I B.Tech (SVEC10) Supplementary Examinations February – 2021

#### **ENGINEERING MATHEMATICS**

[ Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Electronics and Control Engineering, Computer Science and Systems Engineering ]

#### Time: 3 hours

#### Answer any FIVE questions All questions carry equal marks

- 1. a) Solve the differential equation  $(1 + y^2)dx = (\tan^{-1} y x)dy$ .
  - b) Find the orthogonal trajectories of the family of curves  $r^n = a \sin n\theta$ .

2.

a) Using the method of variation of parameters, solve  $y'' - 6y' + 9y = \frac{e^{3x}}{r^2}$ .

- b) Show that the frequency of free vibrations in a closed electrical circuit with inductance L and capacity C in series is  $\frac{30}{\pi \sqrt{LC}}$ .
- **3.** a) Determine whether the following functions are functionally dependent or not. If they are functionally dependent find the relation between them.

$$u = \frac{x}{y} \qquad v = \frac{x+y}{x-y}$$

b) Examine for extreme values of  $f(x,y) = x^4 + y^4 - 2x^2 + 4xy - 2y^2$ 

- a) Show that the evolute of the cycloid x = a(θ sin θ), y = a(1 cos θ) is another cycloid.
  b) Trace the curve ay<sup>2</sup> = x<sup>3</sup>
- 5. a) Find the Laplace transform of (i)  $e^{4t} \sin 2t \cosh(1-e^{t})/t$ .
  - b) Apply convolution theorem to evaluate  $L^{-1}\left[\frac{s^2}{(s^2+a^2)(s^2+b^2)}\right]$ .
- 6. a) Use Laplace transform method to solve  $\frac{d^2x}{dt^2} 2\frac{dx}{dt} + x = e^t$  with x=2,  $\frac{dx}{dt} = -1$  at t = 0. b) Find the inverse Laplace transform of  $\log \frac{s+1}{s-1}$ .
- 7.

8.

- a) Transform the integral  $\int_{0}^{\infty} \int_{0}^{\infty} e^{-1(x^2+y^2)} dx dy$  to polar coordinates and hence evaluate.
  - b) Change the order of integration  $\int_{0}^{1} \int_{x^2}^{2-x} xy \, dx \, dy$  and hence evaluate the same.
- a) Prove that  $\nabla^2 f(r) = f^{11}(r) + \frac{2}{r} f^1(r)$ .
- b) Use the divergence theorem to evaluate  $\iint_{S} xdydz + ydzdx + zdxdy$ , where S is the portion of the plane x + 2y + 3z = 6 which lies in the first octant.

Max. Marks: 70

1

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

I B.Tech (SVEC14) Supplementary Examinations August – 2021

#### **ENGINEERING PHYSICS**

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, **Computer Science and Systems Engineering** 

Time: 3 hours

7

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

- Explain absorption process, spontaneous and stimulated emission and derive 1 6 Marks a) Einstein's coefficients.
  - Explain construction and working of a He-Ne Laser with the help of energy level b) 8 Marks diagram. Mention few applications of Lasers in engineering field.

#### (**OR**)

- Discuss the construction and reconstruction of a Hologram. 2 a)
  - What are different types of Optical Fibers? Classify them based on modes of 8 Marks b) propagation and index profile. Mention few industrial and medical applications of Optical Fibers.

#### UNIT-II

a)	Explain the construction of Hologram.	6 Marks
b)	Describe the acceptance cone and numerical aperture.	8 Marks
a) b)	Derive the Separation between Successive (hkl) Planes. Explain Laue Diffraction of crystals with diagram	6 Marks 8 Marks
b)	Explain Laue Diffraction of crystals with diagram.	8]
	a) b) a) b)	<ul> <li>a) Explain the construction of Hologram.</li> <li>b) Describe the acceptance cone and numerical aperture.</li> <li>a) Derive the Separation between Successive (hkl) Planes.</li> <li>b) Explain Laue Diffraction of crystals with diagram.</li> </ul>

### (UNIT-III)

- 5 Why is the wave nature of matter not apparent in our daily observations? Explain 4 Marks a) it with suitable example.
  - What is the importance of Schrodinger's wave equation? Derive an expression for 10 Marks b) the wave function and energy of a particle confined in a one dimensional potential box.

#### (**OR**)

What is effective mass? Derive an expression for effective mass of an electron. 9 Marks 6 a) Explain origin of energy band formation in solids. 5 Marks b)

### UNIT-IV)

- Derive Clausius Mossotti Equation in dielectrics subjected to static fields. 8 Marks a)
  - Describe frequency and temperature dependence of polarization in dielectric 6 Marks b) medium.

#### (**OR**)

Derive an expression for intrinsic carrier concentration. 7 Marks 8 a) Explain qualitatively the working of a PN Junction Diode using energy level 7 Marks b) diagram.

1

6 Marks

Max. Marks: 70

## UNIT-V

9	a)	Explain the Hysteresis of ferromagnetism.	6 Marks
	b)	Describe the classification of magnetic materials with properties and examples.	8 Marks
		(OR)	
10	a)	Explain the general properties of Superconductors.	6 Marks
	b)	Describe the BCS theory. What is the penetration depth?	8 Marks

#### UNIT-I

7 Marks 1 Solve:  $xy(1 + xy^2)\frac{dy}{dx} = 1$ . b) Solve:  $(D^2 + 4)y = \tan 2x$  by the method of variation of parameters. 7 Marks (**OR**) A body of temperature 80°F is placed in a room of constant temperature 50°F at 2 a) 7 Marks a time t = 0. At the end of 5 minutes the body has cooled to a temperature of  $70^{\circ}$ F. When will the temperature of the body by  $60^{\circ}$ F. Solve:  $y'' + 2y' + 3y = e^x \cos x$ 7 Marks b) (UNIT-II) If  $u = \sin^{-1}\left(\frac{x}{y}\right) + \tan^{-1}\left(\frac{y}{x}\right)$ , show that  $x\frac{\partial u}{\partial x} + y\frac{\partial u}{\partial y} = 0$ 3 a) 7 Marks 7 Marks Determine the point where the function  $u = x^2 + xy + 3x + 2y + 5$  has a maxima b) or minima. (**OR**) 7 Marks 4 Sketch the curve for the equation  $r = a \sin^3 \theta$ . a) 7 Marks b) Find the radius of curvature at the point (r,  $\theta$ ) of the cardioids  $r = a (1 - \cos \theta)$ . (UNIT-III) Find the volume when the loop of the curve  $y^2 = x(2x - 1)^2$  revolves about the 5 7 Marks a) x-axis. Evaluate the following by changing into polar coordinates 7 Marks b)  $\int_{0}^{4} \int_{0}^{\sqrt{16-y^2}} y^2 \sqrt{x^2 + y^2} \, dx \, dy$ (OR) Change the order of integration in  $\int_{0}^{a} \int_{0}^{a} \frac{x \, dy \, dx}{x^2 + y^2}$  and hence evaluate it. 7 Marks 6 a) Evaluate  $\iiint_V (x + y + z) dx dy dz$  where V volume of the cylinder  $x^2 + y^2 = 1$ , z = 0 and 7 Marks b) z = 4 by transforming into cylindrical coordinates. (UNIT-IV) Find the Laplace transform of (i)  $\cos^3 4t$  (ii)  $e^{-3t} t^2 . \sin(t)$ . 7 7 Marks a) Solve  $y'' + 2y' + y = 3x \cdot e^{-x}$  given y(0)=4, y'(0)=0. 7 Marks b) (**OR**) 8 7 Marks a) Find the inverse Laplace transform of (i)  $\cot^{-1}(s)$  (ii)  $\frac{s}{(s^2 + 9)^2}$ .

Solve y''-  $3y'+2y = 4t+e^{3t}$  given y(0)=1, y'(0)=-1, using Laplace transform. b) 7 Marks

### UNIT-V

- Show that the vector field  $\overline{F} = (x^2 + xy^2)\vec{i} + (y^2 + x^2y)\vec{j}$  is irrotational and find 9 7 Marks a) a scalar potential  $\varphi$  such that  $\overline{F} = \nabla \phi$ 
  - Verify Green's Theorem for  $\oint_c (xy + y^2) dx + x^2 dy$ , where C is bounded by 7 Marks b) y = x and  $y = x^2$ .

- (OR) A vector field is given by  $F = (x^2 y^2 + x)\overline{i} (2xy + y)\overline{j}$ . Show that the field F is **10** a) 7 Marks irrotational and find its scalar potential.
  - If  $\overline{F} = 3x^2yz^2\overline{i} + x^3z^3\overline{j} + 2x^3yz\overline{k}$ , then show that  $\int_C \overline{F}.d\overline{r}$  is independent of the path of 7 Marks b) integration. Hence evaluate the integral where C is any path joining (0, 0, 0) to (1, 2, 3).

Answer One Question from each Unit

All questions carry equal marks

### 

1	a)	Determine the non-singular matrices P and Q such that PAQ is in the normal	7 Marks
		torm for A, and hence obtain the rank of the matrix $A = \begin{bmatrix} 2 & -2 & 1 & 3 \\ 2 & 0 & 4 & 1 \end{bmatrix}$ .	
	h)	Solve the following system of equations by Gauss-elimination method:	7 Marks
	0)	2x + 4y + z = 3: $3x + 2y - 2z = -2$ : $x - y + z = 6$ .	
		(OR)	
2	a)	$\begin{bmatrix} 2 & 1 & 1 \end{bmatrix}$	7 Marks
		Verify Cayley-Hamilton theorem for $A = \begin{bmatrix} 0 & 1 & 0 \\ 1 & 1 & 2 \end{bmatrix}$ . Hence find A <sup>-1</sup> .	
	b)	Reduce the quadratic form $6x^2 + 3y^2 + 14z^2 + 4yz + 18zx + 4xy$ into the canonical form.	7 Marks
		UNIT-II )	
3	a)	Find an approximate root of the equation $r^3 - 3r - 5 = 0$ using Newton-	7 Marks
-	)	Raphson method and correct to four decimal places.	
	b)	Fit a parabola $y = a + bx + cx^2$ to the following data	7 Marks
		x: 2  4  6  8  10	
		y: 3.07 12.85 31.47 57.38 91.29	
		(OR)	
4	a)	Estimate the value of $f(3.5)$ from the following data	7 Marks
		x : 3 4 5 6 7 8 9	
	1-)	f(x): 2.7  6.4  12.5  21.6  34.3  51.2  72.9	7 \ ( 1
	D)	Denne forward, backward, central difference operators	/ Marks
5	a)	Find the value of y at x = 0.1, 0.2, if $\frac{dy}{dx} = x - y^2$ and y = 1 at x = 0, by using	7 Marks
		Modified Euler's method.	
	b)	A rod is rotating in a plane. The following table gives angle $\theta$ (in radians)	7 Marks
		through which the:	
		rod has turned for various values of time t (in seconds).	
		$\begin{array}{cccccccccccccccccccccccccccccccccccc$	
		$\forall$ 0 0.12 0.49 1.12 2.02 3.2 4.6/	
		Estimate angular velocity and angular acceleration of the rod at $t = 0.2$ , 1.0 sec.	

(OR)

A rod is rotating in a plane. The following table gives angle  $\theta$  (in radians) 6 14 Marks through which the: rod has turned for various values of time t (in seconds). t : 0.2 0.4 0 0.6 0.8 1.0 1.2 θ 0 0.12 0.49 1.12 2.02 3.2 4.67 Estimate angular velocity and angular acceleration of the rod at t = 0.2, 1.0 sec. UNIT-IV) 7 Marks 7 a) Find the Fourier series to represent function  $f(x) = \frac{1}{4}(\pi - x)^2, 0 < x < 2\pi$ 7 Marks b) Find the Fourier Sine transform of  $f(x) = \frac{1}{x(1+x^2)}$ . (**OR**) 8 a) Find  $Z^{-1}(\frac{3z^2+z}{(5z-1)(5z+2)})$ . 7 Marks Obtain the Half Range Sine series for f(x) = ax + b, in (0,1). 7 Marks b) UNIT-V 9 7 Marks a) Form the partial differential equation for  $z = y^2 + 2f\left(\frac{1}{x} + \log y\right)$ . Solve by the method of separation of variables  $3\frac{\partial u}{\partial x} + 2\frac{\partial u}{\partial v} = 0$ 7 Marks b) with  $u(x,0) = 4e^{-x}$ (**OR**)

An insulated rod of length has its ends A and B maintained at  $0^{\circ}$  C and  $100^{\circ}$  C respectively until steady state condition prevails . If B is suddenly reduced to 0 C and maintained at 0 C. Find the temperature at a distance x from A at time t.  $\bigotimes \bigotimes \bigotimes \bigotimes$

Time: 3 hours

2

a)

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

- UNIT-I
- 1 A system of parallel forces acting on a rigid bar as shown in figure. Reduce this 14 Marks system to i) A single force ii) A single force at A and couple at A iii) A single force at B and couple at B.

(**OR**)

4 Marks

4 Marks

State laws of dry friction. A screw jack has square threads of mean diameter 6cm, helix angle 10<sup>o</sup> and 10 Marks b) coefficient of friction 0.3. Determine the force that must be applied to the end of 60cm lever to raise a weight of 3000N.

### UNIT-II

3 Differentiate between a roller support and a hinged support. 4 Marks a) A simply supported beam AB is subjected to a distributed load increasing from 10 Marks b) 1600 N/m to 4600 N/m from end A to end B respectively. The span AB = 6.5meters. Determine the reactions at the supports.

#### (**OR**)

- State the difference between a perfect frame and an imperfect frame. 4 a)
  - A truss of span 9m is loaded as shown in figure. Find the forces in the members 10 Marks b) marked as 1, 2 and 3, by method of sections.

### UNIT-III)

- **5** a) What do you understand by axes of reference?
  - b) A body consists of right circular solid cone of height 100cm and radius of 80cm 10 Marks placed on solid hemisphere of radius equal to 80cm radius of same material. Find the position of the CG of body.

#### (OR)

6 a) State and explain Pappus -Guldinus theorems for surface of revolution.
b) Find the moment of inertia of a rectangular section of 12cm long and 10cm deep 10 Marks about the centre of gravity.

### UNIT-IV

7 A bullet of mass 0.5 kg moving with a speed of 30m/sec was fired into a 14 Marks wooden block of weight 200N, resting on an incline, and inclined 30<sup>°</sup> to the horizontal. If the coefficient of friction is 0.35, find the distance the block travels along the incline in the upward direction

#### (OR)

8 The motion of a particle is given by  $x=2(t+1)^2$  and  $y=2(t+1)^{-2}$ . Determine the 14 Marks velocity and acceleration of the particle at t=0 and at t=1sec.

### UNIT-V

9 A cylinder, a circular hoop and a sphere each having mass M and radius R are 14 Marks released from rest along a rough plane having inclination β. If in each case rolling occurs without slipping, compare the accelerations of mass centres of these three objects. Determine their ratios also.

#### (OR)

- **10** a) Define the Newton Laws of motion for linear motion and rotational motion. 4 Marks
  - b) A train of weight 2000kN starts from rest and attains a speed of 100km/hr in 4 10 Marks minutes. If the frictional resistance of the track is 8 N per kN of the train's weight, find the average pull required. Take g=9.8 m/sec<sup>2</sup>.

		The die eigen values and eigen vectors of the matrix $\begin{bmatrix} 1 & 2 & 2 \\ -1 & -1 & 0 \end{bmatrix}$	
	1 \		7 ) ( 1
	b)	Reduce the quadratic form $7x^2 + 6y^2 + 5z - 4xy - 4yz$ to the canonical form	/ Marks
		and find its rank, index and signature.	
		(UNIT-II)	
3	a)	Find a real root of the equation $x^3 - x - 11 = 0$ by bisection method.	7 Marks
	b)	Fit a straight line of the form $y = a + bx$ for the following data	7 Marks
		x 0 5 10 15 20 25	
		y 12 15 17 22 24 30	
4	a)	(OR)	7 Martra
4	a)	Find a real root of the equation $x \log_{10} x = 1.2$ lying between 2 and 3 by Regula-	/ WIAIKS
	h)	Find the positive root of $\frac{4}{10}$ 10 correct to three desired places, using	7 Marks
	0)	Find the positive foot of $x - x = 10$ confect to three declinar places, using Newton Dephase method	
_			
5	a)	The following data gives the velocity of a particle for 20 seconds at an interval of 5 seconds. Find the initial acceleration using the entire data:	/ Marks
		Time t (sec): $0$ 5 10 15 20	
		Velocity V(m/sec)         0         3         14         69         228	
	b)	Solve $y' = x + y$ , given $y(1) = 0$ . Find $y(1.1)$ and $y(1.2)$ by Taylor's series	7 Marks
		method. Also, compare the result with its exact value.	
		(OR)	
6	a)	Find the first and second derivatives of the function tabulated below at the point	7 Marks
		$\begin{array}{ c c c c c c c c c c c c c c c c c c c$	
	b)	<u>y J U J U.120 J U.344 J 1.290 J 2.432 J 4.000</u> Use fourth order Runge-Kutta method to find	7 Marka
	U	Use rearrant of the realized realized in the first of the first state	/ 1VIAINS

y at x = 0.1, given that  $dy / dx = 3e^{x} + 2y$ , y(0) = 0 and h = 0.1

**SVEC-14** 

### UNIT-IV

- Find the half-range Sine series for the function  $f(x) = x x^2$ , 0 < x < 1. Find  $Z^{-1}\left[\frac{z^2 3}{(z+2)(z^2+1)}\right]$ . 7 7 Marks a) b) 7 Marks
  - (OR)

#### Find the Fourier series of the function: $f(x) = \begin{cases} 0, when - \pi < x < 0\\ Sinx, when 0, x < \pi \end{cases}$ 8 7 Marks a)

Solve the difference equation:  $u_{x+2} + u_x = 5(2^x)$ , given that  $u_0 = 1$  and  $u_1 = 0$ 7 Marks b)

- Find the partial differential equation of all spheres whose centers lie on the 9 5 Marks a) z-axis.
  - 9 Marks b) Solve the equation  $\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2}$  with boundary conditions  $u(x,0) = 3 \sin n\pi x$ , u(0,t) = 0 and u(1,t) = 0, where 0 < x < 1, t > 0. (OR)
- 10 14 Marks An insulated rod of length has its ends A and B maintained at 0 C and 100 C respectively until steady state condition prevails. If B is suddenly reduced to 0 and maintained at 0 C. Find the temperature at a distance x from A at time t. ැබ (f) Ð

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit

All questions carry equal marks

### UNIT-I

1	a)	Draw a flow chart that to find the reverse of a given number.	7 Marks
	b)	What is a Compiler? Differences between Compiler and an Interpreter.	7 Marks
		(OR)	
2	a)	Explain the structure of C program.	7 Marks
	b)	What is a datatype? Discuss C datatypes.	7 Marks
		UNIT-II	
3	a)	Discuss various single character input and output functions.	7 Marks
	b)	Differentiate between pretest and post test loops.	7 Marks
		(OR)	
4	a)	Write a program to check whether a number is a power of 2 or not.	7 Marks
	b)	Discuss the need for nested loop. Explain any one scenario with C code.	7 Marks
		UNIT-III	
5	a)	Derive the expression for finding the address of any element of a 1-dimensional	7 Marks
		array for any data type.	- > < 1
	b)	Define Recursion. Write a C program to print Fibonacci sequence using	7 Marks
		recursion.	
6	a)	(UK) Differentiate between call by value and call by reference with suitable program	7 Marks
0	a) b)	Demonstrate quick sort with a program	7 Marks
	0)	Demonstrate quiek soft with a program.	
		UNIT-IV	
7	a)	Comprehend how command line arguments can be passed and used.	7 Marks
	b)	Discuss array of pointers and array of pointers as formal parameter.	7 Marks
		(OR)	
8	a)	What is the difference between structure and union? Give example program.	7 Marks
	b)	Write a program to copy one existing fie into other named file.	7 Marks
		UNIT-V	
9	a)	Compare linked list with array. List the merits and demerits of linked list.	7 Marks
	b)	Explain operations performed on doubly linked list.	7 Marks
		(OR)	
10	a)	What is queue? Discuss all its variants.	7 Marks
	b)	Discuss tree as a data structure. Explain its applications in detail.	7 Marks

### UNIT-I

1 Reduce the following forces into single force and couple acting at the origin. 14 Marks  $F_1 = 200N$  passing through (2,3) and (4,5)  $F_2 = 400N$  passing through (-2,3) and (3,4)  $F_3 = 600N$  passing through (2,-3) and (4,0) (**OR**) 2 State laws of dry friction. 4 Marks a)

- A screw jack has square threads of mean diameter 6cm, helix angle 10<sup>o</sup> and 10 Marks b) coefficient of friction 0.3. Determine the force that must be applied to the end of 60cm lever to raise a weight of 3000N.
  - UNIT-II
- 3 A simply supported beam AB of 7m span is subjected to (i) 4KN-m clockwise 14 Marks couple at 2m from A, (ii) 8KN-m anti-clockwise couple at 5m from A and (iii) a triangular load with zero intensity at 2m from A increasing at 4KN/m at a point 5m from A. Determine the reactions at A and B.

#### (**OR**)

Using the method of sections, determine the forces in bars 1,2 and 3 of the plane 14 Marks 4 truss loaded and supported as shown in the figure.

#### UNIT-III)

5 Determine the Second moment area of an unsymmetrical I-section about two 14 Marks orthogonal axes passing through the centroid. Overall height of the section is 400mm, Top flange is 150mm wide and 10mm thick and the bottom flange is 200mm wide and 10mm thick. Web thickness is 12mm.

#### (**OR**)

State theorems of Pappus and hence find the total surface area of a frustum of a 14 Marks 6 hollow cone of height 40mm, base outer radius and inner radius 100mm and 40mm respectively and top outer radius and inner radius 60mm and 40mm respectively. (inner face of the cone is vertical)

#### (UNIT-IV)

7 A bullet of mass 0.5kg moving with a speed of 30m/sec was fired into a wooden 14 Marks block of weight 200N, resting on an incline and inclined 30° to the horizontal. If the coefficient of friction is 0.35, find the distance the block travels along the incline in the upward direction

1

SVEC-14

Max. Marks: 70

8 The motion of a particle is given by  $x = 2(t+1)^2$  and  $y = 2(t+1)^{-2}$  determine the 14 Marks velocity and acceleration of the particle at t = 0 and at t = 1 sec.

### UNIT-V

9 A circular rotating disc of mass m and radius of gyration i has a clockwise 14 Marks angular speed of magnitude  $w_0$  when it is placed on the horizontal floor. Assuming a coefficient of friction  $\mu$  at contiguous surface, determine the expression for time when skidding stops and rolling starts.

#### (OR)

- **10** a) Derive the expressions for velocity and acceleration of a particle subjected to a 7 Marks force as a function of velocity.
  - b) Explain the equations of equilibrium of a rigid body experiencing a planar 7 Marks motion.

1 Discuss briefly about boiler troubles and methods to be adapted for their 14 Marks treatment.

#### (**OR**)

- Explain Nalgonda method used for Defluoridation of water and list out the 2 a) 7 Marks merits and demerits of various deflouridation methods.
  - What is the threshold level of fluoride in ground water? Discuss the adverse 7 Marks b) effects of fluorides on human health

UNIT-II

7 Marks

Discuss about: a) i) particulate composites. ii) layered composites. Give the potential applications of biodegradable polymers. 7 Marks **b**)

#### (**OR**)

4 Define doped conducting polymer. Illustrate p-doped and n-doped conducting 14 Marks polymers.

### UNIT-III)

5	a)	Outline the role of Green Chemistry in our day-to-day life.	7 Marks
	b)	Summarize the commercial applications of bio-diesel.	7 Marks

#### (**OR**)

- 6 Explain the following tools with suitable examples. 14 Marks
  - i) Alternative feed stocks.
  - ii) Alternative products.
  - iii) Alternative reaction conditions.

### UNIT-IV

7 Define sensor. Explain the working principle and construction of potentiometric 14 Marks sensor.

#### (**OR**)

8 Classify the sensors with examples and give the applications of electrochemical 14 Marks sensor.

### UNIT-V

9 Outline the method of electroplating for the control of corrosion. Apply it for 14 Marks nickel electroplating.

#### (**OR**)

- 10 a) Classify the lubricants based on their state. 7 Marks
  - Examine the influence of 'pH' and 'purity of metal' on the rate of corrosion. 7 Marks b)

### UNIT-I

1	a) b)	Explain the characteristics of a laser. Distinguish spontaneous and stimulated emission of radiation. Define life time	6 Marks 8 Marks
	,	of an atom and metastable state.	
		(OR)	
2	a)	Derive the relation between the probabilities of spontaneous emission and stimulated emission in terms Einstein coefficients.	9 Marks
	b)	What is population inversion in lasers? Describe various methods of achieving population inversion.	5 Marks
		UNIT-II	
3	a)	Formulate one dimensional Schrodinger's time independent wave equation and discuss the physical significance of wave function.	10 Marks
	b)	A quantum particle confined to one dimensional box of width of 'a' is known to be in its first exited state. Determine the probability of the particle in the central half.	4 Marks
		(OR)	
4		Evaluate expressions for Eigen function and Eigen values for the particle in one dimensional potential box of length 'L'.	14 Marks
_			
5	a) b)	Classify different types of semiconductor. Derive an expression for intrinsic carrier concentration in an intrinsic semiconductor	4 Marks 10 Marks
		(OR)	
6	a)	What is intrinsic Semiconductor?	4 Marks
	b)	Derive the expression for electron concentration in an intrinsic semiconductor.	10 Marks
7	a)	Define Reverberation time. Formulate Sabine's mathematical relation for reverberation time of the Hall. The volume of a hall is 2265 $m^3$ and its absorption is equal to 92.9 $m^2$ of open window. If the hall is filled with audience, then the absorption becomes double. Find the reverberation time when the hall is without and with audience.	10 Marks
	b)	Outline the three basic requirements of an acoustically good hall.	4 Marks
		(OR)	
8	a)	Explain the various factors affecting the architectural acoustics of a building and their remedies.	8 Marks
	b)	Discuss the following:	6 Marks
		i) Reverberation. ii) Reverberation time.	
		iii) Echelon effect. iv) Absorption coefficient.	

### UNIT-V

- 9 a) Explain crystal planes and crystal direction.
  - b) Derive the expression for inter-planar distance between consecutive planes for a 10 Marks cubic system.

### (OR)

10 Describe the procedure to find the Miller Indices and its mention significance. 14 Marks Draw the planes of (111) (110) (112) (100) and directions of [111] [100] in a cubic lattice.

### UNIT-I

Define the Quadratic form and reduce  $x^2 + 4y^2 + z^2 + 4xy + 6yz + 2zx$  to 1 14 Marks canonical form by technique of orthogonal transformation and hence find its rank index and signature.

#### (**OR**)

2 Define signature of quadratic 14 Marks rank, index, а form. Reduce  $5x^2 + 26y^2 + 10z^2 + 4yz + 14zx + 6xy$  to canonical form by orthogonal reduction technique. Hence find index, Signature and nature of the quadratic form.

### UNIT-II )

3 Construct a second degree polynomial to the following data using technique of 7 Marks a) least square principle.

X	10	15	20	25	30	35
У	35.3	32.4	29.2	26.1	23.2	20.5

7 Marks **b**) Construct by the technique of least squares fit a curve of the form  $y = ae^{bx}$  to the following data.

X	0	2	4
У	5.1	10	31.1
		(OR)	

4 7 Marks a) Using method of least square, fit a straight line y = a + bx to the following data.

Х	0	5	10	15	20	25
У	12	15	17	22	24	30

Applying method of least square principle, construct a curve of the Form 7 Marks b)  $v = ae^{bx}$  to the following data.

x	77	100	185	239	285			
у	2.4	3.4	7.0	11.1	19.6			
(UNIT-III)								

5 7 Marks State Newton's backward interpolation formula and using it evaluate  $\cos 73^{\circ}$ a) from the following data.

$x^{0}$	10	20	30	40	50	60	70	80
Cosx	0.984	0.939	0.866	0.766	0.642	0.500	0.342	0.173
	8	/	U	U	8	U	U	/

State Lagrange's interpolation formula and using it find the value of y when 7 Marks b) x = 10 from the following data.

Max. Marks: 70

SVEC-16

6 a)

b)

Prove the results (i) 
$$\Delta = \frac{\delta^2}{2} + \delta \sqrt{1 + \frac{\delta^2}{4}}$$
. (ii)  $\mu \delta = \frac{1}{2} \Delta E^{-1} + \frac{1}{2} \Delta$ . 7 Marks

b) Write Newton's backward interpolation formula and using it estimate the value 7 Marks of f(42) from the following data.

x	20	25	30	35	40	45
f(x)	354	332	291	260	231	204
		(L	JNIT-	IV)		

7 a) Determine the first and second derivatives of the function tabulated below at the 7 Marks point x = 1.5.

X	1.5	2.0	2.5	3.0	3.5	4.0
у	3.375	7.0	13.625	24.0	38.875	59.0

b) Evaluate  $\int_{0}^{1} x^{3} dx$  with five sub-intervals by Trapezoidal rule.

7 Marks

(OR)

8 a) The following data gives the velocity of a particle for 20 seconds at an interval 7 Marks of 5 seconds. Obtain the initial acceleration using the data.

	Time(t sec)	0	5	10	15	20	
	Velocity v(m/sec)	0	3	14	69	228	
6							7 Marks
Evaluate $\int x \sec \theta$	c xdx taking eight su	b int	erval	s by T	rapez	oidal ru	le.
0	_			_			
		UN:	IT-\				

- 9 a) Calculate y(0.3) from  $y' = x^2 + y^2$ , y(0) = 1 by apply Milne's Predictor- 7 Marks Corrector method. Take the straight values y(-0.1) = 0.9087, y(0.1)=1.1113, y(0.2)=1.2506.
  - b) Compute the value of y(0.2) by Euler's method, given  $y' = x + y^2$ , y = 1 at x=0. 7 Marks (OR)
- 10 a) Given the differential equation  $y' = x^2(1+y)$  with y(1) = 1, y(1.1) = 1.233, 7 Marks y(1.2) = 1.548, y(1.3)=1.974. Estimate y(1.4) using Milne's Predictor Corrector method.
  - b) Given that  $\frac{dy}{dx} = 2 + \sqrt{xy}$  and y = 1 when x = 1. Find approximate value of y at x = 2 in steps of h=0.2, using Euler's modified method.

MULTI-VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS [Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

4

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 a) Design a mathematical equation of the family of orthogonal trajectories to the 7 Marks curves  $a y^2 = x^3$  where a is the parameter.
  - b) Check whether the two families of curves given by  $x^2 y^2 = a^2$  and 7 Marks  $x y = c^2$  are mutually orthogonal to each other or not and justify your answer.

#### (**OR**)

- 2 a) Design a mathematical equation for the orthogonal trajectories of the family of 7 Marks curves  $r = 2a (\cos \theta + \sin \theta)$ .
  - b) If the temperature of the body is changing from 100°C to 70°C in 15 minutes 7 Marks estimate the time for which the body comes to 40°C, the temperature of air being 30°C.

### UNIT-II

- 3 a) A circuit has in series on electromotive force given by  $E = 100 (\sin 40t)$  volts. A 7 Marks resistor of 10 $\Omega$  and an inductor of 0.5 H. If the initial current is 0 find the current at time t > 0.
  - b) A conductor of capacity C discharged through an inductance L and resistance R 7 Marks in series and the charge q at time t satisfies the equation  $L\frac{d^2q}{dt} + R\frac{dq}{dt} + \frac{q}{C} = 0$ . Given that L = 0.25 henries , R = 250 $\Omega$  C = 2 x 10<sup>-6</sup> farads and that when t = 0, charge q = 0.02 coulombs and the current  $\frac{dq}{dt} = 0$ . Estimate the value of q in terms of t.

(OR)

For an L – R – C circuit, the charge q on a plate of the condenser is given by  $L\frac{d^2q}{dt} + R\frac{dq}{dt} + \frac{q}{C} = E \sin \omega t$  where  $i = \frac{dq}{dt}$  The circuit is turned to resonance so that  $\omega^2 = \frac{1}{LC}$ . If CR<sup>2</sup> < 4L and initially q = 0, i = 0 then show that  $q = \frac{E}{R\omega} \left[ e^{\frac{Rt}{2L}} \left( \cos pt + \frac{R}{2LP} \sin pt \right) - \cos \omega t \right]$  where  $p^2 = \frac{1}{LC} - \frac{R^2}{4L^2}$  and  $i = \frac{E}{R} \left[ \sin \omega t - \frac{1}{p\sqrt{LC}} e^{-\frac{Rt}{2L}} \sin pt \right]$ .

### UNIT-III

- 5 a) Examine the function for extreme values 7 Marks  $f(x, y) = x^4 + y^4 2x^2 + 4xy 2y^2$  (x>0, y>0).
  - b) Evaluate three positive numbers whose sum is 100 and whose product is 7 Marks maximum.

#### (OR)

- 6 a) Expand in Taylor series the function  $e^x \cos y$  about the point  $(1, \frac{\pi}{4})$ . 7 Marks
  - b) Making use of the Lagrange's method of multipliers, find the maximum or 7 Marks minimum of  $u = x^2 + y^2 + z^2$  subject to the conditions  $ax^2 + by^2 + cz^2 = 1$  and lx + my + nz = 0.

Change the order of integration, evaluate 
$$\int_{0}^{4a} \int_{x^2/4a}^{2\sqrt{ax}} dy dx$$

8

7

Evaluate  $\int_{0}^{1} \int_{x^2}^{2-x} xy dx dy$  by the change of order technique. 14 Marks

### UNIT-V

- 9 a) State Greens theorem in a place and verify it for  $\oint (3x^2 8y^2)dx + (4y 6xy)dy$  7 Marks where C is the region bounded by  $y = \sqrt{x}$  and  $y = x^2$ .
  - b) State stokes theorem and applying it evaluate  $\oint_C ydx + zdy + xdz$  where C is the Curve of intersection of the sphere  $\mathbf{x}^2 + \mathbf{y}^2 + \mathbf{z}^2 = \mathbf{a}^2$  and  $\mathbf{x} + \mathbf{z} = \mathbf{a}$ .

- 10 a) State stokes theorem and applying it show that curlgrad  $\phi = \overline{0}$ . 7 Marks
  - b) State Gauss divergence theorem and use it to evaluate 7 Marks  $\iint (yz^2\overline{i} + xz^2\overline{j} + 2z^2\overline{k}) \cdot d\overline{s}.$  where S is the closed surface bounded by xy - plane and the upper half of the sphere  $x^2 + y^2 + z^2 = a^2$  above this plane.

#### [Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

- 1 a) State ohm's law and give its applicability to electrical network and explain 7 Marks convention current direction and voltage across an element
  - b) Find the total power dissipated in the circuit shown in the Fig. 1 (All resistances 7 Marks are in ohms).

- 2 a) What are passive and active elements? Explain the volt-current relationship of 7 Marks passive elements with examples.
  - b) Using Kirchoff's current law, find the values of the currents  $i_1$  and  $i_2$  in the 7 Marks circuit shown in Fig. 2.

3 a) Derive the expression of resonant frequency for RLC series circuit shown in Fig.3 6 Marks  $\frac{i\omega L}{\omega L}$ 

- b) For the circuit shown in Fig. 4 compute:
  - (i) Power factor. (ii) Average power delivered by the source.
    - (iii) Reactive power. (iv) Apparent power. (v) Complex power.

8 Marks

#### (OR)

- 4 a) A series RLC circuit consists of  $R=100\Omega$ , L = 0.02 H and C = 0.02 microfarad. 6 Marks Calculate frequency of resonance. A variable frequency sinusoidal voltage of constant RMS value of 50V is applied to the circuit. Find the frequency at which voltage across L and C is maximum and find maximum current in the circuit.
  - b) For the circuit shown in Fig. 5, find the load impedance  $Z_L$  that absorbs the 8 Marks maximum average power. Calculate that maximum average power.

5 State and explain Maximum power transfer theorem and derive the necessary 14 Marks conditions for maximum power transfer for DC and AC excitations.

#### (OR)

- 6 a) State and explain Maximum power transfer theorem and derive the necessary 6 Marks conditions for maximum power transfer for a DC excitations.
  - b) Find the current **i** in the circuit shown in figure using superposition theorem. 8 Marks

### UNIT-IV

- 7 a) Elucidate the measurement of power and power factor of a balanced three phase 6 Marks load with neat sketch.
  - b) For the following Fig.6, the RMS value of the line voltage is 208 V. Find the 8 Marks average power delivered to the load.

- 8 a) Explain how a single wattmeter can be used to measure the reactive power with 6 Marks the help of circuit connection and derive the necessary equations.
  - b) The unbalanced  $\Delta$ -connected load of Fig.7 is supplied by balanced line-to-line 8 Marks voltage of 440V in the positive sequence. Find the line currents. Take  $V_{ab}$  as a reference.

### UNIT-V

- 9 a) Derive the expressions for equivalent inductance of two coils in parallel with 6 Marks i) parallel aiding. ii) parallel opposition.
  - b) Find the input impedance of the circuit in Fig. 8 and the current from the 8 Marks voltage source.

- 10 a) Derive the expressions for equivalent inductance of two coils in series with 6 Marks i) series aiding. ii) series opposition.
  - b) Calculate the mesh currents shown in Fig. 9

8 Marks

#### I B.Tech I Semester (SVEC-16) Supplementary Examinations February – 2021

#### **ENGINEERING CHEMISTRY**

#### [Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

1 Explain the following. 7 Marks a) i) Priming. ii) Foaming. Write short note on internal treatment methods for softening of water. 7 Marks b) (**OR**) What is the principle of reverse osmosis? Explain the process of reverse 2 7 Marks a) osmosis "Reverse osmosis is advantageous over ion exchange process" justify the 7 Marks b) statement UNIT-II 3 a) Differentiate short and long fibre-reinforced composites 7 Marks What are the advantages of composite material? Mention its applications 7 Marks b) (**OR**) Write the synthesis, properties and applications of the following engineering 4 14 Marks plastics. i) Poly Carbonates. ii) Teflon. UNIT-III) Discuss any three tools of Green Chemistry with examples. 5 14 Marks (**OR**) 6 Write the twelve principles of Green Chemistry and evaluate their role on 14 Marks chemistry and environment. UNIT-IV) 7 Discuss the construction and working of Lithium-ion battery with the reactions 14 Marks occurring during charging and discharging. Mention the applications of Li-ion batteries. (**OR**) 8 Define fuel cell. Explain the construction, working of H<sub>2</sub>-O<sub>2</sub> fuel cell and its 14 Marks applications. UNIT-V 9 Define flash point and fire point of a lubricant and explain their significance. 7 Marks a) Illustrate semi-solid lubricants with their uses. 7 Marks b) (**OR**) 10 a) Write short note on: 7 Marks i) Cloud and pour points. ii) Mechanical strength of lubricants. Compare the terms viscosity and viscosity index 7 Marks b) (유) (유)

Max. Marks: 70

[Electrical and Electronics Engineering, Electronics and Communications Engineering, Electronics and Instrumentation Engineering]

#### Time: 3 hours

3

8

#### Answer One Question from each Unit All questions carry equal marks

Max. Marks: 70

### UNIT-I

- 1 a) Explain the construction and working of a semiconductor laser. Give the 10 Marks applications of semiconductor laser.
  - b) Calculate the wavelength of emitted radiation from GaAs which has a band gap 4 Marks of 1.44 Ev.

#### (OR)

- 2 a) What is an optical fiber? What is the principle involved in its working? Derive 10 Marks an expression for acceptance angle of an optical fiber and how it is related to numerical aperture.
  - b) The refractive indices of core and cladding materials of an optical fiber are 1.48 4 Marks and 1.45 respectively. Calculate numerical aperture and acceptance angle

### UNIT-II)

a) Explain origin of energy band formation in solids.
b) Distinguish between conductors, insulators and semiconductors based on band theory. An electron is bound in one dimensional infinite well of width 1 x 10<sup>-10</sup> m then find the energy values in the ground state and in the first two excited states.

#### (**OR**)

4 a) Explain de-Broglie hypothesis.
b) Find the velocity and kinetic energy of an electron having wavelength 1.66Å.
6 Marks

### (UNIT-III)

- 5 a) Write a note on extrinsic semiconductors. How they are formed? 6 Marks
  - b) Obtain an expression for the electrical conductivity in semiconductors. 8 Marks

#### (**OR**)

6 Predict the theory behind the formation of p-n junction and explain its energy 14 Marks band diagram.

### UNIT-IV

- 7 a) How the reverberation and reverberation time influences the acoustically good 6 Marks hall?
  - b) Distinguish between echo and reverberation. A hall with a volume of 1000m<sup>3</sup> 8 Marks has a sound absorbing surface of area of 400m<sup>2</sup>. If the average absorption coefficient of the hall is 0.2 sabine, what is the reverberation time of the hall?

#### (**OR**)

a) Elaborate Meissner's effect.
b) Distinguish between Type-I and Type-II superconductors.
7 Marks

### UNIT-V

4 Marks

- 9 a) How X-rays are suitable in determination of crystal structure.
  - b) State and explain Bragg's law for diffraction in crystals. Calculate the glancing 10 Marks angle at (110) plane of a cubic crystal having lattice constant of 0.26 nm corresponding to the second order diffraction maximum for the X-rays having wavelength of 0.65 nm.

#### (OR)

- 10 a) Explain the principle factors which affect the properties of nanomaterials. 5 Marks
  - b) Discuss in detail about the fabrication of nanomaterials by pulsed laser 9 Marks deposition.

\$P \$P \$P

[Civil Engineering, Mechanical Engineering, Electrical and Electronics Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

#### Time: 3 hours

Max. Marks: 70

14 Marks

#### Answer One Question from each Unit All questions carry equal marks

1

(		UNI	<u>T-I</u> )
	8	- 8	- 2]
Construct the diagonal matrix A=	4	- 3	- 2
	3	- 4	1
		(OF	R)

2 Define modal matrix and spectral matrix. Determine the modal matrix 14 Marks  $\begin{bmatrix} -2 & 2 & -3 \\ 2 & 1 & -6 \end{bmatrix}$ 

$$P \text{ of } A = \begin{bmatrix} 2 & 1 & -6 \\ -1 & -2 & 0 \end{bmatrix}$$

### UNIT-II

3 a) Estimate the value of y at x = 3.5 by fitting the curve of the form 7 Marks y =  $a + bx + cx^2$  by method of least square principle to the following data

					-		•
Х	1	2	3	4	5	6	7
У	2.3	5.2	9.7	16.5	29.4	35.5	54.4

b) Determine the values of a and b and fit an exponential curve of the form 7 Marks  $y = ae^{bx}$  that best fits the following data

Х	0	1	2	3			
Y	1.05	2.10	3.85	8.30			

(UK) 4 a) Construct a straight line by method of least square principle to the following data 7 Marks  $\begin{bmatrix} x & 1 & 2 & 3 & 4 & 5 \end{bmatrix}$ 

X	I	2	3	4	5
у	4	3	6	7	11

b) Using the technique of least squares, fit the parabola  $y = a + bx + cx^2$  to the data 7 Marks f(-1) = -2, f(0) = 1, f(1) = 2, f(2) = 4

#### (UNIT-III)

5 a) Evaluate the value of sin 1.747 using the values given in the table below 7 Marks

x	1.70	1.74	1.78	1.82	1.86
$\sin x$	0.9916	0.9857	0.9781	0.9691	0.9584

b) Using the technique of Lagrange's interpolation, express the function 7 Marks  $f(x) = \frac{3x^2 + x + 1}{(x - 1)(x - 2)(x - 3)}$  as a sum of partial fractions.

(OR)

SVEC-16

6 a) Define (i) Average operator (ii) Central difference operator and hence show that 7 Marks  $E^{\frac{1}{2}} = \mu + \delta$ 

$$E^{\overline{2}} = \mu + \frac{\delta}{2}$$

b)

b) State Newton's forward interpolation formula. Calculate the values of  $e^{185}$  from 7 Marks the following table

x	1.7	1.8	1.9	2.0	2.1	2.2	2.3	
$e^{x}$	5.474	6.050	6.686	7.389	8.166	9.025	9.974	

7 a) A Slider in a machine moves along a fixed straight rod. Its distance x cm along 7 Marks the rod is given below for various values of the time t seconds. Obtain the velocity and acceleration of the slider when t = 0.1 seconds.

t(sec)	0	0.1	0.2	0.3	0.4	0.5	0.6
x (cm)	30.13	31.62	32.87	33.64	33.95	33.81	33.24

7 Marks

Write Simpson's 3/8 rule and evaluate  $\int_{0}^{\frac{1}{2}} \frac{1}{\sqrt{1-x^2}} dx$  applying it with n=6.

#### (OR)

8 a) The Velocity v of a particle moving in a straight line covers a distance x in time t 7 Marks related as follows. Estimate f'(15)

b)  
Evaluate the following integral 
$$\int_{1}^{2} \frac{e^{x}}{x} dx$$
 using Simpson's  $\frac{1}{3}$  rd rule for  $n = 4$   
**UNIT-V**

9 Write Runge-Kutta 4<sup>th</sup> order formulae and use it to evaluate y(0.1) and y(0.2) 14 Marks given  $y' = x^2 - y$  and y(0)=1. Compare the numerical solution obtained with analytical solution.

#### (OR)

10 a) Write Milne's Predictor-Corrector formula and apply it to obtain the solution of 7 Marks the equation  $y' = x - y^2$  at x = 0.8 given that

y(0)=0, y(0.2)=0.02, y(0.4)=0.0795, y(0.6)=0.1762.

b) Estimate the value of y at x = 0.1 given that  $y' = xy^2 - 1$ , y(0) = 1, by Taylor's 7 Marks series method.

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

MULTI-VARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS [Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology and Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

7 Marks

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 a) Solve the differential equation  $(x^2y 2xy^2)dx (x^3 3x^2y)dy = 0$  by 7 Marks reducing it into exact equation.
  - b) Find a solution for the differential equation  $(xy \sin xy + \cos xy) y dx + (xy \sin xy - \cos xy) x dy = 0$

#### (OR)

- 2 a) Identify the integrating factor and solve the differential equation 7 Marks  $(2xy+1)y dx + (1+2xy-x^3y^3)x dy = 0$ 
  - b) Multiplying with the corresponding integrating factor, find a solution for the 7 Marks differential equation  $2xy \, dy (x^2 + y^2 + 1) dx = 0$

### (UNIT-II)

3 a) Applying the method of variation of parameters, solve the differential equation 7 Marks  $(D^2 - 2D)y = e^x \sin x$ 

b) Solve the equation 
$$\frac{d^2 y}{dx^2} - y = \frac{2}{1 + e^x}$$
 by the method of variation of parameters. 7 Marks

#### (OR)

- 4 a) Find a solution of the differential equation  $(D^2 + a^2)y = \sec ax$  by using 7 Marks partial fractions
  - b) An uncharged condenser of capacity C is charged by applying an e.m.f. 7 Marks  $E \sin(\frac{t}{\sqrt{LC}})$ , through leads of self-inductance L and negligible resistance. Show that at any time t, the charge on one of the plates is  $\frac{EC}{2} \left\{ \sin \frac{t}{LC} - \frac{t}{\sqrt{LC}} \cos \frac{t}{\sqrt{LC}} \right\}$  **UNIT-III**
- 5
  - a) Using the appropriate technique of finding stationary values, estimate the 7 Marks maximum and minimum values for the function  $x^3 + y^3 3axy$ 
    - b) Write the Taylor series for a function f(x,y) about a point (a,b) and hence 7 Marks expand the function  $x^3 + y^3 + xy^2$  in powers of (x-1) and (y-2).

(OR)

- 6 a) By the technique of finding stationary values for the function 5 Marks  $x^2y^2 5x^2 8xy 5y^2$ , decide at what points the function becomes maximum and minimum.
  - b) By the technique of Lagrange's undetermined multipliers establish a minimum 9 Marks value for  $x^2 + y^2 + z^2$  subject to the condition  $xyz = a^3$
# UNIT-IV

- 7 a) Evaluate  $\iint (x^2 + y^2) dx dy$  in the positive quadrant for which  $x + y \le 1$ . 7 Marks
  - b) Evaluate  $\iint (x + y) dx dy$  over the region of the positive quadrant bounded by the 7 Marks ellipse  $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ .

#### (OR)

- 8 a) Evaluate the following integral by the technique of transforming into polar 7 Marks coordinates  $\int_{0}^{a} \int_{0}^{\sqrt{a^2-x^2}} y\sqrt{x^2+y^2} dx dy$ .
  - b) Evaluate  $\iint_{R} (1 \frac{x^2}{a^2} \frac{y^2}{b^2}) dx dy$  over the first quadrant of the ellipse  $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$  7 Marks using the transformations x = au and y = bv.

## UNIT-V

- 9 a) Define flux of a vector point function across a surface and compute the flux of 6 Marks water through the parabolic cycloid  $y = x^2$ ,  $0 \le x \le 2$ ;  $0 \le z \le 3$ , if the velocity vector  $\overline{V} = 3z^2\overline{i} + 6\overline{j} + 6xz\overline{k}$  m/sec.
  - b) By transforming into triple integral evaluate  $\iint_{S} x^{3} dy dz + x^{2} y dz dx + x^{2} z dx dy$  8 Marks where S is the closed surface consisting of the cylinder  $\mathbf{x}^{2} + \mathbf{y}^{2} = \mathbf{a}^{2}$  and the circular discs z = 0 and z = b

#### (OR)

10 a) Define surface integral and evaluate  $\int_{S}^{1} \overline{F} \cdot \overline{n} dS$  where  $\overline{F} = z\overline{i} + x\overline{j} - 3y^2 z\overline{k}$  and 9 Marks

S is the surface  $x^2+y^2 = 16$  included in the first octant between z = 0 and z = 5. b)

State Gauss divergence theorem and use it to evaluate  $\iint_{S} \overline{F} \cdot dS$  where <sup>5</sup> Marks  $\overline{F} = 4x\overline{i} - 2y^{2}\overline{j} + z^{2}\overline{k}$  and S is the surface of the closed region bounded by  $\mathbf{x}^{2} + \mathbf{y}^{2} = \mathbf{4}, z = 0$  and z = 3.

#### Answer One Question from each Unit All questions carry equal marks

UNIT-I

14 Marks

Max. Marks: 70

Using nodal method, find the battery current in the circuit of Fig. 1.

- 2 a) Explain the concept of dual and duality in electrical circuits.
  - b) Find the loop currents  $\mathbf{i}_1$ ,  $\mathbf{i}_2$  and  $\mathbf{i}_3$  in the network of Fig.2 by mesh method.

3 a) Derive the expression of resonant frequency for RLC parallel circuit shown in 6 Marks Fig. 3

b) Find the RMS value of the current waveform of Fig. 4, if the current flows 8 Marks through a  $9\Omega$  resistor, calculate the average power absorbed by the resistor.

4 a) Develop the relation between resonant frequency and half-power frequencies for 6 Marks

RCL series circuit shown in Fig. 5

In the parallel RLC circuit of Fig. 6, assume R=8k $\Omega$ , L=0.2mH and C=8 $\mu$ F then 8 Marks b) calculate Resonant frequency, Half-power frequencies, Bandwidth and Quality factor.

- 5 State and explain Millman's theorem. a)
  - Find the current through load resistance RL and also find the voltage drop across 7 Marks **b**) load using Millman's theorem shown in figure Fig. 7.

- 6 State and explain compensation theorem. a)
  - 7 Marks Calculate the change in current of the network given below using compensation 7 Marks b) theorem when load resistor changes to  $10\Omega$ .

- 7 Explain how the power factor of a three phase load can be determined by two 6 Marks a) wattmeter method.
  - b) Find the line currents in the unbalanced three-phase circuit of Fig. 8 and the real 8 Marks power absorbed by the load.

7 Marks

- 8 Three identical coil having impedance of  $(17.32 + j10) \Omega$  each are connected in 14 Marks star across a 3-phase, 50 Hz, 400V supply. Find:
  - i) The total power supplied.
  - ii) Power factor of the load.

10

iii) If same coils are now connected in delta, calculate the total power taken by the load. Comment on result.

9 a) For the coupled circuit shown in fig. 9 find the input impedance at the terminals 6 Marks **ab**.

b) Determine the mesh currents  $I_1$  and  $I_2$  in the circuit of Fig. 10 5  $\Omega$   $_{j2}\Omega$  8 Marks

(OR)

a) Determine the voltage  $V_0$  in the circuit of Fig. 11  $j \mid \Omega$   $4 \Omega$  $V \stackrel{4 \Omega}{\longrightarrow} j \mid S \Omega \stackrel{4 \Omega}{\rightrightarrows} j \mid S \Omega \stackrel{4 \Omega}{n} j \mid S \Omega \stackrel{4 \Omega}{\rightrightarrows} j \mid S \Omega \stackrel{4 \Omega}$ 

b) For the circuit in Fig. 12, determine the coupling coefficient and the energy 7 Marks stored in the coupled inductors at t = 1.5s.

3

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- Write short notes on source transformation. 1 a)
- 7 Marks Reduce the network to a single loop network by successive source 7 Marks b) transformation to obtain the current in the 12  $\Omega$ resistor shown in figure.

#### (**OR**)

- State ohm's law and give its applicability to electrical network and explain 2 a) 7 Marks convention current direction and voltage across an element.
  - Determine the equivalent resistance between the points **ab** in the circuit shown 7 Marks **b**) in figure.

- Explain the concept of active, reactive and apparent power and draw the power 3 7 Marks a) triangle.
  - In an AC circuit with 500sin100t as source voltage, connected across series 7 Marks **b**) combination of resistance and capacitance of  $10\Omega$  and 10F respectively. Calculate the source current flowing through the circuit. Also construct impedance and power triangles.

#### (**OR**)

- Define cut-off frequencies and bandwidth. Derive the expressions for cut-off 4 7 Marks a) frequencies and bandwidth of series RLC circuit.
  - Design the capacitance C, which results in resonance at 5000 rad/sec for the 7 Marks **b**) circuit shown in figure.

SVEC-16

For the circuit shown in figure, determine the impedance  $Z_L$  that results in 14 Marks maximum average power transfer to  $Z_L$ . Also find the maximum power transferred.

 $2 \Omega$ 

7 Marks 7 Marks

7 Marks

7 Marks

1

 $2 \Omega$ 

7 a) Obtain the relation between hybrid and ABCD parameters.b) Find the y- Parameters for the circuit shown in the figure

5

30 \

- 8 a) Define reciprocity and symmetry for a generalized two port network and derive 7 Marks the conditions for reciprocity and symmetry in terms of ABCD parameters.
  - b) Z-parameters for a two port network are given as  $Z_{11}=25$ ,  $Z_{12}=Z_{21}=20$ ,  $Z_{22}=50$ . 7 Marks Design an equivalent T-network.

### UNIT-V)

9 a) What are initial conditions? Explain the procedure to evaluate initial conditions 6 Marks
b) In the circuit shown, theswitchisclosedonposition1at t=0 thereby applying 100V 8 Marks source to the R-L branch, att=500micro seconds, the switch is moved to position 2. Obtain the equations for the current in both intervals.

10 A Series RLC circuit with  $R=100\Omega$ , L=0.1H and C=100µF has a DC voltage of 14 Marks 200 Volts applied to it att=0 through a switch. Determine the transient current. Assume initially the capacitor is charged to a voltage of 10V.

1 Illustrate Relational, Increment and Decrement, Assignment and Special 14 Marks Operators with example programs.

#### (OR)

- a) Why Operator Precedence is necessary? Explain with suitable example. 7 Marks
  - b) Classify 'C' expressions in detail.

7 Marks

7 Marks

- UNIT-II
- 3 Distinguish between while and do-while statements. Write a C program to 14 Marks determine whether the given no is Armstrong Number or not.

#### (OR)

- 4 a) Write a short notes on gets() and puts() functions with suitable examples. 7 Marks
  - b) Write a C program to calculate electricity bill using else-if ladder. Read the 7 Marks starting and ending meter readings. The charges are as follows.
     No of Units Consumed rates in (Rs.) per unit

No. of Units	Consumed rates in (Rs.) p
0-50	1.50
51-100	2.00
101-150	2.50
151-200	2.75
>200	3.00

### (UNIT-III)

5 a) Write short notes on usage of Pre-Processor directives in 'C' programming.
7 Marks
b) Write a 'C' program to find out whether a number is Perfect or not using
7 Marks Functions.

#### (OR)

- 6 a) How 1-Dimesional and 2-Dimensional arrays will be Passed to functions? 7 Marks Explain with suitable examples.
  - b) Write a 'C' program to find Transpose of a Given Matrix using Functions. 7 Marks
- 7 Demonstrate Dynamic Memory Allocation functions with syntax. 14 Marks

#### (OR)

- a) What is Pointer to Pointer? Explain with example.
- b) Write a program using Functions and Pointers to accept a given amount in Figures and display it in Words. (Ex:input:123 output>One Hundred and Twenty Three Rupees)

# UNIT-V

a) What is the difference between sequential access and Random access of files?b) Using command line arguments, write a program to copy two files.7 Marks7 Marks

Answer One Question from each Unit

## All questions carry equal marks

# UNIT-I

a) Solve the differential equation $\frac{d^2 y}{dx^2} + \frac{dy}{dx} + y = (1 - e^x)^2$ .	LS	COI	PO1 PO2
---	----	-----	------------

b) Solve the differential equation 
$$\frac{d^2y}{dx^2} - 2 \frac{dy}{dx} + y = xe^x \sin x$$
.  
(OR) 6 Marks L3 CO1 PO1 PO2

Using the method of variation of parameters, solve 2. a) 6 Marks L3 CO1 PO1 **PO2**  $y'' - 2y' + y = e^x \log x$ .

6 Marks L2 CO1 b) Change the differential equation  $x^2 \frac{d^2 y}{dx^2} - x \frac{dy}{dx} + y = \log x$  in to linear equation with constant coefficients and find its general solution.

# UNIT-II

- Construct the partial differential equation by eliminating arbitrary 3. a) 6 Marks L3 CO1 PO1 function f from the relation  $f(x^2 + y^2, z - xy) = 0$ .
  - Find the complete solution of the partial differential equation b) 6 Marks L1 CO1 PO1  $z^{2}(p^{2}+q^{2})=x^{2}+y^{2}$ . PO<sub>2</sub>

Solve the partial differential equation  $r - 4s + 4t = e^{2x+y}$ . L3 CO1 PO1 4. 6 Marks a) **PO2** Applying the method of separation of variables to solve b) L3 PO1 6 Marks CO1  $\frac{\partial u}{\partial x} = 2 \frac{\partial u}{\partial t} + u$ PO2

# (UNIT-III)

5. 6 Marks L3 CO<sub>2</sub> PO1 Determine  $\frac{du}{dx}$  when  $u = x \log xy$  and  $x^3 + y^3 + 3xy = 1$ . a)

Define Jacobian for two variables and find the Jacobian of the b) 6 Marks L1 CO<sub>2</sub> PO1 variables  $u = \frac{x+y}{1-xy}$  and  $v \tan^{-1} x + \tan^{-1} y$ .

#### (**OR**)

- 6. a) Divide the number 24 into three parts such that the continued 6 Marks L4 CO<sub>2</sub> PO1 product of the first, square of the second and cube of the third PO<sub>2</sub> may be maximum.
  - Using Lagrange's method of undetermined multipliers, calculate 6 Marks L3 CO<sub>2</sub> PO1 b) the maximum value of xyz when x + y + z = a. PO<sub>2</sub>

# UNIT-IV

7.	a)	Evaluate $\iint_{R} xy dx dy$ where <i>R</i> is the region by	6 Marks	L5	CO2	PO1 PO2
		$x$ - axis, $x$ = 2a and $x^2$ = 4ay.				
	b)	Apply change the order of integration and evaluate	6 Marks	L3	CO2	PO1
		$\int_{0}^{\infty}\int_{x}^{\infty} \frac{e^{-y}}{y}  dy  dx  dx$				PO2
		(OR)				
8.	a)	Evaluate $\int \int \int a^{x+y+z} dz dy dx$	6 Marks	L5	CO2	PO1
	a)	Evaluate $\int_{0} \int_{0} \int_{0} e^{-\alpha 2\alpha y \alpha x}$				
	1 \	$\int_{\infty}^{\infty} \int_{0}^{\infty} -(x^{2}+y^{2}) 1 1$	6 Marks	L3	CO2	PO1
	b)	By changing to polar coordinates, evaluate $\iint_{0,0} e^{-\sqrt{x}+y} dxdy$ .				PO2
9.	a)	Determine directional derivative of the field $xy + yz + zx$ at the	6 Marks	L3	CO3	PO1
		point (1,1,1) in the direction of $\vec{i} + \vec{j} + \vec{k}$ .				
	b)	$\int (x^2 + xy) dx + (x^2 + y^2) dy$	6 Marks	L5	CO3	PO1
		Evaluate the line integral $\int_{c}^{c} (c + c + c + c + c + c + c + c + c + c $				PO2
		is the square formed by the lines $y = \pm 1$ and $x = \pm 1$ .				
		(OR)				
10		Verify Gauss divergence theorem for the field	12 Marks	L5	CO3	PO1
•		$\overline{F}(x^2 - yz)\overline{i} + (y^2 - zx)\overline{j} + (z^2 - xy)\overline{k}$ taken over the				PO2
		rectangular parallelepiped $0 \le x \le a$ , $0 \le y \le b$ , $0 \le z \le c$ .

		(UNIT-II)				
3.	a)	Define carbonate and non-carbonate hardness of water. Write the disadvantages of hard water.	6 Marks	L1	CO2	PO1 PO2
	b)	50ml of standard hard water containing 1mg of CaCO <sub>3</sub> per ml consumed 20ml of EDTA. 50ml of a water sample consumed 25ml of same EDTA solution, using eriochrome black-T indicator. Calculate the total hardness of water sample in p.p.m. <b>(OR)</b>	6 Marks	L3	CO2	PO1 PO2
4.	a)	Write note on boiler corrosion and caustic-embrittlement.	6 Marks	L1	CO2	PO1 PO2
	b)	Give the specifications of potable water according to WHO guidelines.	6 Marks	L2	CO2	PO1 PO2
		(UNIT-III)				
5.	a)	What are the reference electrodes? Explain the construction and working of calomel electrode.	6 Marks	L1	CO3	PO1 PO2
	b)	Explain the working principle of $H_2$ -O <sub>2</sub> fuel cell with reactions. (OR)	6 Marks	L2	CO3	PO1
6.	a)	Discuss the various factors influencing the rate of corrosion.	6 Marks	L2	CO3	PO1
	b)	Explain how the corrosion can be minimized by cathodic protection.	6 Marks	L2	CO3	PO1
		(UNIT-IV)				
7.	a)	Discuss the instrumentation of UV-VIS Spectrometer with neat diagram	8 Marks	L2	CO4	PO1 PO5
	b)	Explain bathochromic and hypsochromic shifts with suitable examples	4 Marks	L2	CO4	PO1
		(OR)				
8.	a)	Describe the various molecular vibrations in the IR Spectroscopy	6 Marks	L2	CO4	PO1
	b)	Write the principle and applications of transmission electron microscope.	6 Marks	L1	CO4	PO1

# UNIT-V

9.	a)	Define calorific value of a fuel. Distinguish between gross and net calorific values of a fuel.	4 Marks	L1	CO5	PO1
	b)	What is meant by cracking of petroleum? Write the advantages of catalytic cracking over thermal cracking.	8 Marks	L2	CO5	PO1
		(OR)				
10.	a)	Explain mechanism of fluid and boundary lubrication.	8 Marks	L2	CO5	PO1 PO2
	b)	Write the chief functions of lubricants.	4 Marks	L1	CO5	PO1 PO2

#### **COMMUNICATIVE ENGLISH**

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1.		"Non-verbal communication plays vital role in effectiveness of interaction." Justify the given statement.	12 Marks	L4	CO1	PO2, PO1, PO10
r	a)	(OR) Define and explain the various modes of effective	6 Marka	12	CO1	DO1
۷.	a)	communication	0 WAIKS	L2	COI	PO1,
	b)	"Understanding different types of communication styles are vital for business communication". Evaluate this statement with suitable examples.	6 Marks	L2	CO1	PO1, PO10
		(UNIT-II)				
3.		"Barrier to effective listening is present at every factor of the listening process". Justify the following statement from your viewpoint.	12 Marks	L4	CO1	PO2, PO1, PO10
		(OR)				
4.	a)	"For successful implementation of instructions or briefs note- taking if an effective tool". Discuss the above statement in the context of listening for specifics	6 Marks	L4	CO1	PO1, PO10
	b)	Write about the various types of listening. Give suitable examples.	6 Marks	L4	CO1	PO1, PO10
		UNIT-III				
5.		"Confidence, clarity and fluency pay a significant role in speeches and presentations." Justify the given statement with suitable tips to enhance.	12 Marks	L4	CO1	PO1, PO10
		(OR)				
6.	a)	Significance of planning, preparation and procedure for effective presentation in seminars, conferences etc.	6 Marks	L2	CO1	PO1, PO10
	b)	Write about the paralinguistic features of speaking.	6 Marks	L2	CO1	PO1, PO10
		(UNIT-IV)				
7.		Discuss briefly the SQ3R technique for constructive reading.	12 Marks	L2	CO1	PO5, PO1, PO2, PO10

SVEC-19

Max. Marks: 60

8.	a)	Discuss	at	length	with	suitable	examples	the	important	6 Marks	L2	CO1	PO1,
		technique	es fo	or good c	compre	hension of	f any type o	f read	ling				PO10
	<b>b</b> )	Idontify	th a	tonia	onton	a and th	a leave wear	da in	the tenie	6 Martra	ТЭ	CO1	DO1

b) Identify the topic sentence and the key words in the topic 6 Marks L2 CO1 PO1, sentence that the other sentences support in the paragraph PO10 given below.

Exercise is really good for one's physical and mental health. It is proven that aerobic exercise is good for the heart, which is very important to overall health. I used to run every day, but now I go to dance classes to get my aerobic exercise. Strength training is important for maintaining muscle mass and improving bone density. Both muscle mass and bone density can decrease as we age, so improving them through strength training is important. My grandmother broke a hip last year because her bones were so fragile. All kinds of exercise have been shown to relieve depression, anxiety, and stress.

# UNIT-V

9.		"Using the right words in the right context is one of the essential elements of effective writing". Illustrate.	12 Marks	L4	CO1	PO2, PO1, PO10
		(OR)				
10	a)	Present your understanding of the various steps to compose a good essay.	6 Marks	L2	CO1	PO1, PO10
	b)	Define and explain precise writing and its uses with suitable examples.	6 Marks	L2	CO1	PO1, PO10

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

I B.Tech I Semester (SVEC-19) Supplementary Examinations February - 2021

#### **BASIC ELECTRICAL AND ELECTRONICS ENGINEERING**

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1. a) For the given circuit:
  - i) Find the equivalent resistance across the supply.
  - ii) If the voltage drop across  $5\Omega$  is 100V, find the supply voltage.
  - iii) Find the power consumed by each resistor.

- b) A coil having a resistance of 7 and an inductance of 31.8mH is 6 Marks L3 CO1 PO2 connected to 230V, 50Hz supply. Calculate the:
  - i) circuit current. ii) phase angle.
  - iii) power factor. iv) power consumed.
  - v) reactive power. vi) apparent power.

(OR)

- 2. a) A voltage  $v = 200 \sin \pi t$  is applied to a load having 200 $\Omega$  6 Marks L3 CO1 PO2 in series with 638mH inductor. Estimate power consumed by the load and reactive power of load.
  - b) Find the equivalent resistance across the terminals X and Y. 6 Marks L3 CO1 PO3

3. a) Discuss in detail to improve the power factor of a given power 6 Marks L2 CO2 PO1 system.
b) Explain the block diagram of inverter with details. 6 Marks L1 CO2 PO1 (OR)

6 Marks

L2

CO<sub>2</sub>

PO<sub>2</sub>

PO4

- 4. a) List out the difference between MCB and MCCB.
  - b) What is the importance of earthing and explain different types 6 Marks L2 CO2 of earthing?

6 Marks L3 CO1 PO3

Max. Marks: 60

		UNIT-III				
5.	a)	Explain about torque-slip characteristics in 3-Ø Induction motor.	6 Marks	L2	CO3	PO2
	b)	The primary of a 50Hz, step-down transformer has 480 turns and is fed from 6400V supply. Find: i) the peak value of the flux produced in the core.	6 Marks	L3	CO3	PO3
		ii) the voltage across the secondary winding if it has 20 turns. (OR)				
6.	a) b)	Explain the construction and working of synchronous machine. A 50Hz, 4-pole induction motor has an induced <b>emf</b> in the rotor with a frequency of 2 Hz. Calculate: i) synchronous speed ii) slip iii) speed of the motor	6 Marks 6 Marks	L2 L3	CO3 CO3	PO2 PO3
7.	a)	Draw and explain full-wave rectifier with relevant waveforms.	6 Marks	L2	CO4	PO1
	b)	Draw the circuit diagram for finding the CB characteristics of a Transistor.	6 Marks	L2	CO4	PO2
		(OR)				
8.	a)	Compare and contrast Zener breakdown and Avalanche breakdown.	6 Marks	L2	CO4	PO4
	b)	A transistor has $I_B = 100\mu A$ and $I_C = 2\mu A$ . Find: i) $\beta$ of the transistor. ii) $\alpha$ of the transistor. iii) $\alpha$ of the transistor.	6 Marks	L3	CO4	PO3
		UNIT-V				
9.	a)	Explain the basic internal block diagram of a typical operational amplifier.	6 Marks	L1	CO5	PO1
	b)	Design a practical integrator circuit with a DC gain of 20 to integrate a square wave of 25kHz.	6 Marks	L3	CO5	PO3
		(OR)				
10.	a)	What are the two closed loop configurations of an Op-Amp? Obtain the gains in both the cases.	6 Marks	L2	CO5	PO1
	b)	An Op-Amp has a slew rate of $2V/\mu s$ . What is the maximum frequency of an output sinusoid of peak value 5V at which the	6 Marks	L3	CO5	PO4

distortion sets in due to the slew rate limitation?

#### DIFFERENTIAL EQUATIONS AND MULTIVARIABLE CALCULUS

[ Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering, Computer Science and Engineering (Artificial Intelligence), Computer Science and Engineering (Data Science), Computer Science and Business Systems ]

Time: 3 hours

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

	UNIT-I											
1.	a)	Solve the differential equation $\frac{d^2 y}{dx^2} + \frac{dy}{dx} + y = x^3$ .	7 Marks	L3	CO1	PO1						
	b)	Solve the differential equation $\frac{d^3y}{dx} + y = \cos(2x - 1)$ .	7 Marks	L3	CO1	PO1						
	(OR)											
2.	a)	Using the method of variation of parameters, solve	7 Marks	L3	CO1	PO1						
		$y''-y=\frac{2}{(1+e^x)}$ .										
	b)	Find the general solution of the differential equation $(D^2 + 1)y = x \cos x$ .	7 Marks	L1	CO1	PO1						
	UNIT-II )											
3.	a)	Construct the partial differential equation by eliminating the arbitrary function $\phi$ from $\phi$ $(x^2 + y^2 + z^2, x + y + z) = 0$ .	7 Marks	L3	CO1	PO2						
	b)	Find the general solution of the linear partial differential equation $(x^2 - yz) p + (y^2 - zx) q = z^2 - xy.$	7 Marks	L1	CO1	PO2						
		(OR)										
4.	a)	Solve the partial differential equation $(D^2 + DD' - 6D'^2)z = y \cos x.$	7 Marks	L3	CO1	PO1						
	b)	Solve the partial differential equation $(2DD' + D'^2 - 3D')z = 3\cos(3x - 2y).$	7 Marks	L3	CO1	PO2						
		UNIT-III										
5.	a)	Determine $\frac{\partial(x, y, z)}{\partial(u, v, w)}$ , when $x + y + z = u$ , $y + z = uv$ , $z = uvw$ .	7 Marks	L3	CO2	PO1						
	b)	Show that the functions $u = x + y + z$ , $v = x^2 + y^2 + z^2$ , $w = x^3 + y^3 + z^3 - 3xyz$	7 Marks	L3	CO2	PO2						
		are functionally dependent and hence obtain the relation between them.										
		(OR)										

6.	a)	Examine the maxima and minima of the function	7 Marks	L3	CO2	PO2					
		$f(x, y) = x^3 y^2 (1 - x - y).$									
	b)	Using Lagrange's method of undetermined multipliers, calculate	7 Marks	L3	CO2	PO1					
		the maximum value of $x^2y^2z^2$ when $x + y + z = 1$ .									
	UNIT-IV										
7.	a)	Evaluate $\iint_{R} xydxdy$ , where R is the region bounded by the	7 Marks	L5	CO2	PO1					
		positive quadrant of the circle $x^2 + y^2 = a^2$ .									
	b)	Applying the change of order of integration, evaluate	7 Marks	L3	CO2	PO2					
		$1\sqrt{x}$									
		$\int_{0} \int_{x} xy  dy  dx$									
	(OR)										
0		$1\sqrt{1-x^2}\sqrt{1-x^2}-y^2$	7 Marks	L5	CO2	PO1					
8.	a)	Evaluate $\int_{0} \int_{x} \int_{0} xyz  dz  dy  dx$ .									
	b)	By changing to polar coordinates, evaluate the double integral	7 Marks	L3	CO2	PO2					
		$a\sqrt{a-y^2}$									
		$\int_{\Omega} \int (x^2 + y^2) dy dx$									
9.	a)	Determine the directional derivative of the field	7 Marks	L3	CO2	PO1					
	,	$\phi = x^2 yz + 4xz^2$ at the point (1,-2,1) in the direction of the									
		normal to the surface $x \log z - y^2 = -4$ at the point (-1,2,1).									
	b)	Evaluate the line integral over a circular path	7 Marks	L5	CO2	PO1					
		$x^2 + y^2 = a^2$ , $z = 0$ for a vector field									
		$\overline{F} = \sin y \overline{i} + x(1 + \cos y) \overline{j}.$									
		(OR)									
10		Verify Gauss divergence theorem for the field	14 Marks	L5	CO2	PO2					
		$\overline{F} = (x^2 - yz) \overline{i} + (y^2 - zx)\overline{j} + (z^2 - xy)\overline{k}$ taken over a									
		rectangular parallelepiped $0 \le x \le a$ , $0 \le y \le b$ , $0 \le z \le c$ .

## DIFFERENTIAL EQUATIONS AND MULTIVARIABLE CALCULUS

[ Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering, Computer Science and Business Systems, Computer Science and Engineering (Artificial Intelligence), Computer Science and Engineering (Data Science)]

r	Time: 3	hours		Max.	Marks: 7	70
		Answer One Question from each Unit				
		All questions carry equal marks				
		UNIT-I				
1.	a)	Solve the differential equation $(D - 2)^2 = 8(e^{2x} + \sin 2x)$ .	7 Marks	L3	CO1	PO1
	b)	Solve the differential equation $(D^2 - 3D + 2)y = 2$ .	7 Marks	L3	CO1	PO1
		(OR)				
2.	a)	Solve the differential equation $\frac{d^2 y}{dx^2} - 2 \frac{dy}{dx} + y = xe^x \sin x$ .	7 Marks	L3	CO1	PO2
	b)	Solve the following differential equation by the method of	7 Marks	L3	CO1	PO2
		variation of parameters $y'' - 6y' + 9y = \frac{e^{3x}}{x^2}$ .				
		UNIT-II				
3.	a)	Construct the partial differential equation by eliminating the arbitrary function $\phi$ from $\phi$ ( $xy + z^2, x + y + z$ ) = 0.	7 Marks	L3	CO1	PO1
	b)	Solve the partial differential equation $x^{2}(y-z)p+y^{2}(z-x)q=z^{2}(x-y).$	7 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Construct the partial differential equation by eliminating the arbitrary functions $f$ and $\phi$ from $z = yf(x) + x\phi(y)$ .	7 Marks	L3	CO1	PO1
	b)	Solve the linear homogeneous partial differential equation $\frac{\partial^2 z}{\partial x^2} - \frac{\partial^2 z}{\partial x \partial y} = \sin x \cos 2y.$	7 Marks	L3	CO1	PO2
5.	a)	Show that $\frac{\partial u}{\partial x} + \frac{\partial u}{\partial y} + \frac{\partial u}{\partial z} = 0$ , if $u = f(y - z, z - x, x - y)$ .	7 Marks	L2	CO2	PO1
	b)	Using Lagrange's method of undetermined multipliers, find the minimum value of $x^2 + y^2 + z^2$ subject to the condition	7 Marks	L3	CO2	PO2
		x+y+z=1.				
		(OR)				
6.	a)	If $x = e^r \sec \theta$ , $y = e^r \tan \theta$ then show that $\frac{\partial(x, y)}{\partial(r, \theta)} x \frac{\partial(r, \theta)}{\partial(x, y)} = 1.$	7 Marks	L2	CO2	PO1
	b)	Find the dimensions of the rectangular box requiring least	7 Marks	L1	CO2	PO2

material for its construction when the box is open at the top is to

have a volume of 32 cubic feet.

(UNIT-IV)

7.	a)	Evaluate $\iint_{R} y  dx  dy$ where R is the region bounded by the first	7 Marks	L5	CO2	PO2
		quadrant of the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ .				
	b)	Evaluate $\int_{-10}^{1} \int_{x-z}^{z} \int_{x-z}^{x+z} (x+y+z) dy dx dz$	7 Marks	L5	CO2	PO1
		(OR)				
8.	a)	By changing the order of integration, evaluate	7 Marks	L2	CO2	PO2
		$\int_{0}^{10} \int_{\sqrt{x}}^{1} \cos y^3  dy  dx$				
	b)	Evaluate $\int_{0}^{a} \int_{0}^{\sqrt{a^2 - x^2}} y \sqrt{x^2 + y^2} dy dx$ by transforming into	7 Marks	L5	CO2	PO2
		polar coordinates.				
		UNIT-V				
9.	a)	Find $div\overline{F}$ and $curl\overline{F}$ where $\overline{F} = grad(x^3 + y^3 + z^3 - 3xyz)$ .	7 Marks	L1	CO3	PO1
	b)	Find the directional derivative of $f(x, y, z) = x^2 - y^2 + 2z^2$ at	7 Marks	L1	CO3	PO1
		the point $P(1,2,3)$ in the direction of the line PQ where Q is the point $(5,0,4)$ .				
		(OR)				
10		Verify Green's theorem for $\int_{C} (xy + y^2) dx + x^2 dy$ , where c is	14 Marks	L5	CO3	PO2
		bounded by $y = x$ and $y = x^2$ .				
		\$\$ \$\$ \$

## UNIT-I

- 1. a) With the help of neat sketch, explain in detail the working of the 7 Marks L2 CO1 PO1 single loop generator.
  - b) Find the current delivered by the source in the network shown 7 Marks L3 CO1 PO2 below.

(OR)

		()				
2.	a)	State Kirchhoff's laws and validate the law with suitable examples	7 Marks	L2	CO1	PO1
	b)	Obtain the RMS and Average values of a sinusoidal voltage of	7 Marks	L2	CO1	PO1
		peak $V_m$ and angular frequency $\omega$ rad/s.				
		UNIT-II				
3.	a)	Is Hydro Power plant a sustainable electrical source of	7 Marks	L2	CO2	PO7
		generation? Justify your answer. Also, with neat sketch, explain				
		the operation of hydro power plant.				
	b)	Explain the functional aspects of a relay.	4 Marks	L2	CO2	PO1
	c)	What are the various BEE standards that a consumer has to look	3 Marks	L2	CO2	PO8
		while purchasing any electrical product?				
		(OR)				
4.	a)	With neat sketch, explain the operation of sustainable power	7 Marks	L2	CO2	PO7
		generation using thermal power plant.				
	b)	Explain the significance of power factor and enumerate the	4 Marks	L2	CO2	PO1
		methods of improving the power factor.				
	c)	Explain the significance of Energy Efficiency ratio.	3 Marks	L2	CO2	PO8

	UNIT-III				
a)	With neat sketch, demonstrate the working principle of single phase transformer	7 Marks	L2	CO3	PO1
b)	Explain the working principle of Three phase induction motor and mention any one application.	7 Marks	L2	CO3	PO1
	(OR)				
a)	Explain the constructional details of single phase capacitor start and run induction motor.	7 Marks	L2	CO3	PO1
b)	Explain the working of permanent magnet DC motor and mention any one application.	7 Marks	L2	CO3	PO1
	Explain the operation of a PN junction diode in forward biased and reverse biased condition. Draw its V-I characteristics.	14 Marks	L2	CO4	PO1
a)	(UK) Distinguish hatwaan Half waya Paatifian and full waya reatifian	7 Mortra	12	CO4	DOJ
a)	What is the need for biasing in transistor operation?	7 Marks		C04	PO2
0)			L2	04	101
a) b)	Draw the block diagram of Op-Amp and explain in detail. In an inverting adder circuit, the input voltages ate 0.3 V, 0.5 V, 0.1 V while $R_1=R_2=R_3=1$ K $\Omega$ . If $R_f=10$ K $\Omega$ , calculate the output voltage	7 Marks 7 Marks	L2 L2	CO4 CO4	PO1 PO2
	(OR)				
a)	Examine and derive an expression for $V_0$ of the differentiator circuit by using Op-Amp.	7 Marks	L2	CO4	PO2
b)	Define Op-Amp and list out the ideal characteristics of ideal Op-Amp.	7 Marks	L1	CO4	PO1
	<ul> <li>a)</li> <li>b)</li> <li>a)</li> <li>b)</li> <li>a)</li> <li>b)</li> <li>a)</li> <li>b)</li> <li>a)</li> <li>b)</li> </ul>	<ul> <li><b>UNIT-III</b></li> <li>a) With neat sketch, demonstrate the working principle of single phase transformer.</li> <li>b) Explain the working principle of Three phase induction motor and mention any one application.</li> <li><b>(OR)</b></li> <li>a) Explain the constructional details of single phase capacitor start and run induction motor.</li> <li>b) Explain the working of permanent magnet DC motor and mention any one application.</li> <li><b>UNIT-IV</b></li> <li>Explain the operation of a PN junction diode in forward biased and reverse biased condition. Draw its V-I characteristics.</li> <li><b>(OR)</b></li> <li>a) Distinguish between Half wave Rectifier and full wave rectifier.</li> <li>b) What is the need for biasing in transistor operation?</li> <li><b>UNIT-V</b></li> <li>a) Draw the block diagram of Op-Amp and explain in detail.</li> <li>b) In an inverting adder circuit, the input voltages ate 0.3 V, 0.5 V, 0.1 V while R<sub>1</sub>=R<sub>2</sub>=R<sub>3</sub>=1 KΩ. If R<sub>f</sub>=10 KΩ, calculate the output voltage.</li> <li><b>(OR)</b></li> <li>a) Examine and derive an expression for V<sub>0</sub> of the differentiator circuit by using Op-Amp.</li> <li>b) Define Op-Amp and list out the ideal characteristics of ideal Op-Amp.</li> </ul>	UNIT-IIIa)With neat sketch, demonstrate the working principle of single phase transformer.7 Marksb)Explain the working principle of Three phase induction motor and mention any one application.7 Marksa)Explain the constructional details of single phase capacitor start and run induction motor.7 Marksb)Explain the constructional details of single phase capacitor start and run induction motor.7 Marksb)Explain the constructional details of single phase capacitor start and run induction motor.7 Marksb)Explain the working of permanent magnet DC motor and mention any one application.7 Marksb)Explain the operation of a PN junction diode in forward biased and reverse biased condition. Draw its V-I characteristics. (OR)14 Marksa)Distinguish between Half wave Rectifier and full wave rectifier. UNIT-V7 Marksb)What is the need for biasing in transistor operation? UNIT-V7 Marksa)Draw the block diagram of Op-Amp and explain in detail. b)7 Marksb)In an inverting adder circuit, the input voltages ate 0.3 V, 0.5 V, ol.1 V while $R_1=R_2=R_3=1$ K $\Omega$ . If $R_f=10$ K $\Omega$ , calculate the output voltage.7 Marksa)Examine and derive an expression for V <sub>0</sub> of the differentiator circuit by using Op-Amp.7 Marksb)Define Op-Amp and list out the ideal characteristics of ideal Op-Amp.7 Marks	UNIT-IIIa)With neat sketch, demonstrate the working principle of single phase transformer.7 MarksL2b)Explain the working principle of Three phase induction motor and mention any one application.7 MarksL2a)Explain the constructional details of single phase capacitor start and run induction motor.7 MarksL2b)Explain the constructional details of single phase capacitor start mention any one application.7 MarksL2b)Explain the working of permanent magnet DC motor and mention any one application.7 MarksL2b)Explain the operation of a PN junction diode in forward biased and reverse biased condition. Draw its V-I characteristics. (OR)14 MarksL2a)Distinguish between Half wave Rectifier and full wave rectifier. UNIT-V7 MarksL2b)What is the need for biasing in transistor operation? UNIT-V7 MarksL2a)Draw the block diagram of Op-Amp and explain in detail. N 1 n an inverting adder circuit, the input voltages ate 0.3 V, 0.5 V, 0.1 V while $R_1=R_2=R_3=1$ K $\Omega$ . If $R_f=10$ K $\Omega$ , calculate the output voltage.7 MarksL2a)Examine and derive an expression for V <sub>0</sub> of the differentiator circuit by using Op-Amp.7 MarksL2b)Define Op-Amp and list out the ideal characteristics of ideal Op-Amp.7 MarksL1	UNIT-IIIa)With neat sketch, demonstrate the working principle of single phase transformer.7 MarksL2CO3b)Explain the working principle of Three phase induction motor and mention any one application.7 MarksL2CO3a)Explain the constructional details of single phase capacitor start and run induction motor.7 MarksL2CO3b)Explain the constructional details of single phase capacitor start and run induction motor.7 MarksL2CO3b)Explain the working of permanent magnet DC motor and mention any one application.7 MarksL2CO3UNIT-IVExplain the operation of a PN junction diode in forward biased and reverse biased condition. Draw its V-I characteristics. (OR)14 MarksL2CO4a)Distinguish between Half wave Rectifier and full wave rectifier. UNIT-V7 MarksL2CO4b)Draw the block diagram of Op-Amp and explain in detail. b7 MarksL2CO4b)In an inverting adder circuit, the input voltages ate 0.3 V, 0.5 V, 0.1 V while $R_1=R_2=R_3=1$ K $\Omega$ . If $R_f=10$ K $\Omega$ , calculate the output voltage.7 MarksL2CO4a)Examine and derive an expression for V <sub>0</sub> of the differentiator circuit by using Op-Amp.7 MarksL2CO4b)Define Op-Amp and list out the ideal characteristics of ideal Op-Amp.7 MarksL2CO4

Time: 3 hours Max. Marks: 70 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I Describe Burger's vector for the Edge and Screw Dislocation. 7 Marks CO1 PO1 1. L1 a) List out different type's imperfections in crystals and briefly b) 7 Marks L2 CO1 PO1 explain Schottkey, Frenkel defects, Edge and Screw dislocations. **PO2** (OR)Draw Iron-Iron-Carbide diagram neatly and explain cooling of 2. CO1 **PO1** 14 Marks L2 steel from Liquid phase to room temperature for 0.4% C and PO<sub>2</sub> 0.8% C. UNIT-II ) 3. a) Write short notes surface hardening techniques. Explain any two 7 Marks L1 CO1 **PO1** methods with neat sketches. **PO2** b) Define annealing and recall the types of annealing. 7 Marks L1 CO1 PO1 **PO2** (**OR**) 4 Differentiate the CCT and TTT diagram. Explain construction 14 Marks L1 CO1 **PO1** method of TTT and CCT diagrams. **PO2** PO<sub>3</sub> UNIT-III) What is the effect of Carbon on the properties of steel? Explain 5. a) 7 Marks L2 CO<sub>2</sub> **PO1** the properties and applications of Low, Medium and High carbon **PO2** steels. What is stainless steel? How they are classified and give their 7 Marks CO<sub>2</sub> PO1 b) L1 applications? **PO2** (**OR**) Draw the microstructures of Grey cast iron and White cast iron. CO<sub>2</sub> PO1 6. 14 Marks L3 Also mention its composition, properties and applications. **PO2** UNIT-IV 7. Compare brass and bronze materials. 7 Marks L3 CO<sub>2</sub> PO1 a) **PO2** List the properties and applications of copper. 7 Marks L1 CO<sub>2</sub> PO1 b) PO<sub>2</sub> (**OR**) 8. What is aluminium? Explain the types, properties and uses of 14 Marks L2 CO<sub>2</sub> PO1 aluminium alloys in detail. UNIT-V Write a brief note on Metal-Matrix Composites (MMCs) and 9. 7 Marks L1 CO<sub>2</sub> PO1 a) Ceramic-Matrix Composites (CMCs). **PO2** Discuss on the characteristics and classification of polymers. 7 Marks L1 CO<sub>2</sub> **PO1** b) PO<sub>2</sub> (**OR**) Explain classification, properties and applications of polymer 14 Marks L2 CO<sub>2</sub> 10 PO1

matrix composites. Also discuss its effect on environment.

Time: 3 hours		-	Max. Marks: 70			
		Answer One Question from each Unit All questions carry equal marks				
1.	a) b)	Find the Conjunctive normal form of $\sim (PVQ) \leftrightarrow (P \lor Q)$ . Is $[(P \to R) \land (Q \to R)] \to [(P \lor Q) \to R]$ a Tautology or not? Justify	7 Marks 7 Marks	L3 L4	CO1 CO1	PO3 PO2
		(OR)				
2.	a)	What is the first order predicate calculus statement equivalent to the following premise? "Every teacher is liked by the student".	7 Marks	L2	CO1	PO1
	b)	Given the truth value of P and Q as T and those of R and S as F. Find the Truth value for the following statements. i) $(P \neq R) \land (\sim Q \rightarrow S)$ . ii) $(P \lor (Q \rightarrow (R \land \sim P))) \neq (Q \lor (\sim S))$	7 Marks	L3	CO1	PO3
		$(1 \lor (Q \lor (R \land (-1))) \leftarrow (Q \lor (-3))$				
2	a)	Give an example for symmetric antisymmetric compatibility	7 Marka	τ2	$CO^{2}$	DOJ
5.	<i>a)</i>	and transitive relations.	/ WIAIKS	LJ	002	102
	b)	Determine the value of fog, gof, f <sup>1</sup> og and g <sup>-1</sup> of <sup>1</sup> for the functions	7 Marks	L3	CO2	PO7
		f and g defined by $f(x) = x^2 - 2$ , $g(x) = x + 4$ where R $\rightarrow$ R (set of real numbers).				
		(OR)				
4.	a)	Show that the "greater than or equal "relation is a partial ordering on set of integers.	7 Marks	L4	CO2	PO2
	b)	Draw the Hasse diagram of the set {2, 4, 8, 16} under the partial ordering relation "divides" and indicate those which are totally ordered	7 Marks	L3	CO2	PO3
		UNIT-III				
5.	a)	Show that the set of Natural numbers is a semi group under the operation $x^*y = max\{x, y\}$ and also calculate is it Monoid.	7 Marks	L3	CO3	PO1
	b)	Let $H = \{0, 2, 4\}$ . Check that $(H, +6)$ is a subgroup of $(z_6, +6)$ . (OR)	7 Marks	L3	CO3	PO2
6.	a)	Discuss that monoid homomorphism preserves the property of invertibility with an example.	7 Marks	L2	CO3	PO1
	b)	Examine the relation $a * b = a + b$ - $ab$ for all $a, b \in G$ is a group or not.	7 Marks	L4	CO3	PO2
		UNIT-IV				
7.	a)	Find the coefficient of $x^{23}$ and $x^{32}$ for the function $(1 + x^5 + x^9)^{10}$ .	7 Marks	L3	CO4	PO3
	b)	How many ways can 5 day's be chosen from each of the 12 months of an ordinary year of 365 day's.	7 Marks	L3	CO4	PO4

8.	a)	Solve the Recurrence Relation		7 Marks	L2	CO4	PO4
		$a_n - 9a_{n-1} - 26a_{n-2} - 24a_{n-3} = 0$ where $a_0 = 0$ , $a_1 = 1$ and	$a_2 = 10.$				
	b)	Compute the number of six letter combinations of the	he letter of	7 Marks	L3	CO4	PO2
	,	English alphabet. If no letter is to appear in the co	ombination				
		more than 2 times.					
		UNIT-V					
9.	a)	Define the following with examples:		8 Marks	L2	CO5	PO1
	,	i) Graph. ii) Degree of a vertex.					
		iii) Complete Graph. iv) Sub Graph.					
	b)	Write a short note on:		6 Marks	L2	CO5	PO4
		i) Euler circuit. ii) Hamiltonian circuit.					
		(OR)					
10	a)	Show that a tree with <b>n</b> vertices has exactly (n-1) edge	S.	7 Marks	L4	CO5	PO2
	b)	Show that the K <sub>7</sub> has Hamiltonian graph. How I	many edge	7 Marks	L4	CO5	PO2
		disjoint Hamiltonian cycles are there in $K_7$ ?	, ,

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- a) Four samples of water are collected at Naravari Palli (NP), Pullaiahgari Palli 8 Marks (PP), Kunchivari Palli (KP) and the other at Bandara Palli (BP). 100 ml of the each water sample collected at NP, PP, KP, and BP requires 28, 26, 20, 18 mL of EDTA solution on titrations respectively. 100 ml of SHW (0.28 gms of CaCO<sub>3</sub> per liter) requires 24 ml of EDTA solution on titration. Calculate and compare the degree of hardness and write the chemical reactions involved in titration.
  - b) Fluorides in water. Discuss effects on human Health and Nalgonda technique for 6 Marks deFluoridation of water.

#### (**OR**)

- a) Rishika want to investigate the reason for unforeseen explosion of Home boiler. 8 Marks After explosion the following deposits were found on analysis of boiler pieces. CaSO<sub>4</sub>, CaSiO<sub>3</sub>, MgSiO<sub>3</sub>, Fe<sub>2</sub>O<sub>3</sub>, Mg(OH)<sub>2</sub>, Na<sub>2</sub>FeO<sub>2</sub>, CaCO<sub>3</sub>. Looking at the data Rishika, discussed about how boiler has suffered before explosion predicting the impurities present in water. Can you write the report discussing the attributes for explosion?
  - b) Write the chemistry of estimation of Water hardness by EDTA method? Discuss 6 Marks why PH = 10 is to be maintained.

#### UNIT-II

3	a)	Discuss the preparation, properties and uses of PTFE and PMMA Resin.	8 Marks
	b)	Explain engineering applications of conducting polymers.	6 Marks
		(OR)	
4	a)	Distinguish between thermo plastics and thermo sets.	7 Marks
	b)	Explain the conduction mechanism of polyaniline.	7 Marks
		UNIT-III	
5	a)	Discuss the synthesis of Biodiesel by Trans esterification method.	7 Marks
	b)	Enumerate advantages, disadvantages and important applications of Biodiesel.	7 Marks
		(OR)	
6	a)	Write informative notes on recent trends in Nano Technology and future trends	10 Marks
		of Green Chemistry.	
	b)	Illustrate disadvantages of Nanomaterials.	4 Marks
		UNIT-IV	
7	a)	Distinguish Electrolytic cell and Electrochemical cell with neat diagrams and	10 Marks
		explain their in house and Industrial applications in your everyday life.	
	b)	Explain the significance of the title of this outcome, "Energy from Electron	4 Marks
		Transfer."	

- 8 a) Using values from the table of standard reduction potentials, calculate the cell 6 Marks potentials,  $\nabla G$  and log K under standard conditions of the following cells.
  - i)  $Al(s)/Al^{3+}(aq)//Ag^{+}(aq)/Ag(s)$
  - ii)  $Zn(s)/Zn^{2+}(aq)//Cr^{3+}(aq)/Cr(s)$
  - iii)  $Fe(s)/Fe^{2+}(aq)//Hg^{2+}(aq)/Hg(l)$
  - b) Identify the type of battery that is truly the power behind everyday life. They 8 Marks start and power vehicles, back up uninterruptible operations like hospitals, railroad signals, weapons systems, and air traffic controls, and help electric utilities shift loads among grids. Explain the chemistry with neat diagram.

#### (UNIT-V)

- 9 a) Analyze the possible means of rendering a metal cathodic to protect it from 7 Marks corrosion.
  - b) What is metallic corrosion? Pin holes on tin coated iron are more prone to 7 Marks corrosion of iron than those on zinc coated iron. Why?

#### (**OR**)

- 10 a) How will you assess the situation and identify the type of corrosion from the 8 Marks physical manifestation of the corroded components / parts?
  - b) Discuss the functions of lubricants with suitable examples. 6 Marks

\$P \$P \$P

## Answer One Question from each Unit

Max. Marks: 70

### All questions carry equal marks

### UNIT-I

- a) With the help of suitable diagram, explain the principle, construction and 10 Marks working of an optical fiber as a wave guide.
  b) In an optical fibre, the material has refractive indices of core and cladding of 1.6 4 Marks
  - and 1.3 respectively. What is the value of critical angle? Also calculate the acceptance angle and acceptance cone.

#### (OR)

- 2 a) Classify the different types of optical fibers.
  - b) List the applications of optical fibers in various fields. 4 Marks

### UNIT-II

- 3 a) Explain the de-Broglie hypothesis of duality of material particles.
  b) Derive time independent Schrodinger's wave equation for a free particle.
  (OR)
- 4 Show that the energies of a particle in infinite potential box are quantized. 14 Marks

### UNIT-III)

5 a) Explain direct and indirect band gap semiconducting materials.b) What is the principle of LED? Describe the construction and working of LED.6 Marks8 Marks

#### (**OR**)

- 6 a) Explain the ac frequency dependence of different polarizability in dielectrics.
  b) Explain ionic and orientation polarization.
  5 Marks
  9 Marks
  - UNIT-IV

7 a) Define:

8

9

a)

....

4 Marks

7 Marks

7 Marks

10 Marks

i) Super conductor. ii) Critical temperature. iii) Cooper pair.b) Explain penetration depth in superconductivity. Write any five applications of 10 Marks superconductors.

### (OR)

- Explain the BCS theory of superconductivity.
- b) Explain Josephson effects and their applications.

### UNIT-V

a) Describe the principle factors which affect the properties of nanomaterials.
b) Explain in detail about the fabrication of nanomaterials by pulsed laser
9 Marks deposition.

#### (OR)

10 a) Define nanomaterial. Give the classification of nanomaterials.
b) Discuss the synthesis of nanomaterial by using pulsed laser deposition method.
List the applications of nanomaterials in various fields of science and technology.

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS [Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, **Computer Science and Systems Engineering** 

Time: 3 hours

Max. Marks: 70

14 Marks

#### **Answer One Ouestion from each Unit** All questions carry equal marks

### UNIT-I

1  $x \sin x$  as a cosine series in  $(0, \pi)$  and 14 Marks Obtain the Fourier expansion of hence show that  $\frac{1}{1.3} - \frac{1}{3.5} + \frac{1}{5.7} - \dots = \frac{1}{4}(\pi - 2)$ . (OR)  $\begin{bmatrix} \frac{1}{x} - x & if \quad 0 < x < 1 \end{bmatrix}$ 

2

5

a)

Expand 
$$f(x) = \begin{cases} \frac{1}{4} - x, y & 0 < x < \frac{1}{2} \\ x - \frac{3}{4}, if & \frac{1}{2} < x < 1 \end{cases}$$
 as a **UNIT-II**

Using convolution theorem, evaluate  $L^{-1}\left(\frac{s}{(s^2+a^2)^2}\right)$ .

3 Show that inverse finite Fourier sine transform of 14 Marks  

$$F_{s}(n) = \frac{1}{\pi} \left\{ 1 + \cos n\pi - 2 \cos \frac{n\pi}{2} \right\} \text{ is } f(x) = \left\{ \begin{array}{c} 1, & 0 < x < \pi / 2 \\ -1, & \pi / 2 < x < \pi \end{array} \right.$$
(OR)
$$e^{-ax} \qquad 14 \text{ Marks}$$

Find the Fourier sine and cosine transforms of  $f(x) = \frac{e^{-ax}}{x}$  and deduce that 14 Marks  $\int_{-\infty}^{\infty} \frac{e^{-ax} - e^{-bx}}{r} \sin sx dx = \tan^{-1}(s/a) - \tan^{-1}(s/b).$ 

### UNIT-III)

7 Marks

Fourier series of sine terms.

- **b**) Using Laplace Transform method solve ( $D^2 + 1$ )y = sin t sin 2t, t > 0, 7 Marks if y = 1, Dy=0 when t = 0.
- (**OR**) Find the inverse transform of (i)  $\log(\frac{s+3}{s+4})$  and (ii)  $\cot^{-1} s$ . 6 7 Marks a)

b) Solve by Laplace Transforms, 
$$\frac{d^3y}{dx^3} + 2\frac{d^2y}{dx^2} - \frac{dy}{dx} - 2y = 0$$
,  $y(0) = 1$ , y 7 Marks  
 $y'(0) = y''(0) = 2$ .

### UNIT-IV

- 7 Write the initial value theorem and using it find  $u_1$ ,  $u_2$ a) 7 Marks from  $U(z) = \frac{4z^2 + 5z + 14}{(z-1)^4}.$ 
  - Find by applying the properties of Z transforms b) 7 Marks (i)  $Z[na^n]$  and (ii)  $Z[n^2a^n]$ .

#### (**OR**)

- Apply shifting theorem, evaluate  $Z[\cos(n+1)\theta]$ . 8 7 Marks a)
  - Applying Z-transforms, solve the difference equation  $u_{k+2} 2u_{k+1} + 3u_k = 2^k$ b) 7 Marks with  $u_0 = 2$ ,  $u_1 = 1$ .

### UNIT-V

9 The points of trisection of a tightly stretched string of length l with fixed ends 14 Marks are pulled aside through a distance d on opposite sides of the position of equilibrium and the string is released from rest. Construct a mathematical expression for the displacement of the string at any subsequent time and show that the midpoint of the string is always at rest.

(OR) Solve the linear differential equation  $(x^2 - yz) p + (y^2 - zx) q = z^2 - xy$ . 10 7 Marks a) Solve the equation  $x^2 \frac{\partial u}{\partial x} + y^2 \frac{\partial u}{\partial y} = 0$  by applying method of separation of 7 Marks b) variables.

#### **ENGINEERING MECHANICS** [Civil Engineering, Mechanical Engineering]

Max. Marks: 70

SVEC-16

Time: 3 hours

Answer One Question from each Unit. All questions carry equal marks.

### UNIT-I

- 1 a) If the maximum and minimum resultant forces of two forces acting on a particle 3 Marks are 40 kN and 10 kN respectively, then what would be the type of two forces?
  - b) Two forces are applied as shown to a hook support. Knowing that the magnitude 4 Marks of **P** is 35 N, determine the required angle  $\alpha$ , if the resultant R of the two forces applied to the support is to be horizontal.

c) An electric light weighing 15N hangs from a point C by two strings AC and BC 7 Marks as shown in the figure, AC is inclined at 60° to the horizontal and BC at 45° to the vertical as shown. Find the forces in the strings AC and BC.

- 2 a) State and explain Lami's theorem.
  - b) A girl is sitting in an old automobile tire which is suspended as shown. If the girl and the tire together have a mass of 60 kg, determine the tensions in the ropes AC and BC.

3 Marks

5 Marks

1

### UNIT-II

- 3 a) What are the common types of supports used in two dimensions? Explain the 3 Marks support reactions with suitable sketches.
  - b) The figure shows a pin-jointed plane truss loaded at the point M by hanging a 4 Marks mass of 100 kg. Determine the load in members LN and NK of the truss.

c) Determine the axial force in each bar of the plane truss loaded as shown in the 7 Marks figure.

4 a) Using the principle of virtual work, determine the effort P required to hold the 3 Marks weight of 100N in equilibrium in a system of two frictionless pulleys of the same diameter as shown in figure.

b) A rigid **T** is made out of metal bars AB and CD as shown in figure each 1.4 m 5 Marks long and weigh 40 kg and 30 kg respectively. It is supported in to a vertical plane. Compute angle  $\alpha$  for equilibrium, subjected to a load of 500N at B.

c) Using method of sections determine the forces in members BD and CD of the 6 Marks truss as shown in fig. All triangles are equilateral.

5 a) Two blocks connected by a horizontal link AB are supported on two rough 7 Marks planes as shown in figure. The coefficient of friction for block A on the horizontal plane is  $\mu$ =0.4. The angle of friction for block B on the inclined plane is  $\varphi$ =15°. What is the smallest weight W of block A for which equilibrium of the system can exist?

b) Determine the minimum value of force P required to cause motion of a 7 Marks 100 kg block to impend upon a 30° plane shown in figure. The coefficient of friction is 0.2.

(OR)

6 a) Referring to the figure the coefficient of friction is as follows: 0.25 at the floor, 0.30 at the wall, 0.20 between the blocks. Find the minimum value of a horizontal force P applied to the lower block that will .hold the system in equilibrium.

b) The 2225 N block shown in figure P-507 is in contact with 45° incline. The 6 Marks coefficient of static friction is 0.25. Compute the value of the horizontal force P necessary to

i) just start the block up the incline.

ii) just prevent motion down the incline.

- 7 a) Define the terms Polar Moment of Inertia with suitable sketch. 3 Marks
  - b) Calculate the polar moment of inertia about 'O' of the shaded area shown in the 6 Marks figure.

c) Explain the method of finding the centroids of composite area with suitable 5 Marks example.

#### (OR)

- 8 a) State the difference between centroid and center of gravity. 3 Marks
  - b) A semi-circular area is removed from the trapezium as shown in the figure. 7 Marks Determine the centroid of the remaining shaded area. (All dimensions in mm).

c) State and explain Pappus-Guldinus theorems for surface of revolution and 4 Marks volume of revolution.

- 9 a) i) State impulse-momenutum priniciple.
  - ii) A bullet of mass1kg if fired with a velocity of u m/s from a gun of mass 10kg. Find the ratio of kinetic energies of bullet and gun.

4 Marks

4

- A vehicle of mass 600 kg and moving with a velocity of 12 m/s strikes another 3 Marks **b**) vehicle of mass 400 kg, moving at 9 m/s in the same direction. Both the vehicles get coupled together due to impact. Find the common velocity with which the two vehicles will move. Also find the loss of kinetic energy due to impact.
- A car of mass 1500 kg is uniformly accelerated. Its speed increases from 7 Marks c) 50kmph to 75kmph after travelling a distance of 200m. The resistance to the motion of the car is 0.2% of the weight of the car. Determine (i) the maximum power required, (ii) the power required to maintain a constant speed of 75kmph.

#### (**OR**)

- i) A car starts from rest with a constant acceleration of 4m/sec<sup>2</sup>. Determine 10 4 Marks a) the distance travelled in the 7th second.
  - ii) A fly wheel of 550mm diameter is brought uniformly from rest to a speed of 350 r.p.m in 20 sec. Find velocity and acceleration of a point on its rim 3 seconds after starting from rest.
  - Two blocks of weights P and Q are connected by a flexible but inextensible cord 5 Marks **b**) and supported as shown in Fig. If the coefficient of friction between the block P and the horizontal surface is  $\mu$  and all other friction is negligible, find (i) the acceleration of the system and (ii) the tensile force S in the cord. The following numerical data are given: P= 53.4N; Q=26.7N;  $\mu=1/3$ .

A man weighing 712N stands in a boat so that he is 4.5m from a pier on the c) shore as shown in figure. He walks 2.4m in the boat toward the pier and then stops. How far from the pier will be at the end of this time? The boat weighs 890N, and there is assumed to be no friction between it and the water.

All questions carry equal marks.

### UNIT-I

- 1 State and explain the Kirchhoff's laws with suitable examples. 7 Marks a)
  - b) Compute the equivalent resistance across AB for the network shown below. 7 Marks

(**OR**)

- 2 State and explain the terms node, loop, path with examples. a)
  - Compute the equivalent resistance across voltage source using star/delta 8 Marks b) transformation. Also compute current delivered by voltage source.

If the voltage across 2  $\Omega$  resistor V<sub>0</sub> = -5 cos 2t, Compute the source current i<sub>s</sub>. 3 7 Marks a) And also draw the phasor diagram representing source current and V<sub>0</sub>.

Compute the V(t), shown in figure below. b)

7 Marks

If  $I_s = 20 \sin (10t+15^{\circ})$  A in the circuit shown in figure, compute the current 4 a) 7 Marks

passing through capacitor i<sub>0</sub>.

b) Compute the I<sub>s</sub>(t), circuit shown in figure below. Also compute the power 7 Marks delivered by voltage source. Represent the voltage and current relations in phasor diagram.

- 5 Explain the construction of a single-phase transformer. 5 Marks a) A transformer has 600 primary turns connected to a 1.5 kV supply. Determine the 6 Marks b) number of secondary turns for a 240 V output voltage, assuming no losses. State the reason for transformer is rated in kVA not in KW. 3 Marks c) (**OR**) 6 Explain how torque is developed in DC Motor. 5 Marks a) Write the expression for the torque produced by DC Motor. 3 Marks b) A 230V motor has an armature circuit resistance of 0.6  $\Omega$ . If the full load 6 Marks c) armature current is 30 A and no load armature current is 4 A, find the change in back E.M.F from no load to full load. UNIT-IV 7 a) Define the transducer. 3 Marks State and explain the basic requirements of transducer. 4 Marks **b**) State and explain the principle operation of load cell. 7 Marks c) (**OR**) State the need for data acquisition system, explain the data acquisition system 8 a) 7 Marks with the help of block diagram. **b**) Explain the principle operation of LVDT with the help of neat sketch. 7 Marks UNIT-V 9 Explain the diode acting as switch. 6 Marks a) A 5:1 transformer is connected to a half wave rectifier circuit with a 50 k $\Omega$  load. 8 Marks b) Find iv)  $I_{ac}$ . In put voltage is 220  $V_{pk}$ . i) V<sub>p</sub>; ii)I<sub>D</sub>; iii) Idc; 5 : -1  $220V_{pk}$  $\mathbf{v}_1$ 50kΩ (**OR**)
- 10 a) State and explain the terms Peak Inverse Voltage (PIV), ripple factor, efficiency 7 Marks and regulation of full wave rectifier.
  - b) The circuit shown in figure had excited by sinusoidal waveform, compute the 7 Marks voltage across the load and current passing through 6.8 k $\Omega$ . Also draw the waveforms of V<sub>L</sub>, I<sub>L</sub>, V<sub>D</sub> and I<sub>D</sub>. Assume diode acting as ideal. 7

### Answer One Question from each Unit

# All questions carry equal marks

### UNIT-I

1 Explain the operation of a p-n junction diode in forward biased and reverse 14 Marks biased condition. Draw its V-I characteristics.

(OR)

2 Draw the circuit of a half-wave-rectifier without filter and derive the expressions 14 Marks for ripple factor, % regulation, Efficiency and PIV.

### UNIT-II)

3 Define Early-effect; explain why it is called as base-width modulation. Discuss 14 Marks its consequences in transistors in detail.

#### (OR)

- 4 a) With reference to bipolar junction transistors, define the following terms and 7 Marks explain.
  - i) Emitter efficiency.
  - ii) Base Transportation factor.
  - iii) Large signal current gain.
  - b) How transistor acts as an amplifier?

### UNIT-III

5 Draw the circuit diagram of CC amplifier using hybrid parameters and derive 14 Marks expressions for A<sub>I</sub>, A<sub>V</sub>, R<sub>i</sub>, R<sub>o</sub>.

#### (OR)

6 Draw the circuit diagram and small signal equivalent of CB amplifier using 14 Marks accurate h-parameter model. Derive expressions for A<sub>V</sub>, A<sub>I</sub>, R<sub>i</sub> and R<sub>0</sub>.

### UNIT-IV

- 7 a) Explain the operation of FET with its characteristics and explain the different 10 Marks regions in transfer characteristics.
  - b) Give the classifications of FETs and their application areas. 4 Marks

#### (OR)

8 With the help of neat sketches and characteristic curves, explain the construction 14 Marks and operation of a JFET and mark the regions of operation on the characteristics.

### UNIT-V

9 Explain the tunneling phenomenon. Explain the characteristics of tunnel diode 14 Marks with the help of necessary energy band diagrams.

#### (OR)

10 Explain about :

- i) Varactor diode.
- ii) Schottky Barrier diode with necessary sketches.

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1Determine the ripple factor of an L-section filter comprising a 10H choke and<br/>8μF capacitor, used with a FWR. The DC voltage at the load is 50V. Assume the<br/>line frequency as 50Hz.14 Marks

### (OR)

- 2 A full wave rectifier circuit uses two silicon diodes with a forward resistance of 14 Marks 20 $\Omega$  each. A DC voltmeter connected across the load of 1K $\Omega$  reads 55.4 volts. Calculate:
  - i) Irms.
  - ii) Average voltage across each diode.
  - iii) Ripple factor.
  - iv) Transformer secondary voltage rating.

### UNIT-II

3 Design a self-bias circuit using silicon transistor to achieve a stability factor of 14 Marks 10, with the following specifications:

$$V_{CC} = 16V$$
,  $V_{BE} = 0.7V$ ,  $V_{CEO} = 8V$ ,  $I_{CO} = 4$  mA and  $\beta = 50$ .

#### (OR)

- 4 a) If the base current in a transistor is  $20\mu$ A when the emitter current is 6.4mA, 8 Marks what are the values of  $\alpha$ dc and  $\beta$ dc? Also determine the collector current.
  - b) Draw the input and output characteristics of a transistor in common emitter 6 Marks configurations.

### UNIT-III)

- 5 a) A self biased p channel JFET has a pinch off voltage of  $V_P = 5$  V and  $I_{DSS}=12$  10 Marks mA. The supply voltage is 12 V. Determine the values of  $R_D$  and  $R_S$  so that  $I_D = 5$  mA and  $V_{DS} = 6$ V.
  - b) Sketch the drain characteristics of MOSFET for different values of  $V_{GS}$  and 4 Marks mark different regions of operation.

#### (OR)

- 6 a) In an n-channel FET, the effective channel width is  $3 \times 10^{-4}$  cm and the donor 8 Marks impurity concentration is 1015 electrons/cm<sup>3</sup>. Find the pinch-off voltage.
  - b) Explain how a FET can be made to act as a switch. 6 Marks

### UNIT-IV

7 Explain pierce crystal oscillator and derive the equation for oscillation. 14 Marks (OR)

8 Explain with the relevant information, how the negative feedback improves 14 Marks stability, reduce noise and increase input impedance.

### UNIT-V

9 Give the construction details of UJT and explain its operation with the help of 14 Marks equivalent circuits.

#### (OR)

10 What is the photo diode? Explain its principle of operation and applications in 14 Marks detail.

- a) Illustrate the operation of BUCKET-SORT on the array A = <79, 13, 16, 64, 39, 7 Marks 20, 89, 53, 71, 42> by specifying the algorithm. Prove that sorting n elements with integer keys in the range 1<= key<= m takes O(m + n) time using bucket sort.</li>
  - b) Sort the sequence 8, 1, 4, 1, 5, 9, 2, 6, 5 by using Quick sort. 7 Marks

(OR)

2 a) Design Shellsort routine using Shell's increments. Trace Shellsort after each 7 Marks pass for an array

A = <81, 94, 11, 96, 12, 35, 17, 95, 28, 58, 41, 75, 15>

b) Trace the insertion sort algorithm with the given set of 6 numbers 44, 8, 74, 51, 7 Marks 32, 21 by Showing the passes and position moved. Derive the Worst case and Best case running time of Insertion Sort. What is the running time of insertion sort if all elements are equal?

### UNIT-II

- 3 a) What is a Stack? Explain any three operations performed on a Stack with 7 Marks required algorithms.
  - b) What is enqueue and dequeue? What are the applications of Queue? Explain. 7 Marks (OR)

a) Can you write a condition to check whether the stack is full or empty?b) What is priority Queue? Explain.7 Marks

### (UNIT-III)

- 5 a) Write the structure and enqueue() / insert() function and dequeue()/delete() 7 Marks function for a linked queue.
  - b) Explain the structure of a doubly linked list. Write an algorithm for inserting 7 Marks and deleting an element from doubly linked list. Illustrate the routines with examples.

#### (OR)

- 6 a) Write functions to perform the operations of push(), pop() and search() over 7 Marks Linked Stack
  - b) Differentiate singly linked list and circularly linked list.

### UNIT-IV

- 7 a) Show the result of inserting the following keys into an initially empty 2-3 tree: 7 Marks 3, 1, 4, 5, 9, 2, 6, 8, 7, 0.
  - b) Draw binary search trees of height 2, 3, 4, 5, and 6 on the set of keys  $\{1, 4, 5, 10, 16, 17, 21\}$ . 7 Marks

#### (OR)

8 Write routines to implement the basic binary search tree operations. 14 Marks

### UNIT-V

9 Write the following C routines to implement Open Addressing Hash Table 14 Marks iii) Insert. i) Initialization. ii) Find. iv) Display.

### (OR)

- 10 a)
- Illustrate Connected Graph and Complete Graph. Give an example Write a function to compute the hash values for a specific set of keys using the 7 Marks b) division/modulo method.

### Answer One Question from each Unit.

All questions carry equal marks.

### UNIT-I

- 1 a) Define the 'this' pointer with an example. Indicate the steps involved in referring 7 Marks to members of the invoking object.
  - b) Explain objected oriented concepts that are supported by a C++ program clearly 7 Marks giving the reasons why they are supported through examples.

#### (OR)

- 2 a) Define object oriented programming and explain feature of object oriented 7 Marks programming. How it is different than procedure oriented programming?
  - b) Write the general form of function. Explain the different types of argument 7 Marks passing techniques with example.

#### UNIT-II

3 a) What is the difference between global and local variables?
b) Explain the execution that takes place when an object is passed to a function as Pointer.
7 Marks

#### (OR)

- 4 a) When will the destructor of an object does not get called during function 7 Marks execution?
  - b) Explain how in line function differs from pre processor macro. Explain 7 Marks significant advantages of Inline function.

### (UNIT-III)

5 a) Write a C++ program using this pointer.7 Marksb) Explain about objects and L-values with examples.7 Marks

#### (**OR**)

- 6 Explain the use of constant pointers and pointers to constant with an example. 14 Marks
- 7 a) Write a program that assigns the memory using the copy constructors every time 7 Marks an object is created while at the same time initialization of the newly created object is undertaken using some other object of the same type.
  - b) What rules do you follow when inserters and extractors are overloaded with 7 Marks reference to a class in which they are defined?

#### (OR)

- 8 a) What operators cannot be overloaded as friend operators' functions? Explain the 7 Marks reasons.
  - b) Discuss different ways using which one object can be assigned to another object 7 Marks of the same type.

### UNIT-V

- 9 a) How can define I/O specific to a class? Explain.7 Marksb) Is hiding different from encapsulation explain through an example.7 Marks(OR)
- 10 a) In what way overloaded regular functions are different from overloaded template 7 Marks functions explain.
  - b) List different ways using which polymorphism is implemented within C++. 7 Marks

  b) Simplify the following Boolean function using K-map:
  6 Marks
  - $F(w, x, y, z) = \Sigma(0, 1, 2, 3, 7, 8, 10) + \Sigma(5, 6, 11, 15)$
  - c) Obtain the simplified expression in sum of products for the given Boolean 4 Marks expression  $F(x, y, z) = \Sigma(2, 3, 6, 7)$ .

#### (OR)

4 Simplify the following expression using K-map and implement with two-level 14 Marks NAND gate circuit: F = AB' + ABD + ABD' + A'C'D' + A'BC'

### (UNIT-III)

- 5 a) Show that a full-subtractor can be constructed with two half-subtractors and an 7 Marks OR gate.
  - b) A majority function is generated in a combinational circuit when the output is 7 Marks equal to 1, if the input variables have more 1's than 0's. The output is 0 otherwise. Design a 3 input majority function.

#### (OR)

- 6 a) Implement a full-adder using two half-adders and an OR gate.7 Marksb) Design a combinational circuit with three inputs and one output. The output is7 Marks
  - equal to logic 1, when the binary value of the input is less than 3. The output is logic 0 otherwise.

### UNIT-IV

7 a) Illustrate the functioning of an SR latch using two 2 input NOR gates.
7 Marks
b) What is a characteristic equation? Obtain the characteristic equations for SR, JK, 7 Marks
D and T flip-flops.

#### (OR)

- 8 a) Draw the circuit of JK flip-flop using NAND gates and explain its operation.7 Marksb) What is the difference between an excitation table and a characteristic table?7 Marks
  - Give the excitation tables for SR, JK, T and D flip-flops.

### UNIT-V

9 a) Differentiate between static RAM and Dynamic RAM.
b) Show how the PLA circuit would be programmed to implement the sum and carry outputs of a full-adder.
(OR)

10 Implement the following Boolean functions using PAL:  $F_1 = \Sigma m(0, 2, 5, 7, 8, 10, 12, 13); F_2 = \Sigma m(0, 2, 6, 8, 9, 14, 15)$

#### **ENGINEERING CHEMISTRY**

#### [Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

#### Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 a) Can distilled water be equated to the one obtained from demineralization process 7 Marks in all its aspects? Explain your answer with all necessary chemical reactions involved.
  - b) DISCUSS deionization process of water softening with neat DIAGRAM. Give 7 Marks the chemical reactions where ever is necessary.

#### (**OR**)

2 a) Central Water Commission (CWC) of Tirupati section reports on underground 8 Marks water sample (in mg/L) at the proposed site for the construction of thermal power plant (300 Mw) near Vijayawada is as follows:

 $Ca(HCO_3)_2 = 220, MgCl_2 = 130, CaSO_4 = 98, Mg(HCO_3)_2 = 56, MgSO_4 = 84,$ 

DO = 8, NaCl = 4 and  $Na_2CO_3 = 22$ .

Discuss in detail the operational troubles suffer by the boiler, if above sample of water is to be fed into  $56.24 \times 10^4 \text{ kg m}^{-2}$  boiler.

b) Discuss the role of polymers in purification of water by using advanced 6 Marks methods.

### UNIT-II

- 3 a) Discuss the synthesis, properties and applications of poly carbonates.
  b) Explain the mechanism of degradation and applications of Bio-degradable
  7 Marks
  - b) Explain the mechanism of degradation and applications of Bio-degradable / Marks polymers.

#### (OR)

- 4 a) What is self lubricating plastic? Give examples. Name some specific 5 Marks applications.
  - b) Discuss types of composites and their industrial applications. 9 Marks

#### UNIT-III)

5	a)	What are the basic components of GREEN CHEMISTRY research? Discuss	7 Marks
		with the suitable examples.	
	b)	Discuss the applications of Nanomaterials.	7 Marks
		(OR)	
6	a)	Explain wet chemical synthesis of Nanomaterials.	7 Marks
	b)	Discuss the applications of GREEN CHEMISTRY in science and technology.	7 Marks
		(UNIT-IV)	
7	a)	Describe the working principle construction and chemistry of $1.5 V.7n$ MnO.	7 Marks
,	u)	cell.	
	b)	Explain why an electronic nose, in principle can measure (identify) a very large	7 Marks

number of compounds (mixtures, smells etc) despite using a limited number of sensors.

(**OR**)

8 a) Identify the type of battery commonly used in each of these consumer electronic 7 Marks products in olden days and today. Discuss their construction and Chemistry. Assume none uses solar cells.

i) Digital Camera. ii) MP3 Player.

b) Discuss the role of chemical sensor in determination of PH of unknown solution. 7 Marks

### UNIT-V

- 9 a) Identify the factors involved in influencing corrosion in the given underground 7 Marks and marine structures and explain.
  - b) How will you assess the situation and select the lubricant? Also explain 7 Marks Mechanism of Lubrication.

#### (OR)

- a) A student, in replying to an examination question, writes: 'Corrosion of metal is 10 Marks due to electrical currents of electrochemical origin, Stop current stop corrosion'. Comment on the correctness or otherwise of this statement on the basis of your knowledge of electrochemistry.
  - b) Write the qualities of a good lubricant.

4 Marks

Tim	e: 3 h	ours Max.	Marks: 70
		Answer One Question from each Unit.	
		All questions carry equal marks.	
		UNIT-I	
1	a)	Describe an optical fiber communication system.	6 Marks
	b)	Determine the numerical aperture of a step index fibre when the core refractive	4 Marks
		index $n_1 = 1.5$ and the cladding refractive index $n_2 = 1.48$ . Also find out the	
		maximum angle for the entrance of light, if the fibre is placed in air.	
	c)	Discuss any two applications of lasers in Medicine.	4 Marks
		(OR)	
2	a)	Explain the conditions required for achieving lasing action.	4 Marks
	b)	Discuss the construction and working of a four level laser system you know with	6 Marks
		the help of energy level diagram.	
	c)	Summarize the advantages of optical fiber communication system over conventional system.	4 Marks
		UNIT-II )	
3	a)	Explain variation of potential for an electron moving in a one-dimensional	6 Marks
	,	lattice.	
	b)	Draw and explain band diagrams for conductors, insulators and semi-conductors.	6 Marks
	c)	Explain Fermi-energy level.	2 Marks
		(OR)	
4	a)	Write a short note on electron energy levels of an isolated atom and a solid material.	6 Marks
	b)	Explain the considerations that led de-Broglie to postulate matter waves.	8 Marks
		(UNIT-III)	
5	a)	Explain construction and working of the following with a sketch.	8 Marks
		i) LED. ii) Photo-Diode.	
	b)	How a p-n junction formed? Explain p-n junction diode with the help of an energy band diagram.	6 Marks
		(OR)	
6	a)	What is an extrinsic semiconductor? How does impurities affect the electrical	10 Marks
		conductivity of a doped semiconductor? Write expression for conductivity of an	
		n-type semiconductor.	
	b)	Find the electrical conductivity of intrinsic silicon whose charge concentration is	4 Marks
		1.5 x $10^{10}$ /m <sup>3</sup> and the mobility of electron and hole are $0.13$ m <sup>2</sup> /V-s and	
		0.05m <sup>2</sup> /V-s respectively.	
		UNIT-IV	
7	a)	Describe the requirements of an acoustically good hall.	6 Marks
	b)	Explain the parameters to judge the quality of acoustics of a room.	8 Marks
		(OR)	
8	a)	Write a short note on Absorption coefficient. Suggest a method for measuring	10 Marks
		absorption coefficient.	

Suggest remedies to improve acoustics of buildings. b) 4 Marks

How is nano-world uniquely different? 9 6 Marks a) Discuss the synthesis of nano materials by pulsed laser deposition method with b) 8 Marks appropriate figures. Discuss its advantages. (OR) Discuss important concerns of material scientists in the Nano science. 10 6 Marks a) Discuss the mechanical properties of nano materials. How can these be used in b) 8 Marks

TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit. All questions carry equal marks.

### 

1

2

4

Draw the graph of the triangular periodic signal defined by 14 Marks  $f(t) = \begin{cases} \pi \ t, & 0 \le t \le 1 \\ \pi \ (2 - t), & 1 \le t \le 2 \end{cases}$ and f (t+2) = f(t). Express the signal as series of sin and cosine terms. (OR) Represent the modified saw toothed wave form f(x) = 0 for  $-\pi < x \le 0$ = x for  $0 < x \le \pi$  as a Fourier series and hence evaluate

 $1 + \frac{1}{3^2} + \frac{1}{5^2} + \dots - \dots - \dots$ 

### UNIT-II

3 Find the Fourier sine transform of  $e^{-ax}/x$ . 14 Marks

(OR)

14 Marks

6 Marks

Using Fourier integral representation show that  $\int_{0}^{\infty} \frac{\omega \sin x\omega}{1+\omega^{2}} d\omega = \frac{\pi}{2} e^{-x} \text{ for } x > 0.$  14 Marks

#### (UNIT-III)

5 a) Find the Laplace transform of the square wave function E(t) of period 8 Marks T = 2 defined as  $E(t) = \begin{cases} 1,0 \le t < 1\\ 0,1 \le t < 2 \end{cases}$ .

(**OR**)

b) Determine  $L[\sin^2 t]$ .

6

Determine the Laplace transform of  $\frac{\sin^2 t}{t}$ . Also, evaluate the integral 14 Marks

$$\int_{0}^{\infty} e^{-t} \frac{\sin^2 t}{t} dt.$$

#### (UNIT-IV)

7 a) Evaluate  $Z(n \cos n\theta)$ . b)  $If U(z) = \frac{2z^2 + 3z + 12}{(z-1)^4}$ , then determine **u**<sub>3</sub>. 6 Marks 8 Marks

(OR)

8 Using Z-transform, solve  $u_{n+2} + 4u_{n+1} + 3u_n = 3^n$  with  $u_0 = 0, u_1 = 1$ . 14 Marks

UNIT-V

9 Find the differential equation whose general solution is given by 14 Marks u(x,t) = f(x-ct) + g(x+ct), where **f** and **g** are arbitrary twice differentiable functions.

#### (OR)

10 Solve  $\frac{\partial^2 z}{\partial x^2} + z = 0$ , given that when x = 0,  $z = e^y$  and  $\frac{\partial z}{\partial x} = 1$ . (4) Marks

**ENGINEERING MECHANICS** 

[Civil Engineering, Mechanical Engineering]

Time: 3 hours

#### Max. Marks: 70

### Answer One Question from each Unit.

All questions carry equal marks.

- UNIT-I
- 1 Explain free body diagram with examples. a)
  - Determine the x and y components of each of the forces shown and also find the 4 Marks **b**) resultant of all these forces.

Two identical rollers each of weight Q = 445N are supported by an inclined 7 Marks c) plane and a vertical wall as shown in figure. Assuming smooth surfaces, find the reactions induced at the points of support A, B and C.

- 2 Distinguish among the equilibrium, resultant and equilibrant. 3 Marks a)
  - The force system shown in fig. below has a resultant of 900 N pointing up along b) positive Y axis. Find the value of F and  $\alpha$  required to give this resultant.

The top end of vertical boot is connected by two cables having tension  $T_1$ =500N c) 7 Marks and T<sub>2</sub>=1500N as shown in figure. The third cable AB is used as a guy wire. Determine the tension in cable AB if resultant of the three concurrent forces acting at A is vertical. Also find the resultant.

3 Marks

1

## UNIT-II

- 3 Distinguish between moments and couple with suitable applications. a)
  - For the loading on truss as shown in the figure, find the force in member CD. b)

R D L L L E 1 kN 1 kN

The diameters of the two steps of the pulley of a Weston's differential pulley c) 7 Marks block are 40cm and 30cm respectively. Determine the value of the effort required to lift a load of 4KN using the principle of virtual work. Neglect the frictional forces.

- Explain concept of virtual work with suitable example. 4 a)
  - 3 Marks Consider a truss PQR loaded at P with a force F as shown in the figure. Find the b) 4 Marks tension in the member QR.

Determine the reactions at rollers B and C of the beam shown in figure using the c) 7 Marks method of virtual work.

3 Marks 4 Marks
# UNIT-III

5 a) If the coefficient of friction are known to be  $\mu_s = 0.30$  and  $\mu_k = 0.25$  between all 8 Marks surfaces of contact in figure, find the smallest force P required to start block D moving when (i) block C is restrained by cable AB as shown, and (ii) cable AB is removed. If P = 1500N, determine the resultant of the friction forces exerted on block D if block C is restrained as shown.

b) The block A shown in figure weighs 2000N. The cord attached to if passes over 6 Marks a frictionless pulley and supports a weight equal to 800N. The value of coefficient friction between A and the horizontal plane is 0.35. Determine the horizontal force P: (i) If the motion is impending towards the left. (ii) if the motion is impending towards the right.

6 a) What is the least value of P in the system shown in figure to cause the motion to 7 Marks impend? Assume the pulley is smooth and coefficient of friction between the other contact surfaces is 0.2.

b) What should be the value of the angle  $\theta$  in figure so that the motion of the 90 N 7 Marks block impends down the plane? The coefficient of friction  $\mu$  for all the surfaces is 1/3.

- 7 a) What are the centroidal coordinates of a quarter circular area placed in second 3 Marks quadrant of coordinate system?
  - b) Calculate the Moment of Inertia of shaded portion about centroidal x-axis. 7 Marks

c) For the plane area shown, determine the centroid with respect to the x-axis. 4 Marks

- 8 a) Explain the concept of mass moment of inertia. What is the relation between 3 Marks area moment of inertia and mass moment of inertia?
  - b) Referring to the figure, determine the coordinates  $x_c$  and  $y_c$  of the center of a 7 Marks 100mm diameter, circular hole cut in a thin plate so that this point will be the centroid of the remaining shaded area.

c) Compute the moment of inertia of the composite area about the x-axis.

4 Marks

#### UNIT-V 9 i) State law of conservation of momentum. 4 Marks a) ii) A pulley 2 m in diameter is keyed to a shaft which makes 240 r.p.m. Find the angular and linear velocities of a particle, on the periphery of the pulley. A 10 gm bullet is shot horizontally in a wood block of mass 1 kg. The bullet gets 3 Marks b) embedded in the block and the block is displaced on a rough horizontal table $(\mu=0.2)$ through 1 m. What was the velocity of bullet? A man of mass 75 kg and a boy of mass 25kg drive off the end of a boat of the 7 Marks c) mass 20kg so that their relative horizontal velocity with respect to the boat is 3m/s. If initially the boat is at rest find its final velocity if (i) the two dive off simultaneously (ii) the man dives first followed by the boy. (**OR**) 10 (i) An elevator is required to lift a body of mass 65 kg. Find the acceleration of 4 Marks a) the elevator, which could cause a pressure of 800 N on the floor. (ii) Anelevatorweighing100 kN attains an upward velocity of 4m/s in two seconds with uniform acceleration. What would be the tension in the cable? The wheel of a small gyroscope is set spinning by pulling on a string wound 3 Marks b)

- b) The wheel of a small gyroscope is set spinning by pulling on a string wound 3 Marks around the shaft. Its moment of inertia is I=5562.5 kg-mm<sup>2</sup> and the diameter of the shaft on which the string is wound is 12.5mm. If 750mm of string is pulled off with a constant force of 53.4N, what angular velocity will be imparted to the wheel?
- c) Two weights P and Q are connected by the arrangement shown in figure 7 Marks neglecting friction and the inertia of the pulleys and cord, find the acceleration a of the weight Q. Assume that P = 178N and Q = 133.5N.

4 a) Compute the Z<sub>in</sub>, circuit shown below.

b) Determine the  $Z_f$  and I circuit shown below.

- 5 State the applications of three phase induction motors. Also state the salient 7 Marks a) features of three phase induction motors.
  - b) A single-phase 800V/100V, 50Hz transformer has a maximum core flux density 7 Marks of 1.294 T and an effective cross-sectional area of  $60 \text{ cm}^2$ . Calculate the number of turns on the primary and secondary windings.

#### (**OR**)

- 6 Make use of Faraday's law derive the equation for the EMF induced in a DC 5 Marks a) machine.
  - b) State the applications of DC compound motors.
  - 3 Marks A 4-pole, 440V shunt motor takes 8A on no load, the no load speed being 6 Marks c) 750 R.P.M it has shunt field current of 1.5 A. Calculate the full load speed of the motor if it takes 100A at full load. Armature resistance is  $0.25\Omega$ . Neglect armature reaction.

# UNIT-IV)

7 Explain the operation of ammeter using block diagram. 7 Marks a) State the instrument measures the thickness of conductor; explain the procedure b) 7 Marks to measure the same

### (**OR**)

- 8 a) State the difference between stain gauge and load cell. 7 Marks State and explain the method of current measurement by passive method. b) 7 Marks UNIT-V
- 9 How the transistor act as an amplifier? Explain. a)
  - Derive the current gain of common emitter configuration transistor amplifier 7 Marks b) using voltage divider biasing.

### (**OR**)

- 10 State the difference between diode and transistor, as both are semiconducting a) 7 Marks switches.
  - **b**) State the need for amplifier in electronic circuits. Explain how a NPN Transistor 7 Marks act as amplifier.

69 68 (A) 7 Marks

#### FOUNDATIONS OF DATA STRUCTURES

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours

# Answer One Question from each Unit.

All questions carry equal marks.

## UNIT-I

1 a) Sort the sequence 80, 10, 40, 10, 50, 90, 20, 60, 50 by using

- i) Merge sort.
- ii) Quicksort, with the middle element as pivot and no cutoff (show all steps) Quicksort, with median-of-three pivot selection and a cutoff of 3.
- b) Insertion Sort procedure uses a linear search to scan (backward) through the 7 Marks sorted subarray A  $[0 \dots p 1]$ . We can use a binary search instead to improve the overall worst-case running time of insertion sort to  $\Theta(n \log n)$ . Write routines to implement it.

#### (**OR**)

- 2 a) Write about Radix sort and sort the following numbers using radix sort. 7 Marks 77, 12, 8, 39, 27, 21, 44, 18, 6, 427, 117, 237, 5671 and 600
  - b) Some of the sorting methods are not suited for use with linked lists. Which ones, 7 Marks and why not? Write linked list version of any sorting algorithm.

### (UNIT-II)

3	a)	Write down the algorithms to perform the operations on a stack and explain them.	7 Marks
	b)	How are priority queues implemented using a single queue.	7 Marks
		(OR)	

- 4 a) Construct the prefix and postfix form of the following given expression. 7 Marks i) (A-B\*C-D)/(E+F). ii) ((A+B)\*C-(D-E)^(F+G)). iii) A+B\*(C-D)/(P-R).
  - b) Write an application program to maintain a list of items as a circular queue which 7 Marks is implemented using an array. Simulate insertion and deletion to the queue and display a graphical representation of queue after every operation

### (UNIT-III)

- 5 a) What are the advantages of linked implementation of stack over array 7 Marks implementation?
  - b) Outline an algorithm to merge two ordered singly linked lists of integers into one 7 Marks ordered list.

### (**OR**)

- 6 a) Write the peek()routine to implement stack ADT using Arrays. How does a stack 7 Marks implemented using a linked list differs from a stack implemented using an array?
  - b) Write the routines to implement linear queue using Linked lists which reads an 7 Marks integer and prints its digits in reverse order.

### (UNIT-IV)

- 7 a) Create B-tree of order 4 (t = 2) created by inserting the following data arriving in 7 Marks sequence  $\langle 92, 24, 6, 7, 11, 8, 22, 4, 5, 16, 19, 20, 78 \rangle$ .
  - b) Write a C function to insert an element into an AVL tree with single and double 7 Marks rotations.

#### (**OR**)

Max. Marks: 70

7 Marks

8 Write the insert (), delete () and find () routines for a binary search tree. What 14 Marks are the running times of your routines? Write an algorithm that counts the number of nodes in a binary tree.

# UNIT-V

9 a) In a Graph, define path, closed path and simple path with an example
b) Draw the complete undirected graphs on one, two, three, four and five vertices.
7 Marks
7 Prove that the number of edges in a *n* vertex complete graph is *n*(*n* - 1)/2.

### (OR)

10 Show the result of inserting keys  $\{89, 18, 49, 58, 69\}$  into a open addressing table 14 Marks using the hash function h (k) = k mod 10 with the following collision resolution strategies. Outline the algorithm for inserting and deleting a key into a open addressing table.

i) 
$$f_{(i)} = i$$
. ii)  $f_{(i)} = i^2$ . iii)  $f_{(i)} = i^*h_2(x)$ .

Let the table have 10 slots and  $h_2(x) = 7 - (x \mod 7)$ .

[Computer Science and Engineering, Information Technology and

**Computer Science and Systems Engineering** 

Time: 3 hours

7

Max. Marks: 70

Answer One Question from each Unit. All questions carry equal marks.

### UNIT-I

- Compare and contrast C and C++ through 3 similarities and 3 dissimilarities 1 7 Marks a) citing the example. What is inheritance? Are the private variables of parent class can be inherited into b) 7 Marks a child class? Explain with an example. (OR)2 What is name space and what location in the C++ program are they defined? 7 Marks a) In what way structures in C are different from structures in C++? Develop a 7 Marks **b**) structure in C++ that encapsulate attributes of an entity which is a "purchase order" UNIT-II ) 3 What is recursion? Write an application program to find factorial using recursion. 7 Marks a) Explain about storage class in C++. 7 Marks b) (**OR**) What is the difference between Void, Boolean and I/O functions? 4 7 Marks a) Differentiate between data types and derived data types. 7 Marks b) (UNIT-III) With an example, explain nested selection statements. 5 a) 7 Marks Write a program to copy string to other without using in-built function. 7 Marks b) (**OR**)
- Differentiate between passing by reference and passing by constant reference. 7 Marks 6 a) Write a program to swap two numbers using pointers. b) 7 Marks

### (UNIT-IV)

"Template functions are implicitly overloaded". Justify. 7 Marks a) How will you be able to take control when a system based exception occurs and 7 Marks b) avoid terminating your program when such exception takes place?

#### (**OR**)

- Explain the difference that exists in passing objects, pointers to the objects and 8 7 Marks a) references to the objects as function arguments.
  - What are the limitations of overloading an [] operator? Justify the uses of [] 7 Marks b) operator overloaded function.

# UNIT-V

- What are polymorphic classes? Explain how polymorphism is implemented using 9 7 Marks a) such classes.
  - Explain the way dynamic polymorphism is implemented with the help of an 7 Marks b) example program (A pointer to a parent object can hold the object of either the parent or the child).

### (**OR**)

- In what way member functions are different from manipulator functions which 10 7 Marks a) are meant for undertaking the formatted I/O? Show the difference through an example.
  - Explain the way ambiguities resolve in the Hydride Inherence. b)

### **DIGITAL LOGIC DESIGN**

[Computer Science and Engineering, Information Technology and Computer Science and Systems Engineering]

Tim	e: 3 h	Durs Max.	Marks: 70
		Answer One Question from each Unit.	
		All questions carry equal marks.	
		UNIT-I	
1	a)	Convert the following expressions into sum of products and product of sums:	8 Marks
		i) $(AB + C) (B + C'D) (AB + C)(B + C'D)$	
		ii) $x' + x(x + y')(y + z')$	
	b)	Verify that the following operations are commutative but not associative.	6 Marks
		i) NAND. ii) NOR.	
		(OR)	
2		Given the following Boolean function:	
		F = xy'z + x'y'z + w'xy + wx'y + wxy	
	a)	Obtain the truth table of the function and draw the logic diagram using the original Boolean expression	6 Marks
	b)	Simplify the function to minimum number of literals using principles of Boolean	4 Marks
	,	algebra.	
	c)	Draw the logic diagram from the simplified expression and compare the total	4 Marks
		number of gates with the diagram of part (a)	
		UNIT-II	
3		Simplify the following Boolean functions using K-maps:	
	a)	$F(A, B, C, D) = \Sigma(2,3,10,11,12,13,14,15)$	7 Marks
	b)	$F(A, B, C, D) = \Pi(0, 1, 2, 3, 4, 6, 12)$	7 Marks
		(OR)	
4		Simplify the following Boolean functions using four-variable maps:	
	a)	$F = \Sigma(0, 1, 2, 4, 5, 7, 11, 15)$	7 Marks
	b)	$F = \Sigma(0,2,4,5,6,7,8,10,13,15)$	7 Marks
		(UNIT-III)	
5		What is the importance of a carry look ahead adder? Explain its operation for	14 Marks
		4 bit addition with neat diagrams.	
		(OR)	
6	a)	Implement a full adder function using 4 x 1 multiplexers.	7 Marks
	b)	Illustrate the operation of 8 to 3 line encoder.	7 Marks
		(UNIT-IV)	
7	a)	The content of a 4-bit register is initially 1101. The register is shifted six times	4 Marks
		to the right with the serial input being 101101. What is the content of the register	
	1 \	after each shift?	10 14 1
	b)	Design a synchronous BCD counter with 1 flip-flops.	10 Marks
0	2)	(UK) Draw the sirewit of 2 hit Johnson counter Explain its energian by platting the	7 Mortes
0	a)	output waveforms	/ Wialks
	h)	Design a counter with the repeated binary sequence: 0 1 3 7 6 4	7 Marks
	5)	Use T flip-flops and if the counter enters any invalid state the next state must	/ 1/10/103
		be 0.	

# UNIT-V

- 9 a) Compare PROM, EPROM, EEPROM.
  - b) Design a combinational circuit using a ROM. The circuit accepts a 3 bit number 8 Marks and generates an output binary number equal to the square of the input number. (OR)

10 A combinational circuit is defined by the functions

 $F_1(A, B, C) = \Sigma m(3, 5, 6, 7);$   $F_2(A, B, C) = \Sigma m(0, 2, 4, 7)$ Implement the circuit with a PLA having three inputs, four product terms and two outputs.

#### Time: 3 hours

5.

Max. Marks: 60

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1. 6 Marks L1 CO1 PO1 a) Find the Fourier series of the function  $f(x) = x + x^2 in$  (0,3). Applying Fourier integral theorem. b) show that 6 Marks L3 CO1 **PO2**  $e^{-x}\cos x = \frac{2}{\pi}\int_{0}^{\infty}\frac{\lambda^{2}+2}{\lambda^{4}+4}\cos\lambda xd\lambda.$ 

#### (**OR**)

- 2. a) Find the half-range sine series of 6 Marks L1 CO1 PO1  $f(x) = \begin{cases} \frac{1}{4} - x, & 0 < x < \frac{1}{2} \\ x - \frac{3}{4}, & \frac{1}{2} < x < 1 \end{cases}$ in  $0 \le x \le 1$ 
  - b) Find the Fourier cosine transform of  $f(x) = e^{-ax}$ , a > 0 and 6 Marks L1 CO1 PO1 hence deduce the integral  $\int_{0}^{\infty} \frac{\cos px}{a^{2} + p^{2}} dp$

3. a) Determine 
$$L\{f(t)\}$$
 where  $f(t) = t^2 e^{-3t} \sin 2t$ .  
b) Find the Laplace transform of  $\int_{0}^{t} \frac{1 - e^{-t}}{t} dt$ .  
6 Marks L3 CO1 PO1  
6 Marks L1 CO1 PO1

4. a) (OR) Applying Laplace transforms, evaluate  $\int_{0}^{\infty} te^{-3t} \sin t \, dt$ . 6 Marks L3 CO1 PO2

b) Find the Laplace transformation of the rectified semi-wave 6 Marks L1 CO1 PO2 function defined by  $f(t) = \begin{cases} \sin \omega t, & 0 < t < \frac{\pi}{\omega} \end{cases}$ 

a)  
Find the inverse Laplace transform of 
$$\frac{s+2}{(s^2+4s+5)^2}$$
.  
b)  
Applying convolution theorem, evaluate  $L^{-1}\left[\frac{s^2}{(s^2+a^2)(s^2+b^2)}\right]$ .  
6 Marks L1 CO1 PO1  
6 Marks L3 CO1 PO2

(**OR**)

6. Apply Laplace transform technique to solve 12 Marks L3 CO1 PO2  $(D^2 - 2D + 1)x = e^t$ , if x(0) = 2, x'(0) = -1.

(UNIT-IV)

- 7. Show the sum of the Eigen values of the matrix 12 Marks L2 CO2 PO1  $\begin{bmatrix} 7 & 2 & 2 \\ 2 & 4 & 2 \end{bmatrix}$ 
  - $A = \begin{bmatrix} -6 & -1 & 2 \\ 6 & 2 & -1 \end{bmatrix}$  is equal to the trace of the matrix and

product of the Eigen values equal to its determinant.

#### (OR)

- 8. a) Solve the system of linear equations 6 Marks L3 CO2 PO1 5x+3y+7z=4, 3x+26y+2z=9, 7x+2y+10z=5.
  - b) Change the quadratic form  $3x^2 + 5y^2 + 3z^2 2xy + 2xz 2yz$  to 6 Marks L2 CO2 PO1 sum of squares form by an orthogonal transformation.

### UNIT-V

9. Suppose  $T: \mathbb{R}^2 \to P_1$  is a linear transformation such that 12 Marks L1 CO2 PO2  $T\begin{bmatrix}1\\1\end{bmatrix} = 2 - 3x + x^2$  and  $T\begin{bmatrix}2\\3\end{bmatrix} = 1 - x^2$ , then find  $T\begin{bmatrix}-1\\2\end{bmatrix}$  and  $T\begin{bmatrix}a\\b\end{bmatrix}$ , where P<sub>2</sub> is a vector space of polynomials of degree at most two over R.

### (OR)

- 10 a) Show that the set  $\{1+x, x+x^2, 1+x^2\}$  forms a basis for the vector 8 Marks L2 CO2 PO1 . space P<sub>2</sub>of polynomials of atmost degree two over R.
  - b) Find the Linear transformation  $T: \mathbb{R}^3 \to \mathbb{R}$  defined by 4 Marks L1 CO2 PO1 T(1,1,1) = 3, T(0,1,-2) = 1, T(0,0,1) = 2.

Max. Marks: 60

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

a) Figure shows the connecting rod BA and crank AO. At the given 6 Marks L3 CO1 PO1 position, the connecting rod exerts 2500N of force on crank pin at A. Resolve this force into vertical and horizontal components at A. Also resolve the given force at A along AO and perpendicular to AO.

b) Two smooth cylinders with diameters 250mm and 400mm 6 Marks L4 CO1 PO1 respectively are kept in a groove with slanting surfaces making angles 60° and 30° as shown in the figure. Determine the reactions at contact points A, B and C.

a) An electrical light weighing 15N hangs from a point C by the two strings AC and BC as shown in the figure. AC is inclined at 60° to the horizontal and BC at 45° to the vertical. Using Lami's theorem, find the forces in the strings AC and BC. Find the tension in each cable for the given figure.

6 Marks L4 CO1 PO1 PO2 b) A cantilever truss is loaded as shown in figure, find axial force in 6 Marks L4 CO1 PO1 the members BC and CD. PO2

UNIT-II

3. a) Determine the necessary force P acting parallel to the plane to 8 Marks L4 CO1 PO1 cause motion to impend as shown in the figure. Assume coefficient of friction as 0.25 and the pulley to be smooth.

	b)	Discuss briefly about ladder friction and wedge friction.	4 Marks	L2	CO1	PO1
						PO2
		(OR)				
4.	a)	Discuss briefly about angle of repose and cone of friction.	4 Marks	L2	CO1	PO1
						PO2
	b)	In the given figure, weights of two blocks A and B are 100N and	8 Marks	L4	CO1	PO1
	,	150N respectively. Find the smallest value of the horizontal force				PO2
		F to just move the lower block B if				

- i) the block is restrained by a string.
- ii) when the string is removed.

5.	a)	Find the centroid of a quarter circular lines from basic principles.	6 Marks	L4	CO1	PO1
						PO2
	b)	Derive the mass moment of inertia of a thin disc.	6 Marks	L4	CO1	PO1
						PO2

6. Find the area moment of inertia about the centroidal axes for a 12 Marks L4 CO1 PO1 given area shown in the figure. PO2

		20 cm				
		5 cm				
		30 cm 5 cm				
		5 cm				
		40 cm

### ELECTRIC CIRCUITS [Electrical and Electronics Engineering]

Time: 3 hours		Max. Marks: 60
	Answer One Question from each Unit	
	All questions carry equal marks	

## UNIT-I

- 1. a) Explain clearly about Star-delta and delta-Star transformation. 6 Marks L3 CO1 PO2
  - b) In the network shown below, find all branch currents and voltage 6 Marks L3 CO1 PO3 drops across all resistors.

#### (OR)

2. a) Find the value of  $V_a$  for the following circuit using KVL. 6 Marks L3 CO1 PO3

b) Using nodal analysis find all branch currents for the following 6 Marks L3 CO1 PO2 circuit.

3. a) Determine the effective value of the wave form shown in figure. 6 Marks L3 CO1 PO2

b) An inductance of 0.5H, a resistance of 5 $\Omega$  and a capacitance of 6 Marks L1 CO2 PO1  $8\mu$ F are in series across a 220V ac supply. Calculate the frequency at which the current flowing through the circuit becomes maximum. Also, find bandwidth, half power frequencies and voltage across capacitance at resonance.

(OR)

4. a) Find the form factor for the following waveform shown in figure 6 Marks L2 CO2 PO1 below.

b) Elucidate measurement of power and power factor of a balanced 6 Marks L2 CO2 PO1 3 phase load with neat sketch using two watt meter method.

- 5. a) Show that under the condition of maximum power transfer, the 6 Marks L2 CO3 PO1 efficiency of the circuit is 50 %.
  - b) State and explain Millman's theorem with suitable example. 6 Marks L3 CO1 PO1

(OR)

6. a) Verify Superposition theorem for  $4\Omega$  resistor for the following 6 Marks L1 CO3 PO2 circuit.

b) Describe the concept of duality and dual pairs. Also state the 6 Marks L3 CO3 PO3 procedure followed to interchange between dual pairs.
a) Two similar coils connected in series gave a total inductance of 6 Marks L1 CO4 PO2 CO2 multiplication of the solid in series gave a total inductance of 6 Marks L1 CO4 PO2

7.	a)	1 wo similar coils connected in series gave a total inductance of 600 mH and when one of the coil is reversed, the total inductance is 300 mH. Determine the mutual inductance between the coils and coefficient of coupling.	6 Marks	LI	CO4	PO2
	b)	Two inductively coupled coils have self inductances L1= 50 mH and L2= 200 mH. If the coefficient of coupling is 0.5, i) Find the value of mutual inductance between the coils. ii) What is the maximum possible mutual inductance?	6 Marks	L2	CO4	PO2
8.	a)	Discuss briefly about energy considerations in mutually coupled circuits.	6 Marks	L2	CO4	PO4
	b)	Derive the expression for equivalent inductance of two coil in parallel with i) Parallel aiding. ii) Parallel opposition.	6 Marks	L2	CO4	PO4
9.	a)	What is a constant K low pass filter, derive its characteristics impedance.	6 Marks	L2	CO4	PO2
	b)	Explain the design procedure for a constant K low pass filter and its characteristics.	6 Marks	L3	CO4	PO3
		(OR)				
10	a)	Derive the expression for characteristic impedance in a pass band filter.	6 Marks	L3	CO4	PO4
	b)	Derive necessary expressions for m-derived high pass filter. $\textcircled{\begin{tabular}{c} \begin{tabular}{c} \begi$	6 Marks	L2	CO4	PO1

### Answer One Question from each Unit All questions carry equal marks

# 

1. a) With reference to the circuit shown in figure below, find : 6 Marks i)  $I_x$  if  $I_1=12mA$ . ii)  $I_1$  if  $I_x=12mA$ .

b) Find equivalent resistance across terminals A-B for the circuit 6 Marks L3 CO1 PO2 shown below.

2. a) Determine the value of 'V' such that the current in  $(3+j4\Omega)$  is 6 Marks L4 CO1 PO2 zero.

b) Find the effective resistance between points A and B for the 6 Marks L3 CO1 PO2 given circuit.

#### UNIT-II 3. A two element series circuit is connected across AC source given 6 Marks L3 **CO2 PO2** a) by $V=200\sqrt{2}Sin(314t+20^\circ)$ . The current in the circuit is found to be i= $10\sqrt{2} \cos(314 \text{ t-}25^\circ)$ . Determine the parameters of the circuit. Also determine the power factor, real power and reactive power taken by the circuit. 6 Marks PO<sub>2</sub> b) Explain the sinusoidal response of series RL circuit. L2 CO1 (**OR**) 4. Mention the properties of series resonant circuit. 4 Marks L2 CO1 PO<sub>2</sub> a) A series RLC circuit consists of $50\Omega$ resistance, 0.2 H inductance 8 Marks L3 CO<sub>2</sub> PO<sub>2</sub> b) and 10µF capacitance with applied voltage of 20V. Determine resonant frequency .Find Q- factor of the circuit .Compute the lower and upper frequency limits and the bandwidth of the circuit. UNIT-III 5. a) For the network shown below calculate the maximum power 8 Marks L3 CO1 PO<sub>2</sub> delivered to load resistance R<sub>L</sub>. 3Ω 21, 1, 4Ω ≤ 6 Ω R b) State and illustrate Millmann's theorem with an example. 4 Marks L3 CO1 PO<sub>2</sub> (**OR**) Find the current through $2\Omega$ resistor using Thevenin's theorem. 6. L3 CO1 PO<sub>2</sub> a) 6 Marks 20 V 5Ω 2Ω 10 Ω 10 V 40 V b) Find the current through $2\Omega$ resistor using super position L3 CO1 PO<sub>2</sub> 6 Marks theorem. 20 V 5Ω 2Ω $\Lambda\Lambda$

# UNIT-IV

- a) A series RL circuit with initial condition I<sub>0</sub> in the inductor is 6 Marks L3 CO1 PO2 connected to a DC voltage V at t=0, Derive expression for the instantaneous current through the inductor for t >0.
  - b) In the network shown in fig. a steady state is reached with the 6 Marks L3 CO2 PO2 switch open. At t=0, the switch is closed . For the element values given, Determine the values of  $V_a(0^-)$ ,  $V_b(0^-)$ ,  $V_a(0^+)$  and  $V_b(0^+)$ .

- 8. a) Obtain the DC response for a simple RL circuit with differential 4 Marks L2 CO1 PO2 equations approach.
  - b) In the circuit diagram shown in fig the switch S is closed at t=0 8 Marks with the network previously unenergized. Use laplace transform method and evaluate  $i_1(t)$ .

6 Marks L3 CO1 PO2

## UNIT-V

9. a) Give the logic implementation of a 32 x 4 bit ROM using a 6 Marks L4 CO2 PO2 decoder of a suitable size.
b) Show how the PLA circuit would be programmed to implement 6 Marks L4 CO2 PO1 the 3 bit binary to gray conversion.

(OR)

- 10 a) Realize the following functions using PROM of size 8 x 3:  $F_1 = \sum m(0, 4, 7); F_2 = \sum m(1, 3, 6); F_3 = \sum m(1, 2, 4, 6)$ 6 Marks L4 CO2 PO2
  - b) Write the program table to implement a BCD to Excess-3 code 6 Marks L4 CO2 PO1 conversion using a PLA.

|    |            |                                                                           |            |     |          |              |
| 1. | a)         | Compare biological models and manmade systems.                            | 6 Marks    | L2  | CO1      | PO2          |
|    | b)         | Explain prokaryotes and eukaryotes with neat diagrams.                    | 6 Marks    | L2  | CO1      | PO1          |
|    |            | (OR)                                                                      |            |     |          |              |
| 2. | a)         | Classify living organisms.                                                | 6 Marks    | L2  | CO1      | PO2          |
|    | b)         | Illustrate molecular taxonomy.                                            | 6 Marks    | L2  | COI      | POI          |
|    |            | (UNIT-II)                                                                 |            |     |          |              |
| 3. | a)         | Summarize the industrial applications of enzymes.                         | 6 Marks    | L2  | CO1      | PO1          |
|    | b)         | Explain the structure and functions of proteins.                          | 6 Marks    | L2  | COI      | POI          |
| 4  | a)         | Explain the importance of various biomolecules in the formation           | 7 Marks    | L2  | CO1      | PO1          |
|    | )          | of living organisms.                                                      | ,          |     | 001      | 101          |
|    | b)         | Define enzymes and describe their applications.                           | 5 Marks    | L1  | CO1      | PO5          |
|    |            | (UNIT-III)                                                                |            |     |          |              |
| 5. | a)         | How Mendel laws are important in biology as Newton laws in                | 6 Marks    | L2  | CO2      | PO1          |
|    |            | physics? Explain.                                                         |            |     |          |              |
|    | b)         | What is the process by which information is transferred from DNA to mRNA? | 6 Marks    | L1  | CO2      | PO1          |
| 6  |            | (OR)                                                                      | 12 Mortes  | 1.2 | $CO_{2}$ |              |
| 0. |            | Explain about translation and single gene disorders.                      | 12 Marks   | LZ  | 002      | PUI          |
| _  |            | (UNIT-IV)                                                                 |            |     | ~ ~ •    |              |
| 7. | a)         | Distinguish between Transgenic animals and cloned animals with            | 6 Marks    | L4  | CO3      | PO1          |
|    | h)         | How Biosensors and biochips are prepared? List their                      | 6 Marks    | 14  | CO3      | PO6          |
|    | 0)         | applications.                                                             | 0 IVIUIK5  | 21  | 005      | 100          |
|    |            | (OR)                                                                      |            |     |          |              |
| 8. | a)         | Explain major steps in the recombinant DNA technology and add             | 8 Marks    | L2  | CO3      | PO6          |
|    | <b>b</b> ) | a note on recombinant microbes.                                           | 1 Mortes   | 12  | $CO^{2}$ |              |

| 9. | a)         | What is neuron and synapse? Explain the process of                        | 6 Marks    | L2  | COI      | POI          |
|    | b)         | Summarize the applications of DNA finger printing                         | 6 Marks    | L2  | CO3      | PO6          |
|    |            | (OR)                                                                      | 0 10141110 |     | 200      | 100          |
| 10 | a)         | Compare different types of Genomics.                                      | 6 Marks    | L2  | CO1      | PO1          |
| •  | b)         | Explain about DNA Microarray and its applications.                        | 6 Marks    | L2  | CO3      | PO6          |

SVEC-19

Time: 3 hours

### SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

## I B.Tech II Semester (SVEC-19) Supplementary Examinations March – 2021

### **ENGINEERING PHYSICS**

[Computer Science and Engineering, Information Technology,

**Computer Science and Systems Engineering**]

Max. Marks: 60

### Answer One Question from each Unit All questions carry equal marks

|   | LINITE T |   |
|---|----------|---|
| ( |          | ) |

| 1.  | a) | List the difference between interference and diffraction.                                                                        | 2 Marks   | L1       | CO1      | PO1        |
|-----|----|----------------------------------------------------------------------------------------------------------------------------------|-----------|----------|----------|------------|
|     | b) | Discuss in detail the Fraunhofer diffraction at a single slit.                                                                   | 10 Marks  | L2       | CO1      | PO2        |
| 2   | a) | ( <b>UK</b> )<br>Summarize the theory of Quarter wave plate and Half wave plate                                                  | 4 Marks   | L2       | CO1      | PO1        |
| 2.  | b) | Describe the construction and working of a Nicol's Prism.                                                                        | 8 Marks   | L2<br>L2 | CO1      | PO1        |
|     | -) | UNIT-II)                                                                                                                         |           |          |          | -          |
| 3.  | a) | Explain the physical significance of gradient, divergence and                                                                    | 4 Marks   | L2       | CO2      | PO1        |
|     | b) | curl.<br>Identify the four Maxwell's field equations and explain their                                                           | 8 Marks   | L3       | CO2      | PO1        |
|     | ,  | physical significance.                                                                                                           |           |          |          |            |
|     |    | (OR)                                                                                                                             |           |          |          |            |
| 4.  | a) | Recall the principle behind the functioning of optical fiber.<br>Explain the differences between the step index fiber and graded | 9 Marks   | L2       | CO2      | PO1        |
|     | b) | Index liber.                                                                                                                     | 3 Marks   | 13       | $CO^{2}$ | PO2        |
|     | 0) | ontical fiber with core and cladding refractive indices being 1.48                                                               | JIVIAIKS  | LJ       | 002      | 102        |
|     |    | and 1.45 respectively.                                                                                                           |           |          |          |            |
|     |    | (UNIT-III)                                                                                                                       |           |          |          |            |
| 5.  | a) | Discuss the origin of energy band formation in solids.                                                                           | 5 Marks   | L2       | CO3      | PO1        |
|     | b) | Classify the solids in to conductors, semiconductors and                                                                         | 7 Marks   | L2       | CO3      | PO1        |
|     |    | insulators based on the formation of energy bands.                                                                               |           |          |          |            |
| C   | `` | (OR)                                                                                                                             | 10 1 1    | тр       | 001      | DOO        |
| 6.  | a) | State Hall effect. Derive an expression for Hall coefficient.<br>Mention its applications.                                       | 10 Marks  | L3       | 003      | PO2        |
|     | b) | The $R_H$ of a specimen is 3.66 x 10 <sup>-4</sup> m <sup>3</sup> c <sup>-1</sup> . Its resistivity is                           | 2 Marks   | L1       | CO3      | PO2        |
|     |    | 8.93 x 10 <sup>-3</sup> Ωm. Find $\mu$ and n.                                                                                    |           |          |          |            |
|     |    | UNIT-IV                                                                                                                          |           |          |          |            |
| 7.  | a) | Define dielectric polarization.                                                                                                  | 2 Marks   | L1       | CO4      | PO1        |
|     | b) | Outline an expression for internal field of an atom in a dielectric material.                                                    | 10 Marks  | L2       | CO4      | PO1<br>PO2 |
|     |    | (OR)                                                                                                                             |           |          |          |            |
| 8.  | a) | State magnetic moment. Explain the origin of magnetic moment in an atom.                                                         | 8 Marks   | L2       | CO4      | PO2        |
|     | b) | Classify the magnetic materials and explain them.                                                                                | 4 Marks   | L2       | CO4      | PO1        |
|     |    | UNIT-V                                                                                                                           |           |          | ~~~      |            |
| 9.  | a) | Distinguish Type I and Type II superconductors.                                                                                  | 4 Marks   | L4       | CO5      | POI        |
|     | D) | superconductivity                                                                                                                | ð iviarks | LI       | COS      | PUI        |
|     |    | (OR)                                                                                                                             |           |          |          |            |
| 10. | a) | Describe any one method for synthesize nanomaterials.                                                                            | 6 Marks   | L2       | CO5      | PO1        |
|     | b) | List the applications of nanomaterials.                                                                                          | 6 Marks   | L1       | CO5      | PO1        |
|     |    |                                                                                                                                  |           |          |          |            |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

## I B.Tech II Semester (SVEC-19) Supplementary Examinations March - 2021

### **ENGINEERING CHEMISTRY**

### [Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 60

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. |    | Discuss the particle in one dimensional box using quantum mechanical concept and prove that electronic energy levels are quantized.                                                                                                                                                                                                                            | 12 Marks | L2 | CO1 | PO1  |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----|-----|------|
| 2. | a) | Describe the structure of H <sub>2</sub> O and NH <sub>3</sub> molecule in terms of                                                                                                                                                                                                                                                                            | 5 Marks  | L2 | CO1 | PO1  |
|    | ,  | VSEPR theory.                                                                                                                                                                                                                                                                                                                                                  |          |    |     |      |
|    | b) | Predict the magnetic property and bond order of carbon monoxide molecule based on its energy level diagram.                                                                                                                                                                                                                                                    | 7 Marks  | L3 | CO1 | PO2  |
|    |    |                                                                                                                                                                                                                                                                                                                                                                |          |    |     |      |
| 3. |    | Write the principle of EDTA method and describe the estimation of hardness of water by EDTA method.                                                                                                                                                                                                                                                            | 12 Marks | L2 | CO2 | PO1  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                           |          |    |     |      |
| 4. | a) | Calculate the hardness of water sample with $0.4g$ of CaCO <sub>3</sub> dissolved in dil. HCl and the solution was made up to 500 ml with distilled water. 50 ml of the solution required 35 ml of the EDTA solution for the titration. 50 ml of hard water sample required 25 ml of EDTA and after boiling and filtering required 15 ml of the EDTA solution. | 6 Marks  | L3 | CO2 | PO2  |
|    | b) | Discuss the adverse effects of fluorides on human health.                                                                                                                                                                                                                                                                                                      | 6 Marks  | L3 | CO2 | PO 6 |
|    |    | (UNIT-III)                                                                                                                                                                                                                                                                                                                                                     |          |    |     |      |
| 5. | a) | Explain the construction and working of solid oxide fuel cell.                                                                                                                                                                                                                                                                                                 | 6 Marks  | L2 | CO3 | PO1  |
|    | b) | Discuss different methods used for prevention of corrosion of metal and discuss any one method.                                                                                                                                                                                                                                                                | 6 Marks  | L1 | CO3 | PO2  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                           |          |    |     |      |
| 6. | a) | Why does corrosion occur in steel pipe connected to copper plumbing?                                                                                                                                                                                                                                                                                           | 4 Marks  | L1 | CO3 | PO1  |
|    | b) | Describe the construction and working of the lead acid battery with chemical equations.                                                                                                                                                                                                                                                                        | 8 Marks  | L2 | CO3 | PO1  |
|    |    |                                                                                                                                                                                                                                                                                                                                                                |          |    |     |      |
| 7. | a) | Explain different types of fundamental modes of vibrations.                                                                                                                                                                                                                                                                                                    | 6 Marks  | L2 | CO4 | PO1  |
|    | b) | Write the principle and applications of Transmission Electron Microscope.                                                                                                                                                                                                                                                                                      | 6 Marks  | L1 | CO4 | PO1  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                           |          |    |     |      |
| 8. |    | Discuss the principle and working of UV - Visible spectrometer with the help of a block diagram.                                                                                                                                                                                                                                                               | 12 Marks | L2 | CO4 | PO1  |

SVEC-19

# UNIT-V

| 9. |    | Discuss in detail about various mechanisms of lubrication.                 | 12 Marks | L2 | CO5 | PO1 |
|----|----|----------------------------------------------------------------------------|----------|----|-----|-----|
|    |    | (OR)                                                                       |          |    |     |     |
| 10 | a) | What is meant by cracking of petroleum? Describe the fixed-bed             | 7 Marks  | L2 | CO5 | PO1 |
|    |    | catalytic cracking process with a neat diagram.                            |          |    |     |     |
|    | b) | Calculate the HCV and LCV of coal having the following                     | 5 Marks  | L3 | CO5 | PO2 |
|    |    | compositions;                                                              |          |    |     |     |
|    |    | carbon = $80\%$ , hydrogen = $10\%$ , nitrogen = $4\%$ , sulphur = $2\%$ , |          |    |     |     |

ash = 4%, latent heat of steam = 587 kcal/kg.

I B.Tech II Semester (SVEC-19) Supplementary Examinations March - 2021

#### TRANSFORMATION TECHNIQUES AND LINEAR ALGEBRA

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 60

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) Find the Fourier series of the function  $f(x) = x \sin x$  in (-1,1). 6 Marks L4 CO1 PO1 b) Establish Fourier sine transform for  $f(x) = xe^{-ax}$ . 6 Marks L1 CO1 PO2
- 2. (OR) Show that  $x = 1 - \frac{8}{\pi^2} \left[ \frac{1}{1^2} \cos \frac{\pi x}{2} + \frac{1}{3^2} \cos \frac{3\pi x}{2} + \frac{1}{5^2} \cos \frac{5\pi x}{2} + \dots \right]$  12 Marks L2 CO1 PO2 in the interval (0, 2).

3. a) Determine 
$$L\{f(t)\}$$
 where  $f(t) = t^2 e^{-3t} \sin 2t$ .  
 $\int_{t}^{t} e^{t} \sin t$  6 Marks L3 C01 P01  
6 Marks L1 C01 P01

LINITT TT

b) Find the Laplace transform of 
$$\int_{0}^{t} \frac{e^{-\sin t}}{t} dt$$
.

4. a) Making use of Laplace transform, evaluate  $\int_{0}^{\infty} \frac{\cos at - \cos bt}{t} dt$ . 6 Marks L3 CO1 PO2 b) Evaluate  $L\left\{t^2 \ e^{-3t} \sin 2t\right\}$ . 6 Marks L5 CO1 PO1

5. a) Find the inverse Laplace transform of 
$$\log\left(\frac{s+a}{s+b}\right)$$
.  
6 Marks L1 CO1 PO1  
6 Marks L3 CO1 PO2

b) Evaluate  $L^{-1}\left[\frac{1}{(s^2 + a^2)^2}\right]$  using convolution theorem.

6. Solve the differential equation 
$$\frac{d^2x}{dt^2} - 4\frac{dx}{dt} - 12x = e^{3t}$$
, given that   
 $x(0) = 1, x'(0) = -2$  by using Laplace transforms.

Find the rank of matrix  $A = \begin{pmatrix} 2 & -2 & 0 & 6 \\ 4 & 2 & 0 & 2 \\ 1 & -1 & 0 & 3 \\ 1 & -2 & 1 & 2 \end{pmatrix}$  by reducing it into 6 Marks 7. L1 CO2 PO1 a)

echelon form.

- CO2 b) Determine the Eigen values and Eigen vectors of 6 Marks L3 PO<sub>2</sub>  $B = 2A^2 - \frac{1}{2}A + 3I$ , where  $A = \begin{bmatrix} 8 & -4 \\ 2 & 2 \end{bmatrix}$ . (**OR**)
- Find the orthogonal transformation which transforms the **PO2** 8. 12 Marks L1 CO<sub>2</sub> quadratic form  $3x^2 + 3y^2 + 3z^2 + 2xy + 2xz - 2yz$  to canonical form and write the corresponding canonical form.

UNIT-V

 $\begin{bmatrix} 1 \\ -1 \\ 0 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ -1 \end{bmatrix} and \begin{bmatrix} -1 \\ 0 \\ 1 \end{bmatrix} is 6 Marks L2 CO2$ PO1 9. a) Check whether the set of vectors

linearly independent or not.

Show that the transformation  $T: \mathbb{R}^2 \to \mathbb{R}^3$  defined by 6 Marks L2 CO<sub>2</sub> PO1 b)  $\begin{bmatrix} -1 \\ -1 \end{bmatrix}$ 

$$T\begin{bmatrix} x\\ y\end{bmatrix} = \begin{bmatrix} -y\\ x+2y\\ 3x-4y\end{bmatrix}$$
 is linear.

Show that the vectors  $\begin{bmatrix} 1 \\ -1 \\ 3 \end{bmatrix}$ ,  $\begin{bmatrix} -1 \\ 5 \\ 1 \end{bmatrix}$  and  $\begin{bmatrix} 1 \\ -3 \\ 1 \end{bmatrix}$  form a basis of 6 Marks 10 a)

(**OR**)

L2

CO<sub>2</sub>

PO1

 $R^{3}(R)$ .

Show that the linear transformation  $T: \mathbb{R}^2 \to \mathbb{P}_1$  defined by 6 Marks L2 CO<sub>2</sub> **PO2** b)  $T \begin{vmatrix} a \\ b \end{vmatrix} = a + (a + b)x$  is one-to-one and onto, where P<sub>1</sub> is a vector

space of all linear polynomial over real field.

### I B.Tech II Semester (SVEC-19) Supplementary Examinations March – 2021

### BASIC ELECTRICAL AND ELECTRONICS ENGINEERING [Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) With neat sketch, explain working principle of single loop 8 Marks L2 CO1 PO1 generator.
  - b) Find the current in each branch of the circuit shown in figure 4 Marks L3 CO1 PO2 using current division method.

(**OR**)

2. a) Find the total power dissipated in the circuit shown in the figure 6 Marks L3 CO1 PO2 (All resistances are in ohms).

b) A series combination of R=10 $\Omega$  and L=20mH has a current 6 Marks L3 CO1 PO2 i(t) = 5 cos(500t+100)A. Obtain the voltages v(t) and V, the phasor current I and sketch the phasor diagram.

## UNIT-II

- Sketch the typical layout and explain the operation of Thermal 3. 8 Marks L2 CO<sub>2</sub> PO1 a) power plant. With neat sketch, explain the working of various types of UPS. b) 4 Marks L2 CO<sub>2</sub> PO7 (**OR**) Derive the expression for most economical power factor. 4. 6 Marks L3 CO<sub>2</sub> **PO2** a) Explain the process of plate earthing with neat sketch. 6 Marks b) L2 CO<sub>2</sub> PO1 (UNIT-III) Explain the constructional details of 3-phase induction motor and 6 Marks 5. a) L2 CO3 PO5 mention it's applications. Suggest the suitable device which transforms the voltage with 6 Marks L2 CO3 PO1 b) constant frequency and power. Derive the EMF equation of that
  - device.

(OR)

Max. Marks: 60

### **ELECTRIC CIRCUITS**

[Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 60

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I 🔵

1. a) Find the value of the voltage source  $V_s$  that delivers 2 Amps 6 Marks L3 CO1 PO2 current through the circuit as shown in figure.

b) Find the voltages at the three non reference nodes in the circuit of 6 Marks L4 CO1 PO2 figure

2. a) Using mesh analysis, find I<sub>0</sub> in the circuit shown in figure. 6 Marks L4 CO1 PO2

1

b) Find R<sub>ab</sub> of the network shown in figure, Assume each element is 6 Marks L3 CO1 PO2  $1\Omega$ .

3. a) Determine the form factor of the wave form shown in figure. 6 Marks L3 CO1 PO2

b) Assuming that  $\mathbf{v}_{\mathbf{s}} = \mathbf{16}\cos(2\mathbf{t} - \mathbf{40^0})\mathbf{V}$  in the circuit of shown 6 Marks L3 CO2 PO2 in figure, find the average power delivered to each of the passive elements.

- a) The unbalanced delta-load shown in figure is supplied by 6 Marks L3 CO1 PO2 balanced line-to-line voltages of 240 V in the positive sequence.
  - Find the line currents. Take  $V_{ab}$  as reference.

4.

b) Explain how a single wattmeter can be used to measure the 6 Marks L2 CO1 PO1 reactive power with the help of circuit connection and derive the necessary equations.

- UNIT-III
- 5. Determine the maximum power delivered to the load in the 6 Marks L3 CO1 PO5 a) circuit shown in figure, using maximum power transfer theorem.

Consider the circuit in figure, an ammeter with internal resistance 6 Marks b) L4 CO1 PO5  $R_1$  is inserted between **a** and **b** to measure  $I_0$ . Determine the reading of the ammeter if:  $R_I=500\Omega$ ,  $0\Omega$  using Thevenin's theorem.

(**OR**)

In the circuit shown below, find the voltage across the  $20\Omega$  6 Marks 6. L3 PO5 a) CO1 resistor using Superposition Theorem.

Calculate the change in current of the network given below using b) 6 Marks L3 CO1 PO5 compensation theorem when load resistor changes to  $10\Omega$ .

- Derive the expressions for equivalent inductance of two coils in 7. a) 6 Marks L2 CO1 PO1 parallel with i)parallel aiding and ii) parallel opposition 6 Marks L4 CO1 PO<sub>2</sub>
  - Calculate the mesh currents shown in figure. b)

8. a) For the coupled circuit shown in figure find the input impedance 6 Marks L4 CO1 PO2 at the terminals a-b

- b) Determine the voltage  $V_0$  in the circuit of figure.  $4\Omega$   $4\Omega$   $100/45^{\circ} V$   $100/45^{\circ} V$ 100/45
- UNIT-V 9. Enumerate the various characteristics that a filter should posses 6 Marks L2 CO1 PO1 a) for implementation in signal processing circuits. b) Design a  $\pi$ -section band pass filter having cut-off frequencies of 6 Marks L4 CO<sub>2</sub> PO3 12 kHz and 16 kHz for a load having an impedance of 600  $\Omega$ . (**OR**) 10 a) Define characteristic impedance and derive the characteristic 6 Marks L3 CO1 PO<sub>2</sub> impedance for a T and  $\pi$  networks. Also explain the nature of characteristic impedance in pass band and stop bands. Design m-derived high pass filter having a design impedance of 6 Marks b) L4 CO<sub>2</sub> PO3  $R_0=500\Omega$  and cut-off frequency of 5 kHz and m = 0.32. Also determine the frequency of infinite attenuation.

#### NETWORK ANALYSIS

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

#### Time: 3 hours

2.

Max. Marks: 60

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1. In the circuit shown in figure, write three node equations for 12 Marks L4 CO1 PO2 nodes A, B, and C with node D as the reference and find the node voltages.

(**OR**)

Use nodal voltage method to find the voltages of nodes 'm' and 12 Marks L4 CO1 PO2 'n' and currents through  $j2\Omega$  and  $-j2\Omega$  reactance in the network shown below.

- 3. a) Draw the current, impedance and admittance loci for an RC 6 Marks L2 CO1 PO1 Series circuit having constant reactance but variable resistance.
  b) A TV tuner consists of a series RLC circuit consists of resistance 6 Marks L4 CO2 PO6
  - b) A TV tuner consists of a series RLC circuit consists of resistance R = 20, inductance, L = 0.01H and capacitance,  $C = 0.04 \mu F$ . Calculate the frequency at resonance. If a 10 Volts of frequency equal to the frequency of resonance is applied to this circuit, calculate the values of  $V_C$  and  $V_L$  across C and L respectively. Find the frequencies at which these voltages  $V_C$  and  $V_L$  are maximum.

#### (**OR**)

Draw the phasor representation of voltage and current for 6 Marks CO1 PO1 4. a) L2 Resistor, inductor and capacitor with sinusoidal excitation. A supply of 400V, 50Hz is applied to a series RC circuit. Find b) 6 Marks L4 CO1 PO<sub>2</sub> the value of C if the power absorbed by the resistor to be 500W at 150V. What is the energy stored in a capacitor?

SVEC-19

5. State Superposition theorem and find the current in the  $6\Omega$  12 Marks L3 CO1 PO5 resistor using Superposition theorem for the circuit shown below.

(OR)

6. For the network shown in figure, determine the current through 12 Marks L3 CO1 PO2  $R=10\Omega$  resistor using Thevenin's theorem and verify the result using Norton's theorem.

7. a) Explain the steady state and transient behavior of a capacitor. 4 Marks L1 CO1 PO1 b) The switch in the circuit shown in figure has been closed for a 8 Marks L4 CO1 PO2 long time. The switch opens at t = 0. Compute v(t),  $i_1(t)$  and  $i_2(t)$ .

- 8. a) Derive the transient response of series R-L-C circuit, with DC 4 Marks L2 CO1 PO5 excitation using Laplace transform obtain the response for a critically damped case.
  - b) The switch in the circuit in figure has been closed for a long 8 Marks L4 CO2 PO5 time. At t = 0, the switch is opened find  $v_0(t)$  and  $i_0(t)$  for t > 0 using Laplace transformation method.

## UNIT-V

- 9. a) Define reciprocity and symmetry for a generalized two port 6 Marks L1 CO1 PO1 network and derive the conditions for reciprocity and symmetry in terms of Y parameters.
  - b) Find the y parameters for the two-port network shown in figure. 6 Marks L4 CO1 PO4 Invistigate whether the netwok is symmetrical and reciprocal.

(**OR**)

- 10 a) The Z parameters of a two port network are  $Z_{11}=6\Omega$ ,  $Z_{22}=4\Omega$ ,  $Z_{12}=6$  Marks L4 CO1 PO2  $Z_{21}=3\Omega$ . Compute ABCD Parameters and write the describing equations.
  - b) Determine the impedance (Z) parameter of the given two port 6 Marks L4 CO1 PO4 network shown in fig

4.

Max. Marks: 60

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. The resultant of three forces is 60N as shown in figure. Two of 12 Marks L2 CO1 PO1 the three forces are also shown as 20N and 40 N. Determine the third force.

2. The forces on the gusset plate of a joint in a bridge truss act as 12 Marks L2 CO1 PO1 shown in figure. Determine the magnitudes of the two forces P PO2 and F to maintain equilibrium of the joint.

3. Find the reactions at the supports A and B of the loaded beam 12 Marks L2 CO1 PO1 shown in below figure. PO2

(**OR**)

Calculate the forces included in the members of the pin-jointed 12 Marks L2 CO1 PO1 truss shown in figure. Show the values on a neat diagram of the PO2 truss.

5. The coefficient of friction between a copper block A and an aluminum block B is 0.3, and between the block B and the floor is 0.2. The weight of block A is 30 N and of block B is 20 N as shown in given figure. What force P will cause the motion of block A to impend?

6. Determine the force P required to start the wedge shown in 12 Marks L2 CO1 PO1 figure. The angle of friction for all surfaces in contact is 15°. PO2

UNIT-III

### I B.Tech II Semester (SVEC-19) Supplementary Examinations March – 2021

### **DIGITAL LOGIC DESIGN**

[Computer Science and Engineering, Information Technology,

**Computer Science and Systems Engineering** Max. Marks: 60 Time: 3 hours Answer One Question from each Unit All questions carry equal marks UNIT-I 1. Obtain complement of the Boolean Expression 6 Marks L3 CO1 **PO2** a) A'B + A'BC' + A'BCD.Convert the following numbers with the indicated bases to b) 6 Marks L3 CO1 PO1 decimal: i) (435)<sub>8</sub> ii) (345)<sub>6</sub> iii) (10110110)<sub>2</sub> (**OR**) Each of the following arithmetic operations is correct in at least 6 Marks CO1 **PO1** 2. a) L3 one number system. Determine the bases in each operation: ii) 23 + 44 + 14 + 32 = 223 i) 41/3 = 13Prove the following Boolean theorems: b) 6 Marks L3 CO1 **PO2** i) AB+A'C = (A+C)(A'+B). ii) AB+A'C+BC = AB+A'C. UNIT-II 3. Simplify the following Boolean function using K-Map method. 6 Marks L4 CO1 **PO2** a)  $F(w, x, y, z) = \Sigma(0, 2, 4, 5, 6, 7, 8, 10, 13, 15).$ Implement AND, OR, NOT gates using Universal gates. b) 6 Marks L3 CO1 **PO2** (**OR**) 4. Find the minterms of the following Boolean expressions by first L4 CO1 **PO2** a) 6 Marks plotting each function in map: xy + yz + xy'z. Minimize the expression using K-map and realize using only CO1 b) 6 Marks L4 PO3 NOR gates.  $F(A, B, C, D) = \Pi(1, 4, 5, 11, 12, 14)$  and don't care conditions d(A, B, C, D) = (6, 7, 15)(UNIT-III) With the help of a circuit diagram, explain the operation of series 5. 6 Marks L4 CO<sub>2</sub> **PO2** a) full adder and compare its performance with parallel adder. What is a multiplexer? Use a 4:1 multiplexer and a minimum b) 6 Marks L4 CO<sub>2</sub> PO5

function.  $F(w, x, y, z) = \sum m(3, 4, 5, 7, 10, 14) + \sum d(1, 6, 15)$ 

number of external gates to realize the following Boolean

(**OR**)

| 6. | a) | Realize a full subtract or using MUX.                             | 4 Marks | L4 | CO2 | PO4 |
|----|----|-------------------------------------------------------------------|---------|----|-----|-----|
|    | b) | Draw and explain 4-bit shift register with an example.            | 8 Marks | L2 | CO2 | PO1 |
|    |    | UNIT-IV                                                           |         |    |     |     |
| 7. | a) | Explain about the realization of SR flip-flop, JK flip-flop using | 6 Marks | L2 | CO2 | PO1 |
|    |    | D flip-flop.                                                      |         |    |     |     |
|    | b) | Design a 2-bit x 3-bit Binary Multiplier.                         | 6 Marks | L4 | CO2 | PO3 |

| 8  | a) | Design decade Johnson counter and explain its operation                                                                                | 6 Marks  | 14 | CO2 | PO3 |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------|----------|----|-----|-----|
| 0. | b) | Define excitation table. Explain D flip-flop and obtain the state equation, the state diagram, state table and excitation table of the | 6 Marks  | L2 | CO2 | PO1 |
|    |    | same.                                                                                                                                  |          |    |     |     |
|    |    | UNIT-V                                                                                                                                 |          |    |     |     |
| 9. |    | A combinational circuit is defined by the functions                                                                                    | 12 Marks | L4 | CO2 | PO4 |
|    |    | $F_1(A, B, C) = \Sigma(3, 5, 6, 7)$                                                                                                    |          |    |     |     |
|    |    | $F_2(A, B, C) = \Sigma(0, 2, 4, 7)$                                                                                                    |          |    |     |     |
|    |    | Implement the circuit with a PLA having 3-inputs, four product                                                                         |          |    |     |     |
|    |    | terms and two outputs.                                                                                                                 |          |    |     |     |
|    |    | (OR)                                                                                                                                   |          |    |     |     |
| 10 | a) | Implement F (a, b, c, d) = $\Sigma$ m(0, 1, 2, 3, 6, 9, 11) using PAL.                                                                 | 9 Marks  | L4 | CO2 | PO4 |
| •  | b) | Write short notes on combinational PLDs.                                                                                               | 3 Marks  | L2 | CO2 | PO1 |
|    |    |                                                                                                                                        |          |    |     |     |

### **OBJECT ORIENTED PROGRAMMING THROUGH JAVA**

[Computer Science and Engineering, Information Technology,

Computer Science and Systems Engineering]

Max. Marks: 60

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a)         | Differentiate between Procedural Oriented and Object Oriented<br>Languages                        | 6 Marks    | L2  | CO1      | PO1 |
|----|------------|---------------------------------------------------------------------------------------------------|------------|-----|----------|-----|
|    | b)         | Write about Garbage Collection in Java.                                                           | 6 Marks    | L1  | CO1      | PO1 |
|    |            | (OR)                                                                                              |            |     |          |     |
| 2. | a)         | Illustrate the usage of this keyword using an example program.                                    | 6 Marks    | L2  | CO1      | PO1 |
|    | b)         | Explain about: i) class ii) object iii) constructor.                                              | 6 Marks    | L2  | CO1      | PO1 |
|    | ,          | UNIT-II                                                                                           |            |     |          |     |
| 3. | a)         | Develop a java program to implement Towers of Hanoi problem.                                      | 6 Marks    | L3  | CO1      | PO3 |
|    | b)         | Analyze the concept of constructor overloading with an example program.                           | 6 Marks    | L2  | CO2      | PO2 |
|    |            | (OR)                                                                                              |            |     |          |     |
| 4. | a)         | List and explain any four operators in java.                                                      | 6 Marks    | L1  | CO1      | PO1 |
|    | b)         | Give the purpose of using the final keyword in java.                                              | 6 Marks    | L1  | CO1      | PO1 |
|    | -)         | UNIT-III                                                                                          | •          |     |          |     |
| 5. | a)         | "Java supports reusability". Justify the statement.                                               | 6 Marks    | L5  | CO2      | PO1 |
|    | b)         | Write the process of creating and accessing a package.                                            | 6 Marks    | L1  | CO2      | PO1 |
|    | ,          | (OR)                                                                                              |            |     |          |     |
| 6. | a)         | Design a program to demonstrate multiple inheritance in java.                                     | 6 Marks    | L3  | CO2      | PO4 |
|    | b)         | Explain the following :                                                                           | 6 Marks    | L1  | CO2      | PO1 |
|    | ,          | i) Abstract class. ii) Final keyword with inheritance.                                            |            |     |          |     |
|    |            | UNIT-IV                                                                                           |            |     |          |     |
| 7. | a)         | Develop a java program for producer consumer problem to illustrate the concept of multithreading. | 6 Marks    | L3  | CO2      | PO4 |
|    | b)         | What is Java Collections Framework? List out some benefits of Collection framework                | 6 Marks    | L1  | CO2      | PO1 |
|    |            | (OR)                                                                                              |            |     |          |     |
| 8. | a)         | Difference between Thread and Process in Java. How to                                             | 6 Marks    | L2  | CO2      | PO2 |
|    | <b>b</b> ) | Develop a java program to read 20 marks and store them in an                                      | 6 Marka    | Т 2 | $CO^{2}$ |     |
|    | 0)         | array Define your own exception named wrong mark exception                                        | 0 Iviai KS | LJ  | 002      | 105 |
|    |            | Throw and catch this type of exception when a mark is                                             |            |     |          |     |
|    |            | (<0  and >100)                                                                                    |            |     |          |     |
|    |            |                                                                                                   |            |     |          |     |
| 9  | a)         | What is an Event? Explain the role of Event handler in AWT                                        | 6 Marks    | L1  | CO3      | PO1 |
|    | b)         | Design and develop an Applet to receive the value of the                                          | 6 Marks    | L3  | CO3      | PO5 |
|    | - )        | parameter message from the html file and display it on the webpage                                |            | -   |          |     |
|    |            | (OR)                                                                                              |            |     |          |     |
| 10 | a)         | Construct an anonymous inner class for handling mouse entered                                     | 6 Marks    | 13  | CO3      | PO3 |
| 10 | uj         | events into an Applet                                                                             | U ITUIND   |     | 005      | 105 |
| •  | b)         | List and explain any three Swing GUI components.                                                  | 6 Marks    | L2  | CO3      | PO1 |
|    | - )        | r                                                                                                 |            |     |          |     |

|    |         | Answer One Question from each Unit<br>All questions carry equal marks                                                                             |                |          |     |     |
|    |         |                                                                                                                                                   |                |          |     |     |
| 1. | a)      | Describe the principle and process of determination of hardness of a water sample by EDTA method.                                                 | 7 Marks        | L2       | CO1 | PO1 |
|    | b)      | Define defluoridation. "Presence of fluoride in drinking water causes several health issues" – Support the statement with necessary explanation.  | 7 Marks        | L3       | CO1 | PO6 |
|    |         | (OR)                                                                                                                                              |                |          |     |     |
| 2. | a)      | Discuss ion exchange process of softening of water with a neat diagram.                                                                           | 7 Marks        | L2       | CO1 | PO2 |
|    | b)      | Explain the reasons for formation of scales in boilers. Mention any three disadvantages of scales.                                                | 7 Marks        | L2       | CO1 | PO1 |
|    |         | UNIT-II                                                                                                                                           |                |          |     |     |
| 3. | a)      | Write Schrodinger wave equation and explain the terms involved<br>in it. Describe briefly the significance of $\Psi$ and $\Psi^2$                 | 7 Marks        | L1       | CO2 | PO1 |
|    | b)      | List the salient features of molecular orbital theory.                                                                                            | 7 Marks        | L1       | CO2 | PO2 |
| 4. | a)      | Explain about quantum-mechanical model of atom.                                                                                                   | 7 Marks        | L2       | CO2 | PO1 |
|    | b)      | Draw the energy level diagram of any hetero nuclear diatomic molecule and calculate its bond order.                                               | 7 Marks        | L2       | CO2 | PO2 |
|    |         | (UNIT-III)                                                                                                                                        |                |          |     |     |
| 5. | a)      | Define electrode potential. Write Nernst equation and explain the terms involved in it.                                                           | 7 Marks        | L1       | CO3 | PO1 |
|    | b)      | Compare sacrificial anodic protection and impressed current cathodic protection applied for corrosion control.                                    | 7 Marks        | L4       | CO3 | PO6 |
| 6  | a)      | ( <b>UK</b> )<br>Explain construction and working of any lithium ion battery                                                                      | 7 Marks        | 12       | CO3 | PO1 |
| 0. | b)      | Differentiate between dry corrosion and wet corrosion with an example each.                                                                       | 7 Marks        | L2<br>L4 | CO3 | PO2 |
|    |         |                                                                                                                                                   |                |          |     |     |
| 7. | a)      | Differentiate between chromophore and auxochrome with an example each. Define and explain the terms 'bathochromic shift' and 'hypsochromic shift' | 7 Marks        | L4       | CO4 | PO1 |
|    | b)      | Make use of a neat diagram to explain instrumentation of IR spectrophotometer.                                                                    | 7 Marks        | L3       | CO4 | PO5 |
|    |         | (OR)                                                                                                                                              |                |          |     |     |
| 8. | a)      | Discuss the two types of electronic transitions involving $\pi$ -orbitals in UV-visible spectroscopy.                                             | 7 Marks        | L2       | CO4 | PO1 |

b) Describe any three applications of IR spectroscopy. 7 Marks L2 CO4 PO5

# UNIT-V

| 9. | a) | Explain different types of fuels with suitable examples.                                                                                                         | 7 Marks | L2 | CO5 | PO1 |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----|-----|-----|
|    | b) | List the functions of lubricants and discuss mechanism of lubrication.                                                                                           | 7 Marks | L1 | CO5 | PO2 |
|    |    | (OR)                                                                                                                                                             |         |    |     |     |
| 10 | a) | Discuss the concept of knocking and role of anti-knocking agents in its control.                                                                                 | 7 Marks | L2 | CO5 | PO6 |
|    | b) | <ul> <li>Distinguish the following pairs of properties of lubricants:</li> <li>i) Flash points and Fire point</li> <li>ii) Cloud point and Pour point</li> </ul> |         | L4 | CO5 | PO1 |

#### **APPLIED PHYSICS**

[ Mechanical Engineering ]

Time: 3 hours Max. Marks: 70 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I Summarize the classification of an optical fibre based on 10 Marks L2 CO1 **PO1** 1. a) refractive index profile and modes of propagation with neat sketches. List any four applications of optical fibres. b) 4 Marks L3 CO1 PO2 (**OR**) 2. Explain the principle of operation of optical fiber. Draw a 9 Marks L2 CO1 PO1 a) schematic layout of a step index optical fiber. A step index fiber has a core of refractive index 1.5. If the L3 CO1 b) 5 Marks PO<sub>2</sub> numerical aperture of the fiber is 0.26, calculate the refractive index of the cladding material. UNIT-II Derive Sabine's formula for reverberation time. Write its 9 Marks 3. L2 CO<sub>2</sub> PO1 a) drawbacks. PO2 The reverberation time is found to be 2.4 sec for an empty hall, L3 CO<sub>2</sub> PO2 b) 5 Marks and it is found to be 1.9 sec when a curtain cloth of  $25m^2$  is suspended at the center of the hall. If the dimensions of the hall are 15 x 10 x 6m, calculate the coefficient of absorption of curtain cloth. (**OR**) Explain the principle, construction and working of production of 4. 10 Marks L2 CO<sub>2</sub> PO1 a) ultrasonic waves using piezoelectric method. A X-cut piezoelectric crystal plane has a thickness of 1.6mm. L3 CO<sub>2</sub> b) 4 Marks **PO2** The velocity of propagation of sound waves along the x-direction is 5760m/sec. Calculate the fundamental frequency of the crystal. UNIT-III) If a body is thrown horizontally into space, find the path traced 5. 7 Marks L2 CO3 PO2 a) by that body mathematically. Sketch the displacement Vs time curve, velocity Vs time curve b) 7 Marks L3 CO3 PO2 and acceleration Vs time curve of a body travelling in a straightline path and give your inferences. (**OR**) Assume that a wheel is acted upon by torque, derive an 6. a) 7 Marks L1 CO3 PO1 expression for moment the wheel undergoes, if the body rotates about its own axis with an acceleration " $\alpha$ ". Derive an expression for work energy equation for a body of 7 Marks L2 CO<sub>3</sub> PO1 b) weight W undergoing a translation motion. PO2 UNIT-IV 7. Explain in detail a technique to find the thermal conductivity of a) 8 Marks L2 CO4 PO1 bad conductor. Explain in detail different modes of heat transfer. 6 Marks L2 CO4 PO1 b) PO2

|    |     | (OR)                                                             |          |     |     |     |

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. a) Find the current in 50hm resistor from the circuit diagram given 8 Marks L3 CO1 PO2 below:

|    | b)       | Discuss briefly about the phasor representation of a sinusoidal waveform.                          | 6 Marks   | L2  | COI    | PO1 |
|----|----------|----------------------------------------------------------------------------------------------------|-----------|-----|--------|-----|
|    |          | (OR)                                                                                               |           |     |        |     |
| 2. | a)       | Illustrate Kirchoff's Voltage and Kirchoff's Current laws with the help of an example each.        | 8 Marks   | L2  | CO2    | PO2 |
|    | b)       | Define the following terms:                                                                        | 6 Marks   | L2  | CO2    | PO2 |
|    |          | i) Power factor. ii) Reactive power. iii) Apparent power.                                          |           |     |        |     |
|    |          | UNIT-II                                                                                            |           |     |        |     |
| 3. | a)       | Illustrate the working details of Hydro power plants with neat diagrammatic representation.        | 10 Marks  | L2  | CO2    | PO2 |
|    | b)       | Discuss about power factor correction and its importance in electrical system.                     | 4 Marks   | L2  | CO2    | PO2 |
|    |          | (OR)                                                                                               |           |     |        |     |
| 4. | a)       | Explain the sustainable power generation process in thermal                                        | 8 Marks   | L2  | CO2    | PO7 |
|    | h)       | Write short notes on:                                                                              | 6 Marks   | 12  | $CO^2$ | PO2 |

#### I B.Tech II Semester (SVEC-20) Regular Examinations September – 2021

#### **ELECTRICAL CIRCUITS**

#### [Electrical and Electronics Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

- 1. Derive the expressions for equivalent resistance in case of star to 7 Marks L2 CO1 PO1 a) delta transformation.
  - Find the equivalent resistance between A and N of the circuit b) 7 Marks L3 CO1 PO2 below.

(**OR**)

2. Determine the voltage V which causes the current  $I_1$  to be zero in 7 Marks L3 CO1 PO4 a) the network shown in Fig.

Find currents  $I_X$  and  $I_Y$  of the network shown in the Fig. 7 Marks b)

L3 CO1 PO4

## UNIT-II

- 3. a) Determine the average and r.m.s values of a sinusoidal current 7 Marks having I<sub>m</sub> as the maximum value. Hence, find the values of the peak factor and form factor.
  - b) Determine the form factor and peak factor of the waveform 7 Marks L3 CO2 PO2 shown in figure below.

L2

CO<sub>2</sub>

PO<sub>2</sub>

- (**OR**)
- 4. a) In a particular RL series circuit, a voltage of 10V at 50Hz 7 Marks L6 CO2 PO3 produces a current of 700mA while the same voltageat 75Hz produces a current of 500mA. Design the values of R and L in the circuit?
  - b) A series RLC circuit consists of a resistance of  $1k\Omega$ , an 7 Marks L3 CO2 PO2 inductance of 10mH and a capacitance of  $100\mu$ F. For a supply voltage of 100 V, determine the following:
    - i) Resonant frequency. ii) Q-Factor of the circuit.
    - iii) Half-power frequencies.

6.

## (UNIT-III)

5. a) Use the superposition theorem and determine the value of 7 Marks L3 CO3 PO5 voltageV<sub>x</sub> in the given circuit.

b) In the network shown, find the value of  $Z_L$  to which the 7 Marks L3 CO3 PO5 maximum power can be delivered. Hence, find the value of the maximum power.

a) Obtain the Thevenin's equivalent circuit and find the current 7 Marks L3 CO3 PO5 through  $2\Omega$  resistor connected between terminals A and B in the

b) Find the current through the  $6\Omega$  resistor and verify the reciprocity 7 Marks L3 CO3 PO5 theorem.

- 7. a) Show that power consumption, when three identical impedances 7 Marks L5 CO4 PO4 are connected in delta across a balanced 3-phase supply, is three times that when the same impedances are connected in star across the same 3-phase supply.
  - b) A balanced 3-phase, star-connected load of 100kW takes a 7 Marks L4 CO4 PO3 leading current of 80A, when connected across a 3-phase 1100-V, 50-Hz supply. Find the circuit constants of the load per phase.

(OR)

- 8. a) Explain the measurement of 3-phase active and reactive powers 7 Marks L2 CO4 PO2 using two watt meter method with a neat phasor diagram.
  b) Three coils each with a resistance of 10Ω and reactance of 10Ω 7 Marks L3 CO4 PO2
  - b) Three coils each with a resistance of  $10\Omega$  and reactance of  $10\Omega$  7 Marks are connected in star across a 3-phase, 50Hz, 400V supply. Calculate: i) line current, and ii) readings on the two watt meters connected to measure the power.

9. a) Determine the equivalent inductance of two coils with self- 7 Marks L2 CO5 PO2 inductances L<sub>1</sub>, L<sub>2</sub> and mutual inductance M are connected in parallel aiding and parallel opposing.
b) Find the equivalent inductance between the terminals across XY 7 Marks L4 CO5 PO2

(OR)

10 a) Explain the dot convention used in magnetically coupled circuits 7 Marks L2 CO5 PO1 . with the help of suitable examples.

7 Marks

L3

CO5

PO3

b) Two inductors are connected in parallel. Their equivalent inductance when the mutual inductance aids the self-inductance is 6mH and it is 2mH when the mutual inductance opposes the self-inductance. If the ratio of the self-inductances is 1:3 and the mutual inductance between the coils is 4mH, find the self-inductances.

PO2

#### Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

- 1. a) State and explain KVL and KCL with examples. 7 Marks L2 b) Determine the current through 100 resistor in the fig below 7 Marks L4
  - b) Determine the current through  $10\Omega$  resistor in the fig below 7 Marks L4 CO1 PO2 using mesh analysis.

2. a) Obtain the Node equation for the circuit shown below and 7 Marks L3 CO1 PO2 compute the  $V_0$ .

b) Find Vx for the circuit shown below.

7 Marks L4 CO1 PO2

3. a) Derive expression for bandwidth of series resonance circuit. 7 Marks L2 CO1 PO2 b) In a series RLC circuit with  $R = 10 \Omega$ , L = 0.1 H and  $C = 50 \mu$ F, 7 Marks L3 CO2 PO2 find resonant frequency, quality factor and band width. 4. a) A series connected load draws a current  $I(t) = 4\sin(100\pi t)A$  7 Marks L4 CO1 PO2 when the applied voltage is  $V(t) = 120 \sin(100\pi t)V$ . Find the power factor.

(**OR**)

b) Design a series RLC circuit that resonates at 1.5kHz and 7 Marks L3 CO2 PO2 consumes 50W from a 50V A.C source operating at the resonance frequency. The bandwidth is 0.75kHz.

## UNIT-III

5. a) State and explain Thevinin's theorem.
b) Determine the value of RL and also calculate Pmax by using 7 Marks L4 CO1 PO5 maximum power transfer theorem.

- 6. a) State and explain reciprocity theorem.
  - b) For the circuit shown in figure find the current through the  $15\Omega$  7 Marks L4 CO1 PO2 resistor using Superposition theorem.

7 Marks

L3

CO1

PO2

## (UNIT-IV)

7. a) Find the transient response of RL series circuit for dc excitation.
7 Marks L3 CO1 PO2
b) The switch is in position 1 for long time and moved to position 7 Marks L4 CO1 PO2
2 at t= 0, find current i.

(OR)

8. a) Find the current in the circuit shown for t > 0. At t = 0 sec. the 7 Marks L3 CO2 PO6 network was unenergized.

b) For the circuit shown below find the current in the circuit after 7 Marks L4 CO1 PO2 closing the switch at t=0.

- 9. Express h parameters in terms of ABCD parameters for a 7 Marks L2 CO5 PO1 a) generalized network. 7 Marks
  - Find the y-parameters of the two-port network shown below. b)

L4 CO2 PO5

(OR)

Prove that reciprocity and symmetry condition for Z-parameters. 10 7 Marks PO2 a) L2 CO1 Find the ABCD parameters of the two-port network shown 7 Marks L4 CO1 PO2 b) . below.

#### UNIT-I

- State and prove Lami's theorem. 1. a)
  - Resolve each force acting on the post into its x and y components b) and determine the magnitude and direction of resultant force.

(**OR**)

- What is Newton's first law of motion and law of transmissibility 2. 7 Marks L3 CO1 PO2 a) of forces? PO4
  - A system of connected flexible cables shown in fig. is supporting 7 Marks L4 CO1 b) two vertical forces 200N and 250N at points B and D. Determine the forces in various segments of the cable.

3 a) State and explain varignon's thorem.

b)

7 Marks L3 CO<sub>2</sub> **PO1** Determine the axial force in each bar of the plane truss loaded as 7 Marks L4 CO<sub>2</sub> PO<sub>2</sub>

shown in the figure. 3 m 3 m 1.5 m 1 1.5 m 2

- (OR)
- 4. a) Explain the concept of moment of a force about a point. For what 7 Marks L3 CO2 PO1 condition the moment of a force will be zero?
  b) Determine analytically the equilibrant of the three coplanar 7 Marks L4 CO2 PO3
  - b) Determine analytically the equilibrant of the three coplanar forces shown in Fig. The slopes of the force directions are indicated in the Fig.

- 5. a) State the laws of dry friction.
  - b) Referring to the Figure the coefficient of friction is as follows:
     0.25 at the floor, 0.30 at the wall, 0.20 between the blocks. Find the minimum value of a horizontal force P applied to the lower block that will hold the system in equilibrium.

4 Marks L3 CO3 PO1 10 Marks L4 CO3 PO3

- 6. a) Define wedge and write the equilibrium conditions for ladder 4 Marks L3 CO3 PO1 friction.
  b) Determine the minimum horizontal force to be applied at A to 10 Marks L4 CO3 PO2
  - b) Determine the minimum horizontal force to be applied at A to 10 Marks prevent slipping.  $\mu = 0.2$  between the wall and ladder,  $\mu = 0.3$  between the floor and ladder. The ladder weighs 200N and a man weighing 600 N is at 3m from A.

## UNIT-IV

- State and prove theorems of Pappus-Guldinus. 7. a)
  - 8 Marks L3 PO1 CO4 Find the Moment of inertia of the given figure about the X-axis. b) 6 Marks L4 CO4 PO2

- State and prove perpendicular axis theorem for area moment of 5 Marks 8. L3 CO4 PO1 a) inertia.
  - With respect to coordinate axes x and y, locate the centroid C of b) 9 Marks L4 CO4 PO2 the shaded area as shown in the figure.

| 9. | a) | Find amplitude and time period of a particle moving with SHM,    | 8 Marks | L4 | CO4 | PO1 |
|----|----|------------------------------------------------------------------|---------|----|-----|-----|
|    |    | which has a velocity of 9m/s and 16 m/s at the distance of 3m    |         |    |     |     |
|    |    | and 4m respectively from the centre.                             |         |    |     |     |
|    | b) | A mass of 2 kg is supported on as isolator having a spring scale | 6 Marks | L4 | CO4 | PO3 |
|    |    | of 2940 N/m and viscous damping. If the amplitude of free        |         |    |     |     |
|    |    | vibration of the mass falls to one half it original value in 1.5 |         |    |     |     |
|    |    | seconds, determine the damping coefficient of the isolator.      |         |    |     |     |
|    |    | (OR)                                                             |         |    |     |     |
| 10 | a) | State and explain D'Alembert's principle.                        | 8 Marks | L3 | CO4 | PO1 |
|    | b) | A body moving with simple harmonic motion has amplitude of 1     | 6 Marks | L4 | CO4 | PO3 |
|    |    | m and a period of oscillation of 2 seconds. What will be its     |         |    |     |     |

#### **OBJECT ORIENTED PROGRAMMING THROUGH JAVA**

[ Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering, Computer Science and Engineering (Artificial Intelligence), Computer Science and Engineering (Data Science), Computer Science and Business Systems ]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Describe objects with example program. 7 Marks L1 CO1 PO1 1. a) b) Write a program to find factorial of given number using classes. 7 Marks L6 CO1 PO1 (OR)2. Describe Garbage collection with relevant example. a) 7 Marks L1 CO1 PO1 Solve any java program using constructors. 7 Marks b) L3 CO1 PO1 UNIT-II Compare method overloading and constructor overloading. 3. a) 7 Marks L2 CO<sub>3</sub> PO3 Write a program to find area of triangle using parameter passing. 7 Marks L6 CO2 PO3 b) (**OR**) Develop a program to display prime numbers between 40 and 4. a) 7 Marks L6 CO<sub>2</sub> PO1 100. b) Describe type conversions and casting with examples. 7 Marks L1 CO2 PO1 (UNIT-III) Design a program to find area of rectangle and triangle using 5. a) 7 Marks L6 CO3 PO2 abstract methods and classes. Illustrate packages with example java program. b) 7 Marks L4 CO<sub>2</sub> PO<sub>3</sub> (**OR**) 6. a) Explain Block Lambda expressions with examples. 7 Marks L1 CO3 PO3 Develop a program to implement nested interfaces. b) 7 Marks L6 CO<sub>2</sub> PO2 UNIT-IV Illustrate multiple catch statements with example program. 7. L4 CO3 PO2 a) 7 Marks Design a program to convert an Array List into an array. 7 Marks L6 CO3 PO<sub>3</sub> b) (**OR**) 8. Describe synchronization with example program. PO1 a) 7 Marks L1 CO4 b) Plan nested try statements using Java Program. 7 Marks L5 CO3 PO3 UNIT-V Develop a program to create a vertical and horizontal scroll bars. 9. PO3 a) 7 Marks L6 CO5 b) Design a program to demonstrate the functionality of adapter 7 Marks L6 CO5 PO2 classes. (**OR**) Develop a code to create swing application. 7 Marks CO5 PO3 10 a) L6 b) Design a program for java event handling by outer class. 7 Marks L6 CO5 PO3

|    | b)   | Distinguish between binary search and linear search. In searching point of view, which of the two algorithms is best? | 6 Marks  | L2  | CO2         | PO2         |
|    |      | (UNIT-II)                                                                                                             |          |     |             |             |
| 3. | a)   | Write a program to create a double linked list and insert a node at the middle.                                       | 7 Marks  | L2  | CO3         | PO2         |
|    | b)   | Illustrate with an example on how circular double linked list are created.                                            | 7 Marks  | L2  | CO3         | PO2         |
|    |      | (OR)                                                                                                                  |          |     |             |             |
| 4. | a)   | List and explain applications of linked lists.                                                                        | 5 Marks  | L 2 | CO4         | PO2         |
|    | b)   | Write an algorithm insertion operation of singly linked list.                                                         | 9 Marks  | L2  | CO3         | PO2         |
| 5. | a)   | Write an algorithm to insert and delete elements in a linear queue                                                    | 7 Marks  | L 2 | CO4         | PO2         |
|    | b)   | Write an algorithm to implement stack operations.                                                                     | 7 Marks  | L2  | CO4         | PO2         |
| 6. | a)   | Define queue. Discuss various types of queues and the operations that can be performed.                               | 5 Marks  | L 2 | CO4         | PO2         |
|    | b)   | Convert the given infix expression to postfix expression using stack $(a+b*c^d)*(e+f/g)$ .                            | 9 Marks  | L3  | CO4         | PO3         |
|    |      | (UNIT-IV)                                                                                                             |          |     |             |             |
| 7. | a)   | Construct a binary search tree whose post order traversal is : 5 4 9 11 12 8 13 and 7                                 | 8 Marks  | L3  | CO5         | PO2         |
|    | b)   | Write non-recursive procedures for preorder traversals of a binary tree.                                              | 6 Marks  | L2  | CO5         | PO2         |
|    |      | (OR)                                                                                                                  |          |     |             |             |
| 8. | a)   | Illustrate with an example on how single rotation takes place in AVL trees.                                           | 7 Marks  | L 3 | CO5         | PO2         |
|    | b)   | The order of nodes of a binary tree in Preorder and Inorder traversal are as given below.                             | 7 Marks  | L4  | CO5         | PO2         |
|    |      | Preorder Sequence: A B D G H C E F I K J                                                                              |          |     |             |             |
|    |      | In order sequence. D O II D A E I C K F J<br>Draw the corresponding binary tree                                       |          |     |             |             |
|    |      | Draw the corresponding undry the                                                                                      |          |     |             |             |

## UNIT-V

9. Distinguish between B Tree and B+ tree. Create a B tree of order 14 Marks L 3 CO5 PO2 5 by inserting the following elements: 3,14,7,1,8,5,11,17,13,6,23,12,20,26,4,16,18,24,28 and 19.

(OR)

10 a) Implement Breadth First Search algorithm for the following 10 Marks L3 CO5 PO2 . graph.

4 Marks L 1 CO6 PO2

 (An Autonomous Institution, Affiliated to JNTUA, Anantapur)

#### II B.Tech I Semester (SVEC10) Supplementary Examinations February – 2021

#### STRENGTH OF MATERIALS [Mechanical Engineering]

Time: 3 hours

#### Answer any FIVE questions All questions carry equal marks

- **1.** a) State and explain Hooke's law.
  - b) A metallic rod of 1 cm diameter, when tested under an axial pull of 10 kN was found to reduce its diameter by 0.0003 cm. The modulus of rigidity for the rod is 51 kN/mm<sup>2</sup>. Find the Poisson's ratio, modulus of elasticity and Bulk Modulus.
- 2. A simply supported beam of 10m Length carries a uniformly distributed load throughout the beam length. The supports of the beam are 6m apart. Determine the position of the supports with respect to the ends so that the bending moment of the beam is least possible.
- a) What are the assumptions made in the theory of simple bending?b) Derive flexure formula of beams.
- 4. Determine the shear stress generated in a rectangular section of a beam which is subjected to a shear force F.
- 5. a) Derive an expression that governs the theory of pure torsion.
  - b) A hollow circular shaft of external diameter 50mm and wall thickness 5mm transmits a torque of 10kN-m. Find the maximum shear stress induced in the shaft.
- 6. A cantilever of 4m span length carries a load 40 kN at its free end. If the deflection at the free end is not to exceed 8mm, what must be the moment of inertia of the Cantilever section?
- 7. Show that when a thin walled spherical vessel of diameter 'd' and thickness 't' is subjected to an internal pressure 'p', the increase in volume is equal to  $\frac{\pi p d^4}{8tE} (1 v)$ .
- 8. A compound cylinder is made by shrinking a cylinder of external diameter 200mm and internal diameter of 160mm over another cylinder of external diameter 160mm and internal diameter 120mm. The radial pressure at the junction after shrinking is 8 N/mm<sup>2</sup>. Find the final stresses set up across the section when the compound cylinder is subjected to an internal fluid pressure of 60 N/mm<sup>2</sup>.

Time: 3 hours

2

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

- Define beta and gamma functions and establish a relationship between them. 7 Marks 1 a)
  - b) State Bessels differential equation and its solution  $J_n(x)$ . Show that 7 Marks  $J_{1/2}(x) = \sqrt{\frac{2}{\pi x}} \sin x$ .

#### (**OR**)

a) Show that 
$$2^{2n-1} \Gamma(n)(n+\frac{1}{2}) = \Gamma(2n)\sqrt{\pi}$$
. 7 Marks

b) Show that 
$$J_{3/2}(x) = \sqrt{\frac{2}{\pi x}} \left(\frac{1}{x} \sin x - \cos x\right)$$
. 7 Marks

## UNIT-II )

3 a) Show that 
$$\left(\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2}\right)\log|f'(z)| = 0$$
, where  $f(z)$  is analytic function. 7 Marks

- Find the an analytic function f(z) = u + iv, given that  $u v = (x y)(x^2 + 4xy + y^2)$ . b) 7 Marks (**OR**)
- 4 Show that the function  $f(z) = \sqrt{|xy|}$  is not analytic at the origin, although C-R 7 Marks a) equations are satisfied at that point.
  - b) Find the analytic function f(z) = u + iv if  $u = a(1 + Cos\theta)$ .

## UNIT-III)

7 Marks

5 a) Evaluate 
$$\int_{0}^{2+i} z^2 dz$$
 along the imaginary axis to i and then horizontally to 2 + i.  
5 b)  $z^3 + z^2 + 2z - 1$  7 Marks

Evaluate 
$$\int_{C} \frac{z^3 + z^2 + 2z - 1}{(z=1)^3} dz$$
 where C is  $|z|=3$  using Cauchy's integral formula. 7 Marks

#### (**OR**)

6 a) State Cauchy's theorem and verify it for the function 7 Marks  

$$f(z) = z^2 + 3z - 2i$$
 inside the circle  $|z| = 1$ .

b) Write the Laurent series expansion of 
$$f(z) = \frac{z^2 - 1}{(z+2)(z+3)}$$
, for  $|z| > 3$ . 7 Marks

#### UNIT-IV

7 Determine the poles and corresponding residues for the function f(z)= a) 7 Marks  $\frac{z^2}{(z-1)(z-2)^2}.$ By the method of residues, evaluate  $\int_{0}^{2\pi} \frac{d\theta}{1 - 2a\sin\theta + a^2} = 0 < a < 1.$ 7 Marks b) Calculate the value of  $\oint_c \frac{z-3}{z^2+2z+5}$  dz where C is the circle |z+1+i 1=2. 8 7 Marks a) b) 7 Marks Evaluate  $\int_{0}^{\infty} \frac{dx}{(x^2+1)^2}$ . UNIT-V Find the image of the infinite strip  $\frac{1}{4} \le y \le \frac{1}{2}$  under the transformation w= $\frac{1}{z}$ . 7 Marks 9 a) Find the Bilinear Transformation which maps the points z = 1-i-1 in to the points 7 Marks b) w = i, 0, -i.(**OR**) **10** a) Show that the Bilinear Transformation maps circles to circles. 7 Marks Discuss about the transformation w = Cosz. 7 Marks b) \$P \$P \$P

Roll No.

**Computer Science and Systems Engineering** 

Time: 3 hours

**Answer One Ouestion from each Unit** All questions carry equal marks

UNIT-I

- In a certain college 25% of boys and 10% of girls are studying mathematics. The 1 7 Marks a) the student body. (i) What is the probability that girls contribute 60% of mathematics is being studied? (ii) If a student is selected at random and is found to be studying mathematics, find the probability that the student is a girl.
  - X is a continuous random variable with probability density function given by **b**) 7 Marks  $kx, 0 \le x \le 2$ 
    - $2x, 2 \le x \le 4$  $f(x) = \langle$  $k(6-x), 4 \le x \le 6$

Determine: i) *k*.

#### iii) variance. (**OR**)

2 Define the following and illustrate with example. 6 Marks a) i) Probability. ii) Mutually exclusive events. iii) Conditional event. A random variable X has the following probability function: b) 8 Marks

| Х       | 0        | 1      | 2      | 3    | 4        | 5      | 6         | 7     | 8     |  |
|---------|----------|--------|--------|------|----------|--------|-----------|-------|-------|--|
| P(X)    | k/45     | k/15   | k/9    | k/5  | 2k/45    | 6k/45  | 7k/45     | 8k/45 | 4k/45 |  |
| Determi | ne: i) k | ii) P( | X < 4) | iii) | P(X > 1) | ) (iv) | P(2 < X < | < 7)  |       |  |
|         |          |        |        |      |          |        |           |       |       |  |

ii) mean.

#### UNIT-II )

- Derive mean and variance of Binomial Distribution. 3 a)
  - 7 Marks Samples of (n=6) items are drawn at random from the production process which is 7 Marks b) making 10% defectives, calculate the probabilities of 0,1,2,3,4,5 and 6 defectives in a sample.
    - (**OR**)
- Derive the mean and variance of normal distribution. 4 a) If x is a Poisson variable such that p(x = 1) = 24 p(x = 3), find the probability b) p(x=0).

## UNIT-III)

Altoona Tire Company sells its ATC-50 tires with a 50,000-mile tread-life warranty. Loorie 7 Marks 5 a) Ackerman, a quality control engineer with the company, runs simulated road tests to monitor the life of the output from the ATC-50 production process. From each of the last 10 batches of 1,000 tires, she has tested 5 tires and recorded the following results, with  $\overline{X}$ and R measured in thousands of miles:

| Batch          | 1    | 2    | 3    | 4    | 5    | 6    | 7    | 8    | 9    | 10   |
|----------------|------|------|------|------|------|------|------|------|------|------|
| $\overline{X}$ | 50.5 | 49.7 | 50.0 | 50.7 | 50.7 | 50.6 | 49.8 | 51.1 | 50.2 | 50.4 |
| R              | 1.1  | 1.6  | 1.8  | 0.1  | 0.9  | 2.1  | 0.3  | 0.8  | 2.3  | 1.3  |

i) Use the data above to help Lorrie construct a  $\overline{X}$  chart.

ii) Is the production process in-control? Explain.

Calculate coefficient of correlation from the following data. **b**)

| x | 12 | 9 | 8 | 10 | 11 | 13 | 7 |
|---|----|---|---|----|----|----|---|
| у | 14 | 8 | 6 | 9  | 11 | 12 | 3 |
| 2 |    |   |   |    |    |    | _ |

7 Marks

#### (**OR**)

- 6 a) The numbers of defective washers in a workshop of 20 samples containing 7 Marks 500 washers are 25, 30, 32, 28, 35, 27, 28, 30, 33, 35, 38, 40, 21, 26, 24, 40, 29, 28, 26, 38. Calculate the values for central line and the control units for P-Chart.
  - Calculate Karl Pearson's correlation coefficient for the following paired data 7 Marks b) 28 41 40 38 35 33 40 32 36 33 х 23 33 34 30 28 31 36 38 v 34 26

What inference would you draw from the estimate?

## UNIT-IV

- 7 a) A population consists of five numbers 12, 32,40,51,60. Consider all samples of size 8 Marks two which can be taken without replacement from this population. Estimate:
  - i) The population mean.
  - ii) The population Standard deviation.
  - iii) The mean of the sampling distribution of means.
  - iv) Standard deviation of the sampling distribution of means.
  - b) A sample of size 81 was taken whose variance is 20.25 and means 32. 6 Marks Construct 95%. Confidence interval for the mean.

#### (OR)

- 8 a) When a sample is taken from an infinite population discuss about the standard error 7 Marks of the mean if the sample size is decreased from 800 to 200.
  - b) A sample of 100 electric bulbs produced by a manufacturer A showed a mean life 7 Marks time of 1190hrs and a standard deviation of 90 hrs. Another sample of 75 bulbs produced by a manufacturer B showed a mean life of 1230hrs with a S.D of 120hrs. Test the significance of the difference between the means at 99% level.

## UNIT-V

- 9 a) A random sample of 10 boys had the following IQS 70, 120, 110, 101, 88, 83, 95, 7 Marks 98, 107, 100 Does this data support the assumption of population IQ of 100 (Tabulated value2.262 at 5% L.O.S)
  - b) Two independent random sample each of 8 individuals provide the following data. 7 Marks Estimate the variance ration and test the significance.

| Sample –I | 63 | 64 | 65 | 65 | 66 | 66 | 67 | 68 |
|-----------|----|----|----|----|----|----|----|----|
| Sample-II | 69 | 66 | 67 | 67 | 66 | 68 | 69 | 69 |

(tabulated each 3.80 at 5% L. O.S)

#### (OR)

**10** a) Two Horses A and B were Tested according to the time ( in seconds ) to run a 7 Marks particular track with the following results.

| Horse(A) | 28 | 30 | 32 | 33 | 33 | 29 | 34 |
|----------|----|----|----|----|----|----|----|
| Horse(B) | 29 | 30 | 30 | 24 | 27 | 29 | 1  |

Test whether the two Horses have the same running capacity. (Tabulated value 2.20 at 5% L.O.S).

b) Fit a Poisson distribution to the following data and test – the goodness of fit at 5% 7 Marks leave of significance.

| X | 0   | 1   | 2   | 3        | 4  | 5 | 6 | 7 |
|---|-----|-----|-----|----------|----|---|---|---|
| F | 305 | 366 | 210 | 80       | 28 | 9 | 2 | 1 |

[ Civil Engineering ]

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1 a) Find the force 'P' acting at C in the bar shown in Fig.1. Find the extension of the 7 Marks bar if  $E = 2x10^5$  MPa.

b) A bar of 20 mm diameter is tested in tension. It is observed that when a load of 7 Marks 37.7 kN is applied, the extension measured over a gauge length of 200mm is 0.12mm and contraction in diameter is 0.0036mm. Find Poisson's ratio and Young's modulus.

#### (OR)

2 A round copper rod, 560mm long, has a diameter of 30mm over a length of 14 Marks 200mm, a diameter of 20mm over a length of 200mm and a diameter of 10mm over its remaining length. Determine the stresses in each section and elongation of the rod when it is subjected to a pull of 30 kN. Take E=100kN/mm<sup>2</sup>.

## UNIT-II

3 Define the SF and BM at a section of a beam. Explain the utility of drawing SF 14 Marks and BM diagrams for a beam. Also obtain relationship between SF and BM.

(OR)

A simply supported beam of span 6 m carries a clockwise couple of 5 kN-m at 14 Marks 2m from left support and another anticlockwise couple of 10 kN-m at 4m from left support. The beam carries a UDL of intensity 2 kN/m between the couple. Sketch the SFD and BMD.

## UNIT-III

5 Three steel, plates of width 300mm and thickness 10mm are welded together to 14 Marks form a channel section. What is the moment of resistance of the section if the allowable bending in compression is 60MPa and in tension is 80MPa?

#### (OR)

6 Sketch the variation of shear stress across the depth of an I section of depth 14 Marks 300mm, web thickness 10mm and flange size of 100mm x 10mm. The Flexural shear force action on the section is 200kN.

## UNIT-IV

7 Derive Torsion equation and determine the power transmitted by a solid shaft 14 Marks of 120 mm diameter rotating at 100 r.p.m., if the maximum shear stress is not to exceed 80 Mpa. The maximum torque is 20% more than its mean value.

#### (OR)

Max. Marks: 70

SVEC-14

- 8 A closely coiled helical spring of round steel wire 10 mm in diameter having 14 Marks complete turns with a mean diameter of 12 cm is subjected to an axial load of 200N. Determine:
  - i) The deflection of spring.
  - ii) Maximum shear stress in wire.
  - iii) Stiffness of the spring.

## UNIT-V

9 A thin steel cylindrical shell of thickness 14 mm, 1 m diameter and 3.25 m long 14 Marks is carrying a fluid at a pressure of 1.6 N/mm<sup>2</sup>. Find the change in dimensions of the cylinder.

#### (**O**R)

10 Derive lame's equations for the analysis of thick cylinders. Also sketch the 14 Marks variation of radial stress and hoop stress across the thickness of cylinder having internal radius 150mm and external radius 400mm subjected to an internal pressure of 8Mpa.

FLUID MECHANICS-I

## [ Civil Engineering ]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1 Explain the terms: (i) Dynamic viscosity. (ii) Kinematic viscosity. 14 Marks Give their dimensions. Calculate the density, specific weight and weight of one litre of petrol of specific gravity 0.7.

#### (OR)

2 Differentiate between: (i) Absolute and gauge pressure (ii) Simple manometer 14 Marks and differential manometer. A rectangular plane surface is 2m wide and 3m deep. It lies in vertical plane in water. Determine the total pressure and position of centre of pressure on the plane surface when its upper edge is horizontal and coincides with the water surface.

## UNIT-II

**3** Derive continuity equation for one dimensional flow and list out uses and 14 Marks limitations of flow net.

#### (OR)

- **4** a) Define path line, streak line and the streamline. For what type of flow these lines 7 Marks are identical?
  - b) Define the Equation of Continuity. Derive the Continuity Equation for three 7 Marks dimensional flows from fundamentals by indicating the assumptions made where ever are required.

## UNIT-III

5 Derive Darcy - Weisbach equation and a pipe line AB of diameter 300mm and 14 Marks of length 400m carries water at the rate of 50 lit / sec. The flow takes place from A to B where point B is 30m above A. Find the pressure at A if the pressure at B is 19.62 N/cm<sup>2</sup>. Take f = 0.008.

#### (OR)

6 A weir 36m long is divided in to 12 equal bays by vertical posts, each 60cm 14 Marks wide. Determine the discharge over the weir if the head over the crest is 1.20m and velocity of approach is 2metres per second.

## UNIT-IV

7 Describe the Reynolds's experiment with a neat sketch. Explain how would you 14 Marks distinguish between hydro dynamically smooth and rough boundaries.

#### (OR)

8 A laminar flow is taking place in a pipe of diameter 200mm. The maximum 14 Marks velocity is 1.5 m/s. Find the mean velocity and the radius at which this occurs. Also calculate the velocity at 4cm from the wall of the pipe.

## UNIT-V

- 9 Explain the procedure for solving problem by Buckingham's  $\pi$  theorem in briefly. 14 Marks **(OR)**
- 10Explain the following .14 Marksi) Geometric Similarity.ii) Kinematic Similarity.iii) Dynamic Similarity.

SVEC-14

#### All questions carry equal marks

## UNIT-I

| 1  | a)            | Define electric field intensity. Explain in detail the different ways of obtaining elastic field.                                                               | 7 Marks |
|----|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
|    | b)            | Derive the expression for energy density in electric field.<br>(OR)                                                                                             | 7 Marks |
| 2  | a)            | State and explain Gauss law.                                                                                                                                    | 7 Marks |
|    | b)            | Two dipoles with dipole moments $-5a_Z$ Rc/m and $9a_Z$ Rc/m are located at points $(0, 0, -2)$ and $(0, 0, 3)$ respectively. Find the potential at the origin. | 7 Marks |
|    |               | (UNIT-II)                                                                                                                                                       |         |
| 3  | a)            | Derive the expression for EFI due to an Electric dipole.                                                                                                        | 7 Marks |
|    | b)            | Two point charges of 2 $\mu$ C and -2 $\mu$ C are located at (0, 0, 1) and (0, 0, -1) respectively, in free space. Find the potential at (0, 3, 4) m.           | 7 Marks |
|    |               | (OR)                                                                                                                                                            |         |
| 4  | a)            | Derive the expression for Potential due to an Electric dipole.                                                                                                  | 7 Marks |
|    | b)            | Derive the expression for capacitance of a parallel plate capacitor without composite Dielectric material.                                                      | 7 Marks |
|    |               | (UNIT-III)                                                                                                                                                      |         |
| 5  | a)            | State and prove Biot-Savort's law.                                                                                                                              | 7 Marks |
|    | b)            | Find the Magnetic Field intensity at Point $P(2, 2, 3)$ caused by a current                                                                                     | 7 Marks |
|    |               | filament of 25 A in the $\mathbf{a}_z$ direction and extending from $Z = 0$ to $Z = 6$ .                                                                        |         |
|    |               | (OR)                                                                                                                                                            |         |
| 6  | a)            | Write Maxwell's Fourth equation in Integral form and explain.                                                                                                   | 7 Marks |
|    | b)            | Obtain the expression for Magnetic Field Intensity due to infinitely long co-axial transmission line by applying Ampere's circuital Law.                        | 7 Marks |
|    |               | (UNIT-IV)                                                                                                                                                       |         |
| 7  | a)            | Explain the classification of magnetic materials                                                                                                                | 7 Marks |
|    | b)            | Derive the expression for magnetic energy density in a magnetic field.                                                                                          | 7 Marks |
|    |               | (OR)                                                                                                                                                            |         |
| 8  | a)            | Calculate the self-inductance per unit length of an infinitely long solenoid.                                                                                   | 7 Marks |
|    | b)            | Explain about the magnetic boundary conditions.                                                                                                                 | 7 Marks |
| 9  | a)            | Explain the difference between induced transformer and motional <b>emf</b>                                                                                      | 7 Marke |
| )  | $\frac{a}{b}$ | Write the point form of Maxwell's equations Explain their significance                                                                                          | 7 Marks |
|    | 0)            | (OR)                                                                                                                                                            |         |
| 10 | a)            | Define displacement current. Derive the expression for displacement current density.                                                                            | 7 Marks |
|    | b)            | Write the integral form of Maxwell's equations. Explain their significance. $\circledast \ \circledast \ \circledast$                                           | 7 Marks |

## **ELECTRIC CIRCUITS**

[Electrical and Electronics Engineering]

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

b) Determine the voltage drop across  $5\Omega$  resistor in fig. 2 using nodal analysis. 7 Marks 4  $\Omega$ 

**2** a) Determine the equivalent resistance between the terminals A and B for the 7 Marks network shown in fig. 3.

- b) List the steps involved in constructing the dual of a network. 7 Marks
- **3** a) Analyze the behavior of a series RC circuit excited by a sinusoidal voltage 7 Marks source.
  - b) A series circuit consumes 2kW at 0.8 power factor lag when connected to 230 V, 7 Marks 50Hz supply. Calculate current, kVA, kVAR.

- 4 a) Derive the resonant frequency of parallel combination of series RC and RL 8 Marks circuits.
  - b) Distinguish between series and parallel Resonance. 6 Marks

## UNIT-III)

- **5** a) Derive the relation between line and phase quantities in a three phase balanced 7 Marks star connection.
  - b) Three identical impedances of  $(3+j4)\Omega$  are connected in delta. Find an equivalent 7 Marks star network such that the line current is the same when connected to the same supply.

#### (OR)

6 Explain the measurement of three phase power using two wattmeter methods 14 Marks with neat phasor diagram.

## UNIT-IV

- 7 a) State and explain Faraday's law of Electromagnetic Induction.
  - b) Two coils A and B are wound on same ferromagnetic core. There are 300 turns 8 Marks on A and 2800 turns on B. A current of 4A through coil A produces a flux of 800µWb in the core. If this current is reversed in 20ms, find the average e.m.f induced in coils A and B.

#### (OR)

- 8 a) A steel ring of 25cm mean diameter and of circular section of 3cm in diameter 10 Marks has an air gap of 1.5mm length. It is wound uniformly with 700 turns of wire carrying a current of 2A. Calculate.
  - i) Magneto motive force.
  - ii) Flux density.
  - iii) magnetic flux.
  - iv) Relative permeability of steel ring.
  - b) Explain about series connection of coupled coils.

## 4 Marks

6 Marks

## UNIT-V

- 9 a) State and explain maximum power transfer theorem with a suitable example. 7 Marks
  - b) Obtain the current in  $2\Omega$  resistor in the circuit of Fig.4 by using the venin's 7 Marks theorem.

**10** a) State and explain superposition theorem with a suitable example.

7 Marks

b) For the circuit shown in Fig.5, if the resistance of  $5\Omega$  branch is increased to  $6\Omega$ , 7 Marks Determine the compensation source and verify the results.

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

#### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

1 Explain about series and parallel inductive and capacitive circuit. 8 Marks a) The filament of a light in the circuit has a certain amount of resistance. The bulb 6 Marks b) operates with 120V and 0.8A of current, what is the resistance of its filament?

(**OR**)

- State Kirchoffs voltage and current law with suitable examples. 2 a) 4 Marks
  - Explain voltage division rule and current division rule with an example. 5 Marks b)
  - Find the current through branch a-b using mesh analysis shown Figure.1. 5 Marks c)

## UNIT-II

3 Define resonance and explain the characteristics of series resonance. 7 Marks a) Design a series R-L-C circuit that resonates at 1.5kHz and consumes 50W 7 Marks **b**) from a 50V A.C source operating at the resonance frequency. The bandwidth is 0.75 kHz.

#### (**OR**)

- Distinguish between series and parallel Resonance circuits. 4 6 Marks a)
  - b) A non-alternating periodic waveform has been shown in Figure 2. Find its form 8 Marks factor.

- 5 Obtain the Transient response of RC series circuit for sinusoidal excitation. 7 Marks a)
  - A series RC circuit has R=20 $\Omega$  and C=100 $\mu$ F. A voltage v = 200 Sin 314t is 7 Marks b) applied at t=2.14 msec. Obtain an expression for current. Find the value of current after time 1 m sec from the switching instant.

#### (**OR**)

Explain and derive the expressions of Transient response of RLC series circuit 6 14 Marks with sinusoidal excitation.

## UNIT-IV

- 7 Define port network and obtain the equations of an impedance parameters of 7 Marks a) two port network.
  - Derive the Z-parameter equations for lattice network. b)

8 Find the Z and Y-parameters of the circuit shown in Figure.3 and check the 14 Marks condition for symmetry and reciprocity.

- 9 a) State and explain maximum power transfer theorem and derive the condition for 7 Marks maximum power transfer in an AC circuits.
  - b) Using Norton's theorem, find current through  $6\Omega$  resistor shown in Figure.4. 7 Marks

- 10 a)State reciprocity theorem and explain with an example.6 Marks
  - b) Find the voltage across the 20  $\Omega$  resistor by using superposition theorem for the 8 Marks circuit shown in Figure.5

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1 | a) | Define probability based on set theory and fundamental axioms.                                                                                                                                                                                                                   | 7 Marks |
|---|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
|   | b) | Two boxes are selected randomly. The first box contains 2 black balls and 3 white balls. Second box contains 4 white and 6 black balls. What is the probability of drawing a white ball?                                                                                         | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                             |         |
| 2 | a) | Define joint and conditional probabilities.                                                                                                                                                                                                                                      | 4 Marks |
|   | b) | When are two events said to be collectively exhaustive? Explain with examples.                                                                                                                                                                                                   | 5 Marks |
|   | c) | Estimate the probability of the card being either red or a king when one card is                                                                                                                                                                                                 | 5 Marks |
|   | ,  | drawn from a deck of a regular 52 cards.                                                                                                                                                                                                                                         |         |
|   |    | UNIT-II                                                                                                                                                                                                                                                                          |         |
| 3 | a) | What is the Gaussian random variable? Explain the other distribution and density Examples.                                                                                                                                                                                       | 8 Marks |
|   | b) | Assume automobile arrivals at a gasoline station are Poisson and occur at an average rate of 50/h. The station has only one gasoline pump. If all the cars are assumed to require one minute to obtain fuel, what is the probability that a waiting line will occur at the pump? | 6 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                             |         |
| 4 | a) | Explain Conditional density and list the properties of conditional density.                                                                                                                                                                                                      | 6 Marks |
|   | b) | The sample space for an experiment is $S = \{0, 1, 2, 5, 6\}$ . List all the possible values of the following random variables; (i) $X = 2s$ , (ii) $X = 5s^2 - 1$ .                                                                                                             | 8 Marks |
|   |    | (UNIT-III)                                                                                                                                                                                                                                                                       |         |
| 5 | a) | Explain the concept of "Expected value of a random variable".                                                                                                                                                                                                                    | 6 Marks |
|   | b) | Explain with necessary equation about "Joint density "and list all the properties of the same.                                                                                                                                                                                   | 8 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                             |         |
| 6 | a) | Explain Central limit theorem in detail.                                                                                                                                                                                                                                         | 6 Marks |
|   | b) | Discuss Moments about the Origin, Central moments, Variance and skew.                                                                                                                                                                                                            | 8 Marks |
| - | `` |                                                                                                                                                                                                                                                                                  |         |
| 7 | a) | Explain the meaning of "Mean - Ergodic processes "and Correlation -Ergodic processes.                                                                                                                                                                                            | 6 Marks |
|   | b) | Explain linear time invariant system and time invariant system transfer function. <b>(OR)</b>                                                                                                                                                                                    | 8 Marks |
| 8 | a) | Explain in detail about Poisson Random process and compare it with Gaussian random process.                                                                                                                                                                                      | 6 Marks |
|   | b) | What is the meaning of cross correlation function and list all the properties of cross correlation.                                                                                                                                                                              | 8 Marks |

## UNIT-V

- **9** a) Define thermal noise and explain its relationship to the bandwidth and 7 Marks temperature.
  - b) An amplifier with gain = 30 dB and BN = 25 kHz is found to have T0 = 120 K. 7 Marks Find Te and Noise figure.

#### (OR)

- 10 a) Derive the equation for Noise figure of Cascaded system in terms of individual 7 Marks Noise Figures.
  - b) State and prove any three properties of Narrow band Noise processes. 7 Marks

\$\$ \$\$ \$\$

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

#### II B.Tech I Semester (SVEC14) Supplementary Examinations August – 2021

#### SEMICONDUCTOR DEVICES AND CIRCUITS

#### [ Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering ]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Explain the V-I characteristics of PN diode and Zener diode. Also differentiate 7 Marks them.
  - b) Draw the circuit of a full wave rectifier circuit with L section filter and derive 7 Marks the expression for ripple factor.

#### (OR)

- **2** a) Explain the formation of depletion region in an open circuited PN-junction. 7 Marks What is the significance of barrier potential across a PN-junction?
  - b) A HWR circuit is supplied from a 230-V, 50Hz supply with a step-down ratio of 7 Marks 3:1 to a resistive load of 10 k $\Omega$ . The diode forward resistance is 10 $\Omega$ . Calculate maximum, average, RMS values of current, DC output voltage, efficiency of rectification and ripple factor.

## UNIT-II

| 2          | a)       | Skatch the input and output abaratoristics of a transistor in CD configuration          | 7 Mortra   |
|------------|----------|-----------------------------------------------------------------------------------------|------------|
| 3          | a)       | Sketch the input and output characteristics of a transistor in CB configuration.        | 7 Warks    |
|            | b)       | Explain how a transistor works as an amplifier.                                         | / Marks    |
|            |          | (OR)                                                                                    |            |
| 4          | a)       | Explain how you would locate the operating point using the load line.                   | 7 Marks    |
|            | b)       | Explain, with necessary circuit diagram, the collector to base bias arrangement         | 7 Marks    |
|            |          | and derive at an expression for its stability factor.                                   |            |
|            |          |                                                                                         |            |
| _          |          |                                                                                         |            |
| 5          | a)       | Define h-parameters. How do you determine h-parameters from transistor characteristics? | 7 Marks    |
|            | b)       | Draw the circuit diagram of CB amplifier circuit and its h-parameter equivalent         | 7 Marks    |
|            | - )      | circuit List the characteristics of a CB amplifier                                      |            |
|            |          | (OR)                                                                                    |            |
| 6          | a)       | Analyze the CC amplifier using approximate hybrid model                                 | 8 Marks    |
| U          | u)<br>b) | Describe the simplified hybrid model                                                    | 6 Marks    |
|            | 0)       |                                                                                         | 0 WIAIKS   |
|            |          |                                                                                         |            |
| 7          | a)       | Explain the pinch-off voltage, V-I characteristics of JFET.                             | 6 Marks    |
|            | b)       | With neat diagram, explain the operation of MOSFET in Enhancement mode.                 | 8 Marks    |
|            |          | (OR)                                                                                    |            |
| 8          | a)       | Explain the common drain amplifier and derive expression for gain of the                | 8 Marks    |
| U          | ч)       | amplifier                                                                               | 0 10141110 |
|            | h)       | Write the comparisons of BIT and IFFT                                                   | 6 Marks    |
|            | 0)       |                                                                                         | 0 WIGINS   |
|            |          |                                                                                         |            |
| 9          | a)       | Explain the principle and operation of tunnel diode.                                    | 6 Marks    |
|            | b)       | Explain the construction, operation, equivalent circuit V-I characteristics and         | 8 Marks    |
|            | ,        | application of UJT.                                                                     |            |
|            |          | (OR)                                                                                    |            |
| 10         | a)       | With neat diagram explain about varactor diode                                          | 6 Marks    |
| <b>T V</b> | u /      |                                                                                         | V IVIAIND  |

b) Explain the construction, operation, V-I characteristics and application of SCR. 8 Marks

|     |         |                                                                             |                |

#### UNIT-II

- 3 Using Newton-Raphson method find the root of the equation  $x + log_{10}x = 3.375$ , 7 Marks a) correct to three decimal places.
  - From the following table of half-yearly premium for policies maturing at different 7 Marks **b**) ages, estimate the premium for policies maturing at age of 46.

| Age                 | 45     | 50    | 55    | 60    | 65    |
|---------------------|--------|-------|-------|-------|-------|
| Premium (in rupees) | 114.84 | 96.16 | 87.32 | 74.48 | 68.48 |
|                     | (      | OR)   |       |       |       |

- By using bisection method, find an approximate root of the equation  $\sin x = 1/x$ , 7 Marks 4 a) that lie between x=1 and x=1.5 (measured in radians), carry out computations up to 5 stages.
  - A curve passes through the points (1, -3), (3, 9), (4, 30) and (6, 132). Find the slope 7 Marks b) of the curve at x=2.

#### UNIT-III)

Estimate the value of  $\frac{dy}{dx}$  and  $\frac{d^2y}{dx^2}$  at x = 4.0 at x = 4.0 from the following 7 Marks a)

data.

5

| Х | 1.5   | 2.0 | 2.5    | 3.0  | 3.5    | 4.0  |
|---|-------|-----|--------|------|--------|------|
| у | 3.375 | 7.0 | 13.625 | 24.0 | 38.875 | 59.0 |
| - |       | .1  |        | . 1  |        |      |

Applying Rungekutta method, estimate y when x = 1.2 in steps of 0.1 given that b) 7 Marks  $\frac{dy}{dx} = x^2 + y^2, y(1) = 1.5$ .

6

a) The following table of values of x and y are given. Find  $\frac{dy}{dx}$  when x =1 and x=6. 7 Marks

| x : | 0      | 1       | 2      | 3      | 4      | 5      |       |
|-----|--------|---------|--------|--------|--------|--------|-------|
| y : | 6.9897 | 7.4036  | 7.7815 | 8.1291 | 8.4510 | 8.7506 |       |
| D   | TZ 11  | 4 1 0 1 | 1 C    |        | (0, 5) | .1     | · . · |

b) Using Runge-Kutta method of order four, compute y (2.5) for the equation 7 Marks  $\frac{dy}{dx} = \frac{x+y}{x}, y(2) = 2.$ 

## UNIT-IV

- 7 a) Obtain the half range sine series for the function  $f(x) = \frac{\pi x}{8}(\pi x)$  in the range 7 Marks  $0 \le x \le \pi$ .
  - b) Find the Fourier cosine Transform of  $e^{-\frac{x^z}{z}}$ . 7 Marks

#### (OR)

- 8 a) Find the half range cosine series for the function  $f(x) = \cos ax$  where  $\alpha$  is not an 7 Marks integer in the range  $0 < x < \pi$ 
  - b) Using Fourier integral show that  $e^{-x} \cos x = \frac{2}{\pi} \int_{0}^{\infty} \frac{\lambda^{2} + 2}{\lambda^{2} + 4} \cos \lambda x d\lambda$  7 Marks

## UNIT-V

9 a) Form the partial differential equation by eliminating arbitrary function from 7 Marks xyz = f(x + y + z).

b) Solve by the method of separation of variables  $\frac{\partial^2 u}{\partial x^2} = \frac{\partial u}{\partial y} + 2u$  satisfying u = 0 and 7 Marks

 $\frac{\partial u}{\partial x} = e^{2y}$ , when x=0, for all y.

#### (OR)

- 10 a) Form the partial differential equation by eliminating the arbitrary functions  $f_1$  and 4 Marks  $f_2$  from  $z = f_1(y+2x)+f_2(y-3x)$ .
  - b) Solve one dimensional heat equation by the method of separation of variables 10 Marks  $\frac{\partial u}{\partial t} = c^2 \frac{\partial^2 u}{\partial x^2}$

#### SPECIAL FUNCTIONS AND COMPLEX ANALYSIS

[ Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering ]

Electronics and first unrentation Engineering j

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

| 1 | a) | Define Beta and Gamma functions and derive the relation between them. | 7 Marks |
|---|----|-----------------------------------------------------------------------|---------|
|   | b) | Show that $\frac{d}{dx} [x^n J_n(x)] = x^n J_{n-1}(x)$ .              | 7 Marks |

#### (**OR**)

2 a) Evaluate 
$$\int_{0}^{1} x^{3} \sqrt{1 - x dx}$$
 using beta and gamma functions.  
b) show that  $\frac{d}{dx} [J_{0}(x)] = -J_{1}(x)$ 
7 Marks

## (UNIT-II)

| 3 | a) | Show that an analytic function of constant modulus is constant.                                                                                                                                      | 7 Marks |
|---|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
|   | b) | Determine the analytic function $f(z) = u + iv$ given that $3u + 2v = y^2 - x^2 + 16x$ .                                                                                                             | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                 |         |
| 4 | a) | If $\mathbf{f}(\mathbf{z}) = \mathbf{u} + \mathbf{i}\mathbf{v}$ is an analytic function, find $\mathbf{f}(\mathbf{z})$ if $\mathbf{u} + \mathbf{v} = \frac{x}{x^2 + y^2}$ when $\mathbf{f}(1) = 1$ . | 7 Marks |
|   | b) | Determine the analytic function whose real part is $e^{x}(x \cos y - y \sin y)$ .                                                                                                                    | 7 Marks |

## (UNIT-III)

| 5 | a) | Evaluate $\int_{0}^{1+i} (x - y + ix^2) dz$ along the real axis from $z = 0$ to $z = 1$ and then            | 7 Marks |
|---|----|-------------------------------------------------------------------------------------------------------------|---------|
|   |    | along a line parallel to imaginary axis from $z = 1$ to $z = 1 + i$ .                                       |         |
|   | b) | Use Cauchy's and integral formula to evaluate $\oint_c \frac{e^{2z}}{(z+1)^4} dz$ where c is the circle     | 7 Marks |
|   |    | $ \mathbf{z}  = 2.$                                                                                         |         |
|   |    | (OR)                                                                                                        |         |
| 6 | a) | Evaluate $\oint_{c} \frac{\cos \pi z^2}{z^2 - 1} dz$ around a rectangle with vertices $2 \pm i - 2 \pm i$ . | 7 Marks |
|   | b) | Expand $f(z) = \frac{1}{z^2 - 3z + 2}$ in the region                                                        | 7 Marks |
|   |    | (i) $ z  \ge 2$ (ii) $ Z  \le 1$ (iii) $0 \le  Z-1  \le 1$ using Taylor's series                            |         |

#### UNIT-IV)

7 a) Evaluate  $\int_C \frac{(2z+1)^2}{(4z^3+z)} dz$  where C is the circle |z| = 1. 7 Marks

Max. Marks: 70

b) Evaluate 
$$\int_{-\infty}^{\infty} \frac{x^2}{(x^2+1)(x^2+4)} dx$$
 using residue theorem. 7 Marks

(OR)

Determine the poles and corresponding residues for the function 7 Marks 8 a)  $f(z) = \frac{z^2 - 2z}{(z+1)^2 (z^2+1)}$ 

b)

By the method of residues, evaluate 
$$\int_{0}^{\pi} \frac{d\theta}{a+b\cos\theta} (a > b > 0)$$
. 7 Marks

9 a) Under the transformation 
$$w = 1/z$$
, find the image of the circle  $|z - 2i| = 2$ . 7 Marks

Define a Bilinear transformation and evaluate a bilinear transformation which b) 7 Marks maps the points 1, i, -1 onto the points i , 0 , -i .

- Show that the bilinear transformation maps circles to circles. 7 Marks **10** a) 7 Marks
  - Discuss about the transformation w = Cos z. b)

(f) (f) 송

#### **PROBABILITY AND STATISTICS**

[ Computer Science and Engineering, Information Technology,

**Computer Science and Systems Engineering** 

Time: 3 hours

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

- Define random variable, discrete random variable, continuous random variable 1 7 Marks a) and conditional probabilities.
  - If x and y are continues random variable, then prove that E(X + Y) = E(X) + E(Y). 7 Marks b)

#### (**OR**)

- State and prove the Baye's theorem. 2 a)
  - In a class 2% of Boys and 3% of girls are having blue eyes. There are 30% girls 7 Marks b) in the class. If a student is selected and found that having blue eyes, what is the probability that the student is a girl.

## UNIT-II)

Derive the mean and variance of normal distribution. 7 Marks 3 a) If x is a Poisson variable such that p(x = 1) = 24 p(x = 3), find the probability 7 Marks b) p(x=0).

#### (**OR**)

- 4 Derive mean and variance of Binomial Distribution. a)
  - Samples of (n=6) items are drawn at random from the production process which 7 Marks b) is making 10% defectives. Calculate the probabilities of 0,1,2,3,4,5 and 6 defectives in a sample.

## UNIT-III

| 5 | a) | Obtain the rank  | cor   | relat  | ion c  | o- ef | ficie | nt fo | r the | follo | wing  | data |    | 7 Marks |
|---|----|------------------|-------|--------|--------|-------|-------|-------|-------|-------|-------|------|----|---------|

SVEC-14

7 Marks

7 Marks

- **8** a) Define the Hypothesis, null Hypothesis, alternative Hypothesis Level of 7 Marks significance with suitable example
  - b) In a city 400 out of 600 were smokers. Does this information support the 7 Marks conclusion that the majority of men in this city are smokers? (z = 8.3 majority of people are smokers).

## UNIT-V

- 9 a) A random sample from a company's very extensive files shows that the orders for a certain kind of machinery were filled, respectively in 10, 12, 19, 14, 15, 18, 11 and 13 days. Use the level of significance a = 0.01 to test the claim that on the average such orders are filled in 10.5 days. Assume normality.
  - b) The number of automobile accidents per week in a certain community are as 7 Marks follows: 12, 8, 20, 2, 14, 10, 15, 6, 9, 4. Are these frequencies in agreement with the belief that accident conditions were the same during this 10 week period.

#### (**OR**)

**10** a) The following tables give the number of aircraft accident that occurred during 7 Marks seven days of the week. Find whether the accidents are uniformly distributed over the week.

| No.of accidents 14 18 12 | 2 11 | 15 | 14 |
|--------------------------|------|----|----|

b) Explain briefly significance between F-Test and T-Test

#### **MECHANICS OF SOLIDS**

[Civil Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1 What is strain energy and show that strain energy per unit volume is  $f^2/2E$ ? 14 Marks What is Generalized Hooke's law? Write the governing equations.

#### (OR)

2 Derive relationship between E, N and K and also differentiate Resilience and 14 Marks Toughness.

## UNIT-II)

3 Define the SF and BM at a section of a beam. Explain the utility of drawing SF 14 Marks and BM diagrams for a beam. Also obtain relationship between SF and BM.

#### (**OR**)

4 A simply supported beam of span 6m carries a clockwise couple of 5kN-m at 14 Marks 2m from left support and another anticlockwise couple of 10kN-m at 4m from left support. The beam carries a UDL of intensity 2kN/m between the couple. Sketch the SFD and BMD.

## UNIT-III)

5 Three steel plates of width 300mm and thickness 10mm are welded together to 14 Marks form a channel section. What is the moment of resistance of the section if the allowable bending in compression is 60MPa and in tension is 80MPa?

#### (OR)

6 Sketch the variation of shear stress across the depth of I section of depth 14 Marks 300mm, web thickness 10mm and flange size of 100mm x 10mm. The Flexural shear force action on the section is 200kN.

## UNIT-IV

7 Derive Torsion equation and determine the power transmitted by a solid shaft of 14 Marks 120mm diameter rotating at 100 r.p.m., if the maximum shear stress is not to exceed 80 Mpa. The maximum torque is 20% more than its mean value.

#### (**OR**)

8 It is required to design a closed coiled helical spring which shall deflect 1 mm 14 Marks under an axial load of 100N at a shear stress of 90Mpa. The spring is to be made of round wire having shear modulus of 0.8 x 10<sup>5</sup>Mpa. The mean diameter of the coil is 10 times that of the coil wire. Find the diameter and length of the wire.

## UNIT-V

9 A thick cylinder of steel having an internal diameter of 10cm and an external 14 Marks diameter of 20cm, is subjected to an internal pressure of 80Mpa and an external pressure of 10Mpa. Find the maximum normal and shearing stress in the cylinder and calculate the change of external diameter. Take E= 200Gpa.

#### (OR)

10 Determine the maximum stress induced in a cylindrical steel strut of length 14 Marks 1.4m and diameter 40mm. The strut is hinged at both its ends and subjected to an axial thrust of 30kN at its ends and a transverse point load of 2kN at the centre. Take  $E = 2.08 \times 10^5 \text{ N/mm}^2$ .

#### FLUID MECHANICS-I [ Civil Engineering ]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## 

1 Explain the terms i) Dynamic viscosity, ii) Kinematic viscosity. Give their 14 Marks dimensions. Calculate the density, specific weight and weight of one litre of petrol of specific gravity 0.7.

#### (OR)

- 2 State and prove the Pascal's law. Determine the total pressure on a circular plate 14 Marks of diameter 1.5m which is placed vertically in water in such a way that the centre of the plate is 3m below the free surface of water. Find the position of centre of pressure also.
  - UNIT-II)
- 3 If for a two-dimensional potential flow, the velocity potential is given by: 14 Marks  $\Phi = 4x$  (3y-4), determine the velocity at the point(2, 3). Also determine the value of stream function  $\Psi$  at the point (2, 3).

#### (OR)

4 A pipe 250m long has a slope of 1in 100 and tapers from 1.5m diameter at the 14 Marks higher end to 0.7m at the lower end. The quantity of water flowing is 700 lit/sec. If the pressure at the higher end is 60KPa, find the pressure at the lower end.

## UNIT-III)

5 List the various minor losses in pipes and derive an expression for the loss of 14 Marks head due to sudden enlargement. A horizontal venturimeter with inlet diameter 20cm and throat diameter 10cm is used to measure the flow of oil of sp.gr.0.8. The discharge of oil through venturimeter is 60 litres/s. Find the reading of the oil-mercury differential manometer. Take  $C_d = 0.98$ .

#### (OR)

6 Define an orifice and a mouthpiece. What is the difference between the two? 14 Marks Water is flowing in a rectangular channel 1 m wide and 0.75m deep. Find the discharge over a rectangular weir of crest length 60cm, if the head of water over the crest of weir is 20cm and water from channel flows over the weir. Take  $C_d = 0.62$ . Neglect end contractions. Take velocity of approach into consideration.

## UNIT-IV

7 a) Determine i) the pressure gradient, ii) the shear stress at the two horizontal 7 Marks parallel plates and iii) the discharge per meter width for the laminar flow of oil with a maximum velocity of 2m/sec between two horizontal parallel fixed plates which are 100mm a part. Given  $\mu = 2.4525 \text{ N s/m}^2$ .

1

b) Describe Reynold's experiment to demonstrate the two types of flow.

SVEC-14

#### (OR)

- 8 a) Prove that the velocity distribution of viscous flow between two parallel plates 7 Marks when both plates are fixed across a section parabolic in nature. Also prove that maximum velocity is equal to one and half times the average velocity.
  - b) Water is flowing between two large parallel plates which are 2m a part. 7 Marks Determine maximum velocity, pressure drop per unit length and shear stress at walls of the plate, if the average velocity is 0.4m/sec. Take viscosity of water as 0.01 poise.

## UNIT-V

9 Discharge Q through a turbine is a function of the turbine speed n, head H, 14 Marks diameter D of the runner, density  $\rho$  and viscosity  $\mu$  of the fluid and acceleration due to gravity **g**. Find an expression for Q.

#### (OR)

10 Explain Froude model law and A 1:64 model is constructed of an open channel 14 Marks in concrete which has Manning's N = 0.014. Find the value of N for the model.

II B.Tech I Semester (SVEC14) Supplementary Examinations February – 2021

#### **NETWORK ANALYSIS**

#### [Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours

## Answer One Question from each Unit

## All questions carry equal marks

## UNIT-I

- 1 a) State and explain Kirchhoff's law with suitable examples.
  - b) Find the voltage across  $2\Omega$  resistor in Fig.1b.

**2** a) Briefly explain about source transformation techniques.

b) Find the voltage across  $10\Omega$  resistor in Fig.2b as shown below.

## UNIT-II

- **3** a) Define resonance and list out its implications.
  - b) What is locus diagram? Draw and explain current locus diagram for a series RL 8 Marks circuit, with fixed resistance by deriving necessary expressions.

#### (OR)

- 4 a) Define the following terms with respect to fundamental sinusoidal AC quantity.
  8 Marks i) Average value. ii) RMS value. iii) Instantaneous value. iv) Form factor.
  - b) Distinguish between RLC series and parallel resonance circuits. 6 Marks

## (UNIT-III)

- **5** a) Derive the expressions of Transient response of RL series circuit with DC 7 Marks excitation.
  - b) Determine the voltage at the terminals of a coil having  $R = 10\Omega$  and L = 15mH 7 Marks at the instant when the current is 10A and increasing at the rate of 5A/sec. Also find the stored energy in the inductor.

#### (**OR**)

6 Derive the expressions of Transient response of RC series circuit with sinusoidal 14 Marks excitation using Laplace transform approach.

Max. Marks: 70

6 Marks 8 Marks

7 Marks 7 Marks

- 6 Marks

## UNIT-IV

- 7 a) Derive the relations of Y-parameters in terms of Z-parameters.7 Marksb) Explain about cascade connection of two port networks.7 Marks(OR)
- 8 Define image impedance. Derive the expressions of image impedances of the 14 Marks basic T-Network.

- 9 a) State and explain maximum power transfer theorem with a suitable example. 7 Marks
  - b) Find the load resistance to receive maximum power from the source and also 7 Marks find the maximum power delivered to the load in the circuit shown in Fig.9b.

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

II B.Tech I Semester (SVEC14) Supplementary Examinations February – 2021

#### **THERMODYNAMICS**

# [Mechanical Engineering]

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

- How will you find out whether a given quantity is a thermodynamic property? 1 7 Marks a) How are these properties classified? Give examples of each type. Explain: i) reversible process. ii) irreversible process. Write important criterion for b) 7 Marks a process to be reversible. (**OR**) 2 a) Define following: 9 Marks i) Thermo dynamic state. ii) Quasistatic process. iii) Cyclic and non cyclic process.
  - Show that the work and heat are path functions. b)

## UNIT-II)

- What is a steady flow process? Write the steady flow energy equation and explain 7 Marks 3 a) the various terms in it.
  - Represent schematically heat engine, heat pump and refrigerator. Give their b) 7 Marks performance.

#### (**OR**)

- 4 State and prove Carnot's theorem. a)
  - A heat engine is used to drive a heat pump. The heat transfers from the heat engine b) and from the heat pump are used to heat the water circulating through the radiators of a building. The efficiency of the heat engine is 27% and the COP of the heat pump is 4. Evaluate the ratio of the heat transfer to the circulating water to the heat transfer to the heat engine.

## UNIT-III)

- 5 What is irreversibility? Show the gain of entropy in an irreversible process on 7 Marks a) T-s diagram in the case of steam turbine and compressor.
  - Define the term availability. Find an expression for the availability of a closed b) 7 Marks system.

#### (**OR**)

- 6 Define available and unavailable energy. a)
  - Air enters the heater at 27°C and leaves at 67°C, the pressure being constant at b) 10 Marks 4 bar. The heat source is at 260°C and the surroundings are at 15°C. Treating air as a perfect gas find: i) the gain in availability of the air, ii) the effectiveness of the heater. Also calculate the loss due to irreversibilities.

## UNIT-IV)

- What are Maxwell relations? Derive them. 7 a)
  - 7 Marks Describe the Mollier chart for steam with the help of a suitable diagram. What is 7 Marks b) the importance of this diagram in thermodynamic calculations?

5 Marks

6 Marks

8 Marks

4 Marks

SVEC-14

#### (OR)

- 8 a) Derive Tds equation when (i) T and V independent (ii) T and P independent. 8 Marks
  - b) Draw and explain phase equilibrium diagram for a pure substance on P-T 6 Marks coordinate. Also indicate different regions on the diagram.

## UNIT-V

- **9** a) Derive the expression from the air standard efficiency of the diesel cycle in terms 7 Marks of compression ratio, cut off ration and adiabatic index.
  - b) Explain the working principle of Otto cycle with the help of P-V and T-S 7 Marks diagrams.

#### (OR)

**10** Derive an expression for the thermal efficiency of diesel cycle and draw P-V and 14 Marks T-S diagrams.

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

II B.Tech I Semester (SVEC14) Supplementary Examinations February – 2021

#### **PROBABILITY AND STOCHASTIC PROCESSES**

[Electronics and Communication Engineering]

All questions carry equal marks

#### UNIT-I Define joint and conditional probabilities. 4 Marks a) When are two events said to be collectively exhaustive? Explain with examples 5 Marks b) Estimate the probability of the card being either red or a king when one card is c) 5 Marks drawn from a deck of a regular 52 cards (**OR**) State and prove multiplication theorem of probability. 6 Marks 2 a) b) For any two events A and B in a sample space S, if $B \subset A$ then prove that 8 Marks P(A/B) = 1. UNIT-II State and prove any four properties of probability density function. 6 Marks 3 a) When two dice are thrown, calculate the expected value of the sum of number of 8 Marks b) points on them. (**OR**) State four properties of conditional density function. 7 Marks 4 a) Find the MGF of a Binomial distribution and hence find mean and variance. 7 Marks b) (UNIT-III) Find the skew for Gaussian distributed random variable. 7 Marks 5 a) Define conditional distribution and density function of two random variables 7 Marks b) X and Y. (**OR**) Find the characteristic function for a random variable with density function 6 8 Marks a) $f_x(\omega) = x$ for $0 \le x \le 1$ . Define and explain the characteristic function. 6 Marks b) UNIT-IV Explain about random processes. 7 6 Marks a) State and prove mean Ergodic theorem. 8 Marks b) (**OR**) Discuss about Gaussian Random Process and Poisson Random Process. 7 Marks a) Discuss the auto correlation properties of a random process. 7 Marks b) UNIT-V Classify noise and explain thermal noise in detail for stochastic processes. 7 Marks a) b) Explain noise factor and noise figure. 7 Marks (**OR**) Define the term interference and list several sources. 7 Marks 10 a) For an amplifier with an output signal power of 10W and an output noise power 7 Marks b) of 0.01W, determine the signal-to-noise power ratio

## UNIT-I

- 1 Explain the V-I characteristics of Diode of Diode under forward and reverse bias. 10 Marks a) An ac voltage of peak value 20.7V is connected in series with a silicon diode and 4 Marks b)
  - a load resistance of 490 $\Omega$ . The forward resistance of the diode is 10 $\Omega$ . Calculate: i) peak current through the diode ii) peak voltage output voltage. What will be these values if the diode is assumed to be ideal?

#### (OR)

- Discuss about the temperature dependence of V-I characteristics of PN diode 2 a) 5 Marks
  - Distinguish between transition capacitance and diffusion capacitance of PN 4 Marks **b**) junction diode.
  - Compare and contrast half-wave and full-wave rectifiers. Mention any three 5 Marks c) applications of rectifier

## UNIT-II)

Sketch and explain the common base input and output characteristics. How do 10 Marks 3 a) you draw these curves experimentally? Describe the Base-Width modulation. b) 4 Marks (**OR**) Explain how you would locate the operating point using the load line. 7 Marks 4 a) Explain the collector to base bias arrangement and derive at an expression for its 7 Marks b) stability factor with necessary circuit diagram. (UNIT-III) How do you determine h-parameters from transistor 5 Define h-parameters. a) 7 Marks characteristics? Draw the circuit diagram of CB amplifier circuit and its h-parameter equivalent b) 7 Marks circuit. List the characteristics of a CB amplifier. (**OR**) Analyze the CC amplifier using approximate hybrid model. 8 Marks 6 a) Describe the simplified hybrid model. 6 Marks b) (UNIT-IV) Draw the circuit diagram of common source amplifier and derive expression for 7 a) 7 Marks gain of the amplifier. With neat structure, explain the principle of operation of depletion MOSFET. 7 Marks b) (**OR**) Explain the Drain and Transfer characteristics of a JFET. 7 Marks 8 a) With neat diagrams, explain the characteristics of MOSFET in enhancement 7 Marks b) mode. UNIT-V 9 Explain the working principle and characteristics of SCR. 7 Marks a) Draw the equivalent circuit of UJT and explain the characteristics. 7 Marks **b**) (**OR**) 10 a) Write the applications of UJT. 6 Marks Explain the operation of varactor diode. 8 Marks b) 쓩 융

#### [ Computer Science and Engineering, Information Technology, **Computer Science and Systems Engineering**

**Time: 3 hours** 

2

6

**Answer One Ouestion from each Unit** All questions carry equal marks

## UNIT-I

- 1 Show the following equivalence  $P \rightarrow (Q \lor R) \Leftrightarrow (P \rightarrow Q) \lor (P \rightarrow R)$ 7 Marks a)
  - b) Express the product of sum canonical form of the formula 7 Marks  $(P \land Q) \lor (\neg P \lor Q \land R)$

#### (**OR**)

- Show that  $S \cup R$  is tautologically implied by  $(P \cup Q) \cap (P \rightarrow R) \cap (Q \rightarrow S)$ . 7 Marks a)
- Explain about free and bounded variables in detail in the context of predicate 7 Marks b) logic.

#### UNIT-II )

- Define partial and total order of relations. 3 a)
  - Design a Hasse diagram of  $\{1, 2, 3, 6, 12\}$  under the partial ordering relation **b**) 9 Marks 'divided'.

#### (**OR**)

- Show that f(x, y) = x y is a primitive recursive function. 4 7 Marks a)
  - Let  $X = \{1, 2, 3, 4, 5, 6, 7\}$  and  $R = \{(x,y)/x y \text{ is divisible by } 3\}$  in X. Design an 7 Marks **b**) Equivalence Relation.

## (UNIT-III)

- Define a semi group and a monoid. Give an example for a semi group but not 5 7 Marks a) monoid.
  - 7 Marks b) Prove that a Group in which every element has its own inverse, is abelian group.

(**OR**)

- (G,\*) is a group and (a,b)  $\in$  G then show that  $(a * b)^{-1} = b^{-1} * a^{-1}$ . 7 Marks a)
- Every finite group of order "n" is isomorphic to a permutation group of degree 7 Marks b) 'n' prove it.

## UNIT-IV

- In  $(1 + x^5 + x^9)^{10}$  find the coefficient of  $x^{23}$  and  $x^{32}$ . 7 a)
  - Compute the number of six letter combinations of the letter of English alphabet. 7 Marks b) If no letter is to appear in the combination more than 2 times.

(**OR**)

- 7 Marks 8 Solve the Recurrence Relation  $a_n - 9a_{n-1} - 26a_{n-2} - 24a_{n-3} = 0$  where  $a_0 = 0$ ,  $a_1 = 1$ a) and  $a_2 = 10$ .
  - How many ways can 5 day's be chosen from each of the 12 months of an 7 Marks b) ordinary year of 365 day's.

## UNIT-V

- 9 7 Marks Show that the complete graph  $k_s$  is non planar. a) b)
  - Explain BFS algorithm with example.

10 a) State and prove Grin berg's theorem. Show that the complete Bipartite graph of  $k_{3,3}$  is non planar. 7 Marks **b**)

#### PROBABILITY DISTRIBUTIONS AND STATISTICAL METHODS

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

7 Marks

#### Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

1 a) Let F(x) be the distribution function of a random variable X given by CO4 7 Marks

 $F(x) = \begin{cases} cx^3, when \ 0 \le x < 3\\ 1, when x \ge 3\\ 0, when x < 0 \end{cases}$ 

Determine i) probability density function. ii) value of c. iii) Mean. iv) P(X>1) of a random variable X.

b) Let  $f(x) = 3x^2$ , when  $0 \le x \le 1$  be the probability density function of a CO2 7 Marks continuous variable *X*. By analyzing the functions, estimate the value of '*a*' and '*b*' such that

(i) 
$$P(X \le a) = P(X > a)$$
 (ii)  $P(X > b) = 0.05$ .  
(OR)

2 a) A player tosses 3 fair coins. He wins Rs. 500, if 3 heads appear ; CO4 7 Marks Rs. 300, if 2 heads appear ; Rs. 100 if 1 head occur. On the other hand, he loses Rs. 1500, if 3 tails occur. Calculate the expected gain of the player.

b) Probability density function of random variable *X* is CO1

 $f(x) = \begin{cases} \frac{1}{2}\sin x, \text{ for } 0 \le x \le \pi\\ 0, \text{ elsewhere} \end{cases}$ 

Estimate the mean and median of the distribution and also find  $P(0 \le X \le \frac{\pi}{2})$ .

UNIT-II)

3 a) Construct a binomial distribution and find expected frequencies to the CO3 7 Marks following data

| Χ | 0  | 1  | 2  | 3  | 4  | 5  | 6 |
|---|----|----|----|----|----|----|---|
| f | 13 | 25 | 52 | 58 | 32 | 16 | 4 |

b) Average number of accidents on any day on a national highway is 1.8. CO4 7 Marks Determine the probability that the numbers of accidents is

i) at least one. (ii) at most one.

#### (**OR**)

- 4 a) Calculate the probability that at most 5 defective components will be CO4 7 Marks found in a lot of 200. Experience shows that 2 % of such components are defective. Also estimate the probability of more than five defective components.
  - b) The marks obtained in statistics in a certain examination found to be CO4 7 Marks normally distributed. If 15% of students got greater than or equal to 60 marks, 40 % of students got less than 30 marks, Estimate the mean and standard deviation.

SVEC-16

## UNIT-III)

5 The following are the figures of defectives in 22 lots each containing CO3 14 Marks 2000 rubber belts 25, 430, 216, 341, 225, 322, 280, 306, 337, 305, 356, 402, 216, 264, 126, 409, 193, 326, 280, 389, 451, 420. Design control chart for the fraction defectives and comment on the state of control of the process.

(OR)

6 Calculate the correlation coefficient and regression lines for the following CO4 14 Marks data

| Χ | 2 | 4 | 6 | 8  | 10 | 12 | 14 |
|---|---|---|---|----|----|----|----|
| Y | 4 | 2 | 5 | 10 | 4  | 11 | 12 |
|   |   |   |   |    |    |    |    |

- 7 a) In a sample of 500 from a village in Andhra Pradesh, 280 are found to be CO2 7 Marks rice eaters and the rest are wheat eaters. Examine that both the articles are equally popular or not. Justify.
  - b) A random sample of size 32 from a normal population having the mean CO2 7 Marks 47.5 and the standard deviation 8.4. Examine whether the information support or refuse the claim, that the mean of the population is 42.5.

#### (**OR**)

- 8 a) At a certain date in a large city 400 out of a random sample of 500 men CO2 7 Marks were found to be smokers. After the heavy taxation on tobacco another sample of 600 men in the same city included 400 smokers. Examine whether decrease in the proportion of smokers significant.
  - b) A sample of 500 members has a mean 2.5 cms and standard deviation 2.21 CO5 7 Marks cms. By relevant statistical technique check whether the sample has drawn from the population with a mean 3 cms and standard deviation 2.21 cms.

## UNIT-V

- 9 a) A sample of 26 bulbs give a mean life of 990 hours with a standard CO2 7 Marks deviation of 20 hours. The manufacturer claims that the mean life of bulbs is 1000 hours. Discuss whether the sample is up to the standard or not.
  - b) The measurements of the output of two units have given the following CO4 7 Marks results. Assuming that both samples have been obtained from the normal population at 10% significance level, test whether the two populations have the same variance.

CO4

14 Marks

| Unit-A | 14.1 | 10.1 | 14.7 | 13.7 | 14.0 |
|--------|------|------|------|------|------|
| Unit-B | 14   | 14.5 | 13.7 | 12.7 | 14.1 |
|        |      |      |      |      |      |

10 4 coins were tossed 160 times and the following results were obtained.

| No. of Heads :        | 0  | 1  | 2  | 3  | 4 |
|-----------------------|----|----|----|----|---|
| Observed frequencies: | 17 | 52 | 54 | 31 | 6 |

Under the assumption that coins are unbiased, find the expected frequencies of 0,1,2,3, or 4 heads, and test the goodness of fit ( $\alpha = 0.05$ ).

| 5 |    | Write Cauchy's theorem and verify it for the function $f(z) = z + 1$ over the                                         | CO1,        | 14 Marks |
|   |    | boundary of the square with vertices $z = 0, z = 1, z = 1 + i, z = i$ .                                               | CO4         |          |
| 6 | a) | Construct a Taylor's series for $f(z) = \frac{e^z}{z(z+1)}$ about the point $z = 2$ .                                 | CO3         | 7 Marks  |
|   | b) | Evaluate contour integral $\int \frac{\sin \pi z^2 + \cos \pi z^2}{(z-1)(z-2)} dz$ where <i>c</i> is the circle       | CO4         | 7 Marks  |
|   |    | z  = 3 using Cauchy's Integral formula.                                                                               |             |          |
|   |    | UNIT-IV)                                                                                                              |             |          |
| 7 | a) | Define pole of a function. Evaluate the product of poles of the function $z^2$                                        | CO1,<br>CO4 | 7 Marks  |
|   |    | $f(z) = \frac{1}{(z-1)(z-2)^2}$ at $z = 1, 2$ .                                                                       |             |          |
|   | b) | Show that $\int_{0}^{2\pi} \frac{d\theta}{2 + \cos \theta} = \frac{2\pi}{\sqrt{3}}$ using complex variable technique. | CO5         | 7 Marks  |
|   |    | (OR)                                                                                                                  |             |          |
| 8 | a) | Calculate the value of $\oint \frac{z-3}{cz^2+2z+5} dz$ where C is the circle $ z+1+i  = 2$ .                         | CO4         | 7 Marks  |
|   | b) | Evaluate the integral $\int_{0}^{\infty} \frac{dx}{(1+x^2)^2}$ by using the technique of finding                      | CO5         | 7 Marks  |
|   |    | residues.                                                                                                             |             |          |

## UNIT-V

- 9 a) Define a Bilinear transformation and show that Bilinear transformation CO1, 4 Marks preserves cross ratio of four points.
   CO4
  - b) What is the difference between isogonal and conformal transformations CO4 6 Marks and illustrate with an example.
  - c) Construct bilinear transformation whose invariant points are 1, i and CO3 4 Marks which maps 0 onto -1.

## (OR)

- 10 a) On applying the transformation  $w = \frac{1}{z}$  show that the hyperbola CO4 7 Marks  $x^2 y^2 = 1$ , maps onto the lemniscate  $\rho^2 = \cos 2\phi$ .
  - b) Construct a bilinear the transformation which maps the points -1, i, 1 CO3 7 Marks of the z plane onto 1, i, -1 of the w plane respectively

|   | (OR)                                                                                                                               | ~ ~         |          |
| 8 | Discuss briefly various sources of capital for a business.                                                                         | CO1         | 14 Marks |

From the following Trail Balance of Shukla prepare Trading, Profit and Loss Account for the year ending 31<sup>st</sup> March, 2019 and Balance sheet as on the date.

CO4, 14 Marks

CO5, CO6

| Particulars                      | Debit(Rs) | Credit(Rs) |
|----------------------------------|-----------|------------|
| Buildings                        | 20,000    |            |
| Capital A/c                      |           | 60,000     |
| Purchases & Sales                | 10,000    | 30,000     |
| Stock on 1-04-2018               | 5,000     |            |
| Debtors & Creditors              | 12,000    | 6,000      |
| Drawings                         | 4,000     |            |
| Sales returns & purchase Returns | 2,000     | 500        |
| Freight                          | 2,500     |            |
| Office Salaries                  | 8,000     |            |
| Wages                            | 1,500     |            |
| Postage and Telegrams            | 1,000     |            |
| Machinery                        | 15,000    |            |
| bills Receivable, Bills Payable  | 8,000     | 2,000      |
| Advertisement                    | 2,000     |            |
| Cash in hand                     | 3,500     |            |
| Loose Tools                      | 4,000     |            |
| Total                            | 98,500    | 98,500     |

#### Adjustments:

9

10

- i) Closing Stock was valued at Rs 6,000/-
- ii) Depreciation Buildings by 10% and Loose Tools are evalued at Rs 3,500/-

#### (OR)

The trial balance of a firm on 31.12.2018 is as follows. Prepare final CO4, accounts of this firm. CO5,

CO5, CO6

14 Marks

| Particulars                | Debit (Rs) | Credit (Rs) |
|----------------------------|------------|-------------|
| Capital                    |            | 1,00,000    |
| Plant and Machinery        | 1,60,000   |             |
| Sales                      |            | 354,000     |
| Returns                    | 2,000      | 1,500       |
| Opening Stock              | 700        |             |
| Bank charges               | 150        |             |
| Sundry Debtors & Creditors | 90,000     | 51,600      |
| Furniture                  | 60,000     |             |
| Wages                      | 20,000     |             |
| Salaries                   | 13,600     |             |
| Carriage inwards           | 1,500      |             |
| Carriage outwards          | 2,400      |             |
| bad debts provision        |            | 1,050       |

|          |                                   |                                   |

#### (UNIT-IV)

7 a) Define an event and activity. Differentiate clearly between the two. CO1 6 Marks

b) Discuss various rules for providing dummies in a network and what are CO1 8 Marks redundant dummies.

(OR)

- 8 a) Write a note on development of networks.
  - b) Differentiate between activity oriented diagram and event oriented CO2 6 Marks diagram.

## CO1 8 Marks
# UNIT-V

- 9 a) If the expected time along the critical path of a project is 27 weeks and the CO2 6 Marks standard deviation along it is 6 weeks, determine the probability of completing the project within a) 21 weeks, b) 24 weeks, c) 36 weeks.
  - b) The details of a network are given below where the duration is in days. CO2 8 Marks

| Activity | to | t <sub>m</sub> | tp |
|----------|----|----------------|----|
| 1-2      | 2  | 5              | 8  |
| 1-3      | 1  | 4              | 7  |
| 2-3      | 0  | 0              | 0  |
| 2-4      | 2  | 4              | 6  |
| 2-6      | 5  | 7              | 12 |
| 3-4      | 3  | 5              | 10 |
| 3-5      | 3  | 6              | 9  |
| 4-5      | 7  | 6              | 10 |
| 4-6      | 2  | 5              | 8  |
| 5-6      | 2  | 4              | 6  |

Determine the critical path and project completion time.

(OR)

10 Determine the minimum cost and optimum duration for the following CO9 14 Marks project.

The data of each activity of network is given in the table. Indirect cost is Rs.4000/week.

| Activity | Normal Time<br>(Month) | Cost (Rs.) | Crash Time<br>(Month) | Cost (Rs.) |
|----------|------------------------|------------|-----------------------|------------|
| 0-1      | 3                      | 5000       | 2                     | 5500       |
| 1-3      | 14                     | 10000      | 11                    | 13000      |
| 1-2      | 7                      | 6000       | 4                     | 9000       |
| 2-3      | 9                      | 11000      | 6                     | 18000      |
| 3-4      | 4                      | 9000       | 3                     | 12000      |
| 4-5      | 3                      | 6000       | 2                     | 7800       |

FLUID MECHANICS AND HYDRAULIC MACHINERY

# [ Civil Engineering ]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a) | Define density, specific gravity, viscosity and vapour pressure. Calculate the specific weight, specific mass, specific volume and specific gravity of a liquid having a volume of 6m <sup>3</sup> and weight of 44kN                                                                                                 | CO1 | 7 Marks |
|---|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|   | b) | Describe Newton's law of viscosity and a plate 0.05 mm distant from a fixed plate moves at 1.2 m/s and requires a force of 2.2 N/m <sup>2</sup> to maintain this speed. Find the viscosity of the fluid between the plates <b>(OR)</b>                                                                                | CO2 | 7 Marks |
| 2 | a) | A plate having an area of 0.6 sq.m is sliding down the inclined plane at 30 degrees to the horizontal with a velocity of 0.36 m/s. There is a cushion of fluid 1.8 mm thick between the plane and the plate. Find the viscosity of the fluid if the weight of the plate is 280 N. Also calculate kinematic viscosity. | CO2 | 7 Marks |
|   | b) | A 400 mm diameter shaft is rotating at 200 r.p.m in a bearing of length 120 mm. If the thickness of oil film is 1.5 mm and the dynamic viscosity of the oil is 0.7 N.s/m <sup>2</sup> , determine torque required to overcome friction in bearing and power utilized in overcoming viscous resistance.                | CO2 | 7 Marks |
| 3 | a) | Explain the description of fluid motion and list out types of fluid flows                                                                                                                                                                                                                                             | CO1 | 8 Marks |
| 5 | u) | with an example.                                                                                                                                                                                                                                                                                                      | 001 | o mano  |
|   | b) | Describe types of flow lines and velocity for a two dimensional flow field<br>is given by $V = (3 + 2xy + 4t^2) i + (xy^2 + 3t) j$ . Find the velocity and<br>acceleration at a point (1,2) after 2 sec.                                                                                                              | CO2 | 6 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                  |     |         |
| 4 | a) | Derive continuity equation in three dimensional forms in Cartesian system.                                                                                                                                                                                                                                            | CO1 | 7 Marks |
|   | b) | A pipe (1) 450 mm diameter branches into two pipes (2 and 3) of diameters 300mm and 200mm respectively. If the average velocity in 450mm diameter pipe is 3 m/s find discharge through 450mm diameter pipe and velocity in 200mm diameter pipe if the average velocity in 300mm pipe is 2.5 m/s.                      | CO2 | 7 Marks |
|   |    | (UNIT-III)                                                                                                                                                                                                                                                                                                            |     |         |
| 5 | a) | Explain Reynolds's experiment with a neat sketch and list out the characteristics of laminar flow.                                                                                                                                                                                                                    | CO1 | 7 Marks |
|   | b) | Derive an expression for flow of viscous fluid in circular pipes with assumptions.                                                                                                                                                                                                                                    | CO1 | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                  |     |         |
| 6 | a) | An oil of viscosity 9 poise and specific gravity 0.9 is flowing through a                                                                                                                                                                                                                                             | CO5 | 7 Marks |

- horizontal pipe of 60 mm diameter. If the pressure drop in 100 m length of the pipe is 1800 kN/m<sup>2</sup>, determine rate of flow of oil, centre line velocity, total frictional drag over 100 m length and power required to maintain the flow.
  - b) Define Couette flow and describe flow of viscous fluid between two CO1 7 Marks parallel plates.

# UNIT-IV

- 7 a) List out types of channels and compare open channel flow and pipe flow. CO1 7 Marks What is the purpose of providing bed slope in open channels?
  - b) Classify flows and define energy and momentum correction factors. CO2 7 Marks Hydraulic jump forms at the downstream end of spillway causing 18 cumec discharges. If the depth before jump is 0.8 m, determine the depth after the jump and energy loss.

### (OR)

- 8 a) Discuss the distribution of velocity in an open channel flow. Which CO1 7 Marks velocity is called relative velocity? How does an open channel flow differ from pressure flow?
  - b) A trapezoidal channel with base width 3m and side slope 2H: 1V carries a CO3 7 Marks discharge of 10 cumec at a depth of 1.5m under uniform flow condition. The longitudinal slope of the channel is 0.001. Compute the average shear stress on the boundary and also compute the Manning's N value.

# UNIT-V

- 9 a) State Impulse Momentum Principle. Derive an expression for impact of jet CO2 7 Marks of liquid on a fixed vertical plate. Find the force exerted by a 4cm diameter water jet directed against a flat plate held normal to the jet, if the jet is discharging 60 litres of water per second.
  - b) Derive an expression for impact of jet of liquid on an inclined plate CO2 7 Marks moving in the direction of the jet of liquid. A jet of water 120mm in diameter and moving with a velocity of 25 m/s strikes normally on a flat plate. Determine the force exerted on the plate and the work done when the plate is stationary, the plate is moving with a velocity of 8 m/s in the direction of the jet, and the plate is moving with a velocity of 8 m/s towards the jet.

### (OR)

- a) Derive an expression for impact of jet on a fixed curved plate. A jet of CO2 7 Marks water 5 cm in diameter and moving with a velocity of 15 m/s impinges on a series of vanes moving with a velocity of 5 m/s. Determine force on the plates. Work done per second and Efficiency of the jet.
  - b) Obtain an expression for force exerted by the jet of water on a inclined CO2 7 Marks plane which is at rest. Prove that the maximum efficiency is 50% when a jet of liquid strikes of plates fixed to the periphery of a wheel.

II B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

**MECHANICS OF SOLIDS** 

[Civil Engineering]

Time: 3 hours

4

Max. Marks: 70

# **Answer One Question from each Unit** All questions carry equal marks

# UNIT-I

- A compound bar consist of a central steel strip 25 mm wide and 6.4 mm CO5 1 14 Marks thick placed between two strips of brass each 25 mm wide and 't' mm thick. The strips are firmly fixed together to form a compound bar of rectangular section 20 mm wide and (2t + 6.4) mm thick. Determine
  - i) The thickness of the brass strips which will make the apparent modulus of elasticity of compound bar  $1.57 \times 10^5 \text{ N/mm}^2$  and
  - ii) The maximum axial pull the bar can then carry if the stress is not to exceed 157 N/mm<sup>2</sup>, in either the brass or steel.

Take the values of E for steel and brass as  $2.07 \times 10^5$  N/mm<sup>2</sup> and  $1.14 \times 10^5$ N/mm<sup>2</sup> respectively.

- (**OR**)
- 2 Define resilience. Derive the maximum stress intensity on a member of CO1 14 Marks length 'l' and uniform cross sectional area 'A' when a load of magnitude 'P' is applied gradually and suddenly on the member and identify the difference in these two cases

3 Determine the maximum shear force and bending moment of a Cantilever CO<sub>2</sub> 14 Marks beam shown in the figure and draw SFD and BMD.

(**OR**)

Determine the maximum shear force and bending moment of a Cantilever CO<sub>2</sub> 14 Marks beam shown in the figure and draw SFD and BMD.

Derive the maximum shear stress intensity for a solid circular section. 5 10 Marks CO1 a) A cast iron cantilever of length 2.5m fails when a load of 3kN applied at CO2 4 Marks b) the free end. Determine the stress at failure if the section of the cantilever is of 40mm x 60mm.

SVEC-16

- 6 A load of 75 kN is carried by a column of Cast iron. The external and CO2 14 Marks internal diameters are 200mm and 18 mm respectively, if the eccentricity of the load is 35mm, find:
  - i) The maximum and minimum stress intensities.
  - ii) Upto what eccentricity there is no tensile stress in the column.

# UNIT-IV

- 7 a) A solid shaft of 200mm diameter has the same cross section area as that of CO6 7 Marks the hollow shaft of the same material with inside diameter of 150mm. Find the ratio of the power transmitted by the two shafts at the same speed.
  - b) A solid shaft is 100mm in diameter. It transmits 110 kW at 200 r.p.m, find CO1 7 Marks the maximum intensity of shear stress induced and the angle of twist for a length of 6m.  $C=8\times10^4$  N/mm<sup>2</sup>.

### (**OR**)

- 8 a) A composite spring has two closed coiled springs connected in series; one CO4 7 Marks spring has 12 coils of a mean diameter of 25mm and wire diameter 2.5mm. Find the wire diameter of the other spring, if it has 15 coils of mean diameter 40 mm. The stiffness of the composite spring is 1.5 kN/m. Determine the greatest load that can be carried by the composite spring and the corresponding extension if maximum stress is 250 MN/m<sup>2</sup>. Take C= 80 GN/m<sup>2</sup>.
  - b) A helical spring B is placed inside the coil of a second helical spring A, CO2 7 Marks having the same number of coils and free axial length and of same material. The two springs are compressed by an axial load of 210 N which is shared between them. The mean coil diameters of A and B are 90mm and 60mm and the wire diameters are 12mm and 7mm respectively. Calculate the load taken and the maximum stress in each spring.

### UNIT-V

9 A cylindrical shell 4m long which is closed at the ends has an internal CO5 14 Marks diameter of 1m and a wall thickness of 15mm. Calculate the circumferential and the longitudinal stresses induced and also the change in dimension of the shell if it is subjected to an internal pressure of 1.5MN/m<sup>2</sup>.

### (OR)

- 10 The external diameter of steel collar is 240mm and internal diameter is CO6 14 Marks decreased by 0.15mm when shrunk on to a solid steel shaft of 150mm diameter. Find :
  - i) Radial pressure between the collar and the shaft.
  - ii) Circumferential stress at the inner surface of the tube.
  - iii) Reduction in diameter of the shaft.

Take:  $E= 205 \text{ GN/m}^2$ , and  $\mu = 0.304$ .

### SURVEYING

### [ Civil Engineering ]

Time: 3 hours

Max. Marks: 70

CO1

6 Marks

SVEC-16

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 a) What are the sources of errors in chaining? What precautions would guard CO6 6 Marks against them?
  - b) The length of a Survey line was measured with a 20m chain and was CO2 8 Marks found to be equal to 1200m. As a check the length was again measured with a 25m chain and was found to be 1212m. On comparing the 20m chain with the test gauge, it was found to be 1 decimeter too long. Find the actual length of the 25m chain used.

#### (OR)

- 2 a) What are offsets? What are the types of offsets and method of taking CO1 10 Marks offsets?
  - b) The following perpendicular offsets were taken from a chain line to a CO2 4 Marks hedge

| Chainage (m) | 0   | 15  | 30   | 45   | 60   | 70  | 80  | 100 | 120 | 140 |
|--------------|-----|-----|------|------|------|-----|-----|-----|-----|-----|
| Offsets (m)  | 7.6 | 8.5 | 10.7 | 12.8 | 10.6 | 9.5 | 8.3 | 7.9 | 6.4 | 4.4 |

Calculate the area between the survey line, the hedge and the end offsets:

i) Trapezoidal rule. ii) Simpson's rule.

### UNIT-II)

- 3 a) State the advantages and disadvantages of plane table survey.
  - b) The following staff readings were observed successively with a level. The CO4 8 Marks instrument having been moved after second, fifth and eighth readings. 0.675, 1.230, 0.750, 2.565, 2.225, 1.935, 1.835, 3.220, 3.115, 2.875. The first staff reading was taken with a staff held on a bench mark of reduced level +100.00. Collect and enter the readings in the level book form and identify the reduced levels of all the points.

#### (OR)

4 Explain the tracing paper method of solving the Three Point problem. CO1 14 Marks What is the practical utility of the solution to Three Point problem in the field?

### UNIT-III)

5 A closed traverse ABCDEA was run in the counter clockwise direction, CO3 14 Marks and the following data were obtained.

| Line | Length (m) | Included angle                     |
|------|------------|------------------------------------|
| AB   | 186        | Angle $A = 118^{\circ} 20^{\circ}$ |
| BC   | 164        | Angle $B = 82^{\circ} 10^{1}$      |
| CD   | 303        | Angle $C = 130^{\circ} 00^{1}$     |
| DE   | 162        | Angle D = $73^{\circ} 44^{1}$      |
| EA   | 240        | Angle $E = 128^{\circ} 36^{\circ}$ |

The bearing of AB was  $24^{\circ} 30^{\circ}$ . Determine the closing error, adjust it, and give the corrected consecutive coordinates.

#### (**OR**)

| 6  | a) | Explain the procedure to measure a horizontal angle by repetition method using a theodolite.                                                                                                           | CO1 | 6 Marks  |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Explain the temporary adjustments of Vernier transit theodolite with three screw head.                                                                                                                 | CO6 | 8 Marks  |
|    |    | UNIT-IV                                                                                                                                                                                                |     |          |
| 7  |    | Explain the procedure to set out simple circular curve by Rankines method.                                                                                                                             | CO1 | 14 Marks |
|    |    | (OR)                                                                                                                                                                                                   |     |          |
| 8  | a) | What are the elements of a simple circular curves?                                                                                                                                                     | CO1 | 6 Marks  |
|    | b) | Two straights of a road intersect at a chainage of 2550.5m having an angle of intersection of 110°. Find the various elements of a simple circular curve of 4° to be introduced between the straights. | CO3 | 8 Marks  |
|    |    |                                                                                                                                                                                                        |     |          |
| 9  | a) | What is Total Station? Illustrate its uses.                                                                                                                                                            | CO5 | 6 Marks  |
|    | b) | Explain working principles of EDM by phase difference method.                                                                                                                                          | CO1 | 8 Marks  |
|    |    | (OR)                                                                                                                                                                                                   |     |          |
| 10 | a) | Write short notes on electronic theodolite.                                                                                                                                                            | CO5 | 6 Marks  |
|    | b) | Describe briefly the advantages of electronic theodolite.                                                                                                                                              | CO1 | 8 Marks  |

### II B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

### **DC MACHINES**

#### [Electrical and Electronics Engineering]

Answer One Question from each Unit All questions carry equal marks Max. Marks: 70

SVEC-16

# UNIT-I )

1 Illustrate various methods of excitation of DC machines with neat circuit CO1 7 Marks a) diagrams and deduce the relationships between generated emf and terminal voltage. A short compound wound DC generator supplies a load current of 150 A 7 Marks b) CO4 at 230 V. Calculate the emf generated, if the resistance of armature, series field and shunt field windings are  $0.15\Omega$ ,  $0.1\Omega$  and  $100\Omega$  respectively. Assume the brush drop 1 Volt per brush. (**OR**) 2 Differentiate separately and self-excited DC generators. CO1 3 Marks a) Derive the condition for maximum efficiency of DC generator. b) CO<sub>2</sub> 4 Marks A short-shunt DC compound generator supplies 200A at 100V. The CO4 7 Marks c) resistance of armature, series filed and shunt field windings are 0.04, 0.03 and  $60\Omega$  respectively. Find the **emf** generated. Also find the **emf** generated if same machine is connected as a long-shunt machine. UNIT-II Derive the expressions for demagnetizing and cross-magnetizing ampere 3 a) CO<sub>2</sub> 8 Marks turns per pole in a DC machine with neat sketch. A 6-pole, 148 A DC shunt generator has 480 conductors and is waveb) CO4 6 Marks wound. Its field current is 2A. Find the demagnetizing and crossmagnetizing ampere turns per pole at full load if (i) brushes are on GNA and (ii) brushes are shifted from GNA by 50 electrical degrees. (**OR**) 4 Discuss in detail the detrimental effects of armature reaction in DC 7 Marks CO1 a) machines. With relevant illustrations explain the role of compensating winding in a CO1 7 Marks b) DC machine. UNIT-III) 5 The magnetization curve of a DC shunt generator at 1500 r.p.m is as CO1 14 Marks follows.  $I_{f}(A)$ 0 0.4 0.8 1.2 1.6 2.0 2.4 2.8 3.0  $E_{\sigma}(V)$ 6 60 120 172.5 202.5 221 231 237 240

For this generator, determine:

- i) No-load **emf** for a total shunt field resistance of  $100 \Omega$
- ii) The critical field resistance at 1500 r.p.m and
- iii) The magnetization curve at 1200 r.p.m and there from the open-circuit voltage for a field resistance of 100  $\Omega$ .

### (OR)

1

6 a) Parallel operation of DC series generators is not stable. Justify.

b) A DC series generator having an external characteristics which is a CO4 8 Marks straight line through zero to 50 V at 200 A connected as a booster between station bus bar and a feeder of 0.3  $\Omega$  resistance. Calculate the voltage difference between the station bus bar and the far end of the feeder at a current of (i) 1200 A and (ii) 50 A

# UNIT-IV

- 7 a) Drive the expression for torque developed by a DC motor from CO2 5 Marks fundamentals.
  - b) Select and describe the suitable speed control technique for DC shunt CO5 4 Marks motor which is used to control the speed above rated value.
  - c) A shunt motor operating on 230 V takes an armature current of 6 A at no- CO4 5 Marks load and runs at 1200 r.p.m. Take Ra =  $0.25 \Omega$ . Find the speed and the electromagnetic torque when the armature takes 36 A with the same flux.

### (OR)

- 8 a) DC shunt motor is suitable to drive agricultural pump set. Justify.
  - b) A 220 V shunt motor has an armature resistance of 0.5  $\Omega$ . The armature CO3 8 Marks current at starting must not exceed 40 A. Design a 3-point starter with 6 sections and also calculate the values of the resistor steps to be used in this starter.

# UNIT-V

9 A test on two coupled similar tramway motors, with their fields connected CO4 14 Marks in series, gave the following results when one machine acted as a motor and the other as a generator.

Motor :

Armature current = 56 A; Armature voltage = 590 V; Voltage drop across field winding = 40 V

Generator :

Armature current = 44 A; Armature voltage = 400 V; Field voltage drop = 40 V; Resistance of each armature =  $0.3 \Omega$ 

Compute the efficiency of the motor and generator at this load.

### (**OR**)

- 10 a) Mention the advantages and disadvantages of no-load test.
  - b) Explain running down test for finding stray losses of DC machine.
    - c) In a retardation test on a separately-excited motor, the induced **emf** in the armature falls from 220 V to 190 V in 30 seconds on disconnecting the armature from the supply. The same fall takes place in 20 seconds if, immediately after disconnection, armature is connected to a resistance which takes 10 A (average) during this fall. Find stray losses of the motor.

#### **Answer One Ouestion from each Unit** All questions carry equal marks

### UNIT-I

- Explain the terms electric field intensity and electric flux density with CO1 1 a) 7 Marks necessary mathematical relations. Find the total charge in a volume defined by six planes for which CO3 b) 7 Marks  $1 \le x \le 2, 2 \le y \le 3$  and  $3 \le z \le 4$ , if  $\overline{D} = 4x\overline{a}_x + 3y^2\overline{a}_y + 2z^3\overline{a}_z$  C/m<sup>3</sup>. (**OR**) 2 Define potential gradient and obtain a relation between electric field CO1 7 Marks a) intensity and potential. Find the electric field intensity at the point (1, -2, 1) m given the potential CO3 b) 7 Marks  $V = 3x^2y + 2yz^2 + 2xyz.$ UNIT-II) 3 Derive the expression for energy stored in a capacitor. CO<sub>2</sub> 7 Marks a) A capacitor consists of square shape metal plates of each 80cm side placed CO3 7 Marks b) parallel and 3mm apart. The space between the plates is filled with a dielectric having a relative permittivity of 3. A potential difference of 300V is maintained between the plates. Calculate i) The capacitance. ii) Charge on the capacitor. iii) The electric flux density. iv) Energy stored in the capacitor. (OR)Derive the expression for the relaxation time and show that the relaxation CO<sub>2</sub> 4 a) 7 Marks time is short for good conductors. An electric dipole located at the origin in free space has a moment CO3 b) 7 Marks  $\overline{p} = (4\overline{a}_x + 3\overline{a}_y + 3\overline{a}_z)nCm$ . Determine i) Potential, V at point Q(1, 2, 3). ii) Electric field intensity at  $Q(4, 20^0, 0^0)$ . (UNIT-III) Define magnetic field intensity and magnetic flux density. Obtain the CO1 5 a) 7 Marks relation between them. Derive the expression for magnetic field intensity. b) CO2 7 Marks i) At the centre. ii) On the axis of circular conductor carrying 'T amperes of current. (**OR**) Explain how laws of electromagnetics can be applied in MRI machine. 6 a) CO5 7 Marks A Toroid has 'N' turns and carries current of 'I' amperes. Determine b) CO5 7 Marks magnetic field strength inside and outside the toroid. (UNIT-IV) 7 Define the terms dipole moment and magnetization and establish a CO1 7 Marks a) relation between them.
  - Describe about the boundary conditions pertaining to the magnetic CO1 7 Marks b) materials.

8 a) Derive the expression for force due to:

ii) Differential current element.

b) If a point charge of 3 coulombs moves with a velocity of CO3 7 Marks  $\vec{u} = 7\vec{a_x} + 4\vec{a_y} - 6\vec{a_z}$  m/s, find the force exerted on the charge.

i) If the electric field intensity is  $\vec{E} = 12\vec{a_x} + 4\vec{a_y} - 6\vec{a_z}$  V/m.

ii) If the flux density is  $\overline{B} = 6\overrightarrow{a_x} + 5\overrightarrow{a_y} + 6\overrightarrow{a_z}wb/m^2$ .

UNIT-V

- 9 a) Write the Maxwell's equations in both point form and integral forms for CO1 7 Marks free space and good conductor.
  - b) A parallel plate capacitor with plate area of  $5\text{cm}^2$  and plate separation of CO3 7 Marks 3mm has a voltage  $50\sin 10^3$ t Volts applied to its plate. Calculate displacement current density. Assume  $\varepsilon = 2\varepsilon_0$ .

### (OR)

- 10 a) Given  $\vec{B} = (0.5\vec{a_x} + 0.6\vec{a_y} 0.3\vec{a_z})\cos(500t)$  Tesla and a filamentary CO3 7 Marks loop with its corners at (2, 3, 0)m, (2, -3, 0)m, (-2, -3, 0)m and (-2, 3, 0)m. Find the emf developed in the loop.
  - b) Find the displacement current density within a parallel plate Capacitor CO3 7 Marks where  $\varepsilon = 100\varepsilon_0$ ,  $a=0.01\text{m}^2$ , d = 0.05mm and the capacitor Voltage is 100sin200  $\pi$ t volts.

Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 a) Explain power and energy signal and enumerate the necessary conditions CO1 7 Marks for the signal to be a power or energy signal. Determine the total response of the system described by: b) CO<sub>4</sub> 7 Marks  $\frac{d^2 y(t)}{dt^2} + \frac{dy(t)}{dt} + 0.21y(t) = \frac{dx(t)}{dt} + x(t); where x(t) = 0.2e^{-0.5t}u(t)$ With the initial conditions y'(0) = -1; y(0) = 0.3. (**OR**) Define convolution of two continuous time signals. 2 CO1 6 Marks a) Find the convolution of the two signals x(t) and h(t) in Figure. CO<sub>4</sub> 8 Marks b) h(t)x(t)2 0 1 + UNIT-II 3 Find the response of a system described by  $\frac{dy(t)}{dt} + 2y(t) = x(t)$ ; using the CO5 7 Marks a) Fourier transform. Where the input is defined as  $x(t) = e^{-t} u(t)$ . b) Find the Fourier series for the triangular wave shown in Figure. CO<sub>4</sub> 7 Marks Π (**OR**) Find the Laplace transform of the following signals: 4 CO5 7 Marks a) f(t) = (2t + 4) u(t) and f(t) = (4 + 3e) u(t). A circuit has a transfer function  $H(s) = \frac{s+4}{(s+1)(s+2)^2}$ , determine the CO4 7 Marks b) impulse response. UNIT-III) 5 Explain the transient properties of a capacitor for DC and AC excitations. a) CO1 6 Marks In the circuit shown below, the switch is initially in closed position for a CO<sub>4</sub> 8 Marks b) long time and opened at time t = 0. Find the current i(t) for t > 0.

6 a

- a) A DC voltage of 20V is applied at t=0 in a R-L circuit where CO4 7 Marks R=50hmsand L=10H. Find the Time constant and the maximum value of stored energy during the transient.
  - b) A series RL circuit with  $R = 100 \Omega$  and L = 10 mH has a Sinusoidal CO4 7 Marks excitation V (t) = 250Sin500t. Find the total current using differential equation method assuming that the capacitor is initially uncharged.

- 7 a) Express hybrid parameters in terms of admittance parameters for a CO1 7 Marks generalized network.
  - b) Find the y parameters for the two-port network shown in Figure. CO4 7 Marks Invistigate the netwok for symmetry and reciprocity.

(**OR**)

- 8 a) State the necessary conditions for a network function to be a driving point CO1 6 Marks function.
  - b) Find the hybrid parameters of the network in Figure. Invistigate the netwok CO4 8 Marks for symmetry and reciprocity.

- 9 a) Analyze the nature of characteristic impedance in pass band and stop CO2 6 Marks bands with relevant equations.
  - b) In a signal processing application, it is required to allow only the CO6 8 Marks frequencies ranging between 12 kHz to 16 kHz which is connected to an load impedance of 600  $\Omega$ . Justify a suitable proto type filter circuit with proper components and their specifications.

### (OR)

- 10 a) Derive the design equations for a High pass T-section filter.CO26 Marks
  - b) Design a constant k filter to eliminate band of frequencies lying between CO3 8 Marks 2000Hz and 6000Hz with a design impedance of 600  $\Omega$ . Also determine attenuation and phase shift 1 kHz and 4 kHz.

|   | b)       | A balanced star connected load is supplied from symmetrical three phase,<br>400V system. The current in phase is 30 A and lags behind phase voltage<br>by 30°. Find:<br>i) The impedance in each phase.<br>ii) The total power.                                                                         | CO4        | 7 Marks             |
|   |          |                                                                                                                                                                                                                                                                                                         |            |                     |

#### (**OR**)

- 6 a) Prove that two wattmeters are enough to measure the total power of a CO2 7 Marks three phase unbalanced system with a neat phasor diagram.
  - b) Three equal impedances each having a resistance and reactance of  $25\Omega$  CO4 7 Marks and  $40\Omega$  respectively connected in delta to 400V, three phase, 50Hz supply system. Calculate:
    - i) The line current.
    - ii) Power factor.
    - iii) Power consumed by the circuit.

# UNIT-IV

7 a) Explain the constructional features of an alternator.

b)

 b) A 12-pole, 3 phase alternator is coupled to an engine running at 500 r.p.m. CO4 7 Marks The generator supplies an induction motor having a full load speed of 1440 r.p.m. Find the percentage slip and number of poles of this induction motor.

### (OR)

8 a) Discuss the constructional features of salient pole type alternator. CO1 3 Marks

List out the applications of three phase induction motors. CO6 4 Marks

7 Marks

CO1

c) An alternator on open-circuit generates 360V at 60Hz when the field CO4 7 Marks current is 3.6A. Neglecting saturation, determine the open-circuit e.m.f when the frequency is 40Hz and the field current is 2.4 A.

### UNIT-V

- 9 a) Discuss about the double field revolving theory in single phase induction CO1 7 Marks motor.
  - b) Why the starting torque of a capacitor start induction motor is better than CO2 7 Marks that of a resistance start motor? Explain.

### (OR)

- 10 a) Explain the constructional details of permanent magnet stepper motor. CO1 7 Marks
  - b) Explain the working of variable reluctance stepper motor and mention its CO1 7 Marks applications.

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1 Explain Grashof's criterion and describe any two inversions of 4 bar chain CO1 14 Marks with suitable sketches.

### (OR)

2 a) Classify and explain the types of Kinematic pairsCO1 10 Marksb) What is Grubler's criterion?CO1 4 Marks

### UNIT-II

- In a slider crank mechanism, the crank OB is 30mm and the connecting CO2 14 Marks rod BC is 120mm long. The crank rotates at 300 r.p.m clockwise and makes 60<sup>o</sup> from IDC. Find
  - i) The velocity of piston C.
  - ii) Angular velocity of connecting rod BC.

### (OR)

4 In a four bar mechanism PQRS, PS is fixed link of length 120mm. Crank CO2 14 Marks PQ is 45mm rotates at 200 r.p.m and an acceleration of 150 rad/sec<sup>2</sup> at an instant when crank makes an angle 45<sup>°</sup> to the horizontal. Both are clockwise in nature. The link QR is 90mm and link RS is 60mm. Find the acceleration of Q and R.

### (UNIT-III)

5 Sketch and explain any one type of exact straight line motion mechanism. CO1 14 Marks

### (OR)

6 Derive the condition for correct steering mechanism. Sketch and show the CO1 14 Marks two main steering gears and discuss their relative advantages.

### UNIT-IV

- 7 An epi-cyclic gear train consists of an arm 'a' and two gears P and S CO4 14 Marks having 30 teeth and 50 teeth respectively. The arm rotates about the centre of the gear S at a speed of 120 r.p.m clock wise. Determine the speed of gear P for the following conditions:
  - i) If gear S is fixed.
  - ii) The gear S rotates at 180 r.p.m counter clockwise instead of being fixed.

(**OR**)

- 8 a) Find an expression for the length of the path of contact between two CO3 6 Marks mating spur gears.
  - b) Two mating involute spur gears have 28 and 45 teeth and a standard CO3 8 Marks addendum of one module. Find the length of path of contact and length of arc of contact in terms of module when pressure angle is 20<sup>o</sup>.

# UNIT-V

- A cam with 40 mm minimum radius is rotating clockwise at uniform CO5 14 Marks speed of 1200 r.p.m. It has to operate a knife edge follower as defined below:
  - i) Follower has to move outward through 30mm during  $90^{\circ}$ .
  - of cam rotation with uniform velocity.
  - ii) Dwell for the next 30<sup>°</sup>.
  - iii) Follower is to return to its starting position with SHM during next 120<sup>0</sup>.
  - iv) Follower is to dwell for remaining period.

Draw the cam profile taking the line of action of the follower passing through the center of the cam. Determine the maximum velocity and acceleration of the follower during the return stroke.

### (OR)

10 From the following data draw the cam profile in which the following CO6 14 Marks moves with SHM during ascent and uniformly accelerated and decelerated motion during descent. The diameter of the roller follower is 30mm and lift is 40mm.

Angle of ascent =  $48^{\circ}$ , angle of descent=  $60^{\circ}$ , angle of dwell between ascent and descent =  $42^{\circ}$ , The least radius of the cam is 50mm and the distance between line of action of the follower and axis of cam = 20mm. If the cam rotates at 360 r.p.m CCW, find the maximum velocity and acceleration of the follower during ascent and descent.

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) Write a short note on strain energy.
  - b) A rectangular block 350mm long, 100mm wide and 80mm thick is CO2 9 Marks subjected to axial load as follows. 50kN tensile in the direction of length, 100kN compression in the direction of thickness and 60kN tensile in the direction of breadth. Determine the change in volume, Bulk modulus, modulus of rigidity.

Take E=2 x  $10^5$  N/mm<sup>2</sup> and Poisson's ratio 0.25.

### (OR)

- 2 a) Draw the stress strain curve for brittle materials and explain the salient CO6 6 Marks points on it.
  - b) Derive a relation for change in length of a uniformly varying circular bar CO1 8 Marks subjected to an axial load 'P'.

# UNIT-II)

3 Draw the shear force and bending moment diagram for the overhanging CO6 14 Marks beam carrying uniformly distributed load of 2kN/m over the entire length and a point load of 2kN as shown in Fig 1. Locate the point of contraflexure, if any.

(OR)

- 4 a) Draw the shear force and bending moment diagram for a cantilever beam CO2 6 Marks of length 'L' carrying a uniformly distributed load of W kN/m over the entire span representing maximum values.
  - b) Draw the shear force and bending moment diagram for a cantilever simply CO6 8 Marks supported beam loaded as shown in fig 2.

# UNIT-III)

5 The internal and external diameter of a hollow shaft is in the ration of 2:3. CO3 14 Marks The hollow shaft is to transmit a 400 kW power at 120 r.p.m. The maximum expected toque is 15% greater than the mean value. If the shear stress is not to exceed 50 MPa, Fins section of the shaft which would satisfy the shear stress and twist conditions. Take  $G = 0.85 \times 10^5$  MPa.

### (OR)

- 6 a) Define 'simple bending' or 'pure bending'. List the assumptions made in CO1 4 Marks the theory of simple bending.
  - b) A cast iron beam is of T-section of flange 100mm x 20mm and web CO3 10 Marks 20mm x 80mm. The beam is simply supported on a span of 8m. The beam carries a uniformly distributed load of 1.5kN/m length over the entire span. Determine the maximum tensile and maximum compressive stresses.

# UNIT-IV

7 A beam of length 6m is simply supported at its ends and carries two point CO5 14 Marks loads of 48kN at a distance of 1m and 3m respectively from left end support. Find the deflection under each load, the maximum deflection and the point at which it occurs.

Take E=2 x  $10^5$  MPa and I=85 x  $10^6$  mm<sup>4</sup>.

### (OR)

- 8 A beam of uniform rectangular section 200mm wide and 300mm deep is CO5 14 Marks simply supported at its ends. It carries a uniformly distributed load of 9kN/m run over the entire span of 5m. If the value of E for the beam material is  $1 \times 10^4$  N/mm<sup>2</sup>, find:
  - i) The slope at the supports.
  - ii) Maximum deflection.

# UNIT-V

9 A cylindrical shell 1m diameter and 3m length is subjected to an internal CO3 14 Marks pressure of 2MPa. Calculate the maximum thickness if the stress should not exceed 50MPa. Find the change in diameter and volume of shell. Assume Poisson's ratio of 0.3 and Young's modulus of 200kN/mm<sup>2</sup>.

### (OR)

- 10 a) Show that in thin cylindrical shells subjected to internal fluid pressure, the CO2 4 Marks circumferential stress is twice the longitudinal stress.
  - b) Determine the maximum and minimum hoop stress across the section of a CO4 10 Marks pipe of 400mm internal diameter and 100mm thick, when the pipe contains a fluid at a pressure of 8 N/mm<sup>2</sup>.

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- What is meant by point and path function? Explain with one example CO1 1 6 Marks a) each. CO1 8 Marks
  - b) Define the following:
    - i) Equilibrium and its types.
    - ii) Define property, state, path and process of a system.
    - iii) State Zeroth law of Thermodynamics.
    - iv) Various thermodynamic processes.

### (**OR**)

What is meant by quasi static process and explain it with the neat sketch. CO1 6 Marks a) 8 Marks b) A fluid is confined in a cylinder by a spring loaded frictionless piston so CO2 that the pressure in the fluids is a linear function of the volume (p=a+bV). The internal energy of the fluid is given by the following equation U=34+3.15pV where U is in kJ, p is in kPa and V in cubic meter. If the fluid changes from an initial state of 170kPa, 0.03cubic meter to a final state of 400kPa, 0.06cubic meter, with no work other than that done on the piston, find the direction and magnitude of the work and heat transfer.

# UNIT-II

3 Derive the steady flow energy equation with all the assumptions made and CO1 14 Marks give the equations when it is applied to i) Boiler, ii) Condenser ii) Nozzle, iv)Turbine, v)Compressor

### (**OR**)

- 4 State the First Law of Thermodynamics and prove that for a non-flow CO1 4 Marks a) process, it leads to the energy equation  $Q = \Delta U + W$ .
  - A reversible heat engine operating between reservoirs at 900K and 300K CO2 10 Marks b) drives a reversible refrigerator operating between reservoirs at 300K and 250K. The heat engine receives 1800kJ heat from 900K reservoir. The net output from the combined engine refrigerator is 360kJ. Find the heat transferred to the refrigerator and the net heat rejected to the reservoir at 300K.

# UNIT-III)

- 5 Discuss the concept of entropy and importance of T-s diagram. a)
  - An insulated 0.75 kg copper calorimeter can containing 0.2 kg water is in b) CO3 equilibrium at a temperature of 20°C. An experimenter now places 0.05 kg of ice at 0°C in the calorimeter and encloses the latter with a heat insulating shield.
    - i) When all the ice has melted and equilibrium has been reached, what will be the temperature of water and the can? The specific heat of copper is 0.418 kJ/kg K and the latent heat of fusion of ice is 333 kJ/kg.
    - ii) Compute the entropy increase of the universe resulting from the process.
    - iii) What will be the minimum work needed by a stirrer to bring back the temperature of water to 20°C?

2

- 6 Derive expressions for entropy changes for a closed system in the CO3 a) 4 Marks following cases :
  - i) Heating a gas at constant volume.
  - ii) Heating a gas at constant pressure.
  - Air at 20°C and 1.05 bar occupies 0.025m<sup>3</sup>. The air is heated at constant CO3 b) 10 Marks volume until the pressure is 4.5 bar, and then cooled at constant pressure back to original temperature.

Calculate :

- i) The net heat flow from the air.
- ii) The net entropy change.

Sketch the process on T-s diagram

# UNIT-IV

- 7 Draw the phase change process for pure substance or steam formation and CO1 a) 4 Marks explain
  - A closed vessel of 0.2 cubic meter contains steam at 1 Mpa and CO4 10 Marks b) temperature of 250 deg C. If the vessel is cooled so that pressure falls to 350kPa. Determine the final temperature, heat transfer and change in entropy during the process.

#### (**OR**)

- 8 Write the following: a)
  - i) Mole fraction and Mass fraction.
  - ii) Gravimetric Analysis and Volumetric Analysis.
  - A vessel having a volume of  $0.6 \text{ m}^3$  contains 3.0 kg of liquid water and CO4 8 Marks b) water vapour mixture in equilibrium at a pressure of 0.5 MPa. Calculate :
    - i) Mass and volume of liquid.
    - ii) Mass and volume of vapour.

# UNIT-V

- Derive the expression to find the efficiency of air standard dual cycle with 9 a) CO4 4 Marks the help of p-v and t-s diagram.
  - An I.C. engine operating on the dual cycle (limited pressure cycle) the b) CO5 10 Marks temperature of the working fluid (air) at the beginning of compression is 27°C. The ratio of the maximum and minimum pressures of the cycle is 70 and compression ratio is 15. The amounts of heat added at constant volume and at constant pressure are equal. Compute the air standard thermal efficiency of the cycle. State three main reasons why the actual thermal efficiency is different from the theoretical value. Take  $\gamma$  for air = 1.4.

### (**OR**)

- 10 Write the assumption in air standard cycles. a)
  - An engine with 200mm cylinder diameter and 300mm stroke works on CO5 b) theoretical Diesel cycle. The initial pressure and temperature of air used are 1 bar and 27°C. The cut-off is 8% of the stroke. Determine :
    - i) Pressures and temperatures at all salient points.
    - ii) Theoretical air standard efficiency.
    - iii) Mean effective pressure.
    - iv) Power of the engine if the working cycles per minute are 380. Assume that compression ratio is 15 and working fluid is air. Consider all conditions to be ideal.

(j) (P) (f) CO3 6 Marks

- CO1 4 Marks
  - 10 Marks

# UNIT-V

- 9 a) Design a single tuned amplifier for the following specifications. Centre CO3 7 Marks frequency of 500 KHz and a Band width of 10KHz. Assume the transistor parameters  $g_m = 0.04S$ ,  $h_{fe} = 100$ ,  $c_{b'e} = 1000pF$ ,  $C_{b'e} = 100pF$ . The bias network and input resistance are adjusted such that  $R_i = 4K\Omega$  and  $R_L = 510\Omega$ .
  - b) A class C amplifier has a base bias voltage of -5V and  $V_{cc} = 30$  V. It is CO4 7 Marks determined that a peak input voltage of 9.8V at 1MHz is required to derive the transistor to its saturation current of 1.8 A.

(**OR**)

- 10 a) Write short notes on stability of Tuned Amplifiers. CO1 7 Marks
  - b) Derive the expressions for Bandwidth and Q-factor of single tuned, CO4 7 Marks capacitive coupled amplifiers. List the assumptions made for the derivation.

[Electrical and Electronics Engineering]

Max. Marks: 70

SVEC-16

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a)  | Discuss CE short circuit current gain with relevant equations.                                     | CO3  | 8 Marks |
|---|-----|----------------------------------------------------------------------------------------------------|------|---------|
|   | b)  | Define $f_{\beta} f_{T}$ and $f_{\alpha}$ and state the relation between $f_{\beta}$ and $f_{T}$ . | CO1  | 6 Marks |
|   |     | OR)                                                                                                |      |         |
| 2 | a)  | Derive the expressions for hybrid $\Pi$ conductance $g_{ce}$ , $g_{bb}$ , and gm of a transistor.  | CO3  | 8 Marks |
|   | b)  | What is the use of hybrid parameters in small signal analysis?                                     | CO1  | 6 Marks |
|   |     | UNIT-II)                                                                                           |      |         |
| 3 | a)  | What is feedback amplifies? Classify types of feedback amplifiers.                                 | CO1  | 8 Marks |
|   | b)  | Implement Voltage-Shunt feedback concept for a CE amplifier and show                               | CO6  | 6 Marks |
|   |     | $R_{if} = \frac{R_i}{1 + R_i \beta}  .$                                                            |      |         |
|   |     | (OR)                                                                                               |      |         |
| 4 | a)  | State and explain the Barkhausen's criterion for Oscillations.                                     | CO1  | 6 Marks |
|   | b)  | Implement Audio frequency oscillator by using conventional passive                                 | CO6  | 8 Marks |
|   |     | components like R and C and derive its frequency of oscillations.                                  |      |         |
| _ |     | UNIT-III                                                                                           | 0.04 | - > < 1 |
| 5 | a)  | What are the advantages and disadvantages of a transformer coupled Class-A power amplifier?        | COI  | 7 Marks |
|   | b)  | Select a power amplifier to get an efficiency of 25%.explain it.                                   | CO5  | 7 Marks |
| C | `   | (OR)                                                                                               | 005  |         |
| 6 | a)  | amplifiers, compromising with efficiency.                                                          | 005  | / Marks |
|   | b)  | Explain the operation of a Class-A power amplifier and derive the                                  | CO1  | 7 Marks |
|   |     | expression for maximum efficiency.                                                                 |      |         |
| _ |     | UNIT-IV                                                                                            | ~~ . |         |
| 7 | a)  | Evaluate upper 3-dB and Lower 3-dB frequencies for IKHZ Square wave                                | CO4  | 7 Marks |
|   | 1 \ | output from an amplifier with Rise time $t_r=250$ ns and tilt=10%.                                 | 001  | 7 ) ( 1 |
|   | D)  | clamper                                                                                            | COI  | / Marks |
|   |     | (OR)                                                                                               |      |         |
| 8 | a)  | The input voltage of the two level clippers is varying linearly from 0 to                          | CO4  | 7 Marks |
|   |     | 100v. Draw the output waveform and transfer characteristics.                                       |      |         |

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a)       | Draw the flow chart for Booth's Multiplication. Show the steps for $(+5) \times (-3)$ using Booth's Multiplication Process                                                                                                                                                                         | CO1        | 7 Marks             |
|---|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------|
|   | b)       | Design a 4-bit binary incrementer circuit using four Half-Adder circuits.                                                                                                                                                                                                                          | CO3        | 7 Marks             |
| 2 | a)       | Perform the following arithmetic operations in binary using 2's complement representation. Consider 8-bits for representing binary numbers.<br>i) $6 \pm 13$ ii) $6 \pm 13$ iii) $6 \pm 13$ iv) $6 \pm 13$                                                                                         | CO5        | 7 Marks             |
|   | b)       | What is register transfer logic language? Explain few RTL statements for branching with their actual functioning.                                                                                                                                                                                  | CO1        | 7 Marks             |
|   |          | (UNIT-II)                                                                                                                                                                                                                                                                                          |            |                     |
| 3 | a)<br>b) | Differentiate Hardwired control with Micro-programmed control.<br>Suppose a machine encodes instructions in 32 bits according to the<br>following format. Also, suppose the encoding must accommodate 164<br>op-codes, and 50 registers.                                                           | CO2<br>CO4 | 4 Marks<br>10 Marks |
|   |          | i) What is the minimum number of bits required to represent                                                                                                                                                                                                                                        |            |                     |
|   |          | the op-code field?                                                                                                                                                                                                                                                                                 |            |                     |
|   |          | ii) What is the minimum number of bits required to represent                                                                                                                                                                                                                                       |            |                     |
|   |          | each of the register fields?                                                                                                                                                                                                                                                                       |            |                     |
|   |          | iii) What is the greatest number of bits that are left for the immediate field?                                                                                                                                                                                                                    |            |                     |
|   |          | (OR)                                                                                                                                                                                                                                                                                               |            |                     |
| 4 | a)       | Describe briefly about various addressing modes.                                                                                                                                                                                                                                                   | CO1        | 7 Marks             |
|   | b)       | What are the phases of an Instruction Cycle? Draw the flow chart for                                                                                                                                                                                                                               | CO1        | 7 Marks             |
|   |          | initial configuration of an Instruction Cycle.                                                                                                                                                                                                                                                     |            |                     |
|   |          | (UNIT-III)                                                                                                                                                                                                                                                                                         |            |                     |
| 5 | a)       | A DMA module is transferring the characters to memory using cycle stealing from a device transmitting at 9600 bps. The processor is fetching instructions at the rate of 1 MIPS. By how much will the processor be slowed down due to DMA activity?                                                | CO4        | 7 Marks             |
|   | b)       | Explain about peripheral devices and components in details.                                                                                                                                                                                                                                        | CO1        | 7 Marks             |
| 6 | a)       | It is necessary to transfer 256 words from a magnetic disk to a memory<br>section starting from address 1230. The transfer is by means of DMA.<br>i) Give the initial values that the CPU must transfer to the<br>DMA Controller.<br>ii) Give the step-by-step account of the actions taken during | CO4        | 7 Marks             |
|   |          | the input of the first 2 words.                                                                                                                                                                                                                                                                    |            |                     |

b) Explain program interrupt and interrupt cycle.

### Compare and contrast various Read Only Memories (ROM). A computer uses RAM chips of 1024 x 1 capacity. i) How many chips are needed and how should their address lines be connected to provide a memory capacity of 1024 bytes. ii) How many chips are needed to provide a memory capacity of 16K Bytes. iii) Design the logic circuit. (OR)

7 Marks

7 Marks

UNIT-IV

- 8 a) Distinguish between synchronous and asynchronous DRAM. CO2 7 Marks
  - b) Consider a machine with a byte addressable main memory of 2<sup>16</sup> bytes CO4, 7 Marks and block size of 8 bytes. Assume that a direct mapped cache consisting CO5 of 32 lines is used with this machine.
    - i) How is a 16-bit memory address divided into tag, line number, and byte number?
    - ii) Into what line would bytes with each of the following addresses be stored?

0001 0001 0001 1011

1100 0011 0011 0100

7

a) b)

- 1101 0000 0001 1101
- 1010 1010 1010 1010
- iii) Suppose the byte with address 0001 1010 0001 1010 is stored in the cache. What are the addresses of the other bytes stored along with it?
- iv) How many total bytes of memory can be stored in the cache?
- v) Why the tag is also stored in the cache?

# UNIT-V

- 9 a) Consider 2 processors P<sub>0</sub> and P<sub>1</sub>. Consider memory module with 8 words. CO3 7 Marks Design a Binary Tree Multistage Switching Network to connect processors with memory using 2 x 2 switches.
  - b) A weather forecasting computation requires 250 billion floating-point CO6 7 Marks operations. The problem is processed in a supercomputer that can perform 100 megaflops. How long will it take to do these calculations?

### (OR)

- 10 a) Explain the Serial Inter-processor Arbitration with a neat sketch. CO1 7 Marks
  - b) It is necessary to design a pipeline for a fixed-point multiplier that CO4 7 Marks multiplies two 8-bit binary integers. Each segment consists of a number of AND gates and a binary adder similar to an array multiplier.
    - i) How many AND gates are there in each segment and what size of adder is needed?
    - ii) How many segments are there in the pipeline?
    - iii) If the propagation delay in each segment is 30ns, what is the average time that it takes to multiply two fixed-point numbers in the pipeline?

#### SENSORS AND TRANSDUCERS

[Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1 Define the term 'Units', 'Absolute Units', 'Fundamental Units' and CO6 14 Marks 'Derived Units'. Cite suitable examples to support the need to follow ethical standards for measuring instruments.

### (OR)

2 Differentiate between the deflection and null type of instruments giving CO4 14 Marks suitable examples. Discuss about the selection of a transducer based on their accuracy, sensitivity and suitability for dynamic measurements.

# UNIT-II)

- 3 a) Apply the different standard inputs for studying the dynamic response of a CO2 7 Marks system. Define and sketch them.
  - b) An RC circuit consists of a capacitor of  $1\mu$ F in series with a resistor of CO3 7 Marks 5K $\Omega$ .A dc voltage of 50V is suddenly applied across the circuit. Calculate the value of the voltage after i) 5ms and ii) 25ms.

#### (**OR**)

4 Derive the transfer function of a thermal system when the heat input rate is CO2 14 Marks suddenly increased from its steady conditions. Discuss the assumptions made.

### (UNIT-III)

5 Describe the constructional details of a resistance potential divider and CO1 14 Marks derive the expressions for its output voltage when connected across a meter of finite impedance.

#### (OR)

6 Explain with diagrams, the bonded and unbounded types of strain gauges. CO1 14 Marks For bonded strain gauges, describe the materials used for base, and adhesive materials and also the materials used for leads.

# UNIT-IV

7 Illustrate the process of chemical analysis of liquids in industries which CO5 14 Marks use the principle of electrochemical sensing.

### (OR)

8 Describe the construction, principle of working and applications of Hall CO1 14 Marks Effect transducers.

SVEC-16

# UNIT-V

- 9 a) Explain the principle of working, constructional details and applications of CO1 7 Marks photo transistors.
  - b) A photo-transistor of circuit shown in figure with the characteristics has a CO3 7 Marks supply voltage of 20V and a collector load resistance of  $2K\Omega$ . Determine the output voltage when the illumination level is:
    - i) Zero. ii)  $200 \text{ w/m}^2$  and iii)  $400 \text{ w/m}^2$ .

 10
 Intelligent sensors.

Max. Marks: 70

## Answer One Question from each Unit

All questions carry equal marks UNIT-I CO1 1 Find the truth table for the following: 7 Marks a) iii)  $(p \downarrow q) \land (p \downarrow r)$ . i) (p∨q) ∧ r. ii)  $(\mathbf{p} \vee \mathbf{q}) \Rightarrow \mathbf{r}$ .  $((p \lor q) \land (\neg p \lor \neg q)) \lor q$ . Is a tautology or not? Justify. CO1 7 Marks **b**) (**OR**) 2 Identify and explain the converse, inverse and contra positive of the a) CO3 7 Marks following conditional statement. "If the flood destroy my house or the fires destroy my house, then my insurance company will pay me". Write the Negation of the following statement: CO1 7 Marks b)  $\exists x \in R x > 3 \Rightarrow x^2 > 9$ UNIT-II Determine the value of  $f^{-1}g(x)$  and  $hf(gf^{-1})(hf(x))$  for the functions f, g3 a) CO<sub>4</sub> 6 Marks and  $h: \mathbb{R} \to \mathbb{R}$  be defined by (R is the set of real numbers, such that f(x)=x+2,  $g(x) = (1+x^2)^{-1}$  and h(x)=3. b) Examine the functions f and g both of which are from  $N \rightarrow N$  to N given CO2 8 Marks by f(x, y) = x + y and g(x, y) = xy are onto but not one-one. (**OR**) 4 Define lattice. Also, illustrate properties of lattices. CO1 6 Marks a) b) Determine that (S, /) is a lattice, where S=(1,2,3,6) and / is for divisibility CO4 8 Marks prove that this is a distributive lattice. (UNIT-III) Examine whether given set 'S,'  $S = \{0,1,2,3,4,5\}$  can be semi group under CO2 5 7 Marks a) binary operation O5 or not? State and prove Lagrange's theorem. CO1 7 Marks b) (**OR**) Define Algebraic structure. List its properties. 6 a) CO1 6 Marks Justify whether the set of positive integers N is a monoid with respect to b) CO5 8 Marks the binary operation \* defined as a\*b=lcm(a,b), for all a,b belongs to N. UNIT-IV 7 In a Survey of 500 Television viewers of a sports channel Produced the CO4 5 Marks a) following information: 285 watch cricket, 195 watch hockey, 115 watch football, 45 watch cricket and football, 70 watch cricket and hockey, 50 watch hockey and foot ball and 50 do not watch any of the three kinds of games. Determine: i) How many viewers in the survey watch all three kinds of games? ii) How many viewers watch exactly one of the sports ? In How many ways can 6 men and 6 women be seated in a row? CO<sub>4</sub> 4 Marks b) (i) if any person may sit next to any other. (ii) if men and women must occupy alternative seats. Identify the Coefficient of  $X^{27}$  in the expansion of  $(X^4+X^5+X^6+----)^5$ . CO3 5 Marks c) (**OR**)

- 8 a) Solve the Recurrence Relation  $U_n+5U_{n-1}+5U_{n-2}=0$ ,  $n \ge 0$ , where the initial CO4 7 Marks conditions are  $U_0=0$  and  $U_1=2\sqrt{5}$ .
  - b) If  $a_n$  is a solution of the recurrence relation  $a_{n+1}=Ka_n$  for  $n \ge 0$  and CO2 7 Marks  $a_3=153/49$  and  $a_5=1377/2401$ , what is K?

Roll No.

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

## II B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

## JAVA PROGRAMMING

[Computer Science and Systems Engineering]

Max. Marks: 70

SVEC-16

### Answer One Question from each Unit All questions carry equal marks

|   |            | UNIT-I                                                                      |          |           |
|---|------------|-----------------------------------------------------------------------------|----------|-----------|
| 1 | a)         | What is byte code? What are instance variables?                             | CO1      | 7 Marks   |
|   | b)         | List categories of operators supported by JAVA.                             | CO2      | 7 Marks   |
|   |            | (OR)                                                                        |          |           |
| 2 | a)         | What is a class? Explain the syntax for declaring a class with an example.  | CO1      | 4 Marks   |
|   | b)         | Why does JAVA not support goto statements? What is the alternative way      | CO1      | 5 Marks   |
|   |            | of defining goto statement behavior in Java?                                |          |           |
|   | c)         | Explain in detail about constructor overloading with an example.            | CO1      | 5 Marks   |
|   |            | UNIT-II)                                                                    |          |           |
| 3 | a)         | Create an abstract class <i>Accounts</i> with the following details:        | CO6      | 7 Marks   |
|   |            | Data members:                                                               |          |           |
|   |            | i) Balance ii) AccountNumber                                                |          |           |
|   |            | iii) AccountHoldersName iv) Address                                         |          |           |
|   |            | Methods:                                                                    |          |           |
|   |            | i) Withdrawl() – abstract                                                   |          |           |
|   |            | ii) Deposit()- abstract                                                     |          |           |
|   |            | iii) Display() to show the balance of the account number                    |          |           |
|   |            | Create a subclass of this class SavingsAccount and add the following        |          |           |
|   |            | details:                                                                    |          |           |
|   |            | Data members:                                                               |          |           |
|   |            | i) RateofInterest                                                           |          |           |
|   |            | Methods:                                                                    |          |           |
|   |            | i) calculateAmount()                                                        |          |           |
|   |            | ii) display() t display rate of interest with new balance and               |          |           |
|   |            | full account holder details                                                 |          |           |
|   |            | Create another subclass of the Account class, i.e. CurrentAccount with the  |          |           |
|   |            | following                                                                   |          |           |
|   |            | Data members:                                                               |          |           |
|   |            | 1) overdraftLimit                                                           |          |           |
|   |            |                                                                             |          |           |
|   |            | 1) display() to show overdraft limit along with the full                    |          |           |
|   |            | account holder details                                                      |          |           |
|   |            | Create objects of these two classes and call their methods. Use appropriate |          |           |
|   | <b>b</b> ) | Constructors.                                                               | $CO^{2}$ | 7 Mortra  |
|   | 0)         | (OP)                                                                        | COS      | / WIAIKS  |

| 5  | a)  | What are the Exception types? What is a finally block? When and how is it used? Give a suitable example.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | CO1 | 7 Marks  |
|    | b)  | Design a java program showing the actions form three threads. Use<br>runnable interface to create the threads. Make sure that the main thread<br>always executs last.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | CO3 | 7 Marks  |
|    |     | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |     |          |
| 6  | a)  | Create a user-defined exception named checkArgument to check the<br>number of arguments passed through command line. If the number of<br>arguments is less than five, throw the checkArgument exception, else<br>print the addition of all the five numbers.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | CO4 | 7 Marks  |
|    | b)  | What is multitasking? Is multi threading a form of multitasking?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | CO1 | 7 Marks  |
|    | - ) | UNIT-IV                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |     |          |
| 7  |     | Design a Java applet with the following components<br>Add four labels with Text only, image only, image and text with text<br>displayed at top center, image only at right position. Add four buttons to<br>the Applet - Buttonl with text "Try Me", Button2 with text in the right<br>position. Button3 with the corn image and text in the left position and<br>Button4 with grapes image. Whenever a button is clicked, display a<br>message about the selection in a text field. Make this text field non-<br>editable, so that user cannot change its content. Add keyboard mnemonic<br>to button 3 so that the button can be selected by pressing Alt + C in the<br>keyboard. Add a tooltip to button4, so that it will be displayed when<br>mouse hovers over the button. | CO5 | 14 Marks |
| 8  |     | Design a java program to perform the following using linked list.<br>i) Remove a node form the list.<br>ii) Insert a node at the end of the list.<br>iii) Insert a node anywhere in the existing list.<br>iv) Remove a node anywhere in the existing list.<br><b>UNIT-V</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | CO3 | 14 Marks |
| 9  | a)  | What are servlets? What are the three methods that are central to the life                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | CO1 | 7 Marks  |
|    |     | cycle of a servlet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 96. |          |
|    | b)  | Design a servlet which displays current system date and time.<br>(OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | CO3 | 7 Marks  |
| 10 | a)  | Design a java program to implement Mouse and keyboard events.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | CO1 | 12 Marks |
|    | b)  | What are the tasks of a servlet?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | CO1 | 2 Marks  |

### PROBABILITY DISTRIBUTIONS AND STATISTICAL METHODS

[ Civil Engineering, Mechanical Engineering, Computer Science and Engineering,

Information Technology, Computer Science Systems Engineering ]

Time: 3 hoursMax. Marks: 70Maxer One Question from each Unit  
All questions carry equal marksUNIT-11a)Define continuous random variable and probability density function.  
If the probability density function of a random variable is given by  
$$F(x) = x \quad for  $0 \le x \le 1$   
 $= 2 - x$  for  $1 \le x \le 2$   
 $= 0$  elsewhereCO44 MarksC0410 MarksFind the probabilities that this random variable will take on value  
i) Between 0.2 and 0.8 ii) Between 0.6 and 1.2  
iii) Greater than 1.8 iv) Between 0.6 and 1.2  
iii) Greater than 1.8 iv) Between 0.4 and 1.6.CO47 Marks $f(x) = kxe^{-4x^2} forx < 0$   
 $= 0$  $for x \le 0$ CO47 Marks $f(x) = kxe^{-4x^2} forx < 0$   
 $= 0$  $for x \le 0$ CO47 Marksi) Find k  
ii) Evaluate P(X < 6), P(X  $\ge 6$ ), P(3  $\le X \ge 6$ )  
**UNT -11**CO47 MarksOut3a)The sum and product of the mean and table.CO47 Marksi) Find k  
ii) Evaluate P(X < 6), P(X  $\ge 6$ ), P(3  $\le X \ge 6$ )  
**UNT -11**CO47 MarksCO47A a the sum and product of the marks obtained by 1000 students  
in an examination are respectively 34.4 and 16.5.NoCO47 MarksOROROROUT of the memory chips made in a certain injection is 0.001,  
of the distribution, find the approximate number of students expected to  
obtain marks between 30 and 60.<$$

#### **SPECIAL FUNCTIONS AND COMPLEX ANALYSIS**

[Electrical and Electronics Engineering, Electronics and Communication Engineering,

### **Electronics and Instrumentation Engineering**]

Answer One Question from each Unit All questions carry equal marks

CO4

7 Marks

Max. Marks: 70

**J** - **1** 

## UNIT-I

a) Prove that 
$$\Gamma\left(\frac{1}{2}\right) = \sqrt{\pi}$$
. CO1 7 Marks

b) Prove that 
$$\frac{\beta(m+1,n)}{m} = \frac{\beta(m,n+1)}{n} = \frac{\beta(m,n)}{m+n}$$
. CO4 7 Marks (OR)

a) Prove that 
$$J_{-\frac{1}{2}}(x) = \sqrt{\frac{2}{\pi x}} \cos x$$
. CO4 7 Marks

b) Express  $J_4(x)$  in terms of  $J_0(x)$  and  $J_1(x)$ .

### (UNIT-II)

3 Define continuity of f(z) at origin. Prove that the function defined by CO1 14 Marks  $f(z) = \frac{x^{3}(1+i) - y^{3}(1-i)}{x^{2} + y^{2}}(z \neq 0), f(0) = 0 \text{ is continuous and the Cauchy}$ 

Riemann equations are satisfied at the origin yet f'(0) does not exist.

(**OR**)

4 a) Show that polar form of Cauchy Riemann equations are CO1 7 Marks  $\frac{\partial u}{\partial r} = \frac{1}{r} \frac{\partial v}{\partial \theta}, \quad \frac{\partial v}{\partial r} = -\frac{1}{r} \frac{\partial u}{\partial \theta}.$ Hence deduce that  $\frac{\partial^2 u}{\partial r^2} + \frac{1}{r} \frac{\partial u}{\partial r} + \frac{1}{r^2} \frac{\partial^2 u}{\partial \theta^2} = 0.$ b) If f(z) is ananalytic function of z, Prove that  $\left(\frac{\partial^2}{\partial x^2} + \frac{\partial^2}{\partial y^2}\right) |Rf(z)|^2 = 2 |f'(z)|^2.$ CO2 7 Marks

## UNIT-III)

5 a) State and prove Cauchy's Integral formula. b) Construct a series of positive and negative powers of (z+1) for the CO3 7 Marks  $f(z) = \frac{7z-2}{(z+1)z(z-2)}$ 

- 6 a) Evaluate  $\oint_C \frac{\log z}{(z-1)^3} dz$  where C is  $|z-1| = \frac{1}{2}$  using Cauchy's integral  $\underset{CO4}{CO4}$  7 Marks formula.
  - b) Construct Laurent's series about z = 1 for  $f(z) = \frac{e^{2z}}{(z-1)^3}$ . Analyze the CO2 7 Marks series and identify the region of convergence

## (UNIT-IV)

Define the singularity of a function. Determine the poles of the function CO1 7 14 Marks  $f(z) = \frac{z^3}{(z-1)^4(z-2)(z-3)}$  and the residue at each pole, Hence evaluate CO4  $\oint_C f(z)dz$ , where C is the circle |z| = 2.5. (OR) Evaluate  $\int_{-\infty}^{\infty} \frac{x^2}{(x^2+1)(x^2+4)} dx$  by complex variable technique. 8 CO5 14 Marks UNIT-V 9 Find the bilinear transformation which maps the points z = 1. i, -1 onto CO1 14 Marks CO4 the points w = i, 0, -i. Hence find (a) the image of |z| < 1, (b) the invariant points of this transformation.

- 10 Discuss the transformation  $w = e^z$ . CO3 14 Marks CO4
  - \$} \$} {

MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY

[ Civil Engineering ]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1 Discuss the nature of Managerial Economics and its role in Business CO1 14 Marks decision making process.

(OR)

2 What is Law of Demand? State and explain the Law of Diminishing CO1 14 Marks returns.

## UNIT-II

3 What are the three stages of short run production function? Why does it CO2 14 Marks not make any economic sense to produce in stage 1 or stage 2?

### (OR)

CO2 14 Marks

4 Differentiate between:

- i) Explicit Cost Vs Implicit Cost.
- ii) Fixed Cost *Vs* Variable Cost.
- iii) Marginal Cost Vs Average Cost.

## UNIT-III)

5 Explain the various features of a Perfect Competitive Market. How is CO1 14 Marks Price of a commodity determined under it?

### (OR)

6 Discuss the Pricing strategies with suitable examples. CO2 14 Marks

## UNIT-IV

7 What are Accounting Concepts and Conventions? Name them and explain CO1 14 Marks any two accounting concepts in detail.

### (OR)

- 8 Write journal entries for the following transactions in the books of CO2 14 Marks Mr. Prem Kumar.
  - 2016 March 1 Started business with Rs. 4,00,000 in cash.
    - March 3 Bought goods from Prasad Rs.3,27,100.
    - March 6 Sold goods to Hariswaroop Rs.1,29,300.
    - March 9 Cash sales Rs.37,200.
    - March 12 Sold goods to Babulal Rs.63,100.
    - March 15 Paid Prasad on account Rs.1,50,000.
    - March 18 Paid Salary to manager Rs.50,000.

March 31 Office rent paid to Land Lord Krishna Rs.40,000.

## UNIT-V

9 Explain the distinction between Manual Accounting and Computerized CO1 14 Marks Accounting. Elaborate the advantages and disadvantages of Computerized Accounting.

10 From the following trail balance of Bikram, prepare Trading and Profit & CO2 14 Marks Loss Account for the year ending 31<sup>st</sup> March 2016 and the Balance Sheet as on that date.

| Particulars          | Dr. Rs.   | Particulars   | Cr. Rs.   |
|----------------------|-----------|---------------|-----------|
| Electricity          | 14,000    | Interest      | 16,000    |
| Land                 | 3,56,000  | Discounts     | 6,000     |
| Wages                | 50,000    | Sales         | 8,00,000  |
| Opening Stock        | 20,000    | Returns       | 10,000    |
| Rent                 | 24,000    | Creditors     | 60,000    |
| Office expenses      | 30,000    | Capital       | 3,02,000  |
| Building             | 4,00,000  | Bills payable | 15,000    |
| Salaries             | 90,000    |               |           |
| Power, Gas and Water | 30,000    |               |           |
| Returns              | 20,000    |               |           |
| Furniture            | 1,15,000  |               |           |
| Debtors              | 60,000    |               |           |
| Total                | 12,09,000 | Total         | 12,09,000 |

## Additional information:

- i) Closing stock was valued at Rs.50,000.
- ii) Provide depreciation @ 5% on buildings and 10% on furniture.
- iii) Write off bad debts Rs.2,500.

# CONSTRUCTION PLANNING AND PROJECT MANAGEMENT

[ Civil Engineering ]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Explain the stages of planning by different agencies. 7 Marks 1 CO1 a) List out the salient features of workmen's compensation act of 1923. b) CO8 7 Marks (**OR**) 2 a) Describe the labour legislation in India. CO8 7 Marks What are the basic concepts in the development of construction plans? b) CO1 7 Marks UNIT-II) 3 Write down the ABC classification of materials. CO9 7 Marks a) b) Differentiate resource smoothing and resource leveling. CO9 7 Marks (**OR**) 4 a) Explain about: CO5 7 Marks i) Concreting plant and equipment. ii) Earth compaction equipment. iii) Hoisting equipment. Write a brief note on operation and maintenance of equipment. CO5 7 Marks b) UNIT-III) 5 What is bar chart and what are its shortcomings? CO5 7 Marks a) What is project management? What are the main causes of project failure? b) CO1 7 Marks (**OR**) 6 Discuss the methods of scheduling bringing out their importance in CO1 a) 7 Marks projects. Describe various phases of project management. CO1 7 Marks b) UNIT-IV) What are the different types of networks? Write the advantages of network 7 CO1 7 Marks a) techniques over conventional techniques. The following information applies to particular project. The expected CO3 b) 7 Marks times are given below. 0-1 1-3 2-3 Activity: 1-2 1-4 3-4 4-5 Duration: 3 16 6 8 10 5 3 Draw the network diagram and locate critical path. (**OR**) What is dummy? How and where should a dummy be used? 6 Marks 8 a) CO1 Illustrate Hierarchies in the development of network with an example. CO<sub>4</sub> 8 Marks b) UNIT-V 9 How do you evaluate the probability of completion time for a project? CO4 7 Marks a) What do you mean by CPM? What are the time estimates used in CPM CO3 7 Marks b) and explain their significance?

(OR)

1

10 a) Determine the Critical path for the network given below.

CO2 7 Marks

b) Define "optimistic time estimate", "pessimistic time" and "most likely CO2 7 Marks time estimate".

### MECHANICS OF SOLIDS [ Civil Engineering ]

Time: 3 hours

Max. Marks: 70

## Answer One Question from each Unit All questions carry equal marks

## UNIT-I

A member ABCD is subjected to point loads P1, P2, P3 and P4 as shown CO1 14 Marks in figure. Calculate the force P2 necessary for equilibrium if P1=45kN, P3=450kN and P4=130kN. Determine the total elongation of the member, assuming the modulus of elasticity as 2.1 x 10<sup>5</sup>N/mm<sup>2</sup>

### (OR)

A circular rod of 90mm diameter and 450mm long is subjected to a tensile CO1 14 Marks force of 800kN. Determine the modulus of rigidity, bulk modulus and change in volume if Poisson's ratio = 0.3 and young modulus is  $E = 2.1 \times 10^5 \text{N/mm}^2$ .

## UNIT-II

A beam AB 5m long is simply supported at A and B. it is loaded with CO2 14 Marks point loads of 20kN, 30kN and 20kN at distances of 1m, 3m and 4m respectively from the support A and a uniformly distributed load at the rate of 20kN/m over length of 2m, the beginning of the U.D.L. being at a distance of 2m from A. draw the bending moment and shear force diagrams.

### (OR)

- 4 a) Explain the relation between bending moment and shear force.b) A simply supported beam of span L is loaded with distributed load of CO2 8 Marks
  - intensity zero at the ends and w per unit length at the centre. Plot the shear force and bending moment diagrams.

## (UNIT-III)

5 Derive the basic bending equation for a beam of elastic material. State CO2 14 Marks clearly the assumptions made in simple theory of bending.

### (OR)

6 A beam of triangular cross-section with base **b** and height **h**, is used with CO2 14 Marks the base horizontal. Calculate the intensity of maximum shear stress and plot the variation of shear stress intensity along the section.

## UNIT-IV

7 State the assumptions and derive the torsion equation for a solid shaft CO3 14 Marks subjected to a torque T.

### (OR)

8 In a hollow circular shaft of outer and inner diameters of 20cm and 10cm CO3 14 Marks respectively, the shear stress is not to exceed 40N/mm<sup>2</sup>. Find the maximum torque which the shaft can safely transmit.

## UNIT-V

9 Find the ratio of thickness to internal diameter for a table subjected to CO5 14 Marks internal pressure, when the pressure is  $5/8^{\text{th}}$  of maximum permissible circumferential stress. Find the increase in internal diameter of such a tube 100mm internal diameter, when the internal pressure is 90N/mm<sup>2</sup>. Take E = 2 x 105N/mm<sup>2</sup> and Poisson's ratio = 0.286.

### (OR)

10 A cylindrical vessel whose ends are closed by means of rigid plane plates CO4 14 Marks is made of steel plate 3mm thick. The internal length and diameter of vessel are 50cm and 25cm respectively. Determine the longitudinal and circumferential stress in the cylindrical vessel due to internal fluid pressure of 3Mpa. Also calculate increase in length, diameter and volume. Take (1/m = 0.5), E = 200Gpa.

## SURVEYING

[ Civil Engineering ]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 With a neat sketch, explain the working principles of optical square and CO1 14 Marks cross staff and give a field usage description of optical square and cross staff. (OR)
- A 20-m tape was tested before starting the day's work and found to be CO4 14 Marks 0.02m too short. At the end of the day it was tested again and found to be 0.06m too long. If the total length measured during the day was 1243.5m, find the true length.

## UNIT-II

- 3 Explain two-point problem and the method of solution for plane table CO2 14 Marks surveying and also explain the likely errors that may occur in plane table surveying.
- 4 Explain the rise and fall method of reduction of levels. CO2 14 Marks

## UNIT-III)

5 Explain the step by step procedure to measure the horizontal and vertical CO2 14 Marks angles between two-point with the help of neat sketch.

#### (OR)

6 Derive the formula for distance and elevation in the tangential method CO4 14 Marks with the help of neat sketch and explain the principle of stadia method.

## UNIT-IV)

A chain line was divided into eight sections of 12m each. Offsets were CO2 14 Marks taken from the middle of each section to a boundary. The offsets were measured (in meters) as follows from the left end: 5.63, 6.84, 7.23, 6.95, 7.58, 5.97, 5.84 and 4.95. Find the area between the chain line and the boundary.

### (OR)

8 Derive the expressions for the elements of compound curve and vertical CO4 14 Marks curve with neat sketches.

## UNIT-V

9 Briefly explain the fundamental quantities measured by total station. How CO5 14 Marks they can be used to find the level and coordinates of observed station.

### (**OR**)

10 Discuss briefly the preparations required for measurement with total CO6 14 Marks station and list various input data to be given for distance measurement with total station.

### **DC MACHINES**

[Electrical and Electronics Engineering]

Max. Marks: 70

## Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Describe the different methods of excitation of DC generators with CO1 6 Marks suitable diagrams.
  - b) A 4-pole DC shunt generator with shunt field resistance of  $100\Omega$  and CO4 8 Marks armature resistance of  $1\Omega$  has 378 wave connected conductors in its armature and the generator is driven at 1000 r.p.m. Calculate the power absorbed by the load.

### (OR)

2 a) Derive expression for maximum efficiency in DC generators. CO2 6 Marks
b) A 10KW, 250V DC shunt generator has total rotational losses of 600W. CO4 8 Marks Its armature and shunt field resistance are 0.5Ω and 125Ω respectively.

Calculate the efficiency at rated load.

## (UNIT-II)

- 3 a) Develop an expression for the demagnetizing and cross magnetizing CO2 7 Marks armature ampere-turns in a DC generator.
  - b) A 4-pole DC generator has an output of 120A at 400V, the wave CO4 7 Marks connected armature has 980 conductors. The brushes are advanced by 3 degrees from the neutral axis. Find (*i*) ATd /pole, (*ii*) ATc/pole.

#### (**OR**)

- 4 a) With neat diagrams, describe the phenomenon of armature reaction in a CO1 7 Marks dc machine. Discuss its effects.
  - b) What is meant by reactance voltage and derive expression for reactance CO2 7 Marks voltage.

## UNIT-III)

- 5 a) Describe critical speed and critical resistance of a DC shunt generator and CO1 7 Marks explain how to obtain these from the OCC curve.
  - b) Two shunt generators operating in parallel given a total output of 600A. CO4 7 Marks One machine has an armature resistance of  $0.2\Omega$  and a generator voltage of 455V and the other an armature resistance of  $0.025\Omega$  and a generated voltage of 460V. Calculate the terminal voltage and the Kilowatt output of each machine. Neglect field currents.

- 6 a) Describe the parallel operation of two DC shunt generators. Why the CO1 6 Marks generators with drooping characteristics are best suited?
  - b) A DC series generator having external characteristics which is a straight CO4 8 Marks line through zero to 50V at 200A is connected as a booster between a station bus bar and a seeder of  $0.3\Omega$  resistances. Calculate the voltage different between the station bus bar and the far end the seeder at a current of (i) 200A and (ii) 50A.

## UNIT-IV

Derive the Torque Equation of DC motor. 7 CO<sub>2</sub> 6 Marks a) A 6-pole DC shunt motor has a wave-connected armature with 87 slots, CO4 8 Marks b) each slot containing six conductors. The flux per pole is 30mWb and the armature has a resistance of  $0.10\Omega$ . Calculate the speed when the motor is connected to a 250 V supply and taking an armature current of 80 A. **(OR)** 8 Draw and describe the mechanical characteristics of DC series and shunt CO1 6 Marks a) motor A 230V, DC shunt motor, takes an armature current at 3.33A at rated CO4 8 Marks b) voltage and at a no load speed of 1000 r.p.m. The resistances of the armature circuit and field circuit are  $0.3\Omega$  and  $160\Omega$  respectively. The line current at full load and rated voltage is 40A. Calculate at full load, the speed and the developed torque in case the armature reaction weakens the no load flux by 4%. UNIT-V 9 Describe Field Test for obtaining the efficiency of two similar DC series CO1 6 Marks a) machines. In a retardation test on a DC motor with its field normally excited, the 8 Marks b) CO4 speed fell from 1525 r.p.m to 1475 r.p.m in 25sec. With an average load of 1KW supplied by the armature. The same speed drop occurred in 20sec. Find out the moment of inertia of rotating parts in Kg  $m^2$ . (**OR**) 10 List the merits and demerits of Swinburne's test CO1 4 Marks a) The HOPKINSON'S test on two similar shunt machines give the CO4 10 Marks b) following full data line voltage is 110volts, line current is 48amps, motor armature current is 230amps, field currents are 3amps and 3.5amps. Armature resistance of each is  $0.035\Omega$ . Calculate the efficiency of each

\$P \$P \$P

machine assuming a brush contact drop of 1 volt per brush.

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Explain Electric Field Intensity, Electric Flux Density and the relation CO1 5 Marks between them.
  - b) A 2µC point charge is located at A(4,3,5) in free space. Find  $E_{\rho}$ ,  $E_{\phi}$  and CO3 5 Marks  $E_z$  at P(8,12,2).
  - c) Calculate the work done in moving a 4C charge from B (1, 0, 0) to CO3 4 Marks A(0, 2, 0) along the path y=2-2x, z=0 in the field E= :
    - (i)  $5 a_x V/m$ . (ii)  $5x a_x V/m$ .

#### (OR)

2 a) A circular disk of radius 'a' is uniformly charged with  $\sigma C/m^2$ . The CO2 10 Marks disk lies on the z=0 plane with its axis along the z-axis.

i) Show that at point (0,0,h), 
$$\vec{E} = \frac{\sigma}{2\varepsilon} \left\{ 1 - \frac{h}{[h^2 + a^2]^{1/2}} \right\} \vec{a}_z$$
.

ii) From this, derive the  $\vec{E}$  field due to an infinite sheet of charge on the z=0 plane.

### (UNIT-II)

3 a) Derive the expression for energy density in a static electric field. CO1 4 Marksb) Show that the tangential components are equal at the dielectric-dielectric CO4 10 Marks

interface. Also explore the analysis to derive relation between tangential components for insulated conductor.

#### (OR)

- 4 a) Derive the expression for electric field and potential for the dipole. CO1 7 Marksb) Apply solution of Laplace's equation to derive the expression for CO4 7 Marks
  - capacitance of a coaxial cable.

## (UNIT-III)

- 5 a) Derive expression for H at any point in cylindrical system due to a CO5 6 Marks filamentary conductor carrying a current I on z axis from -∞ < z <∞.</li>
  b) Define magnetic field intensity and magnetic flux density. Give the CO2 5 Marks
  - relation between them. c) Mention the significance of permeability. CO2 3 Marks

#### (OR)

- 6 a) Find the magnetic field intensity at a point on the axis, 5m from the CO3 8 Marks centre of a circular coil of area  $100cm^2$  and carrying a current of 50A.
  - b) Derive  $\nabla X H = J$ . Justify this equation is valid for static magnetic fields. CO4 6 Marks
- 7 a) Derive the expression for force and Torque on a closed loop carrying CO5 7 Marks current in the magnetic field.
  - b) Derive the expressions for statically induced and dynamically induced CO4 7 Marks EMF in case of electromagnetic fields

| 8  | a) | Evaluate the forces per unit length on two long, straight, parallel conductors if each carries a current of 10.0A in the same direction and the separation distance is 0.20m. | CO3 | 6 Marks |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | In a double layered perfect dielectric insulated current carrying cable,                                                                                                      | CO4 | 8 Marks |
|    |    | identify the changes in magnetic field parameters between the dielectrics.                                                                                                    |     |         |
|    |    |                                                                                                                                                                               |     |         |
| 9  | a) | State and explain Faradays laws of electromagnetic induction.                                                                                                                 | CO4 | 7 Marks |
|    | b) | Explain inconsistency of Ampere's law.                                                                                                                                        | CO4 | 7 Marks |
|    |    | (OR)                                                                                                                                                                          |     |         |
| 10 | a) | Write Maxwell's equations for time varying EM fields in both differential and integral form.                                                                                  | CO2 | 8 Marks |
|    | b) | A parallel plate capacitor with plate area of 10cm <sup>2</sup> and plate separation of                                                                                       | CO3 | 6 Marks |
|    |    | 6mm has a voltage $50\sin(10^3 t)$ volts required to its plates. Determine the                                                                                                |     |         |
|    |    | displacement current, assuming $\mathbf{\epsilon} = 2 \mathbf{\epsilon}_0$                                                                                                    |     |         |

| Time: 3 hours |    |                                                                                               | Max. | Marks: 70 |
|---------------|----|-----------------------------------------------------------------------------------------------|------|-----------|
|               |    | <b>Answer One Question from each Unit</b>                                                     |      |           |
|               |    | All questions carry equal marks                                                               |      |           |
|               |    | UNIT-I                                                                                        |      |           |
| 1             | a) | Write about elementary continuous time signals in detail.                                     | CO1  | 7 Marks   |
|               | b) | Determine whether the following systems are linear or not                                     | CO2  | 7 Marks   |
|               |    | dy(t) / dt + 3ty(t) = t2 x(t) and $y(n) = 2x(n) + 1 / x(n-1)$ .                               |      |           |
|               |    | (OR)                                                                                          |      |           |
| 2             | a) | Find the impulse response of causal LTI systems described by the                              | CO4  | 7 Marks   |
|               |    | following differential equation.                                                              |      |           |
|               |    | $d^{2}y(t) = 5 d^{2}y(t) = 6 y(t) = d^{3}x(t) = 2 d^{2}x(t) = 2 r(t)$                         |      |           |
|               |    | $\frac{dt^2}{dt^2} + 3\frac{dt}{dt} + 6y(t) - \frac{dt^3}{dt^3} + 2\frac{dt^2}{dt^2} + 3x(t)$ |      |           |
|               | b) | Distinguish between the following.                                                            | CO2  | 7 Marks   |
|               |    | i. Continuous time signal and discrete time signal.                                           |      |           |
|               |    | ii. Unit step and Unit Ramp functions.                                                        |      |           |
|               |    | iii. Periodic and Aperiodic Signals.                                                          |      |           |
|               |    | UNIT-II                                                                                       |      |           |
| 3             | a) | Find the Laplace Transform and ROC of the signal                                              | CO2  | 7 Marks   |
|               |    | (t) = e - a(t) + e - btu(t)                                                                   |      |           |
|               | b) | Distinguish between Fourier series Analysis and Fourier Transforms.                           | CO2  | 7 Marks   |
|               | `  |                                                                                               | 005  |           |
| 4             | a) | Determine the Fourier Transform for double exponential pulse whose                            | 005  | / Marks   |
|               |    | function is given by $(t) = e - 2 t $ . Also draw its magnitude and phase                     |      |           |
|               | b) | spectra. Determine the initial value and final value of signal $\mathbf{x}(t)$ whose I aplace | CO5  | 7 Marks   |
|               | 0) | Determine the initial value and initial value of signal $x(t)$ whose Laplace $2s + 5$         | 005  |           |
|               |    | Transform is, $X(s) = \frac{2s+3}{s(s+2)}$ .                                                  |      |           |
|               |    | S(S+3)                                                                                        |      |           |
|               |    | (UNIT-III)                                                                                    |      |           |
| 5             | a) | The switch has been in position a for long time $At t = 0$ it moves to                        | CO5  | 7 Marks   |
|               |    | position b. Calculate $I(t)$ for $t > 0$ .                                                    |      |           |
|               |    |                                                                                               |      |           |
|               |    |                                                                                               |      |           |
|               |    |                                                                                               |      |           |

b) Derive the expression for the transient response of series R-L-C circuit CO2 7 Marks driven by sinusoidal forcing function.

SVEC-16

6 a) The switch is closed for longer time. At t equal to 0 it is opened. Obtain CO4 7 Marks the expression for  $i_L(t)$  and v(t) for t > 0.

b) Derive the expressions for natural and transient response of a series RL CO2 7 Marks circuit excited by a DC voltage source and plot the responses as a function of line.

7 a) Calculate the Y parameters for the two port network shown below. CO4 7 Marks

- b) Explain in detail about series and parallel connetion of 2 two port CO1 7 Marks networks.
- (OR) 8 a) Find the Y parameters of the figure given below. CO4 7 Marks

- b) Convert z parameter into the h parameters. CO2 7 Marks
- 9 a) Explain in detail constant K- Low pass filter and constant K- High pass CO2 7 Marks filter.
  - b) Design m- derived LPF with a cut off frequency of 2K Hz and frequency CO3 7 Marks of attenuation 2100Hz. Give design impedance is 400Ω.

(OR)

10 a) Explain in detail m-derived T – Section and m-derived  $\pi$  – Section filter. CO1 7 Marks b) Design a constant K HPF for a cutoff frequency of 2KHz. Given CO3 7 Marks  $R_0 = 500\Omega$ .

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1 Derive EMF equation of a DC generator. CO<sub>2</sub> 7 Marks a) A 1500KW, 550V, 16 pole separately excited DC generator runs at CO4 7 Marks b) 1500 r.p.m. What must be the useful flux/pole if there are 2500 conductors in the armature is lap connected? The full load armature copper loss is given as 25KW. (**OR**) 2 Explain how a Swinburne's test is conducted on DC shunt machine. CO5 7 Marks a) A 240 V, 4 pole wave connected shunt motor gives 1119 KW when CO4 7 Marks b) running at 1000 r.p.m and drawing an armature current of 50A. The shunt field resistance is  $240\Omega$ . The armature has 540 conductors. Armature resistance is  $0.1\Omega$ . Find i) Gross torque. ii) Shaft torque iii)Useful flux/pole. Take total brush voltage drop as 2V. UNIT-II Explain the working of single phase transformer with the help of a phasor 3 CO1 7 Marks a) diagram. A single phase working at unity pf has an efficiency of 90% at both half-7 Marks b) CO4 full load and full load of 1 KW. Calculate its efficiency at 70% of full load. (**OR**) Discuss with neat sketch the equivalent circuit of transformer on load. 7 Marks 4 CO<sub>2</sub> a) The primary and secondary windings of 40KVA, 6600/250V single phase 7 Marks CO4 b) transformer have resistances of  $10\Omega$  and  $0.02\Omega$  respectively. Total leakage reactance of  $35\Omega$  referred to primary winding. Find full load regulation of power factor of 0.8 lag. UNIT-III) 5 Derive relationship between voltages and currents in 3-phase star CO<sub>2</sub> 7 Marks a) connected system. b) Three coils of resistance  $4\Omega$  and reactance  $3\Omega$  are connected in delta CO4 7 Marks across 400V, 50Hz supply. Find the current in each phase, line current in each phase, line current, real power and reactive power. **(OR)** With the help of a circuit and phasor diagrams, show that the total power 6 7 Marks a) CO2 in a 3 phase, 3-wire star connected balanced load can be measured with the help of one wattmeter. Discuss the advantages of a poly phase system. CO1 7 Marks b) UNIT-IV) 7 Derive an expression for the torque of an induction motor and obtain the CO2 7 Marks a) condition for maximum torque. A 3 phase induction motor has 2 poles and is connected to 400V, 50Hz 7 Marks CO4 b) supply. Calculate the actual rotor speed and rotor frequency when the slip

### II B.Tech I Semester (SVEC-16) Supplementary Examinations February – 2021

#### **KINEMATICS OF MACHINERY**

[ Mechanical Engineering ]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1 | a) | What are quick-return mechanisms? Where are they used? Discuss the | CO1 | 7 Marks |
|---|----|--------------------------------------------------------------------|-----|---------|
|   |    | functioning of any one of them.                                    |     |         |
|   | b) | Distinguish between:                                               | CO2 | 7 Marks |
|   |    | i) Mechanism and Machine.                                          |     |         |
|   |    | ii) Analysis and Synthesis of mechanisms.                          |     |         |

iii) Kinematics and dynamics.

#### (**OR**)

- 2 a) Explain Grubler's criterion for determining degree of freedom for CO1 7 Marks mechanisms. Using Grubler's criterion for plane mechanism, prove that the minimum number of binary links in a constrained mechanism with simple hinges is four.
  - b) Identify the kinematic chains to which the following mechanisms belong: CO6 7 Marks
    - i) Steam engine mechanism.
    - ii) Beam engine.
    - iii) Whitworth quick return motion mechanism.
    - iv) Elliptical trammels.

### UNIT-II

- The figure shows a mechanism in which OA=QC=100mm, CO2 14 Marks AB = OB = 300mm and CD=250mm. The crank OA rotates at 150 r.p.m in the clockwise direction. Determine:
  - i) Velocity of the slider at D.
  - ii) Angular velocities of links QB and AB.
  - iii) Rubbing velocity at the pin B which is 40mm in diameter.

(**OR**)

Time: 3 hours

3

- 4 a) Discuss the three types of instantaneous centres for a mechanism.
  - b) Various dimensions of Quick return mechanisms of slotted lever type are given OA=400mm, OP=200mm, AR=700mm, RS=300mm. For the configuration show determine the acceleration of cutting tool at S and angular acceleration of the link RS. The crank RP rotates at 210 r.p.m.

(UNIT-III)

- 5 a) What are straight line mechanisms? Describe one type of exact straight CO2 7 Marks line motion mechanism with the help of a sketch.
  - b) Two shafts with an included angle of 160° are connected by a Hooke's CO2 7 Marks joint. The driving shaft runs at a uniform speed of 1500 r.p.m. The driven shaft carries a flywheel of mass 12kg and 100mm radius of gyration. Find the maximum angular acceleration of the driven shaft and the maximum torque required.

### (OR)

- 6 a) Describe the Watt's parallel mechanism for straight line motion and CO2 7 Marks derive the condition under which the straight line is traced.
  - b) The angle between the axes of two shafts connected by Hooke's joint is CO2 7 Marks 18°. Determine the angle turned through by the driving shaft when the velocity ratio is maximum and unity.

### UNIT-IV

- 7 a) Sketch two teeth of a gear and show the following. CO4 7 Marks Face, flank, top land, bottom land, addendum, dedendum tooth thickness, space width, face width and circular pitch.
  - b) How can you deduce the advantages of involutes systems over cycloidal CO4 7 Marks system?

### (**OR**)

- 8 a) What is the difference between a simple gear train and a compound gear CO4 7 Marks train? Explain with the help of sketches.
  - b) An epicyclic gear consists of a pinion, a wheel of 40 teeth and an annulus CO3 7 Marks with 84 internal teeth concentric with the wheel. The pinion gear with the wheel and the annulus. The arm that carries the axis of the pinion rotates at 100 r.p.m. If the annulus is fixed, find the speed of the wheel. If wheel is fixed, find the speed of annulus.

CO2 4 Marks CO2 10 Marks

## UNIT-V

- 9 a) Draw the displacement, velocity and acceleration diagrams for a follower CO5 4 Marks when it moves with uniform acceleration and retardation. Derive the expression for velocity and acceleration during outstroke and return stroke of the follower.
  - b) It is required to set out the profile of a cam with oscillating follower for CO5 10 Marks the following motion :
    - i) Follower to move outward through an angular displacement of 20° during 90° of cam rotation.
    - ii) Follower to dwell for 45° of cam rotation.
    - iii) Follower to return to its original position of zero displacement in 75° of cam rotation.
    - iv) Follower to dwell for the remaining period of the revolution of the cam.

The distance between the pivot centre and the follower roller centre is 70 mm and the roller diameter is 20 mm. The minimum radius of the cam corresponds to the starting position of the follower as given in (i). The location of the pivot point is 70 mm to the left and 60 mm above the axis of rotation of the cam. The motion of the follower is to take place with S.H.M. during out stroke and with uniform acceleration and retardation during return stroke.

### (OR)

A cam rotating clockwise at a uniform speed of 1000 r.p.m. is required to CO6 give a roller follower the motion defined below :

5 14 Marks

- i) Follower to move outwards through 50mm during 120° of cam rotation.
- ii) Follower to dwell for next 60° of cam rotation.
- ii) Follower to return to its starting position during next 90° of cam rotation,
- iv) Follower to dwell for the rest of the cam rotation.

The minimum radius of the cam is 50mm and the diameter of roller is 10mm. The line of stroke of the follower is off-set by 20mm from the axis of the cam shaft. If the displacement of the follower takes place with uniform and equal acceleration and retardation on both the outward and return strokes, draw profile of the cam and find the maximum velocity and acceleration during out stroke and return stroke.

## STRENGTH OF MATERIALS

#### [ Mechanical Engineering ]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Draw stress strain diagram for ductile material, marks the salient points CO1 6 Marks and explain each of them in detail.
  - b) Three steel bars are made with cross sectional shape of circular with CO2 8 Marks diameter 12mm, square of side 12mm and an equilateral triangle of side 12mm. They are subjected to a load of 40KN with length 2.5m and the poisson's ratio of 0.25. Determine the stress and strain in each member. Take  $E= 2 \times 10^5 \text{ N/mm}^2$ .

#### (**OR**)

2 Calculate the elongation of a copper bar of solid circular cross section CO3 with tapered ends when it is stretched by axial loads of magnitude 16kN (As shown in figure). The length of the end segments is 500mm and the length of the prismatic middle segment is 1250mm. The diameters at cross sections A, B, C and D are 12, 24, 24 and 12mm respectively and the modulus of elasticity is 120GPa.

## UNIT-II

Draw the shear force and bending moment diagram for the beam shown CO6 14 Marks in Fig. 1. Locate the point of contraflexure if any. Also find the point of maximum bending moment.

4

3

A cantilever of length 6m carries two point loads of 2KN and 3KN at a CO6 14 Marks distance of 1m and 6m from the fixed end respectively. It also carries a uniformly distributed load of 1KN/m over a length of 2m at a distance of 3m from the fixed end. In addition to that beam also carries a clockwise couple of 3KN-m at a distance of 4m from fixed end. Draw the shear force and bending moment diagram.

SVEC-16

Max. Marks: 70

CO3 14 Marks

## UNIT-III

5 Derive torsion equation and define polar section modulus. 6 Marks CO1 a) The steel axle of a large winch on an ocean liner is subjected to a torque b) CO2 8 Marks of 1.65KN-m. What is the minimum required diameter  $d_{min}$ , if the allowable shear stress is 48MPa and the allowable rate of twist is  $0.75^{\circ}$ /m. Assume that the shear modulus of elasticity is 80 GPa. **(OR)** 6 A Cast iron beam 20mm x 20mm in section and 100cm long is simply CO3 14 Marks supported at the ends. It carries a point load W at the centre. The maximum stress induced is 120N/mm<sup>2</sup>. What uniformly distributed load will break a cantilever of the same material 50mm wide, 100mm deep and 2m long. UNIT-IV) 7 Calculate the slope at ends and deflection at the middle of simply CO2 14 Marks supported beam of span 'L' subjected to the following loads. i) When a concentrated load 'P' acts at the middle. ii) When a UDL of intensity 'w' per unit run act over entire span. (**OR**) 8 A simply supported beam of 4m length and of uniform rectangular cross CO4 14 Marks section 200mm wide and 350mm deep is loaded with a 50 KN load at its centre of beam. In addition to this it carries a uniformly distributed load

of 30KN/m run over its entire length. Calculate

- i) Maximum slope and maximum deflection.
- ii) Slope and deflection at 3m from one end.

Take  $E = 210 GN/m^2$ .

## UNIT-V

9 A cylindrical vessel whose ends are closed by means of rigid flange CO4 14 Marks plates is made of steel plate 4mm thick. The length and internal diameter of the vessel are 100cm and 30cm respectively. Determine the longitudinal and hoop stresses in the cylindrical shell due to an internal fluid pressure of  $2N/mm^2$ . Also calculate the increase in length, diameter and volume of the vessel. Take  $E = 2 \times 10^5 N/mm^2$  and poisson's ratio of 0.3.

## (OR)

10 Determine the maximum and minimum hoop stress across the section of CO5 14 Marks a pipe of 400mm internal diameter and 100mm thick, when the pipe contains a fluid at a pressure of 8N/mm<sup>2</sup>. Also sketch the radial pressure distribution and hoop stress distribution across the section.

## THERMODYNAMICS

[Mechanical Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I )

| 1 | a)       | Explain in detail about Thermodynamic equilibrium.                                                                                                                                                                                                                                                                                                                                                                                                                                                                          | CO1        | 6 Marks             |
|---|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------|
|   | b)       | Define Thermodynamic system and discuss different types of Thermodynamic systems with examples.                                                                                                                                                                                                                                                                                                                                                                                                                             | CO1        | 8 Marks             |
|   |          | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |            |                     |
| 2 | a)       | Define Thermodynamic definition of work and derive the expression for<br>displacement work and state the conditions under which that equation is<br>valid                                                                                                                                                                                                                                                                                                                                                                   | CO1        | 7 Marks             |
|   | b)       | A gas undergoes a reversible-non flow process according to the relation $P=(-3v+15)$ where v is the volume in m <sup>3</sup> and P is the pressure in bar. Determine the work done when the volume changes from 3 to 6m <sup>3</sup> .                                                                                                                                                                                                                                                                                      | CO2        | 7 Marks             |
| 3 | a)       | State First law of thermodynamics applied to a closed system undergoing                                                                                                                                                                                                                                                                                                                                                                                                                                                     | CO1        | 7 Marks             |
|   | b)       | A domestic refrigerator consumes 3.5 kWh of work during a period of its operation during which Its internal energy drops by 5500 kJ. Determine the direction and magnitude of heat interaction in the above period of operation.                                                                                                                                                                                                                                                                                            | CO2        | 7 Marks             |
|   |          | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |            |                     |
| 4 | a)       | State and prove that Kelvin Planck and Clausius statements are equivalent.                                                                                                                                                                                                                                                                                                                                                                                                                                                  | CO1        | 7 Marks             |
|   | b)       | Air flows at the rate of 0.5kg/s through an air compressor entering at 7m/s velocity, 100kPa pressure and 0.95m <sup>3</sup> /kg specific volume and leaving at 5m/s, 700kPa and 0.19m <sup>3</sup> /kg. The internal energy of the air leaving is 90kJ/kg greater than that of air entering. Cooling water in the compressor jacket absorbs heat from the air at the rate of 58 kW.<br>i) Compute the rate of shaft work input to the air in Kw.<br>ii) Find the ratio of inlet pipe diameter to the outlet pipe diameter. | CO3        | 7 Marks             |
| 5 | a)<br>b) | Define Entropy and prove that Entropy is a property of a system.<br>0.04m <sup>3</sup> of nitrogen contained in a cylinder behind a piston is initially at<br>1.06 bar and 15C. The gas is compressed isothermally and reversibly<br>until the pressure is 4.8 bar. Calculate:<br>i) The change of entropy.<br>ii) The heat flow.<br>iii) The work done.<br>Assume nitrogen to act as a perfect gas. Molecular weight of<br>nitrogen=28.                                                                                    | CO4<br>CO4 | 7 Marks<br>7 Marks  |
|   |          | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |            |                     |
| 6 | a)<br>b) | Define Availability and Irreversibility.<br>A system at 500 K receives 7200 kJ/min from a source at 1000K. The<br>temperature of atmosphere is 300K. Assuming that the temperature of<br>system and source remains constant during heat transfer, find out:<br>i) The entropy produced during heat transfer.<br>ii) The decrease in available energy after heat transfer.                                                                                                                                                   | CO4<br>CO4 | 4 Marks<br>10 Marks |

## UNIT-IV

| 7  | a)  | Define the following terms as applied to pure substance steam.                               | CO1  | 7 Marks |
|----|-----|----------------------------------------------------------------------------------------------|------|---------|
|    |     | i) Sensible heat of water. (ii) Latent heat.                                                 |      |         |
|    |     | iii) Dryness fraction of steam. (iv) Heat of superheat.                                      |      |         |
|    | b)  | Find the internal energy and entropy of 1 kg of steam at 10 bar, when the                    | CO2  | 7 Marks |
|    |     | condition of steam is:                                                                       |      |         |
|    |     | i) 0.85 dry.                                                                                 |      |         |
|    |     | ii) Dry and saturated.                                                                       |      |         |
|    |     | iii) Superheated with degree of superheat being 50 C.                                        |      |         |
|    |     | (OR)                                                                                         |      |         |
| 8  | a)  | Derive an expression for entropy change of an ideal gas in different                         | CO1  | 7 Marks |
|    |     | forms.                                                                                       |      |         |
|    | b)  | Show that for an ideal gas, the slope of the constant volume line on the                     | CO4  | 7 Marks |
|    |     | T-s diagram is more than that of the constant pressure line.                                 |      |         |
|    |     | (UNIT-V)                                                                                     |      |         |
| 9  | a)  | Derive an expression for thermal efficiency of Diesel cycle.                                 | CO4  | 7 Marks |
|    | b)  | An engine working on the Otto cycle has a clearance of 17% of stroke                         | CO5  | 7 Marks |
|    |     | volume and initial pressure of 0.95 bar and temperature 30C. If the                          |      |         |
|    |     | pressure at the end of the constant volume heating is 28 bar. Find:                          |      |         |
|    |     | i) Air standard efficiency.                                                                  |      |         |
|    |     | ii) Maximum temperature in the cycle.                                                        |      |         |
|    |     | iii) Ideal mean effective pressure.                                                          |      |         |
|    |     | (OR)                                                                                         | ~~ . |         |
| 10 | a)  | Compare Otto, Diesel and Dual combustion cycles for the same                                 | CO4  | 7 Marks |
|    | 1 \ | compression ratio and heat rejected.                                                         | 005  | 7 ) ( 1 |
|    | b)  | The swept volume of a diesel cycle engine working on dual cycle is                           | CO5  | / Marks |
|    |     | 0.0053m <sup>3</sup> and clearance volume is 0.00035m <sup>3</sup> . The maximum pressure is |      |         |
|    |     | 65 bar. Fuel injection ends at 5 percent of the stroke. The temperature                      |      |         |
|    |     | and pressure at the start of the compression are 80°C and 0.9 bar.                           |      |         |
|    |     | Determine the air standard efficiency of the cycle. Take $\gamma = 1.4$ for air.             |      |         |

## ELECTRONIC CIRCUIT ANALYSIS AND DESIGN

[Electronics and Communication Engineering]

#### **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I 1 Derive the voltage gain, current gain and input impedance expressions for a) CO<sub>2</sub> 7 Marks CB amplifier using exact h-parameter model. CO<sub>4</sub> 7 Marks b) The h-parameters of the transistor used in CE amplifier are $h_{fe} = 50$ , $h_{ie}=1.1$ K $\Omega$ , $h_{re}=2.5$ x $10^{-4}$ , $h_{oe}=24$ $\mu$ A/V. Find out current gain and voltage gains with and without source resistance, input and output impedances, given that $R_L = 10 \text{ K}\Omega$ and $R_S = 1 \text{ K}\Omega$ . (**OR**) 2 What are the important characteristics of a cascade amplifier? Draw the a) CO<sub>2</sub> 7 Marks circuit of CE-CC cascade amplifier and determine an expression for its voltage gain in terms of its circuit parameters. b) With the help of a neat circuit diagram, analyze the working of a cascode CO1 7 Marks amplifier UNIT-II 3 for the Derive the expression hybrid-π parameters CO2 8 Marks a) $g_m, r_{b'}e, g_{ce}, r_{b'}c, r_{bb'}$ and diffusion capacitance. An amplifier is represented by the following circuit shown, find the mid- CO4 b) 6 Marks band frequency gain. Lower and upper cutoff frequencies 5µF 10K 2pF≠ 101 V, <sup>></sup> Vi /50 <sup>(</sup> (**OR**) Select one amplifier using FET which provides unity voltage gain and 4 a) CO5 6 Marks explain its behavior with necessary expressions. Derive the expression for CE short circuit current gain and draw its b) CO<sub>2</sub> 8 Marks

frequency response.

## UNIT-III)

- 5 a) Describe the following with respect to negative feedback CO1 8 Marks i) Gain sensitivity.
  - ii) Bandwidth extension.
  - iii) Linearizing effect.
  - b) Apply current series feedback to the common emitter amplifier to CO6 6 Marks increase the input resistance and output resistance.

(OR)

Time: 3 hours

Max. Marks: 70
| 6  | a)         | Draw the circuit diagram of Colpitt's oscillator using BJT and derive the expression for frequency of oscillation.                                                                     | CO2 | 6 Marks   |
|----|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
|    | b)         | Design the range of capacitor in a transistorized Hartley Oscillator the two inductances are $2mH$ and $20\mu$ H while the frequency is to be changed from 950 kHz to 2050 kHz.        | CO3 | 4 Marks   |
|    | c)         | Design the minimum value of h <sub>fe</sub> in a transistor Colpitt's oscillator                                                                                                       | CO3 | 4 Marks   |
|    |            | L=100 $\mu$ H, C <sub>1</sub> =0.001 $\mu$ F, C <sub>2</sub> =0.01 $\mu$ F for providing sustained oscillations.                                                                       |     |           |
| 7  | a)         | Design a class A power amplifier to obtain power efficiency of 50%                                                                                                                     | CO3 | 7 Marks   |
|    | b)         | A single transistor is operating as an ideal class B amplifier with a 500 load. A <b>dc</b> meter in the collector circuit reads 10mA. How much signal power is delivered to the load? | CO4 | 7 Marks   |
|    |            | (OR)                                                                                                                                                                                   |     |           |
| 8  | a)         | What is Harmonic distortion in transistor amplifier circuits? Discuss second harmonic distortion.                                                                                      | CO1 | 7 Marks   |
|    | b)         | Explain about heat sinks. Explain the term Thermal Resistance. Give the sketches of heat sinks.                                                                                        | CO1 | 7 Marks   |
|    |            | UNIT-V                                                                                                                                                                                 |     |           |
| 9  | a)         | The bandwidth for single tuned amplifier is 20kHz. Calculate the bandwidth if such three stages are cascaded. Also calculate for four                                                  | CO4 | 4 Marks   |
|    | <b>b</b> ) | Stages.<br>The bandwidth for double tuned amplifier is 20kHz Calculate the                                                                                                             | CO4 | 3 Marks   |

#### SIGNALS AND SYSTEMS

[Electronics and Communication Engineering]

**Time: 3 hours** 

#### Max. Marks: 70

# **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

1 Illustrate the difference between analog, discrete and digital signals. CO2 a) 7 Marks Draw the graphical representation of :

i) 
$$u[-n-2]$$
. ii)  $u[-n+2]$ . iii)  $u[n] -u[n-10]$ .

b) Illustrate whether the following signals are periodic or aperiodic. If the CO4 7 Marks signal is periodic find its fundamental period.

i) 
$$x(n) = 3 \cos(10n + \pi/6)$$
  
(OR)  
ii)  $x(n) = e^{(j \pi n/2)}$ .

2 A Continuous time signal is shown in figure. Sketch and label each of the CO2 7 Marks a) following signals.

i) 
$$y_1(t) = x(t) \cdot u(1-t)$$

i) 
$$y_1(t) - x(t)$$
.  $u(1-t)$   
ii)  $y_2(t) = x(t) \{u(t) - u(t-1)\}$ 

Find the Fourier Transform of the signal.

b) Let  $x(t) = e^{j 2t}$  and  $y(t) = e^{j \pi t}$ , and consider their sum z(t) = x(t) + y(t), CO4 7 Marks and their product w(t) = x(t) y(t). Determine if z(t) and w(t) are periodic, and if so, find their periods.

CO4 7 Marks

CO3

CO1

$$x(t) = x^{1}(t) * x^{2}(t)$$
 where,  $x^{1}(t) = e^{-2t} u(t)$  and  $x^{2}(t) = u(t)$ .

b) CO1 7 Marks State and prove any three properties of Fourier Series.

(**OR**)

4 a)

6

a)

3

a)

The given rectangular pulse is  $x(t) = \begin{cases} 1, & |t| < T_1 \\ 0, & |t| > T_1 \end{cases}$ . Find the Fourier

- transform.
- b) What is an LTI system and Impulse response of a system? Explain CO1 7 Marks briefly.

# UNIT-III)

- 5 a) Differentiate convolution and correlation of signals with examples. CO1 7 Marks An excitation and impulse response of the system are given. Find the CO<sub>2</sub> 7 Marks b) responses. x(t) = u(t); h(t) = 2u(t-1) - 2u(t-4)(**OR**)
  - Explain Parseval's theorem and power density spectrum.
  - Discuss about detection of periodic signals in the presence of noise by CO5 7 Marks b) correlation.

SVEC-16

7 Marks

7 Marks

#### **UNIT-IV** A signal has Laplace transform $X(s) = \frac{s+2}{s^2+4s+5}$ . Find Laplace 7 CO4 7 Marks a) transform Y(s) of the signal y(t) = tx(t). CO4 7 Marks b) For the following transform pair $L[x(t)] = \frac{2s}{s^2 - 2}$ , determine the Laplace transform of *x*(2*t*). (**OR**) 8 CO1 7 Marks a) Explain properties of ROC in Laplace transform. CO3 7 Marks b) Find the Laplace transform of x(t) = t e u(t). UNIT-V 9 Consider the following sampling and reconstruction configuration: a) CO5 7 Marks The output y(t) of the ideal reconstruction can be found by sending the sampled signal $x_s(t) = x(t)p(t)$ through an ideal low pass filter shown in figure. Let $x(t) = 2 + \cos(50\pi t)$ and T = 0.01. Determine and sketch | $X_s(\Omega)$ where $x_s(t) = x(t)p(t)$ . Determine if aliasing occurs. x(t) sample at x[n] ideal reconstruction (b) 7 ideal lowpass filter Build the concept of Sampling theorem with neat diagrams. CO1 7 Marks b) (**OR**) 10 Find the z- transform of the following using ZT properties. CO4 7 Marks a) i) x[n]=n(1/3)<sup>n</sup> u[n] ii) x[n] = (1/4) u[n-2)Determine the inverse ZT of the sequence $X[z] = \frac{1 - 2z^{-1}}{1 + \frac{1}{2}z^{-1}}$ , if x(n) is: b) CO4 7 Marks i) Causal sequence. ii) Anti causal sequence.

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

#### II B.Tech I Semester (SVEC-16) Supplementary Examinations February – 2021

#### SWITCHING THEORY AND LOGIC DESIGN

#### [Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

#### Time: 3 hours Max. Marks: 70 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I 1 Each of the following arithmetic operations is correct in at least one CO1 6 Marks a) number system. Determine the bases in each operation: i) 41/3 = 13. ii) $\sqrt{41} = 5$ Given the following Boolean function: b) CO1 8 Marks F = xy'z + x'y'z + w'xy + wx'y + wxyi) Obtain the truth table of the function. ii) Draw the logic diagram using the original Boolean expression. (**OR**) 2 Verify that the following operations are commutative but not associative. CO1 6 Marks a) i) NAND. ii) NOR. b) Expand and simplify the expressions using De Morgan's theorem: CO1 8 Marks i) F(A, B, C) = (A + B)'(ABC)'(A'C)'. ii) F(A, B, C) = [(AB + B'C) + (BC' + A'B)]'UNIT-II ) Simplify the following Boolean expression and implement with NAND 3 a) CO1 6 Marks gates $F=\Sigma(0, 1, 2, 4, 5, 7, 11, 15)$ . Convert the given expressions into sum of products and product of sums: b) CO1 8 Marks i) (AB + C)B + C'D. ii) x' + x(x + y')(y + z'). (**OR**) Simplify the following Boolean function using Tabulation method. 4 a) CO1 8 Marks $F(A, B, C, D) = \Sigma(1, 3, 4, 5, 10, 11, 12, 13, 14, 15).$ Find the minimum product-of-sums form for the following function and b) CO1 6 Marks implement the function using NOR gates only: $F = \Sigma (4, 5, 8, 9, 12, 13) + d (0, 3, 7, 10, 11).$ (UNIT-III) 5 Design the 4-bit BCD adder and illustrate its operation. CO<sub>2</sub> 7 Marks a) A combinational circuit is defined by the following functions: CO<sub>2</sub> 7 Marks b) $F_1 = x'y' + xyz'; F_2 = x' + y; F_3 = xy + x'y'$ Design the circuit with a decoder and external OR gates. (OR)6 Show that a full-subtractor can be constructed with two half-subtractors CO2 7 Marks a) and an OR gate. Implement a full adder function using 4 x 1 multiplexers. b) CO<sub>2</sub> 7 Marks UNIT-IV Illustrate the operation of MSJK flip-flop using NAND gates. 7 a) CO<sub>2</sub> 6 Marks CO5 8 Marks

| Present | Next State |       | Out   | tput  |
|---------|------------|-------|-------|-------|
| State   | x = 0      | x = 1 | x = 0 | x = 1 |
| a       | f          | b     | 0     | 0     |
| b       | d          | С     | 0     | 0     |
| С       | f          | е     | 0     | 0     |

8 a) Reduce the number of states in the following state table and tabulate the CO2 7 Marks reduced state table.

b) The contents of a serial-in/serial-out shift register are DCBA = 0101, CO2 7 Marks where A is the least significant digit of the register. A serial input 10011 is moved into the shift register from left to right, most significant bit first by five successive clock pulses. Draw time diagrams showing how the outputs of the four flip-flops vary with time during the period of the five clock pulses.

# (UNIT-V)

| 9  | a) | Implement the following Boolean function using PAL:                | CO3 | 6 Marks |
|----|----|--------------------------------------------------------------------|-----|---------|
|    |    | $F_1 = \Sigma m(0, 2, 5, 7, 8, 10, 12, 13)$                        |     |         |
|    | b) | Design an Excess-3 to BCD code converter using PROM.               | CO3 | 8 Marks |
|    |    | (OR)                                                               |     |         |
| 10 | a) | Design a BCD-to-seven segment decoder using PLA.                   | CO3 | 7 Marks |
|    | b) | Give the logic implementation of a 32 x 4 bit ROM using a decoder. | CO3 | 7 Marks |
|    |    |                                                                    |     |         |

II B.Tech I Semester (SVEC16) Supplementary Examinations February – 2021

#### ANALOG ELECTRONIC CIRCUITS

[Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 Derive the expressions for A<sub>I</sub>, A<sub>V</sub>, R<sub>i</sub>, and R<sub>o</sub> for common emitter CO1 8 Marks a) amplifier with unbypassed R<sub>E</sub>. Draw the high frequency hybrid- $\pi$  model for a CE transistor and indicate CO1 b) 6 Marks typical values of circuit parameters. (**OR**) 2 Compare the three types of coupling methods used in multistage CO1 6 Marks a) amplifiers. b) Given the following transistor measurements made at  $I_{c} = 5mA$ , CO4 8 Marks
  - b) Given the following transistor measurements made at  $I_C = 5mA$ , CO4 8 Marks  $V_{CE} = 10V$  and at room temperature  $h_{fe} = 100$ ,  $h_{ie} = 600\Omega$ ,  $A_{ie} = 10$  at 10MHz, Ce = 3pF. Find  $f_{\beta}$ ,  $f_T$ , Ce, rb'e and rbb'.

# UNIT-II)

- 3 a) Draw the circuit diagram of current series feedback amplifier and derive CO3 8 Marks the expressions for voltage gain, output impedance and input impedance.
  - b) An amplifier has an open loop gain of 1000 and a feedback ratio of 0.04. CO1 6 Marks If the open loop gain changes by 10% due to temperature, find the percentage change in gain of the amplifier with feedback.

#### (**OR**)

- 4 a) Classify various oscillators based on output waveforms, circuit CO1 8 Marks components, operating frequencies and feedback sued.
  - b) In a RC phase shift oscillator, the feedback network uses  $R = 6K\Omega$  and CO2 6 Marks C = 1500 pF. The transistorized amplifier used, has a collector resistance of 18K $\Omega$ . Calculate the frequency of oscillations and minimum value of  $h_{fe}$  of the transistor.

# UNIT-III

- 5 a) How the even harmonics in push pull amplifier are are eliminated. Using CO2 8 Marks five point method, derive an expression for the total harmonic distortion.
  - b) A transistor used in audio frequency amplifier, working in class A CO4 6 Marks operation supplies 0.8W to  $4K\Omega$  load. The zero signal d.c. collector current is 31mA and the DC collector current with signal is 36mA. Determine the second harmonic distortion.

#### (OR)

- 6 a) With a neat diagram, explain the principle of operation of class B push CO1 6 Marks pull amplifier and obtain the maximum value of overall efficiency.
  - b) Design a class-B push pull amplifier to deliver 20 Watts to a load of  $16\Omega$ . CO3 8 Marks Given  $V_{CC} = V_m = 40$ Volts.

# UNIT-IV

- 7 a) Explain how a sinusoidal waveform is converted into a square wave CO1 6 Marks using clipper circuit.
  - b) Sketch the response of the RC high pass circuit excited by an exponential CO2 8 Marks input and derive the expression for output.

#### (**OR**)

| 8  | a) | Draw the circuit diagram for a negative and positive voltage clamping circuits. Sketch the input and output waveforms and explain the operation. | CO2 | 8 Marks |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | State and prove the Clamping circuit theorem.                                                                                                    | CO1 | 6 Marks |
|    |    | UNIT-V                                                                                                                                           |     |         |
| 9  | a) | The fixed biased binary uses npn silicon transistor with $h_{fe} = 20$ . Assume                                                                  | CO2 | 8 Marks |
|    |    | that $V_{CE} = 12V$ , $V_{bb} = 3V$ , $R_c = 1K\Omega$ , $R_1 = 10K\Omega$ , $R_2 = 20K\Omega$ . Find                                            |     |         |
|    |    | the stable state current and voltages of $V_{CE(sat)} = 0$ and $V_{be(sat)} = 0$ .                                                               |     |         |
|    | b) | With the help of neat diagram, discuss the different methods of triggering                                                                       | CO1 | 6 Marks |
|    |    | a binary.                                                                                                                                        |     |         |
|    |    | (OR)                                                                                                                                             |     |         |
| 10 | a) | Draw the circuit diagram of self biased transistor binary and analyze the                                                                        | CO1 | 8 Marks |
|    |    | design.                                                                                                                                          |     |         |
|    | b) | Find the period and output frequency of an astable multivibrator with                                                                            | CO2 | 6 Marks |
|    |    | $R_1 = R_2 = 25K\Omega$ and $C_1 = C_2 = 0.4\mu F$                                                                                               |     |         |

### II B.Tech I Semester (SVEC-16) Supplementary Examinations February – 2021

#### **COMPUTER ORGANIZATION**

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

(

| 1 | a) | Draw and explain the diagram for 4-bit arithmetic circuit with four full adders circuits with 4-bit adders and four multiplexers for choosing different operations.                                                                                                   | CO3 | 8 Marks |
|---|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|   | b) | Show the step by step multiplication process using Both algorithm for given multiplicand (+15) and multiplier (-13). (OR)                                                                                                                                             | CO4 | 6 Marks |
| 2 | a) | Design a digital circuit that performs the four logic operations of Ex-OR, Ex-NOR, NOR and NAND. Use two selection variables. Show the logic diagram for one turical stage                                                                                            | CO3 | 6 Marks |
|   | b) | Draw and explain floating addition and subtraction flowchart.                                                                                                                                                                                                         | CO1 | 8 Marks |
|   |    | UNIT-II                                                                                                                                                                                                                                                               |     |         |
| 3 | a) | With a neat diagram, explain the design of control unit with microprogram sequencer.                                                                                                                                                                                  | CO1 | 6 Marks |
|   | b) | Write a program to evaluate the arithmetic statement $X=(A*B) + (C*D)$ using three/two/one/zero address instructions.                                                                                                                                                 | CO5 | 8 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                  |     |         |
| 4 | a) | Draw and explain the flowchart for instruction cycle.                                                                                                                                                                                                                 | CO1 | 6 Marks |
|   | b) | List and explain various addressing modes with an example.                                                                                                                                                                                                            | CO5 | 8 Marks |
|   |    | UNIT-III)                                                                                                                                                                                                                                                             |     |         |
| 5 | a) | With the help of block diagram, explain the concept of DMA controller.                                                                                                                                                                                                | CO1 | 5 Marks |
|   | b) | Discuss about the various modes of data transfer with practical example. <b>(OR)</b>                                                                                                                                                                                  | CO2 | 9 Marks |
| 6 | a) | Distinguish between isolated I/O and memory mapped I/O with an example.                                                                                                                                                                                               | CO2 | 6 Marks |
|   | b) | Demonstrate the role of IOP with neat diagram. Give the steps involved in CPU-IOP communication.                                                                                                                                                                      | CO4 | 8 Marks |
|   |    | (UNIT-IV)                                                                                                                                                                                                                                                             |     |         |
| 7 | a) | Compare SRAM and DRAM in detail.                                                                                                                                                                                                                                      | CO2 | 7 Marks |
|   | b) | How many memory chips are needed to construct 2M*16 memory system using 512k*8 static memory chips?                                                                                                                                                                   | CO3 | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                  |     |         |
| 8 | a) | Write short notes on magnetic disk and optical disks                                                                                                                                                                                                                  | CO6 | 8 Marks |
|   | b) | How many 128*8 RAM chips are needed to provide a memory capacity of 2048? And how many lines of the address bus must be used to access 2048 bytes of memory? How many of these lines will be common to all chips? How many lines must be decoded for the line select? | CO3 | 6 Marks |

# UNIT-V

- 9 a) Consider the multiplication of two 40\*40 matrices using a vector CO6 8 Marks processor.
  - i) How many product terms are there in each inner product and how many inner products must be evaluated?
  - ii) How many multiply-add operations are needed to calculate the product matrix?
  - b) Distinguish between Arithmetic pipe line and Instruction pipe line CO2 6 Marks (OR)
    a) Discus the various interconnection structures with neat sketch. CO1 10 Marks
- 10 a) Discus the various interconnection structures with neat sketch.
  b) Explain the serial arbitration with neat sketch.
  CO1 10 Marks
  CO1 4 Marks

|    |     | UNIT-III)                                                                                                                                                                              |     |          |
| 5  | a)  | Write about passing of arguments to functions with example.                                                                                                                            | CO2 | 7 Marks  |
|    | b)  | What is a text file? Explain the operations of text files in Python.                                                                                                                   | CO1 | 7 Marks  |
|    |     | (OR)                                                                                                                                                                                   |     |          |
| 6  | a)  | Write in detail about string methods in Python.                                                                                                                                        | CO1 | 7 Marks  |
|    | b)  | How do you handle exceptions in Python? Explain.                                                                                                                                       | CO2 | 7 Marks  |
|    |     | (UNIT-IV)                                                                                                                                                                              |     |          |
| 7  | a)  | Define encapsulation, inheritance and polymorphism with illustrations.                                                                                                                 | CO1 | 9 Marks  |
|    | b)  | Give a set of instructions that gets the default turtle and sets it to an actual                                                                                                       | CO4 | 5 Marks  |
|    |     | turtle shape.                                                                                                                                                                          |     |          |
|    |     | (OR)                                                                                                                                                                                   |     |          |
| 8  | a)  | Write in detail about pen attributes for turtle graphics.                                                                                                                              | CO1 | 6 Marks  |
|    | b)  | Develop a simple program to create a polygon shape and create an                                                                                                                       | CO4 | 8 Marks  |
|    |     | interest design with it.                                                                                                                                                               |     |          |
|    |     | UNIT-V                                                                                                                                                                                 |     |          |
| 9  | a)  | Briefly explain about tkinter structure.                                                                                                                                               | CO1 | 7 Marks  |
|    | b)  | Write in detail about adding buttons with suitable example.                                                                                                                            | CO2 | 7 Marks  |
| 10 | `   | (OR)                                                                                                                                                                                   | 000 |          |
| 10 | a)  | With suitable example, explain about reusable GUI components with classes                                                                                                              | CO3 | / Marks  |
|    | b)  | Write a Python script to develop a window by adding check buttons and                                                                                                                  | CO5 | 7 Marks  |
|    | - ) | radio buttons.                                                                                                                                                                         |     |          |

#### SENSORS AND TRANSDUCERS

[Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1 | a) | Illustrate the different types of errors and discuss the causes of errors in | CO6 | 8 Marks |
|---|----|------------------------------------------------------------------------------|-----|---------|
|   |    | measurement and how they can be minimized in detail.                         |     |         |
|   | b) | Explain the significance of STANDARDS in measurements.                       | CO1 | 6 Marks |

#### (OR)

- 2 a) Why the calibration of instrument is necessary before measurement? CO6 6 Marks
  - b) Select a suitable example for illustrating the generalized measurement CO1 8 Marks system.

# UNIT-II

- 3 a) Classify various transducers and distinguish between active and passive CO2 8 Marks type with any two examples.
  - b) Choose the best instrument among A, B, C, D, E, F. Comment on each CO4 6 Marks instrument and justify the answer with valid reason.

- 4 a) List out any four dynamic characteristics of a measurement system and CO1 7 Marks give their importance in the evaluation of the system.
  - b) List different types of standard inputs required in the validation process CO1 7 Marks of a dynamic measurement system. Explain.

# (UNIT-III)

- 5 a) How can Resistive potensio meters be used for Linear and angular CO3 8 Marks displacement measurements? Derive the expression for output.
  - b) Define the Gauge factor and classify the Strain gauges. CO1 6 Marks

#### (OR)

6 a) Explain the characteristic behavior of RTD and list out few applications. CO1 7 Marks
b) "HOT WIRE Anemometers are well suitable for the Gas Flow CO3 7 Marks Measurements". Justify mathematically with the neat sketch.

# UNIT-IV

- 7 a) Explain the construction and working principle of a LVDT as an CO5 8 Marks inductive transducer. How to detect the magnitude and direction of the displacement of a core?
  - b) "LVDT " is a Passive Transducer-Justify. Explain the method of using CO5 6 Marks LVDT for the Thickness measurements.

#### (**OR**)

- 8 a) Differentiate Piezo electric and pyro electric effects and how they are CO4 7 Marks used in various industrial applications.
  - b) List out the opto electronic transducers and explain any one circuitry CO5 7 Marks operation along with the applications.

#### UNIT-V)

- 9 a) Differentiate Piezo electric and pyro electric effects and how they are CO3 7 Marks used in various industrial applications.
  - b) List out the opto electronic transducers and explain any one circuitry CO2 7 Marks operation along with the applications.

#### (**OR**)

- 10 a) Define Micro Machining. Explain surface and bulk micro machining with CO1 7 Marks neat sketch.
  - b) What is the function of Bio sensor and list out the biological parameters CO1 7 Marks measured using Bio sensors.

[Computer Science and Engineering, Information Technology, **Computer Science and Systems Engineering** 

Time: 3 hours

b)

#### Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

 $P \lor (~P \land Q) ⇔ (P \lor Q).$ 1 CO1 7 Marks a) Show that: b) Show that  $S \lor R$  is tautologically implied by  $(P \lor Q) \land (P \rightarrow R) \land (Q \rightarrow S)$ . CO<sub>2</sub> 7 Marks (**OR**) State the converse, opposite and contrapositive for the implication: 2 CO1 7 Marks a) "If the triangle is equiangular, then it is equilateral" b) Convert the following English statements to predicate logic notation: CO1 7 Marks i) All Mokeys have tails. ii) No Mokey has a tail. iii) Some Monkeys have tails. UNIT-II 3 Show that if R, S are equivalence relations on set A the RUS need not be CO1 7 Marks a) an equivalance relation Let  $X=\{1, 2, 3, 6, 12, 18\}$  and the relation | is x divides y. Draw the CO1 7 Marks b) Hasse diagram of (X, | ). (**OR**) Show that the function  $f(x) = x^2$  is not bijective function. Can we find its CO1 4 a) 7 Marks inverse? b) Define Distributive Lattice. Check whether  $(D_{20}, |)$ , where  $D_{20}$  is divisors CO1 7 Marks of 20 and | represents the relation divides. (UNIT-III) Justify whether given set 'S'.  $S=\{0, 1, 2, 3, 4, 5\}$  can be semigroup under 5 CO5 7 Marks a) binary operation  $+_5$  i.e additive modulo 5. Define Monoid and Group. Give an example of Monoid which is not an I 7 Marks b) CO5 group. (OR) Show that in a group (G, .), if  $(a.b)^2 = a^2 \cdot b^2 \quad \forall a, b \in G \text{ then } (G, .) \text{ is}$ 6 CO5 7 Marks a) abelian. State and Prove Lagranges theorem. CO5 7 Marks b) UNIT-IV) 7 Prove by using Mathematical Induction, (x-y) divides  $(x^n - y^n)$ ,  $\forall n \ge 1$ . CO1 7 Marks a) i) How many different license plates are there (allowing repetitions), CO5 7 Marks b) that involve 1, 2 or 3 letters followed by 1, 2, 3 or 4 digits. ii) Involving 1, 2 or 3 letters and 1, 2, 3 or 4 digits if the letters must occur together. (**OR**) 7 Marks 8 CO1 a) Solve the Reccurence Relation  $\mathbf{F_n} = \mathbf{F_{n-1}} + \mathbf{F_{n-2}}$ ,  $n \ge 2$  and  $\mathbf{F_0} = \mathbf{F_1} = 1$ .

Max. Marks: 70

CO1

7 Marks

Solve the Reccurence Relation  $a_n-6a_{n-1}+8a_{n-2}=n.4^n$ .

9

(OR)

a) Write the algorithm for Breadth First Search. Explain with an example.
b) State Prims algorithm. Explain Prims algorithm with an example.

#### Answer One Question from each Unit All questions carry equal marks

|    |    | (UNIT-I)                                                                   |     |          |
|----|----|----------------------------------------------------------------------------|-----|----------|
| 1  | a) | List and explain the Java buzzwords.                                       | CO1 | 8 Marks  |
|    | b) | How "for each" is different from "for" loop? Write a program to calculate  | CO2 | 6 Marks  |
|    |    | average of given 10 numbers using "for each" loop.                         |     |          |
|    |    | (OR)                                                                       |     |          |
| 2  | a) | Discuss various control structures available in Java.                      | CO1 | 8 Marks  |
|    | b) | Why "Java is called platform independent language"? Justify.               | CO1 | 6 Marks  |
|    |    | UNIT-II                                                                    |     |          |
| 3  |    | What are the advantages of inheritance? Explain various types of           | CO1 | 14 Marks |
|    |    | inheritances with suitable examples.                                       |     |          |
|    |    | (OR)                                                                       |     |          |
| 4  | a) | What is an interface? Demonstrate how interfaces can be extended.          | CO2 | 8 Marks  |
|    | b) | Discuss the uses of "final" keyword with suitable examples.                | CO2 | 6 Marks  |
|    |    | (UNIT-III)                                                                 |     |          |
| 5  | a) | Explain the concept of exception handling with suitable example.           | CO2 | 8 Marks  |
|    | b) | Write a program to demonstrate user defined exceptions in Java.            | CO2 | 6 Marks  |
|    |    | (OR)                                                                       |     |          |
| 6  | a) | Explain thread synchronization with an example.                            | CO3 | 6 Marks  |
|    | b) | What is multithreading? How we create multiple threads in Java?            | CO3 | 8 Marks  |
|    |    | (UNIT-IV)                                                                  |     |          |
| 7  | a) | Discuss PriorityQueue class in Java.                                       | CO4 | 6 Marks  |
|    | b) | Discuss briefly Java AWT controls.                                         | CO4 | 8 Marks  |
|    |    | (OR)                                                                       |     |          |
| 8  | a) | Define an applet. Explain applet life cycle methods with the help of an    | CO4 | 6 Marks  |
|    |    | example program.                                                           |     |          |
|    | b) | Define an Event and explain its role in AWT event handling.                | CO4 | 8 Marks  |
|    |    | UNIT-V                                                                     |     |          |
| 9  | a) | What is the role of event listeners in event handling? List the Java event | CO5 | 8 Marks  |
|    |    | listeners with suitable example.                                           |     |          |
|    | b) | Discuss briefly adapter classes in Java.                                   | CO5 | 6 Marks  |
|    |    | (OR)                                                                       |     |          |
| 10 | a) | Write a program to display current web server date and time using          | CO6 | 8 Marks  |
|    |    | GenericServlet with detailed deployment steps.                             |     |          |

b) Explain Http Servlet Life–Cycle with neat sketch. CO6

[Information Technology]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a)  | Describe the list of the programming languages available for Linux                 | CO1   | 7 Marks        |
|---|-----|------------------------------------------------------------------------------------|-------|----------------|
|   | b)  | Write a simple Linux program to enter the details of the student and display them. | CO3   | 7 Marks        |
|   |     | (OR)                                                                               |       |                |
| 2 | a)  | Describe the characteristics of Unix programs and systems.                         | CO1   | 8 Marks        |
|   | b)  | Write a short notes on the following:                                              | CO1   | 6 Marks        |
|   |     | 1) Text Editors. 11) The C Compiler.                                               |       |                |
| • | ``  |                                                                                    |       | <b>5</b> ) ( 1 |
| 3 | a)  | Illustrate how inputs and outputs of Linux programs can be redirected.             | CO5   | 7 Marks        |
|   | D)  | I wo numbers are entered through the keyboard. Write a shell script to             | 003   | / Marks        |
|   |     | (OR)                                                                               |       |                |
| 4 | a)  | What is meant by Shell? Describe in detail the Shell environment with a            | CO1   | 7 Marks        |
|   |     | neat sketch.                                                                       |       |                |
|   | b)  | Write a shell script which gets executed the moment the user logs in. It           | CO5   | 7 Marks        |
|   |     | should display the message "good morning", "good afternoon", "good                 |       |                |
|   |     | evening" based on the time of login.                                               |       |                |
| _ |     |                                                                                    | ~ ~ • |                |
| 5 | a)  | Analyze various systems calls for managing the files.                              | CO2   | 7 Marks        |
|   | b)  | Discuss in detail various commands related to the directories with an examples.    | COI   | / Marks        |
|   |     | (OR)                                                                               |       |                |
| 6 | a)  | Explain the following Standard I/O library commands:                               | CO2   | 8 Marks        |
|   | 1 \ | 1) fopen. 11) fwrite. 111) fseek. 1V) puts.                                        | 004   |                |
|   | b)  | Write a shell script that accepts a file name, starting and ending line            | CO4   | 6 Marks        |
|   |     | numbers as arguments and displays all the lines between the given line             |       |                |
|   |     |                                                                                    |       |                |
| 7 | a)  | Illustrate the working principle of parent process and child process using         | CO6   | 7 Marks        |
| / | a)  | fork system call                                                                   | 000   |                |
|   | b)  | Define signal and mention the different types of signal sources, illustrate        | CO1   | 7 Marks        |
|   | ,   | the catching of signal with example.                                               |       |                |
|   |     | (OR)                                                                               |       |                |
| 8 | a)  | Demonstrate the need for Zombie process with an example.                           | CO1   | 6 Marks        |
|   | b)  | Write a program that accepts two small numbers as arguments and then               | CO5   | 8 Marks        |
|   |     | sums the two in a child process. The sum should be returned by the child           |       |                |
|   |     | to the parent as its exit status and the parent should print the sum.              |       |                |

# UNIT-V

- 9 a) Define socket. Illustrate socket attributes and the process of creating a CO1 7 Marks socket.
  - b) Does the FIFO pipe overcome the limitations of normal pipe? Justify CO6 7 Marks your answer.

### (OR)

- a) Define pipe. Create a named pipe using mknod with an example
  b) Develop a C program to setup a two-way pipe between parent and child
  CO6
  8 Marks
  - processes so that both can send and receive signals.

# FLUID MECHANICS

[ Civil Engineering ]

Max. Marks: 60

# Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1. | a) | Determine the intensity of shear of an oil having viscosity = 1 poise. The oil is used for lubricating the clearance between a shaft diameter 10cm and its journal bearing. The clearance is $1.5$ mm and the shaft rotates at 150 r n m                                                                      | 6 Marks | L4  | CO1        | PO1<br>PO4<br>PO5<br>PO10 |
|----|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|-----|------------|---------------------------|
|    | b) | Calculate the density, specific weight and weight of one litre of Petrol of specific gravity = $0.7$ .                                                                                                                                                                                                        | 6 Marks | L3  | CO1        | PO1<br>PO2<br>PO5<br>PO10 |
|    |    | (OR)                                                                                                                                                                                                                                                                                                          |         |     |            |                           |
| 2. | a) | A plate $(2m \times 2m)$ , 0.25mm distant apart from a fixed plate moves at 40cm/s and requires a force of 1 N. Determine the dynamic viscosity of the fluid in between the plates.                                                                                                                           | 6 Marks | L3  | CO1        | PO1<br>PO2<br>PO4<br>PO10 |
|    | b) | A Hydraulic press has a Ram of 30cm diameter and a Plunger of 4.5cm diameter. Find the weight lifted by the Hydraulic press when the force applied at the Plunger is 500 N.                                                                                                                                   | 6 Marks | L3  | CO2        | PO1<br>PO4<br>PO5<br>PO10 |
|    |    |                                                                                                                                                                                                                                                                                                               |         |     |            | 1010                      |
| •  | `` |                                                                                                                                                                                                                                                                                                               |         | x 0 | <b>a a</b> | <b>DO1</b>                |
| 3. | a) | A stream function is given by $\Psi = 5x-6y$ . Calculate the velocity<br>components and also magnitude and direction of the resultant<br>velocity at any point.                                                                                                                                               | 6 Marks | L3  | CO2        | POI<br>PO2<br>PO4<br>PO10 |
|    | b) | A pipe 50cm in diameter branches into two pipes of diameters 25cm and 20cm respectively as shown in figure. If the average velocity in 50cm diameter pipe is 4m/sec, find (i) Discharge through 50cm diameter pipe and (ii) Velocity in 20cm diameter pipe if the average velocity in 25cm pipe is $3m/sec$ . | 6 Marks | L3  | CO3        | PO1<br>PO4<br>PO5<br>PO10 |
|    |    |                                                                                                                                                                                                                                                                                                               |         |     |            |                           |

| 5. | a) | In a 100mm diameter horizontal pipe a Venturimeter of 0.5 contraction ration has been fixed. The head of water on the Venturimeter when there is no flow is $3m$ (gauge). Find the rate of flow for which the throat pressure will be $2m$ of water absolute. Take C <sub>d</sub> is 0.97 and atmospheric pressure head = 10.3m of water.                        | 6 Marks | L4 | CO3 | PO1<br>PO4<br>PO5<br>PO10               |
|    | b) | A pitot-tube is inserted in a pipe of 300mm diameter. The static pressure in pipe is 100mm of mercury (vacuum). The stagnation pressure at the centre of the pipe, recorded by the Pitot tube is $0.981 \text{ N/cm}^2$ . Calculate the rate of flow of water through pipe, if the mean velocity of flow is 0.85 times the central velocity. Take $C_v - 0.98$ . | 6 Marks | L4 | CO3 | PO1<br>PO2<br>PO5<br>PO10               |
| 6. | a) | A rectangular notch 400mm long is used for measuring a discharge of 30 lit/sec. An error of 1.5mm was made, while measuring the head over the notch. Calculate the percentage error in the discharge assuming co-coefficient of discharge as 0.60.                                                                                                               | 6 Marks | L4 | CO4 | PO1<br>PO2<br>PO4<br>PO10               |
|    | b) | Water flows through a 100mm diameter pipe with a velocity of $0.015$ m/sec. If the kinematic viscosity of water is $1.13 \times 10^{-6}$ m <sup>2</sup> /sec, find the friction factor of the pipe material.                                                                                                                                                     | 6 Marks | L4 | CO4 | PO1<br>PO2<br>PO5<br>PO10               |
|    |    | UNIT-IV                                                                                                                                                                                                                                                                                                                                                          |         |    |     |                                         |
| 7. | a) | Describe Reynold's experiment and mention features of Laminar flow.                                                                                                                                                                                                                                                                                              | 6 Marks | L2 | CO5 | PO1<br>PO2                              |
|    | b) | Calculate the pressure gradient along flow, average velocity and discharge of an oil of viscosity 0.02Ns/m <sup>2</sup> flowing between two stationary parallel plates 1m wide maintained 10 mm apart. The velocity midway between the plates is 3m/sec.                                                                                                         | 6 Marks | L4 | CO5 | PO1<br>PO2<br>PO4<br>PO5<br>PO10        |
| 8. | a) | Derive an expression for Hagen Poiseuille formula.                                                                                                                                                                                                                                                                                                               | 6 Marks | L3 | CO5 | PO1                                     |
|    | b) | A Crude Oil of viscosity 0.97 poise and relative density 0.9 is<br>flowing through a horizontal circular pipe of diameter 100mm<br>and of length 10m. Calculate the difference of pressure at the two<br>ends of the pipe, if 100 kg of oil is collected in a tank in 30<br>seconds.                                                                             | 6 Marks | L4 | CO5 | PO2<br>PO1<br>PO2<br>PO4<br>PO5<br>PO10 |

#### UNIT-V 9. A model of 1.0m wide and 5.5m long rectangular weir is to be 6 Marks CO6 PO1 L4 a) built over a river. The average depth of water in the river is 4m. PO2 The model which has a scale ratio of 1:36 was tested for velocity PO4 of flow of 0.5m/s in the laboratory. It was found that the force **PO10** acting on the model was 2.5N and the height of the standing wave was 40mm. Determine prototype of corresponding speed and force acting. b) A 1.0m log model of a ship is towed at a speed of 81cm/s in a 6 Marks L4 CO6 PO1 towing tank 64m long does this correspond to find out the speed PO2 of the ship. PO5 **PO10** (**OR**) 10 The resisting force of a supersonic plane during flight can be 12 Marks CO6 L4 PO1 considered as dependent on the length of the aircraft L, velocity PO2 V, viscosity $\mu$ , mass density $\rho$ , bulk modulus K. Express the PO4 fundamental relationship between resisting force and these PO5 variables. **PO10**

#### SIGNALS AND NETWORKS

#### [Electrical and Electronics Engineering]

Max. Marks: 60

Answer One Question from each Unit All questions carry equal marks

### UNIT-I )

1. a) Illustrate whether the following signals are periodic or aperiodic. 6 Marks L3 CO1 PO2 If the signal is periodic find its fundamental period. i)  $x(n) = 3\cos(10n + \pi/6)$ 

ii) 
$$x(n) = e^{(j\pi n/2)}$$

b) Consider the following signal and sketch for the given x(-2t+1). 6 Marks L3 CO1 PO2

2. a) Distinguish between Energy and Power signals.

b) Determine and sketch y(t) = x(t) + x(2 - t) where 8 Marks L3 CO1 PO2 x(t) = u(t + 2) - u(t - 1). Express y(t) in terms of step functions.

#### UNIT-II )

3. a) State any four properties of fourier series .
b) Find the fourier series expansion for the waveform shown in 8 Marks L3 CO2 figure.

The waveform is 
$$x(t) = \begin{cases} -\frac{At}{\pi} & \text{for } -\pi \leq t \leq 0 \\ \frac{At}{\pi} & \text{for } 0 \leq t \leq \pi \end{cases}$$
(OR)

- 4. a) Check the following signals  $\cos n\omega_0 t$  and  $\cos m\omega_0 t$  are 4 Marks L2 CO2 PO2 Orthogonal or not.
  - b) The given rectangular pulse is  $x(t) = \begin{cases} 1, & |t| < T_1 \\ 0, & |t| < T_1 \end{cases}$ . Find the fourier transform . 8 Marks L3 CO2 PO2

SVEC-19

PO2

4 Marks

L2

CO1

### (UNIT-III)

5. a) Find the Laplace transform and ROC of the signal –  $e^{-at} u(-t)$ . 6 Marks L3 CO2 PO5

- b) Find the inverse Laplace transform of the 6 Marks L3 CO2 PO5  $X(s) = \frac{2s+1}{(s+1)(s^2+2s+2)}.$
- a) (OR) Find the z- transform of  $x[n] = (2)^n u[n] + \left(\frac{1}{3}\right)^{-n} u[-n]$ . 6 Marks L3 CO2 PO5
  - b) Determine the Inverse ZT, for the following ZT 6 Marks L3 CO2 PO2  $X[z] = \frac{2 - \frac{3}{2}z^{-1}}{1 - \frac{3}{2}z^{-1} + \frac{1}{2}z^{-2}} \quad for \ ROC \ |z| > 1.$

### UNIT-IV

7. a) An electrical circuit shown below has 6 Marks L3 CO3 PO2  $R = 1K\Omega$ ,  $L = 1\mu H$ ,  $C = 1\mu F$ .

- i) Find the system equation (ODE) which relates  $v_i(t)$  with  $v_0(t)$ .
- ii) Determine transfer function H(s).

6.

- iii) Draw magnitude response  $||H(j\omega)||$ .
- b) A signal  $v_i(t) = 10\cos(1000\pi t)$  Volts is applied to the circuit 6 Marks L3 CO3 PO5 shown in 7(a). Comment whether the signal is passed or stopped by the circuit.

#### (OR)

8. a)Differentiate RL and RC circuits4 MarksL2CO3PO1b)For the electrical network shown below, answer the following8 MarksL3CO3PO2

- i) Find the impulse response function for this network.
- ii) Determine the frequency response function.
- iii) Sketch the magnitude and the phase response.

Assume that the output is taken across the 100ohm resistor.

### UNIT-V

9. a) For the given 2-port network, find the value of transfer 6 Marks L3 CO4 PO2 impedance  $z_{21}$  in ohms

10

.

Write short notes on Z,Y,T and h parameters. b) 6 Marks L2 CO4 PO1 (OR) Write short notes on Transfer function and Driving point 6 Marks L3 a) CO4 PO2 function. Explain transmission (ABCD) parameters in detail. 6 Marks L1 CO4 PO1 b)

|    |       | UNIT-I                                                                                                                                                                                                                     |            |          |          |     |
| 1. | a)    | What is meant by thermodynamic equilibrium? Explain the concept of macroscopic and microscopic view point as applied to study of thermodynamics.                                                                           | 6 Marks    | L2       | CO1      | PO1 |
|    | b)    | A gas undergoes a reversible non-flow process according to $P = (-3V+15)$ where V is the volume in m <sup>3</sup> and P is the Pressure in bar. Determine the work done when the volume changes from 3 to 6 m <sup>3</sup> | 6 Marks    | L3       | CO1      | PO2 |
|    |       | ( <b>OR</b> )                                                                                                                                                                                                              |            |          |          |     |
| 2  | a)    | Show that internal energy is a property of the system                                                                                                                                                                      | 6 Marks    | L2       | CO1      | PO2 |
|    | b)    | A steam turbine operates under steady flow conditions receiving steam at the following state:                                                                                                                              | 6 Marks    | L3       | CO1      | PO2 |
|    |       | Pressure 15 bar, internal energy 2700 kJ/kg, specific volume                                                                                                                                                               |            |          |          |     |
|    |       | 0.17 m <sup>3</sup> /kg and velocity 100 m/s. The exhaust of steam from the                                                                                                                                                |            |          |          |     |
|    |       | turbine is at 0.1 bar with internal energy 2175 kJ/kg, specific                                                                                                                                                            |            |          |          |     |
|    |       | volume 15 m <sup>3</sup> /kg and velocity 300 m/s. The intake is 3 m above                                                                                                                                                 |            |          |          |     |
|    |       | the exhaust. The turbine develops 35 kW and heat loss over the                                                                                                                                                             |            |          |          |     |
|    |       | surface of turbine is 20 kJ/kg. Determine the steam flow rate                                                                                                                                                              |            |          |          |     |
|    |       | through the turbine.                                                                                                                                                                                                       |            |          |          |     |
|    |       | UNIT-II                                                                                                                                                                                                                    |            |          |          |     |
| 3. | a)    | Explain Kelvin Planck and Clausius statements and their equivalence.                                                                                                                                                       | 6 Marks    | L1       | CO1      | PO1 |
|    | b)    | A reversible heat engine operates between 875 K and 310 K and                                                                                                                                                              | 6 Marks    | L3       | COI      | PO2 |
|    |       | drives a reversible refrigerator operating between 310 K and                                                                                                                                                               |            |          |          |     |
|    |       | 255 K. The engine receives 2000 kJ of heat and the net work                                                                                                                                                                |            |          |          |     |
|    |       | output from the arrangement equals 350 kJ. Make calculations                                                                                                                                                               |            |          |          |     |
|    |       | for the cooling effect.                                                                                                                                                                                                    |            |          |          |     |
| 4  | a)    | What is Clausius inequality? Explain the entropy principle                                                                                                                                                                 | 6 Marks    | L2       | CO1      | PO1 |
| 1. | b)    | A lump of steel of mass 8 kg at 1000 K is dropped in 80 kg of oil                                                                                                                                                          | 6 Marks    | L2<br>L3 | CO1      | PO2 |
|    | 0)    | at 300 K. Make calculations for the entropy change of steel, the                                                                                                                                                           | 0 11101110 | 20       | 001      | 10- |
|    |       | oil and the universe. Take specific heats of steel and oil as                                                                                                                                                              |            |          |          |     |
|    |       | 0.5 kJ/kg.K and 3.5 kJ/kg.K respectively.                                                                                                                                                                                  |            |          |          |     |
|    |       | (UNIT-III)                                                                                                                                                                                                                 |            |          |          |     |
| 5  | a)    | Define dryness fraction and explain the process of steam                                                                                                                                                                   | 6 Marks    | L2       | CO2      | PO2 |
| 0. | )     | generation (change of phase of water) at constant pressure. Show                                                                                                                                                           | 0 11101110 |          | 002      | 10- |
|    |       | the various stages on P-v and T-s diagrams.                                                                                                                                                                                |            |          |          |     |
|    | b)    | Wet steam at 20 bar pressure and 0.9 dryness fraction is heated                                                                                                                                                            | 6 Marks    | L3       | CO2      | PO2 |
|    |       | reversibly at constant pressure to a temperature of 300°C. Make                                                                                                                                                            |            |          |          |     |
|    |       | calculations for the work done, heat supplied and changes in                                                                                                                                                               |            |          |          |     |
|    |       | internal energy and entropy.                                                                                                                                                                                               |            |          |          |     |
|    |       | (OR)                                                                                                                                                                                                                       |            |          |          |     |

| 6. | a) | Derive the first and second Tds equations and set up the                             | 12      | L3 | CO1 | PO2 |
|----|----|--------------------------------------------------------------------------------------|---------|----|-----|-----|
|    |    | expression for the difference in heat capacities $c_p$ and $c_v$ . State             | Marks   |    |     |     |
|    |    | the significance of this expression.                                                 |         |    |     |     |
|    |    | UNIT-IV                                                                              |         |    |     |     |
| 7. | a) | Define the characteristic gas constant. How does it differ from                      | 6Marks  | L1 | CO3 | PO2 |
|    |    | universal gas constant. Write units for these constants.                             |         |    |     |     |
|    | b) | Explain Law of corresponding states and compressibility factor.                      | 6 Marks | L2 | CO3 | PO2 |
|    |    | (OR)                                                                                 |         |    |     |     |
| 8. | a) | Derive expression for gas constant and molecular mass of the gas mixture.            | 6Marks  | L2 | CO3 | PO1 |
|    | b) | Determine the gas constant, density and partial pressures of the                     | 6Marks  | L3 | CO3 | PO2 |
|    |    | components of a gas mixture consisting of 10 mass fractions of                       |         |    |     |     |
|    |    | air and I mass fractions of lighting gas. Take density of lighting                   |         |    |     |     |

#### **KINEMATICS OF MACHINERY**

#### [Mechanical Engineering]

Time: 3 hours Max. Marks: 60 Answer One Question from each Unit All questions carry equal marks UNIT-I Explain the different types of kinematic pairs with examples. 1. a) 6 Marks L2 CO1 PO1 Explain any two inversions of a single slider crank chain with 6 Marks L2 CO1 b) PO1 neat sketch. (**OR**) 2. Define kinematic link. Describe types of links with example. 6 Marks L2 PO1 a) CO1 Explain the terms: b) 6 Marks L2 CO1 PO1 i) Degree of freedom. ii) Lower pair. iii) Higher pair. UNIT-II Describe the different approximate straight line motion 3. 12 Marks L2 CO<sub>2</sub> PO1 mechanisms with the help of a neat sketch. (**OR**) Explain the Ackerman steering gear mechanism with neat sketch. L2 CO3 PO1 4. 6 Marks a) Derive an expression for the ratio of angular velocities of the L3 CO3 b) 6 Marks PO1, shafts of a Hooke's joint. PO2 UNIT-III) Derive an expression for the length of path of contact in a pair of 5. 6 Marks L4 CO4 PO1, a) meshed spur gears. PO2 A pinion having 30 teeth drives a gear having 80 teeth. The PO1. b) 6 Marks L4 CO4 profile of the gear is Involute with 20<sup>o</sup> pressure angle, 12mm PO2, module and 10mm addendum. Find the length of path of contact, PO3 arc of contact and the contact ratio. (**OR**) 6. Explain the types of gear trains with neat sketch. 6 Marks L2 CO4 PO1, a) In an epicyclic gear train, an arm carries two gears A and B L4 b) 6 Marks CO4 PO1, having 40 and 50 teeth respectively. If the arm rotates at PO2. 200 r.p.m. in the anticlockwise direction about the centre of the PO<sub>3</sub> gear A which is fixed, determine the speed of gear B? If the gear A instead of being fixed, makes 400 r.p.m. in the clockwise

### UNIT-IV)

7. Draw the profile of a cam operating a knife-edged follower 12 Marks L3 CO<sub>5</sub> PO1, having a lift of 30mm. The follower moves outwards with SHM PO2. during 150° of cam rotation and followed by dwell for 60°. The PO3 follower descends for the next 100° rotation of the cam with uniform velocity, again followed by a dwell period. The cam rotates at a uniform velocity of 120 r.p.m and has a least radius of 20mm. What will be the maximum velocity and acceleration of the follower during the outstroke and return stroke?

#### (OR)

direction, what will be the speed of gear B?

- A cam, with a minimum radius of 25mm, rotating clockwise at a 12 Marks L3 CO5 PO1, uniform speed is to be designed to give a roller follower, at the end of a valve rod, motion described below : PO3
  - i) To raise the valve through 50mm during 120<sup>o</sup> rotation of the cam.
  - ii) To keep the valve fully raised through next  $30^{\circ}$ .
  - iii) To lower the valve during next  $60^{\circ}$ .

iv) To keep the valve closed during rest of the revolution. The diameter of the roller is 20mm and the diameter of the cam shaft is 25mm.

Draw the profile of the cam when line of the stroke is offset 15mm from the axis of the cam shaft.

The displacement of the valve, while being raised and lowered, is to take place with simple harmonic motion. Determine the maximum velocity and acceleration of the valve rod when the cam shaft rotates at 100 r.p.m.

### UNIT-V

9. Explain the types of Instantaneous centres with neat sketch 6 Marks CO6 PO1. L2 a) b) Locate all the instantaneous centres of the slider crank 6 Marks L4 CO6 PO1, mechanism as shown in fig. The lengths of crank OB and PO2, connecting rod AB are 100mm and 400mm respectively. If the PO3 crank rotates clockwise with an angular velocity of 15 rad/s, find:

i) Velocity of the slider A

ii) Angular velocity of the connecting rod AB.

10

8.

A mechanism of a crank and slotted lever quick return motion is shown in fig. If the crank rotates counter clockwise at 150 r.p.m, determine for the configuration shown, the velocity and acceleration of the ram D. Also determine the angular acceleration of the slotted lever. Crank AB = 150mm, Slotted arm OC = 700mm and link CD = 200mm.

12 Marks L4 CO6 PO1, PO2, PO3

Max. Marks: 60

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

Draw and explain the stress-strain curve for a ductile material. 6 Marks L2 PO1 1. a) CO1 How the curve is different for a brittle material? PO<sub>2</sub> PO3 PO4 A solid uniform metal bar of diameter **D** and length **L** is hanging 6 Marks CO1 PO1 b) L3 vertically from its upper end. Obtain the total elongation of the **PO2** bar due to its own weight, if  $\gamma$  is the density and E is the Young's PO3 modulus of the material of the bar. PO4 (**OR**) 2. A steel rod ABCD 4.5m long and 25mm in diameter is subjected 6 Marks L4 CO1 PO1 a) to the forces as shown in figure. If the value of the young's **PO2** 

modulus for the steel is **200GPa**, determine its deformation.

$$60 \text{ kN} \leftarrow 1.5 \text{ m} \rightarrow 1.5 \text{ m}$$

| b) | A reinforced concrete column 300mm x 300mm has four                   | 6 Marks | L4 | CO1 | PO1 |
|----|-----------------------------------------------------------------------|---------|----|-----|-----|
|    | reinforcing bars of <b>20mm</b> diameter one in each corner. When the |         |    |     | PO2 |
|    | column is loaded with 600kN weight, find the stresses developed       |         |    |     | PO3 |
|    | in the concrete and steel. Take $E_s / E_c = 15$ .                    |         |    |     | PO4 |
|    | UNIT-II                                                               |         |    |     |     |

- 3. a) Explain the important relations between loading, shear force and 4 Marks L2 CO2 bending moment at a point or between two sections of a beam.
  - b) A cantilever **1.5m** long is loaded with a uniformly distributed 8 Marks load of **2kN/m** and a point load of **3kN** as shown in figure. Draw the shear force and bending moment diagrams for the cantilever.

#### (**OR**) A simply supported beam AB, 6m long is loaded as shown in 4 Marks L4 CO<sub>2</sub> PO1 4. a) figure. Construct the shear force and bending moment diagrams PO<sub>2</sub> for the beam and find the position and value of maximum PO3 bending moment. PO4 PO6 5 kN 2 kN/mPO7 4 kN/m D 1.5 m-·3 m · 6 m Define shear force and bending moment in beams and explain the PO1 8 Marks L2 CO<sub>2</sub> b) sign convention used. **PO2** PO3 PO4 PO6 PO7 UNIT-III) 5. a) List any 6 assumptions used in theory of bending. 4 Marks L1 CO<sub>2</sub> **PO1 PO2** PO3 PO4 PO<sub>6</sub> PO7 b) Determine the maximum uniformly distributed load, a simply 8 Marks L4 CO<sub>2</sub> PO1 supported 40cm deep and 20cm wide timber beam can carry over **PO2** a span of 4m. The maximum permissible bending stress for the PO<sub>3</sub> timber is $2N/mm^2$ . PO4 PO<sub>6</sub> PO7 (**OR**) Derive the bending equation and explain how to find the position 6. a) 6 Marks L5 CO<sub>2</sub> PO1 of neutral axis. PO2 PO3 PO4 PO6 PO7

b) A hollow steel pipe is of 150mm external diameter and 100mm 6 Marks L4 CO2 PO1 internal diameter. If the stresses in tension and compression do not exceed 150N/mm<sup>2</sup> then what longest length of it can be supported freely at its ends? Unit weight of steel is 78kN/m<sup>3</sup>.

PO7

| 7. | a) | Obtain relation for the Moment of resistance by a circular shaft subjected to a torque <b>T</b> .                                                                                                                                                                                                                                                                                                                               | 4 Marks  | L3         | CO3         | PO1<br>PO2<br>PO3<br>PO4<br>PO6 |

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1. | a) | i) Identify possible values of x and y, if $73_x$ (in base-x system) is                                                                                                                                                                                                                                                                                      | 6 Marks  | L1 | CO1 | PO2 |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----|-----|-----|
|    |    | <ul> <li>equal to 54<sub>y</sub> (in base y number system).</li> <li>ii) An electronic device which converts one form of data into another form under the control of a program. To design such electronic device, what are the functional blocks required? Discuss with a neat sketch.</li> </ul>                                                            |          |    |     |     |
|    | b) | Provide significance of distinct number systems. Identify why<br>binary number system is more suitable for digital computers with<br>respective to other number systems. And convert (4675) <sub>16</sub> ,<br>(A467B89) <sub>16</sub> , (5371) <sub>8</sub> and (7856) <sub>10</sub> to binary numbers.<br>(OR)                                             | 6 Marks  | L2 | CO1 | PO2 |
| 2. |    | The instruction at address 021 in the basic computer has $I = 0$ ; an opcode of AND instruction address part is 083 the memory word at address 083 contains operand B8F2 and content of AC is A937. Determine the contents of PC, AR, DR, AC and IR. Repeat the problem 6 more times for all memory reference instructions.                                  | 12 Marks | L4 | CO2 | PO2 |
| 3. | a) | <ul> <li>What is a program status word? If the last operation performed on a computer with an 8-bit word was an addition in which the two operands were 00010110 and 01100011, what would be the value of the following flags? <ol> <li>Carry.</li> <li>Carry.</li> <li>Zero.</li> <li>Overflow.</li> <li>Sign.</li> <li>Even Parity.</li> </ol> </li> </ul> | 5 Marks  | L2 | CO3 | PO1 |
|    | b) | Briefly discuss the basic instruction cycle of processor.                                                                                                                                                                                                                                                                                                    | 7 Marks  | L2 | CO2 | PO1 |
| 4. | a) | The following transfer statements specify a memory. Explain the memory operation in each case.<br>i) R1←M[AR]<br>ii) M[AR]←R4<br>iii) R1←M[R3]                                                                                                                                                                                                               | 3 Marks  | L3 | CO3 | PO2 |
|    | b) | What is DMA? Explain DMA transfer methods.                                                                                                                                                                                                                                                                                                                   | 9 Marks  | L2 | CO2 | PO1 |

|    |            | UNIT-III)                                                                     |            |            |            |                     |
|----|------------|-------------------------------------------------------------------------------|------------|------------|------------|---------------------|
| 5. | a)         | What are the different types of I/O subsystems? Report the flow               | 6 Marks    | L2         | CO2        | PO1                 |
|    | <b>b</b> ) | chart of the I/O subsystem that is driven by interrupts.                      | 6 Marka    | 12         | CO4        |                     |
|    | 0)         | Micro Instruction has three fields. The Micro operation field has             | U IVIAIKS  | LJ         | 04         | 105                 |
|    |            | 16 bits.                                                                      |            |            |            |                     |
|    |            | i) How many bits are there in branch address field and select field.          |            |            |            |                     |
|    |            | ii) If there are 16 status bits in the system, how many                       |            |            |            |                     |
|    |            | bits of branch logic are used to select a status bit?                         |            |            |            |                     |
|    |            | 111) How many bits are left to select an input for the multiplexers?          |            |            |            |                     |
|    |            | (OR)                                                                          |            |            |            |                     |
| 6. | a)         | What happens in the daisy-chain priority interrupt when device 1              | 6 Marks    | L2         | CO3        | PO2                 |
|    |            | requests an interrupt after device 2 has sent an interrupt request            |            |            |            |                     |
|    |            | to the CPU but before the CPU responds with the interrupt                     |            |            |            |                     |
|    | <b>b</b> ) | Explain how communication between CPU and IOP takes place                     | 6 Marks    | 12         | $CO^{2}$   |                     |

II B.Tech I Semester (SVEC-19) Regular Examinations February – 2021

## DATA STRUCTURES

### [ Computer Science and Engineering, Information Technology ]

|    | Time: 3 hours |                                                                                                                                                                                                     |         | Max. Marks: 60 |     |     |
|----|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----------------|-----|-----|
|    |               | Answer One Question from each Unit<br>All questions carry equal marks                                                                                                                               |         |                |     |     |
|    |               | UNIT-I                                                                                                                                                                                              |         |                |     |     |
| 1. | a)            | Define time complexity. Discuss the O (Big oh) notation with an example.                                                                                                                            | 4 Marks | L2             | CO1 | PO2 |
|    | b)            | Define a singly linked list. Write a program to perform merging of two sorted linked lists.                                                                                                         | 8 Marks | L3             | CO1 | PO3 |
|    |               | (OR)                                                                                                                                                                                                |         |                |     |     |
| 2. | a)            | Compare and contrast the arrays and linked lists.                                                                                                                                                   | 4 Marks | L2             | CO1 | PO2 |
|    | b)            | List the advantages of circular linked lists over singly linked lists.<br>Explain how the insertion and deletion operations are performed<br>at the specified position of the circular linked list. | 8 Marks | L1             | CO1 | PO2 |
| 2  | ``            |                                                                                                                                                                                                     | O. M. 1 | т 2            | 001 | DOJ |
| 3. | a)            | Define a stack. Explain the implementation of the stack using linked lists.                                                                                                                         | 8 Marks | L3             | COI | PO3 |
|    | b)            | Convert the given infix expression to postfix ((A+B)*C) / D-E*F+G.                                                                                                                                  | 4 Marks | L4             | CO4 | PO2 |
| 1  | a)            | (UK)<br>How circular queue is advantageous over linear queue? Write its                                                                                                                             | 6 Marks | 13             | CO1 | PO3 |
| 4. | a)            | implementation.                                                                                                                                                                                     |         | LJ             |     | 103 |
|    | b)            | Discuss the priority queues in detail with an example.                                                                                                                                              | 6 Marks | L2             | COI | PO2 |
| 5. | a)            | A binary tree has seven nodes. The Preorder and Postorder<br>traversals of the tree are given below. Can you draw the tree?<br>Justify.<br>Preorder: GFDABEC.                                       | 6 Marks | L2             | CO2 | PO1 |
|    | b)            | Define the red-black tree. Write about how we implement red-<br>black trees                                                                                                                         | 6 Marks | L3             | CO2 | PO3 |
|    |               | (OR)                                                                                                                                                                                                |         |                |     |     |
| 6. | a)            | Explain binary tree traversals with an example.                                                                                                                                                     | 6 Marks | L2             | CO4 | PO1 |
|    | b)            | Write an algorithm to insert a node in a Binary Search Tree.                                                                                                                                        | 6 Marks | L3             | CO2 | PO3 |
| 7. | a)            | Construct the step by step procedure to sort the given list of elements using Quick Sort { 54 26 93 17 77 3 44 55 20}                                                                               | 8 Marks | L3             | CO3 | PO2 |
|    | b)            | Write an algorithm for Linear Search and analyze its time complexity                                                                                                                                | 4 Marks | L4             | CO3 | PO2 |
|    |               | (OR)                                                                                                                                                                                                |         |                |     |     |
| 8. | a)            | Describe the insertion sort algorithm and trace the steps of insertion sort for sorting the list - 12, 19, 33, 26, 29, 35, 22, 37. Find the total number of comparisons made                        | 6 Marks | L3             | CO3 | PO2 |
|    | b)            | Write an algorithm for binary search. Illustrate the search process to find an element 15, if the list of numbers given are: 5, 15, 23, 39, 46, 57, 61, 77, 89.                                     | 6 Marks | L2             | CO3 | PO2 |

|    |     | UNIT-V                                                                                                    |         |            |             |     |

| 1. | a)            | Define damping and discuss the types of damping used in analog meters.                                                                                                                                                                                                                                                                                                                                                                    | 6 Marks  | L1             | CO1 | PO1 |  |  |  |  |
|    | b)            | List out different errors in PMMC and state the advantages and disadvantages of it.                                                                                                                                                                                                                                                                                                                                                       | 6 Marks  | L2             | CO1 | PO2 |  |  |  |  |
|    |               | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |                |     |     |  |  |  |  |
| 2. | a)            | Derive the Torque equation of Moving Iron Instruments.                                                                                                                                                                                                                                                                                                                                                                                    | 6 Marks  | L2             | CO1 | PO3 |  |  |  |  |
|    | b)            | Design a multi-range ammeter for the ranges 10mA, 50mA and 75mA using a D'Arsonval movement having an internal coil resistance of $50\Omega$ at a maximum current of 1mA.                                                                                                                                                                                                                                                                 | 6 Marks  | L4             | CO2 | PO4 |  |  |  |  |
|    |               | (UNIT-II)                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |                |     |     |  |  |  |  |
| 3. | a)            | Classify Ohmmeters and discuss in detail any one of it.                                                                                                                                                                                                                                                                                                                                                                                   | 6 Marks  | L2             | CO1 | PO5 |  |  |  |  |
|    | b)            | Design a shunt type ohmmeter for which the basic D'Arsonval<br>movement with 10 mA and internal resistance of 5 $\Omega$ . The battery<br><b>emf</b> is 3V. It is desires to modify the circuit by adding<br>appropriate shunt resistances across the movement, so that<br>instrument indicates 0.5 $\Omega$ at the midpoint on its scale. Calculate<br>value of shunt resistance and value of limiting resistor R <sub>L</sub> .<br>(OR) | 6 Marks  | L3             | CO1 | PO2 |  |  |  |  |
| 4. | a)            | Classify the types of AC potentiometer and discuss their applications                                                                                                                                                                                                                                                                                                                                                                     | 6 Marks  | L2             | CO2 | PO2 |  |  |  |  |
|    | b)            | Demonstrate how multimeter can measure voltage and current.                                                                                                                                                                                                                                                                                                                                                                               | 6 Marks  | L1             | CO2 | PO8 |  |  |  |  |
| 5. | a)            | Explain the construction and working principle of Electrodynamometer wattmeter.                                                                                                                                                                                                                                                                                                                                                           | 6 Marks  | L1             | CO1 | PO1 |  |  |  |  |
|    | b)            | Discuss in detail about Polyphase energy meter.<br>(OR)                                                                                                                                                                                                                                                                                                                                                                                   | 6 Marks  | L2             | CO2 | PO5 |  |  |  |  |
| 6. |               | In a dynamometer wattmeter the moving coil has 500 turns of mean diameter of 30mm, estimate the torque if the axes of the field and moving coils are at $60^{\circ}$ and $90^{\circ}$ when the density in the field coils is $15 \times 10^{-3}$ Wb/m <sup>2</sup> , the current in moving coil is 0.05 A and the power factor is 0.866.                                                                                                  | 12 Marks | L1             | CO1 | PO1 |  |  |  |  |
| _  |               | UNIT-IV                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |                |     |     |  |  |  |  |
| 7. | a)            | Explain the significance of balance condition in the Wheatstone<br>Bridge and derive the expression.                                                                                                                                                                                                                                                                                                                                      | 6 Marks  | L2             | CO3 | PO2 |  |  |  |  |
|    | b)            | Discuss in detail about the operation of Q-meter.<br>(OR)                                                                                                                                                                                                                                                                                                                                                                                 | 6 Marks  | L2             | CO3 | PO2 |  |  |  |  |
| 8. | a)            | Design a bridge used for measurement of low value inductance<br>and derive its balance equation.                                                                                                                                                                                                                                                                                                                                          | 6 Marks  | L6             | CO3 | PO1 |  |  |  |  |
|    | b)            | Interpret about the sources and detectors used in bridge circuits.                                                                                                                                                                                                                                                                                                                                                                        | 6 Marks  | L1             | CO3 | PO1 |  |  |  |  |

# UNIT-V

| 9. | a) | Discuss in detail about Frequency synthesizer.                  | 6 Marks | L4 | CO4 | PO1 |
|----|----|-----------------------------------------------------------------|---------|----|-----|-----|
|    | b) | With a neat sketch, explain the operation of digital frequency  | 6 Marks | L2 | CO4 | PO1 |
|    |    | meter.                                                          |         |    |     |     |
|    |    | (OR)                                                            |         |    |     |     |
| 10 | a) | With a neat sketch, explain the block diagram of Universal Time | 6 Marks | L2 | CO4 | PO1 |
|    |    | Counter.                                                        |         |    |     |     |
|    | b) | Analyze how universal counter can be used to measure time and   | 6 Marks | L4 | CO4 | PO1 |
|    |    | ratio.                                                          |         |    |     |     |
|    |    |                                                                 |         |    |     |     |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

### II B.Tech I Semester (SVEC-19) Regular Examinations February – 2021

#### **DISCRETE MATHEMATICAL STRUCTURES**

[ Computer Science and Engineering, Information Technology,

Computer Science and Systems Engineering]

Max. Marks: 60

#### Answer One Question from each Unit All questions carry equal marks

|    |    | UNIT-I                                                                                                                                                                                                                       |         |      |     |                     |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|------|-----|---------------------|
| 1. | a) | What is a tautology? Prove $[(p \land \neg q) \rightarrow r] \rightarrow [p \rightarrow (q \lor r)]$ is a tautology                                                                                                          | 6 Marks | L2   | CO1 | PO2                 |
|    | b) | Give a contradiction proof that the square root of 2 is not a rational.                                                                                                                                                      | 6 Marks | L4   | CO1 | PO1                 |
|    |    | (OR)                                                                                                                                                                                                                         |         |      |     |                     |
| 2. | a) | Prove (or) disprove the validity of the following argument. Every living thing is a plant or animal. Davids dog is alive and it is not a plant. All animals have hearts. Hence, David's dog has a heart.                     | 6 Marks | L3   | CO1 | PO2                 |
|    | b) | Obtain the PDNF of $: \mathbf{P} \rightarrow ((\mathbf{P} \rightarrow \mathbf{Q}) \land \sim (\sim \mathbf{Q} \lor \mathbf{P}))$                                                                                             | 6 Marks |      | CO1 | PO2                 |
|    |    | UNIT-II                                                                                                                                                                                                                      |         |      |     |                     |
| 3. | a) | What is a Equivalence relation? Let $X=\{1,2,3,4\}$ and $R=\{(1,1), (1,4), (4,1), (4,4), (2,2), (2,3), (3,2), (3,3)\}$ Determine whether the relation R is equivalence or not.                                               | 6 Marks | L2   | CO2 | PO1                 |
|    | b) | Draw the Hasse – diagram for the post $[D_{32};/]$ . Where '/' is the divisibility relation. Determine this poset is lattice or not.                                                                                         | 6 Marks | L4   | CO2 | PO2                 |
| 4  | a) | Discuss in detail properties of Binary relations                                                                                                                                                                             | 6 Marks | L2   | CO2 | PO4                 |
|    | b) | Let $A = \{1,2,3,4,5,6\}$ , Construct pictorial descriptions of the relation R on A for the following cases:<br>i) $R = \{(j, k)   j \text{ is a multiple of } k\}$ .<br>ii) $R = \{(j, k)   j / k \text{ is a prime } \}$ . | 6 Marks | L3   | CO2 | PO2                 |
|    |    | (UNIT-III)                                                                                                                                                                                                                   |         |      |     |                     |
| 5. | a) | Explain the general properties of Algebraic System.                                                                                                                                                                          | 6 Marks | L2   | CO3 | PO4                 |
|    | b) | Discuss the Homomorphism with suitable examples.<br>(OR)                                                                                                                                                                     | 6 Marks | L2   | CO3 | PO4                 |
| 6. | a) | Examine whether given set $P=\{0,1,2,3,4,5,6,8\}$ can be semi                                                                                                                                                                | 6 Marks | L3   | CO3 | PO4                 |
|    | b) | group under binary operation $\theta_6$ or not.<br>Discuss in detail Isomorphism with suitable examples.                                                                                                                     | 6 Marks | L2   | CO3 | PO4                 |
|    | -) |                                                                                                                                                                                                                              | •       |      |     |                     |
| 7. | a) | State and explain Pigeon – hole principle and its applications.                                                                                                                                                              | 6 Marks | L2   | CO4 | PO2                 |
|    | b) | Find the coefficient of $X^{25}$ in $(X^2+X^3+X^4+X^5+X^6)^7$ .                                                                                                                                                              | 6 Marks | L5   | CO4 | PO2                 |
| 0  | `` | (OR)                                                                                                                                                                                                                         |         | т. 4 | 004 | <b>D</b> O <b>2</b> |
| 8. | a) | In how many ways can the committee of 5 teachers and<br>4 students be chosen from 9 teachers and 15 students be formed<br>if teacher A refuses to serve if student B is on the committee?                                    | 6 Marks | L4   | CO4 | PO2                 |
|    | b) | Solve the recurrence relation:<br>$a_n + a_{n-1} - 6a_{n-2} = 0$ where $a_0 = -1$ , $a_1 = 8$ .                                                                                                                              | 6 Marks | L3   | CO4 | PO2                 |

SVEC-19

### UNIT-V

- 9. a) Show that a complete graph  $K_n$  is planar iff  $n \leq 4.$  (Using 6 Marks L4 CO5 PO2 Euler's)
  - b) Define the Euler Path and determine whether the graph  $(G_1)$  is 6 Marks L3 CO5 PO2 Euler circuit or not?

10 a) Discuss Prim's spanning tree algorithm with suitable example. 6 Marks

.

b) Discuss the difference between DFS and BFS with suitable 6 Marks L2 CO5 PO2 examples.

# II B.Tech I Semester (SVEC-19) Regular Examinations February – 2021

#### DATA STRUCTURES AND ALGORITHMS

[ Computer Science and Systems Engineering ]

| ,  | Time: 3 | hours Answer One Ouestion from each Unit                                                                       |         | Max. Marks: 60 |            |             |  |
|----|---------|----------------------------------------------------------------------------------------------------------------|---------|----------------|------------|-------------|--|
|    |         | All questions carry equal marks                                                                                |         |                |            |             |  |
|    |         |                                                                                                                |         |                |            |             |  |
| 1. | a)      | Apply the Insertion Sort algorithm on following elements: 445, 3, 657, 10, 27, 35, 290, 55, 35, 310.           | 6 Marks | L3             | CO2        | PO5         |  |
|    | b)      | Describe the importance of Performance analysis with suitable examples.                                        | 6 Marks | L2             | CO1        | PO2         |  |
|    |         | i) Space Complexity.<br>(OR)                                                                                   |         |                |            |             |  |
| 2. | a)      | Explain the Radix sort algorithm with a detailed example.                                                      | 6 Marks | L2             | CO2        | PO2         |  |
|    | b)      | Differentiate between the Linear search and Binary search.                                                     | 6 Marks | L3             | CO2        | PO5         |  |
| _  |         |                                                                                                                |         |                | ~ ~ •      |             |  |
| 3. | a)      | Write a program how to implement the Double Linked List concepts of Insertion and deletion.                    | 6 Marks | L2             | CO3        | PO1         |  |
|    | b)      | Explain the concept of circular linked list in detail with an example.                                         | 6 Marks | L3             | CO3        | PO3         |  |
|    | ``      | (OR)                                                                                                           |         | <b>T</b> (     | <b>a a</b> | <b>D</b> 00 |  |
| 4. | a)      | Write a program to implement and compare of two single linked lists i.e list1 and list2.                       | 6 Marks | L6             | CO3        | PO3         |  |
|    | b)      | Differentiate between Double Linked List and Circular Linked List.                                             | 6 Marks | L3             | CO4        | PO2         |  |
|    |         | (UNIT-III)                                                                                                     |         |                |            |             |  |
| 5. | a)      | Write a program to implement stacks using Linked List, Mention any three applications of stacks.               | 6 Marks | L3             | CO4        | PO5         |  |
|    | b)      | Convert the following infix expression to postfix expression $(a + b * (c / d)) / ((e + f) * (g - h)).$        | 6 Marks | L3             | CO4        | PO3         |  |
|    |         | (OR)                                                                                                           |         |                |            |             |  |
| 6. | a)      | Write a program to implement Queues by using arrays. Mention<br>any three applications of Queues.              | 6 Marks | L2             | CO4        | PO2         |  |
|    | b)      | List out the operations of Circular Queue, Priority Queue and Deque in detail.                                 | 6 Marks | L3             | CO4        | PO5         |  |
|    |         | (UNIT-IV)                                                                                                      |         |                |            |             |  |
| 7. | a)      | Explain in detail the representation of Binary Tree and terminologies of Binary Tree.                          | 6 Marks | L3             | CO5        | PO5         |  |
|    | b)      | Mention the concept of insertion operation on Binary Search<br>Tree with a neat example.                       | 6 Marks | L2             | CO5        | PO3         |  |
|    |         | (OR)                                                                                                           |         |                |            |             |  |
| 8. | a)      | Describe the importance of AVL trees and explain with suitable examples the insertion and deletion operations. | 6 Marks | L6             | CO5        | PO5         |  |
|    | b)      | Analyze the importance of implementation of Heap Trees and its applications in detail.                         | 6 Marks | L3             | CO5        | PO2         |  |

# UNIT-V

| 9. | a) | Explain the concept of B+ Tree and demonstrate the insertion     | 6 Marks | L3 | CO5 | PO5 |
|----|----|------------------------------------------------------------------|---------|----|-----|-----|
|    |    | operation in B+tree in detail.                                   |         |    |     |     |
|    | b) | Differentiate between the Graphs and Trees in detail.            | 6 Marks | L2 | CO5 | PO3 |
|    |    | (OR)                                                             |         |    |     |     |
| 10 | a) | Write a program to implement Depth First Search algorithm and    | 6 Marks | L2 | CO5 | PO2 |
|    |    | its complexity analysis.                                         |         |    |     |     |
|    | b) | Mention the Hash Table Structure and its applications in detail. | 6 Marks | L3 | CO5 | PO5 |
|    |    |                                                                  |         |    |     |     |

|----|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|----------------|------------|------------|--|--|--|--|--|--|--|--|
|    |          | Answer One Question from each Unit<br>All questions carry equal marks                                                                                                                                                                                        |                    |                |            |            |  |  |  |  |  |  |  |  |
|    | UNIT-I   |                                                                                                                                                                                                                                                              |                    |                |            |            |  |  |  |  |  |  |  |  |
| 1. | a)       | Define Operating System. List the objectives of an operating system.                                                                                                                                                                                         | 4 Marks            | L1             | CO1        | PO1        |  |  |  |  |  |  |  |  |
|    | b)       | Define a Thread. Give the benefits of multithreading. What resources are used when a thread is created? How do they differ from those used when a process is created?                                                                                        | 8 Marks            | L1             | CO1        | PO1        |  |  |  |  |  |  |  |  |
| 2. | a)       | Summarize Round Robin scheduling algorithm with a suitable example.                                                                                                                                                                                          | 6 Marks            | L2             | CO1        | PO5        |  |  |  |  |  |  |  |  |
|    | b)       | Describe IPC. Explain in detail the inter process communication models.                                                                                                                                                                                      | 6 Marks            | L1             | CO1        | PO4        |  |  |  |  |  |  |  |  |
|    |          | UNIT-II                                                                                                                                                                                                                                                      |                    |                |            |            |  |  |  |  |  |  |  |  |
| 3. | a)       | Illustrate Critical Section problem. Give the conditions that a solution to the critical section problem must satisfy.                                                                                                                                       | 6 Marks            | L4             | CO2        | PO2        |  |  |  |  |  |  |  |  |
|    | b)       | Explain semaphore. List the types of semaphores and show that, if the wait() and signal() semaphore operations are not executed atomically, then mutual exclusion may be violated.                                                                           | 6 Marks            | L4             | CO2        | PO4        |  |  |  |  |  |  |  |  |
| 4. | a)       | Explain the Resource-Allocation-Graph algorithm for deadlock                                                                                                                                                                                                 | 6 Marks            | L4             | CO2        | PO2        |  |  |  |  |  |  |  |  |
|    | b)       | Define Monitor. Give the schematic view of the basic monitor.                                                                                                                                                                                                | 6 Marks            | L1             | CO2        | PO2        |  |  |  |  |  |  |  |  |
| 5. | a)       | Define Thrashing. What is the cause of Thrashing? How does the system detect Thrashing? What can the system do to eliminate this problem?                                                                                                                    | 6 Marks            | L1             | CO3        | PO2        |  |  |  |  |  |  |  |  |
|    | b)       | Identify various issues involved in selecting appropriate disk scheduling algorithm.                                                                                                                                                                         | 6 Marks            | L2             | CO3        | PO2        |  |  |  |  |  |  |  |  |
|    |          | (OR)                                                                                                                                                                                                                                                         |                    |                |            |            |  |  |  |  |  |  |  |  |
| 6. | a)       | Consider the following page reference string:<br>1, 2, 3, 4, 2, 1, 5, 6, 2, 1, 2, 3, 7, 6, 3, 2, 1, 2, 3, 6. How many<br>page faults would occur for the optimal page replacement<br>algorithm, assuming three frames and all frames are initially<br>empty? | 8 Marks            | L3             | CO3        | PO3        |  |  |  |  |  |  |  |  |
|    | b)       | Explain how demand paging affects the performance of a computer system.                                                                                                                                                                                      | 4 Marks            | L4             | CO3        | PO2        |  |  |  |  |  |  |  |  |
|    |          | UNIT-IV                                                                                                                                                                                                                                                      |                    |                |            |            |  |  |  |  |  |  |  |  |
| 7. | a)<br>b) | Explain various file access methods with suitable examples.<br>List out various algorithms in directory implementation.                                                                                                                                      | 6 Marks<br>6 Marks | L4<br>L1       | CO4<br>CO4 | PO2<br>PO2 |  |  |  |  |  |  |  |  |
| 8. | a)       | Explain the three allocation methods in file system                                                                                                                                                                                                          | 8 Marks            | L4             | CO4        | PO2        |  |  |  |  |  |  |  |  |
|    | b)       | Define Kernel I/O Subsystem.                                                                                                                                                                                                                                 | 4 Marks            | L1             | CO4        | PO2        |  |  |  |  |  |  |  |  |

# UNIT-V

| 9. | a) | Explain principles and domain of protection.                  | 6 Marks | L4 | CO5 | PO2 |
|----|----|---------------------------------------------------------------|---------|----|-----|-----|
|    | b) | How access controls can be used on files within a file system | 6 Marks | L4 | CO5 | PO2 |
|    |    | (OR)                                                          |         |    |     |     |
| 10 | a) | Define program threats. List out well-known program threats.  | 6 Marks | L1 | CO5 | PO2 |
|    | b) | Define system threats. List out well-known system threats.    | 6 Marks | L1 | CO5 | PO2 |
|    |    |                                                               |         |    |     |     |

|    |               | Answer One Question from each Unit                                                                                               |                |       |          |     |
|    |               | All questions carry equal marks                                                                                                  |                |       |          |     |
|    |               | UNIT-I                                                                                                                           |                |       |          |     |
| 1. | a)            | Write short notes on Hard links and Symbolic links.                                                                              | 6 Marks        | L2    | CO1      | PO1 |
|    | b)            | Explain the standard file permissions and security mechanism in Linux.                                                           | 6 Marks        | L3    | CO1      | PO2 |
| -  | ,             | (OR)                                                                                                                             |                |       | ~~ (     |     |
| 2. | a)            | Explain the process tree in Linux and define what is Zombie Process.                                                             | 6 Marks        | L3    | CO1      | PO2 |
|    | b)            | Briefly define the permissions of New Files in Linux.                                                                            | 6 Marks        | L2    | CO1      | PO1 |
| 3. | a)            | Write the snippet for opens the file for writing in append mode,                                                                 | 6 Marks        | L2    | CO2      | PO1 |
|    | ,             | writes the given string to the associated stream, and then closes the stream.                                                    |                |       |          |     |
|    | b)            | Write a sample program using buffered I/O to define the structure and writes the content of the structure to standard            | 6 Marks        | L2    | CO2      | PO1 |
|    |               | output.                                                                                                                          |                |       |          |     |
| Δ  | a)            | ( <b>UN</b> )<br>Explain ftrylockfile() flockfile() functions with syntax                                                        | 6 Marks        | 13    | $CO^{2}$ | PO2 |
| ч. | $\frac{a}{b}$ | Standard I/O implements three types of user buffering and                                                                        | 6 Marks        | $L_2$ | CO2      | PO1 |
|    | 0)            | provides developers with an interface for controlling the type and size of the buffer. Explain these three buffering techniques. | 0 IVIUIRS      | 1.2   | 002      | 101 |
|    |               | UNIT-III)                                                                                                                        |                |       |          |     |
| 5. | a)            | Explain how the Scatter/gather I/O advantages over linear I/O methods.                                                           | 6 Marks        | L2    | CO3      | PO1 |
|    | b)            | Write snippets for creating a New Epoll Instance and Controlling Epoll.                                                          | 6 Marks        | L2    | CO3      | PO2 |
|    |               | (OR)                                                                                                                             |                |       |          |     |
| 6. | a)            | Explain the functions readv() and writev() with examples.                                                                        | 6 Marks        | L2    | CO3      | PO1 |
|    | b)            | Write a simple example program that uses mmap() to print a file chosen by the user to standard output.                           | 6 Marks        | L2    | CO3      | PO3 |
|    |               | (UNIT-IV)                                                                                                                        |                |       |          |     |
| 7. | a)            | Justify the role of a device driver is providing mechanism, not policy.                                                          | 6 Marks        | L2    | CO4      | PO2 |
|    | b)            | Explain the kernel's role in designing unix system. (OR)                                                                         | 6 Marks        | L2    | CO4      | PO2 |
| 8. | a)            | Briefly describe the split view of kernel with neat diagram.                                                                     | 6 Marks        | L2    | CO4      | PO1 |
|    | b)            | Write the differences between a kernel module and an application.                                                                | 6 Marks        | L2    | CO4      | PO2 |
|    |               | UNIT-V                                                                                                                           |                |       |          |     |
| 9. | a)            | What are the steps for Design of scull?                                                                                          | 6 Marks        | L2    | CO5      | PO1 |
|    | b)            | Explain the two most important data structure used in device drivers.                                                            | 6 Marks        | L2    | CO5      | PO2 |
|    |               | (OR)                                                                                                                             |                | _     |          | _   |
| 10 | a)            | Explain debugging by watching by using simple code snippets.                                                                     | 6 Marks        | L2    | CO5      | PO2 |
|    | b)            | Explain the kdb Kernel Debugger tool with example.                                                                               | 6 Marks        | L2    | CO5      | PO2 |

Time: 3 hours

Answer One Question from each Unit

All questions carry equal marks

# UNIT-I

- 1. a) Using method of false position, estimate an approximate root 6 Marks L3 CO1 PO2 correct to three decimal places for the equation  $\mathbf{x}^3 \mathbf{x} \mathbf{4} = \mathbf{0}$ .
  - b) Derive a recurrence formula for evaluating  $\sqrt{N}$  by Newton-Raphson method and hence estimate  $\sqrt{10}$  correct to three 6 Marks L3 CO1 PO1 decimal places.

(OR)

2. a) Construct an interpolating polynomial for the following data 6 Marks L3 CO1 PO1 using Newton's forward formula.

| x | 0 | 1 | 2  | 3  | 4  |
|---|---|---|----|----|----|
| У | 3 | 6 | 11 | 18 | 27 |

b) Estimate the value of y(10) from the following data using 6 Marks L5 CO1 PO1 Lagrange's interpolation formula.

| <i></i> | 12 | 15 |    |    | TI |
|---------|----|----|----|----|----|
| v       | 12 | 13 | 1/ | 16 |    |
| x       | 5  | 6  | 9  | 11 |    |

3.

a) Estimate  $\frac{dy}{dx}$  and  $\frac{d^2y}{dx^2}$  for x=1.2 from the following table of 6 Marks L5 CO1 PO2 values of x and y.

| ÷ |   |        |        |        |        |        |        |        |
|---|---|--------|--------|--------|--------|--------|--------|--------|

b) State Simpson's 3/8 rule and applying it to evaluate  $\int_{0}^{\frac{1}{2}} \frac{1}{\sqrt{1-x^{2}}} dx \quad for \ n=6.$ 6 Marks L1 CO1 PO1

#### (OR)

- 4. a) Solve  $y' = x y^2$ , y(0) = 1 using Taylor's series method and compute y(0.1), y(0.2). 6 Marks L3 CO1 PO2
  - b) Apply the fourth order Runge-Kutta method to find y(0.1) and 6 Marks L3 CO1 PO1 y(0.2), given  $y' = x y y^2$ , y(0) = 1.

#### UNIT-III)

- 5. a) If X and Y are discrete random variables and K is a constant, 6 Marks L1 CO2 PO1 show that:
  - i) E(X+K) = E(X)+K
  - ii) E(X+Y) = E(X) + E(Y).

Max. Marks: 60

A continuous variable X has the distribution function  $[0, if x \le 1]$ 6 Marks CO2 PO1 b) L3  $F(x) = \begin{cases} K(x-1)^4, & \text{if } 1 < x \le 3\\ 1, & \text{if } x > 3 \end{cases}$ if x > 3Determine : i) the probability density functions of Xii) K. (**OR**) 6. A player tosses 3 fair coins. He wins Rs. 500 if 3 heads appear, 6 Marks L5 CO<sub>2</sub> PO<sub>2</sub> a) Rs. 300 if 2 heads appear, Rs. 100 if 1 head occurs. On the other hand, he losses Rs.1500 if 3 tails occur. Estimate the expected gain of the player. Show that variance of a random variable X is given by 6 Marks L1 CO<sub>2</sub> PO1 b)  $\sigma^2 = E(X^2) - [E(X)]^2$ . UNIT-IV) 7. Average number of accidents on any day on a national highway L3 CO<sub>2</sub> **PO2** 6 Marks a) is 1.8. Determine the probability that the numbers of accidents is: i) at least one ii) at most one. b) In a sample of 1000 cases, the mean of a certain test is 14 and 6 Marks L1 CO<sub>2</sub> PO1 standard deviation is 2.5. Assuming the distribution to be normal, i) how many students score between 12 and 15. find ii) how many score above 18. iii) how many score below 18. (**OR**) 8. a) Construct a binomial distribution to the following data and find 6 Marks L3 CO2 PO1 the expected frequencies. 2 3 4 5 0 1 6 х 16 4 13 25 52 58 32 f(x)L5 b) The marks obtained in statistics in a certain examination found to 6 Marks CO<sub>2</sub> PO2 be normally distributed. If 15% of students got greater than or equal to 60 marks, 40 % of students got less than 30 marks, Estimate the mean and standard deviation. UNIT-V 9. Explain about : i) Null hypothesis ii) Type-I and type-II errors. a) 6 Marks L2 CO<sub>2</sub> PO1 A random sample of size 16 values from a normal population 6 Marks L4 CO2 PO4 b) showed a mean of 53 and a sum of squares of deviations from the mean equals to 150. Test whether the sample is taken from the population having mean 56. (**OR**) 10 a) In a big city 325 men out of 600 men were found to be smokers. 6 Marks L4 CO<sub>2</sub> PO4 Does this information support the conclusion that the majority of the men in this city are smokers? Analyze the given information and conclude. b) Four methods are under development for making discs of a super 6 Marks L4 CO<sub>2</sub> PO4 conducting material. Fifty discs are made by each method and they are checked for super conductivity when cooled with liquid. 1<sup>st</sup> 2<sup>nd</sup> 3<sup>rd</sup> 4<sup>th</sup> Method Method Method Method Super conductors 31 42 22 25 19 8 28 25 Failures

Test the significant difference between the proportions of conductors at 0.05 level.

**CODE No.: 19BT30102** SVEC-19 Roll No. SREE VIDYANIKETHAN ENGINEERING COLLEGE (An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu) II B.Tech I Semester (SVEC-19) Supplementary Examinations August – 2021 **FLUID MECHANICS** [ Civil Engineering ] Time: 3 hours Max. Marks: 60 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Explain briefly about surface tension and capillarity. 1. 6 Marks L2 CO1 PO1 a) PO10 b) The space between two square flat parallel plates is filled with 6 Marks L4 CO1 PO1 oil. Each side of the plate is 720mm. The thickness of the oil film PO2 is 15mm. The upper plate, which moves at 3m/s requires a force PO4 of 120 N to maintain the speed. Determine: **PO10** i) The dynamic viscosity of the oil. ii) The kinematic viscosity of oil if the specific gravity of oil is 0.95 (**OR**) Derive expressions for total pressure and center of pressure for a 2. 6 Marks L4 CO1 PO1 a) vertically immersed surface. PO2 **PO10** CO1 A circular plate 3 m in diameter is submerged in water in such a 6 Marks L4 PO1 b) way that the greatest and least depths of the surface (below water PO2 surface) are 2 m and 1 m respectively, calculate: PO4 i) The total pressure on front face of the plate. **PO10** ii) The position of center of pressure. UNIT-II i) Distinguish between path lines, stream lines, stream tube and CO<sub>2</sub> PO1 3. a) 6 Marks L4 streak lines. PO2 ii) The diameters of a pipe at the sections 1-1 and 2-2 are 200mm **PO10** and 300mm respectively. If the velocity of water at 1-1 is 4 m/s then find discharge through the pipe and velocity of water at section 2-2. Velocity for a two dimensional flow field is given by b) 6 Marks  $\mathbf{I4}$ CO<sub>2</sub> **PO1**  $V = (3 + 2xy + 4t^2) i + (xy^2 + 3t) j$ . Find the velocity and PO2 acceleration at a point (1,2) after 2 sec. (**OR**) State and prove Bernoulli's equation. List the assumptions which 4 6 Marks PO1 a)  $\mathbf{I4}$ CO<sub>2</sub> are made while deriving Bernoulli's equation. PO2 PO5 **PO10** b) Water is flowing at the rate of 40 liters/sec through a tapering 6 Marks L4 CO2 PO1 pipe. The diameters at the bottom and upper ends are 300mm and PO2 200mm respectively. If the intensities of pressure at the bottom PO4 and upper ends are 250 kN/m<sup>2</sup> and 100 kN/m<sup>2</sup> respectively, find PO10 the difference in datum head.

UNIT-III 5. State the difference between a wholly submerged orifice and a 6 Marks CO3 PO1 L4 a) partially submerged orifice. Derive an expression for discharge PO2 through fully submerged orifice. PO10 A convergent-divergent mouthpiece is fitted to the side of a tank. 6 Marks CO3 b) L4 PO1 It is discharging 5.5 liters/sec of water under a constant head of PO2 2.0 m. If the head lost in the divergent portion is  $1/10^{\text{th}}$  of the PO4 kinetic head at outlet and the separation pressure is 2.5m, find the **PO10** throat and exit diameters. Take atmospheric pressure = 10.3m of water. (**OR**) 6. Explain the following terms: 6 Marks L2 CO3 PO1 a) i) Notch. ii) Weir. PO10 iii) Nappe or vein. iv) Sill or crest. Water is to be supplied to the inhabitants of a college campus 6 Marks L6 CO<sub>4</sub> PO1 b) through a supply main. The following data is given: **PO2** Distance of the reservoir from the campus = 3000 m, Number of PO3 inhabitants = 4000, Consumption of water per day of each PO4 inhabitant = 180 liters. Loss of head due to friction = 18 m and Co-efficient of friction for the pipe, f = 0.007. If the half of the daily supply is pumped in 8 hours, determine the size of the supply main. UNIT-IV Explain Reynolds's experiment with a neat sketch and list out the 7. 6 Marks CO5 a) L2 PO1 characteristics of laminar flow. PO10 Derive an expression for flow of viscous fluid in circular pipes L4 CO5 b) 6 Marks PO1 with assumptions. PO2 (**OR**) 8. Distinguish between hydrodynamically smooth and rough CO5 PO1 a) 6 Marks L2 boundaries. PO2 PO4 b) For turbulent flow in a pipe of diameter 200mm, find the 6 Marks L4 CO5 PO1 discharge when the center line velocity is 30 m/s and velocity at PO2 a point 80mm from the center as measured by pitot tube is 2 m/s. PO4 UNIT-V 9. Define Buckingham pi theorem. The thrust force P developed by 12 Marks CO6 PO1 I.4a propeller depends on the angular velocity  $\omega$ , speed of advance PO2 V, diameter D, dynamic viscosity  $\mu$ , mass density  $\rho$ , elasticity of PO4 fluid medium which can be denoted by the speed of sound C with PO5 unit m/s. Obtain an expression for P by Buckingham pi theorem. (**OR**) 10 List different model laws with scale ratios. In the model test of a 12 Marks L4 CO6 PO1 spillway the discharge and velocity of flow over the model were PO2 2.5 cumecs and 1.5 m/s respectively. Calculate the velocity and PO4 discharge over the prototype which is 36 times the model size. PO5

| Answer One Question from each Unit |  |
|------------------------------------|--|
| All questions carry equal marks    |  |

# UNIT-I

- 1. Determine the maximum shear force and bending moment for a 12 Marks PO1 L4 CO1 simply supported beam carrying a concentrated load 'W' placed **PO2** eccentrically on the span. Draw SFD and BMD PO4 (**OR**) 2 A beam AB 10m long is simply supported at its ends A and B 12 Marks  $\mathbf{I4}$ CO1 PO1 and has an overhang BC of length 2m, it carries uniformly PO<sub>2</sub> distributed load of 30 kN/m for a distance of 4m from the left PO4 end A and a concentrated load of 50 kN and 30 kN at a distance **PO10** of 2m from either support of the beam respectively. A uniformly distributed load of 10 kN/m acts throughout on the overhang. Determine the maximum shear force and bending moment. Draw SFD and BMD. UNIT-II) 3. Determine the dimensions of joist of a timber of span 6 Marks L6 CO<sub>2</sub> PO1 a) 8m to carry a brick wall 210mm thick and 5m high. If the density PO<sub>2</sub> of brick work is 1850 kg/m<sup>3</sup> and the maximum permissible stress PO<sub>3</sub> is limited to 7.5  $MN/m^2$ . Given that the depth of the joist is twice **PO4** the width. PO10 **b**) A laminated wood beam 10cm wide and 15cm deep is made up 6 Marks L5 CO<sub>2</sub> PO1 of three 5 x 10cm wide planks glued together to resist **PO2** longitudinal shear. The beam is simply supported over a span of PO4 2m. If the allowable shearing stress in the glued joint is PO<sub>6</sub>  $0.45 \text{ MN/m}^2$ , find the safe concentrated load that the beam may PO10 carry at its centre. (**OR**) A masonry pier of 3m x 4m supports a load of 40 kN as shown in 4. 12 Marks L4 CO<sub>3</sub> PO1 the figure. **PO2** 
  - i) Find the stresses developed at each corner of the pier.
  - ii) What additional load should be placed at the centre of the pier, so that there is no tension anywhere in the pier section?
  - iii) What are the stresses at the corners with the additional load

in the centre?

# (UNIT-III)

| 5. | a) | A solid shaft 120 mm in diameter transmits 120 kW at 160 r.p.m.<br>Find the maximum shear stress induced in the shaft. Find also the<br>angle of twist in a length of 7.5m. Take C=8 x $10^4$ N/mm <sup>2</sup> .                                                                                                                          | 6 Marks   | L5         | CO4     | PO1<br>PO2                       |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|------------|---------|----------------------------------|
|    | b) | A hollow shaft of diameter ratio $3/8$ is required to transmit 600 kW at 110 r.p.m., the maximum torque being 20 % greater than the mean. The shear stress is not to exceed 63 MN/m <sup>2</sup> and the twist in a length of 3m not to exceed 1.4 degrees. Calculate the maximum external diameter satisfying these conditions.           | 6 Marks   | L6         | CO4     | PO1<br>PO2<br>PO3<br>PO4<br>PO6  |

## UNIT-I

1. a) For the continuous time signal shown in the figure, sketch the 6 Marks L3 CO1 PO2 signal  $y(t) = \{x(t)+x(2-t)\}$ .

b) Determine whether the following signal is periodic or not. If 6 Marks L3 CO1 PO2 periodic find the fundamental frequency.

$$x[n] = \cos\left(\frac{\pi}{8}n\right)\sin\left(\frac{\pi}{4}n\right).$$

(OR)

2. a) Given the signal x(t) as shown in the figure, sketch x(-2t+3) on 6 Marks L3 CO1 PO2 the signal x(t).

b) Investigate whether the signal given by x[t] = nu[n] is power or 6 Marks L4 CO1 PO2 energy signal?

#### UNIT-II

- 3. a) Distinguish between Fourier series and Fourier transforms. 4 Marks L2 CO2 PO1
  - b) Find the voltage  $V_0(t)$  in the circuit shown in figure using Fourier 8 Marks L3 CO2 PO2 transforms, if  $i_s(t) = 8e^{-t} u(t)$ .

- 4. a) State necessary and sufficient conditions for the existence of the 4 Marks L2 CO2 PO1 Fourier series of a signal.
  - b) Find the Fourier transform of the signal shown in the figure. 8 Marks L3 CO2 PO5 f(r) ↑

5. a) Find  $v_o(t)$  in the circuit shown in figure using Laplace transforms. 6 Marks L3 CO2 PO5

b) Determine the transfer function and impulse response for the 6 Marks L3 CO2 PO2 system described by: y[n] - 2y[n-1] - 3y[n-2] = x[n-1].

(OR)

- 6. a) Determine the initial and final values of f(t), if it exist, given 6 Marks L3 CO2 PO2 that:  $F(s) = \frac{5s^2 + 3}{s^3 + 4s^2 + 6}$ .
  - b) Determine the z-transform and its ROC for the following discrete 6 Marks L3 CO2 PO2

signal  $x[n] = -u[-n-1] + \left(\frac{1}{2}\right)^n u[n].$ 

condition.

# UNIT-IV

7. What is the significance of time constant of R-L circuit? What 4 Marks L2 CO3 PO1 a) are the different ways of defining time constant? A Sinusoidal Voltage of  $V(t) = 12 \sin 8t$  Volts is applied at t = 08 Marks L3 CO3 b) PO5 to a RL series of R=  $4\Omega$  and L = 1 H. By Laplace transform method determine the circuit current I (t). Assume zero initial

#### (OR)

8. a) What are initial conditions? Explain the procedure to evaluate 4 Marks L2 CO3 PO1 initial conditions.

L3

CO3

PO5

b) For the circuit given in Figure steady state conditions are reached 8 Marks for the switch K in position-1. At t = 0, the switch is changed to position-2. Use the time domain method to determine the current through the inductor for all t>0.

# UNIT-V

- 9. a) Express ABCD parameters in terms of impedance parameters for 4 Marks L3 CO4 PO1 a generalized network.
  - b) Determine the hybrid parameters for the network shown in 8 Marks L4 CO4 PO4 figure. Also investigate the network for reciprocal and symmetry.

(OR)

- 10 a) Express h-parameters in terms of admittance parameters for a 4 Marks L3 CO4 PO1 . generalized network.
  - b) Determin the admittance parameters for the network shown in 8 Marks L4 CO4 PO4 figure. Determine whether the netwok is symmetrical, reciprocal or not.

|    | b)       | Air at a temperature of 20°C passes through a heat exchanger at a velocity of 40 m/s where its temperature is raised to 820°C. It then enters a turbine with same velocity of 40m/s and expands till the temperature falls to 620°C. On leaving the turbine, the air is taken at a velocity of 55m/s to a nozzle where it expands until the temperature has fallen to 510°C. If the air flow rate is 2.5 kg/s, calculate :                                                                                           | 6 Marks | L3   | CO1      | PO1<br>PO2<br>PO3 |
|    |          | <ul> <li>i) Rate of heat transfer to the air in the heat exchanger.</li> <li>ii) The power output from the turbine assuming no heat loss.</li> <li>iii) The velocity at exit from the nozzle, assuming no heat loss.</li> <li>Take the enthalpy of air as h = cpt, where cp is the specific heat equal to 1.005 kJ/kg°C and t the temperature.</li> </ul>                                                                                                                                                            |         |      |          |                   |
|    |          | (UNIT-II)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |         |      |          |                   |
| 3. | a)       | Define Clausius and Kelvin Planck Statement.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 6 Marks | L1   | CO1      | PO1               |
|    | b)       | A heat pump working on the Carnot cycle takes in heat from a reservoir at 5°C and delivers heat to a reservoir at 60°C. The heat pump is driven by a reversible heat engine which takes in heat from a reservoir at 840°C and rejects heat to a reservoir at 60°C. The reversible heat engine also drives a machine that absorbs 30 kW. If the heat pump extracts 17 kJ/s from the 5°C reservoir, determine:<br>i) The rate of heat supply from the 840°C source.<br>ii) The rate of heat rejection to the 60°C sink | 6 Marks | L3   | CO1      | PO1<br>PO2        |
|    |          | I) The face of heat rejection to the $60^{\circ}$ C sink.                                                                                                                                                                                                                                                                                                                                                                                                                                                            |         |      |          |                   |
| 4. | a)       | Discuss the concept of entropy and importance of T-s diagram                                                                                                                                                                                                                                                                                                                                                                                                                                                         | 6 Marks | L2   | CO1      | PO1               |
|    | b)       | An insulated 0.75 kg copper calorimeter can containing 0.2 kg water<br>is in equilibrium at a temperature of 20°C. An experimenter now<br>places 0.05 kg of ice at 0°C in the calorimeter and encloses the latter<br>with a heat insulating shield.<br>i) When all the ice has melted and equilibrium has been                                                                                                                                                                                                       | 6 Marks | L3   | CO1      | PO1<br>PO2        |
|    |          | can? The specific heat of copper is 0.418 kJ/kg K and<br>the latent heat of fusion of ice is 333 kJ/kg.                                                                                                                                                                                                                                                                                                                                                                                                              |         |      |          |                   |

ii) Compute the entropy increase of the universe resulting from the process.

iii) What will be the minimum work needed by a stirrer to bring back the temperature of water to 20°C?

# UNIT-III

| 5. | a)        | Draw the phase change process for pure substance or steam formation and explain                                                                                                                                | 6 Marks  | L2 | CO2 | PO1        |
|----|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----|-----|------------|
|    | b)        | Calculate the internal energy per kg of super heated steam at a pressure of 10 and a temperature of 300°C. Also find the change of internal energy if this steam expanded to 1.4 bar and dryness fraction 0.8. | 6 Marks  | L3 | CO2 | PO1<br>PO2 |
| 6  | a)        | (UK)<br>Derive Tds relations in terms of temperature and pressure                                                                                                                                              | 6 Marks  | 13 | CO1 | PO1        |
| 0. | <i>a)</i> | changes and temperature and volume changes.                                                                                                                                                                    | 0 WIGINS | ĽJ | COI | PO2        |
|    | b)        | Show that the Joule-Thomson coefficient of an ideal gas is zero.                                                                                                                                               | 6 Marks  | L3 | CO1 | PO1<br>PO2 |
|    |           |                                                                                                                                                                                                                |          |    |     | -          |
| 7. |           | Draw a neat schematic of a compressibility chart and indicate its salient features.                                                                                                                            | 12 Marks | L2 | CO3 | PO1        |
|    |           | (OR)                                                                                                                                                                                                           |          |    |     |            |
| 8. | a)        | Write the following:                                                                                                                                                                                           | 6 Marks  | L2 | CO3 | PO1        |
|    |           | i) Mole fraction and Mass fraction                                                                                                                                                                             |          |    |     |            |
|    | 1.)       | 11) Gravimetric Analysis and Volumetric Analysis.                                                                                                                                                              |          | тэ | COL | DO 1       |
|    | D)        | A vessel having a volume of 0.0m <sup>2</sup> contains 3.0 kg of liquid                                                                                                                                        | 6 Marks  | L3 | 003 |            |
|    |           | 0.5 MPa Calculate :                                                                                                                                                                                            |          |    |     | r02        |
|    |           | i) Mass and volume of liquid                                                                                                                                                                                   |          |    |     |            |
|    |           | ii) Mass and volume of vapour.                                                                                                                                                                                 |          |    |     |            |
|    |           | UNIT-V                                                                                                                                                                                                         |          |    |     |            |
| 9. | a)        | Derive the expression to find the efficiency of air standard dual                                                                                                                                              | 6 Marks  | L3 | CO4 | PO1        |
|    | <i>,</i>  | cycle with the help of p-v and t-s diagram                                                                                                                                                                     |          |    |     |            |
|    | b)        | An I.C engine operating on the dual cycle (limited pressure                                                                                                                                                    | 6 Marks  | L3 | CO4 | PO1        |
|    |           | cycle) the temperature of the working fluid (air) at the beginning                                                                                                                                             |          |    |     | PO2        |
|    |           | of compression is 27°C. The ratio of the maximum and minimum                                                                                                                                                   |          |    |     |            |
|    |           | pressures of the cycle is 70 and compression ratio is 15. The                                                                                                                                                  |          |    |     |            |
|    |           | amounts of neat added at constant volume and at constant                                                                                                                                                       |          |    |     |            |
|    |           | of the cycle. State three main reasons why the actual thermal                                                                                                                                                  |          |    |     |            |
|    |           | efficiency is different from the theoretical value. Take $\gamma$ for $\sin z = 1.4$                                                                                                                           |          |    |     |            |
|    |           | an = 1.4. (OP)                                                                                                                                                                                                 |          |    |     |            |
| 10 | a)        | Write the assumption in air standard cycles                                                                                                                                                                    | 6 Marks  | L2 | CO4 | PO1        |
| 10 | u)        | white the assumption in an standard cycles.                                                                                                                                                                    | o muno   |    | 007 | 101        |

b) Derive an expression for the thermal efficiency of Diesel cycle 6 Marks L3 CO4 PO1 and draw P-V and T-S diagrams. PO2

| 7. | <ul> <li>Draw the profile of a cam operating a knife edge follower from the following data: <ol> <li>Follower to move outward through 40 mm during 60° of a cam rotation.</li> <li>Follower to dwell for the next45°.</li> <li>Follower to return its original position during next 90°.</li> <li>Follower to dwell for the rest of the cam rotation.</li> </ol> </li> <li>The displacement of the follower is to take place with SHM during both outward and return strokes. The least radius of the cam is 50mm. If the rotates at 300 r.p.m, determine the maximum velocity and acceleration of the follower during the outward stroke and return stroke.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 12 Marks | L3  | CO5 | PO1<br>PO2<br>PO3 |

| 8. | Draw the profile of the cam operating a roller reciprocating follower and with the following data:<br>Minimum radius of the cam = 25mm, lift = 30mm, roller diameter = 15mm. The cam lifts the follower for 120 <sup>o</sup> with SHM followed by dwell period of 30 <sup>o</sup> . Then the follower lowers down during 150 <sup>o</sup> of the cam rotation with uniform acceleration and retardation followed by dwell period. If the cam rotates at a uniform speed of 150 r.p.m, calculate the maximum velocity and acceleration of the follower during the descent period.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | 12 Marks | L3  | CO5 | PO1<br>PO2<br>PO3 |
| 9. | A four bar mechanism ABCD is made of four links. AD is fixed<br>link which is 180mm long. The links AB, BC and CD are 90mm,<br>120mm and 120mm respectively. At a certain instant, the link<br>AB makes 69 <sup>o</sup> with link AD. If link AB rotates at uniform speed<br>of 120 r.p.m, find:<br>i) Angular velocities of links BC and CD.<br>ii) Velocity of B and C.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 12 Marks | L4  | CO6 | PO1<br>PO2<br>PO3 |

10 Locate all the instantaneous centres of the slider crank PO1 12 Marks L4 CO6 mechanism shown in following figure. The lengths of crank OB PO2 and connecting rod AB are 100mm and 400mm respectively. If PO3 the crank rotates clockwise with an angular velocity of 10 rad/s, find:

i) Velocity of the slider A.

.

ii) Angular velocity of the connecting rod AB.

### STRENGTH OF MATERIALS

[Mechanical Engineering]

| Time: 3 hours |    |                                                                            | Max. Marks: 60 |    |     |     |
|---------------|----|----------------------------------------------------------------------------|----------------|----|-----|-----|
|               |    | Answer One Question from each Unit                                         |                |    |     |     |
|               |    | All questions carry equal marks                                            |                |    |     |     |
|               |    | UNIT-I                                                                     |                |    |     |     |
| 1.            | a) | Define the term factor of safety and its importance.                       | 4 Marks        | L1 | CO1 | PO1 |
|               | b) | An axial pull of 40 kN is applied on a steel bar of diameter               | 8 Marks        | L3 | CO2 | PO2 |
|               |    | 12mm and length 2.5m. Calculate the change in length, diameter             |                |    |     |     |
|               |    | and volume of the bar if the Poisson's ratio is 0.25. Also find the        |                |    |     |     |
|               |    | work done in stretching the bar. Take $E = 2 \times 10^5 \text{ N/mm}^2$ . |                |    |     |     |
|               |    | (OR)                                                                       |                |    |     |     |
| 2.            |    | A rigid block of mass M is supported by three symmetrically                | 12 Marks       | L3 | CO2 | PO2 |
|               |    | spaced rods as shown in Fig 1. Each copper rod has an area of              |                |    |     |     |
|               |    | 900 mm <sup>2</sup> : length of 160 mm; $E = 120$ GPa; and the allowable   |                |    |     |     |

900 mm<sup>2</sup>; length of 160 mm; E = 120 GPa; and the allowable stress is 70 MPa. The steel rod has an area of 1200 mm<sup>2</sup>; length of 240 mm; E = 200 GPa; and the allowable stress is 140 MPa. Determine the largest mass M which can be supported.

3.

Draw the shear force and bending moment diagram for the beam 12 Marks L4 CO2 PO3 shown in Fig 2. Locate the points of contra flexure, if any. Also find the point of maximum bending moment.

4. a) Is the point of contra flexure and point of inflexion same? Justify. 4 Marks
b) A beam ABC of 10 meters length is simply supported at A and B and has overhanging portion BC such that AB = 8m and BC = 2m. The beam carries uniformly distributed load of 2 kN/m over a length of 4m from A, two concentrated loads of 4 kN and 2 kN at a distance of 6m from A and at the free end C respectively. Draw bending moment and shear force diagrams for the beam mentioning all the salient points. Also locate its point of contra flexure.

|    |          | UNIT-III                                                                                                                                                                                                                                                                                                                                                                                                                    |                    |          |            |            |
|----|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|----------|------------|------------|
| 5. | a)       | Derive the expression for shear stress at any point (or in a fibre) in the cross-section of a beam.                                                                                                                                                                                                                                                                                                                         | 4 Marks            | L1       | CO1        | PO1        |
|    | b)       | An equilateral triangular cross section beam with base 250mm is subjected to a shear force of 150 kN. Draw the shear stress distribution across the section and also determine the average shear stress.                                                                                                                                                                                                                    | 8 Marks            | L3       | CO3        | PO3        |

|               | Answer One Question from each Unit<br>All questions carry equal marks                                                                                                                                                                                                                                                                                                  |          |                |     |     |  |
|               | UNIT-I                                                                                                                                                                                                                                                                                                                                                                 |          |                |     |     |  |
|               | Discuss briefly about series clipper circuits and explain their operation with the help of transfer characteristics.                                                                                                                                                                                                                                                   | 12 Marks | L2             | CO1 | PO1 |  |
|               | (OR)                                                                                                                                                                                                                                                                                                                                                                   |          |                |     |     |  |
| a)            | A square wave whose peak to peak amplitude is 4 V extends $\pm 2$ V with respect to ground. The duration of the positive section is 0.3 sec and that of the negative section is 0.1 sec. If this waveform is impressed upon an RC differentiating network whose time constant is 0.3 sec, what are the steady state maximum and minimum values of the output waveform? | 6 Marks  | L3             | CO1 | PO4 |  |
| b)            | Sketch the response of the low pass RC circuit for a step input<br>with different time constants and derive the expression for rise<br>time.                                                                                                                                                                                                                           | 6 Marks  | L2             | CO1 | PO2 |  |

# UNIT-II

3. a) Determine V<sub>CE</sub> and I<sub>C</sub> in the voltage divider biased transistor 6 Marks L3 CO2 PO4 circuit given in the following figure. Assume V<sub>CC</sub>=20V,  $R_1=6.8k\Omega$ ,  $R_2=R_C=R_E=1k\Omega$ ,  $\beta_{DC}=60$ . Assume V<sub>BE</sub>=0.7V.

b) Design a self-bias circuit and derive the expression for stability 6 Marks L4 CO2 PO3 factor.

(OR)

4. a) Differentiate bias stabilization and compensation techniques 6 Marks
b) Determine the change in collector current produced in the following circuits. The circuit temperature raised from 25°C to 105°C and I<sub>CBO</sub>=15nA@25°C.

|    |    | UNIT-III                                                                                                                                                                                                                                     |          |    |     |     |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----|-----|-----|
| 5. |    | Develop the h-parameter model of CE amplifier and derive the expressions for Current gain, Voltage gain, Input Impedance and Output Impedance.                                                                                               | 12 Marks | L4 | CO3 | PO3 |
|    |    | (OR)                                                                                                                                                                                                                                         |          |    |     |     |
| 6. | a) | Compare CE, CB and CC amplifiers.                                                                                                                                                                                                            | 4 Marks  | L2 | CO3 | PO1 |
|    | b) | Analyze the Common Base amplifier by using the Approximate hybrid model.                                                                                                                                                                     | 8 Marks  | L4 | CO3 | PO2 |
|    |    | UNIT-IV                                                                                                                                                                                                                                      |          |    |     |     |
| 7. |    | Explain the construction and working principle of Enhancement mode and depletion mode MOSFET and draw its characteristics.                                                                                                                   | 12 Marks | L2 | CO4 | PO1 |
| _  |    | (OR)                                                                                                                                                                                                                                         |          |    |     |     |
| 8. | a) | With help of neat circuit diagram, explain the working of self-<br>bias method for FET                                                                                                                                                       | 6 Marks  | L2 | CO4 | PO1 |
|    | b) | Define the parameters trans-conductance $g_m$ , Drain resistance $r_d$ and amplification factor $\mu$ of a JFET. Establish a relation between them.                                                                                          | 6 Marks  | L2 | CO4 | PO1 |
|    |    | UNIT-V                                                                                                                                                                                                                                       |          |    |     |     |
| 9. | a) | Explain how UJT works as a relaxation oscillator with neat diagram and waveforms. Mention its applications.                                                                                                                                  | 8 Marks  | L2 | CO5 | PO6 |
|    | b) | Calculate the frequency of a UJT relaxation oscillator when $R_E$ is 10K $\Omega$ and $C_E$ is 0.1 $\mu$ F and Intrinsic stand-off ratio is 0.65.                                                                                            | 4 Marks  | L2 | CO5 | PO1 |
| 10 | a) | Draw the internal diagram of an SCR (specifying the different<br>layers and their doping levels) and hence, explain the various<br>operating modes of the device. Also draw the V-I characteristics<br>of the SCR. Mention its applications. | 7 Marks  | L2 | CO5 | PO6 |
|    | b) | Discuss the V-I characteristics of a Tunnel Diode.                                                                                                                                                                                           | 5 Marks  | L1 | CO5 | PO1 |

### **Answer One Question from each Unit** All questions carry equal marks

#### UNIT-I ) Distinguish between linear and non-linear data structures. 4 Marks L2 Define linked list. With a neat diagram show how an element is L2 8 Marks added and removed from front end of the list. (OR)Define Double linked list. Write the implementations related to 8 Marks L1inserting a node at user specified position and deleting a node at end. Discuss the advantages and disadvantages of linked lists and 4 Marks L2 arrays. UNIT-II ) Evaluate the given postfix expression 623+-382/+\*2\$3+ L4 4 Marks Explain the list implementation queue data structures and write 8 Marks L3 its implementation. (**OR**)

#### Explain the relevance of stack implementation with recursive 4. a) 6 Marks L3 CO1 function evaluation. b) List out the drawbacks of linear queue? How do overcome it. 6 Marks L2 CO1 Explain.

# UNIT-III

| 5. | a) | Explain the three standard ways of traversing a binary tree with a | 6 Marks | L2 | CO2 | PO1 |
|----|----|--------------------------------------------------------------------|---------|----|-----|-----|
|    |    | recursive algorithm.                                               |         |    |     |     |
|    | b) | Define red-black tree. Write how we implement red-black trees.     | 6 Marks | L2 | CO2 | PO1 |
|    |    | (OR)                                                               |         |    |     |     |
| 6. | a) | Construct a binary search tree by inserting the following data     | 4 Marks | L3 | CO2 | PO3 |
|    |    | sequentially. 45, 32,70,67,21,85,92,40 and explain steps involved  |         |    |     |     |

in detail. b) What are the properties of Height Balanced Trees? With 8 Marks L2 CO2 PO2 illustrations, explain the merits of Height Balanced Trees when compared with Binary Search Trees. What are the steps involved in balancing of an unbalanced binary search tree? Describe all possible of AVL Rotations.

# UNIT-IV

| 7. | a) | Construct step by step, how Merge sort sorts, for the following list of numbers {142, 543, 123, 65, 453, 879, 572, 434} and | 7 Marks | L3 | CO3 | PO2 |
|----|----|-----------------------------------------------------------------------------------------------------------------------------|---------|----|-----|-----|
|    |    | explain in detail.                                                                                                          |         |    |     |     |
|    | b) | Explain Java code for binary search with an example.                                                                        | 5 Marks | L2 | CO3 | PO2 |
|    |    | (OR)                                                                                                                        |         |    |     |     |
| 8. | a) | Arrange the following numbers in increasing order using Quick                                                               | 7 Marks | L2 | CO3 | PO2 |
|    |    | sort: 10, 18, 29, 68, 32, 43, 37, 87, 24, 47, 50                                                                            |         |    |     |     |
|    | b) | Explain Java code for linear search with an example.                                                                        | 5 Marks | L2 | CO3 | PO2 |

Explain Java code for linear search with an example. D)

# UNIT-V

- 9. Describe in detail about breadth first traversal of a graph with 6 Marks L2 CO4 PO2 a) suitable example. Construct and discuss about any two collision avoiding L3 CO2 PO3 b) 6 Marks techniques. (OR) Describe in detail about depth first traversal of a graph with 10 a) 6 Marks L1 CO4 PO1 suitable example. . Solve: Given input (371, 323, 173, 199, 344, 679, 989) and hash 6 Marks L4 CO2 PO2 b)
  - function h(x) = x mod 10, show the resulting.i) Separate Chaining.
    - ii) Closed hashing using linear probing, quadratic probing, and double hashing h2(x)=7 (x mod 7).

# Answer One Question from each Unit

Max. Marks: 60

SVEC-19

## All questions carry equal marks

# UNIT-I

| 1. | a)                                      | Explain layered approach operating system structure.               | 6 Marks | L2 | CO1 | PO1 |
|----|-----------------------------------------|--------------------------------------------------------------------|---------|----|-----|-----|
|    | b)                                      | Discuss about system calls.                                        | 6 Marks | L2 | CO1 | PO1 |
|    | , i i i i i i i i i i i i i i i i i i i | (OR)                                                               |         |    |     |     |
| 2. | a)                                      | Describe Multithreading models with neat diagram.                  | 6 Marks | L2 | CO1 | PO1 |
|    | b)                                      | Consider the following set of processes that arrive at time 0 with | 6 Marks | L3 | CO1 | PO4 |
|    | , i i i i i i i i i i i i i i i i i i i | the length of the CPU burst time given in milliseconds.            |         |    |     |     |

| e ouise unie groen in min |            |  |  |  |  |
|---------------------------|------------|--|--|--|--|
| Process                   | Burst Time |  |  |  |  |
| P1                        | 24         |  |  |  |  |
| P2                        | 3          |  |  |  |  |
| P3                        | 3          |  |  |  |  |

Draw the Gnatt chart using FCFS and Round Robin Scheduling Algorithm. Calculate the average waiting time in both cases. Note: Take time quantum = 4ms Analyze which of the algorithm results in minimum average waiting time.

# UNIT-II

| 3. | a) | Define Race Condition. With pseudo code, present the Peterson's | 6 Marks | L4 | CO2 | PO3 |
|----|----|-----------------------------------------------------------------|---------|----|-----|-----|
|    | ,  | solution for critical section problem.                          |         |    |     |     |
|    | b) | Using semaphores, explain solution for Producer-Consumer        | 6 Marks | L3 | CO2 | PO5 |
|    |    | classical synchronization problem.                              |         |    |     |     |
|    |    | (OR)                                                            |         |    |     |     |
| 4. | a) | Describe necessary conditions for deadlock occurrence.          | 6 Marks | L2 | CO3 | PO1 |

b) Suppose there are four processes in execution with 12 instances 6 Marks L3 CO3 PO3 of resources R in a system.

The maximum need of each process and current allocation are given below:

| Process | Max need | Allocation |
|---------|----------|------------|
| P1      | 8        | 3          |
| P2      | 9        | 4          |
| P3      | 5        | 2          |
| P4      | 3        | 1          |

Find out the safe sequence.

# UNIT-III

- 5. a) Compare the segmented paging scheme with the hashed page 6 Marks L4 CO4 PO2 table Scheme for handling large address spaces. Under what circumstances is one scheme preferable to the other?
  - b) Discuss about memory protection in contiguous memory 6 Marks L2 CO4 PO1 allocation.

(OR)

| 6. | a) | Describe FIFO page replacement algorithm with neat diagram.                 | 6 Marks | L2 | CO4 | PO2 |
|----|----|-----------------------------------------------------------------------------|---------|----|-----|-----|
|    | b) | Discuss the hardware support required for demand paging.                    | 6 Marks | L3 | CO4 | PO1 |
|    |    | UNIT-IV                                                                     |         |    |     |     |
| 7. | a) | Compare file access methods in operating systems.                           | 6 Marks | L4 | CO5 | PO2 |
|    | b) | What are the advantages and disadvantages of contiguous                     | 6 Marks | L2 | CO5 | PO1 |
|    |    | allocation and linked allocation?                                           |         |    |     |     |
|    |    | (OR)                                                                        |         |    |     |     |
| 8. | a) | Explain characteristics of I/O devices.                                     | 6 Marks | L2 | CO6 | PO1 |
|    | b) | Describe the services provided by kernel I/O subsystem.                     | 6 Marks | L4 | CO6 | PO1 |
|    |    | UNIT-V                                                                      |         |    |     |     |
| 9. | a) | Describe the several methods of implementing access matrix.                 | 6 Marks | L2 | CO6 | PO1 |
|    | b) | Analyze the schemes that are used to implement revocation for capabilities. | 6 Marks | L4 | CO6 | PO4 |
|    |    | (OR)                                                                        |         |    |     |     |
| 10 | a) | Explain the various questions that arise in revocation of access rights.    | 6 Marks | L2 | CO6 | PO2 |
|    | b) | Write a short note on denial of service.                                    | 6 Marks | L2 | CO6 | PO2 |

II B.Tech II Semester (SVEC10) Supplementary Examinations March - 2021

KINEMATICS OF MACHINERY

[ Mechanical Engineering ]

Max. Marks: 70

Time: 3 hours

#### Answer any FIVE questions All questions carry equal marks

- 1. a) What is meant by inversion of a mechanism? Describe with the help of suitable sketches the inversion of four bar mechanism.
  - b) How is the mechanism of higher pair can be replaced by the mechanism of lower pair?
- 2. a) Derive an expression for the ratio of shaft velocities for hooks joint and draw the polar diagram depicting the salient features of driven shaft speed.
  - b) Define any one of the approximate straight line motion mechanism with example.
- For the configuration of a slider crank mechanism shown in fig, find

   The acceleration of slider at B, ii) The angular acceleration of link AB
   The crank rotates at 20rad/sec counterclockwise
   Given: OA = 480mm; AB=1600mm; AE=450mm

- 4. Derive an expression for the ratio of shafts velocities for Hooke's joint and draw the polar diagram depicting the salient features of driven shaft speed.
- 5. A Cam is to be designed for a roller follower with the following data:
  - i) Cam lift =40mm during 90 deg of cam rotation with SHM
  - ii) Dwell for the next 30deg
  - iii) During the next 60deg of cam rotation, the follower returns to its original position with SHM
  - iv) Dwell during remaining 180deg

Draw the profile of the cam when the line of stroke of the follower passes through the axis of the cam shaft .The radius of the base circle of the cam is 40mm.Determine the maximum velocity and acceleration of the follower during its ascent and descent, if the cam rotates at 240rpm.

- 6. a) Define : i) Addendum ii) Total Depth
  - b) State and prove the fundamental Law of gearing with neat sketch?
- 7. a) Derive an expression for centrifugal tension in belt drive.
  - b) A leather belt is required to transmit 8 kW from a pulley 1.5 m diameter running at 240 rpm. The angle of contact is 160 °C and the coefficient of friction between belt and pulley is 0.25. The safe working stress for the belt is 1.5 MPa, and density of the belt material is 1000 kg/m<sup>3</sup> determine the width of the belt if its thickness is 10 mm. The effect of centrifugal tension is to be taken into account?

SVEC-10

- **8.** a) What is an epicyclic gear train? In what manner does it differ from a simple or compound gear train?
  - b) A compound gear train consists of six gears. The number of teeth on each gear is as follows:

| Gear         | Α  | В  | С  | D  | Е  | F  |
|--------------|----|----|----|----|----|----|
| No. of teeth | 60 | 40 | 50 | 25 | 30 | 24 |

Determine i) speed of the output shaft ii) output torque iii) holding torque.

Roll No.

II B.Tech II Semester (SVEC14) Supplementary Examinations August – 2021

#### STRUCTURAL ANALYSIS - I [Civil Engineering]

Max. Marks: 70

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

**1** Derive the expressions for finding out principal stresses, principal planes and 14 Marks maximum shear stress of a shaft under both B.M and Torque.

#### (OR)

- 2 At a point in material under stress, the intensity of the resultant stress on a 14 Marks certain plane is 60 Mpa(Tensile) inclined at 30° to the normal of that plane. The stress on a plane at right angles to this has a normal tensile component of intensity 40 Mpa(Tensile). Find:
  - i) The Principal planes and Principal stresses.
  - ii) The planes of maximum Shear and its magnitude.
  - iii) Resultant stress on the plane on which 40 MPa stress is acting.

### (UNIT-II)

3 A cantilever beam of length 7m, carries a point load at a distance of 4m from 14 Marks the fixed end. Find the deflection and slope under the point load and at the free end using Macaulay's method. Take  $E = 2.1 \times 10^5$  MPa and  $I = 86 \times 10^6$  mm<sup>4</sup>.

#### (OR)

4 Compute the maximum slope and deflection for the beam shown in figure, 14 Marks using Moment-Area method. *EI*=16,000 kNm<sup>2</sup>.

5 What are the assumptions made in the Euler's theory? Derive the critical load 14 Marks formula for a long column with both the ends as fixed.

#### (OR)

6 A 5m long circular column having fixed ends has 240mm external diameter 14 Marks and 20mm thickness. The column carries a load of 160 kN at an eccentricity of 25mm from its longitudinal axis. Determine (i) stresses in the extreme fibres of the cross-section and (ii) maximum eccentricity so as to have no tension anywhere in its cross section. The modulus of elasticity of the material is 82 GPa.

# UNIT-IV

7 A fixed beam ABC carries a u.d.l of 5kN/m over the entire span and a point load 14 Marks of 5kN at B. If AB= BC=2m and EI = 2000 kN-m<sup>2</sup>, find the fixing moments and the maximum deflection. Also draw the S.F and B.M diagrams.

#### (**OR**)

8 A continuous beam ABC is simply supported at A, B and C. It carries a central 14 Marks point load of 10 kN on the span AB and a central clockwise moment of 10 kN m at midspan of BC. If AB = 4m and BC = 6m, draw the S.F and B.M diagrams.

# UNIT-V

- 9 a) Derive an expression for Distortional strain energy per unit volume in terms 7 Marks three principal stresses.
  - b) Design the diameter of a circular shaft subjected to combined bending and 7 Marks twisting with bending moment of 10kN.m and twisting moment of 28kN.m. The safe stress in direct tension is 250MPa and  $\mu$ =0.3.

### (OR)

- 10 a) What is Shear centre? Write the short note on Shear centre. 7 Marks
  - b) A channel section has flanges of size 10cm x 10cm and web size of 7 Marks 2cm x 14cm. Determine the shear centre of the channel section.

Time: 3 hours

Roll No.

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1 A flat plate 1.5mx1.5m moves at 45 kmph in stationary air of specific weight 7 Marks a) 11.3N/m<sup>3</sup>. If the coefficients of drag and lift are 0.15 and 0.75 respectively, find lift force, drag force and resultant force. Define displacement, momentum and energy thicknesses. 7 Marks b) (**OR**) Find the displacement thickness, the momentum thickness and energy thickness 2 14 Marks for the velocity distribution in the boundary layer given by  $u/U=2(y/\delta) - (y/\delta)^2$ . UNIT-II 3 Derive the conditions for the rectangular channel of the best section and find 14 Marks the critical depth and critical velocity of the water flowing through a rectangular channel of width 5m, when discharge is  $15 \text{ m}^3/\text{s}$ . (**OR**) Explain the concept of hydraulic jump with a neat sketch and hydraulic jump 4 14 Marks forms at the downstream end of spillway causing 18 cumec discharges. If the depth before jump is 0.8 m, determine the depth after the jump and energy loss. (UNIT-III) 5 Obtain an expression for the force exerted by a jet of water on an inclined fixed 14 Marks plate in the direction of the jet and a jet of water of diameter 50mm moving with a velocity of 40m/s, strikes a curved fixed symmetrical plane at the centre. Find the force exerted by the jet of water in the direction of the jet, if the jet is defected through an angle of 120° at the outlet of the curved plate. (**OR**) 6 Derive the expression for force exerted by a jet on a stationary vertical plate. 7 Marks a) Water is flowing through a pipe at the end of which a nozzle is fitted. The 7 Marks b) diameter of the nozzle is 120mm and the head of water at the centre nozzle is 100m. Find the force exerted by the jet of water on a fixed vertical plate. The co-efficient of velocity is given as 0.95. UNIT-IV) 7 Explain with a neat sketch of different components of a hydro power plant and 14 Marks a Pelton wheel has to design to develop 750 kw working under a head of 250m running at 800 r.p.m with overall efficiency of 85%. Take speed ratio as 0.45, coefficient of velocity 0.98, jet diameter to wheel diameter is 1/10. (**OR**) 8 Give the classification of hydro power plants. 14 Marks UNIT-V 9 What are all the losses that occur during the operation of a centrifugal pump? 7 Marks a) Expand and explain the term NPSH. 7 Marks b) (**OR**) 10 Explain with neat sketches the working procedures of : 14 Marks i) Jet pump ii) Airlift pump. ନ୍ଦ୍ରେ ٢ŵ ැබ 1

### ELECTRICAL AND ELECTRONIC MEASUREMENTS

[Electrical and Electronics Engineering] Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 Explain the Static characteristics of instruments. 7 Marks a) A voltmeter is accurate to 98% of its full-scale reading. 7 Marks b) i) If a voltmeter read 200V on 500V range, what is the absolute error? ii) What is the percentage error reading of part (i)? (**OR**) Explain the construction and working of D'Arsonaval Galvanometer. 2 7 Marks a) Explain the essential operating forces that occur on MI and MC type instruments. b) 7 Marks (UNIT-II) 3 Explain measurement of reactive power in three phase balanced and un-balanced 7 Marks a) loads. Explain working principle of LPF Wattmeter. 7 Marks b) (**OR**) Describe the constructional details of an Electrodynamometer type wattmeter and 4 7 Marks a) derive the expression for torque when the instrument is used on a.c. b) Explain working principle of single phase energy meter with diagram. 7 Marks UNIT-III) 5 a) Briefly describe CT and PT with diagrams. 7 Marks Draw the equivalent circuit and phasor diagram of a current transformer and b) 7 Marks derive the expression for ratio and phase angle errors. (**OR**) Briefly describe single phase Electro dynamo meter type power factor meter. 6 7 Marks a) Explain the disadvantages of shunts and multipliers when used for extension of b) 7 Marks range. Explain how instrument transformers are a better substitute for shunts and multipliers especially for high range values. ( UNIT-IV ) Explain the suitable bridge used for the measurement of high resistance. 7 a) 7 Marks Writ a short notes on Megger and Q-meter. 7 Marks b) (**OR**) 8 Derive the equations of balance for an Anderson's bridge. Draw the phasor 8 Marks a) diagram for conditions under balance. Derive the equations of balance for Schering bridge. Draw the phasor diagram for b) 6 Marks under balance condition. UNIT-V 9 Explain the Lissajous Patterns for the measurement of Phase and Frequency. 8 Marks a) List the Applications of Oscilloscopes. 6 Marks b) (**OR**) Write short notes on the following: 14 Marks 10 i) Digital frequency meter. ii) Dual slope digital volt meter.

### TRANSFORMERS AND INDUCTION MACHINES

[Electrical and Electronics Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 With relevant phasor diagrams, explain the operation of a single phase 8 Marks a) transformer operating on lagging and leading power factor loads. Classify various types of transformers and explain them in brief. 6 Marks b) (**OR**) 2 Derive the EMF equation of a transformer. Hence derive transformation ratio. 7 Marks a) Discuss the effect of variations of frequency and voltage on iron loss. How will **b**) 7 Marks you minimize the hysteresis and eddy current loss that occur in a practical transformer? UNIT-II 3 With neat diagram, explain the various tests conducted on transformer to obtain 14 Marks its equivalent circuit. Derive all related equations.  $(\mathbf{OR})$ Draw the vector diagrams of transformer at load with lagging and leading power 4 6 Marks a) factors. Calculate the voltage regulation for a 200/400 V, 4 kVA transformer at full load 8 Marks b) and pf. 0.8 lagging with following test data: OC test: 200 V, 0.8 A, 70 W (LV side) SC test: 20 V, 10 A, 60 W (HV side) UNIT-III) What are the various three-phase transformer connections? Explain the star-star 5 8 Marks a) and star-delta connections with neat diagrams. What is meant by Scott connection of transformers? Explain its significance and 6 Marks b) applications. (**OR**) A three phase transformer has 400 turns on the primary and 40 turns on the 8 Marks 6 a) secondary. The supply voltage is 3300V. Find the secondary voltage on no load when the windings are connected in (i) star-delta (ii) delta-star. b) Explain the desirable conditions for the parallel operation of 3-phase 6 Marks transformers. UNIT-IV)
- 7 a) Show that a three phase winding when excited by a three phase supply 7 Marks establishes a rotating magnetic field.
  - b) The full load power input to a 3-phase induction motor is 50Kw and the slip is 7 Marks 3%. Neglecting stator losses, calculate the full load cu losses and total mechanical power developed.

### (OR)

- 8 a) Compare slip-ring and squirrel-cage induction motor.
  b) Explain air-gap power, internal mechanical power developed and shaft power.
  6 Marks Deduce a relationship between them.
  - c) Derive the expression for maximum torque of three phase induction motor. 4 Marks

# UNIT-V

9 Explain any two methods of speed control of a squirrel cage induction motor. 14 Marks

7 Marks

# (OR)

- 10 a) Explain auto transformer starting method of 3-phase induction motor.
  - b) The power input to a 3-phase induction motor is 60 KW. The stator losses are 7 Marks 1 KW. Find the mechanical power developed, and the rotor copper loss per phase if the motor is running with a slip of 3%.

### ELECTRONIC CIRCUIT ANALYSIS AND DESIGN

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 What do you mean by a multistage amplifier? Explain it briefly. 6 Marks a) Draw the circuit diagram of a Darlington emitter follower and derive the 8 Marks b) expressions for its voltage gain and input resistance. (OR)2 State the various methods of cascading transistor amplifiers. 7 Marks a) With the help of a suitable circuit diagram, explain the working of a RC coupled 7 Marks b) amplifier UNIT-II ) Explain the frequency response of amplifier at low and high frequencies. 7 Marks 3 a) Define  $F_T$ ,  $F\alpha$  and  $F_\beta$  and find relation between  $F_T$  and  $F_\beta$ . b) (**OR**) Derive the expression for the voltage gain of a common drain FET amplifier. 4 a) 7 Marks Sketch the small signal high frequency circuit of CS amplifier and derive the 7 Marks b) expression for voltage gain. (UNIT-III) With a neat sketch, explain the working of RC phase shift oscillator. 5 6 Marks a) Draw the circuit diagram of a voltage series feedback amplifier and derive b) 8 Marks expressions for voltage gain with and without feedback. (**OR**) 6 Explain in detail about the different feedback topologies. a) A transistor Colpitt's oscillator uses a tank circuit with L = 30mH,  $C_1 = 200PF$ b) and  $C_2 = 200$  PF. What is the frequency of oscillators? UNIT-IV 7 a) In what way the design features of power transistors different from small signal 7 Marks transistors? What reasons will you assign for higher conversion efficiency of Class Bb) amplifier as compared to Class A -amplifier? (**OR**) What do you understand by cross-over distortion? How can it be eliminated in 8 a) Class B-operation? Derive an expression for the efficiency of class A - power amplifiers. b) UNIT-V Explain the working of a single-tuned amplifier. 9 a) 6 Marks Derive an expression for the resonance frequency of a parallel resonant circuit 8 Marks b) (**OR**) 10 a) Explain the working of a double-tuned amplifier. 7 Marks Explain in brief, the function of the tank circuit in a tuned-voltage amplifier. b) 7 Marks କ୍ରେ କ୍ରେ 683

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering] Time: 3 hours Max. Marks: 70

# Answer One Question from each Unit

All questions carry equal marks

### UNIT-I

- 1 a) A discrete-time system s described by the following input-output relation 7 Marks  $y(n) = x^2(n)$ . Is this system (i) static or dynamic and (ii) linear or non-linear?
  - b) Find the step response of an LTI system whose unit impulse response is given by 7 Marks  $h(n) = (0.5)^n u(n)$ .

### (OR)

2 a) Find the convolution sum of sequences x(n) and y(n) for n = 0, 3, 5 and 10 if 7 Marks  $x(n) = (3/4)^n u(n)$  and y(n) = u(n).

b) For what range of values of the parameter  $\alpha$  are the systems defined by the 7 Marks following difference equations stable?  $y(n) - a^2 y(n - 2) = x(n - 3)$ 

### UNIT-II

| 3 | a) | Find Fourier Transform of the function $x(t) = e^{-3t} [u(t+2) - u(t-3)]$ . | 5 Marks |
|---|----|-----------------------------------------------------------------------------|---------|
|---|----|-----------------------------------------------------------------------------|---------|

b) Prove frequency and time shifting properties of Fourier Transform. 9 Marks

### (OR)

4 State and prove following properties of Fourier Transforms. 14 Marks i) Convolution property. ii) Time shifting property.

iii) Differentiation property. iv) Integration property.

. iv) integration property.

### (UNIT-III)

- 5 a) Find the Auto-Correlation of  $f(t) = \cos(\omega_0 t)$  and sketch.
  - b) Derive the relation between PSDs of input and output for an LTI system 7 Marks

### (OR)

- **6** a) State and prove sampling theorem for band limited signals using analytical 8 Marks approach
  - b) Determine the Nyquist sampling rate and Nyquist sampling interval for the 6 Marks signals (i) sinc(100nt). (ii) sinc(100nt) + sinc(50nt).

- 7 a) Find Laplace transforms and sketches their ROC of : 7 Marks (i) x(t) = u(t-5). (ii)  $x(t) = e^{j\omega t}u(t)$ .
  - b) State and prove the following properties of Laplace transform. 7 Marks (i) Convolution property. (ii) Time differentiation.

(OR)

8 a) Solve the second-order linear differential equation y''(t) + 5y'(t) + 6y(t) = x(t) 7 Marks with initial conditions y(0) = 2, y'(0) = 1, and  $x(t) = e^{-t} u(t)$ .

b) Find the inverse Laplace transform of 
$$X(s) = (-5s-7)/(s+1)(s-1)(s+2)$$
 7 Marks UNIT-V

- 9 a) Determine the z-transform of  $x(n) = a^n u(n) b^n u(-n-1)$  and find ROC. 7 Marks
  - b) The output y[n] of a discrete-time LTI system is found to be  $2(1/3)^n u[n]$  when 7 Marks the input x[n] is u[n]. Find the impulse response h[n] of the system.

### (OR)

10 a) Explain geometric evaluation of Fourier Transform from pole-zero plot.7 Marksb) Determine the signal x(n) whose z-transform is given by:7 Marks $X(z) = log(1 - 1 az^{-1}; |z| > |a|)$ 

SVEC-14 Roll No.

ANALOG ELECTRONIC CIRCUITS

[Electrical and Electronics Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 Synthesize A<sub>I</sub>, A<sub>V</sub> R<sub>I</sub> and R<sub>0</sub> for a single stage CE amplifier with un by passed 14 Marks emitter resistance, R<sub>S</sub>=1K $\Omega$ , R<sub>1</sub>=50K $\Omega$ , R<sub>2</sub>=2K $\Omega$ , R<sub>C</sub>=1K $\Omega$ , R<sub>E</sub>=270 $\Omega$  and R<sub>L</sub>=1.2K $\Omega$ . The h-parameters given are h<sub>ie</sub>=1100 $\Omega$  and h<sub>fe</sub>=50.

#### (OR)

2 Estimate  $g_m$ ,  $g_{b'e}$ ,  $c_e$  and  $\omega_\beta$  for a transistor at  $I_C=1mA$  and  $V_{CE}=10V$ . The 14 Marks datasheet shows the values as  $C_C=3PF$ ,  $h_{fe}=200$ ,  $\omega_T=500rad/sec$ . Formulate the expressions used.

### UNIT-II)

- **3** a) Draw the circuit diagram of voltage shunt feedback amplifier and derive 10 Marks expressions for voltage gain and feedback factor.
  - b) Explain the concept of feedback as applied to electronic amplifier circuit. What 4 Marks are the advantages and disadvantages of positive and negative feedback?

#### (OR)

- **4** a) Show that the gain of Wien bridge oscillator using BJT amplifier must be at 10 Marks least 3 for the oscillations to occur.
  - b) Explain the concept of feedback in oscillators.

### (UNIT-III)

5 a) Derive the conversion efficiency of a Class-B amplifier. 7 Marks
b) Compute the effective load resistance R<sub>L</sub> seen looking into the primary of 8:1 7 Marks transformer connected to the output load of 20Ω.

#### (OR)

- 6 a) Distinguish between Class-A, Class-B and Class-AB amplifiers with neat 7 Marks diagrams.
  - b) Describe the second harmonic distortion in power amplifiers. 7 Marks

### UNIT-IV

- 7a)Explain how clipping at two independent levels can be achieved.8 Marks
  - b) Explain positive peak voltage limiters below reference level. 6 Marks

#### (OR)

8 a) With relevant diagrams, explain various switching times of a transistor. 8 Marks b) Design a transistor switch with the following specifications. 6 Marks  $V_{CC}=10V; V_{BB}=6V; I_C(sat)=8mA; h_{FE}(min)=30.$ 

### UNIT-V

**9** Draw the circuit diagram for Schmitt trigger and explain its operation. What are 14 Marks the applications of the above circuit? Derive the expressions for UTP and LTP.

#### (**OR**)

- 10 Describe Monostable multivibrator. Explain with the help of a neat circuit 14 Marks diagram the principle of operation of collector coupled monostable multivibrator, and derive an expression for gate width. Draw the waveforms at collector and base of both transistors.

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

| 1 | a) | Write short notes on complex signals.                                                                                                      | 7 Marks |
|---|----|--------------------------------------------------------------------------------------------------------------------------------------------|---------|
|   | b) | Describe relation between bit rate, bandwidth and baud for 16-PSK.                                                                         | 7 Marks |
|   |    | (OR)                                                                                                                                       |         |
| 2 | a) | With a neat sketch, explain the components of a communication net work.                                                                    | 5 Marks |
|   | b) | Define noise. Explain about Electrical noise and Signal to noise ratio.                                                                    | 9 Marks |
|   |    | UNIT-II                                                                                                                                    |         |
| 3 | a) | Write short notes on plenum cables and coaxial transmission lines.                                                                         | 7 Marks |
|   | b) | Discuss in detail about the classification of transmission lines and also list out the differences between STP and UTP transmission lines. | 7 Marks |
|   |    | (OR)                                                                                                                                       |         |
| 4 | a) | Write short nodes of different modes present in optical fibers.                                                                            | 7 Marks |
|   | b) | List out advantages of optical fiber cables.                                                                                               | 7 Marks |
|   |    | UNIT-III)                                                                                                                                  |         |
| 5 | a) | Explain single channel simplex PCM transmission system.                                                                                    | 8 Marks |
|   | b) | Estimate the line speed for a T1 digital carrier system.                                                                                   | 6 Marks |
|   |    | (OR)                                                                                                                                       |         |
| 6 | a) | With neat sketch, explain various digital line encoding formats.                                                                           | 7 Marks |

Explain how statistical TDM is different from conventional TDM. 7 Marks b)

### UNIT-IV

- Explain in detail about basic telephone call procedures. 7 Marks 7 a) 7 Marks
  - Explain about working of caller ID when it is used. b)

(**OR**)

- Describe processes of C-message noise weighting and give its significance. 7 Marks 8 a)
  - Discuss in detail about the conditions that are addressed by facility parameters. 7 Marks b)

## UNIT-V

- 9 Explain Cellular concept. Define Frequency Reuse mechanism and explain Cell 8 Marks a) Splitting with net sketches. Write about different Hand-off mechanisms. 6 Marks b) (**OR**) Explain in detail about cellular telephone network components. 7 Marks **10** a)
  - Briefly describe AMPS cellular telephone system. 7 Marks b)

# UNIT-I

| 1  | a) | Explain the difference between Procedure Oriented Programming and Object<br>Oriented Programming with the help of suitable programs/code. | 7 Marks |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------|---------|
|    | b) | Write short notes on OOP concepts.                                                                                                        | 7 Marks |
|    | -) | (OR)                                                                                                                                      |         |
| 2  | a) | Explain the concept of Constructor with the help of suitable Java Program.                                                                | 7 Marks |
|    | b) | Explain the difference between a function in C Program and method in Java Program.                                                        | 7 Marks |
|    |    | UNIT-II                                                                                                                                   |         |
| 3  | a) | Write short note on the Costs and Substitutability of Inheritance.                                                                        | 7 Marks |
|    | b) | Explain the Key word 'final' with suitable Java Program.                                                                                  | 7 Marks |
|    |    | (OR)                                                                                                                                      |         |
| 4  | a) | Explain the process of defining, creating and accessing a Package.                                                                        | 7 Marks |
|    | b) | Discuss about CLASSPATH with the help of suitable Java Code.                                                                              | 7 Marks |
|    |    | UNIT-III                                                                                                                                  |         |
| 5  | a) | Write a Java program to change the priority of a thread.                                                                                  | 7 Marks |
|    | b) | Explain the need for synchronizing threads. Demonstrate with a suitable program                                                           | 7 Marks |
|    |    | (OR)                                                                                                                                      |         |
| 6  | a) | Explain the terms: "final", "finally", "finalize".                                                                                        | 6 Marks |
|    | b) | What is an exception? How exception can be handled in Java in different ways?                                                             | 8 Marks |
|    | ,  | UNIT-IV                                                                                                                                   |         |
| 7  | a) | Explain the life cycle of an Applet.                                                                                                      | 7 Marks |
|    | b) | Write a Java program using Applets to display the cursor position by handling mouse events.                                               | 7 Marks |
|    |    | (OR)                                                                                                                                      |         |
| 8  | a) | Explain the two ways of executing an Applet.                                                                                              | 7 Marks |
|    | b) | Design an Applet to play and stop music files.                                                                                            | 7 Marks |
|    |    | UNIT-V                                                                                                                                    |         |
| 9  | a) | Explain the life cycle of a servlet and the methods involved form its creation to destruction.                                            | 7 Marks |
|    | b) | Write a program to connect to a database and retrieve all the data.                                                                       | 7 Marks |
|    | -  | (OR)                                                                                                                                      |         |
| 10 | a) | Write a sample source code structure of a servlet to print Hello World.                                                                   | 7 Marks |
|    | b) | Explain different types of JDBC drivers.                                                                                                  | 7 Marks |

**CONTROL SYSTEMS** 

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Max. Marks: 70

SVEC-14

#### Answer One Question from each Unit All questions carry equal marks

# 

a) What are the effects of feedback on Sensitivity and external noise?
b) For the mechanical system, draw the electrical analogous circuits based on 7 Marks Torque-Voltage and Torque-Current analogy along their equations.

### (OR)

- 2 a) Develop the block diagram for armature controlled DC motor.
  - b) Determine the overall transfer function for the system shown in the figure using 7 Marks block diagram reduction technique.

- 3 a) Find K<sub>p</sub>, K<sub>v</sub> and K<sub>a</sub> for the open-loop transfer function of a unity feedback 4 Marks system given by  $G(s) = \frac{10}{s(0.1s+1)}$ .
  - b) Derive the expressions for under damped second order system with unit step 10 Marks input.

### (OR)

- 4 a) Discus the effect of P, PI, PD on control system characteristics. 6 Marks
  - b) Find the steady state error as a function of time for the unity feedback system 8 Marks G(s)=100/s(1+0.1s), for the input  $r(t)=1+2t+(t^2/2)$ .

# (UNIT-III)

- 5 a) Determine the range of values of K such that the characteristic equation  $s^3$  7 Marks  $+ 3(K+1)s^2 + (7K+5)s + (4K+7) = 0$  has roots more negative than s = -1.
  - b) Explain about the effects of adding zeroes to G(s)H(s) on the root loci. 7 Marks

### (OR)

- 6 a) Sketch the root locus plot of a unity feedback system with an open loop transfer 8 Marks function  $G(s) = \frac{K}{s(s+2)(s+4)}$ .
  - b) Discuss the effect of addition of poles and zeros to the open loop transfer 6 Marks function.

### (UNIT-IV)

7 Sketch the bode plot of the system with open loop transfer function  $G(s)=1/s^2(1+s)$  14 Marks (1+2s), Find gain margin and phase margin of the system.

### (OR)

- 8 a) State and explain Nyquist stability criterion to determine the stability of a system.
  b) Sketch the polar plot and determine gain margin and phase margin for open loop
  8 Marks
  - transfer function of unity feedback system G(s) = 1/s(s+2)(s+4).

# UNIT-V

a) Define the terms State variable and state transition matrix.
b) Obtain the state space representation in Phase variable and Jordan form for the system whose transfer function is given by T(s)=(s+1)/s(s+4)(s+5).
6 Marks
8 Marks

### (OR)

10 a) Obtain state variable representation of a armature controlled DC motor.6 Marksb) Convert the given system matrix into diagonal form.8 Marks

$$\mathbf{A} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ -6 & -11 & -6 \end{bmatrix}$$

#### STRUCTURAL ANALYSIS - I [ Civil Engineering ]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 Derive the expression for stresses on an inclined plane of block subjected to 14 Marks normal stress and shear stress along the two planes at right angles.

#### (OR)

2 The stress on two perpendicular planes through a point are 60 N/mm<sup>2</sup> (tension), 14 Marks 40 N/mm<sup>2</sup> (compression) and 30 N/mm<sup>2</sup> (shear). Find the stress components and the resultant of stresses on a plane at 60 deg to that of the tensile stress.

### UNIT-II

3 A cantilever beam of length 7m, carries a point load at a distance of 4m from the 14 Marks fixed end. Find the deflection and slope under the point load and at the free end using Macaulay's method. Take  $E = 2.1 \times 10^5$  MPa and  $I = 86 \times 10^6$  mm<sup>4</sup>.

#### (OR)

A simply supported rectangular R.C beam is of length 3m and cross section 14 Marks 100mm x 200mm. It carries a point load of 20kN at a distance of 1m from the left support. Find the maximum slope and maximum deflection under the point load. Take  $E = 1 \times 10^4 \text{ N/mm}^2$ .

### UNIT-III)

5 What are the assumptions made in the Euler's theory? Derive the Euler's critical 14 Marks load formula for long column with both ends hinged.

#### (OR)

6 A hollow cylinder cast iron column is 4m long with both ends fixed. Determine 14 Marks the minimum diameter of the column if it has to carry a safe load of 250kN with a factor of safety 5. Take the internal diameter as 0.8 times the external diameter, take a=1/1600 and  $\sigma_c$ =550MN/m<sup>2</sup>.

## UNIT-IV

7 A fixed beam AB of length 5m is carrying a point load of 20kN at C. Find the 14 Marks fixed end moments if AC= 2m and CB= 3m. Draw the S.F and B.M diagrams. If EI= 2400 kN-m<sup>2</sup>, find the location and magnitude of maximum deflection and deflection at C.

### (OR)

8 A continuous beam ABC is simply supported at A, B and C and having 14 Marks AB = 5m, BC= 3m. The span AB carries a point load of 4 kN at 2m away from the support A. The span BC is carrying a **u.d.l** of 2 kN/m. Find the reactions and bending moments at supports A, B and C. Also draw the S.F and B.M diagrams.

## UNIT-V

A beam of rectangular section 180mm wide and 260mm deep is used over a 14 Marks simply supported span of 6.6m to support two concentrated loads of 8 kN each at 3m from either support. The plane of loads makes an angle of 34<sup>o</sup> with the vertical plane of symmetry. Find the direction of the neutral axis and the maximum bending stresses in the beam.

### (OR)

1
A solid circular shaft is subjected to a bending moment of 70 kN/m and a torque of 30 kN/m. Design the diameter of the shaft according to:

i) The Maximum Principal Stress Theory

ii) The Maximum Shear Stress Theory and

iii) The Maximum Distortion Energy Theory.

Take Poisson's ratio = 0.29, the stress at elastic limit of the material is 255 MPa and the factor of safety=2.75.

Find the forces of drag and lift as 0.05 and 0.2 respectively</li> <li>b) What is Von Karman momentum integral equation and where can it be applied. (OR)</li> <li>Give the characteristics of boundary layer along a thin flat plate. UNIT-II</li> <li>a) Derive dynamic equation for gradually varied flow.</li> <li>b) When does a hydraulic jump occurs? Also give its applications. (OR)</li> <li>A trapezoidal channel with side slopes of 1 to 1 has to be designed to convey</li> </ul> |

 $12m^3$ /s at a velocity of 2.5m/s, so that the amount of concrete lining for the bed and sides is the minimum. Calculate the area of lining required for one metre length of canal.

## (UNIT-III)

- 5 Obtain an expression for the force exerted by jet of water on a stationary curved 14 Marks plate in the direction of the jet when the jet strikes the curved plate at the centre and a jet of water of diameter 10cm strikes a flat plate normally with a velocity of 15m/s. The plate is moving with a velocity of 6m/s in the direction of the jet and away from the jet. Find:
  - i) the force exerted by the jet on the plate.
  - ii) work done by the jet on the plate per second.

#### (OR)

- 6 A jet of water having velocity of 20m/s strikes a curved vane, which is moving 14 Marks with a velocity of 10m/s. The jet makes an angle of 20° with the direction of motion of vane at inlet and leaves at an angle of 130° to the direction of motion of vane at outlet. Calculate:
  - i) Vane angles, so that the water enters and leaves the vane without shock.
  - ii) Work done per second per unit weight of water striking (or work done
    - per unit weight of water striking) the vane per second.

## UNIT-IV

- 7 a) Under what headings the turbines can be classified.
  - b) A pelton wheel has to be designed for the following data: 7 Marks
    Power to be developed = 6000kW; Net head available = 300m; Speed = 550 r.p.m.; Ratio of jet diameter to wheel diameter = 1/10; overall efficiency = 85%. Find the number of jets, diameter of the jet, diameter of the wheel and the quantity of water required.

#### (OR)

8 Give the classification of hydro power plants.

14 Marks

Max. Marks: 70

7 Marks

## UNIT-V

- 9 a) Water is to be pumped out of a deep well under a total head of 95m. A number 7 Marks of identical pumps of design speed 1000 r.p.m. and specific speed 900 r.p.m. with a rated capacity of 150 litres/second are available. How many pumps will be needed and how should they be connected?
  - b) When do you go for multi stage pumps?

7 Marks

#### (OR)

10 Explain different components of hydropower plant and write the procedure to 14 Marks calculate discharge using mass curve with a neat sketch.

#### TRANSFORMERS AND INDUCTION MACHINES

[ Electrical and Electronics Engineering ]

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

## UNIT-I )

- 1 a) Derive the EMF equation of a single phase transformer and explain the no-load 7 Marks condition of a single phase transformer with phasor diagram.
  - b) Define Voltage regulation of a transformer. Derive the approximate voltage drop 7 Marks equation for lagging loads.

#### (OR)

- **2** a) Draw and explain the phasor diagram of a transformer for inductive and 7 Marks capacitive loads.
  - b) The efficiency of 1000KVA, 11KV/220V, 50Hz, 1-φ transformer is 98.5% at 7 Marks half full load at 0.8 p.f leading and 98.8% at full load UPF. Determine:
    - i) Iron losses. ii) Full load copper losses.
    - iii) Find maximum efficiency KVA at UPF.

## (UNIT-II)

- **3** a) Explain how Sumpner's test is conducted on a pair of transformers with a neat 7 Marks diagram.
  - b) Two single phase transformers with equal turns have impedance of  $(0.5+j3)\Omega$  7 Marks and  $(0.6+j10)\Omega$  with respect to the secondary. If they operate in parallel, determine how they will share total load of 100KW at 0.8 power factor lagging.

#### (**OR**)

- **4** a) Explain how OC and SC tests are conducted on a single phase transformer with 7 Marks neat diagram.
  - b) Explain the operating principle of auto transformer and derive an expression for 7 Marks the saving in copper when compared to an ordinary transformer.

## UNIT-III

- 5 a) Explain the Scott connection with neat diagrams.
  - b) Describe four possible ways of connections of 3-phase transformers with 7 Marks relevant relations amongst voltages and currents on both HV and LV sides.

#### (**OR**)

- 6 a) A 3-phase transformer has 400 turns on the primary and 40 turns on the 8 Marks secondary. The supply voltage is 3300V. Find the secondary voltage on no load when the windings are connected in (i) star-delta (ii) delta-star.
  - b) Explain the desirable conditions for the parallel operation of 3-phase 6 Marks transformers.

## (UNIT-IV)

- 7 a) Show that a 3-phase winding when excited by a three phase supply establishes a 7 Marks rotating magnetic field.
  - b) The full load power input to a 3-phase induction motor is 50Kw and the slip is 7 Marks 3%. Neglecting stator losses, calculate the full load cu losses and total mechanical power developed.

#### (OR)

Max. Marks: 70

7 Marks

- 8 a) Draw the speed (vs.) torque curves of slip ring induction motor whose rotor 6 Marks resistance is externally changed such that  $R_3 > R_2 > R_1$ .
  - b) A 3-phase 4kW, 400V, 50Hz, 4 Pole induction motor runs at 1440 RPM at rated 8 Marks load condition. Compute its efficiency at rated load condition, where the rotational losses are 400 W and stator copper loss is equal to rotor copper loss.

## UNIT-V

9 What is circle diagram? Explain the step by step procedure of drawing the circle 14 Marks diagram from the test data of a 3-phase induction motor and how to calculate its performance under different load conditions.

#### (OR)

- 10 a)Explain auto transformer starting method of 3-phase induction motor.7 Marks
  - b) The power input to a 3-phase induction motor is 60 KW. The stator losses are 7 Marks 1 KW. Find the mechanical power developed and the rotor copper loss per phase if the motor is running with a slip of 3%.

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1 | a)       | Explain with suitable circuit diagram, the operation of transformer coupled transistorized amplifier.                                                                                                                                                                           | 8 Marks            |
|---|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
|   | b)       | Explain the essential difference between the RC coupled and direct coupled amplifier.                                                                                                                                                                                           | 6 Marks            |
|   |          | (OR)                                                                                                                                                                                                                                                                            |                    |
| 2 | a)       | Give the equation of overall upper and lower cut off frequencies of multistage amplifiers.                                                                                                                                                                                      | 10 Marks           |
|   | b)       | Why capacitive coupling is used to connect a signal source to an amplifier?                                                                                                                                                                                                     | 4 Marks            |
|   |          | UNIT-II                                                                                                                                                                                                                                                                         |                    |
| 3 |          | In a single stage RC coupled CE amplifier, explain the effect of bypass and coupling capacitor on frequency response with necessary analysis. <b>(OR)</b>                                                                                                                       | 14 Marks           |
| 4 | a)       | Sketch the circuit of a CS amplifier. Derive the expression for $A_V$ at low frequencies. What is the maximum value of $A_V$ ?                                                                                                                                                  | 7 Marks            |
|   | b)       | Analyze the performance of common drain FET Amplifier at high frequencies.                                                                                                                                                                                                      | 7 Marks            |
|   |          | UNIT-III)                                                                                                                                                                                                                                                                       |                    |
| 5 | a)<br>b) | What is meant by feedback? What are the effects of negative feedback?<br>In an RC phase shift oscillator if $R_1 = R_2 = R_3 = 80 \text{ K}\Omega$ and $C_1 = C_2 = C_3 = 10\text{PF}$ .<br>The value of $R_C = 2 \text{ K}\Omega$ . Find the frequency of oscillation.<br>(OR) | 7 Marks<br>7 Marks |
| 6 | a)       | Derive an expression for frequency of oscillation for RC phase shift oscillator                                                                                                                                                                                                 | 9 Marks            |
| Ū | b)       | Write a short note on crystal oscillator.                                                                                                                                                                                                                                       | 5 Marks            |
|   |          | UNIT-IV                                                                                                                                                                                                                                                                         |                    |
| 7 | a)       | Draw the circuit for a push-pull amplifier and discuss its working                                                                                                                                                                                                              | 7 Marks            |
|   | b)       | Derive an expression for the efficiency of class B - power amplifiers.                                                                                                                                                                                                          | 7 Marks            |
| 8 | a)       | Draw the circuit for commonly used class A - amplifier. If the amplifier draws                                                                                                                                                                                                  | 7 Marks            |

10W of dc power, what is the maximum ac power available to the load?

b) What is the basis for the classification of power amplifiers? Mention different 7 Marks types of power amplifiers?

## UNIT-V

| a) | What is a tuned voltage amplifier? Explain it briefly.                           | 6 Marks |
|----|----------------------------------------------------------------------------------|---------|
| b) | A parallel resonant circuit has a band width of 15 KHz and Q-factor of 120. What | 8 Marks |
|    | is the resonant frequency of the circuit?                                        |         |
|    |                                                                                  |         |

# (OR) Explain the working of a double-tuned amplifier.

- 7 Marks
- b) Explain in brief, the function of the tank circuit in a tuned-voltage amplifier. 7 Marks

Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

State and explain Coulomb's law. 7 Marks 1 a) Derive the boundary conditions for the tangential and normal components of 7 Marks b) electric fields at the boundary between two perfect dielectrics. (**OR**) Find out capacitance for the coaxial cable. 7 Marks 2 a) Explain about continuity equation. 7 Marks b) UNIT-II ) Explain Ampere's circuital law and its application with one example. 3 a) 7 Marks Illustrate two Maxwell's equations in magneto statics. b) 7 Marks (**OR**) 4 Derive the expression for the energy density in a Magnetic field. 7 Marks a) 7 Marks b) If the magnetic field,  $H = 100 \sin \theta a_{\theta} A/m$  in spherical coordinates, determine  $\vec{J}$  at (10,  $\pi/2$ , 0). UNIT-III) What is the inconsistency in Ampere's Law? How it is rectified by Maxwell? 5 7 Marks a) Explain how the concept of displacement current was introduced by Maxwell to 7 Marks b) account for the production of magnetic fields in the empty space. (**OR**) Express Maxwell's equations in differential form and their corresponding word 6 7 Marks a) statements An electric field in a medium which is source free is given by 7 Marks b)  $\vec{E} = 1.5 \cos(10^8 t = \beta z) \vec{ax} V/m$ . Obtain  $\vec{B}, \vec{H}$  and  $\vec{D}$ . Assume  $\in r=1, \mu_r=1$ and  $\sigma = 0$ . UNIT-IV Derive wave equations in free space. 7 Marks 7 a) Derive the relation between  $\vec{E}$  and  $\vec{H}$  in uniform plane wave. 7 Marks b) (OR) Differentiate Conductors and Dielectrics. Obtain the wave propagation 8 a) 7 Marks characteristics in good dielectrics. b) Prove  $\vec{P} = \vec{E} \times \vec{H}$ . 7 Marks UNIT-V Explain how transmission lines can be used as circuit elements. 9 7 Marks a) Discuss about single stub matching. 7 Marks b) (**OR**) Derive the expression for the characteristic impedance of a Lossless line. 10 a) 7 Marks Write short notes on reflection coefficient, standing wave ratio and transmission 7 Marks b) coefficient. (j) (j) (j)

| 3  |    | Obtain the minimal SOP and POS of the following functions using K- Maps:                                                           | 14 Marks       |
| U  |    | i) $F_1(A, B, C, D) = \sum_m (1, 3, 7, 11, 15) + \sum_d (0, 2, 5)$                                                                 | 1 T IVIUIKO    |
|    |    | ii) $F_2(A, B, C, D) = \prod_m (4, 5, 6, 7, 8, 12) + \prod_d (1, 2, 3, 9, 11, 14)$                                                 |                |
|    |    | (OR)                                                                                                                               |                |
| 4  |    | Simplify the following Boolean function using Quine Mc'Clusky method:                                                              | 14 Marks       |
|    |    | $F(A, B, C, D) = \sum_{m} (0, 1, 6, 7, 8, 9, 13, 14, 15).$                                                                         |                |
|    |    | UNIT-III                                                                                                                           |                |
| 5  | a) | Design a BCD to excess-3 code converter.                                                                                           | 8 Marks        |
|    | b) | Explain the operation of 4-bit carry look ahead adder.                                                                             | 6 Marks        |
|    |    | (OR)                                                                                                                               |                |
| 6  | a) | Design and implement a 4-bit BCD to decimal decoder.                                                                               | 8 Marks        |
|    | b) | Use a multiplexer having three data select inputs to implement the logic                                                           | 6 Marks        |
|    |    | function: $F = \sum_{m} (0, 1, 2, 3, 4, 10, 11, 14, 15)$                                                                           |                |
|    |    | UNIT-IV                                                                                                                            |                |
| 7  | a) | Explain the operation of parallel shift register with parallel load using neat logic                                               | 7 Marks        |
|    | h) | ulagialli.<br>Explain Universal counter with neat diagram                                                                          | 7 Marks        |
|    | 0) | (OR)                                                                                                                               |                |
| 8  | a) | Compare combinational and sequential circuits                                                                                      | 4 Marks        |
|    | b) | What is race around condition? How it is eliminated using master-slave JK flip-                                                    | 10 Marks       |
|    |    | flop?                                                                                                                              |                |
|    |    | UNIT-V                                                                                                                             |                |
| 9  | a) | Describe the design procedure for asynchronous sequential circuits.                                                                | 6 Marks        |
|    | b) | Find a circuit that has no static hazards and the Boolean function:                                                                | 8 Marks        |
|    |    | $F(A, B, C, D) = \sum_{m} (1, 3, 5, 7, 8, 9, 14, 15)$                                                                              |                |
|    |    | (OR)                                                                                                                               |                |
| 10 | a) | Explain the operation of debounce circuit with neat circuit diagram.                                                               | 7 Marks        |
|    | b) | Find a circuit that has no static hazards and implements the Boolean function $\Gamma(A, B, C, D) = \Sigma(0, 2, (-7, 8, 10, 12))$ | 7 Marks        |
|    |    | $F(A, B, C, D) = \sum (0, 2, 0, 7, 8, 10, 12)$                                                                                     |                |

#### II B.Tech II Semester (SVEC14) Supplementary Examinations March – 2021

#### ANALOG ELECTRONIC CIRCUITS [Electrical and Electronics Engineering]

Max. Marks: 70

6 Marks

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Draw the circuit diagram and frequency response of an RC coupled amplifier. 7 Marks Further explain the role of coupling and bypass capacitors.
  - b) Draw the circuit diagram and equivalent high frequency model of emitter 7 Marks follower.

#### (OR)

- 2 a) Derive the current gain of a CE amplifier with resistive load at high frequencies.
  b) Derive the gain and input impedance of a CE amplifier with emitter resistance.
  7 Marks
  - UNIT-II
  - a) Describe the general characteristics of negative feedback amplifiers. 7 Marks
    - b) Explain the Barkhausein criteria for sustained oscillations. 7 Marks

#### (OR)

- 4 a) Derive the effect of negative feedback on the output impedance in different 7 Marks feedback topologies.
  - b) Draw the circuit diagram of Colpitts oscillator and derive the expression for the 7 Marks frequency of oscillations.

## (UNIT-III)

- 5 a) Derive the conversion efficiency of a Class-B amplifier.
   b) Compute the effective load resistance R<sub>L</sub> seen looking into the primary of 8:1
   7 Marks transformer connected to the output load of 20Ω.
  - (OR)
- 6 a) Distinguish between Class-A, Class-B and Class-AB amplifiers with neat 7 Marks diagrams.
  - b) Describe the second harmonic distortion in power amplifiers. 7 Marks
- 7 a) Explain how clipping at two independent levels can be achieved. 8 Marks
- b) Explain positive peak voltage limiters below reference level.

#### (OR)

- **8** a) Draw the circuit diagram of a DC restorer (clamping circuits) and explain its 7 Marks operation with neat diagrams.
  - b) Explain the operation of transistor as a switch with neat diagrams and 7 Marks waveforms.

## UNIT-V

9 Draw the circuit diagram for Schmitt trigger and explain its operation. Give the 14 Marks applications of the above circuit. Derive the expressions for UTP and LTP.

#### (**OR**)

- 10 a) Explain how a Schmitt trigger can be used as a comparator and as a squaring 8 Marks circuit.
  - b) Summarize your understanding on hysteresis and explain how hysteresis can be 6 Marks eliminated in a Schmitt trigger.

II B.Tech II Semester (SVEC14) Supplementary Examinations March – 2021

#### **DATABASE MANAGEMENT SYSTEMS**

#### [ Computer Science and Engineering, Information Technology, **Computer Science and Systems Engineering**

Time: 3 hours

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

| 1 | a) | Describe the characteristics of database system.                                     | 8 Marks  |
|---|----|--------------------------------------------------------------------------------------|----------|
|   | b) | Explain in detail about the three-schema architecture of DBMS.                       | 6 Marks  |
|   |    | (OR)                                                                                 |          |
| 2 | a) | Explain about various constraints used in ER-model.                                  | 6 Marks  |
|   | b) | Discuss in detail about various attributes used in E-R model with suitable examples. | 8 Marks  |
|   |    | UNIT-II                                                                              |          |
| 3 |    | Explain in detail about various key constraints used in database system.             | 14 Marks |
|   |    | (OR)                                                                                 |          |
| 4 | a) | Explain different relational algebraic operations with example.                      | 8 Marks  |
|   | b) | Write short notes on:                                                                | 6 Marks  |
|   |    | i) DDL. ii) DML. iii) Database Schema.                                               |          |
|   |    |                                                                                      |          |

## (UNIT-III)

What is meant by SQL? Explain about nested queries and NULL values in SQL. 7 Marks 5 a) Discuss about complex integrity constraints in SQL. 7 Marks b)

#### (**OR**)

Explain in detail about all functional dependencies based normal forms with 6 14 Marks suitable examples.

#### UNIT-IV

| 7  | a) | List the ACID properties. Explain usefulness of each.                      | 7 Marks |
|----|----|----------------------------------------------------------------------------|---------|
|    | b) | Discuss about multiple granularity.                                        | 7 Marks |
|    |    | (OR)                                                                       |         |
| 8  | a) | Describe the concepts serializability and recoverability.                  | 7 Marks |
|    | b) | What is the time stamp based protocols? Explain any one of them.           | 7 Marks |
|    |    |                                                                            |         |
|    |    | UNIT-V                                                                     |         |
| 9  | a) | Describe difference methods of defining indexes on multiple keys.          | 8 Marks |
|    | b) | Explain in detail about external hashing techniques.                       | 6 Marks |
|    |    | (OR)                                                                       |         |
| 10 | a) | By considering example, show how to reduce access time with primary index. | 7 Marks |
|    | b) | Explain about B tree with suitable examples.                               | 7 Marks |
|    |    |                                                                            |         |

#### **OBJECT ORIENTED PROGRAMMING**

[ Computer Science and Engineering, Information Technology, **Computer Science and Systems Engineering** 

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1  | a)<br>b) | What are the different data types and their ranges in Java?<br>Write a Java program to find the biggest number present in the given array of $n$ numbers.       | 7 Marks<br>7 Marks |
|----|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
|    |          | (OR)                                                                                                                                                            |                    |
| 2  | a)       | Explain the OOP paradigm.                                                                                                                                       | 7 Marks            |
|    | b)       | Write a Java program to accept five command line arguments and perform sorting in increasing order and display them.                                            | 7 Marks            |
|    |          | UNIT-II )                                                                                                                                                       |                    |
| 3  | a)       | List the similarities and differences of classes and interfaces.                                                                                                | 7 Marks            |
| -  | b)       | Write a java program using inheritance that gets the properties of a person and extends to faculty and student and display the details accordingly. <b>(OR)</b> | 7 Marks            |
| 4  | a)       | Why subclass reference variables cannot refer to a super class object? Comment.                                                                                 | 7 Marks            |
|    | b)       | Design a interface queue with the following methods.                                                                                                            | 7 Marks            |
|    |          | i) of ull and gempty.                                                                                                                                           |                    |
|    |          | UNIT-III)                                                                                                                                                       |                    |
| 5  | a)       | Explain the process of creating threads with suitable examples.                                                                                                 | 7 Marks            |
|    | b)       | Write short note on synchronization of threads.                                                                                                                 | 7 Marks            |
|    |          | (OR)                                                                                                                                                            |                    |
| 6  | a)       | Define package. Create a simple package and describe its usage.                                                                                                 | 7 Marks            |
|    | b)       | Explain logging in java with all its levels.                                                                                                                    | 7 Marks            |
|    |          | (UNIT-IV)                                                                                                                                                       |                    |
| 7  | a)       | Explain the life cycle of an Applet.                                                                                                                            | 7 Marks            |
|    | b)       | Design an Applet to display the status of a checkbox on click of a button.                                                                                      | 7 Marks            |
|    |          | (OR)                                                                                                                                                            |                    |
| 8  | a)       | Explain about Scroll pane and dialogs List Panel AWTs with the help of suitable Java program.                                                                   | 7 Marks            |
|    | b)       | Write short note on Lay out Mangers.                                                                                                                            | 7 Marks            |
|    |          | UNIT-V                                                                                                                                                          |                    |
| 9  | a)       | Explain the steps and Java methods involved in establishing database connectivity.                                                                              | 7 Marks            |
|    | b)       | Write a servlet program to demonstrate parameter passing from HTML script using post method.                                                                    | 7 Marks            |
|    |          | (OR)                                                                                                                                                            |                    |
| 10 | a)       | Explain about different types of JDBC drivers.                                                                                                                  | 7 Marks            |
|    | b)       | Explain the process of creation and compiling of Servlet Source Code.                                                                                           | 7 Marks            |

SVEC-14

Max. Marks: 70

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

#### II B.Tech II Semester (SVEC14) Supplementary Examinations March – 2021

#### **CONTROL SYSTEMS**

#### [Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Max. Marks: 70

7 Marks

Time: 3 hours

4

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1a)What are the effects of feedback on sensitivity and external noise?7 Marks
  - b) For the mechanical system, draw the electrical analogous circuits based on 7 Marks Torque-Voltage and Torque-Current analogy along their equations.

### (OR)

- 2 a) Develop the block diagram for armature controlled DC motor.
  - b) Determine the overall transfer function for the system shown in the figure using 7 Marks block diagram reduction technique.

UNIT-II

- **3** a) Draw the second order system step response and indicate all time domain 6 Marks specifications.
  - b) A unity feedback system is characterized by the open loop transfer function 8 Marks G(s)=1000(s+1)/(s+10)(s+50). Determine the steady state error for unit-step, unit-ramp and unit acceleration inputs. Also determine the damping ratio and natural frequency of dominant roots.

#### (OR)

- a) Discus the effect of P, PI, PD on control system characteristics. 6 Marks
  - b) Find the steady state error as a function of time for the feedback system 8 Marks G(s) = 100/s(1+0.1s), H(s) = 5/(s+4) for the input  $r(t) = 1+2t+(t^2/2)$ .

## UNIT-III)

- 5 a) Determine the stability of the control system with characteristics equation 7 Marks  $s^3 + 2s^4 + 2s^3 + 4s^2 + s + 2 = 0$  using Routh Hurwitz Criterion.
  - b) Determine the range of values of K such that the characteristic equation 7 Marks  $s^3 + 3(K+1) s^2 + (7K+5) s + (4K+7) = 0$  has roots more negative than s = -1.

#### (OR)

6 Sketch the root locus diagram for the following open loop transfer function: 14 Marks  $\frac{K}{S(S+4)(S^2+4S+20)}$ 

## UNIT-IV)

Sketch the bode plots showing the magnitude in dB and phase angle in degrees of 7 14 Marks G(s)=10/s(1+0.5s)(1+0.02s). Determine the gain cross over frequency, phase cross over frequency and margins.

#### (OR)

- State and explain Nyquist stability criterion to determine the stability of a system. 7 Marks 8 a) b)
  - What are compensating network? Explain about lead, lag networks. 7 Marks

## UNIT-V

9 a) Define the terms State variable and State transition matrix. 6 Marks Obtain the state space representation in Phase variable and Jordan form for the 8 Marks b) system whose transfer function is given by T(s) = (s+1)/s(s+4)(s+5).

#### (**OR**)

Find the Eigen value and Eigen vectors of the system represented with state space 7 Marks 10 a)  $\begin{bmatrix} 1 & 0 & 2 \end{bmatrix}$ 

matrix A. Also derive diagonal matrix for the system.  $A = \begin{bmatrix} 0 & 2 & 1 \end{bmatrix}$ 0 0 3

What are the advantages of state variable analysis? Also write the properties of b) 7 Marks state transition matrix.

#### **II B.Tech II Semester (SVEC-16) Supplementary Examinations August – 2021**

#### **ENVIRONMENTAL STUDIES**

#### [Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

8

#### **Answer One Ouestion from each Unit** All questions carry equal marks

## UNIT-I

- 1 Explain the need for public awareness about the environment and its CO1 7 Marks a) degradation. What do you mean by forest resource? Explain the direct and indirect CO2 b) 7 Marks
  - benefits of forests.

#### (**OR**)

- Analysis the environmental effects of extracting and using mineral 2 CO<sub>2</sub> 7 Marks a) resources.
  - b) Discuss the reasons for land degradation and suggest the steps to control CO3 7 Marks it.

## UNIT-II)

- 3 What is ecological pyramid? Explain various types of ecological CO<sub>2</sub> 7 Marks a) pyramids.
  - What is meant by bio-diversity and explain the three major components of CO1 b) 7 Marks bio-diversity?

#### (**OR**)

- Analyze the flow of energy through various components of the eco 4 a) CO2 7 Marks system.
  - Analyze the types and characteristics features of a forest ecosystem. b) CO<sub>2</sub> 7 Marks

#### (UNIT-III)

Define solid waste management. Give classification of solid waste and CO1 5 14 Marks discuss the health effects of solid waste pollution.

#### (OR)

6 What is meant my thermal pollution? Describe the control measures can CO3 14 Marks be taken for controlling thermal pollution.

#### UNIT-IV

7 What do you meant by sustainable development? What are the major CO7 14 Marks solutions to attain sustainability?

#### (**OR**)

How the problems can be solved related to Nuclear accidents. CO4 4 Marks a) What are the provisions for the constitution of central and state boards CO8 10 Marks b) under the water Act?

## UNIT-V

9 Discuss the reasons of high population growth in India. 4 Marks CO<sub>2</sub> a) What actions and strategies can be taken to prevent rapid growth of CO1 10 Marks b) population? Explain.

#### (**OR**)

10 Write a report based on the visit in an industrial area. CO9 14 Marks

Max. Marks: 70

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

#### II B.Tech II Semester (SVEC-16) Supplementary Examinations August – 2021

#### ELECTRONIC CIRCUIT ANALYSIS AND DESIGN [Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Draw the h-parameter equivalent circuit of CE amplifier and derive the CO2 7 Marks expressions for A<sub>v</sub>, A<sub>i</sub>, R<sub>i</sub>, R<sub>0</sub>.
  - b) Explain the operation of Bootstrapped Darlington Circuit with neat CO1 7 Marks diagram.

#### (**O**R)

- 2 a) Draw the h-parameter equivalent circuit of CC amplifier and derive the CO2 8 Marks expressions for A<sub>v</sub>, A<sub>i</sub>, R<sub>i</sub>, R<sub>o</sub>.
  - b) Explain the operation of two stage Transformer coupled amplifier with CO1 6 Marks neat diagram.

### (UNIT-II)

3 a) Explain the effect of coupling and bypass capacitors at high frequencies. CO6 6 Marks

b) Derive the expressions for voltage gain and input admittance for common CO2 8 Marks source amplifier at high frequencies.

#### (OR)

- 4 a) Short circuit CE current gain of a transistor is 25 at a frequency of 2MHZ. CO4 6 Marks If  $f_{\beta} = 200$ KHZ, calculate (i)  $f_{T}$  (ii)  $h_{fe}$  (iii) Find the  $|A_{I}|$  at frequency of 10MHZ and 100 MHZ.
  - b) Derive the expressions for voltage gain, output resistance of common CO2 8 Marks drain amplifier at high frequencies.

## (UNIT-III)

- 5 a) Write the advantages of negative feedback in amplifiers. Why negative CO5 8 Marks feedback is not used in oscillators.
  - b) In a transistorized Hartley oscillator, two conductances are 2mH and CO3 6 Marks  $20\mu$ H, while the frequency is to be changed from 950KHZ to 2050KHZ. Calculate the range over which the capacitor is to be varied.

#### (OR)

- 6 a) Draw the wein bridge oscillator and explain its operation and derive an CO1 8 Marks expression for frequency of oscillations.
  - b) Calculate the gain, input resistance, output resistance of voltage series CO4 6 Marks feedback amplifier having A=300,  $R_i=1.5K\Omega$ ,  $R_0=50K\Omega$  and  $\beta=1/20$ .

## UNIT-IV

- 7 a) Explain the advantages of push-pull amplifiers. Derive an expression for CO3 7 Marks the efficiency of a class-B push pull amplifier.
  - b) Explain the operation of class-B push pull amplifier with a neat diagram CO1 7 Marks and derive the expression for efficiency.

(**OR**)

- 8 a) Explain the classifications of power amplifiers based on the period of CO1 4 Marks conduction.
  - b) A single stage class–A amplifier has  $V_{CC} = 20$  volts,  $V_{CEQ} = 10$  volts, CO4 10 Marks  $I_{CQ} = 600$ mA and collector load resistor  $R_L = 16\Omega$ . The AC output current varies by  $\pm 300$ mA with AC input signal. Determine:
    - i) The power supplied by the source to the amplifier circuit.
    - ii) DC power consumed by the load resistor.
    - iii) AC power developed across the load resistor.
    - iv) DC power delivered to the transistor.
    - v) DC power wasted in transistor collector.
    - vi) Overall efficiency.
    - vii) Collector efficiency.

## UNIT-V

- 9 a) Explain the working of single tuned amplifier with a neat diagram. Draw CO1 8 Marks the frequency response of single tuned amplifier.
  - b) With a neat circuit diagram, explain the operation of class-C tuned CO1 6 Marks amplifier.

(OR)

- 10 a) With a neat diagram, explain working of stagger tuned amplifier with its CO1 8 Marks frequency response.
  - b) A single tuned RF amplifier uses a transistor with an output resistance of CO4 6 Marks 50K $\Omega$ , output capacitance of 15PF and input resistance of next stage is 20k $\Omega$ . The tuned circuit consists of 47PF capacitance in parallel with series combinations of 1 $\mu$ H inductance and 2 $\Omega$  resistance. Calculate:
    - i) Resonant frequency.
    - ii) Effective quality factor.
    - iii) Bandwidth of the circuit.

#### SIGNALS AND SYSTEMS [Electronics and Instrumentation Engineering]

Max. Marks: 70

SVEC-16

#### **Answer One Question from each Unit** All questions carry equal marks.

### UNIT-I

1 Write the properties of Dirac-delta function. 6 Marks a) CO1 Show that if the two signals  $f_1(t)$  and  $f_2(t)$  Are orthogonal over an interval CO<sub>2</sub> 8 Marks b)  $t_1$  and  $t_2$  then energy of signal  $[f_1(t) + f_2(t)]$  is equal to the sum of energies of  $f_1(t)$  and  $f_2(t)$ . (**OR**) 2 What are the three elementary operations in block diagram representation CO2 6 Marks a) of continous time system? Determine whether the system is linear, time invariant, causal and CO2 8 Marks b) memory less.  $y(t) = \frac{1}{2} \int_{-\infty}^{t} x(z) dz$ UNIT-II Find the exponential fourier series of the waveform and also draw the CO4 3 a) 8 Marks frequency spectrum. x(t) = A for  $0 \le t \le \pi$ -A for  $\pi \le t \le 2 \pi$ Represent the function  $e^t$  over the interval  $0 \le t \le 1$  by using trigonometric CO1 6 Marks b) fourier series. (**OR**) 4 Define fourier transform and state any four properties. CO1 6 Marks a) Find the fourier transform of signum function and unit step function. CO4 8 Marks b) UNIT-III) 7 Marks 5 a) If  $x(t) = Sin \omega_0 t$ , find (i)  $R(\tau)$ ; (ii) *ESD*. CO1 Verify Parseval's theorem for the energy signal  $x(t) = e^{-4t} u(t)$ . CO4 b) 7 Marks (**OR**) 6 a) Convolve the following signals CO1 7 Marks x[n] = u[n] - u[n-3] $h[n] = (0.5)^n u[n]$ Find the output voltage of the RC lowpass filter shown in figure for an b) CO5 7 Marks input voltage of  $t.e^{-t/RC}$ . UNIT-IV 7 Obtain the relationship between laplace and fourier transforms. CO1 7 Marks a) Find the laplace transform and region of convergence for the following CO4 7 Marks b) signals. i)  $x(t) = e^{-5t} u(t-1)$ ii)  $x(t) = e^t \sin 2t$ . (OR) 8 Find the step response of the series R-L-C Circuit. CO5 8 Marks a) b) Discuss partial fraction method of finding inverse laplace transform. CO1 6 Marks

## UNIT-V

- 9 a) State and prove sampling theorem for band pass signals. CO1 7 Marks
  - b) Discuss the process of reconstructing the analog signal from its samples. CO2 7 Marks (OR)
- 10 a) State and prove time shifting and time reversal property of Z-transform. CO1 8 Marks
  b) Find the Z transform of x[n] = a<sup>n</sup> u[n] b<sup>n</sup> u[-n 1] and specify its CO4 6 Marks ROC.

|     |        | iii) $F = Y\overline{Z}(\overline{XY} + Y\overline{Z})$                                                                                                                                                                 |        |           |
|     | b)     | Obtain the dual and compliment of the following functions.<br>i) $F = (A\overline{B} + C)\overline{D} + E$                                                                                                              | CO5    | 4 Marks   |
|     |        | ii) $F = (\overline{X + Y + Z}) + XYZ.$                                                                                                                                                                                 |        |           |
|     | c)     | Construct Hamming code for BCD 0110 and BCD 0111. Use even parity.                                                                                                                                                      | CO4    | 4 Marks   |
| 3   | a)     | For the function given below.<br>$f = WXY + X\overline{Y}Z + WX\overline{Y}$                                                                                                                                            | CO1    | 7 Marks   |
|     |        | <ul> <li>i) Express 'f' in standard SOP form.</li> <li>ii) Simplify using K-map.</li> <li>iii) Realize 'f' using NAND gates only.</li> </ul>                                                                            |        |           |
|     | b)     | For the function given below, obtain the simplified expression in product of sum form using k-maps                                                                                                                      | CO1    | 7 Marks   |
|     |        | i) $F(A, B, C, D) = 2M(0, 2, 4, 6, 8, 9, 10, 11, 12, 14).$<br>ii) $F(A, B, C) = \overline{AC} + \overline{BC} + ABC$ .                                                                                                  |        |           |
|     |        | (OR)                                                                                                                                                                                                                    |        |           |
| 4   | a)     | Simplify the Boolean expression $F=\sum_{w,x,y,z} 1,3,7,11,15 + d(0,2,5)$ using K-map and indicate the prime implicants.                                                                                                | CO1    | 7 Marks   |
|     | b)     | Obtain the minimal expression for $f=\Sigma m(1,2,3,5,6,7,8,9,12,13,15)$ using tabulation method.                                                                                                                       | CO1    | 7 Marks   |
|     |        | (UNIT-III)                                                                                                                                                                                                              |        |           |
| 5   | a)     | Design a full-subtractor using 3:8 decoders.                                                                                                                                                                            | CO2    | 4 Marks   |
|     | b)     | Implement the following function using 4:1 MUX                                                                                                                                                                          | CO5    | 5 Marks   |
|     |        | $f(A, B, C, D) = \Sigma m(2, 4, 5, 7, 10, 14)$                                                                                                                                                                          |        |           |
|     | c)     | Design an 16:1 multiplexer using NOR gates only.<br>(OR)                                                                                                                                                                | CO2    | 5 Marks   |
| 6   | a)     | Design a BCD to excess-3 code converter circuit.                                                                                                                                                                        | CO4    | 7 Marks   |
|     | D)     | implement full subtractor using two half subtractors and justify the answer.                                                                                                                                            | 002    | / Marks   |

## UNIT-IV

| 7  | a) | Design and implement Mod-8 synchronous counter using T- flip-flops.                                              | CO2 | 7 Marks  |
|----|----|------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Draw the logical diagram of a 4-bit shift register. Explain how shift-left                                       | CO6 | 7 Marks  |
|    |    | and shift-right operations are performed with relevant output waveforms.                                         |     |          |
|    |    | (OR)                                                                                                             |     |          |
| 8  | a) | With a suitable example, explain Moore and Mealy circuits.                                                       | CO3 | 4 Marks  |
|    | b) | Design a sequence generator to generate the sequence $0 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 1$ | CO4 | 10 Marks |
|    |    | and avoid the lockout condition using J-K flip-flops.                                                            |     |          |
|    |    | UNIT-V                                                                                                           |     |          |
| 9  | a) | Realize the following functions using PAL and draw the logic diagram                                             | CO2 | 7 Marks  |
|    |    | using PAL                                                                                                        |     |          |
|    |    | $Y_1(P, Q, R, S) = \Sigma m(3,5,6,7,8,11,13,14,15)$                                                              |     |          |
|    |    | $Y_3(P, Q, R, S) = \Sigma m(0, 1, 5, 6, 8, 9, 11, 13, 14)$                                                       |     |          |
|    | b) | Design and implement 4-bit Binary to Graycode convertor using a suitable                                         | CO2 | 7 Marks  |
|    |    | PLA.                                                                                                             |     |          |
|    |    | (OR)                                                                                                             |     |          |
| 10 | a) | Explain the PAL with neat sketch.                                                                                | CO2 | 4 Marks  |
|    | b) | Implement the following two Boolean functions with PLA                                                           | CO2 | 10 Marks |
|    |    | $F_1(A,B,C) = \Sigma_m(0,1,2,4,)$                                                                                |     |          |
|    |    | $F_2(A,B,C,) = \Sigma_m(0,5,6,7)$                                                                                |     |          |

\$\$ \$\$ \$\$

 $F_3(A,B,C,) = \Sigma_m (1,3,5,6).$

# CONCRETE TECHNOLOGY

## [Civil Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1 | Explain about the use, mechanism and influences on the properties fresh<br>and hardened concrete of the following items. Also explain their<br>influence on the durability of concrete. | CO1   | 14 Marks                                |
|---|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-----------------------------------------|
|   | i) Tricalcium Aluminate. ii) Tricalcium Silicate.                                                                                                                                       |       |                                         |
|   | iii) Heat of Hydration. iv) Gel-Space Ratio.                                                                                                                                            |       |                                         |
|   | (OR)                                                                                                                                                                                    |       |                                         |
| 2 | Explain in detail the influences of following aspects on the concretes:<br>i) Interfacial Transition Zone.                                                                              | CO1   | 14 Marks                                |
|   | 11) Explain difference between angular aggregates and                                                                                                                                   |       |                                         |
|   | rounded aggregates.                                                                                                                                                                     |       |                                         |
|   | 111) Effect of maximum size of aggregate.                                                                                                                                               |       |                                         |
|   | iv) Explain the uses of Zone-1 and Zone-4 fine aggregates.                                                                                                                              |       |                                         |
|   |                                                                                                                                                                                         |       |                                         |
| 3 | Explain the following properties of fresh concretes:                                                                                                                                    | CO2   | 14 Marks                                |
|   | i) w/c ratio ii) Bleeding                                                                                                                                                               | 002   | 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 |

## STRUCTURAL ANALYSIS - I

## [Civil Engineering]

Max. Marks: 70

SVEC-16

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- a) Direct tensile stresses of 120 MPa and 70 MPa act on a body on mutually CO1 7 Marks perpendicular planes. What is the magnitude of shearing stress that can be applied so that the major principal stress at the point does not exceed 135 MPa? Determine the value of minor principal stress and the maximum shear stress.
  - b) The magnitude of normal stress on two mutually perpendicular planes, at CO1 7 Marks a point in an elastic body are 60 MPa (compressive) and 80 MPa (tensile) respectively. Find the magnitudes of shearing stresses on these planes if the magnitude of one of the principal stresses is 100 MPa (tensile). Find also the magnitude of the other principal stress at this point.

#### (**OR**)

2 a) A point in a strained material is subjected to the stresses as shown in CO2 6 Marks figure. Locate the principal planes and evaluate the principal stresses.

b) A point in a strained material is subjected to stress shown in figure. Using CO2 8 Marks Mohr's circle method, determine the normal and tangential stresses across the oblique plane. Check the answer analytically.

- 3 a) Derive the slope at supports and deflection at centre for a simply CO1 7 Marks supported beam carrying uniformly distributed load of w per unit length over the entire span "L".
  - b) A cantilever of length L is loaded with uniformly varying load of CO2 7 Marks intensity zero at the free end and w/unit length at the fixed end. Derive an expression for the deflection at any point. Find also the slope and deflection of the free end.

A beam of length 8m is simply supported at is ends. It carries a CO4 14 Marks uniformly distributed load of 40kN/m as shown in figure below. Determine:

в

3m

- i) Deflection at D.
- ii) Maximum deflection.
- iii) Slope at end A.

-1 m- 🖊

0.3.

Take  $E = 2x10^{5}$ N/mm<sup>2</sup> and  $I = 4.3x10^{8}$ mm<sup>4</sup>. 240 kN/m

4m

8m

#### (**OR**)

Euler's critical load for a column with both ends hinged is found as 6 14 Marks CO5 40 kN. What would be the change in the critical load if both ends are fixed and one end fixed, and other end is hinged?

## UNIT-IV

7 Analyze a propped cantilever beam AB of span "L" carrying a Uniformly CO<sub>2</sub> 14 Marks Distributed Load (UDL) on entire span with magnitude of w. Draw the shear force and bending moment diagrams.

#### (**OR**)

8 Draw the bending moment and shear force diagrams of a beam shown in 14 Marks CO6 the Figure which is simply supported at one end and fixed at another end and is continuous over the mid support.

## UNIT-V

9 Explain in detail about maximum shear strain energy theory. a) A bolt of 12mm diameter is subjected to an axial pull of 10kN and a b) shear force of 7.5 kN. Determine the factor of safety against failure based on maximum principal stress and maximum shear stress theories, if the yield strength of the material is 400 MPa, and Poisson's ratio is

#### (**OR**)

- 10 A simply supported beam of a rectangular section 50mm wide and 70mm CO3 deep is subjected to an inclined load P at the mid span. The inclination of the load is  $30^{\circ}$  to the vertical. If the length of the simply supported beam is 4m and is maximum stress due to bending is not exceed 210MN/m<sup>2</sup>. Determine the value of P.
  - çê, (P) <u></u>

4

- 7 Marks CO1
- CO5 7 Marks
  - 14 Marks

## WATER SUPPLY ENGINEERING

[Civil Engineering]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1 | a) | Give reasons for the following:                                                                          | CO1 | 10 Marks |
|---|----|----------------------------------------------------------------------------------------------------------|-----|----------|
|   |    | i) The quality of water obtained from rivers is not reliable.                                            |     |          |
|   |    | ii) The underground waters are generally clear and free                                                  |     |          |
|   |    | from impurities                                                                                          |     |          |
|   |    | iii) The level of water table is variable                                                                |     |          |
|   |    | iv) Some springs discharge hot water                                                                     |     |          |
|   |    | v) The shallow wells are not suitable for public water supply.                                           |     |          |
|   | b) | What are sources of temperature increase in water bodies? What are the impacts of elevated temperatures? | CO1 | 4 Marks  |
|   |    | (OR)                                                                                                     |     |          |
| 2 | a) | What are the most common constituents of alkalinity? What are their sources and impact?                  | CO7 | 7 Marks  |
|   | b) | Define Chemical Oxygen Demand (COD) and Total Organic Carbon                                             | CO7 | 7 Marks  |
|   | 0) | (TOC) Discuss how these and other tests are used to quantify non-                                        | 007 |          |
|   |    | hiodegradable organics in water                                                                          |     |          |
|   |    |                                                                                                          |     |          |
| • | `` |                                                                                                          | 000 |          |
| 3 | a) | Distinguish between the following:                                                                       | 003 | 6 Marks  |
|   |    | 1) Graphical method and comparative method.                                                              |     |          |
|   |    | 11) Present population and estimated population.                                                         |     |          |
|   | 1) | 11) Continuous supply system and intermittent supply system.                                             | 001 | O.M. 1   |
|   | b) | (OR) What is the principle of centrifugal pump? Explain its component parts.                             | COI | 8 Marks  |
| 4 | a) | What is meant by the term population? What are the various methods                                       | CO4 | 7 Marks  |
|   |    | which are adopted to estimate population of each successive future                                       |     |          |
|   |    | decade?                                                                                                  |     |          |
|   | b) | What do you mean by logistic curve? How can its equation be framed?                                      | CO4 | 7 Marks  |
|   | ,  | UNIT-III                                                                                                 |     |          |
| 5 | a) | Compare the characteristics of Slow sand filter and Rapid sand filter in                                 | CO1 | 8 Marks  |
|   |    | detail.                                                                                                  |     |          |
|   | b) | Explain clearly the difference between chlorination and chloramination.                                  | CO1 | 6 Marks  |
|   |    | (OR)                                                                                                     |     |          |
| 6 | a) | Design a rapid sand filter unit for 4.5 MLD with all its principal                                       | CO3 | 12 Marks |
|   |    | components.                                                                                              |     |          |
|   | b) | What is the action of coagulants when added to raw waters?                                               | CO1 | 2 Marks  |
|   |    | UNIT-IV                                                                                                  |     |          |
| 7 | a) | How are refractory organics removed from water and waste water?                                          | CO1 | 7 Marks  |
|   | b) | What are the factors influence against effective disinfection?                                           | CO1 | 7 Marks  |

(OR)

| 8  | a) | Describe the various lay-outs of distribution network in a water supply system and state their advantages and disadvantages. | CO6 | 7 Marks  |
|----|----|------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | How is the capacity of a distribution reservoir determined? Give an example                                                  | CO6 | 7 Marks  |
|    |    | UNIT-V                                                                                                                       |     |          |
| 9  |    | Enumerate and describe various tests to detect the wastage of water.                                                         | CO5 | 14 Marks |
| 10 |    | Explain the designing aspects of water supply piping in a building.                                                          | CO6 | 14 Marks |

### ELECTRICAL MEASUREMENTS

[Electrical and Electronics Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- a) Explain in detail the different types of errors in measuring instruments. CO1 7 Marks
   b) Describe the construction and working of a permanent magnetic moving CO1 7 Marks coil instruments. (OR)
- 2 a) The resistance of a moving voltmeter is 11k  $\Omega$ . The moving coil has CO4 7 Marks 100 turns and is 40mm long and 30mm wide. The flux density in the air gap is 0.05 Wb/m<sup>2</sup>. Determine the deflection produced by 220 volts if the spring control gives a defection of 1<sup>o</sup> for a torque of 20 x 10<sup>-7</sup> N-m.
  - b) Explain the working of attraction type and repulsion type moving iron CO1 7 Marks instruments with neat diagrams.

## UNIT-II)

- 3 a) Explain the special features incorporated in an electrodynamometer type CO3 7 Marks of wattmeter so that it can be used for low power factor applications.
  - b) The power input to a 3-phase induction motor is read by two watt meters. CO4 7 Marks The readings are 920W and 300W. Calculate the power factor of the motor.

#### (OR)

4 a) Explain the lag adjustment devices of single phase energy meter. CO2 7 Marks
b) A 5A, 230V meter on full load unity power factor test makes 60 CO4 7 Marks revolutions in 360 seconds. If the normal disc speed is 520 revolutions per kWh, find the percentage error.

## UNIT-III)

5 Derive expression for actual transformation ratio, ratio error and phase CO2 14 Marks angle error of a P.T.

#### (OR)

6 a) Explain the single phase EDM type power factor meter with neat sketch.
b) Explain the characteristics of current transformer.
CO1 7 Marks
CO1 7 Marks

#### (UNIT-IV)

7 Describe the working of Schering Bridge. Derive the expressions for CO2 14 Marks capacitance, dissipation factor and its applications.

#### (OR)

- 8 a) A bridge is balanced at 1,000Hz and has the following constants: CO6 7 Marks AB, 0.2Mf pure capacitance; BC, 500Ω pure resistance; CD, unknown; DA, R=300Ω parallel with C = 0.1µF. Find the R and C or L constants of arm CD, considered as a series circuit.
  - b) Explain Anderson's bridge with phase diagram and derive its balance CO2 7 Marks equations.

Time: 3 hours

|    |    | UNIT-V                                                                                                                 |     |         |
|----|----|------------------------------------------------------------------------------------------------------------------------|-----|---------|
| 9  | a) | Write the difference between the DC and AC potentiometers.                                                             | CO1 | 7 Marks |
|    | b) | Explain the polar type AC potentiometer.                                                                               | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                   |     |         |
| 10 | a) | Explain the block diagram of a general purpose oscilloscope and also describe about the observation of waveform on CRO | CO1 | 7 Marks |
|    | b) | Explain the ramp type digital voltmeter.                                                                               | CO1 | 7 Marks |

### TRANSFORMERS AND INDUCTION MACHINES

#### [Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1 | a)  | Explain the importance of V/f ratio in the operation of transformer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | CO2 | 8 Marks  |

|   | b)  | Two transformers operating in parallel have equal voltage ratios. The magnitude of their equivalent leakage impedances are equal, but their reactance to resistance ratios are 3 and 1. Find the ratio of full load kVA delivered to the sum of their individual kVA ratings.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | CO4 | 9 Marks  |
|   |     | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |     |          |
| 4 | a)  | Describe the procedure of sumpner's test to determine the efficiency of transformer. Mention the limitations of this test.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | CO1 | 8 Marks  |
|   | b)  | A 10kVA 2500/250V single phase two winding transformer is used as an auto transformer to raise the supply voltage of 2500V to an output voltage of 2625V. The LV winding of the two winding transformer consists of two equal parts of 125V each. If both parts of low voltage winding are used, determine:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | CO4 | 6 Marks  |

SVEC-16

- 8 a) Derive the expression for developed torque in a three phase induction CO1 7 Marks motor and find the condition for maximum torque.
  - b) The rotor of a three phase induction motor has  $0.04\Omega$  resistance per phase CO4 7 Marks and  $0.2\Omega$  standstill reactance per phase. What external resistance is required in the rotor circuit in order to get half of the maximum torque at starting? Neglect stator impedance.

## UNIT-V

- 9 a) Describe the procedure of no load and blocked rotor test of three phase CO2 7 Marks induction motor.
  - b) Blocked rotor test on a three phase 40kW, 400V, 50Hz 6 pole star CO4 7 Marks connected induction motor gave the following data: 200V, 110A, power factor = 0.4. Determine the starting torque for a three phase voltage of 380V at 45Hz. Neglect magnetizing current and assume equal stator and rotor ohmic losses.

#### (OR)

- 10 a) List various starting methods of three phase induction motors. Explain any CO1 8 Marks one method in detail.
  - b) Explain the principle of operation of induction generator. CO1 6 Marks

#### **DESIGN OF MACHINE ELEMENTS-I**

#### [Mechanical Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1 | a) | What are the basic requirements of a machine element?                                                        | CO1 | 7 Marks |
|---|----|--------------------------------------------------------------------------------------------------------------|-----|---------|
|   | b) | What are the general considerations in designing a machine component?                                        | CO1 | 7 Marks |
|   |    | (OR)                                                                                                         |     |         |
| 2 | a) | What do you understand by preferred numbers? What is their significance                                      | CO1 | 7 Marks |
|   |    | in design?                                                                                                   |     |         |
|   | b) | The principal stresses induced at a point in a machine component made of                                     | CO2 | 7 Marks |
|   |    | steel 50C4 are as follows.                                                                                   |     |         |
|   |    | (S <sub>yt</sub> = 460 Mpa). $\sigma_1$ = 200 MPa, $\sigma_2$ = 150 MPa, $\sigma_3$ = 0. Calculate factor of |     |         |
|   |    | safety using maximum shear stress theory and distortion energy theory.                                       |     |         |
|   |    | UNIT-II)                                                                                                     |     |         |

- 3 a) What are the factors to be considered while designing machine parts to CO1 4 Marks avoid fatigue failure?
  - b) A machine component is subjected to a flexural stress which fluctuates CO2 10 Marks between +300MN/m<sup>2</sup> and -150MN/m<sup>2</sup>. Determine the value of minimum ultimate strength according to Gerber relation and Soderberg relation. Take yield strength = 0.55 Ultimate strength; Endurance strength = 0.5 Ultimate strength and factor of safety =2.

#### (OR)

A steel rod is subjected to a completely reversed axial load of 180kN. Find CO3 14 Marks the diameter of the rod for a factor of safety of 2. Neglect column action. The material has an ultimate tensile strength of 1070 MPa and yield strength of 910 MPa. The endurance limit in reversed bending may be assumed to be one-half of the ultimate tensile strength. Other correction factors may be taken as follows:

For axial loading = 0.7; For machined surface = 0.8; For size = 0.85; For stress concentration=1.0.

## (UNIT-III)

- 5 a) Explain the method of determining the size of bolt when the bracket CO1 4 Marks carries an eccentric load perpendicular to the axis of the bolt.
  - b) For supporting the travelling crane in a workshop, the brackets are fixed CO3 on steel columns as shown in Figure-1. The maximum load that comes on the bracket is 12 KN acting vertically at a distance of 400mm from the face of the column. The vertical face of the bracket is secured to a column by four bolts, in two rows (two in each row) at a distance of 50mm from the lower edge of the bracket. Determine the size of the bolts, if the permissible value of the tensile stress for the bolt material is 84 MPa.

Max. Marks: 70

CO3 10 Marks

- 6 a) What is reinforcement in weld? What are its advantages and CO1 4 Marks disadvantages?
  - b) A rectangular steel plate is welded as a cantilever to a vertical column and CO4 10 Marks supports a single concentrated load P, as shown in Figure 2. Determine the weld size, if shear stress in the same is not to exceed 140 MPa. (Dimensions are in mm).

A mild steel shaft transmits 15 kW at 210 r.p.m. It is supported on two bearings 750mm apart and has two gears keyed to it. The pinion having 24 teeth of 6mm module is located 100mm to the left of the right hand bearing and delivers the power horizontally to the right. The gear having 80 teeth of 6mm module is located 15mm to the right of the left hand bearing and receives power in a vertical direction from below. Assuming an allowable working shear stress as 53 MPa, and a combined shock and fatigue factor of 1.5 in bending as well as in torsion, determine the diameter of the shaft.

#### (**OR**)

8 Design and draw a protective type of cast iron flange coupling for a steel CO5 14 Marks shaft transmitting 15 kW at 200 r.p.m. and having an allowable shear stress of 40 MPa. The working stress in the bolts should not exceed 30 MPa. Assume that the same material is used for shaft and key and that the crushing stress is twice the value of its shear stress. The maximum torque is 25% greater than the full load torque. The shear stress for cast iron is 14 MPa.

## UNIT-V

- 9 Two rods made of plain carbon steel 40C8 ( $S_{yr}$ = 380 MPa) are to be CO3 14 Marks connected by means of a cotter joint. The diameter of each rod is 50mm and the cotter is made from a steel plate of 15mm thickness. Calculate the dimensions of the socket end making following assumptions.
  - i) The yield strength in compression is twice of the tensile yield strength.
  - ii) The yield strength in shear is 50% of the tensile yield strength. Factor of safety= 6

#### (OR)

10 Design a knuckle joint to transmit 150 kN. The design stresses may be CO4 14 Marks taken as 75 MPa in tension, 60 MPa in shear and 150 MPa in compression.

#### **DYNAMICS OF MACHINERY** [Mechanical Engineering]

Time: 3 hours

# **Answer One Ouestion from each Unit** All questions carry equal marks

# UNIT-I

- Briefly explain about any two types of clutches with neat diagram. 1 CO1 a) The brake shown in figure has a coefficient of friction of 0.3 and is to CO2 b)
  - operate using a maximum force of F of 400N. If the band width is 50 mm, find the band tensions and the braking torque.

### (**OR**)

275

2 What is self-energizing and self-locking brake? Explain. CO1 6 Marks a) An engine developing 30KW at 1250 r.p.m is fitted with a cone clutch. CO2 8 Marks b) The cone face has an angle of 12.5<sup>°</sup>. The mean diameter is 400mm, and coefficient of friction is 0.3. The normal pressure shouldn't exceed 0.08Mpa. Find inner and outer radius of clutch plate. UNIT-II ) Draw the turning moment diagrams for Four stroke cycle I.C engine, 3 CO1 5 Marks a) neglecting the effect of inertia of the connecting rod. A ship is propelled by a turbine rotor of mass 500 kg and has a speed of CO3 9 Marks b) 2400 r.p.m. The rotor has a radius of gyration of 0.5m and rotates in clock wise when viewed from the stern. Determine the gyroscopic couple and its effect if. i) The ship runs at a speed of 28 km/hr. It steers to the left in a curve of 60 m radius. ii) The ship pitches 5<sup>°</sup> above and 5<sup>°</sup> below the horizontal position, with a time period of 20 seconds. iii) The ship rolls with an angular velocity of 0.04 rad/sec. (**OR**) Discuss briefly about the stability of 2 - wheel drive, when it is taking a 4 CO1 4 Marks a) turn by considering weight of the vehicle, effect of centrifugal and gyroscopic couples. Find the maximum and minimum speeds of a flywheel of mass 3250 kg CO3 10 Marks b) and radius of gyration 1.8 m, when the fluctuation of energy is 112kN-m. The mean speed of the engine is 240 r.p.m.

# Max. Marks: 70

# 4 Marks

10 Marks

# UNIT-III)

- 5 a) Explain in detail about the functioning of centrifugal governor with neat CO1 4 Marks sketch
  - b) All the links of the porter governor are 178mm long and are hinged at a CO3 10 Marks distance of 38mm from the axis of rotation. The mass of the each ball is 1.15 kg and mass of the sleeve is 20 kg. The governor begins to rise at 280 r.p.m when the upper links are at 30° to the vertical. Assuming that friction is constant, determine the range of the speed if the upper arms make an angle of 45° to the vertical.

#### (OR)

- 6 A spring loaded Hartnell governor has arms of equal length. The mass CO2 14 Marks rotates in a circle of 130mm diameter when the sleeve is in the mid position and the ball arms are vertical. The equilibrium speed for the position is 450 r.p.m, by neglecting the friction. The maximum sleeve movement is to be 25mm and maximum variation of speed by taking into consideration of friction to be 5% of the mid position of the speed. The mass of the sleeve is 4 kg and friction may be considered as 30N. The power of the governor must be sufficient to overcome the friction by one percent change of speed either way at the mid position. By neglecting the obliquity of the arms, determine:
  - i) The mass of each ball.
  - ii) The spring stiffness and.
  - iii) The initial compression of the spring.

# UNIT-IV

7 The firing order of a two-stroke-cycle six cylinder engine is 1–5–3–6–2–4. CO4 14 Marks The adjacent cylinder center lines are 75cm apart. Each cylinder has a connecting rod 120cm long and a stroke 45cm. The mass of reciprocating parts in each cylinder is 200 kg. Determine the magnitudes of primary, secondary unbalanced forces and couples when the engine runs at 250 r.p.m.

### (OR)

- 8 a) Discuss in detail about the balancing V twin Engine CO1 4 Marks
  - b) Four masses A, B, C and D are completely balanced. Masses C and D CO4 10 Marks make angles 90<sup>o</sup> and 195<sup>o</sup> respectively with that of mass B in the counter clock wise direction. The masses at B, C and D are 25kg, 40kg and 35kg respectively. The radii of rotation of masses A, B, C and D are 150mm, 200mm, 100mm and 180mm respectively. Planes B and C are 250mm apart. Determine:
    - i) Mass at A and its angular position.
    - ii) Distances of all the planes.

# UNIT-V

- A weight of 55N suspended by a spring of 1 N/mm is forced to vibrate by CO5 14 Marks a harmonic force of 9 N. C = 77 N-sec/m. Determine:
  - i) The resonant frequency.

9

- ii) The amplitude of mass at resonance.
- iii) The peak amplitude frequency.
- iv) The amplitude at the peak amplitude frequency.

(OR)

10 a) Determine the mass of the system, if  $K_1$ = 2000N/m,  $K_2$ = 1500 N/m, CO1 4 Marks  $K_3$ =3000 N/m,  $K_4$ =  $K_5$ = 500 N/m and natural frequency is 10 Hz.

b) A mass of 2 kg is supported on an isolator having a spring scale of CO5 10 Marks 2940N/m and viscous damping. If the amplitude of free vibration of the mass falls to one half of its original value in 1.5 seconds, determine the damping coefficient of the isolator.

#### FLUID MECHANICS [Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1 | a) | Explain the properties of fluids. 3 liter petrol weighs 21N. Calculate: | CO     | 7 Marks   |
|---|----|-------------------------------------------------------------------------|--------|-----------|
|   |    | i) specific weight. ii) density.                                        |        |           |
|   |    | iii) specific volume. iv) specific gravity.                             |        |           |
|   | b) | A U-tube differential manometer connects two pressure pipes A and       | B. CO2 | 2 7 Marks |

Pipe A contains carbon tetrachloride having a specific gravity 1.594 under a pressure of 11.772 N/ cm<sup>2</sup> and Pipe B contains oil of specific gravity 0.9 under a pressure of 12 N/cm<sup>2</sup>. The pipe a lies 2.5m above pipe B. Find the difference of pressure measured by mercury as fluid filling U-tube.

#### (OR)

- 2 a) Will you state pascal's law in your own words? What is the pressure, in CO1 7 Marks meters of oil (Sp.gr. 0.8), equivalent to 80m of water?
  - b) A differential manometer connected at the two points A and B as shown in CO2 7 Marks figure. At B air pressure is 9.81 N/cm<sup>2</sup> (Abs), find the absolute pressure at A.

- 3 a) Define steady, non-steady, uniform, non-uniform flows. The stream CO2 7 Marks function for a two-dimensional flow is given by  $\psi = 3xy$ , calculate the velocity at the point P (2, 3). Find the velocity potential function  $\Phi$ .
  - b) Water flows in a circular pipe. At one section, the diameter is 0.3m, the CO2 7 Marks static pressure is 260 Kpa gauge, the velocity is 3m/s and the elevation is 10m above ground level. The elevation at a section downstream is 0m, and the pipe diameter is 0.15m. Find the gauge pressure at the downstream section. Frictional effects may be neglected. Assume density of water to be 999 kg/m<sup>3</sup>

#### (OR)

4 If the expression for stream function is described by  $\psi = x^3 - 3xy^2$ , CO<sub>2</sub> 7 Marks a) indicate whether the flow is rotational or irrotational. If the flow is irrotational, determine the expression for velocity potential function. A pitot-tube is inserted in a pipe of 300mm diameter. The static pressure CO4 b) 7 Marks in pipe is 100mm of mercury (vacuum). The stagnation pressure at the centre of the pipe, recorded by the pitot tube id 0.85N/cm<sup>2</sup>. Calculate the rate of flow of water through pipe. If the mean velocity of flow is 0.85 times the central velocity. Take  $C_v = 0.98$ . (UNIT-III) Derive Darcy-Weisbach formula for calculating loss of head due to CO2 5 7 Marks a) friction in a pipe. Water flows through a pipe of diameter 300mm with a velocity of 5m/s. If the co-efficient of friction is given by  $f = 0.015 + \frac{0.08}{\text{Re}^{0.3}}$  where Re is the Reynolds number, estimate the head lost due to friction for a length of 10m. Take kinematic viscosity of water as 0.01 stoke. b) A 75mm diameter water jet having a velocity of 12m/s impinges on a CO3 7 Marks plane. Smooth plate at an angle of  $60^{\circ}$  to the normal to the plate. What will be the impact when (i) the plate is stationary, and (ii) the plate is moving in the direction of the jet at 6m/s? Estimate the work done per unit time by the jet on the plate in each case. Take the density of water as  $998 \text{ kg/m}^3$ . (**OR**) 6 Derive an expression for the head loss due to sudden enlargement in pipe 7 Marks a) CO<sub>4</sub> flow water flows through a pipe line whose diameter various from 25cm to 15cm in a length of 10m. If the Darcy-Weisbach friction factor is assumed constant at 0.018 for the whole pipe, estimate the head loss in friction when the pipe is flowing full with a discharge of  $0.06m^3$ /sec. b) A jet strikes tangentially a smooth curved vane moving in the same CO3 7 Marks direction as the jet, and the jet gets reversed in the direction. Show that the maximum efficiency is slightly less than 60 %. (UNIT-IV) Show that when runner blade angle at inlet of a Francis turbine is 90<sup>o</sup> and 7 CO5 7 Marks a) the velocity of flow is constant, the hydraulic efficiency is given by 2/  $(2+\tan^2 \alpha)$ , Where  $\alpha$  is the vane angle. Describe the following terms related to hydraulic turbines. b) CO3 7 Marks i) Water hammer. ii) Cavitation. iii) Surge Tank. iv) Geometric similarity. (**OR**) A Kaplan turbine operating under a net head of 20 m develops 16 MW 8 a) CO6 7 Marks with an overall efficiency of 80 %. The diameter of the runner is 4.2m, while the hub diameter is 2m and dimensionless specific speed is 3 rad. If the hydraulic efficiency is 90 %, estimate the inlet and exit angles of the runner blades at the mean blade radius if the flow leaving the runner is purely axial. At a project site, the head available is 160m of water at a flow rate of CO3 b) 7 Marks 0.005m<sup>3</sup>/s. Select and design a suitable turbine to generate power, assuming the required coefficients with justification and stating all the relevant parameters.

2

# UNIT-V

- 9 a) Explain the working principle of a single stage centrifugal pump with a CO3 7 Marks neat sketch and also explain briefly mechanical and overall efficiencies of a centrifugal pump.
  - b) Describe construction and working principle of double acting CO3 7 Marks reciprocating pump.

# (OR)

- 10 a) Derive an expression for the work done by the impeller of a centrifugal CO3 7 Marks pump on liquid per second per unit weight of lquid. Explain briefly manometric and volumetric efficiencies of a centrifugal pump.
  - b) Distinguish between Reciprocating and centrifugal pumps. Explain Slip CO3 7 Marks and function of air vessels?

### THERMAL ENGINEERING - I [Mechanical Engineering]

Max. Marks: 70

#### Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

| U | NIT-I | $\supset$ |
|---|-------|-----------|
| - |       | _         |

| 1 | a)            | Explain the working of 4 stroke CI engine with the help of simplified sketches                                                                                             | CO1      | 7 Marks    |
|---|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|------------|
|   | b)            | Distinguish between 4 stroke and 2 stroke engines.                                                                                                                         | CO2      | 7 Marks    |
|   |               | (OR)                                                                                                                                                                       |          |            |
| 2 | a)            | Classify IC engines based on cylinder arrangement.                                                                                                                         | CO1      | 7 Marks    |
|   | b)            | Explain briefly about:                                                                                                                                                     | CO4      | 7 Marks    |
|   |               | 1) Heat loss. (11) Time loss. (111) Blow down loss factors.                                                                                                                |          |            |
|   |               | UNIT-II                                                                                                                                                                    |          |            |
| 3 | a)            | What is meant by flame front propagation and discuss the factors affecting flame speed.                                                                                    | CO4      | 7 Marks    |
|   | b)            | What is meant by detonation as applied to SI engines and discuss the factors affecting detonation.                                                                         | CO2      | 7 Marks    |
|   |               | (OR)                                                                                                                                                                       |          |            |
| 4 | a)            | Briefly explain the combustion phenomena in CI engines.                                                                                                                    | CO2      | 7 Marks    |
|   | b)            | Discuss the factors to be considered for selecting CI engine fuel and                                                                                                      | CO2      | 7 Marks    |
|   |               | explain about its rating.                                                                                                                                                  |          |            |
|   |               | (UNIT-III)                                                                                                                                                                 |          |            |
| 5 | a)            | What is the difference between Indicated power and Brake power and                                                                                                         | CO2      | 7 Marks    |
|   |               | discuss different efficiencies used in the performance of IC engines                                                                                                       |          |            |
|   | b)            | A 2-stroke CI engine develops a brake power of 3.72kW. Its frictional                                                                                                      | CO3      | 7 Marks    |
|   |               | power is 0.75 kW. Its fuel consumption is 1.8 kg/hr and works with an air                                                                                                  |          |            |
|   |               | fuel ratio of 20:1. The heating value of fuel is 40000 kJ/kg. Calculate:                                                                                                   |          |            |
|   |               | 1) Indicated Power. 11) Mechanical Efficiency.                                                                                                                             |          |            |
|   |               | 11) Air consumption per hour. (v) Indicated Thermal Efficiency.                                                                                                            |          |            |
|   |               | v) Brake Inermal Efficiency.                                                                                                                                               |          |            |
| 6 |               | (UR)                                                                                                                                                                       | $CO^{2}$ | 14 Mortra  |

(OR)

of stoichiometric air fuel ratio value for Octane (C<sub>8</sub> H<sub>18</sub>) fuel.

- 8 Distinguish between Higher and Lower Calorific values and discuss any 7 Marks CO2 a) one method for determination of calorific value of a given solid/liquid fuel. b) The percentage weight analysis of a fuel supplied to an IC engine is as CO5 7 Marks follows: C=85%,  $H_2 = 15\%$ , The air fuel ratio 13.5:1. If all the carbon is burnt either to CO or CO<sub>2</sub> and if there is no free oxygen in the exhaust gases, calculate volumetric analysis of the dry products of combustion. UNIT-V 9 Classify the compressors. CO1 7 Marks a) Explain the working of single stage reciprocating compressor with the b) CO1 7 Marks help of P-V and T-s diagrams. (**OR**) Compare Centrifugal and Axial flow compressors. 10 a) CO2 7 Marks A single stage double-acting air compressor is required to deliver 14m<sup>3</sup> of CO2 7 Marks b) air per minute measured at 1.013 bar and 15 C. The delivery pressure is 7 bar and the speed 300r.p.m. Take the clearance volume as 5% of the
  - swept volume with the compression and expansion index of n = 1.3
  - Calculate: i) Swept volume of the cylinder.
    - ii) The delivery temperature.
      - iii) Indicated.

#### **II B.Tech II Semester (SVEC-16) Supplementary Examinations August – 2021**

#### ANALOG COMMUNICATIONS [Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) What is the major drawback in Amplitude Modulation (AM)? Explain, CO1 4 Marks how we overcome that drawback by using DSB-SC.
  - b) An AM signal  $S(t)=20(1+0.9\cos(2\pi \times 10^4 \times t))\cos(2\pi \times 10^6 \times t)$  is CO4 6 Marks transmitted into free space using an antenna whose resistance is 5 $\Omega$ . Sketch the spectrum of AM signal and calculate Bandwidth, Power Radiated and Modulation Efficiency.
  - c) Discuss how a message signal recovered from a DSB-SC wave using CO1 4 Marks Coherent Detector.

#### (OR)

- 2 a) Discuss how an envelope detector extracts original message signal from CO1 6 Marks an AM signal.
  - b) An AM transmitter radiates 50W, when the carrier is modulated by a CO4 8 Marks sinusoidal signal with modulation index of 0.707:
    - i) Determine the modulation efficiency, Carrier Power, Sideband Power.
    - ii) Determine the Peak Amplitude of the carrier before modulation and after modulation.

### UNIT-II

- 3 a) Explain the indirect method of generating WBFM signal. CO1 4 Marks
  - b) Consider an angle modulated signal  $S(t) = 8\cos [8\pi 10^6 t + 2\sin (8\pi 10^3 t)]$ . CO4 10 Marks Find the following:
    - i) Carrier frequency.
    - ii) Modulating signal frequency.
    - iii) Instantaneous frequency at time: 0.5ms., and 1ms.
    - iv) Maximum phase deviation.
    - v) Maximum frequency deviation.

#### (**OR**)

- 4 a) Consider an FM signal  $f(t) = \cos[2\pi f_c t + \beta_1 \sin(2\pi f_1 t) + \beta_2 \sin(2\pi f_2 t)]$ . Find the CO4 5 Marks maximum frequency deviation of the FM signal.
  - b) Discuss how frequency discrimination method is useful to extract message CO1 7 Marks signal from FM signal.
  - c) Write any two differences between NBFM and WBFM. CO1 2 Marks

# (UNIT-III)

- 5 Estimate Signal to Noise ratio of a DSB-SC system. CO2 14 Marks (OR)
- 6 Discuss about the following. i) FM capture Effect. ii) Pre- Emphasis. iii) De-Emphasis. CO2 14 Marks

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) Analyse mathematically the *direction* and *magnitude* of E in terms of the CO1 7 Marks potential V and hence deduce that  $E = \operatorname{grad} V$ .
  - b) The potential field at the point  $P(r, \theta, \varphi)$  is  $V = (10/r^2) \sin \theta \cos \varphi$ . CO4 7 Marks Evaluate the value of electric flux density D at  $(2, \pi/2, 0)$ .

#### (OR)

- 2 a) An infinitely long straight filament carrying a direct current I is placed CO1 7 Marks along z-axis. Apply Biot-Savart's law to calculate the value of magnetic field intensity H at the point  $(\rho, \varphi, z)$ .
  - b) An infinitely long filamentary conductor, which carries a current CO4 7 Marks I = 5.0 A, is placed parallel to the *y*-axis at x = 2m and z = -2m. Calculate the magnetic field intensity H at (0, 0, 0).

# UNIT-II)

- 3 a) In a material for which  $\sigma = 5.0$  S/m and  $\epsilon_r = 1$ , the electric field intensity CO2 7 Marks is  $E = 250 \sin 10^{10} t$  (V/m). Calculate the *conduction* and *displacement* current densities, and the frequency at which both have equal magnitudes.
  - b) Develop the Maxwell's equation,  $\nabla \times E = -\frac{\partial B}{\partial t}$  from Faraday's law of CO1 7 Marks electromagnetic induction.

#### (**OR**)

- 4 a) Develop the boundary conditions on *tangential* and *normal components* of CO1 7 Marks time varying electric field E, across the interface between two media with constants  $\mu_1$ ,  $\in_1$  and  $\mu_2$ ,  $\in_2$ .
  - b) Derive the Maxwell's equations in integral form, from differential form CO2 7 Marks for time harmonic fields, and describe the physical meaning of integral forms.

# UNIT-III)

- 5 a) Define *polarization* of a wave, and describe mathematically *linear*, CO6 7 Marks *elliptical* and *circular* polarizations with illustrating diagrams.
  - b) Derive the expressions for  $\alpha$  and  $\beta$  in terms of the constants of the CO5 7 Marks medium  $\mu$ ,  $\epsilon$  and  $\sigma$  for a *uniform plane wave* propagating in a lossy conducting medium.

#### (OR)

- 6 a) What is Poynting vector? Prove Poynting theorem from first principles. CO5 7 Marks
  - b) Derive the expressions for  $\alpha$ ,  $\beta$ ,  $\nu_p$  and  $\eta$  for the wave propagating in a CO6 7 Marks good dielectric medium.

# UNIT-IV

- 7 a) Obtain the equations for attenuation and phase constants of a transmission CO3 7 Marks line in terms of R, L, C and G.
  - b) Derive the condition for distortion less line and hence justify how the CO2 7 Marks *frequency* and *phase* distortions can be eliminated on a transmission line at low frequency.

### (OR)

- 8 a) The constants of a transmission line are R=6  $\Omega$ /km, L=2.2 mH/km CO3 7 Marks G=0.25x10<sup>-3</sup>mho/km, C=0.005 $\mu$ f/km. Find the attenuation constant, phase shift constant at 1000Hz.
  - b) Define propagation constant. Obtain the expressions for the wavelength CO2 7 Marks and velocity of propagation of voltage and current waves a transmission line.

# UNIT-V

9 a) Discuss the concept of Single stub matching.
b) Define VSWR. Deduce the relation between VSWR and reflection CO4 7 Marks coefficient.

### (OR)

- 10 a) The characteristic impedance of a certain line is  $710 \angle 14^{\circ}\Omega$  and CO1 7 Marks propagation constant of 0.007+j0.028 per km. the line is terminated in a  $300\Omega$  resistor. Calculate the input impedance of the line if its length is 100 km.
  - b) A single stub is to match a  $40\Omega$  line to a load of 200-j $100\Omega$ . The CO4 7 Marks wavelength is 3.0 meters. Determine the shortest distance from the load to the stub location and the proper length of the short-circuited stub.

# Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a)         | Explain the AC characteristics of an Op-amp.                                                                                                            | CO1 | 7 Marks  |
|---|------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|   | b)         | For an Op-amp, CMRR=10dB, difference mode gain $A_d$ =100. The output voltage changes by 20v in 4µsec. Calculate                                        | CO4 | 7 Marks  |
|   |            | i) Common Mode Gain (A <sub>c</sub> ); ii) Slew Rate.                                                                                                   |     |          |
|   |            | (OR)                                                                                                                                                    |     |          |
| 2 | a)         | Why a level translator is needed in an Op-amp circuit? Explain different level translator circuits.                                                     | CO1 | 6 Marks  |
|   | b)         | Why Compensation technique is implemented in an Op-amp? Explain the concept of Pole-Zero Compensation technique.                                        | CO2 | 8 Marks  |
|   |            | UNIT-II                                                                                                                                                 |     |          |
| 3 | a)         | Derive the relationship between input and output of an Inverting amplifier using 741 Op-amp in both ideal and practical conditions.                     | CO2 | 7 Marks  |
|   | b)         | Explain the operation of Full wave rectifier using 741 Op-amp.                                                                                          | CO2 | 7 Marks  |
| Δ | a)         | Explain how log operations are performed by using 741 Op-amp                                                                                            | CO1 | 7 Marks  |
|   | b)         | Design a Triangular Wave generator for the following specifications:                                                                                    | CO4 | 7 Marks  |
|   | ,          | $V_0=10V_{P-P}$ and $f_0=1$ KHz.                                                                                                                        |     |          |
|   |            | (UNIT-III)                                                                                                                                              |     |          |
| 5 | a)         | Explain how an IC voltage regulator works.                                                                                                              | CO1 | 7 Marks  |
|   | b)         | Explain the working of Series Op-amp regulator.                                                                                                         | CO1 | 7 Marks  |
|   |            | (OR)                                                                                                                                                    |     |          |
| 6 | a)         | Why the Narrow Band Pass filter is called as notch filter? Explain.                                                                                     | CO1 | 7 Marks  |
|   | b)         | Design a first order Low Pass Butterworth filter with a cut-off frequency of 3 KHz and pass band gain of 3.                                             | CO4 | 7 Marks  |
|   |            | UNIT-IV                                                                                                                                                 |     |          |
| 7 | a)         | How can pulse width modulation be achieved using 555 timer?                                                                                             | CO5 | 6 Marks  |
|   | b)         | Design an astable multivibrator to generate a:                                                                                                          | CO4 | 8 Marks  |
|   |            | i) 50% duty cycle. ii) 70% duty cycle.                                                                                                                  |     |          |
| _ |            | (OR)                                                                                                                                                    |     |          |
| 8 | a)         | A PLL has free running frequency $f_c = 400$ KHz low pass filter bandwidth<br>of 10 KHz. If an input signal frequency applied is 500 KHz, will the loop | CO4 | 9 Marks  |
|   | <b>b</b> ) | Explain the role of low pass filter in PLI                                                                                                              | CO1 | 5 Marks  |
|   | U)         | Explain the fole of low pass filter in f LL.                                                                                                            | COI | JIVIAIKS |

# UNIT-V

- 9 Determine the full scale voltage and resolution of 4-bit DAC for CO4 a) 6 Marks  $V_{REF}$ =12V and 2R=R=10 K $\Omega$ .
  - LSB of a 9-bit DAC is represented by 19.6mV. If an input of all zero bits CO4 b) 8 Marks is represented by 0V.
    - i) Find the output of DAC for an input, 101101101 and 011011011.
    - ii) What is the Full Scale Reading (FSR) of this DAC?

#### (**OR**)

- Explain the operation of Dual Slope ADC with a neat sketch. 10 a)
- 7 Marks CO1 A dual slope ADC uses a 16-bit counter and a 4 MHz clock rate. The CO4 7 Marks b) maximum input voltage is +10V. The maximum integrator output voltage should be -8V when the counter has cycled through  $2^n$  counts. The capacitor used in the integrator is 0.1µF. Find the value of the resistor R of the integrator. If the analog signal voltage is +4.129 V, find the equivalent digital number.

|   | b) | Find (i) $E(X)$ . (ii) $E(4X-1)$ . (iii) $E(X^2)$ . (iv) $E((X-1)^2)$ .<br>Prove that a linear transformation of Gaussian random variable produces Gaussian random variable?                                                                                                                                                                        | CO2 | 6 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                                |     |         |
| 4 | a) | Define probability distribution function. Consider the experiment of tossing four fair coins. The random variable X is associated with number of tails showing. Compute and sketch the cumulative distribution function of X                                                                                                                        | CO2 | 7 Marks |
|   | b) | Define uniform density function and deduce mean, mean square value and variance for it.                                                                                                                                                                                                                                                             | CO2 | 7 Marks |
|   |    | UNIT-III)                                                                                                                                                                                                                                                                                                                                           |     |         |
| 5 | a) | Given $f_{XY}(x,y) = u(x)u(y)xe^{-x(y+1)}$ then find the marginal density functions of X and Y and conditional density functions.                                                                                                                                                                                                                   | CO2 | 7 Marks |
|   | b) | Random variables X and Y have respective density functions                                                                                                                                                                                                                                                                                          | CO2 | 7 Marks |
|   |    | $f(x) = \frac{1}{a} [u(x) - u(x - a)]$                                                                                                                                                                                                                                                                                                              |     |         |
|   |    | $f_y(y) = bu(y)e^{-by}$ a > 0, b > 0. Find the density function of W = X + Y, if X and Y are stastically independent.                                                                                                                                                                                                                               |     |         |

1

6 a) Let X and Y have joint density function.  

$$f_{XY}(x, y) = \begin{cases} x + y; 0 \le x \le 1, 0 \le 1 \\ 0; \text{ for any other values} \end{cases}$$
Find the conditional expectation of X given Y and Y given X.  
b) Gaussian random variables X<sub>1</sub> and X<sub>2</sub> for which CO3 7 Marks  

$$\overline{X_1} = 2, \overline{X_2} = -1, \sigma_{X_1}^2 = 9, \sigma_{X_2}^2 = 4 \text{ and } C_{X_1X_2} = -3 \text{ are transformed to}$$
new random variables Y<sub>1</sub> and Y<sub>2</sub> according to Y<sub>1</sub> =  $-X_1 + X_2$  and  
 $Y_2 = 0 2X_1 - 3X_2$ . Find  $C_{Y_1Y_2}$  and  $\rho_{Y_1Y_2}$ .  
7 a) Define a K<sup>th</sup> order stationary random processes. When, it will become CO2 7 Marks  
strict sense stationary random processes.  
b) The autocorrelation function of a stationary process is CO3 7 Marks  
 $R_{xx}(\tau) = 25 + \frac{4}{1 + 6\tau^2}$  then find the mean and variance of the process.  
8 a) Define auto correlation function and write its properties.  
b) Explain Gaussian random processes.  
CO2 7 Marks  
(OR)  
8 a) Define noise and classify different types of noise and explain them briefly.  
CO4 7 Marks  
b) Develop the expression for noise voltage when resistors are connected in CO4 7 Marks  
b) Develop the expression for noise voltage when resistors are connected in CO4 7 Marks

(OR)

- 10 Develop the expression for Noise Figure and Noise Temperature for CO4 14 Marks cascaded stages of N amplifiers.

### DATABASE MANAGEMENT SYSTEMS

[Computer Science and Engineering, Information Technology,

**Computer Science and Systems Engineering**]

Time: 3 hours

#### Max. Marks: 70

# Answer One Question from each Unit

# All questions carry equal marks

# UNIT-I

| 1  | a)            | Compare data models? Explain network, hierarchical and relational model in detail.                                                                                                                                                                                                               | CO1        | 7 Marks            |
|----|---------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|    | b)            | Analyze the responsibilities of DBA and database designers. <b>(OR)</b>                                                                                                                                                                                                                          | CO1        | 7 Marks            |
| 2  | a)<br>b)      | Describe in detail about Entity integrity and Referential Integrity in detail.<br>Consider an E-R diagram for a car-insurance company whose customers<br>own one or more cars each. Each car has associated with it zero to any<br>number of recorded accidents. State any assumptions you make. | CO1<br>CO3 | 7 Marks<br>7 Marks |
| 3  | a)            | Discuss the various update operation on relation and types of integrity constraints that must be checked for each update operation.                                                                                                                                                              | CO3        | 7 Marks            |
|    | b)            | What is role of participation? When is it necessary to use role names in description or relation types?                                                                                                                                                                                          | CO3        | 7 Marks            |
|    | ``            |                                                                                                                                                                                                                                                                                                  | 005        | 7 ) ( 1            |
| 4  | a)<br>b)      | Explain the integrity constraints supported by SQL.<br>What is relational algebra? Discuss the various operations of relational algebra                                                                                                                                                          | CO5<br>CO2 | 7 Marks<br>7 Marks |
|    |               |                                                                                                                                                                                                                                                                                                  |            |                    |
| 5  | a)            | Give a detailed description about query processing and optimization                                                                                                                                                                                                                              | CO4        | 7 Marks            |
| 5  | $\frac{a}{b}$ | Write short notes on the following.                                                                                                                                                                                                                                                              | $CO_{4}$   | 7 Marks            |
|    | 0)            | i) Order by clause and LIKE operator. ii) Set operators.<br>(OR)                                                                                                                                                                                                                                 | 000        | , 101001115        |
| 6  | a)            | Differentiate functional dependency and multi valued dependency with example.                                                                                                                                                                                                                    | CO1        | 7 Marks            |
|    | b)            | Explain 4NF and 5NF with an example.                                                                                                                                                                                                                                                             | CO2        | 7 Marks            |
|    |               | UNIT-IV                                                                                                                                                                                                                                                                                          |            |                    |
| 7  | a)            | Explain time stamp based protocols for Concurrency Control.                                                                                                                                                                                                                                      | CO5        | 7 Marks            |
|    | b)            | What are the different types of lockings? In multiple-granularity locking,                                                                                                                                                                                                                       | CO4        | 7 Marks            |
|    |               | what is the difference between implicit and explicit locking?                                                                                                                                                                                                                                    |            |                    |
| 0  | -)            | (OR)                                                                                                                                                                                                                                                                                             | CO2        | 7 \ ( 1            |
| 8  | a)            | Distinguish serial schedule and serializable schedule. Give relevant                                                                                                                                                                                                                             | 003        | / Marks            |
|    | b)            | What are checkpoints? Explain the purpose of checkpoints mechanism                                                                                                                                                                                                                               | CO3        | 7 Marks            |
|    | 0)            | How often should check points be performed?                                                                                                                                                                                                                                                      | 000        | ,                  |
|    |               | UNIT-V                                                                                                                                                                                                                                                                                           |            |                    |
| 9  | a)            | What is the difference between conflict serializability and view serializability? Explain in detail with an example                                                                                                                                                                              | CO4        | 7 Marks            |
|    | b)            | Briefly discuss ACID property with an example.                                                                                                                                                                                                                                                   | CO4        | 7 Marks            |
|    | ,             | (OR)                                                                                                                                                                                                                                                                                             |            |                    |
| 10 | a)            | Define B+ Tree file organization in detail.                                                                                                                                                                                                                                                      | CO5        | 7 Marks            |
|    | b)            | Identify a B+ tree to insert the following key elements (order of the tree is 3) 5,3,4,9,7,15,14,21,22,23.                                                                                                                                                                                       | CO5        | 7 Marks            |

#### II B.Tech II Semester (SVEC16) Supplementary Examinations August – 2021

#### **INDUSTRIAL INSTRUMENTATION - I** [Electronics and Instrumentation Engineering]

**Time: 3 hours** Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 Give three different units of force and summarize different force sensing CO2 7 Marks a) mechanisms. Elaborate on the working principle of torque measurement based on b) CO1 7 Marks Relative angular twist. (**OR**) 2 Explain the following. CO2 14 Marks i) Hydrostatic. ii) Analysis and selection of torque sensors. (UNIT-II) Define relative acceleration. Explain the construction of piezoelectric type CO2 3 7 Marks a) accelerometer in detail. Elaborate on the principle of gyroscope and explain three axis gyro. 7 Marks b) CO2 (OR)4 a) Identify an appropriate sensor for measurement of velocity which CO4 7 Marks consume very little power and explain in detail. Explain the principle and operation of tachogenerators. CO2 7 Marks b) (UNIT-III) 5 a) What is absolute pressure? With neat sketch, explain momentum transfer CO<sub>2</sub> 7 Marks gauge. b) Elaborate on manometer and its types. CO2 7 Marks (**OR**) With neat sketch, explain Mcleod gauge and Knudsen gauge. 6 CO2 7 Marks a) Analyze the requirements for selection of pressure sensors. CO3 7 Marks b) UNIT-IV List the merits and demerits of thermopile and thermocouple. With neat CO4 7 a) 7 Marks sketch, explain them in detail. Elaborate on thermocouple burnout detection and high temperature b) CO2 7 Marks measurement methods. (**OR**) 8 Analyze 2-wire, 3-wire and 4-wire lead resistance methods. CO1 7 Marks a) b) Explain thermoelectric effects and thermocouple laws. CO2 7 Marks UNIT-V 9 Analyze different temperature sensors. 7 Marks CO2 a) Explain about fiber optic thermometer with neat sketch. CO1 7 Marks b) (**OR**) 10 Explain about calibration and simulation for temperature sensors. CO1 7 Marks a) Elaborate on Johnson noise thermometer. CO2 7 Marks b)

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a)            | Explain the basic operational concepts of 8085 microprocessor.                                            | CO1        | 7 Marks            |
|----|---------------|-----------------------------------------------------------------------------------------------------------|------------|--------------------|
|    | b)            | Explain the functional units of a computer with neat sketch.                                              | CO1        | 7 Marks            |
| r  | a)            | $(\mathbf{OK})$<br>What is a DPAM2 Explain the types of DPAM2s with suitable diagrams                     | $CO^{2}$   | 7 Mortes           |
| Ζ  | $\frac{a}{b}$ | Analyze the memory hierarchy in terms of speed size and cost                                              | CO3        | 7 Marks<br>7 Marks |
|    | 0)            |                                                                                                           | 001        | , 1.1.             |
|    |               | UNIT-II                                                                                                   |            |                    |
| 3  |               | Draw the pin diagram of 8085 and explain the function of each pin in detail.                              | CO1        | 14 Marks           |
|    |               | (OR)                                                                                                      |            |                    |
| 4  |               | Explain 8085 data transfer instructions with a suitable example.                                          | CO2        | 14 Marks           |
|    |               | (UNIT-III)                                                                                                |            |                    |
| 5  | a)            | What is meant by addressing mode? Explain the different types of                                          | CO1        | 7 Marks            |
|    |               | addressing modes.                                                                                         |            |                    |
|    | b)            | Differentiate between software and hardware interrupts.                                                   | CO1        | 7 Marks            |
| c  |               | (OR)                                                                                                      | <b>a a</b> | <b>5</b> ) ( 1     |
| 6  | a)            | Write an 8085 program to arrange an array of data in descending order.                                    | $CO_3$     | 7 Marks            |
|    | 0)            | Distinguish between the memories mapped 1/O and peripheral 1/O.                                           | CO4        | / Marks            |
|    |               | UNIT-IV                                                                                                   |            |                    |
| 7  |               | Design a bus system for four registers using multiplexers.                                                | CO3        | 14 Marks           |
|    |               | (OR)                                                                                                      |            |                    |
| 8  | a)            | Design a 4 bit combinational circuit for shifting bits to the right or to the left.                       | CO3        | 7 Marks            |
|    | b)            | Compare RISC and CISC processors.                                                                         | CO2        | 7 Marks            |
|    |               |                                                                                                           |            |                    |
| 9  |               | What are the pipeline conflicts that cause the instruction pipeline to deviate from its normal operation? | CO1        | 14 Marks           |
|    |               | (OR)                                                                                                      |            |                    |
| 10 |               | Develop an algorithm to perform addition and subtraction operation explains with an example.              | CO5        | 14 Marks           |

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a) | Explain the spiral model. What is the task region in the spiral model?<br>How does the customer wins by getting the system or product that satisfy<br>the majority of the customer's needs and the developer wins by working<br>to realistic and achievable budgets and deadline? | CO1 | 7 Marks |
|---|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|   | b) | What are the major differences between system engineering and software engineering? State explains the stages that distinguish the two.                                                                                                                                           | CO1 | 7 Marks |
| 2 | a) | Explain the Evolutionary and Incremental Model. What are the advantages and disadvantages?                                                                                                                                                                                        | CO1 | 7 Marks |
|   | b) | Give at least FIVE reasons for prototyping is problematic.                                                                                                                                                                                                                        | CO1 | 7 Marks |
| 3 | a) | What is the prototyping technique? How prototype models are prepared for a software process? Discuss.                                                                                                                                                                             | CO2 | 7 Marks |
|   | b) | Draw a DFD and CFD of a test monitoring system for Gas Turbine.<br>(OR)                                                                                                                                                                                                           | CO2 | 7 Marks |
| 4 | a) | What is requirement engineering? State its process and explain requirements elicitation problem.                                                                                                                                                                                  | CO2 | 7 Marks |
|   | b) | Why the customer interaction is a difficult process? Explain one formal procedure used for customer interaction.                                                                                                                                                                  | CO2 | 7 Marks |
|   |    | UNIT-III                                                                                                                                                                                                                                                                          |     |         |
| 5 | a) | Briefly explain the use of global variables in context of coupling cohesion.                                                                                                                                                                                                      | CO3 | 7 Marks |
|   | b) | What is transform mapping? Explain the process with an illustration.<br>What is its strength and weakness.                                                                                                                                                                        | CO3 | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                              |     |         |
| 6 | a) | What are the benefits of horizontal partitioning?                                                                                                                                                                                                                                 | CO3 | 7 Marks |
|   | b) | Describe the golden rules for interface design.                                                                                                                                                                                                                                   | CO3 | 7 Marks |
|   |    | (UNIT-IV)                                                                                                                                                                                                                                                                         |     |         |
| 7 | a) | How the RST condition is verified in black box testing? Explain with example.                                                                                                                                                                                                     | CO4 | 7 Marks |
|   | b) | What are the attributes of a good test? Explain the test case design.                                                                                                                                                                                                             | CO4 | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                              |     |         |
| 8 | a) | Explain the testing objectives and its principles.                                                                                                                                                                                                                                | CO4 | 7 Marks |
|   | b) | Explain automated testing tools. How test cases are generated? Discuss when to stop testing. What is performance testing? Describe.                                                                                                                                               | CO4 | 7 Marks |

# UNIT-V

| 9  | a)<br>b) | Explain in detail about Process Improvement.                     | CO6 | 7 Marks<br>7 Marks |
|----|----------|------------------------------------------------------------------|-----|--------------------|
|    | 0)       | Explain in detail business process reengineering.                | 000 | / Warks            |
|    |          | (OR)                                                             |     |                    |
| 10 | a)       | Propose RMMM plan for Staff inefficiency risk while developing a | CO6 | 7 Marks            |
|    |          | software project.                                                |     |                    |
|    | b)       | What are all the formulas for cyclomatic complexity? Calculate   | CO4 | 7 Marks            |

b) What are all the formulas for cyclomatic complexity? Calculate CO4 7 Marks cyclomatic Complexity for greatest of three numbers.

#### II B.Tech II Semester (SVEC-16) Supplementary Examinations August – 2021

# CONTROL SYSTEMS

#### [Electronics and Instrumentation Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) Discuss the effect of feedback on Gain, Stability, Sensitivity and Noise. CO1 7 Marks
  - b) Derive the transfer function of following electrical network. Take input as CO4 7 Marks V(t) and output is current through the inductor.

2 For the mechanical system, draw the electrical analogous circuits based on CO4 14 Marks Torque-Voltage and Torque-Current analogy along their equations.

# UNIT-II

- The transfer function of a unity feedback system CO2 14 Marks  $G(S)H(S) = \frac{k}{s(s+2)(s+4)}$ . Sketch the root locus and determine:
  - i) The value of k to have 40 % overshoot for unit step input.
  - ii) Value of K<sub>v</sub> corresponding to value of K as obtained in (i).
  - iii) Value of settling time t<sub>s</sub>.

#### (OR)

4 Determine the resonant frequency  $W_r$ , resonant peak  $M_r$ , time to reach CO4 14 Marks first overshoot, settling time and band width for the system whose transfer

function is given by 
$$\frac{C(s)}{R(s)} = \frac{5}{S^2 + 2S + 5}$$
.

5 A unity feedback system has an open loop transfer function CO5 14 Marks  $G(S) = \frac{60}{(S+1)(S+2)(S+5)}$ Sketch Nyquist plot for the system and determine whether the closed loop system is stable or not.

(OR)

Sketch the bode plot for system  $G(S)H(S) = \frac{5(1+2S)}{(1+4S)(1+0.25S)}$  and CO5 14 Marks comment on its stability.

- 7 a) What are the types of controllers? Mention the effect of P, PID on CO1 7 Marks controllers.
  - b) Explain the effect of the P controller on time response characteristics. CO1 7 Marks (OR)

8 A unity feed back system has an open-loop transfer function of CO3 14 Marks  $G(S) = \frac{4}{S(2S+1)}$ . It is desired to obtain a phase margin of 40° without sacrificing the K<sub>v</sub> of the system. Design a suitable lag-network and compute the value of network components assuming any suitable impedance level.

# UNIT-V

9 a) Explain the concept of controllability and observability.
b) The transfer function of a control system is given by CO2 7 Marks
V(s) S+2

 $\frac{Y(s)}{U(s)} = \frac{S+2}{S^3+9S^2+26S+24}$ . Check for controllability and observability.

#### (OR)

10 A system is characterized by the following state space equations. CO4 14 Marks

$$\begin{bmatrix} \dot{X}_1 \\ \dot{X}_2 \end{bmatrix} = \begin{bmatrix} -3 & 1 \\ -2 & 0 \end{bmatrix} \begin{bmatrix} X_1 \\ X_2 \end{bmatrix} + \begin{bmatrix} 0 \\ 1 \end{bmatrix} u; t > 0$$
$$y = \begin{bmatrix} 1 & 0 \end{bmatrix} \begin{bmatrix} X_1 \\ X_2 \end{bmatrix}$$

- i) Find the transfer function of the system.
- ii) Compute the state transition matrix.

6

iii) Solve the state equation for the unit step input under zero initial conditions.

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a) | Draw the circuit of CC amplifier and explain its working using h-model approximation analysis                                                                         | CO2 | 7 Marks  |
|---|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|   | b) | Explain the operation of CB amplifier.                                                                                                                                | CO3 | 7 Marks  |
|   | ,  | (OR)                                                                                                                                                                  |     |          |
| 2 | a) | Differentiate different types of coupling schemes in multistage amplifiers.                                                                                           | CO2 | 5 Marks  |
|   | b) | Derive the expression for voltage gain of a two-stage RC coupled CE amplifier at mid frequency range.                                                                 | CO4 | 9 Marks  |
|   |    | UNIT-II                                                                                                                                                               |     |          |
| 3 | a) | Derive the expression for $A_v$ , $R_i$ , $R_o$ of common drain amplifier at high frequencies.                                                                        | CO3 | 8 Marks  |
|   | b) | Draw the hybrid $\pi$ model and explain $\mathbf{g}_{m}$ and $\mathbf{r}_{b'e}$ .                                                                                     | CO4 | 6 Marks  |
|   |    | (OR)                                                                                                                                                                  |     |          |
| 4 | a) | Derive the expression for CE current gain with resistive load.                                                                                                        | CO3 | 8 Marks  |
|   | b) | Short circuit current gain of a transistor is 25 at a frequency of 2MHz. If                                                                                           | CO4 | 6 Marks  |
|   |    | $f_{\beta} = 200 \text{kHz}$ , calculate:                                                                                                                             |     |          |
|   |    | i) $\mathbf{f}_{\mathbf{T}}$ ii) hfe.                                                                                                                                 |     |          |
|   |    | iii)  Ai  at a frequency of10MHz.                                                                                                                                     |     |          |
|   |    | iv)  Ai  at a frequency of 100MHz.                                                                                                                                    |     |          |
|   |    | (UNIT-III)                                                                                                                                                            |     |          |
| 5 | a) | Enumerate the effects of negative feedback on the various characteristics of the amplifier with suitable derivations.                                                 | CO5 | 9 Marks  |
|   | b) | An amplifier has a voltage gain of 200, before negative feedback is<br>applied. When negative feedback is applied, the nominal gain changes by                        | CO4 | 5 Marks  |
|   |    | 10%. Find the percentage change in the overall gain.                                                                                                                  |     |          |
|   |    | (OR)                                                                                                                                                                  |     |          |
| 6 | a) | Derive the expression for frequency of oscillations and the minimum gain<br>required for sustained oscillations of the RC phase shift oscillator with<br>neat diagram | CO3 | 10 Marks |
|   | b) | An Hartlay oscillator is designed with $L_{z}=20\mu H_{z}L_{z}=02mH$ and a variable                                                                                   | CO4 | 4 Marks  |
|   | 0) | capacitance. Determine the range of capacitance value, if the frequency is varied between 950 to 2050kHz                                                              |     |          |
|   |    | (UNIT-IV)                                                                                                                                                             |     |          |
| 7 | a) | Analyze the working of series fed class A power amplifier and derive the                                                                                              | CO6 | 10 Marks |
| , | u) | equation for efficiency.                                                                                                                                              | 000 | 10 maine |
|   | b) | For transformer, the load connected to the secondary has an impedance of                                                                                              | CO4 | 4 Marks  |
|   |    | $8\Omega$ . Its reflected impedance on primary is observed to be $648\Omega$ . Calculate the turn ratio.                                                              |     |          |
|   |    | (OR)                                                                                                                                                                  |     |          |
| 8 | a) | Explain the working of complementary symmetry class-B push-pull power amplifier and derive the equation for efficiency.                                               | CO3 | 8 Marks  |
|   | b) | Write short notes on thermal stability and heat sinks.                                                                                                                | CO2 | 6 Marks  |
### UNIT-V

- 9 a) Draw and explain the working of double tuned amplifier. CO2 8 Marksb) The bandwidth for double tuned amplifier is 10kHz. Calculate the CO5 6 Marks
  - b) The bandwidth for double tuned amplifier is TokHZ. Calculate the COS 6 Marks bandwidth if such three stages are cascaded.

#### (OR)

10 Explain the frequency response of stagger pair and derive the expression CO5 14 Marks for the gain of stagger tuned amplifier.

#### SIGNALS AND SYSTEMS

[Electronics and Instrumentation Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 Define and sketch the following elementary continuous time signals. a) CO3 7 Marks i) Unit impulse signal. ii) Exponential. iii) unit step function. Check the system  $y(t) = \cos[x(t)]$  is linear, Time invariant and stable. b) CO4 7 Marks (**OR**) 2 Define the following properties for a continuous time system. CO3 7 Marks a) i) Causal or non causal. ii) Time variant or time invariant. iii) Linear or non linear. iv) Stable or unstable. Test whether the signal is periodic or Not. If so find the fundamental CO4 7 Marks b) i)  $x(t) = e^{j \cdot 10t}$ Period ii)  $x(t) = \cos(\pi/3t) + \sin(\pi/5t)$ . UNIT-II ) 3 Explain about complex Fourier spectrum. CO3 7 Marks a) Find the Fourier transform of x(t) = u(2t), where u(t) is the unit step b) CO2 7 Marks function. (**OR**) 4 State any four properties of Fourier series. CO2 7 Marks a) Define Fourier transform. Explain the properties of Fourier transform. CO3 7 Marks b) (UNIT-III) 5 State and prove any four properties of Auto correlation function. CO2 7 Marks a) Determine the autocorrelation function and energy spectral density CO1 7 Marks b) function of  $x(t) = e^{-at} u(t)$ . (**OR**) Explain briefly detection of periodic signals in the presence of noise by 6 a) CO2 7 Marks correlation. Analyze the conditions required by the real time communication system in b) CO3 7 Marks order to have distortion less transmission. UNIT-IV Find the Laplace transform of the following signals. 7 CO<sub>2</sub> 7 Marks a) i) Impulse function. ii) unit step function. iii) A sin  $(w_0 t) u(t)$ . Explain how Laplace transform is useful to analyze the stability of system b) CO1 7 Marks in S domain. (**OR**) Prove the scaling and time shifting properties of Laplace transform. 8 CO4 7 Marks a) Determine the Laplace transform of  $x(t) = e^{-at} \operatorname{Cos}(wt) u(t)$ . CO1 7 Marks b) UNIT-V 9 State and prove the following properties of Z transform. a) CO1 7 Marks ii) Time shifting. iii) Differentiation. i) Linearity. b) What is aliasing? Explain its effect on sampling. CO2 7 Marks  $(\mathbf{OR})$ Derive the relation between Z transform and Fourier transform. 10 CO3 7 Marks a) Using appropriate method find y(n) of the Z transformed signal Y(Z)=Z/7 Marks b) CO1  $(Z-1)^2$ . R

#### CONCRETE TECHNOLOGY [Civil Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 What are the Bogue's compounds and explain in detail about their role CO1 14 Marks and influences on the properties of Fresh and Hardened concretes and Durability of concretes?

#### (**OR**)

2 Write different classifications aggregates and explain the influences of CO1 14 Marks size, shape, texture and grading on the properties of Fresh and Hardened concretes and Durability of concretes.

#### UNIT-II)

3 Explain what is the workability of concrete and its influences on the CO2 14 Marks properties of Fresh and Hardened concretes and Durability of concretes.

#### (**OR**)

- 4 Explain about the following properties of hardened concrete and the CO2 14 Marks procedure to measure these properties:
  - i) Compressive strength.
  - ii) Tensile strength.
  - iii) Flexural strength.
  - iv) Maturity Concept of the concrete.

#### (UNIT-III)

- 5 a) Explain in detail how the Creep and the Drying Shrinkage will affect the CO1 10 Marks performance of the concrete.
  - b) Explain the difference between plastic shrinkage and drying shrinkage. CO1 4 Marks (OR)
- 6 Explain in detail the procedure to conduct NDT of a structure deteriorated CO5 14 Marks due to the corrosion of reinforcing steel.

### UNIT-IV

7 Explain in detail about ACI methodology of Concrete Mix Design. CO3 14 Marks

(OR)

1

| 8  | Design a concrete mix for M35 grad<br>concreting, using rounded aggregat<br>the mix design is as given below:                                                   | de for fly ash concrete for the pumped<br>e and using IS method. The data for | CO3 | 14 Marks |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu) II B.Tech II Semester (SVEC-16) Supplementary Examinations, March 2021 ENGINEERING GEOLOGY [Civil Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

Give a brief about scope of geology in civil engineering. CO1 14 Marks (OR)
 List the types of weathering. Give a brief about Chemical weathering of CO1 14 Marks rocks. What is the significance of weathering of rocks in civil engineering?

### UNIT-II

- 3 Give a brief about identification of minerals using physical properties. CO2 14 Marks (OR)
- 4 Give a brief about how various types of rocks are formed. What are their CO2 14 Marks characteristic features? How do you distinguish major rock types in the field?

### UNIT-III

| 5 | a) | Distinguish between strike and dip with neat sketch.     | CO2 | 6 Marks |
|---|----|----------------------------------------------------------|-----|---------|
|   | b) | Highlight on civil engineering considerations of faults. | CO2 | 8 Marks |
|   |    |                                                          |     |         |

6 Give a brief about sub surface investigation using electrical resistivity CO4 14 Marks method. What are the applications of electrical resistivity method in civil engineering?

### UNIT-IV

| 7 |    | What do you understand about hydrological properties of rocks and | CO6 | 14 Marks |
|---|----|-------------------------------------------------------------------|-----|----------|
|   |    | highlight on measures to improve groundwater resources?           |     |          |
|   |    | (OR)                                                              |     |          |
| 8 | a) | Explain the causes of occurrence of earthquakes.                  | CO5 | 8 Marks  |
|   | b) | Highlight on measures to prevent the occurrence of landslides.    | CO5 | 6 Marks  |
|   |    |                                                                   |     |          |

### UNIT-V

9 Give a brief about geological considerations in selection of a suitable site CO3 14 Marks for construction of dam and reservoir. (OR)

- 10 a) Present any case study of a dam how ignorance of geological factors lead CO7 7 Marks to failure of dams.
  - b) Give a brief about geological considerations in site selection for a bridge. CO3 7 Marks

Max. Marks: 70

CO3

7 Marks

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

The isohyets drawn for a storm which occurred over a drainage basin of CO2 14 Marks area 950 sq.km yielded the following information. Determine the average depth of rainfall over the basin.

| Isohyetal interval in mm           | 85-75 | 75-65 | 65-55 | 55-45 | 45-35 |  |  |  |
|------------------------------------|-------|-------|-------|-------|-------|--|--|--|
| Area between<br>isohyetes in sq.km | 125   | 236   | 264   | 175   | 150   |  |  |  |
|                                    |       |       |       |       |       |  |  |  |

#### (OR)

2 The average annual rainfalls in cm at 4 existing raingauge stations in a CO2 14 Marks basin are 105, 79, 70 and 66. If the average depth of rainfall over the basin is to be estimated within 10% error, determine the additional number of gauges needed.

### UNIT-II)

List infiltration indices and In a 140 min storm the following rates of CO2 14 Marks rainfall were observed in successive 20 min intervals:
6, 6, 18, 13, 2, 2 and 12 mm/h. Assuming the ø index value as 3 mm/h and an initial loss of 0.8 mm, determine the total rainfall, net runoff and W- index for the storm.

#### (OR)

- 4 a) Differentiate between evaporation and Evapotranspiration. What are the CO1 7 Marks various factors affecting Evapotranspiration?
  - b) Describe interception and draw typical interception loss curve with a neat CO1 7 Marks sketch.

### (UNIT-III)

5 During a recuperation test conducted on an open well in a region, the CO4 14 Marks water level in the well was depressed by 3m and it was observed to rise by 1.75m in 75 minutes. What is the specific yield of open wells in that region. What could be the yield from a well of 5m diameter under a depression head of 2.5m. What should be the diameter of the well to givbe a yield of 12 lit/s under a depression head of 2m.

#### (OR)

6 Describe the estimation of yield of an open well using recuperation test. CO3 14 Marks

### UNIT-IV

- 7 a) Differentiate channel routing and reservoir routing.
  - b) Describe the most commonly used two techniques for routing of floods CO5 7 Marks through reservoir.

#### (OR)

8 Route the following flood hydrograph through a river reach for which CO4 14 Marks K=12.0 hr, and x=0.20. At the start of the inflow flood, the outflow discharge is 10 cumec.

| Time(hr)       | 0  | 6  | 12 | 18 | 24 | 30 | 36 | 42 | 48 | 54 |
|----------------|----|----|----|----|----|----|----|----|----|----|
| Inflow (cumec) | 10 | 20 | 50 | 60 | 55 | 45 | 35 | 27 | 20 | 15 |

|          |          | <u> </u> |

#### II B.Tech II Semester (SVEC-16) Supplementary Examinations March – 2021

# STRUCTURAL ANALYSIS - I

### [Civil Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

A point with in a loaded beam in under a bending stress of 35Mpa CO1 14 Marks (tensile) and a shear stress of 35Mpa. Find out the principal planes passing through the point and principle stress by using Mohr's circle method.

#### (OR)

2 The stresses on two perpendicular planes through a point in a body are CO1 14 Marks 30Mpa and 15Mpa both tensile along with a shear stress of 25Mpa. Find the magnitude and direction of principal stresses. Also find the magnitude of maximum shear stress

### UNIT-II)

3 Derive expression to find out the equations for slope and deflection of a CO1 14 Marks simply supported beam of length L and uniform EI with a central point load P. evaluate its maximum slope and deflection.

#### (**OR**)

- 4 a) Using moment area theorem, find the maximum deflection in the simply CO3 7 Marks supported beam carrying uniformly distributed load of intensity w per metre length
  - b) A cantilever AB of span 6m is fixe at the end A and propped at end B. It CO2 7 Marks carries a point load of 50kN at mid span level of prop is same as that of fixed end.
    - i) Draw S.F.D and B.M.D.
    - ii) Determine reaction at prop.

### UNIT-III)

5 a) Mention the assumptions and limitations of the Euler's formula.
b) A short column of a rectangular section of size 400 x 200mm is considered of a material with a maximum permissible compressive stress of 90N/mm<sup>2</sup> and tensile stress of 25N/mm<sup>2</sup>, if the compressive load is 1500kN, at what eccentricity can be applied along two principal axes. If the load is increased to 3000kN, what is the permissible eccentricity along the principal axes?

#### (OR)

6 A hollow cost iron column with fixed ends supports an axial load of CO3 14 Marks 1000kN. If the column is 6m long and has an external diameter of 250mm. find the thickness of metal required. Use the Rankine's formulae. Taking a constant = 1/6400 and assume working stress of  $80N/mm^2$ .

SVEC-16

### UNIT-IV)

CO4

7 Marks

7 a) Calculate the fixed end moments for the given beam

b) A beam AB of span 5m fixed at both ends carries a uniformly distributed CO4 7 Marks load of 18kN/m over the whole span. The right end support B sinks by 15mm. determine the fixed end moments and sketch bending moment diagram. Take E = 200kN/mm<sup>2</sup> and  $I = 7.5 \times 10^7$ mm<sup>4</sup>. Find the Fixed end moments for the given beam, support A sinks by 2mm and support B sinks by 3mm.  $E = 2 \times 10^5$ N/mm<sup>2</sup>, I = 40000cm<sup>4</sup>.

(OR)

Analyze the given continuous beam by Clapreyon's theorem of three CO4 14 Marks moments also draw shear force and bending moment diagrams.

### UNIT-V

- A bolt is subjected to an axial pull of 12kN together with a transverse CO2 14 Marks shear force of 6kN. Determine the required diameter of the bolt by using:
  - i) Maximum principal stress theory.
  - ii) Maximum Strain theory.
  - iii) Maximum shear stress theory.

Use the following data:

elastic limit in tension= 300 N/mm<sup>2</sup>, factor of safety = 3 and poisons ratio = 0.3

#### (OR)

A cylindrical shaft made of steel of yield strength 350MPa is subjected to CO1 14 Marks static load consisting of bending moment of 10kN.m and a torsional moment of 30kN.m. Determine the shaft using:

- i) Maximum principal stress theory.
- ii) Maximum Strain theory.
- iii) Maximum shear stress theory.

Take E = 210Gpa, Poisson's ratio = 0.25 and factor of safety = 2.

**II B.Tech II Semester (SVEC-16) Supplementary Examinations March – 2021** 

#### WATER SUPPLY ENGINEERING

[Civil Engineering]

Time: 3 hours

#### Max. Marks: 70

#### **Answer One Ouestion from each Unit** All questions carry equal marks

#### UNIT-I

- 1 a) Prepare a list of factors which are to be considered in the selection of CO<sub>2</sub> 10 Marks source for a water supply scheme. How does the quality of ground water differ from surface water?
  - Find the alkalinity if the water sample is having  $CO_3^{-2}$  ions of 90 mg/L CO1 b) 4 Marks and  $HCO_3^{-1}$  of 61 mg/L.

#### (**OR**)

2 Classify the different types of springs. a)

water as per IS 10500:2012.

- b) Explain how water is drawn from infiltration galleries with a neat sketch. CO1 7 Marks UNIT-II)
- 3 Draw a neat sketch of canal intake and explain the working principle. CO1 4 Marks a) State its merit and demerits.
  - The population of a town as per past census records are furnished below. b) CO<sub>2</sub> 10 Marks Predict the population in the year 2031 and 2041 using the Geometrical increase method.

| Census Year | 1941  | 1951  | 1961  | 1971  | 1981  | 1991  | 2001  | 2011   |
|-------------|-------|-------|-------|-------|-------|-------|-------|--------|
| Population  | 44642 | 50487 | 56816 | 63859 | 71458 | 78543 | 88131 | 100290 |

#### (**OR**)

Explain the working principle of a reservoir intake with a neat sketch. 4 CO1 7 Marks a) Recommend desirable and permissible quality standards for drinking CO7 7 Marks b)

- UNIT-III)
- Explain working of rapid sand filter with the help of neat sketch. 5 CO1 7 Marks a) Estimate the settling velocity of a particle of 0.06mm diameter having 7 Marks b) CO2 specific gravity of 2.65 in temperature of 20°C. The kinematic viscosity of  $\gamma = 1.007 \times 10^{-6} \text{ m}^2/\text{ sec.}$

#### (**OR**)

Explain the sedimentation by coagulation process using alum and state the 6 CO5 7 Marks a) merits and demerits of using alum. Design a slow sand filer for a town of population 60000 persons, provided b) CO3 7 Marks water supply rate 160Lpcd. Take filtration rate as 2.5 litres per minute, m<sup>2</sup>, L/B ratio as 2, maximum demand as 1.8 times average demand.

### UNIT-IV

7 What are the effects of excess concentration of Fluoride in water? List the a) CO6 7 Marks methods available for defluoridation and explain any one of them. Write short notes on types of valves. CO6 7 Marks b) (**OR**) Discuss about the Ion exchange method of water softening with a sketch. 7 Marks 8 a) CO4 Describe the types of hardness present in water. 7 Marks b) CO1 UNIT-V 9 Explain the methods of detection of leakage in the distribution pipes. CO<sub>5</sub> 14 Marks (**OR**) Briefly discuss the design principles involved the design of water supply 10 CO6 14 Marks

network to be laid in a multi storied buildings.

CO1 7 Marks

#### II B.Tech II Semester (SVEC-16) Supplementary Examinations March – 2021

### ELECTRICAL MEASUREMENTS

[Electrical and Electronics Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I )

| 1 | a) | Derive the Torque equation for Moving iron Instruments.                                                                                                                                            | CO1   | 7 Marks |
|---|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|---------|
|   | b) | Discuss various errors that occur in measurements and how can they be compensated.                                                                                                                 | CO1   | 7 Marks |
|   |    | (OR)                                                                                                                                                                                               |       |         |
| 2 | a) | Describe systematic errors in measuring instruments.                                                                                                                                               | CO1   | 7 Marks |
|   | b) | A permanent magnet moving coil instrument has a coil of dimensions                                                                                                                                 | CO4   | 7 Marks |
|   |    | 15mm x 12mm. The flux density In the air gap is $1.8 \times 10^{-a}$ Wb/m <sup>2</sup> and                                                                                                         |       |         |
|   |    | the spring constant is $0.14 \times 10^{-6}$ Nm/rad. Determine the number of turns required to produce an angular deflection of 90 <sup>6</sup> when a current of 5 mA is flowing through the soil |       |         |
|   |    | UNIT-II                                                                                                                                                                                            |       |         |
| 3 | a) | Explain the function of a current transformer. How does a current                                                                                                                                  | CO2   | 7 Marks |
|   | ,  | transformer differ from an ordinary power transformer?                                                                                                                                             |       |         |
|   | b) | List the various parameters that affect the characteristics of current                                                                                                                             | CO4   | 7 Marks |
|   |    | transformer.                                                                                                                                                                                       |       |         |
|   | `  | (OR)                                                                                                                                                                                               | 004   |         |
| 4 | a) | A current transformer has a single turn primary and a 200 turns secondary winding. The secondary supplies a surrent of 5 A to a non-inductive                                                      | CO4   | / Marks |
|   |    | burden of 10 resistance. The requisite flux is set up in the core by an mmf                                                                                                                        |       |         |
|   |    | of 80 A The frequency is 50 Hz and the net cross section of the core is                                                                                                                            |       |         |
|   |    | $1000 \text{ mm}^2$ .                                                                                                                                                                              |       |         |
|   | b) | Why secondary of current transformer should never be open when the                                                                                                                                 | CO4   | 7 Marks |
|   | ,  | Primary winding is energized?                                                                                                                                                                      |       |         |
|   |    | UNIT-III                                                                                                                                                                                           |       |         |
| 5 | a) | Draw a neat sketch and explain the operation of a single phase induction                                                                                                                           | CO1   | 7 Marks |
|   | h) | In a dynamometer wattmeter the moving coil has 500 turns of mean                                                                                                                                   | CO4   | 7 Marks |
|   | 0) | diameter 30 mm. Estimate the torque if the axes of the field and moving                                                                                                                            | 001   | / Winns |
|   |    | coils are at (i) 60° (ii) 90° when the density in the field coils is $15 \times 10^{-3}$                                                                                                           |       |         |
|   |    | $Wb/m^2$ , the current in moving coil is 0'05 Å and the power factor is 0.866.                                                                                                                     |       |         |
|   |    | (OR)                                                                                                                                                                                               |       |         |
| 6 | a) | Explain the working of Low power factor Electrodynamometer type                                                                                                                                    | CO5   | 7 Marks |
|   |    | wattmeter with a neat diagram.                                                                                                                                                                     | ~ ~ . |         |
