|   | b) | A 230V, single phase, watt hour meter has a constant lead of 4 A passing                                                                                                                           | CO4   | 7 Marks |
|   |    | through it for 6 hours at unity power factor. If the meter disk makes 2208                                                                                                                         |       |         |
|   |    | revolutions during this period, what is the meter constant in revolutions per $kWh^2$ Calculate the power factor of the load if the number of                                                      |       |         |
|   |    | revolutions made by the meter are 1472 when operating at 230V and 5A                                                                                                                               |       |         |
|   |    | for 4 hours.                                                                                                                                                                                       |       |         |

Time: 3 hours

#### UNIT-IV) 7 What are the different difficulties encountered in the measurement of high CO3 7 Marks a) resistances? Explain how these difficulties are overcome. b) In the Wheatstone bridge, the values of resistances of various arms are CO5 7 Marks $P = 1000\Omega$ , $Q = 100\Omega$ , $R = 2,005\Omega$ and $S = 200\Omega$ . The battery has an emf of 5V and negligible internal resistance. The galvanometer has a current sensitivity of $10 \text{mm}/\mu\text{A}$ and an internal resistance of $100\Omega$ . Calculate the deflection of galvanometer and the sensitivity of the bridge in terms of deflection per unit change in resistance. (**OR**) 8 List the advantages and disadvantages of Desauty's Bridge. CO1 5 Marks a) A bridge consists of the following : CO3 9 Marks b) Arm ab - a choke coil having a resistance R<sub>1</sub> and inductance L<sub>1</sub>. Arm bc - a non-inductive resistance R<sub>3</sub>. Arm cd - a mica condenser C<sub>4</sub> in series with a non-inductive resistance R<sub>4</sub>. Arm da - a non-inductive resistance R<sub>2</sub> when this bridge is fed from a source of 500 Hz, balance is obtained under following conditions: $R_2 = 2410\Omega$ ; $R_3 = 750\Omega$ ; $C_4 = 0.35\mu$ F, $R_4 = 64.5\Omega$ . The series resistance of capacitor is = $0.4\Omega$ . Calculate the resistance and inductance of the choke coil. The supply is connected between **a** and **c** and the detector is between **b** and **d**. UNIT-V 9 A simple slide wire is used for measurement of current in a circuit. The CO<sub>4</sub> 7 Marks a) voltage drop across a standard resistor of $0.1\Omega$ is balanced at 75cm. Find the magnitude of current if the standard cell emf of 1.45V is balanced at 50cm. Explain the operation of DC crompton potentiometer with a neat diagram. b) CO1 7 Marks **(OR)** 10 Explain how lissajous figures can be used in frequency measurement. CO1 7 Marks a) b) Explain about each block of digital voltmeter and mention its advantages. CO1 7 Marks

#### **GENERATION OF ELECTRIC POWER**

#### [Electrical and Electronics Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 Explain the growth in Electrical power sector in India. CO7 7 Marks a) List out the site selection factor for hydroelectric power station and CO5 7 Marks b) thermal power plant. (**OR**) Draw the water circuit in a thermal power plant. Explain the state of water 2 7 Marks a) CO1 in each stage. Compare impulse and reaction turbines CO<sub>2</sub> 7 Marks b) UNIT-II ) 3 Classify the nuclear reactors based on fossil fuels, moderators and control CO1 7 Marks a) rods used. Explain them briefly. Explain Breeder reactor with neat diagram. Also list out its advantages b) CO1 7 Marks and limitations. (**OR**) 4 Discuss the advantages and disadvantages of Diesel power plant. Also CO2 7 Marks a) mention the reason for not using diesel power plants for generating bulk powers. Draw the layout of gas turbine power plant and briefly explain the b) CO<sub>2</sub> 7 Marks function of various components. UNIT-III) 5 i) Explain the factors affecting the performance of PV Cell. CO6 6 Marks a) ii) Mention advantages and disadvantages of PV Cell. Explain the classification of wind turbines based on orientation with neat b) CO8 8 Marks sketches. (**OR**) Explain anaerobic digestion for biogas with neat sketch. CO6 7 Marks 6 a) Briefly describe on microgrid. Mention its significance. CO8 7 Marks b) (UNIT-IV) 7 A generating station has the following daily load cycle. CO2 8 Marks a) Time (Hours) 0-6 6–10 10-12 12-16 16-20 20 - 24Load (MW) 20 25 30 25 20 35 Draw the load curve and load duration curve. Determine: i) Maximum demand. ii) Units generated per day. iv) Load factor. iii) Average load and. Explain Diminishing Value method to determine the depreciation cost of CO4 b) 6 Marks the power plant.

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

1 Compare between core type and shell type transformers. CO1 6 Marks a) Derive the EMF equation of a 1-phase transformer and calculate the emf / b) CO<sub>2</sub> 8 Marks turn, if the flux is 0.015 Wb at a frequency of 50 Hz. (**OR**) 2 a) Develop the equivalent circuit of a single-phase transformer. CO1 6 Marks A 200 kVA, 1- phase, 3300 / 400 V transformer gave the following results CO4 8 Marks b) in the short circuit test with 200 V applied to the primary and secondary short circuited, the primary current was full load value and the input power was 1650 W. Calculate the secondary potential difference and the % of regulation when the full load current was passing at a 0.707 p.f. lagging with normal primary voltage.

UNIT-II

| a)       | Explain the O.C. and S.C. tests on the transformer and hence explain the | CO1 | 9 Marks |
|----------|--------------------------------------------------------------------------|-----|---------|
|          | evolution of equivalent circuit from it.                                 |     |         |
| b)       | Explain the autotransformer with neat diagram.                           | CO4 | 5 Marks |
|          | (OR)                                                                     |     |         |
| a)       | With neat phasor diagram, explain the voltage regulation of three-phase  | CO1 | 8 Marks |
| <i>,</i> | transformer.                                                             |     |         |

b) The maximum efficiency of a 500kVA. 3,300 V/500 V, 50Hz single phase CO4 6 Marks transformer is 97% and occurs at <sup>3</sup>/<sub>4</sub> full load, unity power factor. If the impedance is 10%, calculate the regulation at full load, power factor 0.8 lagging.

### UNIT-III

- 5 Determine the following impedance parameters of a 3-phase transformer CO1 6 Marks a) ii) Z<sub>s</sub>, iii) Z<sub>t</sub> i) Z<sub>p</sub>,
  - A 5000 KVA, 3-Phase transformer 6.6/33 KV,  $\Delta$ /Y, has no load loss of CO3 8 Marks b) 15KW. The impedance drop at full load is 7%. Find out the primary voltage when a load of 3200 KW at 0.8 power factor is delivered at 33KV.

#### (**OR**)

6 Explain about 3- Phase transformation. CO1 5 Marks a) A 3-Phase step-down transformer is connected to 7.8 KV mains and takes 9 Marks b) CO4 12A. Calculate the secondary line voltage, line current and output for the following connections.

i)  $\Delta/\Delta$ ii) Y/Y iii)  $Y/\Delta$ The ratio of turns per phase is 15. Neglect losses.

### UNIT-IV

- 7 Describe briefly the working principle of slip ring induction motor. CO1 9 Marks a) Explain how its speed control is effected. 5 Marks
  - Explain about torque-slip characteristics. CO2 b)

#### (**OR**)

- 8 Draw and explain the equivalent circuit of Induction Motor with the help CO1 8 Marks a) of phasor diagram.
  - A 3-phase, 50Hz induction motor has a full-load speed of 960rpm. CO4 6 Marks b) Calculate i) no. of poles; ii) slip frequency; iii) speed of rotor field w.r.t rotor structure, stator structure and stator field.

### UNIT-V

9 Explain about No-load and blocked rotor tests. CO1 6 Marks a) A 25KW, 415V, 8-pole, delta connected squirrel cage induction motor CO4 8 Marks b) gave the following test results: No load test: 415V, 10A, 300W Block rotor test: 80V, 40A, 1400W

The D.C resistance of the stator winding per phase measured immediately after block rotor test is  $0.6\Omega$ . Calculate the additional losses and equivalent circuit parameters.

#### (**OR**)

- Explain about the speed control of induction motor by cascade operation. 10 a) CO1 7 Marks Explain the following: CO2 7 Marks b)
  - i) Crawling ii) Cogging.

8 Marks

CO1

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 a) Explain the design process with the help of a flow diagram. CO1 8 Marks
  - b) What are the various manufacturing considerations in machine design? CO1 6 Marks Explain.

#### (OR)

- 2 a) What are the different theories of failure? Explain briefly.
  - b) An unknown weight falls through 10 mm on a collar rigidly attached to CO2 6 Marks the lower end of a vertical bar 3m long and  $600 \text{mm}^2$  in cross section. If the maximum instantaneous extension is known to be 2mm, determine the corresponding stress and the value of unknown weight. Take  $E = 200 \text{kN/mm}^2$ .

### UNIT-II)

3 A cantilever beam made of cold drawn steel 40C8 ( $\sigma_{ut} = 600$ N/mm<sup>2</sup> and CO4 14 Marks  $\sigma_{yt} = 380$ N/mm<sup>2</sup>) is shown in figure. The force P acting at the free end varies from -50N to +150N. The expected reliability is 90% and the factor of safety is 2. The notch sensitivity factor at the fillet is 0.9. Determine the diameter 'd' of the beam at the fillet cross section by taking surface finish factor of 0.77, size factor of 0.85 and stress concentration factor of 1.44.

#### (OR)

- 4 a) What is stress concentration? How does it affect the fatigue strength? CO1
  - b) A machine member is made of plain carbon steel of ultimate strength CO2 650N/mm<sup>2</sup> and endurance limit of 300N/mm<sup>2</sup>. If the member is subjected to a fluctuating torsional moment which varies from -200N-m to 400N-m. Design the member using (i) Goodman's line and (ii) Soderberg line.

### (UNIT-III)

- 5 a) What is bolt of uniform strength? Explain the two methods to make a bolt CO1 6 Marks of uniform strength.
  - b) Explain the method of determining the size of the bolt when the bracket CO3 8 Marks carries an eccentric load perpendicular to the axis of the bolts.

#### (**OR**)

# DE

- 6 With neat sketches, explain different types of welded joints. a)
  - A steel plate 100mm wide and 10mm thick is joined with another steel b) plate by means of single transverse and double parallel fillet welds, as shown in figure. The strength of welded joint should be equal to the strength of the plates to be joined. The permissible tensile and shear stresses for the weld material and the plates are 70 and 50N/mm<sup>2</sup> respectively. Find the length of each parallel fillet weld. Assume tensile force acting on the plates as static.

What type of stresses induced in shafts? Explain. a)

7

Compare the weight, strength and stiffness of a hollow shaft of the same CO4 b) external diameter as that of solid shaft. The inside diameter of the hollow shaft being half the external diameter. Both the shafts made of same material and have same length.

#### (OR)

- 8 Design a bushed pin type flexible coupling for connecting a motor shaft to CO3 14 Marks a pump shaft for the following service conditions: Power to be transmitted = 40 kW, speed of the motor shaft = 1000 r.p.m.The material properties are: The allowable shear and crushing stress for shaft and key material is 40MPa and 80MPa respectively, allowable shear stress for cast iron is 15MPa, Allowable bearing pressure for rubber bush is 0.8 N/mm<sup>2</sup> and the material of the pin is same as that of shaft and key. Draw neat sketch of the coupling. UNIT-V
- 9 Design and draw a socket and spigot cotter joint to support a load varying CO3 14 Marks from 30kN in compression to 30kN in tension. The material used is carbon steel for which the following allowable stresses may be used: Tensile stress = 50MPa; Shear stress = 35MPa and Crushing stress = 90MPa.

#### (**OR**)

Distinguish between cotter joint and knuckle joint. 10 a) CO1 4 Marks Describe in detail the design procedure of knuckle joint. CO1 10 Marks b)

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 Briefly explain the working of cone clutch with neat diagram. a) CO1 4 Marks A plate clutch has three discs on the driving shaft and two discs on the CO2 10 Marks b) driven shaft, providing four pairs of contact surfaces. The outside diameter of the contact surfaces is 240 mm and inside diameter 120 mm. Assuming uniform pressure and  $\mu = 0.3$ ; find the total spring load pressing the plates together to transmit 25 kW at 1575 r.p.m. If there are 6 springs each of stiffness 13 kN/m and each of the contact surfaces has worn away by 1.25 mm, find the maximum power that can be transmitted, assuming uniform wear.

#### (OR)

- 2 a) Discuss the working of prony brake dynamometer with neat sketch and CO1 4 Marks derive the expression for brake power.
  - b) A simple band brake operates on a drum of 600 mm in diameter that is CO2 10 Marks running at 200 r.p.m. The coefficient of friction is 0.25. The brake band has a contact of 270°, one end is fastened to a fixed pin and the other end to the brake arm 125 mm from the fixed pin. The straight brake arm is 750 mm long and placed perpendicular to the diameter that bisects the angle of contact.
    - i) What is the pull necessary on the end of the brake arm to stop the wheel if 35 kW is being absorbed ? What is the direction for this minimum pull ?
    - ii) What width of steel band of 2.5 mm thick is required for this brake if the maximum tensile stress is not to exceed 50 N/mm<sup>2</sup>?

### UNIT-II

- 3 a) Explain the effect of Gyroscopic couple on Naval ship, when it takes right CO2 7 Marks and left turn, engine is rotating both clockwise and anti clockwise looking from bow side with neat sketches.
  - b) Find the angle of inclination with respect to the vertical of a two wheeler CO3 7 Marks negotiating a turn. Given: combined mass of the vehicle with its rider 250 kg; moment of inertia of the engine flywheel 0.3 kg-m<sup>2</sup>; moment of inertia of each road wheel 1 kg-m<sup>2</sup>; speed of engine flywheel 5 times that of road wheels and in the same direction; height of centre of gravity of rider with vehicle 0.6 m; two wheeler speed 90 km/h; wheel radius 300 mm; radius of turn 50 m.

#### (OR)

4 a) Derive the expression for energy stored in Flywheel? CO2 6 Marks
b) The turning moment diagram for a multi cylinder engine has been drawn to a scale 1 mm = 600 N-m vertically and 1 mm = 3° horizontally. The intercepted areas between the output torque curve and the mean resistance line, taken in order from one end, are as follows: + 52, -124, +92, -140, + 85, -72 and + 107 mm<sup>2</sup>, when the engine is running at a speed of 600 r.p.m. If the total fluctuation of speed is not to exceed ± 1.5% of the mean, find the necessary mass of the flywheel of radius 0.5 m.

### UNIT-III)

- 5 Briefly discuss about the sensitiveness and stability of governor? a)
  - In a spring loaded governor of the Hartnell type, the mass of each ball is CO3 b) 5 kg and the lift of the sleeve is 50 mm. The speed at which the governor begins to float is 240 r.p.m., and at this speed the radius of the ball path is 110 mm. The mean working speed of the governor is 20 times the range of speed when friction is neglected. If the lengths of ball and roller arm of the bell crank lever are 120 mm and 100 mm respectively and if the distance between the centre of pivot of bell crank lever and axis of governor spindle is 140 mm, determine the initial compression of the spring taking into account the obliquity of arms. If friction is equivalent to a force of 30 N at the sleeve, find the total alteration in speed before the sleeve begins to move from mid-position.

#### (**OR**)

- 6 Derive the expression for mean speed of a porter governor. CO<sub>2</sub> a) CO3 b)
  - All the arms of a Porter governor are 178 mm long and are hinged at a distance of 38 mm from the axis of rotation. The mass of each ball is 1.15 kg and mass of the sleeve is 20 kg. The governor sleeve begins to rise at 280 r.p.m. when the links are at an angle of  $30^{\circ}$  to the vertical. Assuming the friction force to be constant, determine the minimum and maximum speed of rotation when the inclination of the arms to the vertical is 45°.

### UNIT-IV)

7 What is the need of balancing in rotary and reciprocating engine? Explain CO1 4 Marks a) in detailed? CO4 A, B, C and D are four masses carried by a rotating shaft at radii 100,125, 10 Marks b) 200 and 150 mm respectively. The planes in which the masses revolve are spaced 600 mm apart and the mass of B, C and D are 10 kg, 5 kg, and 4 kg respectively. Find the required mass A and the relative angular settings of the four masses so that the shaft shall be in complete balance. (**OR**) 8 Derive the expression for variation of tractive force induced due the partial a) CO<sub>2</sub> 4 Marks balancing of two cylinder locomotives. The following data apply to an outside cylinder uncoupled locomotive: CO<sub>4</sub> 10 Marks b) Mass of rotating parts per cylinder = 360 kg; Mass of reciprocating parts per cylinder = 300 kg; Angle between cranks =  $90^{\circ}$ ; Crank radius = 0.3 m; Cylinder centres = 1.75 m; Radius of balance masses = 0.75 m; Wheel centres = 1.45 m. If whole of the rotating and two-thirds of reciprocating parts are to be balanced in planes of the driving wheels, find: i) Magnitude and angular positions of balance masses, ii) Speed in kilometres per hour at which the wheel will lift off the rails when the load on each driving wheel is 30 kN and

the diameter of tread of driving wheels is 1.8 m, and 3.

Swaying couple at speed arrived at in (2) above.

## UNIT-V

CO6

6 Marks

- 9 a) Derive the expression for whirling speed of the shaft.
  - b) A machine of mass 75 kg is mounted on springs and is fitted with a CO5 8 Marks dashpot to damp out vibrations. There are three springs each of stiffness 10 N/mm and it is found that the amplitude of vibration diminishes from 38.4 mm to 6.4 mm in two complete oscillations. Assuming that the damping force varies as the velocity, determine: i). the resistance of the dashpot at unit velocity; ii). the ratio of the frequency of the damped vibration to the frequency of the undamped vibration; and iii). the periodic time of the damped vibration.

#### (OR)

- 10 a) Derive the natural frequency of transverse vibrations of shaft subjected to CO2 6 Marks different loads by using Dunkerley's method.
  - b) The mass of a single degree damped vibrating system is 7.5 kg and makes CO5 8 Marks 24 free oscillations in 14 seconds when disturbed from its equilibrium position. The amplitude of vibration reduces to 0.25 of its initial value after five oscillations. Determine:
    - i) stiffness of the spring,
    - ii) logarithmic decrement, and
    - iii) damping factor, i.e. the ratio of the system damping to critical damping.

# FLUID MECHANICS

[Mechanical Engineering]

Max. Marks: 70

CO1

14 Marks

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 The dynamic viscosity of oil, used for lubrication between a shaft and CO5 14 Marks sleeve is 6 poise. The shaft is of diameter 0.4m and rotates at 190 r.p.m. Calculate the power lost in the bearing for a sleeve length of 90mm. The thickness of the oil film is 1.5mm.

#### (OR)

2 Explain the following fluid properties.

i) Surface tension.ii) Viscosity.iii) Weight density.iv) Specific gravity.

### UNIT-II

3 State the force momentum equation. How will you apply momentum CO4 14 Marks equation for determining the force exerted by a flowing liquid in a pipe bend?

#### (OR)

4 The water is flowing through a pipe having diameters 20cm and 10cm at CO2 14 Marks sections 1 and 2 respectively. The rate of flow through the pipe is 35litres/sec. The section 1 is 6m above datum and section 2 is 4m above datum. If the pressure at section 1 is 39.24 N/cm<sup>2</sup>, find the intensity of pressure at section 2.

### UNIT-III

5 a) Give explanation of equivalent pipe and flow through parallel pipes.
b) For a town water supply, a main pipe line of diameter 0.4m is required. As pipes more than 0.35m diameter are not readily available, two parallel pipes of same diameter are used for water supply. If the total discharge in the parallel pipe is same as in the single main pipe, find the diameter of parallel pipe. Coefficient of discharge to be the same for all the pipes.

#### (OR)

6 Derive an expression for the force exerted by a jet of water on a stationary CO5 14 Marks curved vane in the direction of flow.

### UNIT-IV

7 a) Give the classification of turbines with detailed explanation.
b) Describe briefly the function of various main components of pelton CO1 8 Marks turbine with neat sketches.

#### (OR)

8 A turbine develops 7460 kW under a head of 24.7m at 135 r.p.m. What is CO3 14 Marks the specific speed? What would be its normal speed and output under a head of 20.5m?

### UNIT-V

- 9 a) Define centrifugal pump and explain the working procedure of a single- CO1 7 Marks stage centrifugal pump with neat sketch.
  - b) A centrifugal pump is to discharge 0.118m<sup>3</sup>/s at a speed of 1450 r.p.m CO3 7 Marks against head of 25m. The impeller diameter is 250mm, its width at outlet is 50mm and manometer efficiency is 75%. Determine the vane angle at the outer periphery of the impeller.

### (OR)

10 Explain construction and working principle of a single acting CO1 14 Marks reciprocating pump with a neat diagram.

#### THERMAL ENGINEERING-I [Mechanical Engineering]

Time: 3 hours

#### Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1 | a) | Discuss the relative merits and demerits of internal combustion and external combustion engines                                                                                                                                                                                                                                                                                                                                                                                                | CO1 | 7 Marks |
|---|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|   | b) | Draw the valve-timing diagram of four-stroke engine and explain the various processes.                                                                                                                                                                                                                                                                                                                                                                                                         | CO1 | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |     |         |
| 2 | a) | Describe with working principle theoretical and actual valve timing diagrams of four stroke C.I Engine                                                                                                                                                                                                                                                                                                                                                                                         | CO1 | 7 Marks |
|   | b) | Explain the effect of temperature on specific heats. What is the physical explanation for this variation on the performance of I.C Engine?                                                                                                                                                                                                                                                                                                                                                     | CO2 | 7 Marks |
|   |    | UNIT-II )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |     |         |
| 3 | a) | What are the basic parameters that influence the flame speed? Discuss the influence of Engine variables on the flame speed.                                                                                                                                                                                                                                                                                                                                                                    | CO1 | 7 Marks |
|   | b) | What is meant by abnormal combustion? Explain the phenomena of knock in S.I Engines.                                                                                                                                                                                                                                                                                                                                                                                                           | CO1 | 7 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |     |         |
| 4 | a) | What are the different required characteristics of a good combustion chamber for S.I. Engine? Explain.                                                                                                                                                                                                                                                                                                                                                                                         | CO1 | 7 Marks |
|   | b) | Explain the different stages of combustion in C.I Engines.                                                                                                                                                                                                                                                                                                                                                                                                                                     | CO1 | 7 Marks |
|   |    | UNIT-III)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |     |         |
| 5 | a) | Explain the measurement of brake power of I.C Engine by using rope brake dynamometer.                                                                                                                                                                                                                                                                                                                                                                                                          | CO4 | 7 Marks |
|   | b) | A four cylinder, four stroke diesel engines has brake mean effective pressure of 5.5 bar at full load speed of 600 r.p.m and specific fuel consumption of 0.25 kg/kWh. The cylinder has bore of 25cm and stroke length of 35cm. The air fuel ratio is measured as 26 from the exhaust gas analysis. The ambient conditions are 1 bar, 27°C. Assuming the calorific value of fuel as 44 MJ/kg. Determine the brake thermal efficiency and the volumetric efficiency. Also find out brake power. | CO3 | 7 Marks |
| 6 | a) | Define indicated power and how it can be determined experimentally for                                                                                                                                                                                                                                                                                                                                                                                                                         | CO1 | 7 Marks |
|   | ,  | multi cylinder engine.                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |     |         |
|   | b) | A six cylinder, gasoline engine operates on the four stroke cycle. The bore<br>of each cylinder is 80mm and the stroke is 100mm. The clearance volume<br>in each cylinder is 70cc. At a speed of 4000 r.p.m and the fuel<br>consumption is 20 kg/h. The torque developed is 150 N-m. Calculate:<br>i) the brake power.                                                                                                                                                                         | CO3 | 7 Marks |

- ii) the brake mean effective pressure.
- iii) brake thermal efficiency if the calorific value of the fuel is 43000 kJ/kg.
- iv) the relative efficiency if the ideal cycle for the engine is Otto cycle.

### UNIT-IV

- 7 a) How the exhaust and flue gas analysis carried out?
  - b) The percentage composition of sample of liquid fuel by weight is CO4 7 Marks

CO5

7 Marks

- C = 84.8% and  $H_2 = 15.2\%$ . Calculate:
  - i) the weight of air needed for the combustion of 1Kg of fuel.
  - ii) the volumetric composition of the products of composition,
    - if 15% excess air id supplied.

#### (OR)

- 8 a) What is the difference between Higher Heating Value (HHV) and Lower CO1 7 Marks Heating Value (LHV) of the fuel?
  - b) One kg of octane ( $C_8H_{18}$ ) is burned with 200% theoretical air. Assuming CO2 7 Marks complete combustion determine.
    - i) Air-fuel ratio.
    - ii) Dew point of the products at a total pressure 100 kPa.

### UNIT-V

- 9 a) Define volumetric efficiency and explain the effect of clearance volume CO1 7 Marks and pressure ratio on volumetric efficiency.
  - b) A single stage double acting air compressor running at 300 r.p.m, delivers CO2 7 Marks 15m<sup>3</sup> of free air per minute at 700 kPa and 200°C. If the clearance volume is 8% of swept volume and if the index of compression and expansion are same. Find the clearance swept volume of piston and volumetric efficiency. Initial air conditions are 10 kP and 15°C.

#### (**OR**)

- 10 a) Explain the working principle of single stage single acting reciprocating CO1 7 Marks air compressor with the help of neat sketch.
  - b) A single-stage, double acting compressor has a free air delivery of CO2 7 Marks 14 m<sup>3</sup>/min, measured at 1.013 bar and 15°C. The pressure and temperature in the cylinder during induction are 0.95 bar and 15°C. The delivery pressure is 7 bar and index of compression and expansion is 1.3. The clearance volume is 5% of the swept volume. Calculate: (i) Indicated power required. (ii) Volumetric efficiency.

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1 | a)       | The modulating signal in an AM system is a multiple-tone signal given by $m(t) = A_1 \cos \omega_1 t + A_2 \cos \omega_2 t + A_3 \cos \omega_3 t$ . The signal $m(t)$ modulates carrier $A_c \cos \omega_c t$ . Plot the single-sided spectrum and find the bandwidth of the modulated signal. Assume that $\omega_2 \ge \omega_2 \ge \omega_1$ and $A_1 \ge A_2 \ge A_2$ . | CO1        | 7 Marks            |

|               | b) | Assess the characteristics of CMOS Dynamic Electrical behavior.<br>(OR)                                                                                           | CO5            | 7 Marks |
| 2             | a) | Reproduce basic ECL inverter/Buffer with its truth table. Also recognize the importance of ECL.                                                                   | CO6            | 7 Marks |
|               | b) | Elaborate Steady State Electrical behavior of CMOS logic.                                                                                                         | CO1            | 7 Marks |
| 3             | a) | Develop a flow chart for Verilog HDL design flow. Explain each step in detail                                                                                     | CO3            | 7 Marks |
|               | b) | Differentiate the basic description styles supported by Verilog HDL.                                                                                              | CO2            | 7 Marks |
| 4             | a) | Assess the structural design elements of Verilog HDL with a suitable example.                                                                                     | CO2            | 7 Marks |
|               | b) | Summarize the data types in Verilog HDL.                                                                                                                          | CO1            | 7 Marks |
| 5             | a) | Draw the IC diagram of 74 $\times$ 999 adder and explain its operation.                                                                                           | CO1            | 7 Marks |
| -             | b) | Explain clearly about 74 $\times$ 148 priority encoder with its logic symbol.<br>Give its truth table and write Verilog HDL code in any one of the model.<br>(OR) | CO4            | 7 Marks |
| 6             | a) | Implement 4 bit adder using 1 bit full adder and write Verilog HDL code for this implementation.                                                                  | CO4            | 7 Marks |
|               | b) | Design a 4-to-16 decoder using 74 x 138 ICs. Write the corresponding source code using module instantiation.                                                      | CO4            | 7 Marks |
| 7             | a) | Design a mod-129 counter using only two 74 x 163s and no additional gates                                                                                         | CO6            | 7 Marks |
|               | b) | Develop the flow chart for designing sequential logic.                                                                                                            | CO3            | 7 Marks |
| 8             | a) | Use 74 x 74IC to obtain 4-bit binary synchronous counter and develop Verilog HDL program for this logic using data flow style.                                    | CO6            | 7 Marks |
|               | b) | Design an 8-bit serial-in and parallel-out shift register with flip-flops.<br>Explain the operation with the help of timing waveforms.                            | CO3            | 7 Marks |
| 9             | a) | Suggest alternative ways of representing the ROM                                                                                                                  | CO5            | 7 Marks |
| /             | b) | Write short notes on 2-D decoding commercial types-ROM.<br>(OR)                                                                                                   | CO1            | 7 Marks |
| 10            | a) | Highlight the differences of PROM, EPROM and EEPROM technologies.                                                                                                 | CO5            | 7 Marks |
|               | b) | Outline the details of internal structure of 64K x 1 DRAM with the help of timing waveforms.                                                                      | CO1            | 7 Marks |

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1 | a)       | Define electric field strength. Derive an expression for electric field strength of an infinite line charge.                                                                                     | CO1 | 7 Marks    |  |  |  |
|---|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|------------|--|--|--|
|   | b)       | Two point charges $-4\mu c$ and $5\mu c$ are located at (2,-1,3) and (0,4,-2) respectively. Find the potential at (1,0,1), 1f the zero potential is at infinity.                                 | CO1 | 7 Marks    |  |  |  |
| 2 | a)       | State Ampere's circuital law Derive an expression for the magnetic field                                                                                                                         | CO1 | 7 Marks    |  |  |  |
| _ | )        | intensity of an infinite coaxial transmission line.                                                                                                                                              |     | ,          |  |  |  |
|   | b)       | Given the magnetic vector potential $\mathbf{A}=-\rho^2/4$ $\mathbf{a}_z$ Wb/m, calculate the total magnetic flux crossing the surface $\phi = \pi/2$ , $1 \le \rho \le 2m$ , $0 \le z \le 5m$ . | CO1 | 7 Marks    |  |  |  |
|   |          | UNIT-II                                                                                                                                                                                          |     |            |  |  |  |
| 3 | a)       | Explain about transformer electromotive forces.                                                                                                                                                  | CO2 | 7 Marks    |  |  |  |
|   | b)       | In free space, $E=20 \cos(wt-50x) a_y V/m$ . Calculate :                                                                                                                                         | CO2 | 7 Marks    |  |  |  |
|   |          | i) Displacement current density.                                                                                                                                                                 |     |            |  |  |  |
|   |          | (OR)                                                                                                                                                                                             |     |            |  |  |  |
| 4 | a)       | Discuss about the magnetic boundary conditions.                                                                                                                                                  | CO2 | 7 Marks    |  |  |  |
| - | b)       | Given, $H_1=-2a_x+6a_y+4a_z$ A/m in region y-x-2 $\leq 0$ , where $\mu_1=5\mu_0$ . Calculate                                                                                                     | CO2 | 7 Marks    |  |  |  |
|   | ,        | $b_2$ in region y-x-2 $\ge 0$ , where $\mu = 2\mu_0$ .                                                                                                                                           |     |            |  |  |  |
|   |          | UNIT-III)                                                                                                                                                                                        |     |            |  |  |  |
| 5 | a)       | State and explain Poynting's theorem.                                                                                                                                                            | CO6 | 7 Marks    |  |  |  |
|   | b)       | A plane wave travelling in +y direction in a lossy medium                                                                                                                                        | CO4 | 7 Marks    |  |  |  |
|   |          | $(\varepsilon_r=4,\mu_r=1,\sigma=10^{-2}$ S/m) has E=30 cos(10 <sup>9</sup> $\pi$ t+ $\pi/4$ ) a <sub>z</sub> V/m at y=0.                                                                        |     |            |  |  |  |
|   |          | Find (i) E at $y=1m$ , $t=2ns$ (ii) H at $y=2m$ , $t=2ns$ .                                                                                                                                      |     |            |  |  |  |
| 6 | a)       | ( <b>UK</b> )<br>Explain about Reflection of a plane wave at an oblique incidence                                                                                                                | COS | 7 Marks    |  |  |  |
| 0 | h)       | In free space $H=0.2 \cos (\omega t - \beta x) a_{a}A/m$ Find the total power passing                                                                                                            | CO4 | 7 Marks    |  |  |  |
|   | 0)       | through a square plate of side 10cm on plane $x+y=1$ .                                                                                                                                           | 001 | / IVIUIIIO |  |  |  |
|   |          |                                                                                                                                                                                                  |     |            |  |  |  |
| 7 | a)       | Derive the condition for a distortion less line                                                                                                                                                  | CO6 | 7 Marks    |  |  |  |
| , | b)       | A distortion less line has $Z_0=60\Omega, \alpha=20$ mNP/m, phase velocity u=0.6C,                                                                                                               | CO1 | 7 Marks    |  |  |  |
|   | ,        | where C is velocity of light in vacuum. Find R,L,G,C and $\lambda$ at 100MHz.                                                                                                                    |     |            |  |  |  |
|   |          | (OR)                                                                                                                                                                                             |     |            |  |  |  |
| 8 | 8)       | Derive an expression for the input impedance of a transmission line                                                                                                                              | CO6 | 7 Marke    |  |  |  |
| 0 | a)<br>b) | A telephone line has $R=30\Omega/km$ , $L=100mH/km$ G=0 and C=20µF/km At                                                                                                                         | CO1 | 7 Marks    |  |  |  |
|   | ~)       | f=1KHz, calculate                                                                                                                                                                                | 201 | ,          |  |  |  |

|   |               |                                                                                                                            |            |                    |
|   |               | 0 01 µF                                                                                                                    |            |                    |

b) Realize the Schmitt trigger using a 555 timer IC. (OR)

CO5 7 Marks

- 8 a) For a free running oscillator using IC555, for  $R_A$ =6.8 K $\Omega$ ,  $R_B$ =3.3 K $\Omega$  and CO4 7 Marks C=0.5  $\mu$ F, calculate:
  - i) $t_{high}$ .ii) $t_{low}$ .iii)duty cycle.iv) osci

iv) oscillation frequency.

b) How a 555 timer can be used to realize square waveform generator of CO5 7 Marks frequency 3 kHz and duty cycle 50%?

### UNIT-V

- 9 a) Draw the schematic of a DAC. Draw and explain the working principle of CO1 7 Marks a weighted-resistor DAC.
  b) Give the standard specifications of ADC with the normal values. CO1 7 Marks (OR)
  10 a) Compare R-2R and weight resistor types of DAC. CO1 7 Marks
  - b) Explain the operation of a multiplying DAC and mention its applications. CO1 7 Marks

**II B.Tech II Semester (SVEC-16) Supplementary Examinations March – 2021** 

### PROBABILITY AND STOCHASTIC PROCESS

[Electronics and Communication Engineering]

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

1 Explain about joint and conditional probability. CO1 a) 6 Marks Three regular dice are thrown. Assign probabilities to the following b) CO3 8 Marks events: the sum of the points appearing on the three dice is. ii) 9. i) 4. iii) 15. (**OR**) 2 How do you explain statistically independent events using Baye's rule? CO1 6 Marks a) In a manufacturing process where glass products are produced, defects or b) CO3 8 Marks bubbles occur, occasionally rendering the piece undesirable for marketing. It is known that, on average, 1 in every 1000 of these items produced has one or more bubbles. What is the probability that a random sample of 8000 will yield: i) Fewer than 7 items possessing bubbles. ii) None will possess a bubble. iii) Exactly 15 items possessing bubbles. (UNIT-II) State and prove the properties of probability density function. 3 CO1 6 Marks a) A continuous random variable X has a PDF  $f_X(x)=3x^2$ ,  $0 \le x \le 1$ , Find 'a' b) CO<sub>2</sub> 8 Marks and 'b' such that: i)  $P\{X \le a\} = P\{x > a\}$ . ii)  $P\{x > b\} = 0.05$ . (**OR**) Define and explain the following distribution and densities with an CO1 4 a) 6 Marks application. i) Exponential. ii) Uniform. b) In an experiment, a trial consists of four successive tosses of a coin. If we CO2 8 Marks define a random variable as the number of heads appearing in a trial, determine the CDF,  $F_{\mathbf{X}}(x)$ . (UNIT-III) 5 State and prove the joint density function properties. CO1 6 Marks a) If statistically independent random variables X and Y having respective CO2 8 Marks b) densities  $f_X(x) = 5 u(x) e^{-5x}$ ,  $f_Y(y) = 2 u(y) e^{-2y}$  then derive the density function of W = X+Y. (**OR**) 6 Identify the value of moment  $\mu_{22}$ , if statistically independent random CO3 8 Marks a) variables X and Y have moments  $m_{10} = 2$ ,  $m_{20} = 14$ ,  $m_{02} = 12$  and  $m_{11} = -6.$ Explain about the monotonic transformation for a continuous random CO2 b) 6 Marks variable.
#### UNIT-IV)

7 a) A stationary random process X(t) with zero mean and autocorrelation CO2 8 Marks  $R_{xx}(\tau) = [e^{-2|\tau|}]$  is applied to a system of function  $H(\omega) = \frac{1}{2 + j\omega}$  develop

the PSD of output.

- b) Derive the expression for mean and mean squared value of system CO2 6 Marks response. (OR)
- a) Define the terms:

8

- i) Random process.
- ii) Stationary random process.
- iii) Wide sense stationary random process.
- iv) Ergodic random process.
- b) Consider a linear system as shown in figure:

$$X(t) \longrightarrow \boxed{\frac{1}{6+j\omega}} \longrightarrow Y(t)$$

X(t) is the input and Y(t) is the output of the system. The autocorrelation of X(t) is  $R_{xx}(\tau) = 5\delta(\tau)$  determine the PSD and autocorrelation.

#### UNIT-V

9 a) Derive an expression for average noise figure of cascaded networks. CO4 6 Marks
b) Calculate the r.m.s noise voltage generated in the bandwidth of 15 KHz, CO3 8 Marks by a resistor of 2KΩ operating at 20°C. Find the available noise power over this bandwidth. Find the noise PSD.

#### (**OR**)

- 10 a) Two thermal resistors  $R_1$  and  $R_2$  at temperatures  $T_1$  and  $T_2$  are connected CO4 7 Marks in series. Find the noise temperature of the combination. Find the noise temperature when  $R_1 = R_2$ .
  - b) Obtain an expression to find noise band width of the system. CO4 7 Marks

#### PULSE AND DIGITAL CIRCUITS

#### [Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

- 1 a) In an RC low pass circuit R=2 k $\Omega$  and C=1  $\mu$ F. A square with half period CO2 7 Marks of 5  $\mu$ Sec. is applied as input to this circuit. Determine the output waveform.
  - b) What is the function of an attenuator and explain any one application of it. CO4 7 Marks

(OR)

- 2 a) The limited ramp shown in figure is applied to an RC differentiator. Draw CO4 8 Marks the output waveforms for the cases (i) T = 0.2 RC (ii) T = RC (iii) T = 5RC.
  - b) Why does a resistive attenuator need to be compensated? Explain different CO5 6 Marks methods of compensation.

#### UNIT-II

3 a) Determine  $V_0$  for the network shown in figure for the given waveform. CO4 8 Marks Assume ideal Diodes.

b) Draw the basic circuit diagram of negative peak clamper circuit and explain CO1 6 Marks its operation.

#### (**OR**)

- 4 a) Design a Clipper circuit for a sinusoidal input of 50V(P-P) which produces CO3 8 Marks an output with double sided clipper with  $VR_1 = +7V$  and  $VR_2 = -10V$  and assume diodes are ideal.
  - b) Draw the basic circuit diagram of positive peak clamper circuit and explain CO2 6 Marks its operation.

#### UNIT-III)

- 5 a) Design a transistor switch with the following data:  $V_{CC} = 12 \text{ V}$ ,  $V_{BB} = 6 \text{ V}$ ; CO3 7 Marks Ic(sat) = 10mA;  $h_{FE}(\text{min}) = 40$ . Assume the junction voltages as  $V_{CE}(\text{sat}) = 0.3 \text{ V}$  and  $V_{BE}(\text{sat}) = 0.7 \text{ V}$ .
  - b) With the help of a neat circuit diagram and waveforms explain the working CO2 7 Marks of Collector-coupled astable multivibrator.

#### (OR)

- 6 a) Draw the neat circuit diagram of a collector coupled monostable CO1 8 Marks multivibrator and explain its operation with the help of waveforms.
  - b) Draw and explain about the response of Schmitt circuit for the following. CO3 6 Marks i) for loop gain  $\leq 1$  ii) loop gain > 1.

Max. Marks: 70

#### UNIT-IV

7 a) Explain the basic principles of Miller and bootstrap time – base generators. CO1 7 Marks

b) Write important applications of time-base circuits. With reference to time CO2 7 Marks base circuits define the following terms:

i) Fly back time. ii) Transmission error.

#### (OR)

- 8 a) The specifications of UJT are given as  $\eta = 0.6 V_v = 2V$ ,  $R_{BB} = 5 K\Omega$ ,  $I_v = 1.5 CO4$  8 Marks mA,  $I_p = 8 \mu A$  and  $V_{BB} = 18 V$ . Calculate the component values of the UJT Sweep circuit to generate an output sweep frequency of 10 KHz with sweep amplitude of 12 V.
  - b) What is meant by triggered sweep? What are the merits and demerits of CO2 6 Marks triggered sweep circuits.

#### UNIT-V

| 9  | a)   | Draw and explain the operation of Bidirectional sampling gate. | CO1 | 7 Marks |  |  |  |
|----|------|----------------------------------------------------------------|-----|---------|--|--|--|
|    | b)   | Draw and explain the operation of ECL NOR/OR circuit.          | CO1 | 7 Marks |  |  |  |
|    | (OR) |                                                                |     |         |  |  |  |
| 10 | a)   | Draw and explain Six-diode Bidirectional sampling gate.        | CO1 | 7 Marks |  |  |  |
|    | b)   | Draw and explain CMOS Inverter.                                | CO1 | 7 Marks |  |  |  |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu) II B.Tech II Semester (SVEC-16) Supplementary Examinations, March 2021 DATABASE MANAGEMENT SYSTEMS [Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 Explain the drawbacks of conventional file processing system. CO1 6 Marks a) List and explain various database languages with examples. 8 Marks b) CO1 (**OR**) 2 Explain the following: CO2 14 Marks i) Entity set ii) Relationship set iii) Weak-entity set. UNIT-II Discuss in detail about Entity set, Relationship set and different types of 3 CO2 8 Marks a) relationships. List and explain about structural constraints of ER model. 6 Marks b) CO<sub>2</sub> (**OR**) 4 What is relational algebra? How it is different from other relational CO1 8 Marks a) languages? List out and explain different relational algebraic operations with example. Differentiate TRC and DRC. b) CO<sub>2</sub> 6 Marks UNIT-III 5 By considering an example describe various data update operations in CO1 7 Marks a) SQL. Write and explain the structure of SQL SELECT statement with suitable b) CO1 7 Marks example. (**OR**) Explain the need of normalization. 6 a) CO<sub>2</sub> 6 Marks Describe 4NF and 5NF with suitable examples. CO2 8 Marks b) UNIT-IV 7 Describe the properties of a transaction. CO4 6 Marks a) Define Serializability. What is the difference between conflict equivalence b) CO4 8 Marks and view equivalence? (**OR**) 8 Explain about different types of failures occurred in the system. CO1 a) 7 Marks Explain the concept of locking mechanism. State and explain two-phase b) CO2 7 Marks locking protocol. UNIT-V Describe various methods of defining indexes on multiple keys. 9 CO1 a) 6 Marks What is an index structure? Explain how to use hash table as an index CO2 8 Marks b) structure for a database. (**OR**) 10 Write short notes on: CO2 14 Marks i) Hash based indexing; ii) B-trees. <del>(</del>) <del>(</del>@} (j)

II B.Tech II Semester (SVEC-16) Supplementary Examinations March – 2021

#### LINEAR AND DIGITAL ICS [Electrical and Electronics Engineering; **Electronics and Instrumentation Engineering**

Time: 3 hours

#### **Answer One Question from each Unit** All questions carry equal marks

#### UNIT-I

1 Using relevant expressions characterize all the dc and ac characteristics of CO5 14 Marks an ideal OP-AMP.

#### (**OR**)

- 2 Identify the limitations of an op-amp differential amplifier and derive the CO5 a) 7 Marks output voltage of an op-amp based differential amplifier.
  - Sketch the circuit diagram and explain the operation of an inverting CO1 b) 7 Marks amplifier.

#### UNIT-II

Design a Integrator to integrate an I/P signal that varies in frequency from 3 a) CO4 7 Marks 1KHz to 10 KHz and plot the O/P wave forms if the I/P is a sine wave of1Vpeak at 1 KHz. In a second-order high pass Butterworth filter  $C2 = C3 = 0.047 \mu f$ , CO4 b) 7 Marks R2=R3= 3.3K $\Omega$ , R1 = 27 K $\Omega$  and RF=15.8 KW. Determine the low cutoff frequency fL of the filter (**OR**) Determine the order of the Butterworth low-pass filter so that at 4 a) CO3 7 Marks w=1w3dB, the magnitude response is down by at least 20 dB. Design a second order low pass filter for a cutoff frequency of 2KHz. CO3 7 Marks b) (UNIT-III) 5 A 12-bit D to A converter has a full-scale range of 15 volts. Its maximum CO4 9 Marks a) differential linearity error is  $\pm 1/2$  LSB. i) What is the percentage resolution? ii) What are the minimum and maximum possible values of the increment in its output voltage? Distinguish between astable, monostable multivibrators. CO2 5 Marks b) **(OR)** Describe in detail the operation of a dual slope Analog to digital converter. 6 CO1 7 Marks a) A PLL has a free running frequency of 500 KHz, the bandwidth of the CO4 7 Marks b) LPF=10KHz. Will the PLL lock in if  $f_i = 60$  KHz? What is the frequency of the VCO outputs? UNIT-IV) Explain the following terms with reference to CMOS logic. 7 a) CO1 7 Marks i) Logic Levels. ii) DC Noise margin. iii) Power supply rails. iv) Propagation delay. Asses the behavior of CMOS Inverter for LOW and HIGH outputs and CO6 7 Marks b) sketch its equivalent resistive model. (**OR**) Design CMOS transistor circuit for 2-input NOR gate. With the help of 8 CO3 7 Marks a) function table explain the circuit. CO4 b) Design a CMOS transistor circuit that has the functional behaviour. 7 Marks f(X) = (A + B).(B + C).

Max. Marks: 70

#### UNIT-V Use appropriate structure to develop 8:1 Multiplexer using 2:1 CO5 9 7 Marks a) multiplexer. Write a verilog program for an edge triggered RS flip-flop. 7 Marks b) CO4 (OR) Design a 4-bit binary synchronous counter using 74 x 74. 10 a) CO3 7 Marks Design a module-10 counter using two 74 x 163 binary counters. b) CO4 7 Marks

\$\$ \$\$ \$\$

[Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

## Answer One Question from each Unit

All questions carry equal marks

#### UNIT-I

- 1 On what parameters the computers are classified? Explain the types of CO1 7 Marks a) computers with their applications. Briefly explain about the functional units of a computer. b) CO1 7 Marks (**OR**) 2 Explain the construction and working of one cell of DRAM and ROM. 7 Marks a) CO1 Compare SRAM and DRAM. 7 Marks CO<sub>2</sub> b) UNIT-II 3 Draw the timing diagram for the instruction ADI 35H. Analyze the CO2 10 Marks a) sequence of operations involved in the execution of the said instruction. The content of the Accumulator of 8085 processor is 56H. Write the steps b) CO5 4 Marks to mask the lower nibble of Accumulator using suitable i) Arithmetic. ii) Logical instructions. (**OR**) If the 8085 microprocessor adds the bytes 87H and 79H, specify the 4 CO2 8 Marks a) contents of the accumulator and the status of all the flags. Discuss the following instructions of 8085 microprocessor. CO1 6 Marks b) i) RIM. ii) SIM. UNIT-III)
- 5 a) Differentiate vectored and non-vectored interrupts. Explain the interrupt CO1 8 Marks handling mechanism of 8085.
  - b) For the interface shown below, show the address map of the device CO4 6 Marks connected to Y5.

6 a) Explain the addressing modes of 8085 with at least two examples for each. CO1 7 Marks
b) Write an assembly language program using 8085 instructions to CO5 7 Marks cumulatively add eight bytes of data stored in eight consecutive memory locations.

| 7  | a)   | Construct a 4-bit bus with Three-sate buffers.                            | CO3 | 7 Marks |  |  |
|----|------|---------------------------------------------------------------------------|-----|---------|--|--|
|    | b)   | Design a one stage logic circuit to implement different logic functions.  | CO3 | 7 Marks |  |  |
|    | (OR) |                                                                           |     |         |  |  |
| 8  | a)   | Draw flow chart of instruction cycle.                                     | CO5 | 7 Marks |  |  |
|    | b)   | Show how a micro operation is mapped to a micro instruction address.      | CO1 | 7 Marks |  |  |
|    |      | UNIT-V                                                                    |     |         |  |  |
| 9  | a)   | Select the hardware required for performing signed magnitude addition     | CO5 | 7 Marks |  |  |
|    |      | and subtraction.                                                          |     |         |  |  |
|    | b)   | Differentiate between hardwired control and microprogrammed control. Is   | CO2 | 7 Marks |  |  |
|    |      | it possible to have a hardwired control associated with a control memory? |     |         |  |  |
|    |      | (OR)                                                                      |     |         |  |  |
| 10 | a)   | Develop an efficient algorithm perform binary multiplication using Booth  | CO5 | 7 Marks |  |  |
|    |      | algorithm.                                                                |     |         |  |  |
|    | b)   | "Pipelining increases speed of execution". Justify.                       | CO6 | 7 Marks |  |  |
|    |      |                                                                           |     |         |  |  |

#### DESIGN AND ANALYSIS OF ALGORITHMS [Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

| 1 | a) | Prove that $2n^2 2^n + n \log n = \theta (n^2 2^n)$ is correct. | CO5 | 7 Marks |
|---|----|-----------------------------------------------------------------|-----|---------|
|   | b) | Solve the following recurrence relation:                        | CO4 | 7 Marks |
|   |    | T(n) = 1, if n=1 or                                             |     |         |
|   |    | $T(n) = T(n-1) + n(n-1)$ , if $n \ge 2$                         |     |         |
|   |    | (OR)                                                            |     |         |
| 2 | a) | Define pseudocode. Explain its significance with example.       | CO1 | 7 Marks |
|   | b) | Evaluate the time complexity of the below pseudocode:           | CO4 | 7 Marks |
|   |    | Algorithm Sample                                                |     |         |
|   |    | {                                                               |     |         |
|   |    | temp=1                                                          |     |         |
|   |    | repeat {                                                        |     |         |
|   |    | for $i=1$ to n                                                  |     |         |
|   |    | {                                                               |     |         |
|   |    | temp = temp + 1;                                                |     |         |
|   |    | n = n/2;                                                        |     |         |
|   |    | }                                                               |     |         |

} until  $n \le 1$ ;

}

#### UNIT-II)

3 a) Explain disjoint set operations with an example.
b) Outline UNION and FIND algorithms and calculate their time CO3 7 Marks complexities.

#### (OR)

4 a) Outline an algorithm of DFS and calculate its time complexityCO27 Marksb) Apply DFS algorithm for the following graph:CO37 Marks

# UNIT-III

# 5 a) Outline the merge sort algorithm and calculate time complexityCO47 Marksb) Apply merge sort algorithm on the following elementsCO37 Marks35, 57, 23, 2, 56, 68, 10, 20, 65, 457 Marks

#### (OR)

- 6 a) Distinguish divide and conquer and greedy algorithms. Illustrate with an CO2 7 Marks example.
  - b) Consider the digraph given in the following figure. Estimate shortest paths CO5 7 Marks from vertex 5 to other vertices. Explain each step in detail.

#### UNIT-IV

7 a) What is the principle of dynamic programming? Explain with an example. CO1 7 Marks

- b) Explain briefly about any application of dynamic programming. CO1 7 Marks
  - (OR)
- 8 a) Let w = { 7, 4, 10, 23, 35, 20, 32 } and m = 55. Find all possible subsets CO4 7 Marks of w that sum to m. Draw the portion of the state space trees that is generated.
  b) What is graph coloring? Outline an algorithm which finds m-coloring of a CO1, 7 Marks
  - b) What is graph coloring? Outline an algorithm which finds m-coloring of a CO1, 7 Marks graph. CO3

#### UNIT-V

- 9 Elaborate FIFO branch and bound solution with an example. CO1 14 Marks (OR)
- 10 Apply the branch-and-bound technique in solving the Traveling Salesman CO5 14 Marks Problem. Explain with an example.

#### **II B.Tech II Semester (SVEC-16) Supplementary Examinations March – 2021**

#### **THEORY OF COMPUTATION**

[Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

#### **Answer One Question from each Unit** All questions carry equal marks

#### UNIT-I

1 Define Finite Automaton and give its mathematical representation. a) CO1 3 Marks Design equivalent NFA for the following NFA with *\varepsilon*-transition, where q1 b) CO3 7 Marks is an initial and also final state respectively.

| so mai state respectively, |    |    |    |  |  |  |  |
|----------------------------|----|----|----|--|--|--|--|
|                            | A  | b  | 3  |  |  |  |  |
| - *q1                      | Φ  | Φ  | q2 |  |  |  |  |
| q2                         | q3 | q4 | Φ  |  |  |  |  |
| q3                         | Φ  | q2 | Φ  |  |  |  |  |
| q4                         | Φ  | Φ  | q1 |  |  |  |  |

Differentiate between NFA and DFA. c)

for L1 and L2.

#### (**OR**)

- Design an NFA for the set of all strings such that the third symbol from 2 CO3 4 Marks a) the right end is '1' over  $\Sigma = \{0, 1\}$ .
  - The following are two finite automata M1 (Q1, {0,1}, q0,  $\delta1$ , {q0, q1}) CO2. 10 Marks b) and M2 (O2, {0,1}, p0,  $\delta2$ , {p2}) corresponding to regular languages CO3, L1 and L2 with the transition functions given below. CO5 For machine M1,  $\delta 1(q0,0)=q1$ ,  $\delta 1(q0,1)=q0$ ,  $\delta 1(q1,0)=q2$ ,  $\delta 1(q1,1)=q0$ ,  $\delta 1(q_{2},0)=q_{2}, \delta 1(q_{2},1)=q_{2}$ , where q0 is an initial and a final state and q2 is a final state respectively. For machine M2,  $\delta 2(p0,0)=p1$ ,  $\delta 2(p0,1)=p0$ ,  $\delta^2(p_{1,0})=p_{1,0}$ ,  $\delta^2(p_{1,1})=p_{2,0}$ ,  $\delta^2(p_{2,0})=p_{1,0}$ ,  $\delta^2(p_{2,1})=p_{0,0}$ . Here p0 is an initial state and p2 is a final state. Draw transition diagram and transition table

3 a) Derive Regular-Expression for the following FA using  $R_{ii}^{K}$  notation. CO3 10 Marks

Design NFA with €- transitions for the following regular expressions, b) CO3 4 Marks i) b(a+b)\*a. ii) (0 + 1) \* (11 + 00).

#### (**OR**)

- Summarize the properties of regular expressions. 4 CO1 4 Marks a) Is  $L = \{\text{Set of strings of equal number of } a's \text{ and } b's\}$  Regular? Justify. 4 Marks b) CO<sub>2</sub> L1 and L2 are two regular sets. Justify the following. CO2, 6 Marks c) i)  $L1 \Omega L2$  is Regular. CO5 ii) L1.L2 is Regular.
  - iii) L1UL2 is Regular.

Max. Marks: 70

CO<sub>2</sub> 4 Marks

# (UNIT-III)

| 5  | a)  | Is the following CFG is ambiguous?                                                                                          | CO4        | 7 Marks    |
|----|-----|-----------------------------------------------------------------------------------------------------------------------------|------------|------------|
|    |     | $E \rightarrow E + E/E * E/(E)/id$ . Justify your answer with valid example. Find                                           |            |            |
|    | 1-) | equivalent unambiguous grammar.                                                                                             | 004        | 7 \ ( 1    |
|    | D)  | when do you say that a CFG is Unamolguous? Is the following CFG is<br>ambiguous or not? Justify your answer with an example | CO4,       | / Marks    |
|    |     | $S \rightarrow if F$ then $S S \rightarrow if F$ then $S else S F \rightarrow O$ ther Find an equivalent                    | 005        |            |
|    |     | unambiguous CFG.                                                                                                            |            |            |
|    |     | (OR)                                                                                                                        |            |            |
| 6  | a)  | Define Useless symbol, Unit production and Null Production. Give                                                            | CO1,       | 7 Marks    |
|    |     | examples.                                                                                                                   | CO5        |            |
|    | b)  | Find an equivalent Reduced grammar from the following CFG.                                                                  | CO2,       | 7 Marks    |

|               |               | Answer One Question from each Unit                                                                                                               |                |          |          |     |
|               |               | All questions carry equal marks                                                                                                                  |                |          |          |     |
|               |               | UNIT-I                                                                                                                                           |                |          |          |     |
| 1.            | a)            | Discuss manager's myths about software development and their effect on the practitioners as well as on overall outcome.                          | 6 Marks        | L2       | CO1      | PO1 |
|               | b)            | List out the best practices of agile process and principles.<br>(OR)                                                                             | 6 Marks        | L1       | CO1      | PO2 |
| 2.            | a)            | Elaborate the work flow of spiral model with a neat diagram.                                                                                     | 6 Marks        | L2       | CO1      | PO2 |
|               | b)            | Identify the steps in scrum process flow in agile software development.                                                                          | 6 Marks        | L3       | CO1      | PO2 |
|               |               | UNIT-II)                                                                                                                                         |                |          |          |     |
| 3.            | a)            | Illustrate about functional requirements and non-functional requirements.                                                                        | 6 Marks        | L2       | CO2      | PO1 |
|               | b)            | Interpret about requirements management process in an organization to deliver a software product.                                                | 6 Marks        | L3       | CO2      | PO3 |
|               |               | (OR)                                                                                                                                             |                |          |          |     |
| 4.            | a)            | Elaborate the concept of scenario-based modeling.                                                                                                | 6 Marks        | L2       | CO2      | PO3 |
|               | b)            | Model a swimlane diagram for access camera surveillance through the internet in safe home security system.                                       | 6 Marks        | L3       | CO2      | PO3 |
|               |               | (UNIT-III)                                                                                                                                       |                |          |          |     |
| 5.            | a)            | Model a use case diagram for library management system to<br>identify various types of actors, use cases and their relationships<br>between them | 6 Marks        | L3       | CO3      | PO2 |
|               | b)            | Analyze the difference between process and project metrics in software engineering process.                                                      | 6 Marks        | L1       | CO3      | PO1 |
|               |               | (OR)                                                                                                                                             |                |          |          |     |
| 6.            | a)            | Model a sequence and collaboration diagrams for withdrawing an amount from ATM.                                                                  | 6 Marks        | L3       | CO3      | PO2 |
|               | b)            | Illustrate about measures of software quality in an organization.                                                                                | 6 Marks        | L1       | CO3      | PO1 |
| 7             | a)            | Discuss about unit testing and integration testing                                                                                               | 6 Marks        | L2       | CO4      | PO2 |
|               | b)            | Differentiate between black box testing and white box testing.                                                                                   | 6 Marks        | L3       | CO4      | PO2 |
| 8             | a)            | Describe the concept of art of debugging with a neat diagram                                                                                     | 6 Marks        | L2       | CO4      | PO2 |
| 0.            | u)<br>b)      | Interpret about test cases and class hierarchy of object-oriented methods with an example                                                        | 6 Marks        | L2<br>L3 | CO4      | PO2 |
|               |               |                                                                                                                                                  |                |          |          |     |
| 0             | a)            | Discuss about risk mitigation monitoring and management                                                                                          | 6 Marks        | 13       | CO5      | PO5 |
| ).            | $\frac{a}{b}$ | Compare and contrast between McCall's quality factor and ISO                                                                                     | 6 Marks        |          | $CO_{5}$ | PO1 |
|               | 0)            | 9126 quality factor in Software Quality Factors.                                                                                                 | 0 marks        | 15       | 005      | 101 |
| 10            | a)            | Identify the steps for implementing business process                                                                                             | 6 Marks        | L2       | CO5      | PO2 |
| •             | b)            | reengineering model.<br>Illustrate about reverse engineering process to understand                                                               | 6 Marks        | L2       | CO5      | PO2 |
|               |               | internal design structure of complex systems.                                                                                                    |                |          |          |     |

|----|-------|-------------------------------------------------------------|----------|-----|----------|-----|
|    |       | Answer One Question from each Unit                          |          |     |          |     |
|    |       | All questions carry equal marks                             |          |     |          |     |
|    |       |                                                             |          |     |          |     |
| 1. | a)    | Explain Inter Process Communication.                        | 6 Marks  | L2  | CO1      | PO1 |
|    | b)    | Explain operating system structure with neat block diagram. | 6 Marks  | L2  | CO1      | PO1 |
|    |       | (OR)                                                        |          |     |          |     |
| 2. | a)    | What is Scheduling? Explain Multiprocessor Scheduling.      | 6 Marks  | L2  | CO1      | PO2 |
|    | b)    | Discuss about Layered approach.                             | 6 Marks  | L2  | CO1      | PO3 |
|    |       | (UNIT-II)                                                   |          |     |          |     |
| 3. | a)    | Explain Synchronization Hardware.                           | 6 Marks  | L2  | CO2      | PO2 |
|    | b)    | Discuss about System Model.                                 | 6 Marks  | L2  | CO2      | PO2 |
|    |       | (OR)                                                        |          |     |          |     |
| 4. |       | Explain:                                                    | 12 Marks | L2  | CO3      | PO3 |
|    |       | i) Deadlock.                                                |          |     | CO2      | PO2 |
|    |       | ii) Semaphores.                                             |          |     | CO3      | PO1 |
|    |       | iii) Deadlock avoidance.                                    |          |     | CO2      | PO5 |
|    |       | iv) Monitors.                                               |          |     |          |     |
|    |       | (UNIT-III)                                                  |          |     |          |     |
| 5. | a)    | Explain the mass storage structure.                         | 6 Marks  | L2  | CO4      | PO5 |
|    | b)    | Discuss about contiguous allocations.                       | 6 Marks  | L2  | CO4      | PO3 |
|    |       | (OR)                                                        |          |     |          |     |
| 6. | a)    | Explain Demand Paging.                                      | 6 Marks  | L2  | CO4      | PO2 |
|    | b)    | Discuss about Trashing.                                     | 6 Marks  | L2  | CO4      | PO3 |
|    |       | (UNIT-IV)                                                   |          |     |          |     |
| 7. | a)    | Explain File Access Methods.                                | 6 Marks  | L2  | CO5      | PO1 |
|    | b)    | Discuss about I/O hardware.                                 | 6 Marks  | L2  | CO6      | PO4 |
|    |       | (OR)                                                        |          |     |          |     |
| 8. |       | Explain:                                                    | 12 Marks | L2  | CO5      | PO1 |
|    |       | i) Directory Implementation.                                |          |     | CO5      | PO2 |
|    |       | ii) File system implementation.                             |          |     | CO6      | PO4 |
|    |       | iii) I/O interface.                                         |          |     |          |     |
|    |       | UNIT-V                                                      |          |     |          |     |
| 9. | a)    | Discuss about Domain of protection.                         | 6 Marks  | L2  | CO5      | PO2 |
|    | b)    | Explain user authentication.                                | 6 Marks  | L2  | CO6      | PO2 |
|    |       | (OR)                                                        |          |     |          |     |
| 10 | a)    | Explain Access Control.                                     | 6 Marks  | L2  | CO5      | PO2 |
| •  | b)    | Discuss about Firewalling to Protect Systems and Networks.  | 6 Marks  | L2  | CO6      | PO1 |
|    |       |                                                             |          |     |          |     |

#### **ENGINEERING HYDROLOGY**

[Civil Engineering]

Time: 3 hours Max. Marks: 60 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1. List and discuss types of precipitation briefly. 6 Marks L2 **PO1** a) CO1 b) Differentiate between recording and non-recording rain gauge 6 Marks L2 CO1 PO<sub>2</sub> and explain weighing bucket with a neat sketch. (OR)2. a) Explain mass curve and hyetograph with figure. 6 Marks L2 CO1 PO4 There are four rain gauge stations existing in the catchment of a 6 Marks L4 CO1 b) PO5 river. The average annual rainfall values of these stations are 810, 630, 410 and 550 mm respectively. For a 10% error in the estimation of the mean rainfall, calculate the optimum number of stations in the catchment. UNIT-II 3. a) Define infiltration and discuss different factors affecting 6 Marks L2 CO<sub>2</sub> **PO2** infiltration process. Discuss the following terms briefly. 6 Marks L2 CO2 b) **PO2** i) Hyetograph and ii) Double mass curve. (**OR**) A storm produced rainfall intensities of 7, 18, 25, 12, 10, and 4. a) 6 Marks L4 CO<sub>2</sub> PO5 3 mm/r in successive one-hour intervals over a basin of 800 sqkm. The resulting runoff is observed to be 2640 hectare-m. Determine the  $\Phi$  index of the basin. b) Discuss area velocity method to calculate discharge of stream. 6 Marks L2 CO<sub>2</sub> PO4 (UNIT-III) A 30cm well fully penetrates in an unconfined aquifer of 25m 6 Marks CO3 5. a) L4 PO<sub>2</sub> saturated depth. When a discharge of 2100 lpm was being pumped for a long time, observation wells at a radial distance 30m and 90m indicated drawdown of 5m and 4m respectively. Estimate the coefficient of permeability and transmissibility of the aquifer. Discuss briefly about ground water and different forms of 6 Marks L2 CO3 PO4 b) saturated formations in sub-surface of the earth. (**OR**) Derive an expression for discharge from a well fully penetrating 6. a) 6 Marks L4 CO3 PO5 a confined aquifer under steady state flow. b) List the different types of aquifers and explain them briefly. 6 Marks L2 CO3 **PO2** 

#### (UNIT-IV)

- 7. a) Draw and explain a single peaked hydrograph with its 6 Marks L2 CO4 PO4 components.
  - b) Given the ordinates of a 4-h unit hydrograph as below. Derive 6 Marks L6 CO4 PO7 the ordinates of a 12-h unit hydrograph for the same catchment using method of superposition.

| Time (h)          | 0 | 4  | 8  | 12  | 16  | 20  | 24 | 28 | 32 | 36 | 40 | 44 |
|-------------------|---|----|----|-----|-----|-----|----|----|----|----|----|----|
| Ordinate of 4h UH | 0 | 20 | 80 | 130 | 150 | 130 | 90 | 52 | 27 | 15 | 5  | 0  |

efficiency in reservoir.

#### (OR)

- 8. a) Describe the most commonly used two methods for routing of 6 Marks L4 CO5 PO2 floods through reservoir and differentiate channel routing and reservoir routing.
  b) Discuss rational methods for estimation of peak discharge for a 6 Marks L2 CO5 PO4
  - watershed.

# UNIT-V

| 9. | a) | Discuss about reservoir sedimentation and different measure to     | 6 Marks | L2 | CO6 | PO2 |
|----|----|--------------------------------------------------------------------|---------|----|-----|-----|
|    |    | control sedimentation.                                             |         |    |     |     |
|    | b) | Distinguish universal soil loss equation and modified universal    | 6 Marks | L2 | CO6 | PO4 |
|    |    | soil loss equation for the estimation of soil erosion.             |         |    |     |     |
|    |    | (OR)                                                               |         |    |     |     |
| 10 | a) | Discuss erosion and reservoir sedimentation problems in India.     | 6 Marks | L2 | CO6 | PO4 |
|    | b) | Discuss trap efficiency and mention various factors affecting trap | 6 Marks | L2 | CO6 | PO7 |

| 3. | a)       | Prove that the settling of particles is independent of depth of sedimentation tank.                                                                                                                                                                                                                                                                                   | 6 Marks            | L4       | CO2        | PO1<br>PO2                                     |
|    | b)       | Design a rectangular sedimentation tank for a town of population 40,000 and compute surface overflow rate. Assume the average water supply per head per day as 135 litres and detention time as 2 hrs with liquid depth in the tank as 2m. Take L/B ratio as 4:1.                                                                                                     | 6 Marks            | L3       | CO2        | PO1<br>PO2<br>PO3<br>PO4<br>PO6<br>PO8<br>PO10 |
| 4. | a)       | Briefly explain the coagulation process in water treatment. List out types of coagulants used in water treatment plant.                                                                                                                                                                                                                                               | 6 Marks            | L3       | CO2        | PO1<br>PO2<br>PO3<br>PO4<br>PO6<br>PO8         |
|    | b)       | Design rapid sand filter for treating 1.0 MLD water. Assume filtration rate as $2500 \text{ L/m}^2/\text{hr}$ .                                                                                                                                                                                                                                                       | 6 Marks            | L4       | CO2        | PO1<br>PO2<br>PO4<br>PO6<br>PO10               |
|    |          | UNIT-III                                                                                                                                                                                                                                                                                                                                                              |                    |          |            |                                                |
| 5. | a)       | Enlist the objectives of sewerage works and types of sewerage systems.                                                                                                                                                                                                                                                                                                | 6 Marks            | L1       | CO3        | PO1                                            |
|    | b)       | Give various empirical formulae for the determining storm water<br>flow in sewers. Explain their applicability or suitability.<br>(OR)                                                                                                                                                                                                                                | 6 Marks            | L2       | CO3        | PO1<br>PO2                                     |

| 6. | a) | List out the different types of sewerage systems. Describe the merits and demerits of the sewerage system preferred in India.                                                                                                                                                                                                                                                            | 6 Marks | L2 | CO3 | PO1<br>PO2<br>PO5                                     |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----|-----|-------------------------------------------------------|
|    | b) | A 300mm diameter sewer is to flow at 0.3 depth on a grade<br>ensuring a degree of self cleansing equivalent to that obtained at<br>full depth at a velocity of 0.9 m/sec. Find the required grade and<br>associated velocity and rate of discharge at this depth. Assume<br>Manning's rugosity coefficient $n = 0.013$ . The variation of <b>n</b> with<br>depth may be neglected.       | 6 Marks | L3 | CO3 | PO6<br>PO1<br>PO2<br>PO4<br>PO5<br>PO6<br>PO8         |
| 7. | a) | Explain design criteria of construction operation of UASB process.                                                                                                                                                                                                                                                                                                                       | 6 Marks | L2 | CO4 | PO1<br>PO2<br>PO5<br>PO10                             |
|    | b) | Design a suitable rectangular sedimentation tank (provided with mechanical cleaning equipment) for treating the sewage from a city, provided with an assured public water supply system, with a maximum daily demand of 12 million litres per day. Assume suitable values of detention period and velocity of flow in the tank. Make any other assumptions, wherever needed. <b>(OR)</b> | 6 Marks | L2 | CO4 | PO1<br>PO2<br>PO5<br>PO10<br>PO12                     |
| 8. | a) | Explain sludge digestion and its stages in digestion process. Also                                                                                                                                                                                                                                                                                                                       | 6 Marks | L2 | CO4 | PO1<br>PO2                                            |
|    | b) | Develop a relation between a diameter, if circular section of a sewer and a side of the rectangular sewer section having width as twice its depth, the tree sides being wetted. Two sewers are to be hydraulically equivalent.                                                                                                                                                           | 6 Marks | L3 | CO4 | PO2<br>PO1<br>PO2<br>PO3<br>PO5<br>PO6<br>PO8<br>PO10 |
| 9. | a) | Design a septic tank for a hostel housing 150 persons. Also design the soil absorption system for the disposal of the septic tank effluent, assuming the percolation rate as 20 minutes per cm.                                                                                                                                                                                          | 6 Marks | L3 | CO5 | PO1<br>PO2<br>PO3<br>PO5<br>PO6<br>PO10               |
|    | b) | Describe about the two-pipe sanitary plumbing systems normally provided in the buildings compare the merits and demerits of this system.                                                                                                                                                                                                                                                 | 6 Marks | L4 | CO5 | PO1<br>PO2<br>PO10                                    |
| 10 | a) | (OR)<br>What is the purpose of sludge digestion in sewage treatment?<br>Describe various stages of sludge digestion in an anaerobic<br>digester and the characteristic and final method of disposal of the<br>digested sludge.                                                                                                                                                           | 6 Marks | L2 | CO5 | PO1<br>PO2<br>PO5<br>PO6                              |
|    | b) | What are different methods for solid waste collection and disposal? Explain clearly.                                                                                                                                                                                                                                                                                                     | 6 Marks | L6 | CO5 | PO1<br>PO2<br>PO4<br>PO5<br>PO6<br>PO8                |

| 1.            | a) | A fine grained soil has 60% (by weight) clay content. The soil behaves as semi-solid when the water content is between 15% and 28%. The soil behaves fluid-like when the water content is more than 40%. What is the Activity of Soil?                                                      | 6 Marks | L1        | CO1 | PO1<br>PO2        |
|               | b) | If the water content of a fully saturated soil mass is 100%, what will be the relation between void ratio and specific gravity of soil?                                                                                                                                                     | 6 Marks | L2        | CO1 | PO1<br>PO2        |
|               |    | (OR)                                                                                                                                                                                                                                                                                        |         |           |     |                   |
| 2.            | a) | In its natural condition, a soil sample has a mass of 1.980 kg and a volume of $0.001 \text{ m}^3$ . After being completely dried in an oven, the mass of the sample is 1.800 kg. Specific gravity is 2.7, Unit weight of water is 10 kN/m <sup>3</sup> . What is the degree of saturation? | 6 Marks | L3        | CO1 | PO1<br>PO2<br>PO8 |
|               | b) | The laboratory test results of a soil sample are given below:<br>Percentage finer than 4.75 mm = 60, percentage finer than 0.075 mm = 30, liquid limit=35%, Plastic limit = 27%, Classify the soil as per IS1478:1970.                                                                      | 6 Marks | L4        | CO1 | PO1<br>PO2        |
|               |    | UNIT-II                                                                                                                                                                                                                                                                                     |         |           |     |                   |
| 3.            | a) | A soil has a discharge velocity of 3 $\times 10^{-7}$ m/s and void ratio of 0.5. What is the seepage velocity?                                                                                                                                                                              | 6 Marks | L1        | CO2 | PO1               |
|               | b) | If during a permeability test on a soil sample with a falling head<br>permeameter equal time intervals are noted for a drop of head<br>from $L_1$ and $L_2$ and against $L_2$ and $L_3$ . What will be the relation<br>between $L_1$ , $L_2$ , and $L_3$ ?                                  | 6 Marks | L4        | CO2 | PO1<br>PO2        |
|               |    | (OR)                                                                                                                                                                                                                                                                                        |         |           |     |                   |
| 4.            | a) | The flow net for an earth dam with 30m water depth consists of 25 potential drops and 5 flow channels. If the discharge per meter length of dam is 0.00018m <sup>3</sup> /sec, then what is the coefficient of permeability of dam material?                                                | 6 Marks | L2        | CO2 | PO1<br>PO2<br>PO8 |
|               | b) | A soil deposit has three layers having same thickness each but<br>the permeability of the layers is in the ratio of 1:2:4 from top to<br>bottom. What is the ratio of average permeability in the<br>horizontal direction to that in the vertical direction?                                | 6 Marks | L3        | CO2 | PO1<br>PO2        |
| 5.            | a) | A vertical concentrated force of 40 kN is acting at a point on the                                                                                                                                                                                                                          | 6 Marks | L2        | CO3 | PO1               |
|               | ,  | ground surface. Determine the vertical stress intensities due to<br>this load at a depth of 2.5m below GL on the line of action of<br>load and at a depth of 1.5m below GL and a radial distance of<br>3m.                                                                                  |         |           |     | PO2<br>PO4        |
|               | b) | A rectangular footing with dimensions of $2mx3m$ has to carry a uniformly distributed load of $100 \text{ kN/m}^2$ . Plot the distribution of vertical stress intensity due to this load on a horizontal plane at a depth of 2m below the base of the footing by 2:1 dispersion             | 6 Marks | L2        | CO3 | PO1<br>PO2<br>PO4 |

|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |         |    |     |                                 |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----|-----|---------------------------------|
| 6. | a) | What is Newmark's Chart? How is it helpful in computing the vertical stress at any depth due to a loaded area?                                                                                                                                                                                                                                                                                                                                                                                                              | 6 Marks | L1 | CO3 | PO1                             |
|    | b) | Determine the vertical stress intensity at a point 3m below the ground level and 2.5m away from the line of action of a vertical point load of 150 kN acting on the ground surface by Boussinesq's method.                                                                                                                                                                                                                                                                                                                  | 6 Marks | L4 | CO3 | PO1<br>PO2                      |
| 7. | a) | A 10m thick sand layer is underlain by an 8m thick clay layer. The groundwater is found to be at 3m below the surface at the present time. Old well log data shows that the groundwater was as low as 6m below the surface in the past. What is the Over Consolidation Ratio (OCR) at the midpoint of the clay layer? The density of sand is 18 kN/m <sup>3</sup> and the density of clay is $17 \text{ kN/m}^3$ .                                                                                                          | 6 Marks | L3 | CO3 | PO1<br>PO2<br>PO10              |
|    | b) | A laboratory compaction test on soil having specific gravity<br>equal to 2.67 gave a maximum dry unit weight of 17.8 kN/m <sup>3</sup><br>and a water content of 15%. Determine the degree of saturation,<br>air content and percentage air voids at the maximum dry unit<br>weight. What would be theoretical maximum dry unit weight<br>corresponding to zero air voids at the optimum water content?<br>(OR)                                                                                                             | 6 Marks | L4 | CO3 | PO1<br>PO2<br>PO4<br>PO6        |
| 8. | a) | There is a bed of compressible clay of 4m thickness with<br>pervious sand on top and impervious rock at the bottom. In a<br>consolidation test in the laboratory on an undisturbed specimen<br>of clay from this deposit, 90% settlement was reached in 4 hours.<br>The specimen was 20mm thick. Estimate the time in years for the<br>building founded over this deposit to reach 90% of its final<br>settlement                                                                                                           | 6 Marks | L4 | CO3 | PO1<br>PO2<br>PO5<br>PO6        |
|    | b) | The maximum dry density of a sample by light compaction test is 1.80 g/cc at an optimum water content of 14.5 %. Find the air voids and the degree of saturation. $G=2.67$ .                                                                                                                                                                                                                                                                                                                                                | 6 Marks | L2 | CO3 | PO1<br>PO2                      |
| 9. | a) | In a triaxial shear test conducted on a soil sample having a cohesion of $12 \text{ kN/m}^2$ and angle of shearing resistance of $36^\circ$ , the cell pressure was 200 kN/m <sup>2</sup> . Determine the value of the deviator stress at failure                                                                                                                                                                                                                                                                           | 6 Marks | L3 | CO4 | PO1<br>PO2                      |
|    | b) | Two drained triaxial tests are performed on the material. In the first test the all-round pressure is $200 \text{ kN/m}^2$ and failure occurs at an added axial stress of $600 \text{ kN/m}^2$ . In the second test all-round pressure is $350 \text{ kN/m}^2$ and failure occurs at an added axial stress of $1050 \text{ kN/m}^2$ . What values of <b>c'</b> and <b>ø</b> ' correspond to these results?                                                                                                                  | 6 Marks | L3 | CO4 | PO1<br>PO2<br>PO4               |

#### Answer One Question from each Unit All questions carry equal marks

| 1. | a) | Determine the ratio of deflections Y1:Y2 of a simply supported<br>beam carrying a concentrated load W at mid-span deflects by<br>'Y1' under the load. If the same beam carries the load W such that<br>it is distributed uniformly over entire length and undergoes a<br>deflection Y2 at the mid span                                                                         | 4 Marks | L3 | CO1 | PO1<br>PO2<br>PO4<br>PO5<br>PO10 |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----|-----|----------------------------------|
|    | b) | A Cantilever beam of 3m span is 150mm wide and 250mm deep.<br>It carries an UDL of 20 kN/m over its whole span and 25 kN at<br>the free end. Calculate the maximum slope and deflection. Take<br>$E = 2 \times 10^5 \text{ N/mm}^2$ . Use Moment-area method.                                                                                                                  | 8 Marks | L4 | CO1 | PO1<br>PO2<br>PO4<br>PO5<br>PO10 |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                           |         |    |     |                                  |
| 2. | a) | Determine the mid span deflection of simply supported beam<br>with concentrated load 'W' at mid span by Double Integration<br>method.                                                                                                                                                                                                                                          | 4 Marks | L3 | CO1 | PO1<br>PO2<br>PO4<br>PO5<br>PO10 |
|    | b) | A beam of uniform section 10m long is simply supported at its<br>ends. It carries Point loads of 100 kN and 60 kN at a distance of<br>2m and 5m respectively from the left end. Calculate:<br>i) The deflection under each load.<br>ii) The maximum deflection. Using Macaulay's method.<br>$E = 200 \times 10^{6} \text{ N/m}^{2}$ and $I = 118 \times 10^{-4} \text{ m}^{4}$ | 8 Marks | L4 | CO1 | PO1<br>PO2<br>PO4<br>PO5<br>PO10 |

|    |                                 | Answer One Question from each Unit                                                                                                                                     |         |    |     |     |  |  |  |  |  |  |  |
|    | All questions carry equal marks |                                                                                                                                                                        |         |    |     |     |  |  |  |  |  |  |  |
|    | UNIT-I                          |                                                                                                                                                                        |         |    |     |     |  |  |  |  |  |  |  |
| 1. | a)                              | Determine the minimum sum of products and minimum product<br>of sums for $\mathbf{f} = \mathbf{b'c'd'} + \mathbf{bcd} + \mathbf{acd'} + \mathbf{ab'bc'd}$ .            | 6 Marks | L3 | CO1 | PO2 |  |  |  |  |  |  |  |
|    | b)                              | Simplify the following function using K-map $F(A,B,C,D)=\sum(0,1,2,3,4,6,9,10)+d(7,11,12,13,15)$                                                                       | 6 Marks | L3 | CO1 | PO5 |  |  |  |  |  |  |  |
|    |                                 | (OR)                                                                                                                                                                   |         |    |     |     |  |  |  |  |  |  |  |
| 2. | a)                              | Simplify the expression $BD+BCD^1+A^1B^1C^1D^1$ and implement them with two level NAND gate circuit.                                                                   | 6 Marks | L3 | CO1 | PO5 |  |  |  |  |  |  |  |
|    | b)                              | Explain the properties of EX-OR and EX-NOR gates.                                                                                                                      | 6 Marks | L1 | CO1 | PO1 |  |  |  |  |  |  |  |
|    |                                 |                                                                                                                                                                        |         |    |     |     |  |  |  |  |  |  |  |
| 3. | a)                              | Design half subtractor and Realize full subtractor using half subtractors                                                                                              | 6 Marks | L1 | CO2 | PO1 |  |  |  |  |  |  |  |
|    | b)                              | Implement the following logic function using 8 x 1 and 4 x 1 multiplexer $f(A,B,C,D)=\sum m(1,3,4,6,7,9,10,11,14)$ .                                                   | 6 Marks | L2 | CO2 | PO5 |  |  |  |  |  |  |  |
| 4. | a)                              | Draw and explain the block diagram of a 4-bit binary adder/subtractor circuit.                                                                                         | 6 Marks | L2 | CO2 | PO5 |  |  |  |  |  |  |  |
|    | b)                              | Construct 5 to 32 decoder using one 2 to 4 and four 3 to 8 decoders.                                                                                                   | 6 Marks | L2 | CO2 | PO4 |  |  |  |  |  |  |  |
|    |                                 |                                                                                                                                                                        |         |    |     |     |  |  |  |  |  |  |  |
| 5. | a)                              | Explain the operation of Master Slave JK flip-flop with suitable diagrams                                                                                              | 8 Marks | L1 | CO3 | PO1 |  |  |  |  |  |  |  |
|    | b)                              | Design 4-bit twisted ring counter. Also draw its state diagram and sequence table.                                                                                     | 4 Marks | L3 | CO3 | PO3 |  |  |  |  |  |  |  |
|    |                                 | (OR)                                                                                                                                                                   |         |    |     |     |  |  |  |  |  |  |  |
| 6. | a)                              | Design a synchronous sequential counter using JK flip-flop and avoid lock out condition, for $4 \rightarrow 6 \rightarrow 7 \rightarrow 3 \rightarrow 1 \rightarrow 4$ | 6 Marks | L3 | CO3 | PO3 |  |  |  |  |  |  |  |
|    | b)                              | Design Mod-9 counter using D flip-flop                                                                                                                                 | 6 Marks | L2 | CO3 | PO5 |  |  |  |  |  |  |  |
|    |                                 |                                                                                                                                                                        |         |    |     |     |  |  |  |  |  |  |  |
| 7. | a)                              | Distinguish between Moore and Mealy model with necessary block diagram                                                                                                 | 4 Marks | L1 | CO4 | PO1 |  |  |  |  |  |  |  |
|    | b)                              | Realize a logic function using F (A,B,C)= $\Sigma_m(2,4,5,6)$ using Hazard Free logic gate network.                                                                    | 8 Marks | L2 | CO4 | CO4 |  |  |  |  |  |  |  |
|    |                                 |                                                                                                                                                                        |         |    |     |     |  |  |  |  |  |  |  |

(OR)

Minimize the sequential machine represented in the state table 8. 8 Marks CO4 PO5 a) L2 Minimize the sequences and shown below using merger table. Table

|    |    |                     |               | Table        |              | _                |         |    |     |     |

Find the percentage voltage regulation at full load current of 40Amps at power factor of 0.8 lagging.

#### UNIT-IV)

- 7. Derive an expression for synchronizing torque when a 3-phase a) 6 Marks L2 CO3 alternator is connected to infinite bus-bar.
  - b) Two alternators A and B operate in parallel and supply a load of 10MW at 0.8pf lagging.
    - i) By adjusting steam supply of A, its power output is adjusted to 6,000KW and by changing its excitation, its P.F is 6 Marks adjusted to 0.92 lag. Find the Power Factor of alternator B.
    - ii) If steam supply of both machines is left unchanged, but excitation of B is reduced so that it's P.F becomes 0.92 lead. Find new P.F of A.

#### (**OR**)

| 8. | a) | Discuss and state the conditions necessary for paralleling alternators.                                                                                                                                                                                                                                                | 6 Marks | L2 | CO3 | PO7 |

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | List and describe the different static characteristics of measuring instruments.                                                                                                                                                                                                                                                                                    | 6 Marks | L1         | CO1        | PO1                 |
|----|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|------------|------------|---------------------|
|    | b) | Explain the importance of damping mechanism in an instrument<br>and how are they classified.                                                                                                                                                                                                                                                                        | 6 Marks | L2         | CO1        | PO1                 |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                |         |            |            |                     |
| 2. | a) | Explain the construction details of attraction type moving iron<br>instrument. Derive the Torque equation for moving iron<br>instrument, and show that the scale is non-uniform.                                                                                                                                                                                    | 6 Marks | L5         | CO1        | PO3                 |
|    | b) | The Ayrton universal shunt has a total resistance of 6000 $\Omega$ and galvanometer has a resistance of 2000 $\Omega$ . Determine the multiplying power of shunt for 1000 $\Omega$ , 2000 $\Omega$ and 3000 $\Omega$ tapping.                                                                                                                                       | 6 Marks | L3         | CO1        | PO2                 |
| 3. | a) | Explain with a neat circuit of single phase Dynamometer type<br>Wattmeter and derive the equation for deflection torque                                                                                                                                                                                                                                             | 6 Marks | L2         | CO2        | PO1                 |
|    | b) | Draw the possible methods of connections of the pressure coil of<br>a wattmeter and compare the errors.                                                                                                                                                                                                                                                             | 6 Marks | L2         | CO2        | PO4                 |
|    | `` | (OR)                                                                                                                                                                                                                                                                                                                                                                |         | <b>T A</b> | <b>a a</b> | <b>D</b> O <b>0</b> |
| 4. | a) | A 230V, 50Hz single phase energy meter has a constant of 200 revolutions per kWh. While supplying a non-inductive load of 4.4A at normal voltage, the meter takes 3 minutes for 10 revolutions. Calculate the percentage error of the instrument                                                                                                                    | 6 Marks | L3         | 002        | PO2                 |
|    | b) | Draw the connection diagram of a 3-phase energy meter and<br>explain its working. How do you correct it, if it is found to be<br>moving fast and justify your answer?                                                                                                                                                                                               | 6 Marks | L4         | CO2        | PO6                 |
|    |    | (UNIT-III)                                                                                                                                                                                                                                                                                                                                                          |         |            |            |                     |
| 5. | a) | A current transformer with turn's ratio 1:201 is rated as 1000/5A, 25VA. The core loss and magnetizing components of primary are 3A and 7A under rated conditions. Find the ratio and phase angle errors for full burden at 0.88 p.f leading.                                                                                                                       | 6 Marks | L3         | CO3        | PO2                 |
|    | b) | Illustrate the ratio and phase angle errors in potential transformer<br>and explain how to overcome.                                                                                                                                                                                                                                                                | 6 Marks | L4         | CO3        | PO1                 |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                |         |            |            |                     |
| 6. | a) | Draw the circuit diagram of Crompton's potentiometer and<br>explain its working. Describe the steps used when measuring an<br>unknown resistance.                                                                                                                                                                                                                   | 6 Marks | L1         | CO3        | PO5                 |
|    | b) | A Potentiometer consisting of a resistance dial having 15 steps of $10\Omega$ each and a series connected slide wire of $10 \Omega$ which is divided into 100 divisions. If the working current of the potentiometer is 15mA and each division of the slide wire can read accurately up to 1/5 of its span. Calculate the resolution of the potentiometer in volts. | 6 Marks | L3         | CO3        | PO2                 |

(UNIT-IV)

| 7. | a) | Explain kelvin's double bridge for measurement of low resistance with neat circuit diagram and list out the assumptions made                                                                                                                                                                                                                                                                                                                                              | 6 Marks    | L2 | CO4 | PO3 |
|----|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|----|-----|-----|
|    | b) | The four arms of a Wheatstone bridge are as follows $AB=5\Omega$ ;<br>BC=500 $\Omega$ ; CD=1000 $\Omega$ ; DA=100 $\Omega$ . The galvanometer has a<br>resistance of 100 $\Omega$ , a sensitivity of 5mm/ $\mu$ A and it is connected<br>across AC. A source of 5V DC is connected across BD. Calculate<br>the current through the galvanometer and its deflection, if the<br>resistance of arm DA is changed from 100 $\Omega$ to 102 $\Omega$ .                         | 6 Marks    | L3 | CO4 | PO4 |
| 8  | a) | Show how the Wien's bridge can be used for the measurement of                                                                                                                                                                                                                                                                                                                                                                                                             | 6 Marks    | L2 | CO4 | PO1 |
| 0. | u) | frequency in audio range. Derive the equation for frequency <b>f</b> .                                                                                                                                                                                                                                                                                                                                                                                                    | 0 10101110 | 22 | 001 | 101 |
|    | b) | The four arms of an A.C. bridge network are as follows:                                                                                                                                                                                                                                                                                                                                                                                                                   | 6 Marks    | L3 | CO4 | PO4 |
|    |    | Arm AB: an unknown capacitance; Arm BC: a standard capacitor C3 of 1000pF; Arm CD: a non-inductive resistor R4 of 100 $\Omega$ in parallel with a capacitor C4 of 0.01 $\mu$ F; Arm DA: a non – inductive resistor R2 of 1000 $\Omega$ . The A.C. supply is connected across terminals B, D and the supply frequency is 50Hz. If the bridge is balanced with the above values, determine the components of the unknown impedance, while deriving the balanced conditions. |            |    |     |     |
| 9. | a) | Explain how frequency can be measured using Lissajous patterns                                                                                                                                                                                                                                                                                                                                                                                                            | 6 Marks    | L2 | CO5 | PO5 |

#### Answer One Question from each Unit All questions carry equal marks

|    |    | UNIT-I )                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |     |       |     |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-----|-------|-----|
| 1. | a) | What is method of images? Derive an expression for the capacitance per unit length of a 3-phase transposed line. What is the effect of earth on the capacitance of the line?                                                                                                                                                                                                                                                                                                                                      | 6 Marks  | L2  | CO1   | PO1 |
|    | b) | A 3-phase, 50Hz, 66kV overhead transmission line has its conductors arranged at the corners of an equilateral triangle of 3m sides and the diameter of each conductor is 1.5cm. Determine the capacitance per phase, if the length of line is 100 km, and also calculate the charging current.                                                                                                                                                                                                                    | 6 Marks  | L3  | CO1   | PO2 |
| 2. | a) | Derive the expression for capacitance of single core cable with                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 6 Marks  | L2  | CO1   | PO1 |
|    | )  | conductor diameter d and inner sheath diameter D.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |     |       |     |
|    | b) | An 11kV, 50Hz, single phase cable 2.5km long, has a diameter of 20mm and internal sheath radius of 15mm. If the dielectric has a relative permittivity of 2.4, determine i) capacitance ii) charging current iii) total charging kVAR.                                                                                                                                                                                                                                                                            | 6 Marks  | L3  | CO1   | PO2 |
| 2  | 2) | UNIT-II                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | ( Manlea | T A | cor   |     |
| 3. | a) | of medium transmission lines. Draw a phasor diagram with the receiving end voltage as reference. Comment how this analysis help full in real time power systems.                                                                                                                                                                                                                                                                                                                                                  | 6 Marks  | L4  | 02    | PO4 |
|    | b) | An overhead 3-phase transmission line delivers 5000 kW at 22kV<br>at 0.8 p.f lagging, the resistance and reactance of each conductor<br>is $4\Omega$ and $6\Omega$ respectively. Determine i) sending end voltage,<br>ii) percentage regulation, iii) Transmission efficiency.                                                                                                                                                                                                                                    | 6 Marks  | L3  | CO2   | PO2 |
| 4. | a) | Derive the expressions for reflected voltage and current waves,<br>when the transmission line is terminated by the conscitive load                                                                                                                                                                                                                                                                                                                                                                                | 6 Marks  | L2  | CO2   | PO1 |
|    | b) | A cable with surge impedance of $100\Omega$ is terminated by the capacitive load.<br>A cable with surge impedance of $100\Omega$ is terminated in two parallel connected open wires having surge impedances of $600\Omega$ , and $1000\Omega$ respectively. If a steep fronted voltage wave of 2 kV travels along the cable, find the voltage and current in the cable and the open-wire lines immediately after the travelling wave has reached the transition point. Assume voltage wave to be infinite length. | 6 Marks  | L5  | CO2   | PO3 |
| 5. | a) | Derive the expressions for sag and tension when the supports are                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 6 Marks  | L2  | CO3   | PO1 |
|    |    | at unequal heights. Comment how it is useful in power system.                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |     | ~ ~ • |     |
|    | b) | A transmission line has a span of 150m between level supports. The line conductor has a cross-sectional area of $1.25$ cm <sup>2</sup> and it weighs 120kg per 100m. If the breaking stress of copper conductor is 4220 kg per cm <sup>2</sup> . Calculate the maximum sag for a safety factor of 4. Assume maximum wind pressure of 90 kg per m <sup>2</sup> .                                                                                                                                                   | 6 Marks  | L3  | CO3   | PO7 |

| b) | The three bus-bar conductors in an outdoor sub-station are<br>supplied by units of post insulators. Each unit consists of a stack<br>of 3-pin insulators fixed one on the top of the other. The voltage<br>across the lowest insulator is 8.45 kV and that across the next is<br>7.25 kV. Find the bus-bar voltage of the station.                                                                                            | 6 Marks                 |
| b) | A two conductor main AB, 500m in length is fed from both ends<br>at 250 volts. Loads of 50A, 60A, 40A and 30A are tapped at<br>distance of 100m, 250m, 350m and 400m from end A<br>respectively. If the X-section of conductor be $1 \text{cm}^2$ and specific<br>resistance of the material of the conductor is $1.7\mu\Omega\text{cm}$ , determine<br>the minimum consumer voltage.                                         | 6 Marks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | PO3                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| b) | A single phase distributor AB has a total impedance of $(0.1 + j \ 0.2)\Omega$ . At the far end B, a current of 80A at 0.8 p.f. lagging and at mid-point C a current of 100A at 0.6 p.f. lagging are tapped. If the voltage of the far end is maintained at 200V, determine: i) Supply end voltage $V_{A}$ ; ii) Phase angle between $V_A$ and $V_B$ . The load power factors are with respect to the voltage at the far end. | 6 Marks A centrifugal clutch is to transmit 15 kW at 900 r.p.m. The shoes 1. 12 Marks L5 CO1 **PO2** are four in number. The speed at which the engagement begins is PO<sub>3</sub> 3/4th of the running speed. The inside radius of the pulley rim is PO4 150mm and the centre of gravity of the shoe lies at 120mm from the centre of the spider. The shoes are lined with Ferrodo for which the coefficient of friction may be taken as 0.25. Determine: i) Mass of the shoes, and ii) Size of the shoes, if angle subtended by the shoes at the centre of the spider is 60° and the pressure exerted on the shoes is  $0.1 \text{ N/mm}^2$ .

#### (**OR**)

- Define brake and classify them according to the means used for 2. 4 Marks L1 CO1 PO1 a) transforming the energy and according to the direction of acting force. L5 CO1 PO<sub>2</sub>
  - A single block brake is shown in figure below. The diameter of 8 Marks b) the drum is 250mm and the angle of contact is 90°. If the operating force of 700N is applied at the end of a lever and the coefficient of friction between the drum and the lining is 0.35, determine the torque that may be transmitted by the block brake.

## UNIT-III

| In an Engine Governor of the Porter type, the upper and lower arms are 200mm and 250mm respectively and pivoted on the axis of rotation. The mass of the central load is 15 kg, the mass of each ball is 2 kg and friction of the sleeve together with the resistance of the operating gear is equal to a load of 25N at the sleeve. If the limiting inclinations of the upper arms to the vertical are 30° and 40°, find, taking friction into account, range of speed of the governor.                                                                                                                                                                                                                               | 8 Marks                                                                                                                                | L1<br>L5                                                                                                                                                                                                                             | CO4<br>CO4    | PO1<br>PO2<br>PO3<br>PO4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| A shaft carries four masses in parallel planes A, B, C and D in<br>this order along its length. The masses at B and C are 18 kg and<br>12.5 kg respectively, and each has an eccentricity of 60 mm. The<br>masses at A and D have an eccentricity of 80 mm. The angle<br>between the masses at B and C is 100° and that between the<br>masses at B and A is 190°, both being measured in the same<br>direction. The axial distance between the planes A and B is<br>100 mm and that between B and C is 200 mm. If the shaft is in<br>complete dynamic balance, determine : i) the magnitude of the<br>masses at A and D ; ii) the distance between planes A and D ;<br>and iii) the angular position of the mass at D. | 12 Marks                                                                                                                               | L5                                                                                                                                                                                                                                   | CO5           | PO2<br>PO3<br>PO4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Define Longitudinal, Transverse and Torsinal vibrations.<br>A shaft 1.5 m long supported in flexible bearings at the ends<br>carries two wheels each of 50 kg mass. One wheel is situated at<br>the centre of the shaft and the other at a distance of 375 mm from<br>the centre towards left. The shaft is hollow of external diameter<br>75 mm and internal diameter 40 mm. The density of the shaft<br>material is 7700 kg/m <sup>3</sup> and its modulus of elasticity is<br>200 GN/m <sup>2</sup> . Find the lowest whirling speed of the shaft, taking<br>into account the mass of the shaft.                                                                                                                    | 3 Marks<br>9 Marks                                                                                                                     | L1<br>L5                                                                                                                                                                                                                             | CO6<br>CO6    | PO1<br>PO2<br>PO3<br>PO4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <ul> <li>(OR)</li> <li>The mass of an electric motor is 120 kg and it runs at 1500 r.p.m. The armature mass is 35 kg and its C.G. lies 0.5 mm from the axis of rotation. The motor is mounted on five springs of negligible damping so that the force transmitted is one-eleventh of the impressed force. Assume that the mass of the motor is equally distributed among the five springs. Determine : <ul> <li>i) Stiffness of each spring.</li> <li>ii) Dynamic force transmitted to the base at the operating speed.</li> <li>iii) Natural frequency of the system.</li> </ul> </li> </ul>                                                                                                                          | 12 Marks                                                                                                                               | L5                                                                                                                                                                                                                                   | CO6           | PO2<br>PO3<br>PO4                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

- i) No. of late jobs
- ii) Cycle Time
- iii) Theoretical Number of Work Stations required
- iv) Balance Efficiency

## (UNIT-IV)

7. Elucidate in detail, the concept, evolution and scope of marketing 12 Marks L2 CO4 PO1 strategy formulation and different components of a marketing PO2 plan.

(OR)

8. Explain channels of marketing with the help of marketing 12 Marks L2 CO4 PO1 communication. PO2

## UNIT-V

9.Draw the network for the activities whose three time estimates<br/>are given in the table. From the three time estimates obtain the<br/>expected times of all the activities and find criticalpath, project<br/>duration, slack for all events, probability of completing the<br/>projectin 20 days.12 Marks<br/>PO1<br/>PO2<br/>PO3<br/>PO4<br/>PO4<br/>PO11

| Activity | Optimistic  | Most likely | Pessimistic |
|----------|-------------|-------------|-------------|
| Activity | time (days) | time (days) | time (days) |
| 1-2      | 1           | 2           | 3           |
| 1-3      | 5           | 6           | 7           |
| 1-4      | 3           | 5           | 7           |
| 2 - 5    | 5           | 7           | 9           |
| 3 - 5    | 2           | 4           | 6           |

i) Draw the project network.

ii) Find the critical path.

iii) Find the project completion time and the corresponding cost.

iv) What is the total cost, if the project deadline is 13 days?

v) Assume the project deadline to be 10 days. The company has to bear Rs.170 for each day of delay. Find the optimal number of days to crash the project.

## LINEAR AND DIGITAL IC APPLICATIONS

#### [Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

| Time: 3 hours |    | hours                                                                                                                    |         | Max    | . Marks: | 60  |
|---------------|----|--------------------------------------------------------------------------------------------------------------------------|---------|--------|----------|-----|
|               |    | Answer One Question from each Unit                                                                                       |         |        |          |     |
|               |    |                                                                                                                          |         |        |          |     |
|               |    | (UNIT-I)                                                                                                                 |         |        |          |     |
| 1.            | a) | Illustrate the operation of instrumentation amplifier with neat sketches.                                                | 6 Marks | L2     | CO1      | PO1 |
|               | b) | List out and explain the applications of PLL. (OR)                                                                       | 6 Marks | L1     | CO1      | PO2 |
| 2.            | a) | Draw the functional block diagram of timer in Astable mode and derive expression for free running frequency.             | 6 Marks | L2     | CO1      | PO2 |
|               | b) | List out and explain the applications of monostable multivibrator.                                                       | 6 Marks | L1     | CO1      | PO2 |
| 3.            | a) | Explain the operation of R-2R DAC.                                                                                       | 6 Marks | L2     | CO2      | PO3 |
|               | b) | Explain about second order HPF with neat sketches and derive the expression for $F_L$ .                                  | 6 Marks | L2     | CO2      | PO3 |
|               |    | (OR)                                                                                                                     |         |        |          |     |
| 4.            | a) | Explain the operation of Dual Slope ADC.                                                                                 | 6 Marks | L2     | CO2      | PO3 |
|               | b) | Design a second order LPF with a cutoff frequency of 10KHz.                                                              | 6 Marks | L4     | CO2      | PO3 |
| 5.            | a) | Write the basics in HDL programming using structural and data flow modeling.                                             | 6 Marks | L2     | CO3      | PO5 |
|               | b) | Write a process based HDL program for the prime-number detector of 4-bit input and explain the flow using logic circuit. | 6 Marks | L3     | CO3      | PO5 |
| 6.            | a) | Explain about dataflow design elements of VHDL.                                                                          | 6 Marks | L2     | CO3      | PO5 |
|               | b) | Write a VHDL code for basic gates in dataflow model.                                                                     | 6 Marks | <br>L3 | CO3      | PO5 |
| 7.            | a) | Write a VHDL program for 4x1 Multiplexer and 1x4 Demultiplexer.                                                          | 6 Marks | L3     | CO4      | PO5 |
|               | b) | Explain about parity generator and checker.<br>(OR)                                                                      | 6 Marks | L2     | CO4      | PO5 |
| 8.            | a) | Write a HDL code for Barrel Shifter using 74x151 multiplexer.                                                            | 6 Marks | L3     | CO4      | PO5 |
|               | b) | Write a HDL code 74x181 Arithmetic and Logic Unit.                                                                       | 6 Marks | L3     | CO4      | PO5 |
| 9.            | a) | Explain how a JK- flip-flop can be constructed using a T- flip-flop.                                                     | 6 Marks | L2     | CO5      | PO1 |
|               | b) | Write a HDL code for JK flip-flop. (OR)                                                                                  | 6 Marks | L3     | CO5      | PO5 |
| 10            | a) | Draw the circuit of MOD 8 Down ripple counter with D-flip-flops and explain its operation.                               | 6 Marks | L2     | CO5      | PO1 |
|               | b) | Write a HDL code for $74x194$ universal shift register.                                                                  | 6 Marks | L3     | CO5      | PO5 |

| Answer One Question from each Unit |    |                                                                                                                                                                                                                   |           |     |                |     |  |
|                                    |    | All questions carry equal marks                                                                                                                                                                                   |           |     |                |     |  |
|                                    |    | UNIT-I                                                                                                                                                                                                            |           |     |                |     |  |
| 1.                                 | a) | Draw the circuit diagram of two stage R-C coupled transistor amplifier and explain the working of it.                                                                                                             | 6 Marks   | L2  | CO1            | PO1 |  |
|                                    | b) | Explain different types of distortions in amplifiers.<br>(OR)                                                                                                                                                     | 6 Marks   | L1  | CO1            | PO2 |  |
| 2.                                 | a) | Explain how the frequency response will get affected by R-C coupling in multistage amplifier.                                                                                                                     | 6 Marks   | L3  | CO1            | PO2 |  |
|                                    | b) | Explain how the bootstrapping method will increase the input impedance of Darlington amplifier.                                                                                                                   | 6 Marks   | L2  | CO1            | PO2 |  |
|                                    |    | UNIT-II                                                                                                                                                                                                           |           |     |                |     |  |
| 3.                                 | a) | Show that in voltage series and in voltage shunt feedback amplifiers the gain will be reduced by a factor of $(1+\beta A)$                                                                                        | 6 Marks   | L2  | CO2            | PO2 |  |
|                                    | b) | Calculate the gain, input and output impedances of a voltage-                                                                                                                                                     | 6 Marks   | L3  | CO2            | PO5 |  |
|                                    |    | series feedback amplifier having A= -300, $R_i$ = 1.5k $\Omega$ , $R_o$ = 50 k $\Omega$ and $\beta$ = -1/15.                                                                                                      |           |     |                |     |  |
|                                    |    | (OR)                                                                                                                                                                                                              |           |     |                |     |  |
| 4.                                 | a) | What are the advantages and disadvantages of the introduction of negative feedback in amplifiers? Explain.                                                                                                        | 6 Marks   | L2  | CO2            | PO2 |  |
|                                    | b) | Show that in a current series feedback amplifier the input and output impedances are increased by a factor of $(1+\beta A)$ with feedback.                                                                        | 6 Marks   | L4  | CO2            | PO3 |  |
|                                    |    | UNIT-III                                                                                                                                                                                                          |           |     |                |     |  |
| 5.                                 | a) | Explain the principle of operation of Wein bridge oscillator.                                                                                                                                                     | 6 Marks   | L2  | CO2            | PO2 |  |
|                                    | b) | Compare RC phase shift oscillator and Wein bridge oscillator.<br>(OR)                                                                                                                                             | 6 Marks   | L4  | CO2            | PO5 |  |
| 6.                                 | a) | Draw and explain the operation of colpitt's oscillator                                                                                                                                                            | 6 Marks   | L1  | CO2            | PO1 |  |
|                                    | b) | In a transistorized Hartely oscillator the two inductances are 2 mH, and 20 $\mu$ H while the frequency has to be changed from 950 kHz to 2050 kHz. Calculate the range over which the capacitor is to be varied. | 6 Marks   | L3  | CO2            | PO4 |  |
|                                    |    | UNIT-IV                                                                                                                                                                                                           |           |     |                |     |  |
| 7.                                 | a) | Show that the transformer coupled class A amplifier has maximum efficiency of 50%                                                                                                                                 | 6 Marks   | L2  | CO3            | PO2 |  |
|                                    | b) | Design a class B power amplifier to deliver 25W to a load                                                                                                                                                         | 6 Marks   | L3  | CO3            | PO4 |  |
|                                    |    | resistor $R_L = 8\Omega$ , using transformer coupling, $V_m = V_{CC} = 25V$ .<br>Assume necessary data.                                                                                                           |           |     |                |     |  |
| 0                                  | a) | (UK)<br>Explain the principle of operation of class C newer amplifier                                                                                                                                             | 6 Morka   | тэ  | $CO^{2}$       | DOJ |  |
| 0.                                 | a) | with neat sketches.                                                                                                                                                                                               | U IVIAIKS | LZ  | 003            | rU2 |  |
|                                    | D) | Determine the maximum power dissipation allowed for a 100 W silicon transistor (rated at 25°C) for a derating factor of 0.6 W/°C at a case temperature of 150° C.                                                 | 6 Marks   | L4  | 03             | PO4 |  |

## UNIT-V

| 9. | a) | Describe how 555 Timer IC can be used to generate a square     | 6 Marks | L2 | CO4 | PO2 |
|----|----|----------------------------------------------------------------|---------|----|-----|-----|
|    |    | wave.                                                          |         |    |     |     |
|    | b) | Design a second order low pass filter with upper frequency cut | 6 Marks | L3 | CO4 | PO3 |
|    |    | off of 12 kHz.                                                 |         |    |     |     |
|    |    | (OR)                                                           |         |    |     |     |
| 10 | a) | Explain the working of 555 Timer IC in monostable multi        | 6 Marks | L2 | CO4 | PO1 |
|    |    | vibrator mode and give its applications.                       |         |    |     |     |
|    | b) | Draw the circuit diagram and explain the operation of op-amp   | 6 Marks | L3 | CO4 | PO2 |
|    |    | based second order low-pass and high-pass filters.             |         |    |     |     |
|    |    |                                                                |         |    |     |     |

| 3.            | a) | Sixteen-bit messages are transmitted using a Hamming code.          | 6 Marks   | L4             | CO3      | PO2          |
|               |    | How many check bits are needed to ensure that the receiver can      |           |                |          |              |
|               |    | detect and correct single bit errors? Show the bit pattern          |           |                |          |              |
|               |    | transmitted for the message 1101001100110101. Assume that           |           |                |          |              |
|               |    | even parity is used in the Hamming code.                            |           |                |          |              |
|               | b) | Describe Bridges, Routers and Gateways.                             | 6 Marks   | L2             | CO5      | PO1          |
|               |    | (OR)                                                                |           |                |          |              |
| 4.            | a) | Consider the delay of pure ALOHA versus slotted ALOHA at            | 6 Marks   | L2             | CO1      | PO1          |
|               |    | low load. Which one is less? Explain.                               |           |                |          |              |
|               | b) | Discuss A protocol using selective repeat with figures.             | 6 Marks   | L2             | CO3      | PO1          |
|               |    | (UNIT-III)                                                          |           |                |          |              |
| 5.            | a) | Explain Network Layer design issues.                                | 6 Marks   | L2             | CO3      | PO2          |
|               | b) | Demonstrate hierarchical routing with figures.                      | 6 Marks   | L3             | CO2      | PO4          |
|               |    | (OR)                                                                |           |                |          |              |
| 6.            | a) | Explain Bellman-Ford routing algorithm with figure and analyze      | 6 Marks   | L2             | CO2      | PO2          |
|               |    | Count-to-Infinity Problem.                                          |           |                |          |              |
|               | b) | Describe congestion prevention policies in detail.                  | 6 Marks   | L2             | CO5      | PO3          |
|               |    | (UNIT-IV)                                                           |           |                |          |              |
| 7.            | a) | Explain Real-time Transport Control Protocol.                       | 6 Marks   | L2             | CO3      | PO1          |
|               | b) | Demonstrate TCP Segment header with figure.                         | 6 Marks   | L3             | CO3      | PO1          |
|               |    | (OR)                                                                |           |                |          |              |
| 8.            | a) | Analyze TCP Congestion control in detail.                           | 6 Marks   | L4             | CO3      | PO3          |
|               | b) | Describe UDP Segment header.                                        | 6 Marks   | L2             | CO3      | PO1          |
|               |    | UNIT-V                                                              |           |                |          |              |
| 9.            | a) | Can a computer have two DNS names that fall in different            | 6 Marks   | L4             | CO4      | PO2          |
|               |    | top-level domains? If so, give a plausible example. If not, explain |           |                |          |              |
|               |    | why not.                                                            |           |                |          |              |
|               | b) | Describe HTTP and FTP.                                              | 6 Marks   | L2             | CO4      | PO6          |
|               |    | (OR)                                                                |           | <b>.</b> .     | <b>a</b> | <b>D</b> = 5 |
| 10            | a) | Analyze Name servers.                                               | 6 Marks   | L4             | CO4      | PO2          |
| •             | b) | Describe various Message Formats.                                   | 6 Marks   | L2             | CO4      | PO1          |

| Time: 3 hours |         |                                                                   |             |         | Max. Marks: 60 |     |  |
|---------------|---------|-------------------------------------------------------------------|-------------|---------|----------------|-----|--|
|               |         | All questions carry equal marks                                   |             |         |                |     |  |
|               |         |                                                                   |             |         |                |     |  |
| 1             | a)      | Define a data model. Describe various data models                 | 6 Marka     | T 1     | CO1            |     |  |
| 1.            | $a_{j}$ | Discuss about database languages with suitable example            | 6 Marks     | $1^{1}$ | C01            |     |  |
|               | 0)      | (OR)                                                              | 0 WIAIKS    | L       | COI            | 102 |  |
| 2.            | a)      | Explain the following:                                            | 6 Marks     | L3      | CO1            | PO1 |  |
|               |         | i) Entity Type. ii) Relationship Type. iii) Weak-entity set.      |             |         |                |     |  |
|               | b)      | Construct ER model for Student database of University with a      | 6 Marks     | L3      | CO1            | PO2 |  |
|               |         | neat diagram                                                      |             |         |                |     |  |
|               |         | UNIT-II                                                           |             |         |                |     |  |
| 3.            | a)      | What are the properties of a relation?                            | 4 Marks     | L1      | CO2            | PO1 |  |
|               | b)      | Describe different types of constraints used in relational model. | 8 Marks     | L2      | CO2            | PO1 |  |
|               |         | (OR)                                                              |             |         |                |     |  |
| 4.            | a)      | Compare relational algebra and relational calculus.               | 6 Marks     | L2      | CO2            | PO1 |  |
|               | b)      | List and explain about any four operations of relational algebra. | 6 Marks     | L2      | CO2            | PO1 |  |
|               |         | (UNIT-III)                                                        |             |         |                |     |  |
| 5.            | a)      | Write a structure of SQL and also explain various data types.     | 6 Marks     | L3      | CO3            | PO2 |  |
|               | b)      | Mention and explain about group functions that are used in SQL.   | 6 Marks     | L2      | CO2            | PO2 |  |
| ~             |         | (OR)                                                              |             |         | ~ ~ •          |     |  |
| 6.            | a)      | Differentiate procedural and non-procedural languages.            | 6 Marks     | Ll      | CO3            | PO1 |  |
|               | b)      | Write a PL/SQL programme to reverse the given number.             | 6 Marks     | L2      | CO3            | PO4 |  |
|               |         | UNIT-IV                                                           |             |         |                |     |  |
| 7.            | a)      | Why the Functional Dependencies are needed? Explain its           | 6 Marks     | L1      | CO4            | PO1 |  |
|               | 1 \     | concept.                                                          | OV 1        | 1.0     | 004            | DOA |  |
|               | b)      | Describe about different normal forms used to normalize the       | 6 Marks     | L2      | CO4            | PO2 |  |
|               |         | relations.                                                        |             |         |                |     |  |
| 8             | a)      | Draw and explain Transaction state transition diagram             | 6 Marks     | 13      | CO4            | PO2 |  |
| 0.            | b)      | What is serializability? Explain its concept                      | 6 Marks     | LJ      | CO4            | PO2 |  |
|               | 0)      |                                                                   | 0 101001110 | 21      | 001            | 102 |  |
| 0             | a)      | Describe Two-Phase Locking protocol and explain about various     | 6 Marks     | 12      | COS            | PO1 |  |
| ).            | a)      | types of Two-Phase Locking                                        | 0 WILLING   |         | 005            | 101 |  |
|               | b)      | Explain about Multi-version concurrency control mechanism.        | 6 Marks     | L3      | CO5            | PO2 |  |
|               | 0)      | (OR)                                                              | 0 10100110  | 20      | 000            | 102 |  |
| 10            | a)      | State and explain various file organization methods. Give         | 6 Marks     | L2      | CO5            | PO1 |  |
|               | /       | suitable examples to each of them.                                |             |         |                |     |  |
|               | b)      | Distinguish between extendible and linear hashing.                | 6 Marks     | L1      | CO5            | PO1 |  |
|               |         |                                                                   |             |         |                |     |  |

## THEORY OF COMPUTATION

[Information Technology] Time: 3 hours Max. Marks: 60 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I Design a DFA to accept the language where  $L = \{w | w \text{ has both }$ a) 6 Marks L3 CO<sub>2</sub> **PO2** an even number of 0's and even number of 1's}. Construct DFA for the given following NFA. b) 6 Marks L4 CO1 PO<sub>2</sub> 0, 0, 1 0 0 0, (OR)State and prove equivalence of NFA with  $\varepsilon$  – transitions and a) 6 Marks L4 CO<sub>2</sub> PO<sub>3</sub> NFA. b) Compare and contrast Moore machine and Mealy machine. 6 Marks L3 CO1 **PO2** UNIT-II) Discuss in detail the closure properties of regular sets. a) 6 Marks L4 CO<sub>2</sub> PO<sub>2</sub> Construct a finite automata equivalent to  $(0+1)^*(00+11)(0+1)^*$ . CO3 b) 6 Marks PO1 L2 (**OR**) a) Minimize the following automata. 6 Marks L4 CO<sub>2</sub> **PO2** 0. 1 0 1 а 1 Discuss in detail Applications of regular expressions. 6 Marks b) L3 CO<sub>2</sub> PO1 (UNIT-III) What is an ambiguous grammar? Check the grammar G having 12 Marks L4 CO3 PO5

(**OR**)

productions S  $\rightarrow$  aB / bA, A  $\rightarrow$  a / aS / bAA, B  $\rightarrow$  b / bS / aBB

## SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

II B.Tech II Semester (SVEC-19) Regular Examinations August – 2021

## **CONTROL SYSTEMS** [ Electronics and Communication Engineering, Electronics and Instrumentation Engineering ]

Max. Marks: 60

### Time: 3 hours

## Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- a) Develop and explain the Force-Voltage and Force-Current 6 Marks L1 CO1 PO1 analogy expressions.
   b) C(S) 6 Marks L2 CO1 PO2
  - b) Draw the signal flow graph and determine  $\frac{C(S)}{R(S)}$  using Mason's 6 Marks L2

gain formula for the following fig.

- 2. a) Develop the expression for transfer function of Armature 6 Marks L2 CO1 PO2 controlled DC servo motor. Draw the block diagram.
  - b) Obtain Mathematical model of the mechanical system shown in 6 Marks L2 CO1 PO2 fig.

- 3. a) Derive expressions for Rise time, Peak time, Delay time and 6 Marks L1 CO2 PO1 Maximum overshoot of second order under damped system with step input.
  - b) The open loop transfer function of a unity feed back system is 6 Marks L3 CO2 PO3 K

given by  $G(S) = \frac{K}{S(TS+1)}$  where K and T are positive

Constants.

By what factor should be amplifier gain be reduced so that the peak over shoot of unit step response of the system is reduced from 75% to 25%.

## (**OR**)

- 4. a) Explain briefly about the effect of adding Proportional and 6 Marks L1 CO2 PO2 Integral controllers to a control system.
  - b) For a unity feedback system the open loop transfer function is 6 Marks L3 CO2 PO3 10(s+2)

$$G(s) = \frac{10(s+2)}{s^2(s+1)}$$

i) Find the positional ,velocity and acceleration error constants .

ii) Steady state error when the input is 
$$R(s) = \frac{3}{s} - \frac{2}{s^2} + \frac{1}{s^2}$$

|    |    | UNIT-III                                                                                                                                                                       |          |    |     |     |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----|-----|-----|
| 5. |    | Draw the bode plot of $G(s)H(s) = \frac{250}{s(2.5+s)(10+s)}$ .                                                                                                                | 12 Marks | L3 | CO3 | PO4 |
|    |    | Find Gain Margin and Phase Margin.                                                                                                                                             |          |    |     |     |
| 6. |    | (OR)<br>Explain about the advantages of root locus and determine the<br>limiting value of gain 'K' for stability to the open loop transfer<br>K                                | 12 Marks | L3 | CO3 | PO4 |
|    |    | function $\frac{1}{s(1+0.1s)(1+0.2s)}$ .                                                                                                                                       |          |    |     |     |
|    |    | UNIT-IV                                                                                                                                                                        |          |    |     |     |
| 7. |    | Consider a unity feedback system with open loop transfer<br>function, $G(S) = \frac{20}{S(S+2)(S+4)}$ . Design a PD controller so                                              | 12 Marks | L4 | CO4 | PO4 |
|    |    | that the closed loop has a damping ratio of 0.8 and natural frequency of oscillation as 2 rad/sec.                                                                             |          |    |     |     |
| 8. |    | Consider a unity feedback system with open loop transfer                                                                                                                       | 12 Marks | L4 | CO4 | PO4 |
|    |    | function, $G(S) = \frac{K}{S(S+4)(S+7)}$ . Design a lead compensator                                                                                                           |          |    |     |     |
|    |    | to satisfy the condition of Maximum peak overshoot Mp=12.63%.                                                                                                                  |          |    |     |     |
|    |    | UNIT-V                                                                                                                                                                         |          |    |     |     |
| 9. | a) | Obtain the state model of the system whose transfer function is                                                                                                                | 6 Marks  | L2 | CO5 | PO5 |
|    |    | given by $\frac{y(s)}{u(s)} = \frac{10}{(s^2 + 4s^2 + 2s + 1)}$ .                                                                                                              |          |    |     |     |
|    | b) | Compute the state transition matrix of a system represented by                                                                                                                 | 6 Marks  | L3 | CO5 | PO5 |
|    |    | $\begin{bmatrix} x_1 \\ x_2 \end{bmatrix} = \begin{bmatrix} -3 & 1 \\ -2 & 0 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \end{bmatrix} + \begin{bmatrix} 0 \\ 1 \end{bmatrix} u,$ |          |    |     |     |
|    |    | (OR)                                                                                                                                                                           |          |    |     |     |
| 10 |    | Define controllability and observability. Find controllability and observability of the given System                                                                           | 12 Marks | L2 | CO5 | PO5 |
| •  |    | $\begin{bmatrix} \dot{x}_1 \end{bmatrix} \begin{bmatrix} 2 & -2 & 3 \end{bmatrix} \begin{bmatrix} x_1 \end{bmatrix} \begin{bmatrix} 11 \end{bmatrix}$                          |          |    |     |     |
|    |    | $\dot{x}_{2} = 1  1  1  1   x_{2}  + 1   u ;$                                                                                                                                  |          |    |     |     |

$$\begin{bmatrix} x_1 \\ \dot{x}_2 \\ \dot{x}_3 \end{bmatrix} = \begin{bmatrix} 1 & 1 & 1 \\ 1 & 3 & -1 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix} + \begin{bmatrix} 1 \\ -14 \end{bmatrix} \begin{bmatrix} u \end{bmatrix};$$
  
$$Y = \begin{bmatrix} -3 & 5 & -2 \end{bmatrix} \begin{bmatrix} x_1 \\ x_2 \\ x_3 \end{bmatrix}.$$

## ETHICAL HACKING

[ Electrical and Electronics Engineering, Electronics and Communication Engineering, **Electronics and Instrumentation Engineering** 

Time: 3 hours Max. Marks: 60 Answer One Question from each Unit All questions carry equal marks UNIT-I What is meant by Certified Ethical Hacker (CEH)? Discuss what 6 Marks L1 CO1 PO1 a) domains tested by CEH. Define Pen Test? different Penetration-Testing b) Explain 6 Marks L2 CO1 **PO2** methodologies. (**OR**) What is a Buffer Overflow attack? Discuss different Buffer 6 Marks L1 CO1 **PO6** a) Overflow vulnerabilities. Define worm. Explain different Common computer worms with L2 b) 6 Marks CO1 PO1 suitable examples. UNIT-II Explain any two methods social engineers use to gain access to a) 6 Marks L3 CO<sub>2</sub> **PO1** information. What is a Foot prining? How to gather information through foot b) 6 Marks L4 CO3 PO8 printing in DNS. (**OR**) Discuss in detail different Information gathering tools. 6 Marks L1 CO1 PO1 a) Define ping sweep. How to conduct ping sweep in hacking field b) 6 Marks L3 CO3 PO<sub>6</sub> explain with suitable examples. UNIT-III) What is Steganography? Discuss different Steganography 6 Marks L2 CO<sub>2</sub> PO1 a) technologies. Explain different Denial of Service (DOS) attacks. L2 b) 6 Marks CO<sub>2</sub> PO1 (**OR**) Discuss in-detail different Password cracking Techniques. PO6 a) 6 Marks L1 CO<sub>2</sub> Explain different Escalating Privileges. b) 6 Marks L2 CO1 PO<sub>2</sub> (UNIT-IV) Explain different vulnerabilities identified by the security tester a) 6 Marks L2 CO1 PO8 in the OWASP. Explain how to hack the web server using OWASP developed 6 Marks L4 CO3 b) PO<sub>6</sub> the Web Goat project to think and figure out how to launch attacks in the web applications. (OR)

### Explain the use of war driving and how it works. 6 Marks 8. L3 CO3 **PO1** a) Write short notes on wireless hackers tools : b) 6 Marks L3 CO3 **PO2** i) NetStumbler. ii) Kismet.

|    |    | UNIT-V                                                                                                                           |         |    |     |     |
|----|----|----------------------------------------------------------------------------------------------------------------------------------|---------|----|-----|-----|
| 9. | a) | What is Symmetric algorithm? Discuss different types of                                                                          | 6 Marks | L2 | CO1 | PO1 |
|    | b) | Symmetric algorithms and also specify disadvantages.<br>Distinguish between Symmetric and Asymmetric cryptography<br>algorithms. | 6 Marks | L4 | CO3 | PO8 |
|    |    | (OR)                                                                                                                             |         |    |     |     |
| 10 | a) | Explain Cisco Router Configuration access modes. What                                                                            | 6 Marks | L3 | CO3 | PO6 |
|    | b) | Commands are used to showing configuration details?<br>Describe and discuss the Cisco Router Components.                         | 6 Marks | L1 | CO2 | PO2 |

III B.Tech I Semester (SVEC14) Supplementary Examinations August - 2021

## STRUCTURAL ANALYSIS - II

[ Civil Engineering ]

Max. Marks: 70

SVEC-14

## Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1 Two point load of 150kN and 250kN spaced 3m apart cross a girder of span 15m 14 Marks from left toright with 150kN load leading. Find the values of maximum positive and negative shear force and bending moment at a section D, 6m from left hand support. Also find the absolute maximum bending moment due to given load system.

## (OR)

2 Draw the ILD for shear force and bending moment for a section at 5m from the 14 Marks left hand support of a simply supported beam, 20m long in which a UDL rolling load of length 6m and intensity 12 kN/m traverses. Also find the absolute maximum bending moment due to given load system.

# UNIT-II

3 Analyse following continuous beam by slope deflection method and sketch the 14 Marks BMD.

4 Analyse the continuous beam shown in figure using moment distribution method 14 Marks of analysis and Sketch the SFD and BMD. Given AB=CD=6m and BC=4m.

- **6** a) Derive the strain energy in linear elastic systems for flexural loading. 7 Marks
  - b) Calculate the slope at ends of a simply supported beam carrying a UDL w per 7 Marks unit length over the whole span.

(UNIT-IV)

7 What is a Tube structure in tall buildings? Explain the various types of Tube 14 Marks structures in detail using sketches.

(OR)

8 Explain the analysis of a building frame subjected to horizontal forces using 14 Marks Portal method with the help of an example.

## UNIT-V

**9** Explain static and kinematic redundancy with examples. Determine static and 14 Marks kinematic redundancy for the following structures.

(OR)

10 Analyze the rigid frame shown in figure by direct stiffness matrix method.

14 Marks

2

## III B.Tech I Semester (SVEC14) Supplementary Examinations August – 2021

**SOIL MECHANICS** 

[ Civil Engineering ]

Max. Marks: 70

## **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

1 Describe the classification of Coarse grained Soils. 6 Marks a) Obtain the relationship between for the water content, void ratio, specific 8 Marks b) gravity and degree of saturation.

## (**OR**)

A sample of clay taken from a natural stratum was found to be partially 14 Marks 2 saturated and when tested in the laboratory gave the following results. Specific gravity of soil particles is 2.6, wet weight of sample is 250g, dry weight of sample is 210g and volume of sample is 150cm<sup>3</sup>. Compute the degree of saturation, water content, porosity and void ratio using phase diagram.

## UNIT-II

3 What are the properties of the flow nets? 6 Marks a) A falling head permeability test was carried out on a 12.7cm long sample of 8 Marks b) silty clay. The diameter of the sample and the stand pipe were10cm and 1.0cm respectively. The water level in the stand pipe was observed to fall from 85cm to 55cm in 17minutes. Determine the co-efficient of permeability of the soil and height of water level in the stand pipe after another 17minutes. (**OR**)

In a deposit of silt, the water table which was at originally at a depth of 1m 4 14 Marks below ground level was lowered to 3m below ground level. The silt above water table was capillary-saturated. The saturated unit weight of silt was 20kN/m<sup>3</sup>. What is the change in effective pressure at a depth of 0.0m, 1.0m and 3.0m?

## UNIT-III)

- 5 a) Distinguish between Boussinesq's and Westergaard's theory of stress 6 Marks distribution in soils.
  - An annular ring footing of external and internal radii of 4m and 2m respectively 8 Marks b) transmits a pressure of 150kN/m<sup>2</sup>. Calculate the vertical stress at a depth of 1.0m and 2.0m below the centre.

## (OR)

6 Marks 6 Discuss the effect of compaction on properties of soil a) A soil in the borrow pit is at a dry density of 17kN/m<sup>3</sup> with moisture content of 8 Marks b) 10%. The soil is excavated from this pit and compacted in an embankment to a dry density of 18 kN/m<sup>3</sup> with a moisture content of 15%. Compute the quantity of soil to be excavated from the borrow pit and the amount of water to be added for 100m<sup>3</sup> of compacted soil in the embankment.

## UNIT-IV

- Differentiate between compaction and consolidation. 7 6 Marks a)
  - b) What is pre-consolidation pressure and describe the determination of pre-8 Marks consolidation pressure.

Time: 3 hours

SVEC-14

8

A Normally consolidated clay layer 2m thick is sandwiched between two sand layers. The average overburden stress at the middle of clay layer can be taken as 60kN/m<sup>2</sup>. Due to construction of a structure there is an increase in effective vertical stress of 40 kN/m<sup>2</sup> at the middle of clay layer. The liquid limit of clay layer is 60% and the initial void ratio is 0.7. Estimate the consolidation settlement.

9 a) Explain the critical void ratio and pore pressure coefficients, in detail.
b) A cylindrical specimen of saturated soil fails under an axial stress 150 kN/m<sup>2</sup>
b) A cylindrical specimen of saturated soil fails under an axial stress 150 kN/m<sup>2</sup>
b) B Marks in an unconfined compression test. The failure plane makes an angle of 52° with the horizontal. Calculate the cohesion and angle of internal friction of the soil.

| ( | ( | ) | ŀ | 2 | ) |
|---|---|---|---|---|---|
| L | ľ | , |   | • | J |

- **10** a) Write the merits and demerits of tri-axial shear test over the direct shear test. 6 Marks
  - b) The following results were obtained from undrained shear box tests on samples 8 Marks of silty clay:

| Normal pressure (kN/m <sup>2</sup> ) | 210 | 315 | 420 |
|--------------------------------------|-----|-----|-----|
| Shear stress (kN/m <sup>2</sup> )    | 115 | 142 | 171 |

Determine the cohesion and angle of shearing resistance.

## III B.Tech I Semester (SVEC14) Supplementary Examinations August – 2021

## **CONTROL SYSTEMS**

[Electrical and Electronics Engineering]

Max. Marks: 70

SVEC-14

## Answer One Question from each Unit All questions carry equal marks

- UNIT-I
- **1** a) What is control system? Explain the components of control system with the help 6 Marks of block diagram.
  - b) What is block diagram? Explain all the rules used for block diagram reduction 8 Marks method.

## (OR)

a) Write the differential equations governing the mechanical system shown below. 10 Marks Draw the force Voltage and force current electrical analogous circuits and verify it by using mesh and nodal analysis for the figure shown below and determine its transfer function.

b) Write short notes on synchro transmitter.

4 Marks

3 a) Obtain the time response for First order system with respect to input test signals
b) Explain about generalized error constants in control systems.
6 Marks

(UNIT-II)

## (OR)

- 4 a) Derive the mathematical expression for delay time, rise time and settling time 7 Marks for the second order system.
  - b) The overall transfer function of a unity feedback control system is given by 7 Marks C(S) 10

 $\frac{C(S)}{R(S)} = \frac{10}{S^2 + 6S + 10}$ 

Determine the time domain specifications for the given system.

# UNIT-III

5 a) Determine the range of values of K for stability of a unity feedback system 7 Marks whose open loop transfer function is  $G(s) = \frac{K}{s(s+1)(s+4)}$ .

(**OR**)

b) Discuss the applications of R-H criterion.

6

Draw the complete root locus of the system with  $G(s)H(s) = \frac{K(s+0.5)(s+2)}{s(s+1)(s-1)}$ , 14 Marks determine the range of K for which system is stable.

# UNIT-IV

7 The open loop transfer function of a unity feedback system is given by 14 Marks G(S) = 1/S(1+S) (1+2S). Sketch the Polar plot and determine the gain margin and phase margin.

## (OR)

8 Sketch the Bode plot and hence find Gain cross over frequency, Phase cross 14 Marks over frequency, gain margin and phase margin for the given system, G(S) = 0.75(1+0.2S)/S(1+0.5S) (1+0.1S)

# UNIT-V

- 9 a) Construct state model for the fallowing differential equation 7 Marks  $3y_4+5y_3+6y_2+7y_1+4y_0 = 3u_0$ 
  - b) Obtain the state variable representation for Armature controlled DC motor. 7 Marks

## (OR)

- 10 a) Derive an expression for the solution of Homogeneous state equations.
  b) Determine the State Controllability and Observability of the system using 7 Marks
  - Kalman's test.

$$A = \begin{bmatrix} 0 & 2 & 0 \\ 1 & 2 & 0 \\ -1 & 0 & 1 \end{bmatrix} B = \begin{bmatrix} 0 \\ 1 \\ 1 \end{bmatrix} C = \begin{bmatrix} 1 & 0 & 1 \end{bmatrix}$$

## **DYNAMICS OF MACHINERY**

## [Mechanical Engineering]

Max. Marks: 70

## Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a) | The lengths of crank and connecting rod of a horizontal reciprocating engine are 200mm and 800mm respectively. The crank is rotating at 480 r.p.m. Using Klein's constructions find the acceleration of the piston                                                                                                                                                                                                                                                                                                                    | 7 Marks  |
|---|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|   | b) | The lengths of crank and connecting rod of a horizontal reciprocating engine are<br>100mm and 500mm respectively. The crank is rotating at 400 r.p.m. When the<br>crank has turned 30 <sup>o</sup> from the inner dead centre, find analytically:<br>i) Acceleration of the piston.<br>ii) Velocity of the piston.                                                                                                                                                                                                                    | 7 Marks  |
| 2 | a) | Explain the procedure to determine the velocity and acceleration of a four-bar mechanism by Klein's construction.                                                                                                                                                                                                                                                                                                                                                                                                                     | 7 Marks  |
|   | b) | What are the Forces on the reciprocating parts of an engine neglecting and considering weight of the connecting rod using Analytical method?                                                                                                                                                                                                                                                                                                                                                                                          | 7 Marks  |
|   |    | (UNIT-II)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |
| 3 | a) | Explain the effect of Gyroscopic couple on a Naval ship during pitching.                                                                                                                                                                                                                                                                                                                                                                                                                                                              | 7 Marks  |
|   | b) | Explain the effect of Gyroscopic couple on Aero plane.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |
| 4 | a) | List out the few machines in which flywheel are used.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | 7 Marks  |
|   | b) | What is the function of a flywheel? How does it differ from that of a governor?<br>The torque delivered by a two-stroke engine is represented by<br>$t = (1000 + 300 \text{ Sin } 2\theta - 500 \text{ Cos } 2\theta) \text{ N.m.}$ , where $\theta$ is the angle turned by the<br>crank from the inner-dead centre. The engine speed is 250 r.p.m. The mass of<br>the flywheel is 400 kg and radius of gyration is 400 mm. Determine:<br>(i) The power developed. (ii) The total percentage fluctuation of speed.<br><b>UNIT-III</b> | 7 Marks  |
| 5 |    | With a neat sketch, describe the principle and working of an internal expanding shoe brake. Derive expression for the braking torque                                                                                                                                                                                                                                                                                                                                                                                                  | 14 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | 1436 1   |
| 0 |    | A multi-plate clutch has three pairs of contact surfaces. The outer and inner radii<br>of the contact surfaces are 150mm and 80mm respectively. The maximum axial<br>spring force is limited to 3 KN and the co-efficient of friction is 0.3. Assuming<br>uniform wear, find the power transmitted by the clutch at 1500 r.p.m.                                                                                                                                                                                                       | 14 Marks |

## UNIT-IV

- 7 a) What is meant by effort and power of a governor? Find the expressions for the 7 Marks same in a porter governor.
  - b) The following data relate to a Hartnell governor M = 1.5 kg; a = 100 mm; 7 Marks b=40 mm;  $r_1 = 70$  mm;  $r_2 = 110$  mm;  $N_1 = 260$  r.p.m; and  $N_2 = 275$  r.p.m. The axis of rotation is 80mm form the fulcrum. Calculate the rate of the spring and the equilibrium speed, when the radius of the balls is 80mm.

## (OR)

8 a) Why is balancing necessary for rotors of high speed engines?
b) A circular disc mounted on a shaft carries three attached masses 4 kg, 3kg and 2.5 kg at radial distances 75mm, 85mm and 50mm and at the angular positions of 450, 1350 and 2400 respectively. The angular positions are measured counter-clockwise from the reference line along x-axis. Determine the amount of the counter mass at a radial distance of 75mm required for the static balance.

# UNIT-V

9 a) Explain with sketches the different cases of damped vibrations.
b) A cantilever shaft 50mm diameter and 300mm long has a disc of mass 100kg at its free end. The Young's modulus for the shaft material is 200GN/m<sup>2</sup>. Determine the frequency of longitudinal and transverse vibration of the shaft.

# (OR)

a) What do you understand by 'torsionally equivalent shaft'?
b) Describe in detail the method of finding the frequency of torsional vibration of a 7 Marks two rotor system.

## **DESIGN OF MACHINE ELEMENTS-I**

[ Mechanical Engineering ]

Time: 3 hours

Max. Marks: 70

## Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) What are the factors to be considered for the selection of materials for the design 7 Marks of machine elements? Discuss.
  - b) What are preferred numbers? How will you find the numbers belonging to R10 7 Marks series?

## (OR)

- 2 a) Explain the importance of manufacturing considerations in the design process. 7 Marks
  - b) Define "mechanical properties of an engineering material". State any six 7 Marks mechanical properties and applications of it.

# UNIT-II

- **3** a) Define stress concentration and also give the sources of stress concentration. 7 Marks
  - b) A rotating bar made of steel 40C8 is subjected to a completely reversed bending 7 Marks stress. The corrected endurance limit of the bar is 315 N/mm<sup>2</sup> .Calculate the fatigue strength of the bar for a life of 90,000 cycles.

## (OR)

4 A transmission shaft carries a pulley between two bearings. The bending 14 Marks moment at the pulley varies from 100 N-m to 400 N-m, as the torsional moment in the shaft varies from 50 N-m to 110 N-m. The shaft is made of steel (S<sub>ut</sub> =540 N/mm<sup>2</sup>, S<sub>yt</sub>=400 N/mm<sup>2</sup>). The corrected endurance limit of the shaft is 200 N/mm<sup>2</sup>. Determine the diameter of the shaft using a factor of safety of 2.

# UNIT-III

- What is meant by the efficiency of the riveted joint? 4 Marks 5 a) Determine the efficiency of a double riveted, chain lap joint used to join 6mm 10 Marks b) thick plates with 20mm diameter rivets and 60mm pitch. The permissible stresses are 100 MPa in tension, 120 MPa in crushing and 75 MPa in shear. (OR)Discuss various ways in which a riveted joint may fail. 6 Marks 6 a) Two plates of 10mm thick are joined by means of a single riveted, double strap b) 8 Marks butt joint. The rivet diameter is 20mm and pitch of the rivets is 60mm. The
  - permissible stresses are:  $\sigma_t = 80$  MPa,  $\sigma_c = 120$  MPa,  $\tau = 60$  MPa. Calculate the efficiency of the joint.

# UNIT-IV

- 7 a) How are the keys classified? Draw neat sketches of different types of keys and 7 Marks state their applications.
  - b) A solid circular shaft is subjected to a bending moment of 3000 N-m and a 7 Marks torque of 10 000 N-m. The shaft is made of 45C8 steel having ultimate tensile stress of 700 MPa and a ultimate shear stress of 500 MPa. Assuming a factor of safety as 6, determine the diameter of the shaft.

## (OR)

**8** a) How do you classify shaft couplings?

b) Design a muff coupling for a shaft transmitting 30kW at 300 r.p.m. The material 10 Marks adopted for shaft is plain carbon steel (SAE 1040) and muff coupling is grey cast iron (FG 200). The key is also made of plain carbon steel. Design torque on the shaft may be taken as 1.15 times the average torque.

# UNIT-V

9 a) What are the applications of a cotter joints?4 Marksb) Describe the design procedure of a Knuckle joint.10 Marks

## (OR)

**10** Design a knuckle joint to transmit 150 kN. The design stresses may be taken as 14 Marks 75 MPa in tension, 60 MPa in shear and 150 MPa in compression.

|    |          | (UNIT-III)                                                                                                                                                                                                                                 |                    |  |  |  |  |
| 5  |          | Draw and explain the circuit of Collector-Coupled Monostable Multivibrator<br>with necessary waveforms and also derive the expression for pulse width.                                                                                     | 14 Marks           |  |  |  |  |
| 6  | a)       | Discuss in detail about Transistor switching times with relevant diagrams                                                                                                                                                                  | 6 Marks            |  |  |  |  |
| 0  | b)       | Design a Collector-Coupled Astable multivibrator with frequency 1KHz,<br>$h_{FE} = 50, 1c(sat) = 5mA, V_{CE(sat)} = 0.2, V_{cc} = 12$ . Assume $R_1 = R_2, C_1 = C_2$                                                                      | 8 Marks            |  |  |  |  |
|    |          | (UNIT-IV)                                                                                                                                                                                                                                  |                    |  |  |  |  |
| 7  | a)       | Define the following:                                                                                                                                                                                                                      | 6 Marks            |  |  |  |  |
| ,  | u)       | i) Sween-speed error ii) Displacement error iii) Transmission error                                                                                                                                                                        | 0 marks            |  |  |  |  |
|    | b)       | Explain the principle and working of a transistor Bootstrap time-base generator.<br>( <b>OR</b> )                                                                                                                                          | 8 Marks            |  |  |  |  |
| 8  | a)       | Briefly explain the concept of pulse synchronization of relaxation devices.                                                                                                                                                                | 6 Marks            |  |  |  |  |
|    | b)       | With the help of circuit diagram and waveforms, explain frequency division by<br>an Astable multivibrator.                                                                                                                                 | 8 Marks            |  |  |  |  |
|    |          | UNIT-V                                                                                                                                                                                                                                     |                    |  |  |  |  |
| 9  | a)       | With neat diagram, analyze the working of bidirectional sampling gate using two transistors.                                                                                                                                               | 6 Marks            |  |  |  |  |
|    | b)       | Discuss the applications of Sampling gates.<br>(OR)                                                                                                                                                                                        | 8 Marks            |  |  |  |  |
| 10 | a)       | Draw and explain the circuit of Two-input TTL NAND gate.                                                                                                                                                                                   | 6 Marks            |  |  |  |  |
|    | b)       | Implement OR and AND gates using diodes and transistors.                                                                                                                                                                                   | 8 Marks            |  |  |  |  |

|    | 0)        | frequency response of an on amp                                                                                                                           | / WIAIKS           |
|    |           | (OR)                                                                                                                                                      |                    |
| 2  | a)        | Define the following terms:                                                                                                                               | 4 Marks            |
|    |           | i) Input bias current. ii) Input offset voltage.                                                                                                          |                    |
|    | b)        | Explain the frequency compensation technique in an op-amp.                                                                                                | 10 Marks           |
|    |           | UNIT-II                                                                                                                                                   |                    |
| 3  | a)        | Draw the circuit of a typical instrumentation amplifier. Why do we use two-stage op-amp circuit as an instrumentation amplifier? Explain.                 | 8 Marks            |
|    | b)        | With neat sketches, explain the frequency response of different filters. (OR)                                                                             | 6 Marks            |
| 4  | a)        | Draw the circuit of voltage to current converter and explain its operation.                                                                               | 7 Marks            |
|    | b)        | Design a differentiator to differentiate an input signal that varies in frequency from 10 Hz to about 1 KHz.                                              | 7 Marks            |
|    |           | UNIT-III                                                                                                                                                  |                    |
| 5  | a)        | Explain the block diagram of PLL.                                                                                                                         | 7 Marks            |
|    | b)        | Design a symmetrical square wave generator with a frequency of 5KHz. Draw the circuit and respective waveform.                                            | 7 Marks            |
|    |           | (OR)                                                                                                                                                      |                    |
| 6  | a)        | Define capture-range, lock-range and pull-in time of PLL.                                                                                                 | 6 Marks            |
|    | b)        | Design a monostable multivibrator using 555 timer to produce a pulse width of 100ms.                                                                      | 8 Marks            |
|    |           | UNIT-IV                                                                                                                                                   |                    |
| 7  | a)        | What do you mean by 5V tolerant inputs?                                                                                                                   | 3 Marks            |
|    | b)        | Define DC noise margin with reference to TTL gate.                                                                                                        | 3 Marks            |
|    | c)        | Draw and explain the circuit diagram of 2-input ECL NOR/OR gate.                                                                                          | 8 Marks            |
| Q  | a)        | (UR)<br>Explain the following terms with reference to CMOS logic:                                                                                         | 6 Marka            |
| 0  | <i>a)</i> | i) Logic levels ii) Power supply rails                                                                                                                    | 0 Iviai KS         |
|    | b)        | Briefly explain about CMOS/TTL interfacing                                                                                                                | 8 Marks            |
|    | -)        |                                                                                                                                                           |                    |
| 9  | a)        | Explain about Verilog as HDL.                                                                                                                             | 7 Marks            |
|    | b)        | Write a Verilog code for half-adder using CMOS switches.                                                                                                  | 7 Marks            |
|    | ,         | (OR)                                                                                                                                                      |                    |
| 10 | a)        | Design 8:1 Multiplexer using 2:1 multiplexer.                                                                                                             | 7 Marks            |
|    | b)        | Write a Verilog program for a Mod 10 counter.                                                                                                             | 7 Marks            |
|    |           |                                                                                                                                                           |                    |
|    |           | 1                                                                                                                                                         |                    |

CODE No.:14BT51202 SVEC-14 Roll No. SREE VIDYANIKETHAN ENGINEERING COLLEGE (An Autonomous Institution, Affiliated to JNTUA, Anantapur) **III B.Tech I Semester (SVEC14) Supplementary Examinations August – 2021** SOFTWARE ENGINEERING [ Computer Science and Engineering, Information Technology, **Computer Science and Systems Engineering** Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 Explain the changing nature of the software. 7 Marks a) Sketch and explain about a software process framework. 7 Marks b) (**OR**) Describe scrum process model with neat diagram. 2 7 Marks a) Explain the prototyping process model with a neat diagram. 7 Marks b) UNIT-II What are the difficulties in Elicitation? 3 a) 4 Marks b) Design Interaction model for word processor. 10 Marks (**OR**) Explain the requirements management principles and procedures. 7 Marks 4 a) b) What is System Modeling? List out and briefly explain various models. 7 Marks (UNIT-III) Explain Re-engineering process model with a neat sketch. 5 7 Marks a) Define software Architecture. Why is architecture important? Explain. 7 Marks b) (**OR**) 6 Explain in-detail about Architectural Patterns. 7 Marks a) Write the steps involved in interface design. 7 Marks b) UNIT-IV Define debugging. Explain the process of debugging. 9 Marks 7 a) Write short notes on White box testing technique. 5 Marks b) (**OR**) What are the various testing strategies for conventional software? 8 9 Marks a) Differentiate between verification and validation. 5 Marks **b**) UNIT-V Compare and contrast reactive and proactive risk strategies. 7 Marks 9 a) Briefly write about software Reliability. 7 Marks b) (**OR**) Write short notes on RMMM. 7 Marks 10 a) Define Quality and write about quality concepts. 7 Marks b)

III B.Tech I Semester (SVEC14) Supplementary Examinations February – 2021

## **PROFESSIONAL ETHICS**

[ Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering |

Time: 3 hours

8

9

## **Answer One Question from each Unit** All questions carry equal marks

Max. Marks: 70

# UNIT-I

- Briefly explain the general types of enquiries involved in engineering 1 a) 6 Marks inspection.
  - What is meant by professional conscience and right of conscientious refusal? 8 Marks b) (**OR**)
- Why is it important to study the subject of professional ethics? 6 Marks 2 a) How did Gilligum view the three levels of moral development initiated by b) 8 Marks Kholbuerg?

# UNIT-II

| 3 | a) | Mention the different types of ethical theories. What are its uses? | 8 Marks |
|---|----|---------------------------------------------------------------------|---------|
|   | b) | Explain in detail about role of law of Engineering.                 | 6 Marks |
|   |    | (OR)                                                                |         |
| 4 | a) | Write short notes on theories of right action.                      | 6 Marks |
|   | b) | Explain in detail the qualities of professional practitioners.      | 8 Marks |

# UNIT-III)

| 5 | a) | What are the issues involved in maintenance?                             | 6 Marks |
|---|----|--------------------------------------------------------------------------|---------|
|   | b) | Explain the concept of interest with examples from consulting Engineers. | 8 Marks |
|   |    | (OR)                                                                     |         |
| 6 | a) | What is the importance of industrial standard?                           | 6 Marks |
|   | b) | How do the different ways and means of the "code of ethics" help the     | 8 Marks |

How do the different ways and means of the "code of ethics" help the D) 8 Marks Engineers?

# UNIT-IV

7 List the rights conferred on citizen in the constitution. 6 Marks a) Explain the concept of whistle blowing and the conditions expected for whistle b) 8 Marks blowing.

## (**OR**)

Explain the respect for authority in detail. 6 Marks a) List the advantages and limitations of collective bargaining. 8 Marks b)

# UNIT-V

"Engineers shine better as managers". Discuss. a) What is known as technology transfer? Why is it so critical in defence / 8 Marks b) aerospace industries?

## (**OR**)

"Engineers in weapon development" - Discuss 8 Marks **10** a) Describe the ethics related to multinational corporations. 6 Marks b)

6 Marks

### **SOIL MECHANICS**

[ Civil Engineering ]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- Describe different types of soil structure. 5 Marks 1 a) 9 Marks b) A partially saturated soil sample has a volume of 6  $\times 10^{-5}$  m<sup>3</sup> and weighs 1N. The sample is dried in the oven and its dry weight is found to be 0.78N. The specific gravity of solid particles is 2.65. Determine degree of saturation. (**OR**) Differentiate between the submerged unit weight and saturated unit weight. 2 5 Marks a) b) Describe I.S classification of soils. 9 Marks UNIT-II ) 3 What are the properties of the flow nets? 6 Marks a) A falling head permeability test was carried out on a 12.7cm long sample of silty 8 Marks b) clay. The diameter of the sample and the stand pipe were10cm and 1.0cm respectively. The water level in the stand pipe was observed to fall from 85cm to 55cm in 17minutes. Determine the co-efficient of permeability of the soil and height of water level in the stand pipe after another 17minutes. (**OR**) In a deposit of silt, the water table which was at originally at a depth of 1m below 4 14 Marks ground level was lowered to 3m below ground level. The silt above water table was capillary-saturated. The saturated unit weight of silt was 20kN/m<sup>3</sup>. What is the change in effective pressure at a depth of 0.0m, 1.0m and 3.0m? (UNIT-III) State the assumptions of Boussinesq's theory of stress distribution in soils. 4 Marks 5 a) Derive an expression for a vertical stress below the centre of circular area b) 10 Marks supporting a uniformly distributed load at the surface. Use bousinesq's theory. (**OR**) What is compaction curve and describe zero-air void curve with a sketch. 6 6 Marks a) Explain how field control of compaction soil is achieved. Describe at least one 8 Marks b) example in each case. UNIT-IV) 7 Explain briefly Terzaghi's theory of one dimensional consolidation and derive its 14 Marks equation. (**OR**) Define: 6 Marks 8 a) i) Preconsolidation pressure. ii) Compression index. iii) Degree of saturation. iv) Coefficient of consolidation. The liquid limit of a normally consolidated clay sample is 58%. At a stress of b) 8 Marks 100kN/m<sup>2</sup>, the void ratio is 1.05. Calculate the void ratio if the stress is increased to 200kN/m<sup>2</sup>. If the clay year thickness is 5m, what is the total settlement?
  - 1

Time: 3 hours

# UNIT-V

| 9  | a) | Explain the critical void ratio and pore pressure coefficients in detail.                                                                                                                 | 6 Marks |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
|    | b) | A cylindrical specimen of saturated soil fails under an axial stress $150$ kN/m <sup>2</sup> in an unconfined compression test. The failure plane makes an angle of $52^{\circ}$ with the | 8 Marks |
|    |    | horizontal. Calculate the cohesion and angle of internal friction of the soil.                                                                                                            |         |
|    |    | (OR)                                                                                                                                                                                      |         |
| 10 | a) | State the advantages and limitations of direct shear test.                                                                                                                                | 8 Marks |
|    | b) | Describe pore pressure parameters. State its importance in shear strength of soils.                                                                                                       | 6 Marks |
|    |    | ନ୍ତି ନି                                                                                                                                                                                   |         |

III B.Tech I Semester (SVEC14) Supplementary Examinations February – 2021

# CONTROL SYSTEMS

### [Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- **1** a) What is control system? Explain the components of control system with the help 6 Marks of block diagram.
  - b) What is block diagram? Explain all the rules used for block diagram reduction 8 Marks method.

#### (OR)

a) Write the differential equations governing the mechanical system shown below. 10 Marks Draw the force Voltage and force current electrical analogous circuits and verify it by using mesh and nodal analysis for the figure shown below and determine its transfer function.

b) Write short notes on synchro transmitter.

4 Marks

### UNIT-II)

- 3 a) Find K<sub>p</sub>, K<sub>v</sub> and K<sub>a</sub> for the open-loop transfer function of a unity feedback system 4 Marks given by  $G(s) = \frac{10}{s(0.1s+1)}$ 
  - b) Derive the expressions for time domain specifications  $\mathbf{t_r}$ ,  $\mathbf{t_p}$ , max peak overshoot 10 Marks for under damped second order system with unit step input.

#### (OR)

- 4 a) Obtain the time response for First order system with respect to input test signals 8 Marks
  - b) Explain about generalized error constants in control systems. 6 Marks

### UNIT-III

5 A unity feedback system has an open loop transfer function 6 (s) H(s) =  $\frac{K}{s(s+3)(s^2+2s+2)}$ 

Sketch the root locus as 'K' varies from 0 to  $\infty$ .

#### (OR)

SVEC-14

- 6 a) Sketch the root locus plot of a unity feedback system with an open loop transfer 8 Marks function  $G(s) = \frac{K}{s(s+2)(s+4)}$ .
  - b) Discuss the effect of addition of poles and zeros to the open loop transfer 6 Marks function.

### UNIT-IV

- 7 a) The open loop transfer function of a unity feedback control system is given below 8 Marks  $G(s) = \frac{50}{S(S+5)}$ . Draw the Nyquist plot and comment on the stability of the closed loop system.
  - b) A second order system has overshoot of 50% and period of oscillation 0.2s in step 6 Marks response. Determine resonant peak, resonant frequency and bandwidth.

#### (**OR**)

8 a) Derive expressions for Resonant peak magnitude and resonant frequency.
b) Derive the transfer functions for Lead and Lag compensation networks.
6 Marks

### UNIT-V

| 9  | a) | Construct state model for the fallowing differential equation $3y_4+5y_3+6y_2+7y_1+4y_0$                  | 7 Marks |
|----|----|-----------------------------------------------------------------------------------------------------------|---------|
|    |    | $= 3u_{0.}$                                                                                               |         |
|    | b) | Obtain the state variable representation for Armature controlled DC motor.                                | 7 Marks |
|    | ,  | (OR)                                                                                                      |         |
| 10 | a) | State and explain controllability and observability.                                                      | 6 Marks |
|    | b) | The transfer function of a control system is given by $\frac{Y(s)}{U(s)} = \frac{S+2}{s^3+9s^2+26s+24}$ . | 8 Marks |
|    |    | Check for controllability and observability.                                                              |         |

#### TRANSMISSION OF ELECTRIC POWER [Electrical and Electronics Engineering]

romes Engineering J

Max. Marks: 70

6 Marks

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 a) Derive an expression for the inductance of a double circuit,  $3-\Phi$  line whose 7 Marks conductors are situated at the corners of a regular hexagon.
  - b) A 25000 KVA, 13.8 KV generator has sub transient reactance of 0.2 p.u. and is 7 Marks connected to a transmission line through a transformer rated 30000 KVA, 13.8  $\Delta$  230 Y KV with reactance as 0.008 p.u. If the base to be used in calculations is 100 MVA, 220 KV for the transmission line, what p.u. values should be used for the transformer and generator reactance?

#### (OR)

- **2** a) Derive an expression for p.u. impedance of a given base MVA and base KV in 5 Marks terms of new base MVA and new base KV.
  - b) The conductors of a 3-Φ line are placed at the corners of an equilateral triangle. 9 Marks The conductor spacing is 3m and each copper conductor has a diameter of 12.5mm. Calculate resistance, series and shunt reactance per meter per phase of the line. The frequency is 50Hz.

### UNIT-II

- 3 a) A 60Hz, 250km line has an impedance of  $(33+j104)\Omega$  and admittance of 7 Marks  $10^{-3}\Omega$ . The receiving end load is 50MW at 208KV with 0.8pf lag. Find the sending end voltage, current, power and power factor using ABCD constants for a nominal  $\pi$  model.
  - b) A 3-phase, 50Hz transmission line is 250km long. The load is 125MW 7 Marks operating at 220KV upf. Evaluate the incident and reflected voltages at receiving end.  $R = 0.172 \Omega/km$ , L=2.1mH/km and C=0.01µF/km.

### (OR)

- 4 a) Derive the ABCD constants for a medium transmission line which can be 8 Marks analyzed using nominal  $\pi$  method.
  - b) Using a nominal  $\pi$  model find the sending end voltage and regulation of a 250km three phase line delivering 50MVA at 0.85p.f lag, 132KV, 50Hz. The conductors are spaced 3m apart equilaterally. The conductor diameter is 1.6cm and resistance is 0.11 $\Omega$ /km.

### (UNIT-III)

5 a) Show that a traveling wave moves with a velocity of light on the overhead line.
7 Marks
b) A 3-Φ transmission line has conductors 1.5 cm in diameter spaced 1m apart in equilateral formation. The resistance and leakage are negligible. Find the natural impedance of the line.
7 Marks

#### (OR)

- 6 a) Write short notes on Beweley's lattice diagram.
  - b) A surge of 200KV traveling on a line of natural impedance  $500\Omega$  arrives at a gunction with two lines of impedances  $700\Omega$  and  $300\Omega$  respectively. Find the surge voltages and currents transmitted into each branch line. Also find the reflected surge voltage and current.

### UNIT-IV)

- 7 Discuss the phenomenon of corona and corona loss and indicate the 7 Marks a) circumstances under which they are likely to occur.
  - Calculate the disruptive critical voltage for a  $3-\Phi$  overhead line which has three b) 7 Marks smooth round conductors of 12.7mm diameter arranged in a 3m delta. The barometric pressure is 750mm of mercury and the air temperature is -1°C. The breakdown strength of air is 21KV rms/cm.

### (**OR**)

- What are the types of insulators? 8 a)
  - A string of 5 suspension insulators is connected across 100KV line. Calculate b) the distribution of voltage on the insulator discs if the capacitance of each disc to earth is 0.1 of the capacitance of the insulator. Calculate also the string efficiency.

### UNIT-V

9 The towers of height 30mt and 90mt respectively support a transmission line 14 Marks conductor at water crossing. The horizontal distance between the towers is 500m. If the tension in conductor is 1600kg, find minimum clearance of conductor and water, clearance mid-way between supports. Weight of conductor is 1.5kg/m. Bases of the towers can be considered to be at water level.

### (**OR**)

- 10 a) Explain about different types of grading of cables.
  - Determine the insulation resistance of a single core cable of inside diameter 5 Marks b) 0.03m, outside diameter 0.075m and length 2km. The resistivity of insulating material being 6 x  $10^{12} \Omega$ -m.

3

### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

The crank and connecting rod of a steam engine are 0.3m and 1.5m in length. The 1 14 Marks crank rotates at 180 r.p.m. clockwise. Determine the velocity and acceleration of piston when the crank is at 40° from the inner dead centre position. Also determine the position of the crank for zero acceleration of the piston.

### (**OR**)

2 A petrol engine with a speed of 3000 r.p.m. has a stroke of 8.75cm. The weight of 14 Marks the connecting rod is 1.75kgf. The length of connecting rod from centre to centre is 17.5cm. The centre of gravity from big end centre is 5.75cm. The radius of gyration about an axis through the center of gravity and perpendicular to the connecting rod is 7.5cm. Find the inertia force of the connecting rod and its direction with the centre line of the connecting rod when the crank makes an angle of 40<sup>°</sup> with I.D.C. Also find inertia torque on the crank shaft.

## UNIT-II )

- Explain the effect of Gyroscopic couple on a Naval ship during pitching. 7 Marks a) 7 Marks b)
  - Explain the effect of Gyroscopic couple on a Aero plane.

#### (OR)

4 List out the few machines in which flywheel are used. 7 Marks a) What is the function of a flywheel? How does it differ from that of a governor? 7 Marks b) delivered by a two-stroke engine is represented by The toraue t=  $(1000 + 300 \text{ Sin } 2\boldsymbol{\vartheta} - 500 \text{ Cos } 2\boldsymbol{\vartheta})$  N.m where  $\boldsymbol{\vartheta}$  is the angle turned by the crank from the inner-dead centre. The engine speed is 250 r.p.m. The mass of the flywheel is 400 kg and radius of gyration is 400mm. Determine (i) The power developed (ii) The total percentage fluctuation of speed

### UNIT-III)

- 1. A cone clutch with one cone angle 20° is to transmit 7.5kw at 750 r.p.m. The 5 14 Marks normal intensity of pressure between the contact faces is not to exceed 0.12N/mm<sup>2</sup>. The coefficient of friction is 0.2. If face width is 1/5th of mean diameter, find;
  - i) The main dimensions of the clutch.
  - ii) Axial force required while running.

### (**OR**)

A multi-plate clutch has three pairs of contact surfaces. The outer and inner radii 6 14 Marks of the contact surfaces are 150mm and 80 mm respectively. The maximum axial spring force is limited to 3KN and the co-efficient of friction is 0.3. Assuming uniform wear find the power transmitted by the clutch at 1500 r.p.m.

Max. Marks: 70

2

# Derive the expression for critical speed of shaft with a single disc considering

#### ද්මු ද්මු ලි

- 9 A cylinder of mass M and radius R rolls without slipping on a cylindrical surface 14 Marks of radius R. Find the natural frequency for small oscillations about the lowest position. (**OR**)
  - damping.

UNIT-V

In a porter governor the upper and lower arms are each 200mm long and are each

inclined at  $30^{\circ}$  to the vertical when the sleeve is in its lowest position. The points if suspensions are each 36mm from the axis of the spindle. The mass if each rotating ball is 3kg and the central load on the sleeve is 20kg. If the lift of sleeve

UNIT-IV

Maximum and minimum radii of governor balls are 12cm and 8cm. The min equilibrium speed is to be 300 r.p.m The max equilibrium speed is 5% greater than min. Find the stiffness of the spring and the equilibrium speed when the radius of rotation of the balls is 10cm. (**OR**)

Distance of fulcrum of each bell crank lever from the axis of rotation= 9cm

The following particulars refer to the Hartnell type of governor.

14 Marks

14 Marks

6 Marks

8 Marks

Length of bell crank lever arms vertical = 10cm Length of bell crank lever arms horizontal = 5 cm

is 36mm, find the range of speed of the governor.

Explain whirling speed of shaft.

Weight of each ball = 20 N

### **DESIGN OF MACHINE ELEMENTS-I** [Mechanical Engineering]

Time: 3 hours

6

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

- 1 Explain the importance of manufacturing considerations in the design process. 7 Marks a) Define "mechanical properties of an engineering material". State any six 7 Marks b) mechanical properties and applications of it. (**OR**) 2 What are the steps to be followed while designing a machine element? 7 Marks a) Define the following properties of a material: 7 Marks b)
  - i) Ductility. ii) Toughness. iii) Hardness. iv) Creep.

### UNIT-II)

- What is meant by endurance strength of a material? How do the size and 3 a) 4 Marks Surface condition of a component and type of load and effect such strength?
  - A circular bar of 500mm length is supported freely at its two ends. It is acted 10 Marks b) upon by a central concentrated cyclic load having a minimum value of 20kN and maximum value of 50kN. Determine the dia of bar by taking a factor of safety of 1.5, size effect of 0.85, surface finish factor of 0.9. The material properties of bar are given by ultimate strength of 650MPa, yield strength of 500MPa and endurance strength of 350MPa.

#### (**OR**)

- 4 Formulate Soderberg's equation and state its application to different types of 6 Marks a) loading.
  - b) A 50mm diameter shaft is made from carbon steel having ultimate tensile 8 Marks strength of 630MPa. It is subjected to a torque which fluctuates between 2000N-m to 800N-m. Using Soderberg method, calculate the factor of safety. Assume suitable values for any other data needed.

### (UNIT-III)

- Discuss the bolt of uniform strength in detail. 5 a)
  - A steam engine cylinder has an effective diameter of 350mm and the maximum 7 Marks b) steam pressure acting on the cylinder cover is 1.25N/mm<sup>2</sup>. Calculate the number and size of studs required to fix the cylinder cover, assuming the permissible stress in the studs as 33MPa.

#### (**OR**)

Discuss various ways in which a riveted joint may fail. 6 Marks a) Two plates of 10mm thick are joined by means of a single riveted, double strap 8 Marks b) butt joint. The rivet diameter is 20mm and pitch of the rivets is 60mm. The permissible stresses are:  $\sigma_t = 80$ MPa,  $\sigma_c = 120$ MPa,  $\tau = 60$ MPa. Calculate the efficiency of the joint.

Max. Marks: 70

7 Marks

### UNIT-IV

6 Marks

4 Marks

- 7 a) Prove that a square key is equally strong is shear and compression
  b) A standard splined connection 8 x 36 x 40 is used for a gear and shaft assembly
  - b) A standard splined connection 8 x 36 x 40 is used for a gear and shaft assembly 8 Marks rotating at 700 r.p.m. The length of the gear hub is 50mm the normal pressure on the spines is limited to 6.5N/mm<sup>2</sup>. Calculate the power that can be transmitted form gear to shaft.

### (OR)

8 a) How do you classify shaft couplings?

b) Design a muff coupling for a shaft transmitting 30kW at 300 r.p.m. The material 10 Marks adopted for shaft is plain carbon steel (SAE 1040) and muff coupling is grey cast iron (FG 200). The key is also made of plain carbon steel. Design torque on the shaft may be taken as 1.15 times the average torque.

### UNIT-V

| 9  | a) | What are the applications of a cotter joints?                   | 4 Marks  |
|----|----|-----------------------------------------------------------------|----------|
|    | b) | Describe the design procedure of a Knuckle joint.               | 10 Marks |
|    |    | (OR)                                                            |          |
| 10 | a) | Distinguish between cotter joint and knuckle joint.             | 4 Marks  |
|    | b) | Discuss the design procedure of spigot and socket cotter joint. | 10 Marks |

#### ANTENNAS AND PROPAGATION [Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1 | a) | Obtain the relations between the potentials and their sources.                 | 7 Marks |
|---|----|--------------------------------------------------------------------------------|---------|
|   | b) | Derive the expression for the power radiated by an alternating current element | 7 Marks |
|   |    | and hence its radiation resistance.                                            |         |
|   |    | (OR)                                                                           |         |
| 2 | a) | Derive the expression for radiation resistance of alternating current element. | 9 Marks |
|   | b) | Design an antenna with $R_r = 73\Omega$ and $R_L = 2\Omega$ .                  | 5 Marks |
|   |    | UNIT-II                                                                        |         |
| 3 | a) | Derive an expression for a broadside array.                                    | 7 Marks |
|   | b) | Calculate the beam width of main lobe of a broadside array.                    | 7 Marks |
|   | ŕ  | (OR)                                                                           |         |
|   |    |                                                                                |         |

4 a) Explain binomial array.8 Marksb) Distinguish between binomial and uniform linear arrays.6 Marks

### UNIT-III)

| 5 | a) | Explain the construction of horn antenna and its principle of working.  | 7 Marks |
|---|----|-------------------------------------------------------------------------|---------|
|   | b) | With neat diagrams, describe the principle of working of 3-element Yagi | 7 Marks |
|   |    | antenna, listing out its length and spacing requirements.               |         |
|   |    | (OP)                                                                    |         |

#### (OR)

| 6 | a) | Explain the geometrical configuration of different reflector types in detail. | 7 Marks |
|---|----|-------------------------------------------------------------------------------|---------|
|   | b) | State the features, advantages and limitations of microstrip antenna.         | 7 Marks |

### UNIT-IV

7 Describe how gain of an antenna under test can be measured using absolute gain 14 Marks method.

#### (**OR**)

- **8** a) Explain the 3 antenna method of measurement of the gain of a horn antenna 8 Marks with necessary relations.
  - b) Analyze sources of errors in antenna measurements. 6 Marks

### UNIT-V

- **9** a) Derive expression for the field strength, due to space wave propagation at a 7 Marks point away from the transmitter.
  - b) Explain salient features of Sommerfeld's theory. 7 Marks

(OR)

- **10** a) Explain the terms wave tilt, virtual height, MUF, Skip distance and critical 7 Marks frequency.
  - b) Derive an expression for the refractive index of the ionosphere in terms of 'N' 7 Marks

and frequency.

|    |    | UNIT-I                                                                                                      |          |
| 1  |    | Explain various TTL logic familiars.                                                                        | 14 Marks |
| 2  | a) | (OR)<br>What kinds of transistors are used in CMOS gates and draw the 2 input XOR<br>gate using CMOS logic? | 7 Marks  |
|    | b) | Explain the electrical characteristics of BJT inverter.                                                     | 7 Marks  |
|    |    | (UNIT-II)                                                                                                   |          |
| 3  | a) | Explain clearly about the ASIC design flow                                                                  | 7 Marks  |
| •  | b) | Explain the operators used in Verilog HDL.                                                                  | 7 Marks  |
|    | ,  | (OR)                                                                                                        |          |
| 4  | a) | What are the language constructions used in Verilog HDL.                                                    | 7 Marks  |
|    | b) | Write a Verilog program for four bit bidirectional shift register.                                          | 7 Marks  |
|    |    | UNIT-III)                                                                                                   |          |
| 5  | a) | Explain the standard 3 $\times$ 8 decoder and implement One bit full adder using decoder.                   | 7 Marks  |
|    | b) | Design a 4 x 1 multiplexer using tristate buffers.                                                          | 7 Marks  |
|    |    | (OR)                                                                                                        |          |
| 6  | a) | Design a 16-bit comparator using 74 x 85 ICs.                                                               | 8 Marks  |
|    | b) | Implement a full adder with two 4 x 1 multiplexers.                                                         | 6 Marks  |
|    |    | UNIT-IV                                                                                                     |          |
| 7  | a) | Design a conversion circuit to convert T flip-flop to JK flip-flop.                                         | 7 Marks  |
|    | b) | Draw and explain the operation of positive edge triggered D flip-flop.                                      | 7 Marks  |
|    |    | (OR)                                                                                                        |          |
| 8  | a) | Design a conversion circuit to convert SR flip-flop to JK flip-flop.                                        | 7 Marks  |
|    | b) | Design a 4-bit, 4-state ring counter using 74 x 194.                                                        | 7 Marks  |
|    |    | UNIT-V                                                                                                      |          |
| 9  | a) | Explain the internal structure of 64K x 1 DRAM. With the help of timing waveforms, discuss DRAM access.     | 8 Marks  |
|    | b) | Realize the logic function performed by 74 x 381 with ROM.                                                  | 6 Marks  |
|    |    | (OR)                                                                                                        |          |
| 10 |    | Discuss how PROM, EPROM and EEPROM technologies differ from each other.                                     | 14 Marks |

explain.

### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

| 1 | a)  | Obtain the response of RC high-pass circuit for square input for different time constants with neat sketches | 8 Marks        |
|---|-----|--------------------------------------------------------------------------------------------------------------|----------------|
|   | b)  | Justify how a Low-pass RC circuit acts as an Integrator.                                                     | 6 Marks        |
|   |     | (OR)                                                                                                         |                |
| 2 | a)  | Explain ringing circuit and attenuator.                                                                      | 7 Marks        |
|   | b)  | Explain the application of an attenuator as CRO probe.                                                       | 7 Marks        |
|   |     | UNIT-II                                                                                                      |                |
| 3 | a)  | Define clipper. Explain the clipping using zero diodes.                                                      | 7 Marks        |
|   | b)  | Draw a transistor clipper and explain its operation.                                                         | 7 Marks        |
|   |     | (OR)                                                                                                         |                |
| 4 | a)  | State and prove Clamping circuit theorem.                                                                    | 7 Marks        |
|   | b)  | What is the difference between the output from a clipping circuit and a                                      | 7 Marks        |
|   |     | clamping circuit? Explain with neat sketches.                                                                |                |
|   |     | UNIT-III)                                                                                                    |                |
| 5 | a)  | Give the design procedure for emitter coupled monostable multivibrator.                                      | 7 Marks        |
|   | b)  | Design an astable multivibrator to produce an output with 100 msec ON period                                 | 7 Marks        |
|   |     | and 50 msec OFF period for $V_{CC} = 18V$ , $h_{FE} = 60$ , $I_{C \text{ (sat)}} = 100 \mu\text{A}$ .        |                |
|   |     | (OR)                                                                                                         |                |
| 6 | a)  | Explain the working of collector coupled astable multivibrator with circuit                                  | 7 Marks        |
|   | 1.) | diagram and wave forms.                                                                                      | 7 Maulaa       |
|   | D)  | Explain the use of a monostable relaxation circuit as a frequency divider with                               | / Marks        |
|   |     | the help of heat diagram and wave forms.                                                                     |                |
|   |     | UNIT-IV                                                                                                      |                |
| 7 |     | Write notes on the following:                                                                                | <b>5</b> ) ( 1 |
|   |     | 1) Differentiate voltage and current time based generators.                                                  | 7 Marks        |
|   |     | 11) Monostable blocking oscillators.                                                                         | / Marks        |

#### THEORY OF COMPUTATION

#### [ Computer Science and Engineering, Information Technology ]

Time: 3 hours

Max. Marks: 70

### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

- 14 Marks 1 Let L be a set accepted by a NFA and then prove that there exists DFA that accepts L.
- (**OR**) Design a NFA accepts the following strings over the alphabets {0.1} The set of 2 14 Marks all string that beings with 01 and ends with 11. Check for the validity of 01111 and 0110 strings.

#### UNIT-II Let L be any subset of 0\*. Prove that L\* is regular. 3 (**OR**)

Construct regular expression equivalent to the following DFA. 4 14 Marks

### UNIT-III

| 5 | Find a CFG equivalent with no useless symbols equivalent to | 14 Marks |
|---|-------------------------------------------------------------|----------|
|   | $S \rightarrow AB \mid CA$ $A \rightarrow a$                |          |
|   | $B \rightarrow BC \mid AB$ $C \rightarrow aB \mid b$        |          |
|   | (OR)                                                        |          |
| 6 | Construct a PDA equivalent to the following grammar.        | 14 Marks |
|   | $S \rightarrow aAA$                                         |          |
|   | $A \rightarrow aS  bS a$                                    |          |

### UNIT-IV

| 7 | Compare Two-way infinite tape TM and multiple tracks TM. | 14 Marks |
|---|----------------------------------------------------------|----------|
|   | (OR)                                                     |          |
| 8 | Construct a TM to perform copy operation.                | 14 Marks |

### UNIT-V

- 9 Show that it is undecidable whether a TM halts on all inputs. 14 Marks (**OR**)
- Prove that the union of two recursive languages is recursive and the union of 10 14 Marks two recursively enumerable languages is recursively enumerable.

ନ୍ଦ୍ରେ ද්මු ලි 14 Marks

Time: 3 hours

#### LINEAR AND DIGITAL IC APPLICATIONS

#### [Electrical and Electronics Engineering, Electronics and Instrumentation Engineering]

#### Time: 3 hours

### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

- 1 Define the following: a)
  - i) Slew Rate. ii) PSRR. iii) Thermal drift.

Operational amplifier has differential gain of 80 dB and CMRR of 100 dB. 8 Marks b) If  $V_1 = 2\mu V$  and  $V_2 = 1.6\mu V$ , then calculate output voltages for differential and common-mode input signal operations.

#### (**OR**)

2 List the characteristics of an ideal op-amp. 4 Marks a) Explain in detail about the AC characteristics of an op-amp. b) 10 Marks

- UNIT-II
- 3 a) Explain Current to Voltage converter. 7 Marks Design an integrator to integrate a square wave of +/- 5V with a frequency of 7 Marks b) 3KHz. Draw the input and output waveforms.

#### (**OR**)

4 Derive the transfer function and magnitude for a low pass first order filter. 7 Marks a) Design a Schmitt trigger for an upper threshold voltage of 4V and lower 7 Marks b) threshold voltage of -2V for saturated voltages of +/- 14V.

### UNIT-III)

List out the applications of PLL and explain any two applications. 5 7 Marks a) Design a 555 timer astable multivibrator operating at 20 KHz with 40% duty b) 7 Marks cycle.

### (**OR**)

- Explain the operation of dual slope A/D converter. 7 Marks 6 a) Draw and explain VCO working principle and derive a equation for its free 7 Marks b)
  - running.

### UNIT-IV)

Explain low voltage CMOS logic and interfacing. 7 Marks 7 a) Realize the Boolean function [(AB+CD) E]' using CMOS logic. 7 Marks b) (**OR**) Discuss the steady state behavior of CMOS devices. 8 7 Marks a) Realize XOR gate using ECL logic. Explain. b) 7 Marks

### UNIT-V

- Design a full adder using gate level modeling. 7 Marks 9 a) Explain various data types of Verilog HDL in detail. b) 7 Marks (**OR**)
- Explain blocking and non-blocking statements with example. **10** a) 7 Marks

6 Marks

Max. Marks: 70

b) Using two 8:1 MUX design and implement a 16:1 Multiplexer in Verilog HDL. 7 Marks

| 5-8      | 2                                    | 5                                      | 14                                   |  |  |
| 6-8      | 6                                    | 12                                     | 30                                   |  |  |
| 7-8      | 2                                    | 5                                      | 8                                    |  |  |

The activities of a project and their time estimates are given below:

i) Draw the PERT network diagram.

ii) Determine the mean time and standard deviation of each activity.

iii) Determine the critical path and the standard deviation for the critical path.

- iv) Calculate the slack for the events.
- v) Calculate the total float, free float and independent float for each activity.

### (OR)

8 Discuss the role and importance of women as an entrepreneur. CO5 14 Marks

### UNIT-V

9 Discuss the need for maintenance management. Illustrate various CO5 14 Marks maintenance strategies and explain the techniques of managing work environment.

#### (OR)

- 10 a) Differentiate between Total Quality Management (TQM) and Six Sigma CO6 7 Marks concepts.
  - b) Describe the steps involved in Material requirement planning. CO1 7 Marks

#### III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

COSTING AND FINANCING MANAGEMENT FOR CIVIL ENGINEERS [Civil Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 Write down the procedure involved in cost estimating. CO2 14 Marks

#### (**OR**)

2 Write down the importance of preliminary estimates and detailed CO4 14 Marks estimates.

### UNIT-II)

3 The following was the expenditure on a contract for Rs.8,00,000 CO4 14 Marks commenced in January 2018:

| Materials               | Rs. 1,50,000 |
|-------------------------|--------------|
| Wages                   | Rs. 1,64,000 |
| Plant                   | Rs. 22,000   |
| <b>Business</b> Charges | Rs. 9,400    |

Cash received on account to December, 2018 amounted to 2,80,000 being 85% of work certified. The value of materials in hand as on 31-12-2018 was Rs.15,000. Prepare the Contract Account for 2018 showing the profit to be credited to the year's Profit and Loss Account. Plant is to be depreciated at 10%.

#### (OR)

4 Define Contract Costing. List out the costs not attributable to contract CO1 14 Marks account.

### UNIT-III)

| 5  | Write down the objectives and principles of Good Budgetary Control. | CO3 | 14 Marks |
|----|---------------------------------------------------------------------|-----|----------|
|    | (OR)                                                                |     |          |
| 6  | Define Budget. Write down the characteristics of Budget.            | CO4 | 14 Marks |
|    | UNIT-IV                                                             |     |          |
| 7  | Write a short note on Non-discounted Cash Flow techniques.          | CO2 | 14 Marks |
|    | (OR)                                                                |     |          |
| 8  | "Capital budgeting decisions are irreversible". Justify?            | CO4 | 14 Marks |

#### III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

### **PYTHON PROGRAMMING**

#### [Computer Science and Systems Engineering]

Time: 3 hours

### **Answer One Question from each Unit** All questions carry equal marks

- 1 Write notes on Python Standard Library. a)
  - Write a Python program that allows the user to enter two integer values CO1 b) and displays the results when each of the following arithmetic operators is applied. For example, if the user enters the values 7 and 5, the output would be,
    - 7 + 5 = 127 - 5 = 27 \* 5 = 357/5 = 1.407 / / 5 = 17%5 = 27 \*\* 5 = 16,807

All floating-point results should be displayed with two decimal places of accuracy. In addition, all values should be displayed with commas where appropriate.

#### (**OR**)

- Algorithms and computers are a "perfect match". Justify. 2 a) CO2 6 Marks
  - List and describe the capabilities an Integrated Development Environment CO1 8 Marks b) (IDE) should provide.

### UNIT-II )

- Illustrate selection and iterative control statements with suitable examples. 3 a) CO1 8 Marks
  - Write a program that sums a series of (positive) integers entered by the CO1 b) 6 Marks user, excluding all numbers that are greater than 100.

#### (OR)

Write a Python program that prompts the user to enter types of fruit and 4 CO3. 7 Marks a) how many pounds of fruit there are for each type. The program should CO4. then display the information in the form fruit, weight listed in alphabetical CO5 order, one fruit type per line as shown below,

Apple, 6 lbs.

Banana, 11 lbs. etc.

Give a program segment that creates an initially empty dictionary named b) CO3. 7 Marks password lookup, prompt-ing one-by-one for usernames and passwords CO5 (until a username of 'z' is read) entering each into the dictionary.

### (UNIT-III)

- Briefly describe the following types of function arguments: 5 CO2 14 Marks
  - i) Actual Arguments vs. Formal Parameters.
  - ii) Mutable vs. Immutable Arguments.
  - iii) Keyword Arguments vs Default Arguments

1

7 Marks CO1

Max. Marks: 70

7 Marks

|    |    | (OR)                                                                                                                                                                                                                                                                                       |             |          |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------|
| 6  | a) | Elaborate on Merge Sort Recursive algorithm.                                                                                                                                                                                                                                               | CO1         | 7 Marks  |
|    | b) | Explain the fundamental operations on text files.                                                                                                                                                                                                                                          | CO4.<br>CO5 | 7 Marks  |
|    |    | UNIT-IV                                                                                                                                                                                                                                                                                    |             |          |
| 7  | a) | What is meant by inheritance? Describe the use of inheritance in Python by considering appropriate examples.                                                                                                                                                                               | CO3         | 10 Marks |
|    | b) | Describe what it means for a member of a class to be private.                                                                                                                                                                                                                              | CO3         | 4 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                       |             |          |
| 8  | a) | Give a set of instructions for controlling the turtle to draw a line from the top-left corner of the screen to the bottom-right corner, and from the top-right corner to the bottom-left corner, thereby making a big X on the screen. There should be no other lines drawn on the screen. | CO5         | 7 Marks  |
|    | b) | Give a set of instructions that moves the turtle with an actual turtle shape<br>from the bottom of the screen toward the top, changing its fill color when<br>it crosses the x axis of the grid coordinates.                                                                               | CO5         | 7 Marks  |
|    |    | UNIT-V                                                                                                                                                                                                                                                                                     |             |          |
| 9  | a) | Briefly discuss tkinter Extensions.                                                                                                                                                                                                                                                        | CO5         | 8 Marks  |
|    | b) | Justify how tkinter's accessibility, portability and availability have made it the most widely used Python GUI solution.                                                                                                                                                                   | CO5         | 6 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                       |             |          |

|    |    | Ramp input with aid of neat sketches.                                   |     |         |
|    | b) | Apply appropriate technique on a simple RC Circuit to convert a square  | CO5 | 7 Marks |
|    |    | wave to periodical ramp signal.                                         |     |         |
|    |    | (OR)                                                                    |     |         |
| 2. | a) | Obtain the response of RC High Pass Circuit for a square wave input for | CO1 | 8 Marks |
|    |    | different Time Constants and evaluate % Tilt.                           |     |         |
|    | b) | Justify how a Low-pass RC circuit acts as an Integrator.                | CO2 | 6 Marks |
|    |    |                                                                         |     |         |
|    |    | UNIT-II                                                                 |     |         |
| 3. | a) | What is synchronized clamping?                                          | CO2 | 7 Marks |

| 3. | a) | What is synchronized clamping?                                                                                                                                                                             | CO2 | 7 Marks |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | State and prove clamping circuit theorem.                                                                                                                                                                  | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                       |     |         |
| 4. | a) | In a clamping circuit, for symmetrical square wave Asses the parameters of ratio of area in forward direction to area in reverse direction in terms of forward resistance $R_f$ reverse resistance $R_r$ . | CO6 | 8 Marks |

b) Explain the operation of a biased negative clamper with neat sketch. CO1 6 Marks

### (UNIT-III)

- 5. a) Design a collector-coupled monostable multivibrator with a gate width of CO3 8 Marks 5ms using n-p-n silicon transistors.
  - b) With the help of neat diagrams, discuss the different methods of triggering CO1 6 Marks a binary.

(OR)

- 6. a) Sketch and explain the operation of a Fixed-bias Bi-stable Multivibrator CO1 7 Marks with relevant waveforms.
  - b) Apply appropriate multi-vibrating technique to convert voltage into CO5 7 Marks frequency using two transistors.

### UNIT-IV

- 7. a) Draw and explain the circuit diagram of transistor Miller time-base CO1 8 Marks generator.
  - b) Compare the voltage and current time base generators with some CO3 6 Marks examples.

(OR)

8. a) Explain the basic principles of Bootstrap Time-base generator.
b) Explain the principle and working of a Transistor Current Time-Base CO1 8 Marks generator.

### THEORY OF COMPUTATION

[Computer Science and Engineering]

Time: 3 hours

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

- 1 What is a Finite State Machine (FSM)? Give the Mathematical CO1 7 Marks a) representation of FSM. Explain each component.
  - b) Discuss the words W in the language L accepted by the automaton in the CO2 7 Marks figure.

2 What is NFA? Obtain the equivalent DFA for following finite automata a) CO2 7 Marks with  $\varepsilon$  transitions.

|   | 0    | 1  |
|---|------|----|
| а | a, b | a- |
| b | -    | с  |
| с | С    | с  |

- Construct a FA accepting all strings over {a, b} ending in aba or aaba. CO3 7 Marks b) UNIT-II
- Show that the following language is not regular  $L = \{ a^{P} | P \text{ is Prime } \}.$ 3 CO5 7 Marks a)
  - How can we say that 2 DFA's are equivalent? Explain with help of an **b**) CO1 7 Marks example.
- (OR)CO3 4 a) Construct regular expression corresponding to the finite state diagram. 7 Marks

Minimize the following finite automata. b)

CO3 7 Marks

# UNIT-III)

| 5  | a) | Explain the applications of CFG's.                                                   | CO1 | 7 Marks |
|----|----|--------------------------------------------------------------------------------------|-----|---------|
|    | b) | Find the Parse tree for the expression <b>abbcde</b> , considering the productions   | CO4 | 7 Marks |
|    |    | $S \rightarrow aACBe$ , $A \rightarrow Ab$ , $A \rightarrow b$ , $B \rightarrow d$ . |     |         |
|    |    | (OR)                                                                                 |     |         |
| 6  | a) | State and prove pumping Lemma for Context Free Languages.                            | CO5 | 7 Marks |
|    | b) | Convert the following grammar in to GNF.                                             | CO3 | 7 Marks |
|    |    | $S \rightarrow XA \mid BB$ , $B \rightarrow b \mid SB$ , $X \rightarrow b$ .         |     |         |
|    |    | UNIT-IV                                                                              |     |         |
| 7  | a) | Discuss Chomsky hierarchy of Languages.                                              | CO1 | 5 Marks |
|    | b) | Design a NPDA that accepts the language                                              | CO3 | 9 Marks |
|    | ĺ. | $L = \{ a^{n}b^{n}; n > 0 \} \cup \{ a \}.$                                          |     |         |
|    |    | (OR)                                                                                 |     |         |
| 8  | a) | Discuss about the model of linear bounded automaton.                                 | CO1 | 6 Marks |
|    | b) | Obtain a PDA to accept a string of balanced parentheses. The parentheses             | CO3 | 8 Marks |
|    | ,  | to be considered are (, ), [, ], { and }.                                            |     |         |
|    |    |                                                                                      |     |         |
| 9  | a) | Construct a turning machine that computes 1's complement of a binary                 | CO4 | 7 Marks |
|    |    | number.                                                                              |     |         |
|    | b) | State and explain the un-decidability of post correspondence problem.                | CO1 | 7 Marks |
|    |    | (OR)                                                                                 |     |         |
| 10 | a) | List about multiple Turing Machines.                                                 | CO1 | 7 Marks |
|    | b) | Distinguish between PCP and MPCP. What are the concepts used in                      | CO1 | 7 Marks |
|    |    | UTM's?                                                                               |     |         |
|    |    |                                                                                      |     |         |

Max. Marks: 70

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1 | a)       | Explain the differences between working stress method and limit state method                                                                                                                                                                                                                                                                                   | CO1        | 5 Marks            |
|---|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|   | b)<br>c) | Explain the stress block parameters with neat sketches.<br>Define partial safety factors of load and material. Write the expressions to<br>determine the design load and design strength of the material from their<br>respective characteristic values employing the corresponding partial safety                                                             | CO1<br>CO1 | 5 Marks<br>4 Marks |
|   |          | factors.                                                                                                                                                                                                                                                                                                                                                       |            |                    |
| 2 | a)       | (OR)<br>A rectangular reinforced concrete section having a breadth of 350mm is<br>reinforced with 2 bars of 28mm and two bars of 25mm diameters at an<br>effective depth of 700mm adopting M-20 grade concrete and Fe-415<br>HYSD bars. Determine the ultimate moment of resistance of the section.                                                            | CO3        | 7 Marks            |
|   | b)       | Determine the area of the tensile reinforcement required in flanged beam having the flowing sectional dimensions to support the factored moment 275kN-m. Width of the Flange $(b_f)$ - 750mm, width of the rib $(b_w)$ - 300mm, thickness of the flange $(D_f)$ - 120mm, effective depth (d)-600mm. Use M-20 grade concrete and Fe-415 HYSD bars.              | CO3        | 7 Marks            |
|   |          | UNIT-II                                                                                                                                                                                                                                                                                                                                                        |            |                    |
| 3 | a)       | Explain the shear reinforcement, main steel and hanger bars with neat sketch.                                                                                                                                                                                                                                                                                  | CO1        | 5 Marks            |
|   | b)       | What is characteristic strength of materials and how to calculate design strength?                                                                                                                                                                                                                                                                             | CO1        | 5 Marks            |
|   | c)       | Explain limit state of collapse and limit state of serviceability. <b>(OR)</b>                                                                                                                                                                                                                                                                                 | CO1        | 4 Marks            |
| 4 |          | Design an L-beam for an office room floor to suit the following data:<br>Clear span – 6m, Center to center of supports – 6.3m, The L – beam is<br>monolithic with R.C, Columns, Spacing of beams – 2.75m c/c, Loading<br>(office floor) - $4kN/m^2$ , Thickness of slab – 100mm, Width of columns<br>-300 mm, use M-20 grade of concrete and Fe-415 HYSD bars. | CO3        | 14 Marks           |
| 5 | a)       | What are the limitations for longitudinal reinforcement and transverse                                                                                                                                                                                                                                                                                         | CO1        | 5 Marks            |
|   |          | reinforcement in slabs as per IS code.                                                                                                                                                                                                                                                                                                                         | ~ ~ .      |                    |
|   | b)       | Represent IS code recommendations of torsion steel in slabs.                                                                                                                                                                                                                                                                                                   | COI        | 5 Marks            |
|   | C)       | (OR)                                                                                                                                                                                                                                                                                                                                                           | COI        | 4 Marks            |
| 6 |          | Design a two-way slab for a room of size 4m by 5m with dimensions and simply supported edges on all the sides with corners prevented from lifting to support a live load of 4 kN/m <sup>2</sup> . Adopt M-20 grade concrete and Fe-415 grade HYSD bears.                                                                                                       | CO3        | 14 Marks           |

# UNIT-IV

| 7  | a) | Define pedestal, short column and long column.                                                                                                                                                                                                                                | CO1 | 5 Marks  |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | How will you calculate the slenderness ratio of a column?                                                                                                                                                                                                                     | CO1 | 5 Marks  |
|    | b) | Discuss about braced and un-braced columns.                                                                                                                                                                                                                                   | CO5 | 4 Marks  |
|    | ,  | (OR)                                                                                                                                                                                                                                                                          |     |          |
| 8  |    | Design the reinforcement in a rectangular column of size 300mm x 500mm to support a design ultimate load of 500 KN, together with a factored moment of 200 KN-m. Adopt M-20 grade concrete and Fe-415 grade HYSD bears. Sketch the details of reinforcement. Use SP-16 chart. | CO3 | 14 Marks |
|    |    | UNIT-V                                                                                                                                                                                                                                                                        |     |          |
| 9  | a) | What are the two essential requirements in design of foundation                                                                                                                                                                                                               | CO1 | 5 Marks  |
|    | b) | Explain types of stair cases with neat sketches.                                                                                                                                                                                                                              | CO1 | 5 Marks  |
|    | c) | What is punching shear? Explain punching in footings.                                                                                                                                                                                                                         | CO7 | 4 Marks  |
|    | ,  | (OR)                                                                                                                                                                                                                                                                          |     |          |
| 10 |    | Design an isolated square sloped footing for a square column of size $450 \text{mm} \times 450 \text{mm}$ . for an axial factored load of 1600 KN. Use M-20                                                                                                                   | CO3 | 14 Marks |

concrete and Fe-415 steel. The S.B.C of soil is 200 kN/m<sup>2</sup>.

III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

### **SOIL MECHANICS** [Civil Engineering]

Time: 3 hours

#### Max. Marks: 70

### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

1 If the water content of a fully saturated soil mass is 100%, what will be the CO3 a) 6 Marks relation between void ratio and specific gravity of soil? b) The water content of saturated soil and the specific gravity of soil solids CO<sub>2</sub> 8 Marks were found to be 30% and 2.70 respectively. Assuming that the unit weight of water to be 10 kN/m<sup>3</sup>, what are the saturated unit weight and void ratio? (**OR**) CO2 2 What will be the Relative density of soil, if soil is having maximum dry a) 5 Marks density of 2, minimum dry density of 1.2 and normal dry density of 1.6? CO8 Sieve analysis on a dry soil sample of mass 1000 g showed that 980 g and 9 Marks b) 270 g of soil pass through 4.75 mm and 0.075 mm sieve respectively. The liquid limit and plastic limit of soil fraction passing through 425 micron sieve are 40% and 18% respectively. Classify the soil as per IS1478:1970. (UNIT-II) A soil has a discharge velocity of  $3 \times 10^{-7}$  m/s and void ratio of 0.5. What 6 Marks 3 CO<sub>2</sub> a) is the seepage velocity? If flow net of a cofferdam foundation had 6 numbers of flow channels and CO<sub>2</sub> b) 8 Marks 12 numbers of equi-potential drops with a head of water lost during seepage being 6m through the foundation having  $k = 4 \times 10^{-5}$  m/minute. then what will be the seepage loss (in  $m^3/day$ ) per meter length of dam? (**OR**) Illustrate the method of determination of coefficient of permeability of CO4 4 a) 6 Marks cohesion less soils. If during a permeability test on a soil sample with a falling head CO2 8 Marks b) permeameter equal time intervals are noted for a drop of head from L<sub>1</sub> and  $L_2$  and against  $L_2$  and  $L_3$ , what will be the relation between  $L_1$ ,  $L_2$  and  $L_3$ ? (UNIT-III) What is Newmark's Chart? How is it helpful in computing the vertical 5 CO1 7 Marks a) stress at any depth due to a loaded area? Determine the vertical stress intensity at a point 3m below the ground CO2 7 Marks b) level and 2.5m away from the line of action of a vertical point load of 150kN acting on the ground surface by Boussinesq's method. (**OR**) What are the factors affecting the compaction of soils and explain them? 6 CO1 6 Marks a) A natural soil deposit has a bulk unit weight of 20kN/m<sup>3</sup> and water content CO3 8 Marks b) of 5%. Estimate the amount of water (in litres) required to be added to  $1m^3$ of soil to raise the water content to 20%. Assume the void ratio to remain constant. Take specific gravity of soil solids as 2.7.

### UNIT-IV

- 7 a) In a consolidation test the following results have been obtained. When the CO3 6 Marks load was changed from 50kN/m<sup>2</sup> to 100kN/m<sup>2</sup>, the void ratio changed from 0.70 to 0.65. Determine the coefficient of volume decrease and the compression index.
  - b) Find the settlement due to consolidation in a  $3m \times 3m$  column foundation CO7 8 Marks with a load of 270kN. The foundation is placed 1m below the ground surface and the clay layer is 9m thick. There is a sand layer underneath the clay layer. The density of the clay layer is  $18kN/m^3$ , the compression index C<sub>e</sub> of the clay layer is 0.32, the recompression index C<sub>r</sub> is 0.035, the pre-consolidation pressure (P<sub>e</sub>) is  $92kN/m^2$  and the initial void ratio e<sub>0</sub> of clay is 0.80. Assume that the pressure is distributed at a 2:1 ratio and the clay is normally consolidated.

#### (**OR**)

- 8 a) What are the various assumptions and limitations of Terzaghi's one CO1 6 Marks dimensional consolidation theory?
  - b) There is a bed of compressible clay of 4m thickness with pervious sand on CO2 8 Marks top and impervious rock at the bottom. In a consolidation test in the laboratory on an undisturbed specimen of clay from this deposit 90% settlement was reached in 4 hours. The specimen was 20mm thick. Estimate the time in years for the building founded over this deposit to reach 90% of its final settlement.

- 9 a) Classify triaxial tests from the point of view of drainage characteristics. CO3 6 Marks Briefly describe the essential features of each.
  - b) Two undrained triaxial tests were conducted on soil specimens and they CO2 8 Marks gave the following results.

| Confining pressure (kg/m <sup>2</sup> ) | ) : | 150 | 300 |
|-----------------------------------------|-----|-----|-----|
| Failure load (kg/m <sup>2</sup> )       | :   | 500 | 800 |

Determine the value of apparent cohesion and friction of the soil.

(**OR**)

- 10 a) Discuss the advantages of triaxial tests over direct shear test. CO2 6 Marks
  - b) The principal stresses at a point in a material are 100kN/m<sup>2</sup> and 50kN/m<sup>2</sup>. CO2 8 Marks Determine the Normal, Shear and Resultant Stress on a plane inclined at 35<sup>o</sup> to the major principal plane. Also find the maximum value of Obliquity for this plane.

### STRUCTURAL ANALYSIS - II

[Civil Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- a) Derive the expression for maximum bending moment and shear force for a CO1 6 Marks simply supported beam with a UDL moving from left to right.
  b) For a simply supported beam AB of 4m with an overhang of 2m, plot the CO2 8 Marks
  - influence lines for reactions at A, shear force at D 2m away from left support A and bending moment at D. Using the influence line diagrams, determine the value of the above stress functions due to an UDL of 20kN/m covering the entire span.

#### (OR)

- a) An UDL of 50 kN/m of 6m length crosses a girder of span 40m left to CO2 6 Marks right with the help of influence lines. Determine the values of shear force, bending moment at 12 m from the left support when the head of the load is 6m from the left support.
  - b) An UDL of 40kN/m and length of 3m traverse across the simply CO2 8 Marks supported length of 18m.Compute the maximum bending moment at 4m from the left support and absolute bending moment using influence lines.

# UNIT-II

3 Analyze the two–span continuous beam shown in Figure 1 by slope CO6 14 Marks deflection method and draw the bending moment and shear force diagrams.

4

Analyze the continuous beam shown in Figure 2 by using moment CO6 14 Marks distribution method and draw the bending moment diagram.

# UNIT-III

5 a) Derive the expression for strain energy due to axial load.CO17 Marksb) Determine the deflection of the free end of a cantilever of length 'L'CO27 Marks

subjected to a concentrated load 'P' at the end using strain energy method.

### (OR)

Analyze the continuous beam shown in Figure 3 by Kani's method.

7 Explain the following:

- i) How many unknown reactive forces for a hinge, roller and fixed support with an example?
- ii) Give examples for statically determinate and statically indeterminate beams.
- iii) How many methods are available to analyze the statically indeterminate structures with an example?

#### (**OR**)

8 Analyze the truss shown in Figure 4 below by Castigliano's theorem. Area CO4 14 Marks of cross section of members in mm<sup>2</sup> is shown in Figure 4. E is constant throughout.

- 9 a) Define plastic hinge and shape factor. CO1 Determine the collapse load of a continuous beam shown in Figure 5. CO3 b)
  - 7 Marks 7 Marks

10 Calculate the plastic moment capacity required for the continuous beam CO3 14 Marks with working loads shown in Figure 6.

6

CO5 14 Marks

III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

# WASTE WATER TECHNOLOGY

[Civil Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

- 1 a) Describe the systems of sewerage.
  - b) The drainage area of one sector of a town is 20 hectares, population CO 50,000 and rate of water supply 200lpcd. The classification of the surface of this area is as follows.

| Percentage of total | Type of         | Coefficient of |
|---------------------|-----------------|----------------|
| surface area        | Surface area    | runoff         |
| 20                  | Hard pavement   | 0.85           |
| 20                  | Roof surface    | 0.80           |
| 15                  | Un paved street | 0.20           |
| 30                  | Garden and lawn | 0.20           |
| Balance             | Wooden area     | 0.15           |

If the time of concentration for the area is 15minutes, find the maximum quantity of sewage from sector.

#### (**OR**)

2 Design a sewer to serve a population of 1 lakhs. The daily per capita CO3 7 Marks a) water supply allowance being 150 liters of which 80% finds its way into the sewer. The slope available for the sewer to be laid is 1 in 700 and the sewer should be designed to carry 2.5 times the dry weather flow when running full. Write short notes on the following. CO1 7 Marks b) i) Drop man holes. ii) Lamp holes. iii) Flushing tanks. UNIT-II 3 What is BOD? Derive an expression for the first stage BOD. CO2 7 Marks a) What do you understand by population equivalent? How do you CO<sub>2</sub> 4 Marks b) determine it? A 2% solution of a sewage sample is incubated for 5 days at 20°C. The CO<sub>2</sub> 3 Marks c) depletion of oxygen was found to be 4 p.p.m. Determine the BOD of the sewage. (**OR**) Draw and describe the conventional treatment process flow diagram of 4 CO7 7 Marks a) municipal wastewater treatment plant. Design a grit chamber for a maximum wastewater flow of 10 MLD, to CO3 7 Marks b) remove particles up to 0.2 mm diameter having specific gravity 2.65. The

kinematic viscosity of water is  $1.141 \times 10^{-6} \text{ m}^2/\text{s}$  at  $15^{\circ}\text{C}$ .

Max. Marks: 70

CO3 7 Marks

# (UNIT-III)

| 5  | a) | What are the factors affecting biological treatment systems?                                                                                                                                                                                                                                                                  | CO5 | 4 Marks   |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
|    | b) | Write the organic loading parameters of activated sludge process.                                                                                                                                                                                                                                                             | CO5 | 3 Marks   |
|    | c) | Design the activated sludge units for the following data:<br>i) Population served = 50,000                                                                                                                                                                                                                                    | CO3 | 7 Marks   |
|    |    | ii) Average sewage flow = 180 lpcd                                                                                                                                                                                                                                                                                            |     |           |
|    |    | iii) BOD of raw sewage = $200 \text{ mg/l}$                                                                                                                                                                                                                                                                                   |     |           |
|    |    | iv) Raw sewage suspended solids = 300 mg/l                                                                                                                                                                                                                                                                                    |     |           |
|    |    | v) BOD removal in primary treatment = $35\%$                                                                                                                                                                                                                                                                                  |     |           |
|    |    | vi) Overall BOD reduction desired = $80\%$                                                                                                                                                                                                                                                                                    |     |           |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                          |     |           |
| 6  | a) | Explain the functioning of oxidation of pond with a neat sketch.                                                                                                                                                                                                                                                              | CO4 | 7 Marks   |
|    | b) | The effluent from a primary settling tank is applied to a standard rate filter at the rate of 3 MLD, having a BOD of 175 mg/l. Determine the depth and volume of filter. Adopting surface loading of 2000 $l/m^2/day$ and an organic loading of 150 g/m <sup>3</sup> /day. Also determine the efficiency of such filter unit. | CO3 | 7 Marks   |
|    |    |                                                                                                                                                                                                                                                                                                                               |     |           |
| 7  | a) | Explain anaerobic sludge digestion process and the factors influencing it                                                                                                                                                                                                                                                     | CO1 | 7 Marks   |
|    | h) | What is sludge condition and dewatering? Explain the methods of sludge                                                                                                                                                                                                                                                        | CO1 | 7 Marks   |
|    | 0) | dewatering.                                                                                                                                                                                                                                                                                                                   | 001 | / WILLING |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                          |     |           |
| 8  | a) | What is nitrification and denitrification? Explain the biological process of denitrification in the removal of organic nitrogen from wastewater.                                                                                                                                                                              | CO2 | 7 Marks   |
|    | b) | What is Rotating Biological Contactor? Explain the working principle of Rotating Biological Contactor.                                                                                                                                                                                                                        | CO2 | 7 Marks   |
|    |    | UNIT-V                                                                                                                                                                                                                                                                                                                        |     |           |
| 9  | a) | Explain the self purification of streams with the help of oxygen sag curve.<br>Also enlist various factors affecting self purification.                                                                                                                                                                                       | CO1 | 7 Marks   |
|    | b) | Derive streeter-phelps equation.                                                                                                                                                                                                                                                                                              | CO2 | 7 Marks   |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                          |     |           |
| 10 | a) | What is sewage farming? What are its advantages over the method of disposal of sewage by dilution?                                                                                                                                                                                                                            | CO1 | 7 Marks   |
|    | b) | Explain the septic tank effluent disposal methods.                                                                                                                                                                                                                                                                            | CO4 | 7 Marks   |

#### III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

# **CONTROL SYSTEMS**

#### [Electrical and Electronics Engineering, Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit. All questions carry equal marks

# UNIT-I

- Describe Masson's gain formulae. List out the advantages and disadvantages CO1 1 6 Marks a) of signal flow graph.
  - Determine the transfer function of the system using block diagram reduction CO4 8 Marks b) rules.

- 2 Briefly describe the effect of feedback on parameters like gain, sensitivity CO1 7 Marks a) and stability.
  - Derive the transfer function of armature controlled DC motor and draw the CO4 7 Marks b) block diagram.

# UNIT-II

- 3 Derive the expression for time response of second order under damped CO2 6 Marks a) system for unit step input and also draw the response curve.
  - The open loop transfer function of a unity feedback system is CO4 b) 8 Marks  $G(s) = \frac{10}{s(s+4)}$ . Determine the nature of response of the closed loop system

for a unit step input. Also determine the rise time, peak time, peak overshoot and settling time.

#### (**OR**)

- Sketch the complete root locus for a system with an open loop transfer 4 CO4 10 a) function  $G(s)H(s) = \frac{K}{S^2+2S+2}$ . Marks
  - Briefly explain the difficulties in Routh-Hurwitz criterion and how to CO1 b) 4 Marks overcome.

# UNIT-III)

- Derive the expressions for Resonant peak ,Resonant frequency and CO1 5 6 Marks a) Bandwidth in frequency domain analysis
  - Sketch the Nyquist plot and determine the stability of the closed loop b) CO5 8 Marks system, whose open loop transfer function is given by  $G(s)H(s) = \frac{K}{S(S^2+2S+6)}$ .

### (**OR**)

6 CO5 14 Draw the Bode plot for the transfer function  $G(s) = \frac{16(1+0.5S)}{S^2(1+0.125S)(1+0.1S)}$ . From graph determine: Marks i) Gain cross over frequency. ii) Phase cross over frequency. iii) Gain Margin and Phase Margin. iv) Stability of the system. UNIT-IV) 7 What is compensator? Explain the design procedure for a lead compensator. a) CO1 7 Marks Derive the transfer function of PI controller and also explain how it affects CO6 7 Marks b) steady state error in second order under damped system when subjected to unit ramp input. (**OR**) The open loop transfer function of a unity feedback system is 8 CO3 14  $G(s) = \frac{K}{s^2(1+0.2s)}$ . Design suitable compensator to meet the following Marks specifications. i) Acceleration error constant K<sub>a</sub>=10

ii) Phase Margin  $=30^{\circ}$ .

# UNIT-V

- 9 Differentiate the state variable approach with transfer function approach for CO2 7 Marks a) modeling of control systems. CO2 7 Marks
  - b) Obtain the state model of a given electrical system.

(**OR**)

10 a) What is state transition matrix? Give the properties of state transition matrix. CO1 7 Marks Determine the complete controllability and complete observability of the CO4 7 Marks b)

Where 
$$A = \begin{bmatrix} 0 & 1 \\ -1 & -3 \end{bmatrix}, B = \begin{bmatrix} 1 \\ 2 \end{bmatrix}, C = \begin{bmatrix} 1 & 1 \end{bmatrix}$$

system with  $\dot{Y} - \Lambda Y \perp B I I V - C Y$

# **POWER ELECTRONICS**

#### [Electrical and Electronics Engineering]

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

# 

| 1 | a) | Draw and explain switching or dynamic characteristics of a thyristor during its turn-on and turn-off processes.                                                                                                                                                                                                                      | CO1         | 7 Marks  |
|---|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------|
|   | b) | Explain the different turn-on methods of SCR.                                                                                                                                                                                                                                                                                        | CO1         | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                 |             |          |
| 2 | a) | A thyristor is made up of a number of SCRs connected in series and parallel. The string has voltage and current ratings of 12KV and 5KA respectively. The voltage and current ratings of available SCRs are 1900Vand 1200A respectively. For a string efficiency of 95%, calculate the number of series and parallel connected SCRs. | CO1,<br>CO4 | 7 Marks  |
|   | b) | Explain what are the methods used to protect an SCR from di/dt and over current.                                                                                                                                                                                                                                                     | CO1         | 7 Marks  |
|   |    | UNIT-II                                                                                                                                                                                                                                                                                                                              |             |          |
| 3 | a) | Explain the operation of single phase fully controlled bridge type rectifier with R- load and derive for average output voltage.                                                                                                                                                                                                     | CO2,<br>CO4 | 7 Marks  |
|   | b) | Explain effects of freewheeling diode.                                                                                                                                                                                                                                                                                               | CO2         | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                 |             |          |
| 4 | a) | What is the effect of source inductance on the performance of $1-\Phi$ fully controlled converter? Discuss with neat sketches.                                                                                                                                                                                                       | CO2         | 7 Marks  |
|   | b) | Explain the operation of three phase half controlled bridge converter with RL- load with neat sketches.                                                                                                                                                                                                                              | CO2         | 7 Marks  |
|   |    | UNIT-III)                                                                                                                                                                                                                                                                                                                            |             |          |
| 5 | a) | Explain the different modes of operation of $3-\Phi$ dual converter.                                                                                                                                                                                                                                                                 | CO2         | 7 Marks  |
|   | b) | With neat sketch, explain single phase AC voltage controller for R-load. Derive RMS load voltage and current.                                                                                                                                                                                                                        | CO2         | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                                                                                                                 |             |          |
| 6 | a) | Explain the working of a single phase bridge type cyclo-converter for RL- load of frequency $f_0 = \frac{1}{4} f_s$ with continuous conduction mode.                                                                                                                                                                                 | CO2         | 10 Marks |
|   | b) | What are the applications of cyclo-converters?                                                                                                                                                                                                                                                                                       | CO2,<br>CO5 | 4 Marks  |

### Answer One Ouestion from each Unit.

Max. Marks: 70

# All questions carry equal marks

# UNIT-I

- Derive the EMF equation of an alternator. Discuss the effects of pitch 1 a) CO1 6 Marks factor and distributed factor on generated voltage. A 3-phase, star connected alternator has the following data: 8 Marks b) CO4 Voltage required to be generated on open circuit is 4000V at 50Hz, speed=500 r.p.m, stator slots/pole/phase=3, conductors/slot = 12. Find: i) The number of poles. ii) Useful flux per pole. (**OR**) 2 Explain the constructional details of salient pole synchronous machine CO1 7 Marks a) with a neat sketch. b) A 3-phase, 16 pole alternator has the following data: CO4 7 Marks Number of slots=192, conductors/slot=8, coil span=160 electrical degrees, speed=375 r.p.m, flux/pole = 55mwb. Calculate the phase and line voltages. UNIT-II) 3 What is voltage regulation? Discuss the synchronous impedance method CO2 6 Marks a) of calculating the voltage regulation of alternator. b) A 30KVA, 440V, 50Hz, 3-phase, star connected synchronous generator CO4 8 Marks gave the following data: 7 Field current (A): 4 6 8 10 12 14 2 O.C.Voltage(V): 155 287 395 440 475 530 570 592 S.C.Current(A) 11 22 34 40 46 57 69 80 Resistance between terminals is  $0.3\Omega$ . Find regulation at full load 0.8 p.f lagging, 0.8 p.f leading by EMF method, take Z<sub>s</sub> corresponds to short circuit current of 80A. (**OR**) 4 Explain the two-reaction theory of salient pole alternator with necessary 7 Marks CO1 a) phasor diagrams. A 100KVA, 3000V, 50Hz, 3-phase, star connected alternator has CO4 7 Marks b) effective armature resistance of  $0.2\Omega$ . The field current of 40A produces short circuit current of 200A and an open circuit voltage 1040V (line voltage). Calculate the full load voltage regulation at 0.8 p.f lagging and leading cases. Draw the phasor diagram. UNIT-III 5 What is the necessity of parallel operation of alternators? Give the CO1 6 Marks a) conditions to be satisfied. What is synchronization? Explain the synchronizing of alternator using CO5 8 Marks b) three dark lamp method with a neat diagram. (**OR**) Define short circuit ratio? Briefly explain its significance in synchronous 6 CO<sub>2</sub> 7 Marks a) machine.
  - Explain the operation of synchronous generator with a constant load and CO2 7 Marks b) variable excitation.

# UNIT-IV

- 7 a) Explain the working of a synchronous induction motor with a neat CO1 7 Marks sketch.
  - b) What is damper winding? Explain the function of it and where it is CO2 7 Marks located.

### (OR)

- 8 a) What is synchronous condenser? Explain the operation of synchronous CO1 6 Marks motor as a synchronous condenser.
  - b) Calculate the R.M.S value of the induced voltage per phase of a 10-pole, CO4 8 Marks 3-phase, 50-Hz alternator with 2 slots per pole per phase and 4 conductors per slot in two layers, the coil span is 150 electrical degrees. The flux per pole has a fundamental component of 0.12 wb and a 20% third harmonic component.

UNIT-V

- 9 a) Using double revolving field theory, explain the torque-slip CO2 7 Marks characteristics of a single phase induction motor and prove that it can not produce any starting torque.
  - b) Explain how universal motor can be operated from DC as well as AC CO2 7 Marks supplies.

#### (OR)

- 10 a) Explain the construction and operation of AC series motor. Compare the CO2 7 Marks performance with universal motor.
  - b) Describe the construction and principle of operation of a reluctance CO1 7 Marks motor.

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

# TRANSMISSION AND DISTRIBUTION

[Electrical and Electronics Engineering]

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) A single phase has two parallel conductors 2 meters apart. The diameter CO4 6 Marks of each conductor is 1.2cm. Calculate the loop inductance per km of the line.
  - b) A 3-phase double circuit line is shown below. Radius of each conductor is CO4 8 Marks 1cm. Determine the capacitance and charging current per km assuming the line is transposed and operating voltage is 220kV, 50Hz.

(**OR**)

A 33kV, 50Hz, 3-phase underground cable, 4 km long uses three single 2 a) CO4 10 Marks core cables. Each of the conductor has a diameter of 2.5cm and the radial thickness of insulation is 0.5cm. Determine: i) Capacitance of the cable/phase ii) Charging current/phase iii) Total charging kVAR. The relative permittivity of insulation is 3. Explain about Capacitance Grading. 4 Marks b) CO<sub>2</sub> (UNIT-II) Explain the classification of lines based on their length of transmission. 3 CO<sub>2</sub> 4 Marks a) A single-phase 50Hz generator supplies an inductive load of 5,000kw at a CO3 10 Marks b) power factor of 0.707 lagging by means of an overhead transmission line 20km long. The line resistance and inductance are  $0.0195\Omega$  and 0.63mH per km. The voltage at the receiving-end is required to be kept constant at 10 KV. Determine: i) the sending-end voltage and voltage regulation of the line. ii) the transmission efficiency. (**OR**) Derive the expression for voltage regulation of medium transmission line 4 CO1 6 Marks a) if the line is represented by nominal- $\Pi$ . A 50Hz, 3-phase transmission line is 100km long. It has a total series CO3 8 Marks b) impedance of 35+j140 ohms and a shunt admittance of  $j930 \times 10^{-6}$  S. It delivers 40MW at 220kV, with 90% power factor lagging. Find the losses, efficiency and voltage regulation by nominal-T method.

Time: 3 hours

# (UNIT-III)

| 5  | a) | A three phase 220kV, 50Hz transmission line consists of 1.2cm radius conductor spaced 2 meters apart in equilateral triangular formation. Find the disruptive critical voltage between the lines if the temperature is 20°C and atmospheric pressure is 72.2cm. Take $m_0=0.96$ . Dielectric strength of air = 21 1kV (rms)/cm                                                                                                           | CO4 | 7 Marks |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | An overhead line has the following data:<br>Span length 160m on level supports, conductor diameter 0.95 cm, weight<br>per unit length of the conductor 0.68kg/m, ultimate stress 4250kg/cm <sup>2</sup> ,<br>wind pressure 40kg/cm <sup>2</sup> of projected area, factor of safety 5. Find the sag<br>of the conductor                                                                                                                  | CO4 | 7 Marks |
| 6  | a) | A string of 3 insulators is connected across three phase, 66kV line. If the self capacitance of each unit is equal to 6 times pin to earth capacitance. Calculate the potential difference across each unit and string efficiency.                                                                                                                                                                                                       | CO4 | 8 Marks |
|    | b) | Briefly describe the methods of reducing corona effect.                                                                                                                                                                                                                                                                                                                                                                                  | CO2 | 6 Marks |
| 7  | a) | A 2-wire DC distributor is loaded as shown in figure below. The voltage at the feeding end is 230V. The distance between sections are given in meters. Determine the cross sectional area of the conductor for a minimum consumer voltage of 220V. Assume the resistance of conductor used for a distributor is $1/60\Omega$ for one meter length and 1sq.mm conductor cross section.                                                    | CO5 | 9 Marks |

# Answer One Question from each Unit. All questions carry equal marks

# UNIT-I

- A journal bearing with a diameter of 200mm and length 150mm carries CO2 14 Marks a load of 20kN, when the journal speed is 150 r.p.m. The diametral clearance ratio is 0.0015. If possible, the bearing is to operate at 35°C ambient temperature without external cooling with a maximum oil temperature of 90°C. If external cooling is required, it is to be as little as possible to minimize the required oil flow rate and heat exchanger size.
  - i) What type of oil do you recommend?
  - ii) Will the bearing operate without external cooling?
  - iii) If the bearing operates without external cooling, determine the operating oil temperature?
  - iv) If the bearing operates with external cooling, determine the amount of oil in kg/min required to carry away the excess heat generated over heat dissipated, when the oil temperature rises from 85°C to 90°C, when passing through the bearing.

#### (OR)

- 2 a) Discuss about hydrodynamic and hydrostatic lubrication.
  - b) Design a journal bearing for a centrifugal pump running at 1440 r.p.m. CO3 The diameter of the journal is 100mm and load on each bearing is 20kN. The factor ZN/p may be taken as 28 for centrifugal pump bearings. The bearing is running at 75°C temperature and the atmosphere temperature is 30°C. The energy dissipation coefficient is 875 W/m<sup>2</sup>/°C. Take diametral clearance as 0.1 mm.

# UNIT-II

A ball bearing subjected to a radial load of 4000 N is expected to have CO6 14 Marks a satisfactory life of 12000 hours at 720 r.p.m. with a reliability of 95%. Calculate the dynamic load carrying capacity of the bearing, so that it can be selected from manufacturer's catalogue based on 90% reliability. If there are four such bearings each with a reliability of 95% in a system, what is the reliability of the complete system?

### (OR)

- 4 a) The ball bearings are to be selected for an application in which the CO6 7 Marks radial load is 2000 N during 90% of the time and 8000 N during the remaining 10%. The shaft is to rotate at 150 r.p.m. Determine the minimum value of the basic dynamic load rating for 5000 hours of operation with not more than 10% failures.
  - b) Explain in detail about the causes and remedies of rolling contact CO1 7 Marks bearings.

# UNIT-III)

A 15 kW and 1200 r.p.m. motor drives a compressor at 300 r.p.m. CO6 through a pair of spur gears having 20° stub teeth. The centre to centre distance between the shafts is 400mm. The motor pinion is made of forged steel having an allowable static stress as 210MPa, while the gear is made of cast steel having allowable static stress as 140MPa. Assuming that the drive operates 8 to 10 hours per day under light shock conditions, find from the standpoint of strength,

i) Module. ii) Face width.

iii) Number of teeth and pitch circle diameter of each gear.

Check the gears thus designed from the consideration of wear. The surface endurance limit may be taken as 700MPa.

#### (**OR**)

Design a pair of helical gears for transmitting 22kW. The speed of the CO3 driver gear is 1800 r.p.m. and that of driven gear is 600 r.p.m. The helix angle is 30° and profile is corresponding to 20° full depth system. The driver gear has 24 teeth. Both the gears are made of cast steel with allowable static stress as 50MPa. Assume the face width parallel to axis as 4 times the circular pitch and the overhang for each gear as 150mm. The allowable shear stress for the shaft material may be taken as 50MPa.

#### UNIT-IV

A vertical spring loaded valve is required for a compressed air 7 CO3 14 Marks

> receiver. The valve is to start opening at a pressure of 1 N/mm<sup>2</sup> gauge and must be fully open with a lift of 4mm at a pressure of 1.2 N/mm<sup>2</sup> gauge. The diameter of the port is 25mm. assume the allowable shear stress in steel as 480MPa and shear modulus as 80 kN/mm<sup>2</sup>. Design a suitable close coiled round section helical spring having squared ground ends. Also specify initial compression and free length of the spring.

#### (**OR**)

- A composite spring has two closed coil helical springs. The outer spring 8 is 15mm larger than the inner spring. The outer spring has 10 coils of mean diameter 40mm and wire diameter 5mm. The inner spring has 8 coils of mean diameter 30mm and wire diameter 4mm. When the spring is subjected to an axial load of 400 N, find
  - i) compression of each spring.
  - ii) load shared by each spring.
  - iii) shear stress induced in each spring.

The modulus of rigidity may be taken as 84 kN/mm<sup>2</sup>.

### UNIT-V

Design a cast iron piston for a 4-stroke I.C Engine with the following CO3 14 Marks specifications:

> Cylinder bore = 100 mm, Stroke length = 120 mm, Maximum gas pressure =  $4 \text{ N/mm}^2$ , Indicated mean effective pressure=0.7 N/mm<sup>2</sup>, Mechanical efficiency = 80%, Fuel consumption=0.15 kg per BHP hour, Higher calorific value of the fuel= $42 \times 10^3 \text{ KJ/Kg}$ , Speed = 2000 r.p.m.

Assume any another relevant data required.

An open belt connects two flat pulleys. The pulley diameters are 300mm CO5 14 Marks and 450mm and the corresponding angles of lap are 160° and 210°. The smaller pulley runs at 200 r.p.m. The coefficient of friction between the belt and pulley is 0.25. It is found that the belt is on the point of slipping when 3kW is transmitted. To increase the power transmitted two alternatives are suggested, namely

- i) increasing the initial tension by 10%.
- ii) increasing the coefficient of friction by 10% by the

application of a suitable dressing to the belt.

Which of these two methods would be more effective? Find the percentage increase in power possible in each case.

| 3  |    | Explain in detail the objectives and importance of Plant Maintenance.                                                                                                                                                                                                                                                                                             | CO2 | 14 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                              |     |          |
| 4  |    | Discuss Reliability and explain M.T.T.R, M.T.B.F, Availability, Failure Rate, Probability of Failures and Reliability Improvement Factor.                                                                                                                                                                                                                         | CO2 | 14 Marks |
|    |    | UNIT-III                                                                                                                                                                                                                                                                                                                                                          |     |          |
| 5  | a) | Discuss the scope and purpose of Work Study.                                                                                                                                                                                                                                                                                                                      | CO3 | 4 Marks  |
|    | b) | Describe the procedure for Time Study and its uses in industries.                                                                                                                                                                                                                                                                                                 | CO3 | 10 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                              |     |          |
| 6  | a) | Explain work sampling procedure.                                                                                                                                                                                                                                                                                                                                  | CO4 | 4 Marks  |
|    | b) | Calculate the limit of error for 95% confidence, when we estimate the activity use 20% of the time and we have 125 samples.                                                                                                                                                                                                                                       | CO4 | 10 Marks |
|    |    | UNIT-IV                                                                                                                                                                                                                                                                                                                                                           |     |          |
| 7  | a) | Explain the objectives of Inventory Management.                                                                                                                                                                                                                                                                                                                   | CO5 | 7 Marks  |
|    | b) | Discuss the flow of Materials in Inventory Management.                                                                                                                                                                                                                                                                                                            | CO5 | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                              |     |          |
| 8  |    | A company makes and sells a seasonal product. Based on a sales forecast<br>of 2000, 3000, 6000 and 5000 per quarter, calculate a level production<br>plan, quarterly ending inventory and average quarterly inventory. If<br>inventory carrying costs are 10 per unit, what is the annual cost of<br>carrying inventory? Opening and ending inventories are zero. | CO5 | 14 Marks |
|    |    | UNIT-V                                                                                                                                                                                                                                                                                                                                                            |     |          |
| 9  | a) | Construct an operating characteristic curve for N=1000, n=89 and C=2.                                                                                                                                                                                                                                                                                             | CO5 | 7 Marks  |
|    | b) | Discuss about multiple sampling and sequential sampling plans.                                                                                                                                                                                                                                                                                                    | CO5 | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                              |     |          |
| 10 |    | Briefly explain the 7 tools of Quality Control.                                                                                                                                                                                                                                                                                                                   | CO5 | 14 Marks |

| 2 | a)   | fits.                                                                                                                                                                                                                  | COI | 6 Marks |  |  |  |
|   | b)   | Determine the tolerances on the hole and shaft for a precision running fit designated by 50H7g6. 50mm lies between the range 30-50mm.<br>$i = 0.45 D^{1/3} + 0.001D$                                                   | CO3 | 8 Marks |  |  |  |
|   |      | <ul> <li>Fundamental deviation of 'g' shaft = -2.5 D <sup>0.34</sup>. State the following.</li> <li>i) Actual maximum and minimum sizes of both hole and shaft.</li> <li>ii) Maximum and minimum clearances</li> </ul> |     |         |  |  |  |
|   |      |                                                                                                                                                                                                                        |     |         |  |  |  |
| 3 | a)   | Sketch and explain the use of Limit gauges in mass production                                                                                                                                                          | CO5 | 8 Marks |  |  |  |
| 2 | b)   | State and explain the Taylor's principle of Gauge Design.                                                                                                                                                              | CO1 | 6 Marks |  |  |  |
|   | (OR) |                                                                                                                                                                                                                        |     |         |  |  |  |
| 4 | a)   | Explain the principle of LVDT with neat sketch.                                                                                                                                                                        | CO4 | 7 Marks |  |  |  |
|   | b)   | Explain the use of sine bar for measuring angle of a taper plug gauge with the help of a neat sketch.                                                                                                                  | CO2 | 7 Marks |  |  |  |
|   |      | UNIT-III)                                                                                                                                                                                                              |     |         |  |  |  |
| 5 | a)   | Describe the Straight edge method for checking straightness of a surface.                                                                                                                                              | CO2 | 7 Marks |  |  |  |
|   | b)   | What are interferometers? What are their advantages over optical flats?                                                                                                                                                | CO1 | 7 Marks |  |  |  |
|   |      | (OR)                                                                                                                                                                                                                   |     |         |  |  |  |
| 6 | a)   | Define the following in connection with surface texture assessment.<br>i) Roughness.<br>ii) Waviness.<br>iii) Lay.<br>v) Sampling length<br>v) Primary texture<br>vi) Secondary texture                                | CO1 | 6 Marks |  |  |  |
|   | b)   | Describe the principle and operation of Talysurf surface roughness instrument.                                                                                                                                         | CO5 | 8 Marks |  |  |  |
|   |      | UNIT-IV                                                                                                                                                                                                                |     |         |  |  |  |
| 7 | a)   | Enumerate the effect of flank angle error on the effective diameter of a screw thread.                                                                                                                                 | CO2 | 6 Marks |  |  |  |
|   | b)   | Describe the procedure for measuring the effective diameter of screw thread by using two wire method with neat sketch.                                                                                                 | CO5 | 8 Marks |  |  |  |
|   |      | (OR)                                                                                                                                                                                                                   |     |         |  |  |  |
| 8 | a)   | Describe in brief the various elements of the spur gear which are checked for accuracy of the gear.                                                                                                                    | CO1 | 6 Marks |  |  |  |
|   | b)   | Explain the method used for finding the pressure angle of the gear.                                                                                                                                                    | CO3 | 8 Marks |  |  |  |

# UNIT-V

| 9  | a) | Explain the usage of strain gauge for measuring torque.           | CO4 | 7 Marks |
|----|----|-------------------------------------------------------------------|-----|---------|
|    | b) | Describe the importance of strain gauge Rosettes.                 | CO2 | 7 Marks |
|    |    | (OR)                                                              |     |         |
| 10 | a) | Explain the following.<br>i) Digital Thermometers.                | CO4 | 8 Marks |
|    |    | ii) Radiation method for measuring temperature.                   |     |         |
|    | b) | Discuss the calibration method for pressure measuring instrument. | CO3 | 6 Marks |

III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### **REFIRGERATION AND AIR CONDITIONING**

#### [Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) What is meant by refrigeration? State the important applications of CO1 6 Marks refrigeration.
  - b) The capacity of refrigerator is 150 TR when working between the CO3 8 Marks temperature limits of -10°C and 30°C. Determine the mass of ice produced per day from water at 40°C. Also find the power required to drive the unit. Assume that the cycle operates on reversed Carnot cycle. Take the specific heat of ice as 2.1 kJ/kgK and latent heat of ice as 33 kJ/kg.

#### (OR)

- 2 a) Explain the working of simple evaporative air cooling system with the help CO1 6 Marks of neat sketch.
  - b) In a refrigerator working on a Bell Coleman cycle, the air drawn into the CO3 8 Marks compressor from the cold chamber at a pressure of 1 bar and 12°C. After isentropic compression to 4.5 bar, the air is cooled at constant pressure to a temperature of 20°C. The air is then expanded to 1 bar with polytropic expansion index is 1.25 and passed to the cold chamber. Determine:
    - i) Work done per kg of air flow.
    - ii) Refrigerating effect per kg of air flow.
    - iii) Theoretical COP.

# UNIT-II)

- 3 a) Explain the working of Vapour compression refrigeration system with the CO1 6 Marks help of T-s and P-h diagrams.
  - b) A vapour compression refrigeration system is operating in between the CO3 8 Marks pressure limits of 60 bar and 25 bar. The working fluid is dry and saturated at end of compression and there is no under cooling before expansion valve. Determine the COP and Capacity of the refrigerator for the fluid flow rate of 5 kg/hr. Data:

| Pressure | Sat      | Enthalpy(kJ/kg) |        | Entropy | (kJ/kgK) |
|----------|----------|-----------------|--------|---------|----------|
| (bar)    | Temp (K) | Liquid          | Vapour | Liquid  | Vapour   |
| 60       | 295      | 151.96          | 293.29 | 0.554   | 1.0332   |
| 25       | 261      | 56.32           | 322.58 | 0.226   | 1.2464   |
|          |          |                 | (OR)   |         |          |

- 4 a) Briefly classify the refrigerants and discuss the salient features of four CO1 6 Marks most commonly used refrigerants.
  - b) A R-12 refrigerator working between the temperatures limits of -10°C and CO4 8 Marks 30°C. The compressor employed is of 20cm x 15cm twin cylinder single acting compressor having a volumetric efficiency of 85%. The compressor runs at 500 r.p.m. The refrigerant is sub cooled and enters at 22°C in the expansion valve. The vapour is superheated and enters the compressor at -2°C. Work out the following:
    - (i) Show the process on T-s and p-h diagrams.
    - (ii) The amount of refrigerant circulated per minute.
    - (iii) The ton of refrigeration and the COP of the system.

# (UNIT-III)

| 5 | a) | Make a comparison between VCR a                     | and VAR systems.                                    | CO1        | 6 Marks   |
|---|----|-----------------------------------------------------|-----------------------------------------------------|------------|-----------|
|   | b) | Explain the working of Practical V                  | apour Absorption Refrigeration system               | CO3        | 8 Marks   |
|   |    | with the help of a neat sketch                      |                                                     |            |           |
|   |    |                                                     | $(\mathbf{OP})$                                     |            |           |
| 6 | 2) |                                                     |                                                     | $CO^{2}$   | Q Maulta  |
| 0 | a) | what is the basic principle of Steam                | jet reingeration system? Define:                    | COS        | 8 IVIAIKS |
|   |    | (1) Nozzle efficiency.                              |                                                     |            |           |
|   |    | ii) Entrainment efficiency.                         |                                                     |            |           |
|   |    | iii) Compression efficiency                         | as applied to Steam jet refrigeration               |            |           |
|   |    | system.                                             |                                                     |            |           |
|   | b) | What is the basic principle in The                  | ermo electric refrigeration system and              | CO3        | 6 Marks   |
|   |    | discuss it's relative advantages and disadvantages. |                                                     |            |           |
|   |    | c (                                                 |                                                     |            |           |
| _ |    |                                                     |                                                     | <b>a a</b> |           |
| 1 | a) | Define the following psychrometric                  | terms.                                              | CO5        | 6 Marks   |
|   |    | i) DBT.                                             | ii) DPT.                                            |            |           |
|   |    | iii) Absolute humidity.                             | iv) Degree of Saturation.                           |            |           |
|   |    | v) Relative humidity.                               | vi) Enthalpy of moist air.                          |            |           |
|   | b) | A sample of air has DBT and W                       | BT of 35°C and 25°C respectively as                 | CO5        | 8 Marks   |
|   |    | recorded by a sling psychrometer.                   | The barometric pressure is 1.0132 bar.              |            |           |
|   |    | Make calculations for:                              | 1                                                   |            |           |
|   |    | i) the vapour pressure.                             | ii) the relative humidity.                          |            |           |
|   |    | iii) the specific humidity.                         | iv) the degree of saturation.                       |            |           |
|   |    | v) the vapour density of air                        | vi) the dew point temperature                       |            |           |
|   |    | vii) the enthalpy of the mixt                       | ure                                                 |            |           |
|   |    | vir) the enthalpy of the mixe                       |                                                     |            |           |
| 0 | `` |                                                     | ( <b>UK</b> )                                       | 005        | 0 1 1     |
| 8 | a) | Explain the following psychrometri                  | c processes.                                        | 005        | 8 Marks   |
|   |    | 1) Sensible cooking.                                |                                                     |            |           |
|   |    | ii) Sensible heating.                               |                                                     |            |           |
|   |    | iii) Cooling and dehumidific                        | cation.                                             |            |           |
|   |    | iv) Heating and humidificati                        | on.                                                 |            |           |
|   | b) | 90m <sup>3</sup> of air per minute at 20°C and      | 75% RH is heated until its temperature              | CO5        | 6 Marks   |
|   |    | becomes 30°C. Calculate:                            | •                                                   |            |           |
|   |    | i) RH of the heated air.                            | (ii) heat added to air per minute.                  |            |           |
|   |    | ,                                                   |                                                     |            |           |
| 0 |    |                                                     |                                                     | a o c      |           |
| 9 | a) | Explain the working of summer air                   | conditioning system for hot and humid               | CO6        | 6 Marks   |
|   |    | air with the help of neat sketch and                | showing important calculation that can              |            |           |
|   |    | be made.                                            |                                                     |            |           |
|   | b) | A restaurant with a capacity of 10                  | 0 persons is to be air conditioned with             | CO6        | 8 Marks   |
|   |    | the following conditions:                           |                                                     |            |           |
|   |    | Outside conditions: 30°C DBT and                    | d 70% RH, Desires inside conditions:                |            |           |
|   |    | 23°C DBT and 55% RH, Quantity                       | of air supplied: 0.5m <sup>3</sup> /min/person. The |            |           |
|   |    | desired conditions are achieved                     | by cooling, dehumidifying and then                  |            |           |
|   |    | heating. Determine:                                 |                                                     |            |           |
|   |    | i) Capacity of the cooling of                       | coil in tonnes of refrigeration.                    |            |           |
|   |    | ii) Canacity of heating coil                        |                                                     |            |           |
|   |    | iii) Amount of water remove                         | ed by dehumidifier                                  |            |           |
|   |    | iv) By-nass factor of the hea                       | ting coil of its surface temperature is             |            |           |
|   |    |                                                     | and con or its surface temperature is               |            |           |
|   |    |                                                     |                                                     |            |           |

(OR)

10 a) Briefly discuss the factors affecting human comfort and discuss the CO6 4 Marks concept of effective temperature.

10 Marks

- b) The following data refer to summer air conditioning of a building: CO6 Outside design conditions: 43°C DBT, 27°C WBT; Inside design conditions: 25°C DBT, 50% RH; Room sensible heat gain: 84,000 kJ/h; Room latent heat gain: 21,000 kJ/h; Bypass factor of the cooling coil used is 0.2; The return air from the room is mixed with the outside air before entry to cooling coil in the ratio of 4:1 by mass. Determine:
  - i) Apparatus dew point of the cooling coil.
  - ii) Entry and exit conditions of air for cooling coil.
  - iii) Fresh air mass flow rate.
  - iv) Refrigeration load on the cooling coil.

## <u>NOTE:</u> Refrigerants and Refrigerant properties data book must be supplied in the examination hall

#### THERMAL ENGINEERING-II

#### [Mechanical Engineering]

Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Compare the Rankine efficiency of a high pressure plant operating from 1 a) CO1 7 Marks 80 bar and 400°C with a low pressure plant operating from 40 bar and  $400^{\circ}$ C, if the condenser pressure in both the cases is 0.07 bar. Consider a steam power plant operating on the simple ideal Rankine cycle. CO1 7 Marks b) Dry saturated steam enters the turbine at 15Mpa and leaves at 100kPa pressure. The exhaust steam enters the condenser and leaves it as saturated liquid. Draw the cycle on T-s and h-s diagrams and also determine the work produced by the turbine, work consumed by the pump and the thermal efficiency of the plant. (**OR**) Describe the functioning the Benson boiler with the help of a diagram. 2 a) CO1 7 Marks Explain the function of following mountings. b) CO<sub>2</sub> 7 Marks i) Fusible plug. ii) Feed check valve. iii) Safety valve. UNIT-II Define the following terms. 3 CO1 a) 7 Marks i) Factor of evaporation. ii) Chimney efficiency. iii) Boiler draught Discuss the classification of boiler draught. CO3 7 Marks b) (**OR**) A Lancashire boiler generates 2500 kg of dry steam/hr at a pressure of CO1 4 7 Marks a) 11 bae. The grate area is  $3.6m^2$  and 75 kg of coal is burnt/m<sup>2</sup> of grate are/hr. The calorific value of the coal is 33,200 kj/kg and temperature of feed wated is 17.5°C. Determine: i) Actual Evaporation/kg of coal. ii) Equivalent evaporation from and at 100°C. iii) Efficiency of the boiler Discuss briefly about preparation of heat balance sheet applied to boilers. CO4 b) 7 Marks (UNIT-III) The inlet conditions of steam to a C-D nozzle is 20bar and 260<sup>o</sup>C. The exit 5 a) CO1 7 Marks pressure is 4 bar. Assuming frictionless flow up to the throat and nozzle efficiency of 85%, determine: i) the flow rate for a throat area of 32.2 cm<sup>2</sup> ii) the exit area Classify the nozzles. What is theoretical pressure ratio for dry saturated CO2 b) 7 Marks steam and super heated steam?

(**OR**)

Time: 3 hours

6 Steam enters the blade row of an impulse turbine with a velocity of CO1 7 Marks a) 600 m/s at angle of  $25^{\circ}$  to the plane of rotation of the blades. The mean blade speed is 255 m/s. The blade angle on the exit side is 30°. The blade friction coefficient is 10%. Determine: i) Work done per kg of steam. ii) Diagram efficiency. iii) Axial thrust per kg of steam. b) What is the classification of steam turbines? CO5 7 Marks UNIT-IV In a reaction stage of a steam turbine, the nozzle angle is  $20^{\circ}$  and the CO2 7 a) 7 Marks absolute velocity of steam at inlet to the moving blades is 240m/s. The blade velocity is 210m/s. If the blades are designed for 50% reaction, determine: i) The blade angle at inlet and exit. ii) The enthalpy drop per unit mass of steam in the moving blades and in the complete stage. iii) The diagram power for a steam flow of 1kg/s. iv) The diagram efficiency. What is degree of reaction? Discuss the working of parson's reaction CO1 b) 7 Marks turbine. (**OR**) Differentiate surface and jet condensers. 8 a) CO1 7 Marks Explain the working of a Counter flow jet condenser with neat diagram. b) CO2 7 Marks UNIT-V 9 7 Marks In a gas turbine plant working on brayton cycle, the air at inlet is 27°c, CO1 a) 0.1MPa.The pressure ratio is 6.25 and the maximum temperature is 800°C. The turbine and compressor efficiencies are each 80%. Find the compressor work, turbine work, heat supplied, cycle efficiency and turbine exhaust temperature. Mass of air may be considered as 1Kg. Draw T-S diagram. An ideal air standard Brayton cycle operates with air. At the compressor CO2 7 Marks b) inlet, the air is at 500K and at the turbine outlet the gas is at 1400K. The pressure ratio of the cycle is. Determine: i) Net work done. ii) Thermal efficiency.

### **MECHATRONICS**

#### [Mechanical Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a) | Define Mechatronics. What are the objectives of Mechatronics?                                     | CO1 | 5 Marks  |
|----|----|---------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Explain various elements of Mechatronics systems with an example.                                 | CO1 | 9 Marks  |
|    |    | (OR)                                                                                              |     |          |
| 2  | a) | Define the role of Automation. Explain how a Mechatronics system fits into it.                    | CO1 | 5 Marks  |
|    | b) | Compare Traditional Design approach with Mechatronics Design approach.                            | CO1 | 5 Marks  |
|    | c) | Differentiate Closed and Open loop feedback system.                                               | CO1 | 4 Marks  |
|    |    | UNIT-II                                                                                           |     |          |
| 3  |    | Write about:                                                                                      |     |          |
|    |    | i) Hall effect sensor.                                                                            | CO2 | 5 Marks  |
|    |    | ii) Proximity Sensor.                                                                             | CO2 | 5 Marks  |
|    |    | iii) Any light sensor used in Camera.                                                             | CO2 | 4 Marks  |
|    |    | (OR)                                                                                              |     |          |
| 4  | a) | Explain various elements of Hydraulic system with neat sketches.                                  | CO2 | 10 Marks |
|    | b) | Write the working principle of Stepper motor.                                                     | CO2 | 4 Marks  |
|    |    | UNIT-III)                                                                                         |     |          |
| 5  | a) | What is signal conditioning? What is the necessity of signal conditioning and list the functions? | CO3 | 8 Marks  |
|    | b) | Write about:                                                                                      | CO3 | 6 Marks  |
|    |    | i) Noise filter. ii) Voltage to frequency converter.                                              |     |          |
|    |    | (OR)                                                                                              |     |          |
| 6  | a) | Write the differences between Analogue and Digital signals.                                       | CO3 | 4 Marks  |
|    | b) | Write about Digital to Analogue converter.                                                        | CO3 | 10 Marks |
|    |    | UNIT-IV                                                                                           |     |          |
| 7  | a) | What are various process controllers and write controller principles.                             | CO4 | 6 Marks  |
|    | b) | Explain PID controller by Oscillation method.                                                     | CO4 | 8 Marks  |
|    |    | (OR)                                                                                              |     |          |
| 8  | a) | Write about PI controller.                                                                        | CO4 | 6 Marks  |
|    | b) | Explain Adaptive controller.                                                                      | CO4 | 8 Marks  |
|    |    | UNIT-V                                                                                            |     |          |
| 9  |    | Explain Washing machine mechanism with Mechatronics system.                                       | CO5 | 14 Marks |
|    |    | (OR)                                                                                              |     |          |
| 10 |    | Write about automatic car park barrier system.                                                    | CO5 | 14 Marks |
|    |    |                                                                                                   |     |          |

# UNIT-I

Sketch the electrical representation of binary data 101000111 using CO1

|   |    | different formats.                                                                                                                                                                                                                  |     |          |
|---|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|   | b) | Discuss the advantages of DM over PCM.                                                                                                                                                                                              | CO2 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                |     |          |
| 2 | a) | What is the necessity of non-uniform quantization and explain companding.                                                                                                                                                           | CO1 | 7 Marks  |
|   | b) | If mp = 20V and 256 quantizing levels are employed, what is the voltage between levels when there is no compression? For $\mu = 255$ , what is the smallest and what is the largest effective separation between levels.            | CO2 | 7 Marks  |
|   |    | UNIT-II                                                                                                                                                                                                                             |     |          |
| 3 | a) | Analyze the effect of thermal noise in PCM.                                                                                                                                                                                         | CO2 | 7 Marks  |
|   | b) | Derive the expression for Signal to Quantization noise ratio in Delta modulation.                                                                                                                                                   | CO2 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                |     |          |
| 4 |    | Justify that the output SNR in a PCM system is superior to that of a DM system.                                                                                                                                                     | CO3 | 14 Marks |
|   |    | UNIT-III)                                                                                                                                                                                                                           |     |          |
| 5 | a) | Compare probability of error of different modulation techniques.                                                                                                                                                                    | CO2 | 7 Marks  |
|   | b) | Implement a digital system for generation and reception of BFSK.                                                                                                                                                                    | CO6 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                |     |          |
| 6 | a) | Explain the generation and reception of DPSK signal with example.                                                                                                                                                                   | CO6 | 7 Marks  |
|   | b) | Explain the principle of QPSK system. Compare binary PSK and QPSK schemes.                                                                                                                                                          | CO2 | 7 Marks  |
|   |    | UNIT-IV                                                                                                                                                                                                                             |     |          |
| 7 | a) | Define the following terms:                                                                                                                                                                                                         | CO1 | 4 Marks  |
|   |    | i) Channel Capacity. ii) Rate of information.                                                                                                                                                                                       |     |          |
|   | b) | Consider five symbols given by the probabilities 1/2, 1/4, 1/8, 1/16, 1/16.<br>(i) Calculate Entropy (ii) Use Huffman algorithm to develop an efficient code and calculate the average number of bits/symbol. Compare with Entropy. | CO5 | 10 Marks |
|   |    | (OR)                                                                                                                                                                                                                                |     |          |
| 8 | a) | Differentiate the terms:                                                                                                                                                                                                            | CO5 | 8 Marks  |
|   |    | i) Data and Information. ii) Define entropy.                                                                                                                                                                                        |     |          |
|   | b) | Find the Channel capacity of Binary symmetric channel.                                                                                                                                                                              | CO5 | 6 Marks  |
|   |    | 1                                                                                                                                                                                                                                   |     |          |

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1 | a) | What is an Assembler directive and explain any three Assembler directives.                                                                               | CO2 | 7 Marks  |
|---|----|----------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|   | b) | Develop an Assembly Language program to move a string from one<br>memory location to another memory location using string instructions.                  | CO4 | 7 Marks  |
|   |    | (OR)                                                                                                                                                     |     |          |
| 2 | a) | Discuss the fields of flag register in detail.                                                                                                           | CO1 | 7 Marks  |
|   | b) | Compose an Assembly Language program to arrange given bytes in ascending order residing in memory at an offset of 6000H from segment base.               | CO4 | 7 Marks  |
|   |    | UNIT-II                                                                                                                                                  |     |          |
| 3 | a) | Describe in detail bus activities of 8086 microprocessor during memory read operation in minimum mode.                                                   | CO1 | 8 Marks  |
|   | b) | Explain interrupt vector table of 8086 microprocessor.                                                                                                   | CO1 | 6 Marks  |
|   |    | (OR)                                                                                                                                                     |     |          |
| 4 |    | Explain pin-diagram of 8086 microprocessor.                                                                                                              | CO1 | 14 Marks |
|   |    | (UNIT-III)                                                                                                                                               |     |          |
| 5 |    | Explain the internal architecture of 8255 PPI.                                                                                                           | CO1 | 14 Marks |
|   |    | (OR)                                                                                                                                                     |     |          |
| 6 | a) | Illustrate the purpose of DMA controller in microprocessor based system designs and point out the need for DMA control in a microprocessor based system. | CO1 | 7 Marks  |
|   | b) | Write an Assembly Language program to initialize 8251 and receive 100 bytes of data.                                                                     | CO3 | 7 Marks  |
|   |    | UNIT-IV                                                                                                                                                  |     |          |
| 7 | a) | Differentiate microcontroller and microprocessor.                                                                                                        | CO1 | 4 Marks  |
|   | b) | Explain the pin diagram of 8051 microcontroller.                                                                                                         | CO1 | 10 Marks |
|   |    | (OR)                                                                                                                                                     |     |          |
| 8 | a) | Describe in detail addressing modes of 8051 with suitable examples.                                                                                      | CO1 | 7 Marks  |
|   | b) | Develop an Assembly Language program to move 16 bytes of data from ROM starting at location 9000H to RAM starting at 9000H.                              | CO4 | 7 Marks  |
| 0 |    | Calculate the value to be leaded in to the timer registers if we want to have                                                                            | CO4 | 7 Martra |
| 9 | a) | a time delay of 4ms show the program for timer 1 to create a pulse width of 4ms on pin P2.2. Assume X TAL=11.0592MHz.                                    | 04  | / Warks  |
|   | b) | Illustrate the serial communication in 8051 with its special function registers.                                                                         | CO2 | 7 Marks  |

(OR)

| 10 | a) | Design instructions to:                                           | CO3 | 7 Marks |
|----|----|-------------------------------------------------------------------|-----|---------|
|    |    | i) Disable the serial interrupt, timer 1 interrupt and external   |     |         |
|    |    | hardware interrupts.                                              |     |         |
|    |    | ii) Enable timer 0 interrupt then.                                |     |         |
|    |    | iii) Enable all interrupts with a single instruction.             |     |         |
|    | b) | Draw and explain the bit for mats of IE and IP registers in 8051. | CO1 | 7 Marks |

### VLSI DESIGN

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

# Answer One Question from each Unit. All questions carry equal marks

# UNIT-I

- 1 a) Identify where the diffusion and deposition process are used in CO1 7 Marks NMOS/CMOS fabrication process.
  - b) Compare the relative merits of three different forms of pull-up for an CO2 7 Marks inverter circuit. What is the best choice for realization in:

i) NMOS technology. ii) CMOS technology.

#### (OR)

- 2 a) Why CMOS inverter is called as ratioless logic? Explain in detail. CO2 7 Marks
  - b) Consider an NMOS transistor in a 0.6µm process with  $W/L = 4/2 \lambda$  CO1 7 Marks (i.e., 1.2/0.6µm). In this process, the gate oxide thickness is 100 °A and the mobility of electrons is  $350 \text{ cm}^2/\text{V} \cdot \text{s}$ . The threshold voltage is 0.7V. Plot *Ids* vs. *Vds* for *Vgs* = 0, 1, 2, 3, 4 and 5V.  $\epsilon_{si} = 3.9 \times 8.85 \times 10^{-14} \text{ F/cm}$ .

# UNIT-II

- 3 a) A particular layer of MOS circuit has a resistivity  $p = 1\Omega$  cm. A section CO4 7 Marks of this layer is 55 µm long and 5 µm wide and has a thickness of 1 µm. Calculate the resistance from one end of this section to the other (along the length). Use the concept of sheet resistance *Rs*. What is the value of *Rs*?
  - b) Explain how delay estimation can be performed for a standard MOS CO3 7 Marks delay unit.

### (OR)

- 4 a) Represent the stick diagram of inverter for ratioed and ratioless logic. CO4 7 Marks Illustrate with examples.
  - b) Construct NMOS inverter layout with the help of  $\lambda$ -based rules. Clearly CO1 7 Marks mention the design rules used in the layout.

# (UNIT-III)

- 5 a) Discuss the use of pass transistor logic for functional unit design. CO5 7 Marks Identify the limitations of pass transistor logic.
  - b) Estimate CMOS inverter delay using rise-time and fall-time estimation. CO5 7 Marks

#### (OR)

- 6 a) Explain the construction of transmission gate based adder in detail. CO4 7 Marks
  - b) Draw the static CMOS logic circuit for the following expression. CO4 7 Marks i) Y = (ABCD)'. ii) Y = [D(A+BC)]'.

# UNIT-IV

- 7 a) Differentiate the channeled gate array and channeless gate array. CO1 7 Marks
  - b) Explain the FPGA design flow and bring out the differences with ASIC CO5 7 Marks design flow.

#### (OR)

- 8 a) Discuss in detail, different architectures of programmable interconnects CO1 7 Marks in FPGA.
  - b) Discuss any two types of programming technology used in FPGA CO1 7 Marks design.

# UNIT-V

- 9 a) Discuss various fault models used for testing process. CO6 7 Marks
  - b) Differentiate the process of test vector generation for combinational and CO6 7 Marks sequential circuits.

### (OR)

- 10 a) Discuss the use of power management techniques for low power CO3 7 Marks designs.
  - b) Discuss various approaches available in design for testability. CO1 7 Marks

III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

### LINUX PROGRAMMING

[Computer Science and Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I 9 Marks 1 List File and Directory maintenance commands. CO1 a) Describe Zombie processes. CO1 5 Marks b) (**OR**) 2 a) Write a shell script that counts number of lines in an input file using for CO3 7 Marks loop. Write a shell program to find whether a given number is prime or not b) CO5 7 Marks using command line arguments. UNIT-II Differentiate between PIPEs and FIFOs. CO2 7 Marks 3 a) CO6 7 Marks Write a shell script that accepts one or more filenames as arguments and b) converts all of them to uppercase, provided they exist in the current directory. (**OR**) 4 Discuss the necessity of shell programming. CO1 7 Marks a) Explain the contents of thread structures and their uses. CO1 7 Marks b) UNIT-III) 5 What is Socket? Explain Socket System calls for connectionless protocols. CO1 7 Marks a) CO1 b) Discuss Socket attributes 7 Marks (**OR**) Perform client and server program Socket programming for exchanging of 6 CO4 7 Marks a) data using system calls. Discuss about system calls and device drivers. CO1 7 Marks b) UNIT-IV ) 7 Write a C program to display Environment Variables. CO3 7 Marks a) Illustrate the working principles of parent process and child process using CO5 b) 7 Marks fork command. (**OR**) 8 Analyze shell scripts. CO<sub>2</sub> 7 Marks a) Implement the IPC form PIPE. b) CO4 7 Marks UNIT-V 9 Discuss File system structure in Linux. CO1 7 Marks a) CO2 Analyze system calls. 7 Marks b) (**OR**) 10 Write a shell program to print a multiplication table of a number given CO6 7 Marks a) from command line. Describe process scheduling. CO1 7 Marks b)

# III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

### **COMPUTER VISION**

[Computer Science and Engineering]

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

# UNIT-I

| 1  | a) | Describe different sources and their effects for the lambertian with specular model area.                                                                                                                                                       | CO1 | 9 Marks  |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Analyze different shadow removal using color with an example.<br>(OR)                                                                                                                                                                           | CO2 | 5 Marks  |
| 2  | a) | Explain about color matching.                                                                                                                                                                                                                   | CO1 | 4 Marks  |
|    | b) | In the CMY space, the three primary colors are cyan, magenta and yellow.<br>CMY mixing is subtractive, recall we showed that mixing cyan and<br>magenta by over printing resulted in blue. What color is obtained by<br>mixing cyan and yellow? | CO6 | 10 Marks |
|    |    | UNIT-II                                                                                                                                                                                                                                         |     |          |
| 3  | a) | Discuss synthesizing texture. How they are used for generating different filling holes in images?                                                                                                                                               | CO2 | 7 Marks  |
|    | b) | Investigate about local texture representation using filters of an image. <b>(OR)</b>                                                                                                                                                           | CO1 | 7 Marks  |
| 4  | a) | Write a note on human stereopsis with an example.                                                                                                                                                                                               | CO2 | 9 Marks  |
|    | b) | List the advantages and disadvantages of epipolar constraint.                                                                                                                                                                                   | CO2 | 5 Marks  |
| 5  | a) | Develop Shot Boundary detection algorithm interframe differences.                                                                                                                                                                               | CO3 | 7 Marks  |
|    | b) | Analyze the important applications of interactive segmentation.                                                                                                                                                                                 | CO3 | 7 Marks  |
|    | ,  | (OR)                                                                                                                                                                                                                                            |     |          |
| 6  | a) | Explain division clustering with a graph by normalized cuts concept.                                                                                                                                                                            | CO1 | 7 Marks  |
|    | b) | Give in detail mean shift to find local modes for any sample data.                                                                                                                                                                              | CO3 | 7 Marks  |
|    |    | UNIT-IV                                                                                                                                                                                                                                         |     |          |
| 7  | a) | Explain classification of receiver operating curves concept in detail.                                                                                                                                                                          | CO1 | 7 Marks  |
|    | b) | Differentiate between error and loss.                                                                                                                                                                                                           | CO3 | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                            |     |          |
| 8  |    | Discuss the detection objects in images for the sliding window method.                                                                                                                                                                          | CO3 | 14 Marks |
| 9  | a) | Demonstrate geometric and semantic questions for the concept of object recognition.                                                                                                                                                             | CO1 | 9 Marks  |
|    | b) | Describe the purpose of basic technology on semantic object recognition. <b>(OR)</b>                                                                                                                                                            | CO2 | 5 Marks  |
| 10 |    | Analyze approximate nearest neighbors and hashing concepts with their examples.                                                                                                                                                                 | CO1 | 14 Marks |

[Computer Science and Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit. All questions carry equal marks

# UNIT-I

| 1  | a)       | Explain the different transmission models in data communications.<br>Briefly explain about network components                                                 | CO1 | 6 Marks  |
|----|----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b)       | Draw the TCP/IP protocol suite and explain the functionality of the layers.                                                                                   | CO1 | 8 Marks  |
|    |          | (OR)                                                                                                                                                          |     |          |
| 2  | a)       | Explain the different types of noise that interfere with data communication signals.                                                                          | CO1 | 7 Marks  |
|    | b)       | What are the different types of Network models? Compare analog and digital modulation.                                                                        | CO2 | 7 Marks  |
|    |          | UNIT-II                                                                                                                                                       |     |          |
| 3  |          | What is companding? Explain analog and digital companding in detail. (OR)                                                                                     | CO1 | 14 Marks |
| 4  | a)       | Compare analog and digital transmission.                                                                                                                      | CO2 | 4 Marks  |
|    | b)       | What is superframe and extended superframe TDM format? Explain briefly.                                                                                       | CO3 | 10 Marks |
|    |          |                                                                                                                                                               |     |          |
| 5  | a)       | What are the three modes of terrestrial propagation of Electromagnetic                                                                                        | CO1 | 7 Marks  |
|    | ,        | waves? Explain in detail.                                                                                                                                     |     |          |
|    | b)       | Draw functional block diagram of a standard telephone set and explain<br>the components.                                                                      | CO1 | 7 Marks  |
|    |          | (OR)                                                                                                                                                          |     |          |
| 6  | a)       | What is satellite multiple accessing arrangement? List and describe in detail the three forms of satellite multiple accessing arrangements with neat diagrams | CO3 | 7 Marks  |
|    | b)       | Explain the working of electronic telephone and subscriber loop.                                                                                              | CO1 | 7 Marks  |
|    | 0)       |                                                                                                                                                               | 001 | ,        |
| 7  | ``       |                                                                                                                                                               | 001 | 10 1 1   |
| /  | a)<br>b) | List various data communications character codes and explain.                                                                                                 | CO1 | 10 Marks |
|    | 0)       | (OR)                                                                                                                                                          | COS | 4 Marks  |
| 8  | a)       | With a diagram explain first generation analog cellular telephone                                                                                             | CO1 | 8 Marks  |
| Ũ  | b)       | Describe Universal Product Code (UPC).                                                                                                                        | CO1 | 6 Marks  |
|    | ,        |                                                                                                                                                               |     |          |
| 9  |          | Give a brief note on the seven components that make up a two-point data communication circuit.                                                                | CO1 | 14 Marks |
|    |          | (OR)                                                                                                                                                          |     |          |
| 10 | a)       | Describe basic functions of DSU and CSU.                                                                                                                      | CO1 | 8 Marks  |
|    | b)       | Compare Cable modems and standard Voice-band modems.                                                                                                          | CO1 | 6 Marks  |

# III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### **INDUSTRIAL INSTRUMENTATION - II**

[Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# (UNIT-I)

| 1   | a)<br>b) | Describe the principle of buoyancy type density measuring instrument.<br>Explain the principle of rotating concentric cylinder viscometer with a neat diagram.     | CO1<br>CO1 | 7 Marks<br>7 Marks |
|-----|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|     |          | (OR)                                                                                                                                                               |            |                    |
| 2   | a)       | Discuss the principle and working of hygrometer method of humidity measurement in detail                                                                           | CO1        | 7 Marks            |
|     | b)       | Explain the principle of Saybolt's viscometer with a neat diagram.                                                                                                 | CO1        | 7 Marks            |
| 3   | a)       | Explain the principle and working of Bubbler type liquid level measuring system                                                                                    | CO4        | 7 Marks            |
|     | b)       | Discuss the design aspects of flat and shaft type level measuring device.<br>(OR)                                                                                  | CO4        | 7 Marks            |
| 4   | a)       | Explain the scheme of capacitance type level gauging in detail.                                                                                                    | CO2        | 7 Marks            |
|     | b)       | Discuss the process of ultrasonic level gauging in both liquid and vapor phases.                                                                                   | CO2        | 7 Marks            |
|     |          | UNIT-III)                                                                                                                                                          |            |                    |
| 5   | a)       | Describe the principle and working of venture flow meter                                                                                                           | CO1        | 7 Marks            |
| C   | b)       | Calculate the flow rate in kg/hr of saturated steam flowing in a 20cm line                                                                                         | CO1        | 7 Marks            |
|     | -)       | at a pressure of 34 kg/cm <sup>2</sup> and producing a head of 20cm of mercury across a venture neck with $\beta = 0.5$ and across an orifice with $\beta = 0.5$ . |            |                    |
| 6   | a)       | (UK)<br>What are the different types of ultresonic flow meters? Describe                                                                                           | CO5        | 7 Marka            |
| 0   | a)       | ultrasonic flow measurement system with a neat schematic diagram.                                                                                                  | 005        |                    |
|     | b)       | along with their method of detection.                                                                                                                              | 005        | / Marks            |
|     |          | (UNIT-IV)                                                                                                                                                          |            |                    |
| 7   | a)       | Describe the principle of Wheatstone bridge conditioning circuit used with thermistors.                                                                            | CO3        | 7 Marks            |
|     | b)       | Write a detailed note on thermistors. (OR)                                                                                                                         | CO3        | 7 Marks            |
| 8   | a)       | Discuss the principle of low drift amplifiers.                                                                                                                     | CO3        | 7 Marks            |
|     | b)       | Describe the principle of electrometer amplifier.                                                                                                                  | CO3        | 7 Marks            |
|     |          | UNIT-V                                                                                                                                                             |            |                    |
| 9   | a)       | Describe the working of Hall – Effect proximity switch in the Head-on and Slide-by modes.                                                                          | CO6        | 7 Marks            |
|     | b)       | Discuss about the working of Mechanical Limit switch provided with a fixed lever actuator with a neat diagram.                                                     | CO6        | 7 Marks            |
| 1.0 |          | (OR)                                                                                                                                                               | ac í       | - 1 - 1            |
| 10  | a)       | What are the essentials of purging, pressurization and ventilation? Discuss about a typical purge assembly.                                                        | CO6        | 7 Marks            |
|     | b)       | Discuss various approaches of safety in case of Explosion hazards.<br>$\circledast  \circledast$                                                                   | CO6        | 7 Marks            |

Max. Marks: 70

#### Answer One Question from each Unit. All questions carry equal marks

# UNIT-I

| 1   | a)  | With neat sketches, explain how DSB-SC waves are generated using<br>Balanced modulator and Ring modulator                                          | CO3   | 10 Marks   |
|-----|-----|----------------------------------------------------------------------------------------------------------------------------------------------------|-------|------------|
|     | b)  | A DSB-SC signal is generated using the carries $\cos(\omega_c t + \theta)$ and modulating signal $x(t)$ . Find the envelope of the DSB-SC signal.  | CO2   | 4 Marks    |
| 2   | a)  | Write a detailed note on block diagram of electrical communication                                                                                 | CO1   | 10 Marks   |
|     | b)  | Define modulation and explain when modulation is required.                                                                                         | CO5   | 4 Marks    |
| 3   | a)  | Explain the generation of FM waves using indirect FM method                                                                                        | CO3   | 10 Marks   |
| 5   | h)  | A 10MHz carrier is frequency modulated by a sinusoidal signal of                                                                                   | CO2   | 4 Marks    |
|     | 0)  | 500Hz, the maximum frequency deviation being 50KHz. Using the Carson's rule find the required bandwidth.                                           | 002   | i ivitains |
|     |     | (OR)                                                                                                                                               |       |            |
| 4   | a)  | Compare Frequency Modulation and Phase Modulation.                                                                                                 | CO5   | 7 Marks    |
|     | b)  | With a neat sketch, explain the demodulation of FM waves.                                                                                          | CO1   | 7 Marks    |
|     |     | (UNIT-III)                                                                                                                                         |       |            |
| 5   | a)  | Explain the methods of getting the pulse amplitude modulated waveform.                                                                             | CO3   | 7 Marks    |
|     | b)  | Write a brief note on digital communication system and its advantages. <b>(OR)</b>                                                                 | CO1   | 7 Marks    |
| 6   | a)  | Compare PAM, PWM and PPM.                                                                                                                          | CO5   | 7 Marks    |
|     | b)  | Explain the PAM signal recovery through holding circuit method.                                                                                    | CO3   | 7 Marks    |
| 7   | a)  | Compare the three basic forms of digital pulse modulation                                                                                          | CO5   | 10 Marks   |
| ,   | h)  | A sinusoidal signal is transmitted using PCM. The output signal to                                                                                 | CO4   | 4 Marks    |
|     | 0)  | quantizing noise ratio is required to be 55.8 dB Find the minimum                                                                                  | 001   | 11111111   |
|     |     | number of representation levels L required to achieve this performance                                                                             |       |            |
|     |     | (OR)                                                                                                                                               |       |            |
| 8   | a)  | Write a brief note on companding.                                                                                                                  | CO1   | 4 Marks    |
| -   | b)  | With a neat sketch, explain the PCM system.                                                                                                        | CO3   | 10 Marks   |
|     | -)  | UNIT-V                                                                                                                                             |       |            |
| 9   | a)  | A continuous signal is band limited to 5KHz. The signal is quantized in 8 levels of a PCM system with probabilities 0.25, 0.2, 0.2, 0.1, 0.1, 0.5, | CO4   | 4 Marks    |
|     | • • | 0.5 and 0.5. Calculate Entropy and the rate of information.                                                                                        | a a c |            |
|     | b)  | Explain how Block codes are used for error control.                                                                                                | CO6   | 10 Marks   |
| 1.0 |     | (OR)                                                                                                                                               | ac í  | - > < 1    |
| 10  | a)  | Explain Huffman coding with an example.                                                                                                            | CO6   | 7 Marks    |
|     | b)  | Write a brief note on methods of error correction.                                                                                                 | CO6   | 7 Marks    |
|     |     | \$\$ \$\$ \$\$                                                                                                                                     |       |            |

| 5  | a)       | With a neat diagram, explain the pin diagram of 8085.                                                                                               | CO1        | 7 Marks            |
|    | b)       | Discuss about arithmetic and logical instructions in detail.<br>(OR)                                                                                | CO1        | 7 Marks            |
| 6  | a)       | Draw and give analysis of the timing diagram for a memory read operation of 8085 microprocessor.                                                    | CO2        | 7 Marks            |
|    | b)       | Discuss about the following of 8085 in detail:<br>i) LHLD. ii) STAX. iii) OUT.                                                                      | CO1        | 7 Marks            |
|    |          | UNIT-IV                                                                                                                                             |            |                    |
| 7  | a)       | What is an addressing mode? Explain various addressing modes of 8085 with suitable examples.                                                        | CO1        | 7 Marks            |
|    | b)       | Write a program to arrange first 10 numbers from memory address 3000H in an ascending order.                                                        | CO4        | 7 Marks            |
|    |          | (OR)                                                                                                                                                |            |                    |
| 8  | a)<br>b) | What is an Interrupt? Explain about maskable interrupts of 8085.<br>Write a program to exchange the data at 5000M and 6000M memory                  | CO1<br>CO4 | 7 Marks<br>7 Marks |
|    |          |                                                                                                                                                     |            |                    |
| 9  | a)       | Give the organization of typical hardwired control unit and explain the functions performed by the various blocks                                   | CO3        | 10 Marks           |
|    | b)       | Highlight the solutions of instruction hazards.                                                                                                     | CO1        | 4 Marks            |
| 10 | a)       | (UK)<br>Explain in detail about instruction execution characteristics                                                                               | CO1        | 7 Marke            |
| 10 | b)       | Illustrate the various mapping techniques of Cache memory.                                                                                          | CO2        | 7 Marks            |

### SENSOR AND SIGNAL CONDITIONING [Electrical and Electronics Engineering]

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

|    |    | (UNIT-I)                                                                                                |     |          |
|----|----|---------------------------------------------------------------------------------------------------------|-----|----------|
| 1  | a) | Explain the construction and working of the:                                                            | CO1 | 8 Marks  |
|    |    | i) Resistive temperature detectors.                                                                     |     |          |
|    |    | ii) Light dependent resistor.                                                                           |     |          |
|    | b) | Discuss working principle of Hot-wire resistive transducer.                                             | CO2 | 6 Marks  |
|    |    | (OR)                                                                                                    |     |          |
| 2  | a) | Explain the various classifications of transducers and list out the factor for selection of transducer. | CO1 | 8 Marks  |
|    | b) | Explain the working principle of resistive hygrometer.                                                  | CO2 | 6 Marks  |
|    |    | UNIT-II)                                                                                                |     |          |
| 3  | a) | Explain the frequency response of capacitive sensors.                                                   | CO1 | 6 Marks  |
| -  | b) | Explain the principle of working construction and characteristic of Linear                              | CO3 | 8 Marks  |
|    | -) | variable differential transformers.                                                                     |     |          |
|    |    | (OR)                                                                                                    |     |          |
| 4  | a) | Analyze the principle of electromagnetic sensors.                                                       | CO2 | 6 Marks  |
|    | b) | Explain the principle of working and construction and characteristic of                                 | CO3 | 8 Marks  |
|    |    | Linear rotary differential capacitance sensor.                                                          |     |          |
|    |    | (UNIT-III)                                                                                              |     |          |
| 5  | a) | What are the properties of Piezolectric materials and mention its                                       | CO5 | 7 Marks  |
|    | )  | application?                                                                                            |     |          |
|    | b) | Explain the operation and construction of photo-voltaic cell and what are                               | CO1 | 7 Marks  |
|    | ,  | the uses.                                                                                               |     |          |
|    |    | (OR)                                                                                                    |     |          |
| 6  | a) | Describe the construction and operation of thermocouples.                                               | CO4 | 8 Marks  |
|    | b) | Explain the magneto strictive transducers working principle.                                            | CO3 | 6 Marks  |
|    |    | UNIT-IV)                                                                                                |     |          |
| 7  | a) | Distinguish between the shaft and optical encoders.                                                     | CO2 | 6 Marks  |
|    | b) | Explain the about the smart sensors.                                                                    | CO1 | 8 Marks  |
|    | ,  | (OR)                                                                                                    |     |          |
| 8  | a) | Write a note on fiber-optic sensors.                                                                    | CO1 | 6 Marks  |
|    | b) | Explain the Ultrasonic-based sensors.                                                                   | CO6 | 8 Marks  |
|    |    | UNIT-V                                                                                                  |     |          |
| 9  | a) | Explain the principle of operation of chopper amplifiers.                                               | CO5 | 7 Marks  |
| -  | b) | Discuss about the noise present in charge amplifiers                                                    | CO1 | 7 Marks  |
|    | 2) | (OR)                                                                                                    | 201 |          |
| 10 |    | Draw circuit diagram of instrumentation amplifier and explain its function.                             | CO3 | 14 Marks |
|    |    | Also derive its gain equation.                                                                          |     |          |
|    |    |                                                                                                         |     |          |

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a) | Discuss in detail about the midpoint circle algorithm with the help of an example           | CO3   | 8 Marks |
|----|----|---------------------------------------------------------------------------------------------|-------|---------|
|    | b) | What is meant by raster scanning? Discuss in detail about raster method for transformation. | CO1   | 6 Marks |
|    |    | (OR)                                                                                        |       |         |
| 2  | a) | Distinguish between seed filling and scan line filling algorithm.                           | CO1   | 8 Marks |
|    | b) | Explain Bresenham's line drawing algorithm.                                                 | CO3   | 6 Marks |
|    |    | UNIT-II                                                                                     |       |         |
| 3  | a) | Explain the geometric transformation of the scaling rotation and translation.               | CO4   | 8 Marks |
|    | b) | Derive the transformation matrix for reflection about $y = mx + b$ .                        | CO4   | 6 Marks |
|    |    | (OR)                                                                                        |       |         |
| 4  | a) | Express window-to-viewport mapping in the form of a composite transformation matrix         | CO4   | 8 Marks |
|    | b) | Write about polygon clipping with an example.                                               | CO4   | 6 Marks |
|    |    | UNIT-III)                                                                                   |       |         |
| 5  | a) | In how many ways splines could be represented? Show illustrations.                          | CO1   | 8 Marks |
|    | b) | Demonstrate Bezier Curves with an example.                                                  | CO2   | 6 Marks |
|    |    | (OR)                                                                                        |       |         |
| 6  | a) | Explain the area division and Octree methods.                                               | CO2   | 8 Marks |
|    | b) | Derive the matrix form for the following basic geometric transformations in 3-D graphics:   | CO3   | 6 Marks |
|    |    | i) Rotation. ii) Mirror reflection.                                                         |       |         |
|    |    | (UNIT-IV)                                                                                   |       |         |
| 7  | a) | Differentiate between multimedia and hypermedia.                                            | CO5   | 8 Marks |
|    | b) | State the advantage of RIFF format.                                                         | CO1   | 6 Marks |
| 0  |    | (OR)                                                                                        | 0.04  | 0.14    |
| 8  | a) | Describe the different color spaces / models in detail.                                     | COI   | 8 Marks |
|    | b) | Explain about various Graphics and Image Data Types.                                        | 002   | 6 Marks |
|    |    | UNIT-V                                                                                      |       |         |
| 9  | a) | Explain the significance of SNR and SQNR in a multimedia system.                            | CO2   | 8 Marks |
|    | b) | Explain the video compression method in detail.                                             | CO2   | 6 Marks |
|    |    | (OR)                                                                                        | a o c | 0.14    |
| 10 | a) | Compare lossless and lossy compression.                                                     | CO6   | 8 Marks |
|    | b) | Differentiate between directory based and arithmetic coding.                                | 005   | 6 Marks |

#### **OBJECT ORIENTED ANALYSIS AND DESIGN**

[Computer Science and Engineering, Information Technology]

Time: 3 hours

#### Answer One Question from each Unit. All questions carry equal marks

# UNIT-I

| 1 | a)<br>b)   | Explain the software development life cycle of object-oriented approach. | CO1 | 7 Marks<br>7 Marks |
|---|------------|--------------------------------------------------------------------------|-----|--------------------|
|   | 0)         | Association.                                                             | COI | / Warks            |
|   |            | (OR)                                                                     |     |                    |
| 2 | a)         | Difference between class notation and object notation in UML.            | CO1 | 7 Marks            |
|   | b)         | What is the Object Modeling Techniques (OMT)?                            | CO1 | 7 Marks            |
|   |            | UNIT-II                                                                  |     |                    |
| 3 | a)         | What do you mean by class diagram? Where it is used and also discuss     | CO2 | 7 Marks            |
|   |            | the steps to draw the class diagram with any one example.                |     |                    |
|   | b)         | Analyze and explain how to control the visibility of elements present in | CO2 | 7 Marks            |
|   |            | package.                                                                 |     |                    |
| 1 | 2)         | (UK)                                                                     | CO1 | 7 Mortra           |
| 4 | a)         | Explain in detail the different activities involve in the design of view | COI | / WIAIKS           |
|   |            | ayer classes with an example of report generation system that shows the  |     |                    |
|   | <b>b</b> ) | Construct and explain the class diagram for library monogement system    | cor | 7 Mortra           |
|   | D)         | Construct and explain the class diagram for horary management system.    | 002 | / Marks            |
|   |            |                                                                          |     |                    |
| 5 |            | Draw the use case model for the following system and explain.            | CO3 | 14 Marks           |
|   |            | A computerized banking network includes both human cashiers and          |     |                    |
|   |            | Automatic Teller Machines (ATM) to be shared by a consortium of          |     |                    |
|   |            | banks. Each bank provides its own computer to maintain its own           |     |                    |
|   |            | accounts and process transactions against them. Cashier stations are     |     |                    |
|   |            | owned by individual banks and communicate directly with the bank         |     |                    |
|   |            | computers. Human cashiers enter account and transaction data ATM         |     |                    |
|   |            | accepts a cash card, interacts with the user, communicates with the      |     |                    |
|   |            | central computer to carry out the transaction, dispenses the cash and    |     |                    |
|   |            | prints receipts. The system requires appropriate record keeping and      |     |                    |
|   |            | security provisions. The system must handle concurrent accesses to the   |     |                    |
|   |            | same account correctly.                                                  |     |                    |
|   |            | (OR)                                                                     |     |                    |
| 6 | a)         | Illustrate with an example, the relationship between sequence diagram    | CO3 | 7 Marks            |
|   | <b>.</b> . | and use cases.                                                           |     |                    |
|   | b)         | Explain what a domain model is and what function it fulfills.            | CO3 | 7 Marks            |
| _ |            |                                                                          |     |                    |

7 Discuss the following concepts of activity diagrams with suitable CO4 14 Marks examples.

| i) Transition.      | ii) Branching.  |
|---------------------|-----------------|
| iii) fork and join. | iv) swim lanes. |
|                     | (OR)            |

Max. Marks: 70

8

CO4 14 Marks

7 Marks

CO5

- Write short notes on:
  - i) Tagged values.
  - iii) Active objective.
  - v) Events and signals.

# UNIT-V

ii) Concurrent substate.

iv) Adornments.

9 a) Explain about the forward and reverse engineering.

b) Explain about the modeling executable files, libraries and tables and CO5 7 Marks files and documents.

### (**OR**)

10 Consider the application is assumed to be a web based application which CO5 14 Marks is deployed in a clustered environment using server 1, server 2 and server 3. The user is connecting to the application using internet. The control is flowing from the caching server to the clustered environment. Draw the deployment diagram of order management system.

# UNIT-I )

| 1  | a)       | Describe various features of object oriented programming that are supported by Java language.                                                                                                 | CO1         | 5 Marks            |
|----|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------|
|    | b)       | List out various types of constructors in Java language. Explain each of<br>them with an example                                                                                              | CO1         | 9 Marks            |
|    |          | (OR)                                                                                                                                                                                          |             |                    |
| 2  | a)       | Illustrate with an example, how methods are overloading in Java.                                                                                                                              | CO3         | 9 Marks            |
|    | b)       | What is recursion? Write a program to find out the factorial of a given number using recursion.                                                                                               | CO1         | 5 Marks            |
|    |          | UNIT-II                                                                                                                                                                                       |             |                    |
| 3  | a)       | Discuss about super keyword with an example.                                                                                                                                                  | CO3         | 8 Marks            |
|    | b)       | What is meant by a package? Write the syntax for creating a package. <b>(OR)</b>                                                                                                              | CO2         | 6 Marks            |
| 4  | a)       | Create an interface with the methods void set() and void compute().<br>Create a class with the variables length and breadth which implements<br>this interface to find the area of rectangle. | CO3,<br>CO6 | 9 Marks            |
|    | b)       | What are the differences between abstract class and an interface?                                                                                                                             | CO3         | 5 Marks            |
| 5  | a)       | Briefly explain the keywords try, catch and finally with their syntax.                                                                                                                        | CO1         | 6 Marks            |
|    | b)       | Distinguish between throw and throws keyword with examples.                                                                                                                                   | CO1,<br>CO2 | 8 Marks            |
|    |          | (OR)                                                                                                                                                                                          |             |                    |
| 6  | a)<br>b) | Discuss about the life cycle of a thread with a neat diagram.<br>Describe the mechanism employed in inter thread communication in                                                             | CO1<br>CO1, | 7 Marks<br>7 Marks |
|    |          |                                                                                                                                                                                               | 002         |                    |
| 7  | 2)       | Discuss shout Linked List along with an averable                                                                                                                                              | CO2         | 6 Mortra           |
| /  | $a_{j}$  | Explain Applet Life Cycle and its methods with a post sketch                                                                                                                                  | $CO_2$      | 0 Marks            |
|    | 0)       | (OR)                                                                                                                                                                                          | 004         | o wiaiks           |
| 8  | a)       | Create an Applet that reads username and password by passing parameters from HTML documents.                                                                                                  | CO4         | 7 Marks            |
|    | b)       | Create an applet that looks like a Login page using AWT Controls and<br>print the information in the same Applet when the user submits the<br>button.                                         | CO4         | 7 Marks            |
|    |          | UNIT-V                                                                                                                                                                                        |             |                    |
| 9  | a)       | Discuss about various event classes.                                                                                                                                                          | CO4         | 5 Marks            |
|    | b)       | Illustrate with an example, how mouse events are handled in an Applet. <b>(OR)</b>                                                                                                            | CO4         | 9 Marks            |
| 10 | a)       | Describe the life cycle of a Servlet and the methods used in it                                                                                                                               | CO5         | 9 Marks            |
|    | b)       | Discuss about how Cookies are handled inside a Servlet                                                                                                                                        | CO5,<br>CO6 | 5 Marks            |
|    |          |                                                                                                                                                                                               |             |                    |

III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

### **COMPILER DESIGN**

# [Information Technology, Computer Science and System Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit. All questions carry equal marks

# UNTT-T

| 1  | a)       | How to classify the phases of a compiler? Briefly describe the phases with an illustration               | CO1          | 8 Marks             |
|----|----------|----------------------------------------------------------------------------------------------------------|--------------|---------------------|
|    | b)       | What is interpretation? What are the different kinds of interpreters? Explain.                           | CO1          | 6 Marks             |
|    |          | (OR)                                                                                                     |              |                     |
| 2  | a)       | What is the need and role of Lexical Analyzer? Describe the simple for<br>the design of Lexical Analyzer | CO1          | 7 Marks             |
|    | b)       | Explain input buffering strategy used in Lexical analysis phase.                                         | CO1          | 7 Marks             |
| 2  | ``       |                                                                                                          | 000          | 436 1               |
| 3  | a)<br>b) | Check whether the following grammar is LL(1) grammar or not?<br>S $\rightarrow$ iCtS                     | CO3<br>CO3   | 4 Marks<br>10 Marks |
|    |          | $S \rightarrow iCtSeS$                                                                                   |              |                     |
|    |          | $\begin{array}{c} S \rightarrow a \\ C \rightarrow b \end{array}$                                        |              |                     |
|    |          | (OR)                                                                                                     |              |                     |
| 4  | a)       | Construct the SLR parsing table for the ambiguous grammar<br>$E \rightarrow E+E   E*E   (E)   id$        | CO3          | 10 Marks            |
|    | b)       | How to eliminate Left recursion from the grammar?                                                        | CO3          | 4 Marks             |
|    |          | (UNIT-III)                                                                                               |              |                     |
| 5  | a)       | Define Syntax directed definition. What are S attributed and L attributed definitions?                   | CO4          | 7 Marks             |
|    | b)       | Define syntax trees. How to construct a syntax tree? Describe.<br>(OR)                                   | CO4          | 7 Marks             |
| 6  | a)       | Write a note on the specification of a simple type checker using example.                                | CO4          | 6 Marks             |
|    | b)       | What is a type expression? Explain the equivalence of type expressions with an appropriate example.      | CO4          | 8 Marks             |
|    |          | UNIT-IV                                                                                                  |              |                     |
| 7  | a)       | Write the Syntax Directed Translation for flow control statements                                        | CO4          | 7 Marks             |
| ,  | b)       | What are the different kinds of storage allocation strategies? Explain.                                  | CO6          | 7 Marks             |
|    | ,        | (OR)                                                                                                     | <b>G A C</b> |                     |
| 8  | a)       | What are the different kinds of data structures used for symbol table? Explain.                          | CO6          | 8 Marks             |
|    | b)       | Explain the usage of Simple Stack Allocation Scheme.                                                     | CO6          | 6 Marks             |
| 9  | a)       | Define Basic Block and Flow Graph.                                                                       | CO2          | 6 Marks             |
| -  | b)       | Write a note on Data Flow analysis.                                                                      | CO2          | 8 Marks             |
|    | - )      | (OR)                                                                                                     |              |                     |
| 10 | a)       | Write the simple code generation algorithm and explain with an                                           | CO1          | 7 Marks             |
|    | ••)      | example.                                                                                                 | 002          | 7 1 1               |
|    | D)       | write a brief note on peephole optimization.                                                             | 002          | / Marks             |
|    |          | 순화 순화 순화                                                                                                 |              |                     |

#### SYSTEMS SOFTWARE

#### [Computer Science and Systems Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I ) 1 Explain the architecture of UNIX operating system with a neat diagram. a) CO1 7 Marks Explain the following commands with all the options: CO1 7 Marks b) i) wc. ii) rm. iii) ls. v) mv. vii) cat. (OR) 2 Discuss various features of UNIX operating system. CO2 7 Marks a) Explain the commands used for mailing system in UNIX. CO1 7 Marks b) UNIT-II) CO2 3 Give overview of the UNIX file subsystem. 14 Marks (**OR**) 4 Implement 'cp' command in UNIX using system calls. a) CO<sub>3</sub> 7 Marks Explain 'DUP' system call and show the entries in data structures after CO4 7 Marks b) execution of DUP with a neat diagram. (UNIT-III) 5 Explain the process state model for UNIX and state transitions. CO4 14 Marks (**OR**) 6 a) When kernel saves the context of a process? Write an algorithm for CO3 7 Marks handling interrupts. List the entries of a region table and describe the kernel operations to CO3 7 Marks b) manipulate process address space. UNIT-IV Write an algorithm for FORK system call. 7 a) CO4 7 Marks b) Explain process termination in UNIX. CO4 7 Marks (**OR**) Explain use of Exec system with an example 'C' program. 8 CO4 7 Marks a) Write a 'C' program to change the size of process. b) CO4 7 Marks UNIT-V What are the features of Transmission Control Protocol/Internet Protocol? 9 a) CO2 7 Marks Explain. Discuss about MAC and IP addresses that can be used by TCP/IP. CO2 7 Marks b) (OR)10 a) Briefly explain Domain Name System (DNS). **CO2** 7 Marks Write short note on partitions in UNIX and explain how to create file 7 Marks CO3 b) system in UNIX.

#### III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### **MODELING AND SIMULATION**

[Computer Science and Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1 List and explain the advantages and disadvantages of simulation. CO1 8 Marks a) Write a short note on list processing. CO1 6 Marks b) (**OR**) 2 a) Explain queuing simulation in a spread sheet. CO2 8 Marks Illustrate simulation environments. CO6 6 Marks b) UNIT-II ) 3 A bus arrives every 20 minutes at a specific stop beginning at 6.40 A.M. CO<sub>2</sub> 7 Marks a) and continuing until 8.40 A.M. A certain passenger does not know the schedule, but arrives randomly (uniform distributed) between 7.00 A.M and 7.30 A.M. every morning. What is the probability that the passenger waits more than 5 minutes for a bus? With suitable example, explain about exponential distribution. CO4 7 Marks b) (OR)Explain Poisson Process along with its properties. 9 Marks 4 a) **CO4** Write about empirical distributions. CO4 5 Marks b) UNIT-III) 5 Explain queue behavior and queue discipline and list queuing notation for CO3 8 Marks a) parallel server systems. List the steady state parameters of M/G/1. CO4 6 Marks b) (**OR**) Name and explain some of the useful statistical models for queuing 6 a) CO6 8 Marks system. What is network of queue? Mention the general assumption for a stable CO<sub>2</sub> 6 Marks b) system with infinite calling population. UNIT-IV) 7 What are pseudo random numbers? What are the problems that occur CO<sub>4</sub> 8 Marks a) while generating pseudo random numbers? Also list the important considerations during generation of random numbers. Explain acceptance – rejection technique for Poisson distribution. b) CO3 6 Marks (**OR**) Generate 5 Poisson variates with mean  $\alpha = 0.25$ . Random numbers are: 8 7 Marks a) CO4 0.073, 0.693, 0.945, 0.739, 0.014 and 0.342. b) Explain with an example, importance of data distribution using histogram. CO6 7 Marks UNIT-V What is Time Series input model? Explain AR(1) and EAR(1) model. 9 CO4 7 Marks a) Explain verification of simulation model with a neat diagram. CO5 7 Marks b) (**OR**) What do you understand by 'Goodness of Fit Test'? Write the procedure 10 a) CO3 7 Marks for the same. Differentiate between terminating and steady state simulation with respect b) CO6 7 Marks to output analysis with an example.

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

#### III B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### DIGITAL SIGNAL PROCESSING

[Electronics and Instrumentation Engineering]

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

# UNIT-I

- 1 Define a signal. Classify them with an example. CO4 7 Marks a) State and prove linearity, time shifting and symmetry properties of DFS. CO2 7 Marks b) (**OR**) 2 a) Define stability of a system. Explain about BIBO stability criterion of a CO<sub>2</sub> 7 Marks discrete system with an example. b) Check the following systems for time variance causality, linearity and CO4 7 Marks stability. i) y(n) = x(n) + x(n-1). ii) y(n) = n x(n). UNIT-II 3 Find the circular convolution of the sequences  $\{1,-1,1,1\}$  and  $\{1,2,3,4,5\}$ . 7 Marks CO<sub>2</sub> a) With a neat derivation explain the procedure to compute IDFT using CO1 7 Marks b) Radix - 2 FFT. (**OR**) 4 Contrast the transforms DTFT, DFS and DFT. CO1 7 Marks a) An 8 point sequence is given by x(n) {1,2,3,4,4,3,2,1}. Compute CO2 7 Marks b) 8 point DFT of x(n) by Radix - 2 DIF FFT UNIT-III) 5 CO5 7 Marks a) Convert analog filter into digital filter whose system unction is  $H_a(s)=3/$ (s+3)(s+9) using impulse invariant method for T=1sec. Derive an expression for order of the chebyshev analog proto type filter. CO2 7 Marks b) (**OR**) Design a digital low pass Butterworth digital IIR filter which is required to 6 a) CO5 10 Marks meet the following specifications by using bilinear transformation... Pass band attenuation  $\leq 2 \text{ dB}$ , Pass band edge frequency = 4KHz. Stop band attenuation  $\geq$  40 dB, stop band edge frequency = 8KHz. Sampling rate = 24 KHz. Obtain the direct form I and II form realization for the system CO<sub>2</sub> 4 Marks b) y(n) = -0.1y(n-1)+0.2y(n-2)+3x(n)+3.6x(n-1)+0.6x(n-2)UNIT-IV) 7 Explain designing of FIR filter using frequency sampling technique. CO<sub>2</sub> 7 Marks a) Realize the following FIR system described by equation using the direct CO3 7 Marks b) form and linear phase structure.
  - $H(z) = \frac{1}{4} + \frac{1}{2}z^{-1} + \frac{3}{4}z^{-2} + \frac{1}{2}z^{-3} + \frac{1}{4}z^{-4}$

Time: 3 hours

#### (OR)

- 8 a) Discus about characteristics of symmetric and anti-symmetric FIR filters. CO3 7 Marks
  - b) Design a Linear phase band pass FIR filter with a cutoff frequencies in the CO3 7 Marks range  $0.4 \pi$  to  $0.6\pi$  rad/sample by taking 7 samples of hamming window. Take N=11.

# UNIT-V

- 9 a) Discuss in detail bout pipelining of instruction execution in DSP CO1 7 Marks processors.
  - b) What is meant by bit reversal address mode? Write the applications for CO1 7 Marks which addressing are proffered.

### (OR)

- 10 a) Explain special addressing modes in Programmable DSPs. CO1 7 Marks
  - b) What is the function of MAC unit used in DSP? Explain any two methods CO1 7 Marks used to avoid over flow and underflow.

#### **IRRIGATION ENGINEERING**

[Civil Engineering]

Max. Marks: 70

SVEC-16

### **Answer One Ouestion from each Unit** All questions carry equal marks

# UNIT-I

- 1 What do you understand by the term irrigation? Discuss the necessity of CO1 7 Marks a) irrigation in a tropical country like India. Compute the depth and frequency of irrigation required for a certain crop CO3 b) 7 Marks
  - with data given below. Root zone depth = 100cm, wilting point = 12%, field capacity = 22%, consumptive use = 25mm/day, apparent specific gravity of soil=1.5, efficiency of irrigation = 50%. Assume 50% depletion on available moisture before application of water at field capacity.

#### (**OR**)

- 2 List out objectives of irrigation. Discuss the advantages and ill effects of CO1 a) 7 Marks irrigation.
  - A water course has a culturable command area of 1000 hectares. The 7 Marks b) CO4 intensity of irrigation for crop A is 40% and for crop B is 45%, both the crops being rabi crops. Crop A has a kor depth of 150mm and kor period 3 weeks and crop B has a kor depth of 100mm and kor period 2 weeks. Calculate the discharge of the water course.

# UNIT-II

- Sketch the layout of a typical diversion head works and briefly discuss the 3 a) CO<sub>2</sub> 7 Marks functions of the various components of diversion head works.
  - Define diversion head work and mention the functions of diversion head b) CO2 7 Marks work.

#### (**OR**)

4 Define silt excluder and explain the working and design considerations 7 Marks CO3 a) with a neat sketch. Explain the importance of exit gradient and how do you check the exit CO2 7 Marks b) gradient.

# UNIT-III)

Define gravity dam and discuss the components of gravity dam with a neat CO1 5 a) 7 Marks sketch. Classify dams and discuss each in detail. CO<sub>2</sub> b) 7 Marks

(**OR**)

- Briefly describe an ogee spillway and its components with a neat sketch CO2 7 Marks 6 a) and discuss its necessity. b)
  - What is an ogee spillway and how it is designed? CO3 7 Marks

# UNIT-IV)

7 What is a canal fall and why is it required to provide in a canal? 7 Marks a) CO1 b) Classify falls and explain the suitability of location of falls. CO2 7 Marks

(**OR**)

| 8  | a) | Discuss the requirements of a good outlet.                                 | CO2 | 7 Marks |
|----|----|----------------------------------------------------------------------------|-----|---------|
|    | b) | Distinguish between:                                                       | CO1 | 7 Marks |
|    |    | i) modular. ii) semi modular.                                              |     |         |
|    |    | iii) non-modular outlets with a neat sketch.                               |     |         |
|    |    | UNIT-V                                                                     |     |         |
| 9  | a) | What are the features to be considered while designing of cross drainage   | CO3 | 7 Marks |
|    |    | works?                                                                     |     |         |
|    | b) | Explain the method of fixing the waterway of drain in an aqueduct.         | CO5 | 7 Marks |
|    |    | (OR)                                                                       |     |         |
| 10 | a) | Classify river training works and discuss any one in detail.               | CO2 | 7 Marks |
|    | b) | Discuss the relative merits and demerits of river training by embankments. | CO1 | 7 Marks |
|    |    |                                                                            |     |         |

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I )

1 Design a reinforced beam of rectangular section using the following data: CO3 14 Marks Effective span = 5m, Width of the span = 250mm, Overall depth= 500mm, Service load (D.L+ L.L) = 40 KN/m<sup>2</sup>, Effective cover = 50mm Materials: use M20 concrete and Fe415 steel bars.

#### (OR)

2 Identify the depth of neutral axis and ultimate moment of resistance of T CO2 14 Marks beam section for the following data.

Flange width = 800mm, Flange thickness = 150mm, Web width = 300mm. Effective depth = 420mm. Area of tension reinforcement = 14701 mm<sup>2</sup>. Assume = M 25 grade concrete and Fe 415 grade steel.

# UNIT-II)

An RCC beam 300mm wide and 500mm deep is reinforced with 4 bars of CO3 14 Marks 16mm dia of grade Fe415 on tension side. If design shear force is 80 kN, design the shear reinforcement consisting only of vertical stirrups. The grade of concrete used is M20.

#### (OR)

4 Design a cantilever beam of uniform depth for a span of 2.9m, if the CO3 14 Marks superimposed load is 22 kN/m and it is monolithic with R.C column of 300mm width and 400mm deep. Use M20 grade concrete and Fe415 steel.

### (UNIT-III)

5 A simply supported slab has a clear span of 2.1m and is supported on CO3 14 Marks walls 400mm thick along edges. If the live load on the slab 4 kN/m<sup>2</sup>, and the floor finish weighs 0.6 kN/m<sup>2</sup>. Design the slab using M20 grade concrete and Fe 415 HYSD bars.

#### (**OR**)

6 Design a simply supported RCC slab for an office floor having clear CO3 14 Marks dimensions of 4m x 10m with 230mm walls all around. Adopt M 20 grade concrete and Fe 415 grade HYSD bars.

# UNIT-IV

7 Determine the ultimate load carrying capacity of rectangular column CO3 14 Marks section 400 x 600mm reinforced with 10nos. of 25mm dia. Use M25 concrete and Fe415 steel.

#### (OR)

8 A short rectangular column having an effective length of 3m carries a CO3 14 Marks factored axial compressive load of 2000 kN. Architectural requirements dictate the column size as 600 x 450mm. Design the column using M20 concrete and Fe 415 steel.

# UNIT-V

- 9 a) Write down the different types of footings and their suitability. CO1 7 Marks
- b) Enumerate the procedure for the design of combined rectangular footing CO1 7 Marks for two columns only

# (OR)

10 Design a combined footing for the two columns at a multi-storey building. CO3 14 Marks The columns of size 400mm x 400mm transmit a working load of 300KN each and they are spaced at 5m centers. The safe bearing capacity of soil at site is 200KN/m<sup>2</sup>. Adopt M20 grade concrete and Fe415 grade steel. Sketch the details of reinforcements in the combined footing.

#### SOIL MECHANICS [Civil Engineering]

Time: 3 hours

# Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) Derive the relation between unit weight ( $\gamma$ ), degree of saturation (S), void CO2 6 Marks ratio (e) and unit weight of water ( $\gamma_w$ ).
  - b) The mass of a moist sample collected from the field is 645 g, and its oven CO2 8 Marks dry mass is 405.76 g. If G = 2.68 and the void ratio of the soil in the field is 0.83, determine:
    - i) moist density in the field.
    - ii) dry density in the field.
    - iii) amount of water to be added per m<sup>3</sup> of soil in the field for saturation.
    - iv) saturated density.

#### (OR)

- 2 a) Define and explain: Liquid limit; Plastic limit; Shrinkage limit; and CO4 6 Marks Plasticity index. Briefly describe the procedure to determine the liquid limit of a soil by Casagrande's method.
  - b) A soil has a liquid limit of 45%, plastic limit of 20% and flow index of CO7 8 Marks 50%. Determine its toughness index. If the natural water content is 25%, comment on the state of its consistency. Also, classify the soil as per IS Classification if the fraction passing through 75 micron sieve is 60%.

# UNIT-II

- 3 a) What is flow net? Explain the properties and uses of flow net. CO1 6 Marks
  - b) For a homogeneous earth dam 52m high and 2m free board, a flow net CO2 8 Marks was constructed and following results were obtained.

No. of potential drops = 25

No. of flow channels = 4

The dam has a horizontal filter of 40m length at its downstream end. Calculate the discharge per metre length of the dam if the coefficient of permeability of the dam material is  $3 \times 10^{-3}$  cm/sec.

#### (OR)

- 4 a) Illustrate the method of determination of coefficient of permeability for CO4 6 Marks cohesive soils.
  - b) In a falling head permeability test on a soil of length L1, the head of water CO2 8 Marks in the stand pipe takes 5 seconds to fall from 900 to 135mm above the tail water level. When another soil of length 60mm is placed on the first soil, the time taken for the head to fall between the same limits is 150 seconds. The permeameter has a cross sectional area of 4560mm<sup>2</sup> and stand pipe area of 130mm<sup>2</sup>. Calculate the permeability of second soil.

# (UNIT-III)

5 a) What are the assumptions and limitations made in Boussinesq's theory? CO1 6 Marks
b) A circular ring footing for an overhead water tank carries a load of CO2 8 Marks 1000kN whose outer diameter is 3m and inner diameter is 1.5m. Determine the induced stress at a depth of 3m from surface below the centre of the loaded area.

- What are the field methods for compacting soils? Discuss the suitability of CO1 6 6 Marks a) different methods with respect to the soil type.
  - A proposed embankment fill requires 5000m<sup>3</sup> of compacted soil. The void CO3 b) ratio of compacted fill is specified as 0.70. Four borrow area soils are available as described in the following table.

| Borrow area | Void ratio | Cost of transportation Rs./m <sup>3</sup> |
|-------------|------------|-------------------------------------------|
| А           | 0.85       | 450                                       |
| В           | 1.20       | 300                                       |
| С           | 0.95       | 350                                       |
| D           | 0.75       | 500                                       |

Make the necessary calculations to select the borrow area from which the soil should be brought to minimize the cost. Let specific gravity of all four soils equal to 2.70.

UNIT-IV)

- Describe a method to determine the pre-consolidation pressure of soil with CO8 7 7 Marks a) a neat sketch and explain its significance.
  - A layer of clay 8m thickness is located between two sand layers. The b) CO<sub>2</sub> 7 Marks coefficient of consolidation of the clay is  $5 \times 10^{-2}$  nm<sup>2</sup>/sec. The fill material was placed over a very large area above the top sand layers. After 3 years, what percentage of the additional pressure due to the fill material will be carried by the soil grains at the middle of the clay layer?

#### (**OR**)

- Distinguish between normally consolidated and over consolidated soil. 8 5 Marks a) CO<sub>2</sub> 9 Marks
  - A clay soil, tested in a consolidometer showed a decrease in void ratio b) CO<sub>2</sub> from 1.20 to 1.10 when the pressure was increased from 25  $kN/m^2$  to 50 kN/m<sup>2</sup>. Calculate the coefficient of compressibility and the coefficient of volume compressibility. If the coefficient of consolidation determined in the test for the given stress increment was  $10m^2$  / year, calculate the coefficient of permeability in cm/s. If the sample tested at the site was taken from a clay layer 3.0m in thickness, determine the consolidation settlement resulting from the given stress increment.

### UNIT-V

- Discuss the relative advantages and disadvantages of the direct shear test CO2 9 6 Marks a) over the triaxial compression test. How are triaxial tests classified based on drainage conditions?
  - b) The results for triaxial tests conducted on three samples of a soil are given CO2 8 Marks below. Obtain the shear strength parameters of the soil.

| Cell pressure (kN/m <sup>2</sup> )   | 100 | 200 | 450 |
|--------------------------------------|-----|-----|-----|
| Deviator stress (kN/m <sup>2</sup> ) | 375 | 575 | 973 |
| ()                                   | DR) |     |     |

- 10 A consolidated undrained triaxial test was conducted on saturated clay. 14 Marks CO<sub>2</sub> When the confining pressure was 200 kN/m<sup>2</sup>, the sample failed at a deviator stress of 500kN/m<sup>2</sup>. The pore water pressure was 150kN/m<sup>2</sup>. The failure plane occurred at an angle of 60° to the horizontal.
  - i) Determine the normal and shear stresses on the failure plane at failure. Also calculate the maximum shear stress.
  - ii) If the same specimen were tested in a drained test with a confining pressure of 200 kN/m<sup>2</sup>, what would have been the deviator stress at failure? Take  $c = 44 \text{ kN/m}^2$ .

# **Answer One Ouestion from each Unit** All questions carry equal marks

# UNIT-I )

1 As system of 5 loads 80kN, 160kN, 160kN, 60kN and 40kN crosses a CO2 14 Marks beam of 15m span with the 80kN load leading. The distance between the loads are 2.4m, 3m, 2.4m and 1.8m respectively. Find the maximum bending moment at the center of the span. Also find the absolute maximum bending moment of the beam.

### (OR)

- Write a short note on Equivalent Uniformly Distributed Load. 2 4 Marks a) CO1
  - A uniformly distributed load of 50 kN/m of 6m length crosses a girder of CO2 10 Marks b) span 40m from left to right. With the help of influence lines, determine the values of shear force and bending moment at a point 12m from the left support, when the head of the load is 16m from the left support.

# UNIT-II

3 Analyse the continuous beam ABCD shown in Fig.1 by slope deflection CO6 14 Marks method and draw the bending moment diagram.

Analyse the continuous beam shown in Fig.2 by moment distribution CO4 4 14 Marks method, if support B sinks by 12mm. Given that  $E = 200 \text{ kN/mm}^2$  and  $I = 20 \times 10^6 \text{ mm}^4$ .

6 Find the vertical deflection of joint B in the truss loaded as shown in 14 Marks CO2 Fig.4. The cross-sectional area of the members in mm<sup>2</sup> are shown in brackets. Take  $E = 200 \text{kN/mm}^2$ .

Find the stresses in all the members of the given frame as shown Fig.5, in 7 CO4 14 Marks which the cross sectional areas of vertical members are 3000mm<sup>2</sup> each and those of all other members are  $2200 \text{mm}^2$ . E= $2 \times 10^5 \text{ N/mm}^2$ .

8 Determine the forces in the members of the truss shown in Fig.6; AE is CO4 14 Marks constant for all the Members. The member BC is 3.6m.

- 9 Write the assumptions for evaluating fully plastic moment. And also a) CO1 8 Marks derive fully plastic moment M<sub>P</sub> and shape factor S in general.
  - A T-section consists of a flange 150x10mm and a web of 140x10mm. The b) CO3 6 Marks section modulus of the T-section is 54600mm<sup>3</sup>. This section is used as a simply supported beam of 4m span and carries a UDL of 25kN/m on the whole span. Determine the shape factor of the beam and also calculate the collapse load for the beam. Assume yield stress as 250 Mpa.

#### (**OR**)

Calculate the plastic moment capacity required for the continuous beam 10 14 Marks CO3 with working loads shown in Fig.7.

|   |    | per day having 5 day BOD of 160 mg/l. Assume suitable data where ever required.                                                                     |          |          |
|   |    | (UNIT-IV)                                                                                                                                           |          |          |
| 7 | a) | What is sludge conditioning and dewatering? Explain any one of the                                                                                  | CO1      | 7 Marks  |
|   | /  | methods of sludge dewatering.                                                                                                                       |          |          |
|   | b) | Sludge disposal to an onsite create lot of problems to the community.                                                                               | CO5      | 7 Marks  |
|   | -  | What are steps you suggest for the disposal and what is the mechanism                                                                               |          |          |

involved in the process of removal of pathogenic bacteria from sludge.

Max. Marks: 70

SVEC-16

#### (OR)

- 8 a) Mention the various physical chemical processes used for the removal of CO1 5 Marks nitrogen from sewage. Describe briefly each method.
  - b) Explain the process of removal of phosphorous and refractory organic CO2 9 Marks materials.

# UNIT-V

- 9 a) Classify the various methods of sewage disposal.
  - b) Draw a typical oxygen sag curve and explain its meaning and state its CO9 7 Marks importance in benefits of maintaining the DO in the river water for society.

CO1

7 Marks

#### (**OR**)

- 10 a) Discuss various methods of disposal of septic tank effluent with neat CO4 7 Marks sketches and recommendations in the design.
  - b) Design a septic tank with dispersion trench for 175 users. The rate of CO3 7 Marks water supply is 70 LPCD. Assume suitable criteria as applicable. Draw a neat sketch of the unit.

#### **CONTROL SYSTEMS**

#### [Electrical and Electronics Engineering, Electronics and Communication Engineering]

Time: 3 hours

# **Answer One Question from each Unit**

All questions carry equal marks

# UNIT-I

- 1 Discuss the rules implemented for the reduction of a given block diagram CO1 7 Marks a)
  - b) Compare open loop and closed loop control system performance. CO<sub>2</sub> 7 Marks

(**OR**)

- 2 State Mason's gain formula for deriving transfer function of a system. CO1 6 Marks a) 8 Marks
  - b) CO2 Determine the transfer function,  $\frac{I_2(s)}{V(s)}$  for the electrical system shown in

figure below.

- 3 a) Derive the expression for the time response of an under damped second CO2 7 Marks order system when subjected to unit step input.
  - A unity feedback system is characterized by the open-loop transfer CO4 7 Marks b) function  $G(s) = \frac{1}{s(0.3s+1)(0.1s+1)}$ . Determine the steady-state errors for

unit-step, unit-ramp and unit-acceleration inputs.

### (**OR**)

- Sketch the root locus plot for a unity feedback system with an open loop CO5 4 7 Marks a) transfer function  $G(s) = \frac{K}{s(s+2)(s+4)}$ .
  - Explain the Routh-Hurwitz criteria with an example. b) CO<sub>2</sub> 7 Marks (UNIT-III)

Sketch the Bode plot showing the gain magnitude in dB and phase angle 5 CO5 14 Marks in degrees as a function of log frequency for the transfer function 2000  $G(s)H(s) = \frac{2000}{s(s+2)(s+100)}$ . Determine the gain crossover frequency,

phase crossover frequency, gain margin and phase margin. Also, determine the gain and the corresponding phase margin for a gain crossover frequency of 50 rad/sec.

(**OR**)

Sketch the Nyquist plot and there from determine the stability of the CO5 14 Marks closed-loop system whose open-loop transfer function is given by

$$G(s)H(s) = \frac{K(s+4)}{s^2(s+1)}.$$

# UNIT-IV

- 7 a) Explain the effect of PI controller on time response characteristics of a CO6 7 Marks second order system.
  - b) Briefly explain the types of compensators in design aspects of a control CO1 7 Marks system in frequency response analysis.

#### (**OR**)

Consider the unity feedback system whose open loop transfer function is CO3 14 Marks  $G(s) = \frac{K}{1 - \frac{K}{1 -$ 

0

$$(s) = \frac{1}{S(S+1)(0.1S+1)}.$$

Design phase-lead compensator to meet the following specifications

i) Velocity error constant, 
$$K = 10 \text{ S}$$
, ii) Phase Margin = 35.

9 Obtain the state model for the electrical system shown in figure below. CO4 14 Marks Also, find the solution for the state equation with  $R=5\Omega$ , L=10mH and

C=2 $\mu$ F. Assume initial state vector  $X(0) = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$ 

(OR)

- 10 a) Explain the Kalman's test for determining controllability and observability CO1 7 Marks of a system.
  - b) Explain the concept of conversion of state model in to transfer function of CO1 7 Marks a control system and vice versa.

| 2 | a) | Design a firing circuit for triggering an SCR subjected to 1-phase, 50Hz AC Voltage and can control its conduction over a period of 5ms, configured for multipurpose automatic illumination control applications                                                                     | CO6 | 10 Marks |
|   | b) | Twenty SCRs each of 500V, 500A are used in Five columns and Four rows in a circuit of 2kV and 1.8 kA. Calculate Voltage and Current de-rating factors                                                                                                                                | CO4 | 4 Marks  |
|   |    | UNIT-II                                                                                                                                                                                                                                                                              |     |          |
| 3 | a) | Define extinction angle. List and explain the factors affecting extinction angle                                                                                                                                                                                                     | CO1 | 4 Marks  |
|   | b) | With the help of neat circuit diagram and necessary waveforms, analyze<br>the operation of single phase fully controlled bridge rectifier with RL<br>Load for firing angle delays $\alpha=30^{\circ}$ and $120^{\circ}$ by incorporating the<br>variation of extinction angle.       | CO2 | 10 Marks |
|   |    | (OR)                                                                                                                                                                                                                                                                                 |     |          |
| 4 | a) | List the advantages of freewheeling diode and explain how power factor<br>can be improved by connecting it in anti- parallel across the RL-Load fed<br>by a fully controlled rectifier.                                                                                              | CO1 | 6 Marks  |
|   | b) | Discuss the effect of source inductance on the performance of a three-<br>phase fully controlled rectifier with RL load and sketch relevant                                                                                                                                          | CO1 | 8 Marks  |
|   |    |                                                                                                                                                                                                                                                                                      |     |          |
| 5 | a) | Discuss the operational differences between circulating and<br>non-circulating current modes of a single phase dual converter with                                                                                                                                                   | CO1 | 7 Marks  |
|   | b) | R-load.<br>Derive the expressions for RMS values of output voltage and load current<br>of a single phase AC voltage controller (employing SCRs) feeding<br>R-load.                                                                                                                   | CO4 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                                                                                                                                 |     |          |
| 6 |    | Design a single phase, 230V, 50Hz bridge type cycloconverter scheme with RL-load to produce an output frequency of 250 Hz. Identify the method of commutation employed and sequence of firing pulses to be produced. With the help of a neat circuit diagram and relevant waveforms, | CO3 | 14 Marks |

#### 1

explain its operation.
# UNIT-IV

- 7 a) Explain the principle of complimentary commutation technique with the CO1 7 Marks help of neat circuit diagram and relevant waveforms.
  - Compare natural and forced commutation techniques and recommend CO1, 7 Marks b) suitable commutation type preferred for turning off a thyristor if used in a CO5 chopper circuit.

# (**OR**)

- Explain the working of a step-down chopper with R-load and derive an 8 a) CO1 7 Marks expression for average value of output voltage.
  - Discuss current limit control strategy for a DC chopper. CO1 7 Marks b)

# UNIT-V

Explain the operation of a basic parallel inverter and draw relevant 9 CO1, 14 Marks waveforms. CO2

### (**OR**)

- Compare sinusoidal pulse width modulation technique over multiple pulse 10 CO1 a) 8 Marks width modulation technique and discuss.
  - A single phase half bridge inverter has a resistive load of  $10\Omega$  and input 6 Marks b) CO4 voltage of 100V. Determine:
    - i) RMS output voltage at fundamental frequency.
    - ii) average and peak currents of each thyristor.
    - iii) the peak reverse blocking voltage of each thyristor.

### III B.Tech I Semester (SVEC-16) Supplementary Examinations August - 2021

#### SYNCHRONOUS MACHINES [Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

SVEC-16

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

a) Discuss the importance of distributed armature winding in an alternator. CO1 6 Marks
 b) How the winding factors affect the waveform of generated emf of CO2 8 Marks alternator? What steps are taken to eliminate third and fifth harmonic components of generated emf?

### (OR)

- 2 Explain the following characteristics of an alternator: CO1 14 Marks
  - i) Open Circuit Characteristics.
  - ii) Short Circuit Characteristics.
  - iii) Zero Power Factor Characteristics.

# UNIT-II

- 3 a) Explain the two reaction theory of salient pole machine. Draw the phasor CO1 8 Marks diagram and obtain regulation of an alternator using this theory.
  - b) A 70 MVA, 13.8 kV, 3-phase star connected salient pole alternator having CO4 6 Marks  $X_d = 1.83\Omega$  and  $X_q = 1.2\Omega$  delivers at 0.8 p.f lagging. Neglecting the armature resistance, calculate:
    - i) The excitation voltage  $(E_f)$ .
    - ii) The voltage regulation.

### (OR)

- 4 a) Describe the slip test method for measurement of  $X_d$  and  $X_q$  of CO1 6 Marks synchronous machine.
  - b) An alternator has a direct-axis synchronous reactance of 0.8 per unit and CO4 8 Marks quadrature-axis synchronous reactance of 0.5 per unit. Determine the per unit open-circuit voltage for full-load at a power factor of 0.8. Neglect saturation.

# UNIT-III)

- 5 a) Discuss the load sharing between two alternators which are connected in CO1 6 Marks parallel.
  - b) A shopping complex consists of a lighting load of 3000 kW and a motor CO3 8 Marks load of 5000 kW at a pf of 0.72. Two alternators are connected in parallel to feed this load. One machine is loaded up to 5000kW at 0.8 pf lagging. Suggest the specifications required for other machine to share the remaining load.

### (**OR**)

- 6 a) Obtain an expression fort the natural frequency of undamped oscillation of CO1 6 Marks the rotor of synchronous motor.
  - b) Show that the short circuit ratio of a synchronous generator is the CO2 8 Marks reciprocal of per-unit value of synchronous reactance adjusted to saturation at rated voltage.

# UNIT-IV

- 7 a) Derive an expression for power developed in a 3-phase synchronous CO2 8 Marks motor.
  - b) A 20kW, 400V, 3-phase, star-connected synchronous motor has per phase CO4 6 Marks impedance of (0.15+j0.9) Ω. Determine the induced emf, torque angle and mechanical power developed for full load at 0.8 pf lagging. Assume 92% efficiency of the motor. Draw the phasor diagram.

### (OR)

- 8 a) Mention the role of a synchronous condenser in power transmission lines. CO5 6 Marks
  - b) A 400V, 3-phase installation takes a current of 36A at 0.8 pf lagging. A CO4 8 Marks synchronous motor improves the overall p.f. to 0.92 lagging.
     Simultaneously the synchronous motor drives a 15 HP load at an efficiency of 85%. Determine
    - i) the power factor of the synchronous motor.
    - ii) the leading kVAr supplied by the motor.
    - iii) the kVA rating of the motor.

# UNIT-V

- 9 a) Explain why a single-phase single winding induction motor produces no CO1 6 Marks starting torque.
  - b) What design features are incorporated in a split-phase motor to make it CO3 8 Marks self-starting?

### (OR)

CO1 14 Marks

- 10 Write a short notes on:
  - i) Resistance split-phase motors.
  - ii) Capacitor split phase motors.
  - iii) Capacitor start and run split phase motors.

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- a) Derive the expression for flux linkages due to internal flux and external CO2 6 Marks flux for a single wire current carrying conductor.
   b) Derive an expression for the indextance of a 2 marks and external CO2 8 Marks
  - b) Derive an expression for the inductance of a 3 phase overhead line. CO2 8 Marks

### (OR)

- 2 a) List out the various properties of dielectric compounds to be used for CO6 7 Marks insulation of cables. And explain the inter-sheath grading of cables.
  - b) A single core 11kV, 50Hz, 5km long cable has a core diameter of 1.5cm CO4 7 Marks and diameter of under sheath 3.0cm. The relative permittivity of the insulating material is 2.5. The power factor on open circuit is 0.04. Determine:
    - i) The capacitance of the cable.
    - ii) Charging conductor.
    - iii) Maximum dielectric stress.
    - iv) Minimum dielectric stress.

# UNIT-II

- 3 a) Discuss the classification of overhead transmission lines. Define A, B, C CO3 7 Marks and D constants of a transmission line.
  - b) Derive the reflection and refraction coefficients of a line terminated with CO2 7 Marks resistance.

### (OR)

- 4 a) Define regulation of a short 3-phase transmission system and develop an CO1 7 Marks expression for approximate voltage regulation.
  - b) A balanced 3-phase load of 30MW is supplied at 132kV, 50Hz and CO4 7 Marks 0.85 p.f lagging by means of a transmission line. The series impedance of a single conductor is (20 + j52) ohms and the total phase-neutral admittance is  $315 \times 10^{-6}$  mho. Using nominal-T method, determine:
    - i) The A, B, C and D constants of the line.
    - ii) Sending end voltage.
    - iii) Regulation of the line.

# (UNIT-III)

- 5 a) A transmission line has a span of 275m between level supports. The CO4 7 Marks conductor has an effective diameter of 1.96 cm and weighs 0.865 kg/m. Its ultimate strength is 8060 kg. If the conductor has ice coating of radial thickness 1.27cm and is subjected to a wind pressure of 3.9 gm/ cm<sup>2</sup> of projected area, calculate sag for a safety factor of 2. Weight of 1 c.c. of ice is 0.91 gm.
  - b) A 3-phase, 220kV, 50Hz transmission line consists of 1.5 cm radius CO3 7 Marks conductor spaced 2 metres apart in equilateral triangular formation. If the temperature is 40°C and atmospheric pressure is 76cm, calculate the corona loss per km of the line. Take mo = 0.85.

### (OR)

- Each line of a 3-phase system is suspended by a string of 3 identical CO2 6 a) 10 Marks insulators of self-capacitance C farad. The shunt capacitance of connecting metal work of each insulator is 0.2 C to earth and 0.1 C to line. Calculate the string efficiency of the system if a guard ring increases the capacitance to the line of metal work of the lowest insulator to 0.3 C
  - Explain briefly various line supports used for overhead transmission CO1 4 Marks b) system.

# UNIT-IV)

- 7 a) Explain load modeling and its characteristics.
  - A two-wire DC distributor cable 1000metres long is loaded with CO4 7 Marks b) 0.5 A/metre. Resistance of each conductor is 0.05  $\Omega$ /km. Calculate the maximum voltage drop if the distributor is fed from both ends with equal voltages of 220 V. What is the minimum voltage and where it occurs?

#### (**OR**)

- 8 Explain various factors that influence voltage levels in design and CO3 7 Marks a) operation of the distribution system.
  - Discuss the difference between radial and loop types of primary b) CO5 7 Marks distribution feeders.

### UNIT-V

- 9 a) How do you analyze a substation service area with 'n' primary feeders? CO2 8 Marks
  - List the procedure to select the location of substation. CO7 b) 6 Marks

#### (OR)

- 10 a) Give the comparison of outdoor and indoor sub-stations. CO5 7 Marks
  - What are the advantages of GIS over conventional air substations? Give CO6 7 Marks b) the limitations of GIS.

SVEC-16

### **Answer One Question from each Unit** All questions carry equal marks

# UNIT-I

1 A journal bearing is proposed for a steam engine. The load on the journal CO3 14 Marks is 2 kN, diameter 45mm, length 60mm, speed 1500 r.p.m., diametral clearance 0.001 mm, ambient temperature 15.5°C. Oil SAE 10 is used and the film temperature is 60°C. Determine the heat generated and heat dissipated. Take absolute viscosity of SAE10 at  $60^{\circ}C = 0.014 \text{ kg/m-s}$ .

#### (**OR**)

- 2 A 70mm long journal bearing supports a load of 2700N on a 40mm CO<sub>2</sub> 14 Marks diameter shaft. The bearing has a radial clearance of 0.05mm and the viscosity of the oil is 0.021 kg/m-s at the operating temperature. If the bearing is capable of dissipating 80J/s, determine the maximum safe speed.
  - UNIT-II
- 3 The ball bearings are to be selected for an application in which the radial CO4 14 Marks load is 2000N during 90% of the time and 8000N during the remaining 10%. The shaft is to rotate at 150 r.p.m. Determine the minimum value of the basic dynamic load rating for 5000 hours of operation with not more than 10% failures.

### (**OR**)

4 A ball bearing subjected to a radial load of 5 kN is expected to have a life CO4 14 Marks of 8000 hours at 1450 r.p.m. with a reliability of 99%. Calculate the dynamic load capacity of the bearing so that it can be selected from the manufacturer's catalogue based on a reliability of 90%.

### (UNIT-III)

- 5 Explain briefly about Lewis equation for tangential tooth load (capacity) CO1 7 Marks a) for both spur and helical gears.
  - b) Explain about double helical and herring bone gears with neat sketch. CO1 7 Marks (**OR**)
- Design a pair of spur gears to transmit 25kW at 1200 r.p.m to a parallel 6 CO3 14 Marks shaft to be rotated at 600 r.p.m. The center distance between shafts is 175mm.

# UNIT-IV

Write the classification of springs CO1 a) Design a helical compression spring to sustain an axial load of 3kN. The CO3 b) deflection is 60mm. spring index is '6'. The shear stress is not to exceed 300MPa. Rigidity modulus for spring material is 81GPa.

#### (**OR**)

8 Design a helical spring to support a tensile load of 6 kN and to have a 14 Marks CO3 stiffness of 100N/mm. the spring index is 6. The spring is made of steel having allowable stress of 300MPa. Take G=80GPa.

9

An open-belt drive connects two pulleys 120cm and 50cm diameters, on CO6 14 Marks parallel shafts 4m apart. The maximum tension in the belt is 1855.3 N. The co-efficient of friction is 0.3. The driver pulley of diameter 120cm runs at 200 r.p.m. Calculate:

- i) The power transmitted.
- ii) Torque on each of the two shafts.

### (OR)

10 Design a cast iron piston for a single acting four stroke engine for the CO5 14 Marks following data:

Cylinder bore = 100 mm; Stroke = 125 mm; Maximum gas pressure = 5 N/mm<sup>2</sup>; Indicated mean effective pressure =  $0.75 \text{ N/mm}^2$ ; Mechanical efficiency = 80%; Fuel consumption = 0.15 kgper brake power per hour;Higher calorific value of fuel =  $42 \times 103 \text{ kJ/kg}$ ; Speed = 2000 r.p.m.

Any other data required for the design may be assumed.

### **METROLOGY AND MEASUREMENTS** [Mechanical Engineering]

Time: 3 hours

# **Answer One Ouestion from each Unit** All questions carry equal marks

# UNIT-I

- 1 Define error. Explain types of errors in measuring system. a)
  - A slip gauge set with 87 pieces, as under is available. b)

| Range (mm)     | Steps (mm) | No. of blocks |
|----------------|------------|---------------|
| 1.001 to 1.009 | 0.001      | 9             |
| 1.01 to 1.49   | 0.01       | 49            |
| 0.5 to 9.5     | 0.5        | 19            |
| 10 to 90       | 10         | 9             |
| 100            | -          | 1             |

Build up the following dimensions with minimum number of slip gauges.

i) 29.578 mm. ii) 46.635 mm.

(**OR**)

- 2 With neat sketches, differentiate between hole basis system and shaft basis CO1 7 Marks a) system.
  - Determine the dimensions and tolerances of shaft and hole having size of CO3 7 Marks b) 30H<sub>7</sub>h<sub>8</sub> fit. Also, determine the allowance and maximum clearance.

# UNIT-II

| 3 | a) | List various types of limit gauges and explain any three gauges.          | CO1 | 7 Marks |
|---|----|---------------------------------------------------------------------------|-----|---------|
|   | b) | Describe mechanical comparator with a neat sketch and explain clearly the | CO5 | 7 Marks |
|   |    | method of magnification adopted to it.                                    |     |         |

### (**OR**)

| 4 | a) | Why is sine bar not suitable for measuring angles above 45°? | CO2 | 6 Marks |
|---|----|--------------------------------------------------------------|-----|---------|
|   | b) | Explicate the working principle of                           | CO1 | 8 Marks |

- Explicate the working principle of: b)
  - i) Optical comparator.
  - ii) Pneumatic comparator.

# UNIT-III)

| 5 | a) | Illustrate with suitable sketches the measurement of straightness using                 | CO1 | 8 Marks |
|---|----|-----------------------------------------------------------------------------------------|-----|---------|
|   |    | autocollimator.                                                                         |     |         |
|   | b) | Explain flatness measurement using straight edges.                                      | CO1 | 6 Marks |
|   |    | (OR)                                                                                    |     |         |
| 6 | a) | Describe various methods of measuring surface texture giving their relative advantages. | CO5 | 8 Marks |

Mention various BIS symbols for indication of surface finish. CO1 6 Marks b)

# (UNIT-IV)

7 Name the important elements of thread which are required to be measured CO1 14 Marks in order to determine the accuracy of screw threads. Describe in brief how the errors in these elements affect the working of the threaded elements.

### (**OR**)

Demonstrate the method used for checking pitch of the gear. 8 a) CO5 6 Marks Describe a gear tooth vernier caliper and show how this is used for CO4 8 Marks b) checking gears.

Max. Marks: 70

CO1 6 Marks

CO2 8 Marks

# UNIT-V

| 9  | a) | Explain the following:                                          | CO1 | 8 Marks |
|----|----|-----------------------------------------------------------------|-----|---------|
|    |    | i) Electrical strain gauge.                                     |     |         |
|    |    | ii) Stain gauge rosettes.                                       |     |         |
|    | b) | Differentiate between compressive strains and tensile strains.  | CO1 | 6 Marks |
|    |    | (OR)                                                            |     |         |
| 10 | a) | Write short notes on Electrical resistance sensors and Junction | CO1 | 7 Marks |
|    |    | semiconductor sensors.                                          |     |         |
|    | b) | Explain the method used for pressure measurement.               | CO5 | 7 Marks |
|    |    |                                                                 |     |         |

| iv) iviass of condensing cooling water assuming the                                                                                                        |                                |

v) Also tabulate energy balance for 1 kg of refrigerant.

# UNIT-III

- 5 a) Discuss the advantages of vapour absorption refrigeration system over CO1 7 Marks vapour compression refrigeration system.
  - b) In a vapour absorption refrigeration system, heating, cooling and CO3 7 Marks refrigeration takes place at the temperatures of 100°C, 20°C and -5°C respectively. Find the maximum C.O.P of the system.

### (**OR**)

- 6 a) What is thermo electric refrigeration system? List out the merits and CO2 6 Marks demerits of thermo-electric refrigeration system over other refrigeration system. What are the fields of its applications?
  - b) Determine the COP of a vapour absorption refrigeration system when the CO2 8 Marks temperature of generator is 120°C, the temperature of the condenser is 30°C and the temperature of the evaporator is -20°C. What would be its C.O.P, if it were a Carnot?

# UNIT-IV

- 7 The following data apply to an air conditioning system: Room sensible heat =41868kJ/hr ; room latent heat=41868 kJ/hr; inside design condition= 25°C, 50% RH, outside design condition=35°C, DBT, 27.8 WBT. Return air from the room is mixed with the outside air before entering the cooling coil in the ratio of 4:1. Return air from the room is mixed with the cooling air, i.e. after the cooling coil in the ratio of 1:4. Cooling coil by pass factor is 0.1. The air may be reheated if necessary before supplying to the conditioned space. Assume ADP as 10°C and determine,
  - i) Supply air conditions into the room.
  - ii) Refrigeration load due to the reheat.
  - iii) Total refrigeration capacity.
  - iv) The quantity of fresh air supplied.

### (OR)

- 8 a) Explain in brief, an adiabatic saturation process. Represent the same on a CO5 6 Marks psychrometric chart.
  - b) Ten grams of moisture per kg of dry air is removed from atmospheric air CO6 8 Marks when it is passed through an air conditioning system and its temperature becomes 20°C. The atmospheric conditions are 40°C DBT and 60% RH. Find the following for the conditioned air.
    - i) Relative humidity.
    - ii) Wet-bulb temperature.
    - iii) Dew point temperature.
    - iv) Enthalpy change for the air.

Assume standard atmospheric pressure.

# UNIT-V

- 9 a) Explain in detail, the filters used in air conditioning systems. CO1 7 Marks
  - b) Explain the use of heat pump for heating and cooling cycle with a neat CO1 7 Marks diagram.

# (OR)

- 10 a) Define human comfort and explain the factors which affect human CO1 7 Marks comfort.
  - b) Discuss various types of duct systems and their applications. CO1 7 Marks

# **Answer One Question from each Unit** All questions carry equal marks

# UNIT-I

- Differentiate between water tube and fire tube boilers. 1 CO1 7 Marks a)
  - Discuss the working of Babcock and Wilcox boiler with a neat sketch. CO1 7 Marks b) (**OR**)

#### Describe Locomotive boiler with a neat sketch. CO1 7 Marks a) In a Rankine cycle the steam at inlet to the turbine is saturated at a CO2 b) 7 Marks pressure of 20 bar and exhaust pressure is 0.04 bar. Determine:

i) Pump work. ii) Turbine Power. iii) Rankine efficiency. Assume the flow rate of steam as 10 kg/sec.

# UNIT-II

- 3 Write a short note on equivalent evaporation, factor of evaporation and CO1 7 Marks a) boiler efficiency.
  - A Lancashire boiler generates 2500 kg of dry steam / hr at a pressure of CO3 7 Marks b) 11 bar. The grate area is 3.6  $m^2$  and 75 kg of coal is burnt /  $m^2$  of grate area /hr. The calorific value of the coal is 33,200 kJ/kg and temperature of feed water is 17.5°C. Determine:
    - i) Actual evaporation / kg of coal.
    - ii) Equivalent evaporation from and at 100°C.
    - iii) Efficiency of the boiler.

### (**OR**)

4 Explain induced draught and forced draught. CO1 7 Marks a) How much air used per kg of coal burnt in a boiler having chimney of CO4 7 Marks b) 32.3m height to create a draught of 19mm of water column when the temperature of flue gases in the chimney is 370°C and the temperature of boiler house is 30°C?

# UNIT-III)

- 5 Explain the types of steam nozzles. a)
  - Dry saturated steam at a pressure of 5 bar enters in a nozzle and is CO2 9 Marks b) discharged at a pressure of 1.5 bar. Find the final velocity of steam, when the initial velocity of the steam is neglected. If 10% of heat drop is lost in friction, find the % reduction In the final velocity.

### (**OR**)

- Give the classification of steam turbines. a) The velocity of steam leaving the nozzles of impulse turbine is 1200 m/s CO5 9 Marks b) and the nozzle angle is 20°. The blade velocity is 375 m/s and the blade velocity coefficient is 0.75. Assuming no loss due to shock at inlet, calculate for a mass flow of 0.5 kg/s and symmetrical blading.
  - i) Blade inlet angle.
  - ii) Driving force on the wheel.
  - iii) Axial thrust on the wheel.
  - iv) Power developed by Turbine.

CO1 5 Marks

CO1

5 Marks

# UNIT-IV

- 7 What are various sources of air leakage in to steam condenser? How does CO2 7 Marks a) it affect the performance of condensing plant? Describe with neat sketch the working of surface condenser. CO1 7 Marks b) (OR)8 What is 50% Reaction Turbine? What are the characteristics of 50% CO1 5 Marks a) **Reaction Turbine?** Reaction Turbine runs at 3000 r.p.m and its steam consumption is 9 Marks b) CO<sub>2</sub> 15400kg/hr. the pressure of steam at a certain pair is 1.9 bar its dryness 0.93 and power developed by air is 3.5 kW. The discharging blade tip angle is 200 for both fixed and moving blades and the axial velocity of flow is 0.72 of the blade velocity. Find the drum diameter and blade height. Take the tip leakage steam as 8%, but neglect blade thickness. UNIT-V 9 Distinguish between rocket propulsion and turbojet propulsion Engines. CO1 7 Marks a) b) The air enters the compressor of an open cycle constant pressure gas CO<sub>2</sub> 7 Marks turbine at a pressure of 1 bar and temperature of 20°C. The pressure of air after compression is 4bar. The isentropic efficiency of compressor and turbine are 80% and 85% respectively. The air fuel ratio used is 90:1. If flow rate of air is 3 kg/s, find i) power developed ii) thermal efficiency of the cycle . Assume C<sub>P</sub>=1 kJ/kgK,  $\gamma$  =1.41 and Calorific Value fuel = 41800kJ/Kg. (**OR**) 10 In a constant pressure open cycle gas turbine air enters at 1 bar and 20°C CO2 7 Marks a) and leaves the compressor at 5 bar. Using the following data: temperature of the gases entering the turbine =  $680^{\circ}$ C, pressure loss in the combustion chamber = 0.1 bar,  $\eta_{compressor} = 85\%$ ,  $\eta_{turbine} = 80\%$ ,  $\eta_{combustion} = 85\%$ ,  $\gamma$ =1.4,  $C_p$ =1.024kJ/kg K for air and gas. Find: i) The quality of air circulation if the plant develops 1065kW.
  - ii) Heat supplied per kg of circulation.
  - iii) Thermal efficiency of the cycle. Mass of fuel may be neglected.
  - b) Explain the effect of regeneration, inter cooling, and reheating on the CO2 7 Marks performance of Gas turbine plant.

[Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1 Define the term feedback and explain the differences between open and CO1 14 Marks closed loop control systems. (**OR**) Define Mechatronics. Mention the key elements of Mechatronic systems. 2 CO1 a) 6 Marks Mention the advantages and disadvantages involved in a mechatronic CO1 8 Marks b) systems. UNIT-II ) 3 Explain the static characteristics of a sensor. CO1 6 Marks a) A potentiometer which is used to measure the rotational position of a shaft has 850 turns of wire. The input range is from -160° to +160°. The output range is from 0 V to 12 V. Determine the span, sensitivity and average resolution. Explain the working principle and operation of an optical encoder. b) CO2 8 Marks (**OR**) State the factors to be considered for selecting a sensor. 4 a) CO<sub>2</sub> 4 Marks What is a pneumatic system? Explain the elements of a pneumatic system. b) CO2 10 Marks (UNIT-III) What is noise in signals? Explain low pass and band pass filtering circuit. CO3 8 Marks 5 a) Explain voltage frequency converters with their use in signal conditioning. CO1 6 Marks b) (**OR**) Why is operation amplifiers used in signal conditioning? Explain 6 CO3 8 Marks a) differential amplifier with neat sketch. Derive an expression for finding the unknown resistance in Wheat stone b) CO3 6 Marks bridge circuit. UNIT-IV 7 Describe and compare the characteristics of Proportional (P) control and CO4 14 Marks Proportional plus integrated (PI) control. (OR)8 Explain PID controller tuning using process reaction curve method. CO<sub>4</sub> 8 Marks a) A PI controller has an input voltage range of 0.4 - 2 V and the output 6 Marks b) CO4 voltage range 0.10 V,  $R_2$ = 160 k $\Omega$ ,  $R_1$ =8 k $\Omega$  and C= 10  $\mu$ F. Determine the values of gain  $K_p$ ,  $K_i$  and proportional band of integration gain in %/(% s). UNIT-V 9 Explain the mechatronics design approach. CO5 8 Marks a) Elaborate the method of automatic car parking system. b) CO5 6 Marks (**OR**) 10 Describe the mechatronics application in an automobile engine a) CO5 10 Marks management system. Justify the importance of ethics as a design constraint. CO6 4 Marks b) (F) (j) (P)

### Answer One Question from each Unit All questions carry equal marks

| C | U | Ν | IT | <b>-I</b> | ) |
|---|---|---|----|-----------|---|
|   | _ | _ |    |           | _ |

| 1 | a) | Illustrate role of Assembler Directives in ALP using a model program.                                                                                                      | CO2 | 7 Marks  |
|---|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|   | b) | Contrast Procedures to MACROs with suitable examples.                                                                                                                      | CO2 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                       |     |          |
| 2 | a) | Illustrate Intel 8086 memory organization as even and odd banks and point out how both byte and word access were supported.                                                | CO5 | 7 Marks  |
|   | b) | Interpret the following Assembler directives.                                                                                                                              | CO2 | 7 Marks  |
|   |    | i) ENDS. ii) EVEN. iii) DUP. iv) Assume.                                                                                                                                   |     |          |
|   |    | UNIT-II)                                                                                                                                                                   |     |          |
| 3 | a) | Describe Intel 8086 Pin Diagram.                                                                                                                                           | CO1 | 7 Marks  |
|   | b) | Write 8086 assembly language program to SORT an array of 10 bytes in descending order.                                                                                     | CO4 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                       |     |          |
| 4 | a) | Design the Timing Diagram of Read and write cycle in maximum mode configuration.                                                                                           | CO3 | 8 Marks  |
|   | b) | Distinguish NMI and INTR.                                                                                                                                                  | CO2 | 6 Marks  |
|   |    | (UNIT-III)                                                                                                                                                                 |     |          |
| 5 | a) | Interpret about control words of 8255.                                                                                                                                     | CO1 | 7 Marks  |
|   | ,  | i) Mode Set Control Word. ii) BSR Mode.                                                                                                                                    |     |          |
|   | b) | Differentiate between automatic rotation and automatic EOI mode.                                                                                                           | CO2 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                       |     |          |
| 6 | a) | Draw and explain ICW and OCW formats.                                                                                                                                      |     | 10 Marks |
|   | b) | Compare pole command mode and EOI mode.                                                                                                                                    | CO2 | 4 Marks  |
|   |    | UNIT-IV                                                                                                                                                                    |     |          |
| 7 | a) | Design a flowchart and develop an ALP to perform arithmetic operations on two unsigned bytes from:                                                                         | CO3 | 7 Marks  |
|   |    | i) Internal RAM. ii) External RAM.                                                                                                                                         |     |          |
|   | b) | Write an ALP to store 10 bytes of data stored in RAM locations starting from 45H to transfer serially. At the end of data transfer the value of R0 is displayed on Port 1. | CO4 | 7 Marks  |
|   |    | (OR)                                                                                                                                                                       |     |          |
| 8 | a) | Compose a program for bit manipulation operations in 8051.                                                                                                                 | CO4 | 7 Marks  |
|   | b) | Design a flowchart and write an ALP to transfer a block of 8 bytes from External RAM at 4500H to External RAM at 5400H.                                                    | CO3 | 7 Marks  |

# UNIT-V

- 9 a) Show the setup and develop an ALP to interface keyboard with 8051 CO5 7 Marks microcontroller.
  - b) Model the setup and develop an ALP to interface LCD with 8051 CO6 7 Marks microcontroller. Specify the applications of it.

### (OR)

- 10 a) Show the setup to interface seven segment displays with 8051 and write a CO5 7 Marks program for generating a sequence in seven segments depending on your own assumption.
  - b) Apply 8051 interfacing concept to interface 4 digits of 7 segment LED CO6 7 Marks display to Intel 8051. Mention the applications of it.

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a)<br>b) | Why CMOS inverter is called a low power device? Explain.<br>Assess the Metallization and Encapsulation methods related to IC fabrication process.                                                               | CO3<br>CO2 | 6 Marks<br>8 Marks |
|----|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|    |          | (OR)                                                                                                                                                                                                            |            |                    |
| 2  | a)       | Derive an equation for Transconductance of an n channel enhancement<br>MOS- FET operating in active region.                                                                                                     | CO2        | 6 Marks            |
|    | b)       | A PMOS transistor is operated in triode region with the following parameters. VGS = -4.5V, Vtp = -1V, VDS = -2.2V, (W/L) = 95, $\mu$ nCox = 95 $\mu$ A/V 2. Find its drain current and drain source resistance. | CO3        | 8 Marks            |
|    |          | UNIT-II                                                                                                                                                                                                         | <b>G A</b> | 0.14               |
| 3  | a)<br>b) | Sketch the stick diagram for NAND gate and give its procedural steps.<br>Discuss the limitations of scaling of MOS circuits.                                                                                    | CO4<br>CO1 | 8 Marks<br>6 Marks |
| 4  | a)       | Design a layout diagram for N-MOS inverter.                                                                                                                                                                     | CO4        | 7 Marks            |
|    | b)       | Illustrate the lambda-based design rules.                                                                                                                                                                       | CO1        | 7 Marks            |
|    | ,        | (UNIT-III)                                                                                                                                                                                                      |            |                    |
| 5  | a)       | Explain the construction of transmission gate based adder in detail.                                                                                                                                            | CO1        | 7 Marks            |
| -  | b)       | Assess the operation of Manchester carry chain adder and find the worst case delay of carry chain.                                                                                                              | CO4        | 7 Marks            |
| 6  | a)       | (OR)<br>Outline the features of 4-by-4 barrel shifter using complementary                                                                                                                                       | CO4        | 8 Marks            |
|    |          | transmission gates. Sketch its circuit diagram and explain its shifting operation.                                                                                                                              |            |                    |
|    | b)       | Write short note on: i) Carry skip adder. ii) Carry select adder.                                                                                                                                               | CO1        | 6 Marks            |
| 7  | a)       | Outline the different programmable blocks used in the general architecture of FPGA.                                                                                                                             | CO6        | 7 Marks            |
|    | b)       | Differentiate the channeled gate array and channel less gate array. (OR)                                                                                                                                        | CO2        | 7 Marks            |
| 8  | a)       | Differentiate the array-based programmable wiring and switch box based programmable wiring.                                                                                                                     | CO2        | 7 Marks            |
|    | b)       | Sketch and explain the typical standard-cell structure showing low-power cell.                                                                                                                                  | CO6        | 7 Marks            |
|    |          |                                                                                                                                                                                                                 |            |                    |
| 9  | a)       | Mention how many test vectors are required to exhaustively test a combinational circuit with n-inputs and a sequential circuit with n-inputs                                                                    | CO5        | 7 Marks            |
|    |          | and m-storage devices respectively.                                                                                                                                                                             |            |                    |
|    | b)       | Write short notes on Design strategies for test.                                                                                                                                                                | CO1        | 7 Marks            |
| 10 | - )      | (OR)                                                                                                                                                                                                            | 001        | 7 1 1              |
| 10 | a)       | Write short notes on UNUS testing.<br>Evamina Dowar minimization tashnigues in design and short made                                                                                                            | COI        | / Marks            |
|    | U)       | $\otimes$ $\otimes$ $\otimes$                                                                                                                                                                                   | COS        | / IVIAIKS          |

Roll No.

### **SREE VIDYANIKETHAN ENGINEERING COLLEGE**

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

# III B.Tech I Semester (SVEC-16) Supplementary Examinations August - 2021

# MICROPROCESSORS AND INTERFACING

[Computer Science and Systems Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

Max. Marks: 70

SVEC-16

|    |    | UNIT-I                                                                                                                 |     |            |
|----|----|------------------------------------------------------------------------------------------------------------------------|-----|------------|
| 1  | a) | Explain the initialization sequence of 8259A.                                                                          | CO3 | 7 Marks    |
|    | b) | Write about the command words of 8259A.                                                                                | CO2 | 7 Marks    |
|    | ,  | (OR)                                                                                                                   |     |            |
| 2  | a) | Explain about Internal architecture of 8279 Keyboard/Display interface.                                                | CO2 | 10 Marks   |
|    | b) | What is the purpose of priority resolver in 8259A?                                                                     | CO2 | 4 Marks    |
|    |    | UNIT-II                                                                                                                |     |            |
| 3  | a) | What is the importance of cascade buffer/comparator? Explain briefly.                                                  | CO2 | 7 Marks    |
|    | b) | Draw and Explain ICW and OCW?                                                                                          | CO2 | 7 Marks    |
|    |    | (OR)                                                                                                                   |     |            |
| 4  | a) | What is pole command mode and EOI mode?                                                                                | CO2 | 7 Marks    |
|    | b) | Differentiate cascade mode and buffered mode.                                                                          | CO1 | 7 Marks    |
|    |    | (UNIT-III)                                                                                                             |     |            |
| 5  | a) | Draw and explain the internal architecture of 8259.                                                                    | CO1 | 10 Marks   |
|    | b) | Explain importance of ISR and IRR?                                                                                     | CO2 | 4 Marks    |
|    |    | (OR)                                                                                                                   |     |            |
| 6  | a) | Discuss in detail DMA.                                                                                                 | CO3 | 7 Marks    |
|    | b) | What is 8251? How can it be programmed to operate in serial communication mode?                                        | CO5 | 7 Marks    |
|    |    | UNIT-IV                                                                                                                |     |            |
| 7  | a) | Show the setup to and write an ALP to interface a hexadecimal key pad to<br>Intel 8086. Specify the applications of it | CO6 | 7 Marks    |
|    | b) | Briefly describe the importance of modem control in 8251                                                               | CO2 | 7 Marks    |
|    | 0) | (OR)                                                                                                                   | 002 | , 1.101110 |
| 8  | a) | Draw the Pinouts of 8251A and discuss them in detail.                                                                  | CO2 | 10 Marks   |
|    | b) | What is the function of mode set register available in 8257?                                                           | CO1 | 4 Marks    |
|    |    | UNIT-V                                                                                                                 |     |            |
| 9  | a) | Draw and explain the internal architecture of 8257.                                                                    | CO1 | 10 Marks   |
|    | b) | Draw the formats of ICW3 in master and slave mode.                                                                     | CO1 | 4 Marks    |
|    | ,  | (OR)                                                                                                                   |     |            |
| 10 | a) | Draw and explain mode instruction control word format in Asynchronous and synchronous mode.                            | CO3 | 10 Marks   |
|    | b) | Explain briefly automatic rotation and automatic EOI mode.                                                             | CO1 | 4 Marks    |
|    |    |                                                                                                                        |     |            |

# **Answer One Question from each Unit**

Roll No.

All questions carry equal marks

#### UNIT-I (

| 1  |           | Write short notes on the following guided and unguided transmission medium                                                                        | CO1 | 14 Marks |
|----|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    |           | i) Twisted-Pairs. ii) Coaxial Cable.                                                                                                              |     |          |
|    |           | iii) Fiber Optics. iv) Radio Transmission.                                                                                                        |     |          |
|    |           | (OR)                                                                                                                                              |     |          |
| 2  | a)        | Sketch the electromagnetic spectrum for Wireless Transmission.                                                                                    | CO1 | 7 Marks  |
|    | b)        | Distinguish between Radio Wave Transmission and Microwave Transmission.                                                                           | CO2 | 7 Marks  |
|    |           | UNIT-II)                                                                                                                                          |     |          |
| 3  | a)        | Sketch the Ethernet frame format.                                                                                                                 | CO1 | 7 Marks  |
|    | b)        | List and explain the fields of Ethernet frame.                                                                                                    | CO1 | 7 Marks  |
|    |           | (OR)                                                                                                                                              |     |          |
| 4  | a)        | Write the properties of Data Link - Layer Switching. Compare Switch and Router.                                                                   | CO2 | 7 Marks  |
|    | b)        | Illustrate Collision-Free Protocols with examples.                                                                                                | CO1 | 7 Marks  |
| 5  |           | Illustrate the following congestion control algorithms with an example:i) Leaky bucket Algorithm.ii) Random Early Detection.(OR)                  | CO2 | 14 Marks |
| 6  | a)        | Distinguish between ARP and RARP Protocols.                                                                                                       | CO2 | 7 Marks  |
|    | b)        | Explain Various Internet Control Message Protocol Message Types.                                                                                  | CO1 | 7 Marks  |
|    |           | (UNIT-IV)                                                                                                                                         |     |          |
| 7  |           | A TCP connection is established over a 1.2 Gb/s link with a round-trip time of 3.3ms. To transmit a file of size 2 MB, we start sending it, using | CO4 | 14 Marks |
|    |           | 1 KB packets.                                                                                                                                     |     |          |
|    |           | i) How long does the transmission take if an Additive Increase,                                                                                   |     |          |
|    |           | Multiplicative Decrease Control with a window size                                                                                                |     |          |
|    |           | of $w_g = 500 \text{ KB}$ is used?                                                                                                                |     |          |
|    |           | 11) Repeat part (1), using Slow-Start Control.                                                                                                    |     |          |
| Q  | a)        | (UR)<br>Draw the TCP segment header formet and explain the use of each field in                                                                   | CO1 | 7 Morka  |
| 0  | <i>a)</i> | detail                                                                                                                                            | COI | / WIAIKS |
|    | b)        | Summarize congestion control mechanisms in TCP.                                                                                                   | CO2 | 7 Marks  |
|    | ,         |                                                                                                                                                   |     |          |
| 9  | a)        | List and explain the built-in HTTP request methods.                                                                                               | CO1 | 7 Marks  |
|    | b)        | How is Hypertext Transfer Protocol related to World Wide Web?                                                                                     | CO2 | 7 Marks  |
|    |           | (OR)                                                                                                                                              |     |          |
| 10 | a)        | Explain in detail about messages headers in Hypertext Transfer Protocol.                                                                          | CO1 | 7 Marks  |
|    | b)        | Illustrate Hypertext Transfer Protocol caching.                                                                                                   | CO2 | 7 Marks  |
|    |           | · · · · · · · · · · · · · · · · · · ·                                                                                                             |     |          |

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a)<br>b)   | Explain in detail about gethostname and uname function.<br>Write a linux program which extracts some user information from | CO1<br>CO3 | 7 Marks<br>7 Marks |
|----|------------|----------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|    |            | (OR)                                                                                                                       |            |                    |
| 2  | a)         | Design a linux program which extracts host information using getuid function                                               | CO4        | 10 Marks           |
|    | b)         | Compare internal and external commands.                                                                                    | CO2        | 4 Marks            |
|    |            | UNIT-II                                                                                                                    |            |                    |
| 3  | a)         | Define shell and its responsibilities.                                                                                     | CO1        | 4 Marks            |
|    | b)         | Write shell script on prime number and Fibonacci series by using control structures.                                       | CO3        | 10 Marks           |
|    |            | (OR)                                                                                                                       |            |                    |
| 4  | a)         | Write a shell script that takes a login name and reports when that person                                                  | CO3        | 7 Marks            |
|    | <b>b</b> ) | logs in.                                                                                                                   | CO6        | 7 Mortra           |
|    | 0)         | checks if every argument supplied is a file or a directory and reports                                                     | 000        | / Warks            |
|    |            | accordingly. Whenever the argument is a file, the number of lines on it is<br>also reported                                |            |                    |
|    |            | (UNIT-III)                                                                                                                 |            |                    |
| 5  | a)         | Analyze the working of formatted Input and Output.                                                                         | CO2        | 7 Marks            |
|    | b)         | Illustrate briefly with example file and directory maintenance.                                                            | CO5        | 7 Marks            |
|    |            | (OR)                                                                                                                       |            |                    |
| 6  | a)         | Define a file descriptor and explain it briefly with a simple program.                                                     | CO1        | 6 Marks            |
|    | b)         | What is file permission? What are different ways of setting file permission? Explain.                                      | COI        | 8 Marks            |
|    |            | (UNIT-IV)                                                                                                                  |            |                    |
| 7  | a)         | Analyze the need for zombie process with example.                                                                          | CO2        | 6 Marks            |
|    | b)         | Write a filter program that reads from its standard input and writes to its                                                | CO4        | 8 Marks            |
|    |            | standard output converting into uppercase by using shell redirection.                                                      |            |                    |
| 8  | a)         | (OR)<br>Write a program that illustrates the working of signal                                                             | CO4        | 7 Marks            |
| 0  | b)         | Discuss the following commands with example:                                                                               | CO4        | 7 Marks            |
|    | 0)         | i) kill. ii) killall.                                                                                                      | 001        | , 1,100110         |
|    |            | UNIT-V                                                                                                                     |            |                    |
| 9  | a)         | Illustrate how unrelated process can communicate using named pipes.                                                        | CO5        | 7 Marks            |
|    | b)         | Explain O-RDONLY and O-WRONLY command.                                                                                     | CO1        | 7 Marks            |
|    |            | (OR)                                                                                                                       |            |                    |
| 10 | a)         | Discuss the Client/Server application creation using FIFO.                                                                 | CO1        | 10 Marks           |
|    | b)         | Illustrate the sequence after a call to pipe and fork.                                                                     | COI        | 4 Marks            |
|    |            | 수영 수영 수영                                                                                                                   |            |                    |

[Electronics and Instrumentation Engineering]

Max. Marks: 70

SVEC-16

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a) | Sketch the structure of living cell and explain its components.                                 | CO1 | 7 Marks  |  |
|----|----|-------------------------------------------------------------------------------------------------|-----|----------|--|
|    | b) | List the problems encountered in measuring a living system.                                     | CO4 | 7 Marks  |  |
|    |    | (OR)                                                                                            |     |          |  |
| 2  |    | Identify the suitable electrode for measurement of cardiac signals and                          | CO5 | 14 Marks |  |
|    |    | explain each in detail.                                                                         |     |          |  |
|    |    | UNIT-II                                                                                         |     |          |  |
| 3  |    | Discuss different lead configurations used in ECG with relevant sketches.                       | CO2 | 14 Marks |  |
|    |    | (OR)                                                                                            |     |          |  |
| 4  |    | Describe the various methods available for measurement of Blood Pressure and explain any one.   | CO2 | 14 Marks |  |
|    |    | UNIT-III)                                                                                       |     |          |  |
| 5  | a) | Explain the standard norms of electrode configuration for measurement of EEG with neat diagram. | CO6 | 7 Marks  |  |
|    | b) | Describe the analysis of brain waves.                                                           | CO3 | 7 Marks  |  |
|    |    | (OR)                                                                                            |     |          |  |
| 6  |    | Explain the principle, working of spirometer with suitable schematic diagram.                   | CO1 | 14 Marks |  |
|    |    | UNIT-IV                                                                                         |     |          |  |
| 7  |    | Illustrate circuit diagram of fixed rate pace makers and explain its working.                   | CO1 | 14 Marks |  |
|    |    | (OR)                                                                                            |     |          |  |
| 8  |    | Define diathermy and also explain microwave diathermy with a neat sketch.                       | CO1 | 14 Marks |  |
|    |    |                                                                                                 |     |          |  |
| 9  |    | Distinguish ultrasonic imaging systems (A B and M mode) with suitable                           | CO5 | 14 Marks |  |
| /  |    | diagrams.                                                                                       | 200 |          |  |
|    |    | (OR)                                                                                            |     |          |  |
| 10 |    | Identify the suitable instrument to analyze EGG and also explain principle                      | CO5 | 14 Marks |  |
|    |    |                                                                                                 |     |          |  |

| 5  | 2)          | Describe the control and status signals of 2005                                                                                                       | CO1        | 7 Mortes   |
| 3  | $a_{\rm h}$ | Describe the control and status signals 018085.                                                                                                       | CO1        | 7 Marks    |
|    | 0)          | applications.                                                                                                                                         | COS        | / IVIALKS  |
|    |             | (OR)                                                                                                                                                  |            |            |
| 6  | a)          | Draw the pin diagram of 8085 and justify the need to multiplex address and data pins.                                                                 | CO1        | 7 Marks    |
|    | b)          | Differentiate between JMP and CALL instructions.                                                                                                      | CO2        | 7 Marks    |
|    |             |                                                                                                                                                       |            |            |
| 7  | a)          | Draw and explain the 8085 interrupts and vector locations                                                                                             | CO1        | 7 Marks    |
| ,  | h)          | Interface two 2KB of EPROM to the 8085 processor by selecting suitable                                                                                | CO4        | 7 Marks    |
|    | 0)          | addresses                                                                                                                                             | 001        | / WILLING  |
|    |             | (OR)                                                                                                                                                  |            |            |
| 8  | a)          | Explain the addressing modes of 8085 with example                                                                                                     | CO1        | 7 Marks    |
| U  | h)          | Explain how a RAM chip $(1K \times 8)$ can be interfaced to $8085$                                                                                    | $CO^2$     | 7 Marks    |
|    | 0)          | microprocessor with the help of a diagram                                                                                                             | 002        | / 10101113 |
|    |             | UNIT-V                                                                                                                                                |            |            |
| 9  | a)          | Design the organization of a 1K x 1 Memory with a neat sketch.                                                                                        | CO3        | 7 Marks    |
|    | b)          | Analyze the working of static RAM cell.                                                                                                               | CO2        | 7 Marks    |
|    |             | (OR)                                                                                                                                                  |            |            |
| 10 | a)          | Cache memory increases the speed of operation. Justify.                                                                                               | CO6        | 7 Marks    |
|    | b)          | Discuss Out-of-order execution of a program.                                                                                                          | CO1        | 7 Marks    |
|    | ,           |                                                                                                                                                       |            |            |
|    |             |                                                                                                                                                       |            |            |

# SENSORS AND SIGNAL CONDITIONING

[Electrical and Electronics Engineering]

Max. Marks: 70

SVEC-16

### Answer One Question from each Unit All questions carry equal marks

#### UNIT-I Explain the loading effect on the accuracy of a resistance potentiometer CO1 7 Marks a) transducer when used for measurement of displacement. Apply the conceptual knowledge for the measurement of Relative CO6 7 Marks b) humidity present in surrounding environment. (OR)Explain with the aid of a circuit diagram the principle of operation of a CO5 14 Marks strain measurement system with temperature compensation technique. UNIT-II How angular displacement is measured using capacitive transducer? CO1 14 Marks (**OR**) How is the rotational displacement measured by using capacitive CO1 14 Marks transducer? UNIT-III) Compare a total radiation pyrometer with an optical pyrometer in terms of a) CO1 7 Marks operation and construction details. Provide a feasible solution for the conversion of mechanical energy into 7 Marks b) CO4 electrical energy. (**OR**) Explain the principle of working and construction details of a photo-CO1 14 Marks voltaic cell. Explain why it is very useful for space applications. UNIT-IV Define digital sensor and explain the operation of position encoder with CO1 14 Marks neat sketch. (**OR**) Analyze in detail the fiber –optic sensors and explain its applications. CO<sub>2</sub> 14 Marks UNIT-V Sketch the block diagram of signal conditioning circuit and explain each CO3 14 Marks block in detail (**OR**) Choose an appropriate technique to measure Reactance and also explain CO5 14 Marks the operation in detail.

### **OBJECT ORIENTED ANALYSIS AND DESIGN**

#### [Computer Science and Engineering, Information Technology]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I a) Write the importance of modeling. CO1 4 Marks b) List and explain principles of modeling. CO1 10 Marks (**OR**) Categorize the basic building blocks of UML with examples. a) CO1 7 Marks Describe structural and behavioral diagrams of UML in detail. b) CO1 7 Marks UNIT-II ) Distinguish class diagram and object diagram. CO2 7 Marks a) Analyze and explain how to control the visibility of elements present in CO2 7 Marks b) package. (**OR**) Categorize the owned elements in packages. CO1 7 Marks a) b) Compare and contrast various adornments in dependency relationship. CO2 7 Marks (UNIT-III) Design and apply modeling techniques of use case diagram for ATM CO3 7 Marks a) application. Design a model for home automation system with class diagram. 7 Marks b) CO3 (**OR**) Design and apply modeling techniques of sequence diagram for School a) CO3 7 Marks monitoring system. Design a model for communication setup in mobile with sequence 7 Marks b) CO3 diagram. UNIT-IV) Discuss in detail about State machines along with simple state, nested CO4 14 Marks states, concurrent states, different events and action within each state for Point of Sale system. (OR)Describe the communication problems between thread states and thread 14 Marks CO4 lifecycle in state chart diagram. UNIT-V Design a model for online shopping through component diagram. CO5 7 Marks a) Design a model for client server communication through deployment CO5 7 Marks b) diagram. (**OR**) 10 Design and apply modeling techniques of component diagram for home CO5 7 Marks a) automation system. Design and apply modeling techniques of deployment diagram for library b) CO5 7 Marks information system.

# WEB TECHNOLOGIES [Information Technology]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a) | Name different types of lists supported by HTML. Distinguish between HTML and HTML5.                                                                                                                      | CO1,<br>CO2 | 7 Marks    |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|------------|
|    | b) | Explain the following HTML tags with suitable example.<br>i) <pre>, ii) <canvas>, iii) <img/>, iv) <div>.</div></canvas></pre>                                                                            | CO1         | 7 Marks    |
| 2  | a) | Explain the frames and table tags of HTML with suitable example.                                                                                                                                          | CO1         | 7 Marks    |
|    | b) | Explain the following HTML tags with suitable example.<br>i) <font>. ii) <meta/>. iii) . iv) <video>.</video></font>                                                                                      | CO1         | 7 Marks    |
|    |    | UNIT-II                                                                                                                                                                                                   |             |            |
| 3  | a) | Classify CSS selectors and explain.                                                                                                                                                                       | CO2         | 7 Marks    |
|    | b) | Design a web page that display credit card type and then validate the entered card number according to the card type.                                                                                     | CO6         | 7 Marks    |
|    |    | (OR)                                                                                                                                                                                                      | ~ ~         |            |
| 4  | a) | i) Window. ii) Document.                                                                                                                                                                                  | COI         | 7 Marks    |
|    | b) | Develop a web page to convert Indian rupees to Foreign currency. Read<br>the Indian rupees through input dialog and select foreign currency to<br>which Indian rupees are converted using drop down menu. | CO6         | 7 Marks    |
| 5  |    | Develop a mobile optimized website for displaying the images using responsive classes.                                                                                                                    | CO5         | 14 Marks   |
| ~  |    | (OR)                                                                                                                                                                                                      | 005         | 1477 1     |
| 6  |    | UNIT-IV                                                                                                                                                                                                   | 005         | 14 Marks   |
| 7  | a) | Build a PHP Page that reads User Name and Favorite Color from the html<br>form and then display user name in green color and sets user favorite<br>color as a background color to the web page            | CO4         | 8 Marks    |
|    | b) | Demonstrate the implementation of Object Cloning in PHP                                                                                                                                                   | CO1         | 6 Marks    |
|    | 0) | (OR)                                                                                                                                                                                                      | 001         | 0 11100110 |
| 8  | a) | Develop a PHP code to implement multi-level inheritance.                                                                                                                                                  | CO3         | 8 Marks    |
|    | b) | Demonstrate OOP principles with suitable example using PHP                                                                                                                                                | CO1         | 6 Marks    |
| 9  | a) | Define a prepared statement Explain in detail with the suitable program                                                                                                                                   | CO3         | 7 Marks    |
| ,  | b) | Create a web page to perform form data validation in PHP.                                                                                                                                                 | CO4         | 7 Marks    |
|    | ,  | (OR)                                                                                                                                                                                                      |             |            |
| 10 | a) | List the different authentication methodologies used in PHP.                                                                                                                                              | CO1         | 7 Marks    |
|    | b) | Design a web page to store the contact us form data in the database using PHP. (Note: contact us page contains the following fields Name, Email, while the massage and where the terms)                   | CO3         | 7 Marks    |
|    |    | subject, message and submit button).                                                                                                                                                                      |             |            |

#### **III B.Tech I Semester (SVEC-16) Supplementary Examinations August - 2021**

#### MODELING AND SIMULATION [Computer Science and Engineering]

Time: 3 hours

Max. Marks: 70

SVEC-16

### Answer One Question from each Unit All questions carry equal marks

UNIT-I

- 1 a) Name several entities, attributes, activities, events and state variables for CO1 9 Marks the following systems.
  - i) A cafeteria.
  - ii) A grocery store.
  - iii) A hospital emergency room.
  - b) What are the events and activities associated with the use of your check CO1 5 Marks book?

(**OR**)

2 Consider the following continuously operating job shop. Inter-arrival CO2 14 Marks times of jobs are distributed as follows:

| Time Between<br>Arrivals (Hours) | Probability |
|----------------------------------|-------------|
| 0                                | 0.23        |
| 1                                | 0.37        |
| 2                                | 0.28        |
| 3                                | 0.12        |

Processing times for jobs are normally distributed, with mean 50 minutes and standard deviation 8 minutes. Construct a simulation table and perform a simulation for 10 new customers. Assume that, when the simulation begins, there is one job being processed (scheduled to be completed in 25 minutes) and there is one job with a 50-minute processing time in the queue.

- i) What was the average time in the queue for the 10 new jobs?
- ii) What was the average processing time of the 10 new jobs?
- iii) What was the maximum time in the system for the 10 new jobs?

# UNIT-II)

- 3 a) List and explain terminology and concepts of statistical models in CO1 9 Marks simulation.
  - b) A production process manufactures alternators for outboard engines used CO3 5 Marks in recreational boating. On the average, 1% of the alternators will not perform up to the required standards when tested at the engine assembly plant. When a large shipment of alternators is received at the plant, 100 are tested, and, if more than two are nonconforming, the shipment is returned to the alternator manufacturer. What is the probability of returning a shipment?

(OR)

|    |    | (011)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |     |             |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-------------|
| 4  | a) | Describe useful statistical models and its situations that arise to conduct simulation.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | CO1 | 9 Marks     |
|    | b) | <ul> <li>An industrial chemical that will retard the spread of fire in paint has been developed. The local sales representative has estimated, from past experience that 48% of the sales calls will result in an order.</li> <li>i) What is the probability that the first order will come on the fourth sales call of the day?</li> <li>ii) If eight sales calls are made in a day, what is the probability of receiving exactly six orders?</li> <li>iii) If four sales calls are made before lunch, what is the probability that one or fewer results in an order?</li> </ul> | CO4 | 5 Marks     |

State and prove any two properties of DTFT. 6 Marks CO2 b) (**OR**) State and prove the necessary and sufficient condition for causality of an 2 a) CO<sub>2</sub> 7 Marks LTI discrete time system. The system is represented by the difference equation: CO4 7 Marks b) y(n) = x(n+1) + 3x(n) + 5x(n-1)Is the system causal, stable, and time invariant? Justify your answer. UNIT-II ) Determine the circular convolution of the sequences. 3 CO2 8 Marks a)  $X_1(n) = \{1, 1, -1, -1\}$  and  $X_2(n) = \{1, 0, -1, 0, -1\}$ Sketch the radix 2 DIF FFT structure when N=16. CO1 6 Marks b) (**OR**) Draw the radix 2 DIT FFT structure when N=16. 7 Marks 4 a) CO1 State and prove the circular time shifting property of DFT. 7 Marks b) CO2 (UNIT-III) Convert the analog filter into digital filter whose system function is CO5 5 a) 7 Marks  $H(s) = \frac{(s+0.2)}{(s+0.2)^2+9}$  using impulse invariant method. b) Derive an expression for order of the chebhyshev analog prototype filter. CO<sub>2</sub> 7 Marks (**OR**) Using bilinear transformation design a digital bandpass butter worth filter CO5 6 a) 10 Marks with the following specifications. sampling frequency=8KHz. αp=2dBin passband 800Hz≤f≤1000Hz.  $\alpha$ s=20dB in stopband  $0 \le f \le 400$ Hz and 200Hz  $\le f \le \infty$ . b) Discuss transpose form of second order IIR system realizations. CO2 4 Marks (UNIT-IV) Distinguish the window functions used in the design of FIR filters. 7 a) CO<sub>2</sub> 7 Marks Design a linear phase FIR Lowpass filter using rectangular window with b) CO3 7 Marks cut off frequency  $Wc=0.2\pi$  rad/sample and N=7. (**OR**) Design Low pass FIR filter for the desired frequency response CO3 8 a) 7 Marks  $H_d(w) = \begin{cases} e^{-j2w} - \pi / 4 \le \omega \le \pi / 4 \\ 0 & \pi / 4 \le \omega \le \pi \end{cases}$  using Rectangular window when N=5. Design a linear phase FIR bandstop filter to reject frequencies in the range CO3 7 Marks b)  $0.35\pi$  to  $0.48\pi$  rad/sample by taking 75 samples of rectangular window.

# UNIT-V

- 9 a) Write the silent features of TMS320C6X family of digital signal CO1 7 Marks processor.
  - b) Explain various types of general purpose register in TMS320C6X. CO1 7 Marks

(OR)

- 10 a) Elaborate any three special purpose addressing mode in DSP processors. CO1 7 Marks
  - b) Discuss in detailed about pipelining of instruction execution in DSP CO1 7 Marks processor.

|   |          | iii) Rotation iv) Convolution                                                                                                               |     |                    |
|   |          | (OR)                                                                                                                                        |     |                    |
| 2 | a)       | Explain about image sampling and quantization and write its applications in communication.                                                  | CO6 | 7 Marks            |
|   | b)       | Apply Walsh Transform for the given image $F = [0 \ 1 \ 3 \ 6]$ and write the transformed image.                                            | CO5 | 7 Marks            |
|   |          | UNIT-II                                                                                                                                     |     |                    |
| 3 | a)       | Compare different enhancement techniques in frequency domain.                                                                               | CO2 | 7 Marks            |
|   | b)       | Distinguish between image smoothening and sharpening and perform the correspondence between filtering in the spatial and frequency domains. | CO2 | 7 Marks            |
|   |          | (OR)                                                                                                                                        |     |                    |
| 4 | a)       | State and explain any two smoothing linear filter.                                                                                          | CO1 | 7 Marks            |
|   | b)       | Distinguish between spatial domain and frequency domain techniques of image enhancement.                                                    | CO2 | 7 Marks            |
|   |          | UNIT-III                                                                                                                                    |     |                    |
| 5 | a)       | Explain about constrained least squares restoration process for image restoration.                                                          | CO1 | 7 Marks            |
|   | b)       | Write the algorithm used in adaptive filters whose behavior changes based on stastical characteristics.                                     | CO3 | 7 Marks            |
|   |          | (OR)                                                                                                                                        |     |                    |
| 6 | a)       | Distinguish between Inverse filtering, wiener filtering and Constrained least squares filtering.                                            | CO3 | 7 Marks            |
|   | b)       | Develop algorithm for adaptive median filter for restoration of an image.                                                                   | CO3 | 7 Marks            |
|   |          | UNIT-IV                                                                                                                                     |     |                    |
| 7 | a)       | Calculate the code interval for the source with symbols S1, S2, S3, S4, S5 using arithmetic coding.                                         | CO4 | 7 Marks            |
|   | b)       | Explain dictionary based compression technique.                                                                                             | CO1 | 7 Marks            |
|   |          | (OR)                                                                                                                                        |     |                    |
| 8 | a)       | What is meant by lossy compression? Discuss about transform coding.                                                                         | CO1 | 7 Marks            |
|   | b)       | Write a short notes on:                                                                                                                     | CO1 | 7 Marks            |
|   |          | i) Inter pixel redundancy.                                                                                                                  |     |                    |
|   |          | 11) Psychovisual Redundancy.                                                                                                                |     |                    |

1

# UNIT-V

| 9  | a) | Apply various techniques in Color transformations in image processing.                                                                    | CO5 | 7 Marks |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | Explain the concept of motion in segmentation. What is its use?                                                                           | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                      |     |         |
| 10 | a) | Define an edge in a digital image. What are the derivative operators useful in image segmentation and explain their role in segmentation? | CO1 | 7 Marks |
|    | b) | What are the techniques used in image processing to describe point, line and edge detection?                                              | CO5 | 7 Marks |

Max. Marks: 70

SVEC-16

Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a) | Write about wireless data services.                                                                                     | CO1 | 7 Marks  |
|----|----|-------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Demonstrate the functionalities of 2G Digital Cellular Standards.                                                       | CO2 | 7 Marks  |
| 2  | a) | Differentiate Voice-Oriented and Data-Oriented Access.                                                                  | CO2 | 10 Marks |
|    | b) | Solve interference issues using Wireless LAN Standards.                                                                 | CO4 | 4 Marks  |
|    | ,  | (UNIT-II)                                                                                                               |     |          |
| 3  | a) | Compare Ad-Hoc and Infrastructure topology.                                                                             | CO2 | 10 Marks |
|    | b) | Why band splitting is not used in 2G cellular networks.                                                                 | CO1 | 4 Marks  |
| 4  | a) | Evaluate five different cell types in the cellular hierarchy and compare<br>them in terms of coverage and antenna site. | CO5 | 7 Marks  |
|    | b) | How to improve the capacity of a cellular network.                                                                      | CO1 | 7 Marks  |
|    | ,  | UNIT-III)                                                                                                               |     |          |
| 5  | a) | Draw and explain the Reference Architecture of IEEE 802.11.                                                             | CO1 | 7 Marks  |
|    | b) | Illustrate the concept of Carrier sensing.                                                                              | CO2 | 7 Marks  |
|    |    | (OR)                                                                                                                    |     |          |
| 6  | a) | Categorize various Physical specification of DSSS                                                                       | CO2 | 8 Marks  |
|    | b) | What is the PCF in 802.11, what services does it provide, and how is it implemented?                                    | CO1 | 6 Marks  |
|    |    | UNIT-IV                                                                                                                 |     |          |
| 7  | a) | With suitable diagram explain the subsystems of GSM Architecture.                                                       | CO1 | 10 Marks |
|    | b) | Apply the framing structure in GSM in mobile Applications.                                                              | CO5 | 4 Marks  |
| _  |    | (OR)                                                                                                                    |     |          |
| 8  | a) | Analyze the reasons to perform handoff.                                                                                 | CO2 | 8 Marks  |
|    | b) | Choose the services of GSM suitable for current data networks.                                                          | CO6 | 6 Marks  |
| 9  | a) | With neat sketch explain the basic architecture of a WATM network.                                                      | CO1 | 8 Marks  |
|    | b) | Design solutions for Privacy in SWAN and WATM systems                                                                   | CO3 | 6 Marks  |
|    |    | (OR)                                                                                                                    |     |          |
| 10 |    | Considering that the encoded voice in Bluetooth is at 64Kbps in each direction. Find the following:                     | CO4 | 14 Marks |
|    |    | i) Use packet format for the HV1 channels to show that these                                                            |     |          |
|    |    | packets are sent every six slots.                                                                                       |     |          |
|    |    | ii) Use packet format for the HV2 channel to find how often                                                             |     |          |
|    |    | these packets are sent.                                                                                                 |     |          |

III B.Tech II Semester (SVEC14) Supplementary Examinations August - 2021

**REINFORCED CEMENT CONCRETE STRUCTURES – II** 

[ CIVIL ENGINEERING ]

Max. Marks: 70

14 Marks

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1 Explain the different types of stair case with neat sketch
- (OR)
   Design a dog-legged stair case for a building in which the vertical distance is 14 Marks 3.6m. The stair hall measures 2.5m x 5.0m. The live load may be taken as 2.5 kN/m<sup>2</sup>. Use M20 grade concrete and Fe415 grade steel. Draw a neat sketch showing reinforcement details in the waist slab

### UNIT-II

3 Design a combined rectangular footing for two columns C1 and C2 spaced at 14 Marks 3m apart. Characteristic loads on C1 and C2 are 750kN and 1000kN respectively and the size of the columns is 300mm x 600mm where 600mm size is along C1-C2. Width of the footing shall be 2m. The A.B.P on soil is 150kN/m<sup>2</sup>.

#### (**OR**)

4 Design a pile under a column transmitting an axil load of 500kN. The pile is to 14 Marks be driven to a hard stratum available at a depth of 8m. Use M20 concrete and Fe: 415 steel.

### (UNIT-III)

- 5 Describe the behaviour of the various elements of a counterfort retaining wall 14 Marks and write the design steps of this retaining wall.
  - (OR)
- 6 Design the counter fort retaining wall to suit the following data: 14 Marks Height of the wall above ground level = 6m; Density of soil: 16 kN/m<sup>3</sup>; Angle of repose: 33<sup>o</sup>; S.B.C. of soil: 160 kN/m<sup>2</sup>; Spacing of counterforts :3m c/c

### UNIT-IV

7 Design a rectangular water tank 5m x 4m with depth of storage 3m, resting on 14 Marks ground and whose walls are rigidly joined at vertical and horizontal edges. Assume M20 concrete and Fe415 grade steel. Sketch the details of reinforcement in the tank

#### (OR)

8 Design a conical dome roof for a room with base diameter as 10m. The live load 14 Marks due to wind, snow, etc may be taken as 2N/m. The height of the roof is 4m.

### UNIT-V

9 Describe in detail the design steps for the design of chimney. 14 Marks

(**OR**)

10 Design a circular silo of 12m height and 6m internal diameter to store cement of 14 Marks unit weight 15.5kN/m<sup>3</sup> and  $\phi = 25^{\circ}$ .

\$} \$} \$}

#### III B.Tech II Semester (SVEC14) Supplementary Examinations August - 2021

#### **TRANSPORTATION ENGINEERING - I**

#### [Civil Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1 a) What is highway alignment? What factors are to be given consideration while 7 Marks fixing the alignment? Also discuss the role of obligatory points in finalizing alignment.
  - b) Calculate the length of transition curve and the shift using the following data: 7 Marks Design speed = 65kmph; Radius of circular curve = 220m; Allowable rate of introduction of super elevation (pavement rotated about the center line)=1 in 150; Pavement width including extra widening =7.5 m

#### (OR)

2 a) List the Drawings and Reports to be prepared in Highway Projects. 7 Marks

- b) There is a horizontal highway curve of radius 400m and length 200m on 7 Marks highway. Compute the set-back distances required from the centre line on the inner of the curve so as to provide for:
  - i) Stopping sight distance of 90m.
  - ii) Safe overtaking sight distance of 300m.
  - iii) The distance between the centre lines of the road and the inner lane is 1.9m

### UNIT-II

**3** Discuss the construction of Road in water-Logged areas and explain the process of 14 Marks drainage of slopes and erosion control.

#### (OR)

4 The maximum quantity of water expected in one of the open longitudinal drains on 14 Marks clayey soil is 0.9 m<sup>3</sup>/sec. Design the cross section and longitudinal slope of trapezoidal drain assuming the bottom width of the trapezoidal section to be 1.0m and cross slope to be 1.0 vertical to 1.5 horizontal. The allowable velocity of flow in the drain is 1.2m/sec and Manning's roughness coefficient is 0.02.

### UNIT-III)

5 a) Explain design of Dowel bars along with equations.
b) Calculate the stresses at interior, edge and corner regions of a cement concrete 7 Marks pavement using Westergaard's stress equation. Use the following data: Wheel load, P=5100kg.
Modulus of elasticity of cement concrete, E=3.0×105 kg/cm<sup>2</sup> Pavement thickness, h=18cm Poisson's ratio of concrete, µ=0.15 Modulus of sub grade reaction ,K=6.0 kg/cm<sup>3</sup> Radius of contact area, a=15cm

#### (OR)

6 Elaborate IRC recommended procedure for design of rigid pavements.

# UNIT-IV

| 7  | a) | What are the materials used in Cement Concrete roads? Write the construction        | 7 Marks  |  |  |  |
|----|----|-------------------------------------------------------------------------------------|----------|--|--|--|
|    |    | procedure of CC Pavements.                                                          |          |  |  |  |
|    | b) | Write a brief note on PCC pavements.                                                | 7 Marks  |  |  |  |
|    |    | (OR)                                                                                |          |  |  |  |
| 8  |    | Write in detail with the help of neat sketches:                                     | 14 Marks |  |  |  |
|    |    | i) Compacting equipment of Asphalt Pavement.                                        |          |  |  |  |
|    |    | ii) Air Compressors.                                                                |          |  |  |  |
|    |    | UNIT-V                                                                              |          |  |  |  |
| 9  | a) | Explain the causes, effects and adjustment of creep. Write short notes on the       | 7 Marks  |  |  |  |
|    |    | following:                                                                          |          |  |  |  |
|    |    | i) Summit Curves and Valley Curves. ii) Cant deficiency.                            |          |  |  |  |
|    |    | iii) Points and Crossings. iv) Coning of wheels.                                    |          |  |  |  |
|    | b) | Discuss the theories related to creep. What are the function of various components  |          |  |  |  |
|    |    | like:                                                                               |          |  |  |  |
|    |    | i) rails. ii) sleepers. iii) ballast.                                               |          |  |  |  |
|    |    | (OR)                                                                                |          |  |  |  |
| 10 | a) | Elaborate factors affecting selection of site for Airport.                          |          |  |  |  |
|    | b) | What are the different types of horizontal and vertical curves? Derive the relation |          |  |  |  |

b) What are the different types of horizontal and vertical curves? Derive the relation 7 Marks between radius and versine of the curve.

| 3  | a)       | Derive the scattering matrix of E-plane Tee.                                                                                                                       | 7 Marks    |
|    | b)       | With a neat diagram, explain the dielectric and rotary wave phase shifters.                                                                                        | 7 Marks    |
|    |          | (OR)                                                                                                                                                               |            |
| 4  |          | Write short notes on the following.                                                                                                                                | 14 Marks   |
|    |          | 1) Directional coupler.                                                                                                                                            |            |
|    |          | 11) Wave guide windows.                                                                                                                                            |            |
|    |          | 111) Flap attenuator.                                                                                                                                              |            |
|    |          | (UNIT-III)                                                                                                                                                         |            |
| 5  | a)       | List the classification of microwave tubes. Differentiate between klystrons and TWT.                                                                               | 7 Marks    |
|    | b)       | Explain how oscillations are generated in reflex klystron. How to calculate its electronic admittance?                                                             | 7 Marks    |
|    |          | (OR)                                                                                                                                                               |            |
| 6  | a)       | Explain the principle of operation of two cavity Klystron with neat diagrams.                                                                                      | 7 Marks    |
|    | b)       | Derive an expression for the power output and efficiency of a two cavity Klystron.                                                                                 | 7 Marks    |
|    | -        |                                                                                                                                                                    |            |
| 7  | a)       | What are the salient features of TWT? How it is able to give large bandwidth                                                                                       | 6 Marks    |
| /  | a)<br>b) | A TWT operators at $f = 2$ GHz. The slow wave structure has a nitch angle of $5^{\circ}$                                                                           | 8 Marks    |
|    | 0)       | A Twi operates at $1 - 5$ GHz. The slow wave structure has a pitch angle of 5<br>and the attenuation constant is 3 Nn/m. Determine the propagation constant of the | o wiaiks   |
|    |          | travelling wave in the tube                                                                                                                                        |            |
|    |          | (OR)                                                                                                                                                               |            |
| 8  | a)       | Draw the structure of 8 cavity magnetron and explain its bunching process                                                                                          | 7 Marks    |
| 0  | h)       | Explain how cross field is used to generate oscillations in Magnetron                                                                                              | 7 Marks    |
|    | 0)       |                                                                                                                                                                    | , 1,101110 |
|    |          | UNIT-V                                                                                                                                                             |            |
| 9  | a)       | Explain the operation of Gunn diode along with its V-I characteristics.                                                                                            | 7 Marks    |
|    | b)       | Give the microwave bench setup to measure wavelength of a given signal.                                                                                            | 7 Marks    |
|    | ,        | (OR)                                                                                                                                                               |            |
| 10 | a)       | Explain the measurement procedure for Q-factor of a resonant cavity.                                                                                               | 7 Marks    |
|    | b)       | Explain in detail about RWH theory.                                                                                                                                | 7 Marks    |
|    |          |                                                                                                                                                                    |            |

SVEC-14

### SREE VIDYANIKETHAN ENGINEERING COLLEGE

Roll No.

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

#### III B.Tech II Semester (SVEC14) Supplementary Examinations August – 2021

#### VLSI DESIGN

#### [Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### **Answer One Ouestion from each Unit** All questions carry equal marks

### UNIT-I

- 1 With neat diagrams, explain the different steps in n-well fabrication of CMOS 8 Marks a) transistors.
  - Define threshold voltage of a MOS device and explain its significance. 6 Marks b) (**OR**)
- Illustrate an equation for I<sub>DS</sub> of an n-channel Enhancement MOSFET operating 2 a) 8 Marks in linear region.
  - Estimate  $g_m$  of the device for a PMOS transistor is operating in saturation 6 Marks **b**) region with the following parameters.

 $V_{GS} = -5V$ ;  $V_{to} = -1.2V$ ; W/L = 95;  $\mu_n C_{ox} = 95 \ \mu A/V^2$ 

### UNIT-II)

What are various limitations of scaling? 4 Marks 3 a) Design a symbolic layout for a complementary CMOS circuit that implements 10 Marks b) Y = (A+BC)'.

#### (**OR**)

Drive an expression for a nMOS inverter pair delay whose transistor size is 4:1. 8 Marks 4 a) Drive the expression for effective resistance and capacitance estimation using b) 6 Marks RC delay models.

### UNIT-III)

- 5 Explain the operation of 8 x 8 array multiplier with neat sketch 8 Marks a) With the help of the logical schematic, explain the working of a parity 6 Marks b) generator. (**OR**) Explain the CMOS system design based on the data path operators with a 6 a) 6 Marks suitable example. Discuss the working principle of booth multiplier with an example. b) 8 Marks UNIT-IV Design an OR-AND PLA that provides the following outputs. 7 8 Marks a) F1 = M2. M3. M5F2 = M0. M1. M4F3 = M1. M2. M6. M7 With neat diagram, explain the operation of synchronous counter. 6 Marks b) (**OR**) With neat sketch, explain CLB, IOB and programmable interconnects of FPGA 8 Marks 8 a) device.
  - Compare the features of PLA, PAL, CPLD and FPGAs. **b**)

# UNIT-V

- **9** a) Explain the various logic synthesis tools available for ASIC and FPGA-based 7 Marks design.
  - b) Explain various types of simulation.

7 Marks

### (OR)

- **10** a) What is need for testing? Explain the difference between testing and 6 Marks verification.
  - b) Explain the chip level test techniques. Explain the chip level test techniques. 8 Marks

Answer One Question from each Unit

All questions carry equal marks

# UNIT-I

| 1  | a)  | Find the Fourier transform of cosw <sub>0</sub> t and sinw <sub>0</sub> t. Compare their power spectral densities                                                  | 7 Marks  |
|----|-----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|    | b)  | A signal $x(t)$ is having a fourier Transform of $x(f)$ . Find the Fourier Transform of $dx(t)/dt$ .                                                               | 7 Marks  |
|    |     | (OR)                                                                                                                                                               |          |
| 2  | a)  | Explain the effect of PSD on Transfer function.                                                                                                                    | 7 Marks  |
|    | b)  | Show that $R_{12}(\tau) = R_{21}(-\tau)$ .                                                                                                                         | 7 Marks  |
|    |     | UNIT-II                                                                                                                                                            |          |
| 3  | a)  | Explain the operation of envelop detector with a neat circuit diagram.                                                                                             | 7 Marks  |
|    | b)  | Draw the spectrum of WBFM and explain the effect of modulation index on the spectrum.                                                                              | 7 Marks  |
|    |     | (OR)                                                                                                                                                               |          |
| 4  | a)  | Explain clearly about pre-emphasis and de-emphasis in FM wave.                                                                                                     | 7 Marks  |
|    | b)  | Explain the difference between DSB and SSB system.                                                                                                                 | 7 Marks  |
|    |     | (UNIT-III)                                                                                                                                                         |          |
| 5  | a)  | Explain the generation and detection of PPM signal.                                                                                                                | 8 Marks  |
|    | b)  | Assess the effect of aliasing in sampling process.                                                                                                                 | 6 Marks  |
|    |     | (OR)                                                                                                                                                               |          |
| 6  | a)  | Compare FDM and TDM. What is meant by an asynchronous multiplexing?                                                                                                | 7 Marks  |
|    | b)  | Explain the methods for demodulation of PAM signals.                                                                                                               | / Marks  |
|    |     | UNIT-IV                                                                                                                                                            |          |
| 7  | a)  | Derive the expression for signal to quantization noise ratio for PCM system that<br>employs linear quantization technique. Assume the input to the PCM system is a | 7 Marks  |
|    | 1 \ | sinusoidal signal.                                                                                                                                                 | 7 1 1    |
|    | D)  | Distinguish between QPSK and MSK.                                                                                                                                  | / Marks  |
| 8  | a)  | (UN)<br>Explain the delta modulation with block diagram. Discuss the disadvantages of                                                                              | 8 Marks  |
| 0  | a)  | delta modulation                                                                                                                                                   | 0 WIGINS |
|    | b)  | Discuss coherent, non coherent detection of ASK.                                                                                                                   | 6 Marks  |
|    | ,   | UNIT-V                                                                                                                                                             |          |
| 9  | a)  | Discuss the viterbi algorithm with example.                                                                                                                        | 7 Marks  |
|    | b)  | What is the use of syndrome? Draw the (n-k) syndrome calculation circuit for                                                                                       | 7 Marks  |
|    |     | (n,k) cyclic code? Explain.                                                                                                                                        |          |
|    |     | (OR)                                                                                                                                                               |          |
| 10 | a)  | Find a generator polynomial for a (7, 4 cyclic code and hence find the code word for[1000].                                                                        | 7 Marks  |
|    | h)  | Consider 5 messages with probabilities 0.22 0.34 0.17 0.19 0.08 are                                                                                                | 7 Marks  |

Consider 5 messages with probabilities 0.22, 0.34, 0.17, 0.19, 0.08 are / Marks D) transmitted. Estimate its coding efficiency using Huffman code.

#### **OBJECT ORIENTED PROGRAMMING**

#### [Electronics and Communication Engineering]

Time: 3 hours

7

**Answer One Question from each Unit** All questions carry equal marks

# UNIT-I

- Define constructor and explain rules for writing constructors and types of 1 a) 7 Marks constructors with an example.
  - Explain method overloading in JAVA and write a java program to overload print 7 Marks b) method to print different data type values.

#### (**OR**)

- Explain type conversation and type casting with examples. 7 Marks 2 a)
  - Write a java program to read six subject marks of a student and find the total and 7 Marks b) average of marks using arrays.

### UNIT-II)

Define inheritance and explain different kind of inheritance with a suitable 14 Marks 3 example.

#### (**OR**)

#### Explain super keyword in java with examples. 7 Marks 4 a) Describe abstract class with an example. 7 Marks b)

### UNIT-III)

Explain the life cycle of thread with a neat diagram. 14 Marks 5

(**OR**)

Specify the benefits of exception handling in java, write a java program to 6 14 Marks represent at least five exception handling concept.

### UNIT-IV

Explain life cycle of an applet. a) Explain Layout managers and write a java program to create a login page using 7 Marks b) Flow Layout?

#### (OR)

- Write a java applet program to design a login page and when user click sign in 8 7 Marks a) button the entered username and password should be displayed on the applet window.
  - Explain Checkbox Group component and methods, event associated with it. 7 Marks b)

# UNIT-V

#### Explain life cycle of a servlet. 9 a) Explain ServletContext. b)

### (**OR**)

- Explain ResultSet with an example jdbc program. **10** a)
  - Explain javax.servlet.ServletRequest and javax.servlet.ServletResponse. 7 Marks b)

Max. Marks: 70

#### MICROPROCESSORS AND MICROCONTROLLERS

[ Electrical and Electronics Engineering, Electronics and Communication Engineering,

### **Electronics and Instrumentation Engineering**]

Time: 3 hours

3

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

a) With a neat block diagram, explain the architecture of 8086 Microprocessor.
b) Write an assembly language program for 8086 microprocessor to reverse a given 7 Marks string: "Microprocessors for IT".

#### (**OR**)

- **2** a) Explain different addressing modes of 8086 microprocessor with suitable 8 Marks examples.
  - b) Explain the following string manipulation instructions of 8086 with suitable 6 Marks examples.

a) Compose Intel 8086 Interrupt supporting structure.
b) Interface 4KX8 EPROM and 8KX8 RAM to Intel 8086 starting at FF000H and 7 Marks 00000H respectively.

#### (OR)

- 4 a) Discuss in detail about the interrupts structure of 8086. 7 Marks
  - b) Draw and explain the timing diagram of memory READ operation of 8086 7 Marks microprocessor.

### UNIT-III

| 5  | a)<br>b) | Develop ALP to Initialize 8251A to send and receive characters on polled basis.<br>Differentiate synchronous to asynchronous serial transmission methods | 8 Marks<br>6 Marks |
|----|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|
|    | 0)       | (OR)                                                                                                                                                     | 0 10 10 10 10      |
| 6  | a)       | Reproduce 8255A control word formats and discuss the function of each bit in this format.                                                                | 7 Marks            |
|    | b)       | Show the setup to interface 8-channel ADC to Intel 8086.                                                                                                 | 7 Marks            |
|    |          | UNIT-IV                                                                                                                                                  |                    |
| 7  | a)       | List out the alternate functions of port3 in 8051 microcontroller.                                                                                       | 4 Marks            |
|    | b)       | Explain addressing modes supported by 8051 microcontroller with examples.                                                                                | 10 Marks           |
|    |          | (OR)                                                                                                                                                     |                    |
| 8  | a)       | Explain briefly the arithmetic and logical instructions of Intel 8051.                                                                                   | 7 Marks            |
|    | b)       | Explain the interfacing between 8051 and an external memory with suitable diagrams.                                                                      | 7 Marks            |
|    |          | UNIT-V                                                                                                                                                   |                    |
| 9  | a)       | Contrast Timer to Counter operation of 8051. Categorize different modes of operating Timers/Counters in 8051                                             | 7 Marks            |
|    | b)       | Develop ALP to create a square wave of 50% duty cycle on P1.5. Assume                                                                                    | 7 Marks            |
|    |          | XTAL=11.0592 MHz.                                                                                                                                        |                    |
|    |          | (OR)                                                                                                                                                     |                    |
| 10 | a)       | Discuss the interrupt structure of 8051. Mention the priority. Explain how least                                                                         | 9 Marks            |
|    |          | priority is made as highest priority.                                                                                                                    |                    |
|    | b)       | List out the steps involved in programming the 8051 to transfer data serially.                                                                           | 5 Marks            |
|    |          | (A) (A) (A)                                                                                                                                              |                    |

Max. Marks: 70

**Answer One Question from each Unit** All questions carry equal marks

# UNIT-I

- Derive an expression for radius of neutral axis for circular cross section. 4 Marks 1 a)
  - A load of 10kN is applied to a steel curved beam as shown in the figure. b) Compute the increase in distance between the points A and B due to the load. Assume  $G = 0.84 \times 105 \text{ N/mm}^2$ ,  $E = 2.10 \times 105 \text{ N/mm}^2$ .

W = 15 kN

### (OR)

Derive an expression for radius of neutral axis for Trapezoidal cross section. 2 a) The section of a crane hook is a rectangle 60mm x 40mm. The center of b) curvature of the section is at a distance of 80mm from the centroid of the section. A load of 15kN is acting through the center of curvature. Determine the maximum and minimum bending stresses induced in the hook.

### UNIT-II

What is journal bearing? Give its classifications. 3 a)

ISKN

A full journal bearing operating under steady load has the following b) specifications.

Journal diameter = 60mm; Bearing length = 60mm; Radial load on bearing = 2.8kN; Journal speed = 1020 r.p.m; Radial clearance = 0.05mm; Viscosity of oil = 80 x  $10^{-9}$  N-s/mm<sup>2</sup>; Density of oil = 860 kg/m<sup>3</sup>; Specific heat of oil = 1.76 kJ/kg.<sup>0</sup>C; Using Raimondi and Boyd data given in the table, determine:

- i) Somerfield number.
- ii) Power loss in friction.
- iii) Minimum film thickness.

### (**OR**)

- What are the advantages of antifriction bearings? 4 a)
  - A single-row deep groove ball bearing is subjected to an axial thrust load 11 Marks b) 1100 N and a radial load of 2100 N. Select the suitable bearing for an average life of 5 years with 8 hr/day.

### UNIT-III

- 5 Discuss the design procedure of spur gears. a)
  - Design a spur gear drive required to transmit 45kW at a pinion speed of 7 Marks b) 800 r.p.m. The velocity ratio is 3.5: 1. The teeth are  $20^{\circ}$  full-depth involute with 18 teeth on the pinion. Both the pinion and gear are made of steel with a maximum safe static stress of 180 MPa. Assume a safe stress of 40 MPa for the material of the shaft and key.

### (**OR**)

The following particulars of a single reduction spur gear are given: 6 Gear ratio = 10:1; Distance between centres = 660mm approximately; Pinion transmits 500kW at 1800 r.p.m.; Involute teeth of standard proportions (addendum = m) with pressure angle of  $22.5^{\circ}$ ; Permissible normal pressure between teeth = 175 N per mm of width.

- Find : i) The nearest standard module if no interference is to occur.
  - ii) The number of teeth on each wheel.
  - iii) The necessary width of the pinion.

number of coils. G = 80 GPa.

iv) The load on the bearings of the wheels due to power transmitted.

# UNIT-IV)

7 Derive the expression for the energy stored in helical springs of circular wire. 7 Marks a) A close-coiled helical spring whose free length when not compressed is 15cm, 7 Marks b) is required to absorb strain energy is equal to 50N-m when compressed with the coils in contact. The maximum shearing stress limited to 140 MPa. Assuming a mean coil diameter of 10cm, find the diameter of the steel wire required and the

### (**OR**)

- Derive the expression of the deflection of helical springs of circular wire. 8 a)
  - Design a helical compression spring for a maximum load of 1000 N for a b) deflection of 25mm using the value of spring index as 5. The maximum permissible shear stress for spring wire is 420 MPa and modulus of rigidity is 84kN/mm<sup>2</sup>. TakeWahl's factor,

 $K = \frac{4C-1}{4C-4} + \frac{0.615}{C}, \text{ where } C = \text{ springindex}.$ 

# UNIT-V

Design the Overhung Crankshaft. i) When the crank is at dead centre? 7 Marks ii) When the crank is at an angle of maximum twisting moment? 7 Marks (**OR**) State the function of the following for an internal combustion engine piston: 14 Marks i) Ribs. ii) Piston rings. iii) Piston skirt. iv) Piston pin.

For the following data, draw the network diagram, and then crash the activities 14 Marks to find the time cost trade-off points that company should want to consider. Start with the plan that has the longest duration.

| Activity | Preceding Activity | Time (weeks) |       | <u> </u> | (Rs.) |
|----------|--------------------|--------------|-------|----------|-------|
|          |                    | Normal       | Crash | Normal   | Crash |
| Α        | -                  | 2            | 1     | 20000    | 20700 |
| В        | -                  | 3            | 1     | 29000    | 33000 |
| С        | A                  | 2            | 1     | 25000    | 26100 |
| D        | B                  | 4            | 3     | 47000    | 47750 |
| E        | С                  | 4            | 2     | 55000    | 57000 |
| F        | C                  | 3            | 2     | 29000    | 29500 |
| G        | D, E               | 5            | 3     | 79000    | 80800 |
| Н        | F,G                | 2            | 1     | 15000    | 17900 |

# UNIT-IV

- 7 a) Explain about various types of customers in queuing theory.
  - b) In a railway yard goods train arrive at a rate of 30 trains/day. Assuming that the 7 inter-arrival time follows an exponential distribution and service time distribution is also exponential with an average 36 minutes. Calculate the following:
    - i) The average number of trains in the queue.
    - ii) The average waiting of a train in the system.
    - iii) The probability that the number of trains in the system exceeds 10.

#### (OR)

8 A tourist car has 25 taxis in operation. He keeps 3 drivers as reserve to attend 14 Marks the calls in case the scheduled driver reports sick. The probability distribution of sick drivers is as follows:

| Number of sick | 0   | 1    | 2    | 3    | 4    | 5    |  |  |
|----------------|-----|------|------|------|------|------|--|--|
| Probability    | 0.1 | 0.15 | 0.10 | 0.15 | 0.22 | 0.28 |  |  |

Simulate for 10 days and estimate.

- i) the utilization of reserve drivers.
- ii) probability that at least one taxi will be off the road due to
  - non-availability of a driver.

Take random numbers as 82, 89, 78, 24, 53, 61, 18, 45, 04, 23.

9 Find the solution of the following Game

| ·A   |                | <b>B</b> <sub>1</sub> | <b>B</b> <sub>2</sub> | <b>B</b> <sub>3</sub> |  |
|------|----------------|-----------------------|-----------------------|-----------------------|--|
| yeı  | A <sub>1</sub> | 15                    | 2                     | 3                     |  |
| Pla  | $A_2$          | 6                     | 5                     | 7                     |  |
|      | A <sub>3</sub> | -7                    | 4                     | 0                     |  |
| (OR) |                |                       |                       |                       |  |

10 What is decision making? Explain and differentiate this under the conditions of 14 Marks certainty and uncertainty.

#### HEAT TRANSFER

#### [Mechanical Engineering]

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1 Derive general 3-D heat conduction equation in Cartesian coordinate system. 14 Marks

#### (OR)

- **2** a) Derive the heat conduction equation in cylindrical co-ordinates using an 7 Marks elemental volume for a stationary isotropic solid.
  - b) A 3cm OD steam pipe is to be covered with two layers of insulation each having 7 Marks a thickness of 2.5cm. The average thermal conductivity of one insulation is 5 times that of the other. Determine the percentage decrease in heat transfer if better insulating material is next to pipe than it is the outer layer. Assume that the outside and inside temperatures of composite insulation are fixed.

- 3 a) A hallow sphere 10cm ID and 30cm OD of a material having thermal 7 Marks conductivity 50 W/mK is used as s container for a liquid chemical mixture. Its inner and outer surface temperatures are 300°C and 100°C respectively. Determine the heat flow rate through the sphere. Also estimate the temperature at a point a quarter of the way between the inner and outer surfaces.
  - b) Explain the following: 7 Marks i) Efficiency of fin. ii) Effectiveness of fin. (OR)

4 a) Define lumped heat analysis.

b) A stainless steel rod of outer diameter 1cm originally at a temperature of 320°C 10 Marks is suddenly immersed in a liquid at 120°C for which the convective heat transfer coefficient is 100W/m<sup>2</sup>K. Determine the time required for the rod to reach a temperature of 200°C.

### UNIT-III)

5 Air at 20°C flows over a flat plate having a uniform heat flux of 800W/m<sup>2</sup>. The 14 Marks flow velocity is 4m/s and the length of the plate is 1.2m. Determine the value of heat transfer coefficient and also the temperature of the plate as the air leaves the plate.

#### (**OR**)

6 a) Air at 4 x 10<sup>-4</sup> kg/s and 27°C enters a triangular duct that is 20mm on a side and 8 Marks 2m long. The duct surface is maintained at 100°C. Assuming fully developed flow through the duct, determine air outlet temperature.

1

b) Explain with neat sketch how the flow and temperature development in the 6 Marks entrance region of pipe differs among air, water and liquid metals.

Time: 3 hours

Max. Marks: 70

### UNIT-IV

- 7 a) State the different types of boiling and explain with neat sketch the different 8 Marks stages in pool boiling heat transfer.
  - b) An electric wire of 1.5mm diameter and 200mm long is laid horizontally and 6 Marks submerged in water at atmospheric pressure. The wire has an applied voltage of 16 V and carries a current of 40 amperes. Calculate:
    - i) the heat flux. ii) the excess temperature.

(**OR**)

- **8** a) Sketch the temperature variation in parallel flow and counter flow heat 5 Marks exchangers.
  - b) In a double pipe counter flow heat exchanger 10000 kg/h of an oil having a 9 Marks specific heat of 2095 J/kg K is cooled from 80°C to 50°C by 8000 kg/h of water entering at 25°C. Determine the heat exchanger area for an overall heat transfer coefficient of 300 W/m<sup>2</sup>K.

# UNIT-V

9 A truncated cone has top and bottom diameters of 20cm and 10cm respectively 14 Marks and a height of 10cm. Calculate the shape factor between the top surface and side (conical surface). Also the shape factor between the side and itself. The fraction of radiation leaving the top surface which is intercepted by the bottom surface is 0.12.

#### (OR)

| 10 | a) | Define emissivity, absorptivity and reflectivity.                            | 6 Marks |
|----|----|------------------------------------------------------------------------------|---------|
|    | b) | Two large parallel plates are kept at 1000°C and 500°C                       | 8 Marks |
|    |    | i) Determine heat radiated.                                                  |         |
|    |    | ii) If the respective emissivities are 0.7 and 0.4, determine heat radiated. |         |

# PRINCIPLES OF COMMUNICATION

### [Electronics and Instrumentation Engineering]

| Time | : 3 ho     | urs Max.                                                                                                                                | Marks: 70      |  |  |  |
|------|------------|-----------------------------------------------------------------------------------------------------------------------------------------|----------------|--|--|--|
|      |            | Answer One Question from each Unit                                                                                                      |                |  |  |  |
|      |            | All questions carry equal marks                                                                                                         |                |  |  |  |
|      |            | UNIT-I                                                                                                                                  |                |  |  |  |
| 1    | a)         | Plot the convolution of a function $f(t)$ with a pair of impulses.                                                                      | 7 Marks        |  |  |  |
|      | b)         | Find the Fourier transform of a signal $x(t) = te^{-at}u(t)$ .                                                                          | 7 Marks        |  |  |  |
|      |            | (OR)                                                                                                                                    |                |  |  |  |
| 2    | a)         | Find the Fourier transform of $x(t) = 2/1+t^2$ .                                                                                        | 7 Marks        |  |  |  |
|      | b)         | Explain Autocorrelation of a periodic waveform.                                                                                         | 7 Marks        |  |  |  |
|      |            | UNIT-II                                                                                                                                 |                |  |  |  |
| 3    | a)         | Explain clearly about pre-emphasis and de-emphasis in FM wave.                                                                          | 7 Marks        |  |  |  |
|      | b)         | Explain the difference between DSB and SSB system.                                                                                      | 7 Marks        |  |  |  |
|      |            | (OR)                                                                                                                                    | <b>5</b> ) ( 1 |  |  |  |
| 4    | a)         | With necessary equations, explain the generation of NBFM using narrow band                                                              | / Marks        |  |  |  |
|      | h)         | FM generator.<br>Explain the comparisons between FM and AM techniques                                                                   | 7 Marks        |  |  |  |
|      | 0)         | Explain the comparisons between I with the Pilvi techniques.                                                                            | / IVIUINS      |  |  |  |
|      |            | (UNIT-III)                                                                                                                              |                |  |  |  |
| 5    | a)         | Explain the differences between DM and ADM.                                                                                             | 7 Marks        |  |  |  |
|      | b)         | Explain the block diagram of FDM system.                                                                                                | 7 Marks        |  |  |  |
|      | ``         | (OR)                                                                                                                                    | 7 ) ( 1        |  |  |  |
| 6    | a)<br>b)   | Compare IDM and FDM.                                                                                                                    | 7 Marks        |  |  |  |
|      | 0)         | Explain the natural and nat tap sampling techniques.                                                                                    | / IVIAIKS      |  |  |  |
| _    |            | UNIT-IV                                                                                                                                 |                |  |  |  |
| 7    | a)         | Explain about PSK, QPSK.                                                                                                                | 7 Marks        |  |  |  |
|      | b)         | Explain the working of Coherent and non coherent PSK.                                                                                   | / Marks        |  |  |  |
| 8    | a)         | A bit stream 1011111011 is to be transmitted using ASK FSK and PSK                                                                      | 7 Marks        |  |  |  |
| 0    | u)         | techniques. Draw the waveforms for the above mentioned digital modulation                                                               |                |  |  |  |
|      | <b>b</b> ) | techniques.                                                                                                                             | 7 Mortra       |  |  |  |
|      | 0)         | using ADM.                                                                                                                              | / WAIKS        |  |  |  |
|      | UNIT-V     |                                                                                                                                         |                |  |  |  |
| 9    | a)         | Find a generator polynomial for a (7, 4 cyclic code and hence find the code word for [1000].                                            | 7 Marks        |  |  |  |
|      | b)         | Consider 5 messages with probabilities 0.22, 0.34, 0.17, 0.19, 0.08 are transmitted. Estimate its coding efficiency using Huffman code. | 7 Marks        |  |  |  |
| 10   | a)         | Define mutual information. State and prove the properties of it.                                                                        | 7 Marks        |  |  |  |
| -•   | b)         | Explain the concept of Huffman coding technique by taking an example.                                                                   | 7 Marks        |  |  |  |
|      | ,          |                                                                                                                                         |                |  |  |  |

#### III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

### MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY [Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

| Time | Max. Marks: 70 |                                                                                                           |     |          |
|------|----------------|-----------------------------------------------------------------------------------------------------------|-----|----------|
|      |                |                                                                                                           |     |          |
| 1.   | a)             | Define Demand and explain its determinants                                                                | CO1 | 7 Marks  |
|      | b)             | Discuss about types of Price Elasticity of Demand with examples                                           | CO1 | 7 Marks  |
|      | ,              | (OR)                                                                                                      |     |          |
| 2.   |                | What is Demand Forecasting? Explain about different methods of Demand Forecasting.                        | CO2 | 14 Marks |
|      |                | UNIT-II                                                                                                   |     |          |
| 3.   |                | Discuss the following:                                                                                    | CO1 | 14 Marks |
|      |                | i) Fixed costs <i>Vs.</i> Variable costs.                                                                 |     |          |
|      |                | ii) Separable Costs Vs. Joint costs.                                                                      |     |          |
|      |                | iii) Avoidable Costs Vs. Unavoidable costs.                                                               |     |          |
|      |                | (OR)                                                                                                      |     |          |
| 4.   |                | From the following particulars calculate the Break-Even Point in terms of both quantity and value:        | CO2 | 14 Marks |
|      |                | Production in units : 20,000                                                                              |     |          |
|      |                | Sales price : Rs.6/- per unit                                                                             |     |          |
|      |                | Variable costs : Rs.40,000/-                                                                              |     |          |

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

Max. Marks: 70

## UNIT-I )

1. "Success is a peak and cannot be reached in a leap". Discuss the CO1 14 Marks implications of the above statement.

#### (**OR**)

 a) Self-confidence is both a cause and consequence of Self-esteem. Explain. CO1 7 Marks
 b) Loyalty vs Self-esteem : a case study Lauren's first job after graduation from Santa Clara University was

working as a quality engineer with a highly respected technology company. She had to monitor the manufacturing process and make sure that all products met customer specifications. Just three months into her position, the company booked a very large deal with a strategic customer, helping establish the company's dominance in the industry.

Specifically, Lauren's company was designing a device that would be integrated into another company's product. The customer contracted out this work because they were experiencing rapid growth and cannot meet demand otherwise. They picked Lauren's company because of its good reputation and fast turnaround time. Lauren's role was to test the new device and make sure it met technical and environmental specifications, particularly functionality under extreme conditions, such as high humidity.

The test results showed that the products did not meet the quality standards agreed upon, but only by a very small margin. Her general manager instructed her to push it through anyway, stating that the risk of failure was not great enough to delay mass production. Moreover, the likelihood of the product ever being placed in such extreme situations was so small that the manager did not feel jeopardizing the contract was worth it.

Lauren spoke to her immediate boss, who worked under her general manager, and he also advocated pushing the product through to production. She was faced with the choice of ignoring company protocols or going against management. Sweeping the problem under the rug would require Lauren to sign off on a report that she knew to be fraudulent. She also knew that if she went to upper management her working relationships with her immediate bosses would be strained, maybe even preventing her success in the company. Not to mention, the company would have to delay production and possibly lose the contract. What should Lauren do?

|     |    | UNIT-II                                                                                                                                           |     |          |
|-----|----|---------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
| 3.  |    | List the advantages of positive thinking and the disadvantages of negative thinking.                                                              | CO1 | 14 Marks |
|     |    | (OR)                                                                                                                                              |     |          |
| 4.  | a) | "Negative thinking is the early stage of the chronic illness called pessimism." Discuss.                                                          | CO2 | 7 Marks  |
|     | b) | How do positive greetings, enthusiasm and a sense of humour help in the work place?                                                               | CO2 | 7 Marks  |
|     |    | UNIT-III)                                                                                                                                         |     |          |
| 5.  |    | List the ways employers can encourage and inspire critical thinking in<br>their employees.                                                        | CO2 | 14 Marks |
|     |    | (OR)                                                                                                                                              |     |          |
| 6.  | a) | Define Stress management.                                                                                                                         | CO1 | 7 Marks  |
|     | b) | How can stress affect productivity and success?                                                                                                   | CO3 | 7 Marks  |
|     |    | (UNIT-IV)                                                                                                                                         |     |          |
| 7.  |    | Discuss the six leadership qualities that a good leader should possess. <b>(OR)</b>                                                               | CO1 | 14 Marks |
| 8.  | a) | "A leader is one who knows the way, goes the way, and shows the way"<br>Elaborate how these leadership qualities contribute to workplace success. | CO4 | 7 Marks  |
|     | b) | Contrast the above with the team spirit of the rest of the members.                                                                               | CO4 | 7 Marks  |
| 9.  |    | "One should make sure of the rules of one's job by the end of the first day of employment." Justify the statement.                                | CO5 | 14 Marks |
|     |    | (OR)                                                                                                                                              |     |          |
| 10. | a) | Evaluate the purpose of form "W-4"                                                                                                                | CO5 | 7 Marks  |
|     | b) | What is Job description? Why should it be studied closely?                                                                                        | CO2 | 7 Marks  |

[Information Technology]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a)         | Explain the fundamental concepts of Computer Algorithms.                                                                                  | CO1      | 7 Marks              |
|-----|------------|-------------------------------------------------------------------------------------------------------------------------------------------|----------|----------------------|
|     | b)         | Describe the importance of Computational Problem Solving Characteristics in detail.                                                       | CO2      | 7 Marks              |
|     |            | (OR)                                                                                                                                      |          |                      |
| 2.  | a)         | Explain in detail about the variables and Identifiers in Python Programming.                                                              | CO1      | 7 Marks              |
|     | b)         | Mention any five operations in Python.                                                                                                    | CO1      | 3 Marks              |
|     | c)         | Write a simple program in python to print greatest number in given three numbers.                                                         | CO2      | 4 Marks              |
|     |            |                                                                                                                                           |          |                      |
| 3   | a)         | Explain "for" statement in python with an example                                                                                         | CO1      | 7 Marks              |
| 5.  | b)         | Write a python script to calculate sum of individual digits of a given number using "for".                                                | CO4      | 7 Marks              |
|     |            | (OR)                                                                                                                                      |          |                      |
| 4.  | a)         | Differentiate between the Selection Control and Iterative Control.                                                                        | CO2      | 7 Marks              |
|     | b)         | Illustrate the importance of implementation of Sets in Python.                                                                            | CO1      | 7 Marks              |
|     |            | (UNIT-III)                                                                                                                                |          |                      |
| 5.  | a)         | Write a short note on recursive problem solving. How it is differed from                                                                  | CO3      | 10 Marks             |
|     | <b>b</b> ) | Further the concernt of using toys files in detail with an relevant examples                                                              | cor      | 1 Mortes             |
|     | D)         | Explain the concept of using text files in detail with an relevant examples.                                                              | 02       | 4 Marks              |
| 6   | a)         | (UK)<br>Illustrate with a program, the concept of Cigorotte Use/Lung Concer-                                                              | CO4      | 0 Mortra             |
| 0.  | a)         | Correlation program with justification.                                                                                                   | 004      | 9 Marks              |
|     | b)         | Describe the String Processing in detail in python programming.                                                                           | CO1      | 5 Marks              |
|     |            | (UNIT-IV)                                                                                                                                 |          |                      |
| 7.  | a)         | Elucidate the turtle graphics, how are helpful in creating the graphics window? Justify the concept with exploration of relevant programs | CO3      | 7 Marks              |
|     | b)         | Develop a simple python program for bouncing ball using multiple turtles                                                                  | CO5      | 7 Marks              |
|     |            | (OB)                                                                                                                                      |          |                      |
| 8   |            | Illustrate the concept of Inheritance in detail? Explain the types of                                                                     | CO5      | 14 Marks             |
| 0.  |            | Inheritance with respective examples in python programming                                                                                | 005      | I I IVIUINS          |
|     |            |                                                                                                                                           |          |                      |
| 0   | -)         | Emploin in detail the Dividing second                                                                                                     | CO1      | 7 ) (                |
| 9.  | a)<br>b)   | Explain in detail the Binding events.                                                                                                     | CO1      | 7 Marks              |
|     | 0)         | Describe the usage of Tkinter extensions and structures.                                                                                  | 002      | / WIAIKS             |

Answer One Question from each Unit All questions carry equal marks

#### (UNIT-I)

|     |    |                                                                                                            | 994 |         |
|-----|----|------------------------------------------------------------------------------------------------------------|-----|---------|
| 1.  | a) | Illustrate the Data Models in detail.                                                                      | COI | 7 Marks |
|     | b) | Describe Schema and Instance with an example.                                                              | CO1 | 7 Marks |
|     |    | (OR)                                                                                                       |     |         |
| 2.  | a) | What are the different types of database users? Discuss the main activities of each.                       | CO1 | 7 Marks |
|     | b) | Explain the conceptual design with the ER model.                                                           | CO3 | 7 Marks |
|     |    | UNIT-II)                                                                                                   |     |         |
| 3.  | a) | Explain the Relational calculus in brief.                                                                  | CO4 | 7 Marks |
|     | b) | What is a View? Explain the SQL constructs to modify the structure of tables.                              | CO3 | 7 Marks |
|     |    | (OR)                                                                                                       |     |         |
| 4.  | a) | Explain the Integrity constraints over relations in detail.                                                | CO2 | 7 Marks |
|     | b) | Describe the various types of Join with an example.                                                        | CO3 | 7 Marks |
|     |    | UNIT-III)                                                                                                  |     |         |
| 5.  | a) | Illustrate the problems caused by redundancy. Give examples of insertion, updation and deletion anomalies. | CO2 | 7 Marks |
|     | b) | Describe 1NF, 2NF and 3NF with a suitable example.                                                         | CO2 | 7 Marks |
|     | ,  | (OR)                                                                                                       |     |         |
| 6.  | a) | Write about Set comparison operators.                                                                      | CO3 | 7 Marks |
|     | b) | Explain the Closure of a Set of FDs with an example.                                                       | CO2 | 7 Marks |
|     |    | (UNIT-IV)                                                                                                  |     |         |
| 7.  | a) | Describe the Implementation of Atomicity and Durability.                                                   | CO4 | 7 Marks |
|     | b) | Explain in detail the Validation based protocols.                                                          | CO3 | 7 Marks |
|     |    | (OR)                                                                                                       |     |         |
| 8.  | a) | Explain how granularities of locking affect the performance of concurrency control algorithm.              | CO3 | 7 Marks |
|     | b) | Describe timestamp ordering concurrency control techniques.                                                | CO3 | 7 Marks |
|     |    | UNIT-V                                                                                                     |     |         |
| 9.  | a) | Explain ISAM in detail.                                                                                    | CO5 | 7 Marks |
|     | b) | Explain in detail the tree structured indexing with neat sketch.                                           | CO5 | 7 Marks |
|     |    | (OR)                                                                                                       |     |         |
| 10. | a) | Write short note on comparison of File organizations.                                                      | CO5 | 7 Marks |
|     | b) | Apply the concept of B+ tree to implement multilevel indexing.                                             | CO6 | 7 Marks |
|     |    |                                                                                                            |     |         |

# [ Mechanical Engineering ]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

|     | UNIT-I |                                                                              |     |         |  |
|-----|--------|------------------------------------------------------------------------------|-----|---------|--|
| 1.  | a)     | Explain the iteration statements used in java.                               | CO1 | 9 Marks |  |
|     | b)     | Write short notes on garbage collection in java.                             | CO1 | 5 Marks |  |
|     |        | (OR)                                                                         |     |         |  |
| 2.  | a)     | Explain the java buzzwords in detail.                                        | CO1 | 8 Marks |  |
|     | b)     | Write a java program to print Fibonacci series using recursion.              | CO3 | 6 Marks |  |
|     |        | (UNIT-II)                                                                    |     |         |  |
| 3.  | a)     | Explain multi level inheritance. Demonstrate the execution order of          | CO3 | 9 Marks |  |
|     |        | constructors in multi level inheritance with a java code.                    |     |         |  |
|     | b)     | What are packages? Explain the benefits of creating programs using packages. | CO1 | 5 Marks |  |
|     |        | (OR)                                                                         |     |         |  |
| 4.  | a)     | Does java supports multiple inheritance? Justify.                            | CO1 | 4Marks  |  |
|     | b)     | Differentiate between abstract classes and interfaces.                       | CO1 | 4Marks  |  |
|     | c)     | Write a java program on extending interface to other interface.              | CO3 | 6Marks  |  |
|     |        | UNIT-III)                                                                    |     |         |  |
| 5.  | a)     | Explain exception handling mechanism in detail.                              | CO1 | 8 Marks |  |
|     | b)     | Explain methods used in inter-thread communication.                          | CO1 | 6 Marks |  |
|     |        | (OR)                                                                         |     |         |  |
| 6.  | a)     | Differentiate between exceptions, runtime errors and compile time errors     | CO1 | 5 Marks |  |
|     | b)     | Write a java program to demonstrate multithreading using Runnable interface. | CO3 | 9 Marks |  |
|     |        | (UNIT-IV)                                                                    |     |         |  |
| 7.  | a)     | Demonstrate Linked List class with its methods.                              | CO3 | 7 Marks |  |
|     | b)     | Explain in detail about applet architecture and applet skeleton.             | CO4 | 7 Marks |  |
|     |        | (OR)                                                                         |     |         |  |
| 8.  | a)     | Write an applet program reading parameters from a html file and display.     | CO3 | 8 Marks |  |
|     | b)     | Illustrate about different layout managers in AWT.                           | CO4 | 6 Marks |  |
|     |        | UNIT-V                                                                       |     |         |  |
| 9.  | a)     | Explain in detail about various event classes.                               | CO1 | 7 Marks |  |
|     | b)     | Explain about any three classes and interfaces in javax. Servlet package.    | CO1 | 7 Marks |  |
|     |        | (OR)                                                                         |     |         |  |
| 10. | a)     | Explain in detail about adapter classes.                                     | CO1 | 5 Marks |  |
|     | b)     | Write a servlet program which displays "Welcome to Servlets" on execution.   | CO3 | 9 Marks |  |

## Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  |    | Explain in detail about the Emerging areas in Mechatronics.                                                                                               | CO1         | 14 Marks |
|-----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------|
|     |    | (OR)                                                                                                                                                      |             |          |
| 2.  | a) | Discuss a measurement system and its constituent elements.                                                                                                | CO1         | 7 Marks  |
|     | b) | What are the major advantages of using Microprocessor based controllers? Explain with example.                                                            | CO2         | 7 Marks  |
|     |    |                                                                                                                                                           |             |          |
| 3.  | a) | Explain Dynamic characteristics of transducer and their effect on performance of transducer.                                                              | CO1,<br>CO3 | 7 Marks  |
|     | b) | Explain the components of hydraulic activation system with neat sketch<br>and block diagram. Distinguish between Servo valve and Direct Control<br>valve. | CO2         | 7 Marks  |
|     |    | (OR)                                                                                                                                                      |             |          |
| 4.  | a) | Explain the working and types of a stepper motor. In detail.                                                                                              | CO2         | 7 Marks  |
|     | b) | Describe the use of Eddy Current and Capacitance for proximity sensing.                                                                                   | CO2         | 7 Marks  |
|     |    | UNIT-III                                                                                                                                                  |             |          |
| 5.  | a) | What is Data acquisition? Explain with a block diagram, the DAQ System.                                                                                   | CO3         | 7 Marks  |
|     | b) | Explain in detail Analogue to Digital Conversion process.                                                                                                 | CO3         | 7 Marks  |
|     |    | (OR)                                                                                                                                                      |             |          |
| 6.  | a) | What do you mean by the time Filtering and filter? How are filters classified?                                                                            | CO3         | 7 Marks  |
|     | b) | Explain the working of op-Amp as Sample and hold circuit.                                                                                                 | CO3         | 7 Marks  |
|     |    | UNIT-IV                                                                                                                                                   |             |          |
| 7.  | a) | What are the limitations of a two - step (on - off) control and in what situation is such a control system commonly used?                                 | CO4         | 7 Marks  |
|     | b) | Explain in detail adaptive control system.                                                                                                                | CO4         | 7 Marks  |
|     |    | (OR)                                                                                                                                                      |             |          |
| 8.  | a) | Discuss in detail about PI and PD mode electronic controllers.                                                                                            | CO4         | 7 Marks  |
|     | b) | Compare the control system performance for the system with a Derivative and Integral controller.                                                          | CO4         | 7 Marks  |
|     |    | UNIT-V                                                                                                                                                    |             |          |
| 9.  |    | Explain the various stages in Mechatronics design approach and state how it differs from the traditional approach.                                        | CO5,<br>CO6 | 14 Marks |
|     |    | (OR)                                                                                                                                                      |             |          |
| 10. |    | Device a pick and place robot system explain the various Mechatronics elements used in the design.                                                        | CO5         | 14 Marks |

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. |    | During the communication, how various layers of OSI model exchange information to establish a connection? Justify this with a suitable diagram. | CO1 | 14 Marks |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
| 2. | a) | Explain how the information gets passed from one layer to the next in the TCP/IP model.                                                         | CO2 | 7 Marks  |
|    | b) | Compare network topologies with their performance indicator.                                                                                    | CO2 | 7 Marks  |
| 3  | a) | Mention the Collision Free Protocols with an example                                                                                            | CO2 | 7 Marks  |
|    | b) | Solve the One-bit Sliding window Protocol disadvantage in detail and specify how it can overcome.                                               | CO2 | 7 Marks  |
|    |    | (OR)                                                                                                                                            |     |          |
| 4. | a) | A bit string, 011110111110111110, needs to be transmitted at the data link layer. What is the string transmitted after bit stuffing?            | CO2 | 4 Marks  |
|    | b) | Explain stop and wait protocol in both noisy and noiseless channel when:<br>i) the data is lost. ii) ACK is lost. iii) ACK is delayed.          | CO2 | 10 Marks |
|    |    | (UNIT-III)                                                                                                                                      |     |          |
| 5. | a) | Explain steps involved in Link State Routing.                                                                                                   | CO3 | 7 Marks  |
|    | b) | What is congestion, why congestion occurs, how congestion control is performed by leaky bucket algorithm?                                       | CO3 | 7 Marks  |
|    |    | (OR)                                                                                                                                            |     |          |
| 6. | a) | Describe Bellman-Ford Algorithm. What are the disadvantages of Bellman Ford Algorithm?                                                          | CO3 | 7 Marks  |
|    | b) | Consider the network shown in below.                                                                                                            | CO3 | 7 Marks  |
|    | ,  |                                                                                                                                                 |     |          |

Which uses distance vector routing? You are router C. You have just received the following distance vectors:

E

from B: (4, 0, 8, 13, 7, 2)

from D: (17, 11, 6, 0, 8, 10)

from E: (8, 6, 2, 10, 0, 4)

Your distances to B, D and E are 7, 4 and 6, respectively. What is your new routing table (include the distance and next hop for each destination)?

## UNIT-IV

7. Compare the TCP header and UDP header. List the field in the TCP CO2 14 Marks header that is missing from UDP header. Give the reason for their absence.

#### (OR)

- 8. a) How is congestion controlled? Explain in detail about congestion control CO3 8 Marks techniques in transport layer.
  - b) What is meant by data encapsulation? Explain data encapsulation in CO3 6 Marks TCP/IP.

## UNIT-V

9. Infer the steps involved in DNS for resource records identification. CO2 14 Marks (OR)
10. a) Examine and discuss Electronic Mail and its services. CO3 7 Marks CO3 7 Marks
b) Explain in detail about HTTP. CO3 7 Marks

### III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

#### WEB TECHNOLOGIES

[Computer Science and Systems Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Write the HTML code for creating multi-line text box with necessary                                                                                                                                      | CO1 | 7 Marks            |
|-----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|--------------------|
|     | b) | Explain how basic and nested tables are created using HTML.                                                                                                                                              | CO2 | 7 Marks            |
| 2.  | a) | Describe HTML text formatting tags with example.                                                                                                                                                         | CO4 | 7 Marks            |
|     | b) | Design a web page using HTML with image, navigation.                                                                                                                                                     | CO2 | 7 Marks            |
| 3   | a) | Explain different types of control statements in Java script with example                                                                                                                                | CO5 | 7 Marks            |
| 5.  | b) | Define CSS. Explain inline, internal, external and embedded style sheets with examples.                                                                                                                  | CO3 | 7 Marks<br>7 Marks |
|     |    | (OR)                                                                                                                                                                                                     |     |                    |
| 4.  | a) | Write a Java script to display a given number in words.                                                                                                                                                  | CO4 | 7 Marks            |
|     | b) | Design a web page to convert Indian rupees to Foreign currency. Read the<br>Indian rupees through input dialog and select foreign currency to which<br>Indian rupees are converted using drop down menu. | CO6 | 7 Marks            |
|     |    | (UNIT-III)                                                                                                                                                                                               |     |                    |
| 5.  |    | Develop a mobile optimized website for displaying the images using responsive classes.                                                                                                                   | CO5 | 14 Marks           |
|     |    | (OR)                                                                                                                                                                                                     |     |                    |
| 6.  | a) | Explain jQuery Selectors. Give some examples.                                                                                                                                                            | CO4 | 7 Marks            |
|     | b) | Explain HTML structure for Bootstrap with example.                                                                                                                                                       | CO3 | 7 Marks            |
|     |    | (UNIT-IV)                                                                                                                                                                                                |     |                    |
| 7.  | a) | Demonstrate the implementation of Object cloning in PHP.                                                                                                                                                 | CO5 | 7 Marks            |
|     | b) | Explain Control structures in PHP with example.                                                                                                                                                          | CO3 | 7 Marks            |
|     |    | (OR)                                                                                                                                                                                                     |     |                    |
| 8.  | a) | Develop a PHP code to implement multi-level inheritance.                                                                                                                                                 | CO3 | 8 Marks            |
|     | b) | Explain the predefined and user defined functions in PHP with an example.                                                                                                                                | CO4 | 6 Marks            |
|     |    |                                                                                                                                                                                                          |     |                    |
| 9.  | a) | Write a PHP code to validate the form consisting of a username, password and email fields.                                                                                                               | CO3 | 7 Marks            |
|     | b) | Define a prepared statement. Explain in detail with the suitable program. (OR)                                                                                                                           | CO3 | 7 Marks            |
| 10. | a) | Write a PHP script to retrieve the data from MySQL database.                                                                                                                                             | CO4 | 7 Marks            |
|     | b) | Design a web page to store the Bio-data form data in the database using PHP. (Note: Bio-data page contains the fields Name, E-mail, Address, Phone number and photo).                                    | CO6 | 7 Marks            |

# **OBJECT ORIENTED PROGRAMMING**

[Electrical and Electronics Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I How to create a two dimensional array in Java? Write a program to print 1. a) CO1 5 Marks unit matrix of size 5x5. What is meant by parameterized constructor? Explain with an example. CO1 9 Marks b) (**OR**) 2. Illustrate how methods are overloaded in Java with an example. CO3 7 Marks a) List any five methods of string class with its syntax and example on each CO1 7 Marks b) of it. UNIT-II ) Differentiate between this and super keyword in Java. CO3 8 Marks 3. a) b) What is an abstract class? Write an example how abstract classes are CO2 6 Marks created and accessed. (**OR**) 4. Why java does not support multiple inheritances? How to solve this CO3. 8 Marks a) problem? CO6 Elaborate the process of creating a user defined package. CO3 6 Marks b) (UNIT-III) 5. Illustrate the need of finally keyword in programming languages. a) CO1 6 Marks Discuss about how a user defined exception is created in Java. b) CO1, 8 Marks CO<sub>2</sub> (OR)Describe how priorities will be used in invoking multiple threads created 6. CO1 7 Marks a) through Runnable interface. Sketch the life cycle of a Thread and discuss about each of its state. b) CO1, 7 Marks CO2 UNIT-IV ) 7. What is the need of Collection Classes in Java? Discuss about LinkedList CO<sub>2</sub> 6 Marks a) class with an example. Illustrate how TreeSet will be used in Collections with an example. CO4 8 Marks b) (OR)8. How do you pass parameters to an Applet in Java? CO4 7 Marks a) Discuss about various layout managers available in AWT. CO4 7 Marks b) UNIT-V With an example, discuss how MouseListener interface is implemented. 9. a) CO4 8 Marks Elaborate the need of delegation event model of Java Language. CO4 6 Marks b) (**OR**) 10. Create a Servlet to read Login Credentials of a user and display that CO6 9 Marks a) information in it. Discuss about life cycle of a Servlet with its skeleton. CO5, 5 Marks b) CO6

## FOUNDATION ENGINEERING

#### [Civil Engineering]

Time: 3 hours

Max. Marks: 70

CO<sub>2</sub>

6 Marks

## **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

- 1. Discuss in brief about various methods of boring. CO1 8 Marks a) Explain about Seismic refraction method with an aid of neat sketch. CO1 6 Marks b) (**OR**) 2. With an aid of neat sketch, discuss about static cone penetration test. Give CO1 7 Marks a) out correlations between cone resistance  $(q_c)$  and SPT number (N). Explain in brief about various design features effecting sample CO1 7 Marks b) disturbance. UNIT-II 3. Differentiate between Rankine's earth pressure theory and Coulomb's CO1 a) 8 Marks earth pressure theory. A retaining wall of height 7m retains a backfill with horizontal surface. CO2 6 Marks b) The backfill was having  $\phi = 30^{\circ}$ ,  $\gamma_{sat} = 21 \text{kN/m}^3$  and  $\gamma = 17 \text{ kN/m}^3$ . The water table is at a depth of 4m from backfill surface. Calculate the total passive earth pressure acting on retaining wall. (OR)4. Explain in brief about stability considerations of gravity retaining wall CO1 7 Marks a) with a neat sketch. A retaining wall with a smooth vertical back, retains a clayey backfill CO<sub>2</sub> 7 Marks b) with  $c = 17 \text{ kN/m}^2$ ,  $\phi = 27^\circ$ ,  $\gamma = 20 \text{ kN/m}^3$ . Calculate the total active thrust
  - acting on retaining wall assuming that tension crack may develop to the full theoretical depth.

## UNIT-III)

- 5. What are the various types of slope failure? Explain them briefly. a)
  - CO<sub>2</sub> 8 Marks b) An infinite slope in sandy soil is inclined at 20° to the horizontal has  $\gamma = 18 \text{ kN/m}^3$ ,  $\gamma_{\text{sat}} = 21 \text{ kN/m}^3$ ,  $\phi = 35^\circ$ . A hard layer exists 5m below and parallel to the surface. What is the factor of safety against slip when: (i) the slope has negligible water in it, (ii) the slope submerged with steady seepage parallel to the surface up to a height of 3m from failure surface?

### (**OR**)

- Explain the stability analysis for finite slopes using Bishop's method. CO2 6. 8 Marks a)
  - **b**) An embankment constructed with an inclination of 35<sup>°</sup> and its height is CO2 6 Marks 15m. The angle of shearing resistance is 15<sup>0</sup>, cohesion intercept is 20 kN/m<sup>2</sup> and unit weight of soil is 18.0 kN/m<sup>3</sup>. If the embankment was fully submerged, then find the factor of safety with respect to cohesion. Use Taylors stability number.

For  $i = 35^{\circ}$  and  $\phi = 15^{\circ}$ , take Sn = 0.06.

## UNIT-IV

- 7. a) Discuss about the effect of water table on bearing capacities of shallow CO1 8 Marks foundation.
  - b) Determine the allowable bearing pressure of a shallow foundation of 2m CO2 6 Marks width with its base at 1.5m depth. The water table is at a depth of 2m from ground surface. The corrected N value obtained from SPT test at depth of foundation is 25. Use Teng's formulae and assume allowable settlement as 40mm.

### (OR)

- 8. a) What are the assumptions of Terzaghi's bearing capacity theory? CO1 6 Marks
  - b) A square footing of size  $3m \times 3m$  rests on a c-  $\phi$  soil having c =  $12kN/m^2$ , CO2 8 Marks  $\phi = 30^{\circ}$  and  $\gamma = 18 kN/m^3$ . The base of the footing is at a depth of 2.5 m below ground surface. Calculate the safe bearing capacity of the soil for following conditions:
    - i) When water table is at a depth of 3m from ground surface.
    - ii) When water table is at ground surface.

(For  $\phi = 30^{\circ}$ , N<sub>c</sub> = 37.2, N<sub>q</sub> = 22.5 and N<sub>y</sub> = 19.7) Take F.S = 3.

## UNIT-V

- 9. a) What is a pile foundation? What are the conditions where a pile CO1 8 Marks foundation is more suitable than a shallow foundation?
  - b) Discuss in brief about various formulae used for determining capacity of CO1 6 Marks driven piles.

#### (OR)

- 10. a) Explain the following rectifying methods of tilts and shifts of well CO1 6 Marks foundation.
  - i) Controlled dredging.
  - ii) Pushing the well.
  - iii) Water jetting.
  - b) What are the various types of caissons? Give out their advantages and CO1 8 Marks disadvantages.

# HIGHWAY AND TRAFFIC ENGINEERING

## [Civil Engineering]

Max. Marks: 70

#### **Answer One Ouestion from each Unit** All questions carry equal marks

## UNIT-I

| 1. | a) | Explain briefly the following.                                                                             | CO1 | 6 Marks |
|----|----|------------------------------------------------------------------------------------------------------------|-----|---------|
|    |    | i) IRC.                                                                                                    |     |         |
|    |    | ii) Central Road Fund.                                                                                     |     |         |
|    | b) | Explain various factors controlling highway alignment with a neat sketch.                                  | CO1 | 8 Marks |
|    |    | (OR)                                                                                                       |     |         |
| 2. | a) | What is super elevation? Derive an expression for super elevation with a neat sketch.                      | CO3 | 7 Marks |
|    | b) | Define over taking sight distance. Derive an expression for over taking sight distance with a neat sketch. | CO3 | 7 Marks |
|    |    | UNIT-II)                                                                                                   |     |         |
| 3. | a) | List the desirable properties of bitumen and mention various tests performed on bituminous materials.      | CO2 | 7 Marks |
|    | b) | Explain crushing test on aggregate with a neat sketch                                                      | CO2 | 7 Marks |
|    |    | (OR)                                                                                                       |     |         |
| 4. | a) | Differentiate between flexible and rigid pavement.                                                         | CO3 | 7 Marks |
|    | b) | Write equations for load, temperature and frictional stresses in rigid pavement.                           | CO3 | 7 Marks |
|    |    | UNIT-III)                                                                                                  |     |         |
| 5. | a) | List out elements involved in traffic operation. Discuss the primary functions of traffic engineering.     | CO5 | 7 Marks |
|    | b) | Explain various static vehicle characteristics affecting road design and traffic performance.              | CO4 | 7 Marks |
|    |    | (OR)                                                                                                       |     |         |
|    |    |                                                                                                            |     |         |

- 6. A vehicle travelling with a speed of 45 kmph was stopped within CO4 6 Marks a) 1.7 seconds after application of brakes. Find the average skid resistance.
  - Discuss fundamental diagrams of traffic flow. CO6 8 Marks b)

Time: 3 hours

## UNIT-IV

- 7. a) Enlist method of traffic volume study and explain mechanical counters CO6 7 Marks method with advantages.
  - b) Using the spot speed data given in the following table, determine: CO8 7 Marks
    - i) Modal Speed. ii) Median Speed.
    - iii) Speed limit for Traffic Regulations.
    - iv) Speed to be used in geometric design.

| Speed Range (kmph) | No. of Vehicles observed |
|--------------------|--------------------------|
| 21-25              | 2                        |
| 26-30              | 6                        |
| 31-35              | 18                       |
| 36-40              | 25                       |
| 41-45              | 19                       |
| 46-50              | 16                       |
| 51-55              | 17                       |
| 56-60              | 12                       |
| 61-65              | 7                        |
| 66-70              | 4                        |
| 71-75              | 3                        |
| 76-80              | 1                        |
|                    | (OR)                     |

8. a) Enlist purposes of travel time and delay study. Also explain fixed delay CO7 7 Marks and operational delay.

b) Define practical capacity. Briefly discuss various factor affecting the CO7 7 Marks practical capacity of road

### UNIT-V

- 9. a) Explain collision and condition diagram. List preventive measure for road CO6 7 Marks accidents.
  - b) Explain various methods of on-street parking with neat sketch. CO7 7 Marks

### (OR)

- 10. a) Draw a neat sketch of rotary intersection. Show all design components CO7 7 Marks and explain about them in brief.
  - b) List various traffic signs as per IRC and draw neat sketch of following CO7 7 Marks signs.

i) No parking. ii) Hair pin Band. iii) Give way.

\$} {} {}

### SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

#### STEEL STRUCTURES [Civil Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

 Design a double cover plate butt joint using M24 bolts of product grade C CO3 14 Marks and property class 5.6 to connect two flats of size 350mm x 16mm for maximum efficiency. Assume that one shear plane intercepts the threads of the bolts. The yield and ultimate tensile strengths of the flats are 250 MPa and 410 MPa, respectively.

#### (OR)

2. Determine the size of end fillets to connect two plates with cross sections CO2 14 Marks of 125 x 8mm and 125 x 12mm which are subjected to a tension of 100kN at working load. The ultimate strength of the plates,  $f_u = 410$  MPa.

## UNIT-II)

 Design a laterally unsupported beam for the following data: CO3 14 Marks Effective span: 4 m; Maximum bending moment: 550 kNm; Maximum shear force: 200 kN; Steel of grade: Fe 410.

#### (OR)

4. Design a simply supported beam of span 5m carrying a reinforced CO3 14 Marks concrete floor capable of providing lateral restraint to the top compression flange. The uniform distributed load of 60kN/m. Assume Fe 410 grade steel.

## UNIT-III)

5. Determine the tension capacity of 150 x 90 x 8mm angles in Fe 410 steel CO2 14 Marks assuming:

i) Connection through the longer leg by two rows of M20 bolts and

ii) Connection through shorter leg by a single row of M24 bolts.

### (OR)

6. A double angle discontinuous strut consists of two ISA 75 x 75 x 6 CO3 14 Marks connected back to back to both sides of the 10mm thick gusset plate with two bolts. The length of the strut is 4.5m. Calculate the safe load carrying capacity of the section.

## UNIT-IV

7. Design a batten system for a column of 10m long to carry a factored axial CO4 14 Marks load of 1000kN. The column is restrained in position but not in direction at both ends. Assume that the two channels back to back.

### (OR)

#### 1

8. Design a suitable slab base for a column section ISHB 200 at 365.9 N/m CO2 14 Marks supporting an axial load of 400kN. The base plate is to rest on a concrete pedestal of M-20 grade.

## UNIT-V

9. As per IS 875 (Part 3), determine the basic wind pressure to be considered CO6 14 Marks for a shed in the outskirts of Bangalore.

## Given data: Structure: General purpose with probable life of

50 years.

Terrain category is I, Building Class B.

Eye board height: 11 m.

Topography: Plain area.

#### (OR)

10. Explain the following terms as per IS 875 (Part 3):

| i) Basic wind speed.                           | CO7 | 3 Marks |
|------------------------------------------------|-----|---------|
| ii) Design wind speed.                         | CO7 | 3 Marks |
| iii) Risk coefficient.                         | CO7 | 3 Marks |
| iv) Terrain, Height and structure size factor. | CO7 | 3 Marks |
| v) Topography factor.                          | CO7 | 2 Marks |

# FIRE ENGINEEERING

[Civil Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  |    | Write a detailed note on shock waves, auto ignition and boiling liquid expanding vapour explosion.          | CO1  | 14 Marks |
|-----|----|-------------------------------------------------------------------------------------------------------------|------|----------|
|     |    | (OR)                                                                                                        |      |          |
| 2.  | a) | Describe the theory of combustion and explosion.                                                            | CO1  | 8 Marks  |
|     | b) | Discuss briefly about toxicity of products of combustion.                                                   | CO1  | 6 Marks  |
|     |    | UNIT-II                                                                                                     |      |          |
| 3.  |    | Discuss in detail about types of fire extinguishers, fire stoppers, alarm and detection systems.            | CO2  | 14 Marks |
|     |    | (OR)                                                                                                        |      |          |
| 4.  | a) | Explain the concept of fire triangle.                                                                       | CO1  | 6 Marks  |
|     | b) | Explain the various classes of fires.                                                                       | CO2  | 8 Marks  |
|     |    | UNIT-III                                                                                                    |      |          |
| 5.  | a) | Explain about active and passive fire protection systems.                                                   | CO2  | 7 Marks  |
|     | b) | Write a note on portable extinguishers.                                                                     | CO5  | 7 Marks  |
|     |    | (OR)                                                                                                        |      |          |
| 6.  |    | Explain the selection criteria, reliability, maintenance and evaluation of various fire protection systems. | CO3  | 14 Marks |
|     |    | UNIT-IV                                                                                                     |      |          |
| 7.  |    | Discuss the significance of structural fire protection and structural integrity.                            | CO2  | 14 Marks |
|     |    | (OR)                                                                                                        |      |          |
| 8.  |    | Explain the fire safety requirements for high rise buildings.                                               | CO7  | 14 Marks |
|     |    | UNIT-V                                                                                                      |      |          |
| 9.  |    | Explain the explosion relief of large enclosures, explosion venting and inert gases.                        | CO9  | 14 Marks |
|     |    | (OR)                                                                                                        |      |          |
| 10. |    | Discuss in detail about explosion protection, flame arresters, isolation and venting.                       | CO10 | 14 Marks |
|     |    |                                                                                                             |      |          |

## ADVANCED STRUCTURAL ANALYSIS

## [Civil Engineering]

Max. Marks: 70

CO1

7 Marks

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Explain in detail.
  - i) Effects of yielding of supports in arches. CO2
  - ii) Rib shortening and temperature changes in the arches.
  - b) Find the horizontal thrust of a two hinged arch subjected to concentrated CO4 7 Marks load as shown below.

(**OR**)

2. A three hinged parabolic arch is shown in figure, determine the bending CO2 14 Marks moment, normal thrust and radial shear at quarter span and draw bending CO4 moment.

3. Analyse the below portal frame by moment distribution method. CO4 14 Marks

## 4. Analyze the following portal frame by portal method. Draw BMD CO4 14 Marks

1

5. Analyze the given two span continuous beam by flexibility method.

CO3 14 Marks

6. For the simply supported beam shown below, develop the flexibility CO2 14 Marks matrix with reference to the coordinates as specified.

7. Analyse the given continuous beam by stiffness matrix method and CO2 14 Marks sketch BMD.

(OR)

8. Calculate the support moments for the given continuous beam by support CO3 14 Marks B sinks by 2.5mm. Draw BMD. Take E=200kN/mm<sup>2</sup>, I=3.5x10<sup>7</sup> mm<sup>4</sup>

9. A curved beam is in the form of a full continuous circle in plan with a CO2 14 Marks radius of 3m and is supported continuously on five supports. The beam carries a uniformly distributed load of 30kN/m length, inclusive of its own weight. Determine the bending moment, twisting moment and shear force at salient locations. Also plot the B.M., T.M. and S.F. diagrams for one span.

### (OR)

10. A semi-circular beam is simply supported on three equally spaced CO2 14 Marks columns. Show that the maximum bending moment and maximum twisting moment are equal to 0.429wR<sup>2</sup> and 0.1045wR<sup>2</sup> respectively.

## **GROUNDWATER DEVELOPMENT AND MANAGEMENT**

[Civil Engineering]

Time: 3 hours

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

## ( UNIT-I )

| 1. | a) | Define Darcy law. Derive the expression for the Darcy law. List the | CO1 | 8 Marks |
|----|----|---------------------------------------------------------------------|-----|---------|
|    |    | different assumptions and discuss it validity.                      |     |         |
|    | b) | Briefly explain Aquifer, Aquiclude, Aquitard and Aquifuge.          | CO1 | 6 Marks |

#### (**OR**)

- 2. Discuss the terms specific yield, specific retention, porosity and their CO1 8 Marks a) relationship.
  - With the help of neat sketch, explain in detail the vertical distribution of CO1 6 Marks b) ground water.

## UNIT-II

- Derive the expression for discharge "Q" through a well, fully penetrating 3. a) CO<sub>2</sub> 8 Marks a confined aquifer or artesian aquifer.
  - An unconfined aguifer has a thickness of 40m. A fully penetrating 20cm b) CO2 6 Marks diameter well in this aquifer, is used to pumped water at a rate of 35 lit/sec. the drawdown measured in two observation wells located at distances of 20m and 120m from the well are 7.0m and 1.0m respectively. Determine the average hydraulic conductivity of the aquifer.

#### (**OR**)

- Derive an expression for discharge from a well fully penetrating a CO2 4. 7 Marks a) unconfined aquifer under steady state flow. Assume if any data required.
  - An unconfined aquifer has a thickness of 30m. A fully penetrating 20cm CO2 7 Marks b) diameter well in this aquifer is pumped at a rate of 35 lit/sec. The drawdown measured in two observation wells located at distances of 10m and 100m from the well are 7.5m and 0.5m respectively. Determine the average hydraulic conductivity of the aquifer and transmissibility of the unconfined aquifer. Assume if any data required.

## UNIT-III

| 5. | a) | Briefly discuss saline water intrusion. List the different reason for the | CO4 | 8 Marks |
|----|----|---------------------------------------------------------------------------|-----|---------|
|    |    | saline water intrusion.                                                   |     |         |
|    | b) | List the different disadvantages of saline water intrusion in aquifers.   | CO4 | 6 Marks |
|    |    | (OR)                                                                      |     |         |
| 6  | a) | Explain Glover method                                                     | CO4 | 5 Marks |

Explain Glover method. CO<sub>4</sub> a) b) A well screen 1m in length is located 15m below the groundwater table in CO6 9 Marks an unconfined aquifer having permeability of 20 m/day. The fresh water and sea water interface exist at a depth of 36m below the water table depth. What is the maximum discharge that can be sustained from the well without causing the salt to intrude into the well?

5 Marks

## UNIT-IV

7. List and briefly explain different techniques used for ground water CO3 14 Marks recharge methods in detail with neat sketches.

#### (OR)

- 8. a) List and explain the indirect techniques used of the ground water CO3 7 Marks recharge.
  - b) Describe any one combined techniques of subsurface and surface used for CO3 7 Marks recharge of ground water.

## UNIT-V

9. Briefly discuss geophysical logging and resistivity logging sub-surface CO5 14 Marks methods of ground water investigation.

#### (OR)

- 10. a) Explain the principle of subsurface investigation using electrical CO5 8 Marks resistivity methods for exploration of ground water.
  - b) Explain the basic principle of seismic refraction method. CO5 6 Marks

| Metals      | 3                    | 7          |

#### (OR)

2. Investigate the importance of role of NGOs and legislation in effective CO2 14 Marks Solid Waste Management.

### (UNIT-II)

- 3. a) Discuss how the waste is collected, removed and transported. CO2 7 Marks
  - b) Write the importance of color containers and materials used for storage CO5 7 Marks containers.

#### (OR)

4. How the recyclable materials are separate at source? Discuss briefly CO2 14 Marks processing of solid waste at residential dwellings.

## (UNIT-III)

- 5. a) Investigate the important factors to be considered in preparation of CO4 7 Marks collection routes.
  - b) Explain the different options available for collection of waste under CO2 7 Marks Indian condition.

#### (**OR**)

6. Explain in detail about selection of location, operation and maintenance CO9 14 Marks of transfer station.

## UNIT-IV

7. a) Write a detailed note on "composting". CO5 7 Marks
b) What is incineration? Explain the advantages and disadvantages of CO2 7 Marks incineration of refuse.

## (OR)

8. Explain in detail about any two techniques used for processing of solid CO5 14 Marks waste.

## UNIT-V

| 9.  | a) | Write a brief note on management rules in Bio-medical waste.                                                         | CO6 | 7 Marks |
|-----|----|----------------------------------------------------------------------------------------------------------------------|-----|---------|
|     | b) | What is pyrolysis and explain process with neat sketch.                                                              | CO5 | 7 Marks |
|     |    | (OR)                                                                                                                 |     |         |
| 10. | a) | What are the factors that are considered for selecting a land filling site in terms of environmental sustainability? | CO7 | 7 Marks |
|     | b) | Write the adverse effects of a land filling leachate and list approximate Control measures.                          | CO5 | 7 Marks |

Answer One Question from each Unit All questions carry equal marks

## 

| 1. | a) | Derive the fundamental torque equation of an electrical drive.                                                                                                                                      | CO1 | 8 Marks |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | A drive has the following parameters:                                                                                                                                                               | CO1 | 6 Marks |
|    |    | T = 150 - 0.1 N, N-m, where N is the speed in r.p.m.                                                                                                                                                |     |         |
|    |    | Load torque $TI = 100$ , N-m, Initially the drive operating in steady-state.<br>The characteristics of the load torque are changed to $TI = -100$ . Calculate initial and final equilibrium speeds. |     |         |
|    |    | (OR)                                                                                                                                                                                                |     |         |
| 2. | a) | Explain Modes of operation of electrical drives.                                                                                                                                                    | CO2 | 7 Marks |
|    | b) | Draw and explain the closed loop speed control schemes in multi motor drives.                                                                                                                       | CO1 | 7 Marks |

## UNIT-II

A 230V, 960 r.p.m, 20A separately excited dc motor has armature CO3 14 Marks resistance and inductance of 1.2Ω and 50mH respectively. Motor is controlled by a single phase half controlled rectifier with source voltage of 230V, 50Hz. Identify the modes and calculate speeds for:
(i) α =60<sup>o</sup> and torque =1000 N-m. (ii) α =120<sup>o</sup> and torque =1000 N-m.

#### (OR)

4. Analyze speed torque relation and characteristics of separately excited CO2 14 Marks DC motor fed by a 3-phase fully controlled converter. Draw the relevant waveforms.

## UNIT-III)

5. Describe operation of chopper fed to separately excited DC motor under CO2 14 Marks motoring and regenerative braking control with circuit and waveforms.

### (OR)

- 6. A 230 V, 1200 r.p.m, 15 A separately excited motor has an armature CO4 14 Marks resistance of  $1.2\Omega$ . Motor is operated under dynamic braking with chopper control; braking resistance has a value of  $20\Omega$ .
  - i) Calculate duty ratio of chopper for motor speed of 1000 r.p.m and braking torque equal to 1.5 times rated torque.
  - ii) What will be the motor speed for duty ratio of 0.5 and motor torque equal to its rated torque.

Time: 3 hours

## UNIT-IV

- 7. a) With necessary block diagram, explain operation of variable frequency CO2 10 Marks control of 3-phase Induction motor.
  - b) List out difference between CSI and VSI fed drives. Justify. CO4 4 Marks

#### (OR)

- 8. A 440 V, 50Hz, 970 r.p.m, 6 pole Y connected three phase wound rotor CO5 14 Marks induction motor has following parameters referred to stator. Rs=0.1 Ω, Rr'=0.08 Ω, Xs=0.3 Ω, Xr'=0.4 Ω. Stator to rotor turns ratio is 2. Motor speed is controlled by Static Scherbius Drive. Drive is designed for a speed range of 25% below the synchronous speed. Max value of firing angle is 165°. DC link inductor resistance is 0.01 Ω.
  Calculate:

  i) Transformer turns ratio.
  ii) Torque for a speed of 780 r.p.m at α=140°
  - iii) Firing angle for half the rated motor torque and speed of 800 r.p.m.

## UNIT-V

- 9. a) Analyze the operation of self-controlled synchronous motor with Voltage CO2 10 Marks source inverter.
  - b) Name the different modes employed to achieve variable frequency control CO1 4 Marks in synchronous motors.

### (OR)

- 10. a) When can a synchronous motor be load commutated? CO1 4 Marks
  - b) List out and explain the drive circuits for stepper motors, depending on CO5 10 Marks load torque capability how drive circuit selected.

## **POWER SYSTEM ANALYSIS**

#### [Electrical and Electronics Engineering]

Max. Marks: 70

Time: 3 hours

## **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

Form Y bus for the network by direct inspection method: 1. CO4 7 Marks a) Element 5-2 1-2 2 - 35-1 1 - 43-6 4-6 Positive 0.04 0.04 0.02 0.07 sequence 0.05 0.03 0.10 reactance Define the per unit value of a quantity. How will you change the base b) CO1 7 Marks impedance from one set of base values to another set?

(**OR**)

- 2. Describe the per phase generator model with required diagrams. 7 Marks CO<sub>2</sub> a) b) 7 Marks
  - With neat diagrams, explain the transformer model used for per phase CO2 analysis.

- 3. Illustrate the modifications necessary in the  $Z_{BUS}$  when a mutually coupled CO5 7 Marks a) element is removed.
  - Using the building algorithm construct  $Z_{BUS}$  for the system shown in figure. CO4 7 Marks b) Choose 4 as reference bus.

- 4. Explain the procedure for modification of  $Z_{BUS}$  when a line is added, which 7 Marks a) CO5 has no mutual reactance.
  - Form bus impedance matrix for the data given below. b)

Bus code Element number Self-impedance From bus - To bus 1 2-3 0.6 p.u. 2 1-3 0.5 p.u. 3 1 - 20.4 p.u.

1

CO3 7 Marks

## UNIT-III)

5. Explain the step by step computational procedure for the Gauss-Seidel CO5 14 Marks method of load flow studies when the system contains all types of buses.

#### (OR)

- 6. a) What are the assumptions made in reducing Newton Raphson method to CO1 7 Marks decoupled method for power flow solution?
  - b) Derive the static load flow equations of n-Bus system. CO2 7 Marks

## (UNIT-IV)

- 7. a) With the help of a detailed flow chart, explain how a symmetrical fault can CO2 7 Marks be analysed using  $Z_{BUS}$ .
  - b) What are the various types of faults? Discuss their frequency of occurrence CO3 7 Marks and severity. Find the fault current when an L-L-G fault occurs at the terminals of an unloaded generator.

#### (OR)

- 8. a) Illustrate the procedure for making short circuit studies of a large power CO1 7 Marks system.
  - b) A 3-phase, 25 MVA, 11 KV alternator has internal reactance of 6%. Find CO3 7 Marks the external reactance per phase to be connected in series with the alternator so that steady state short circuit current does not exceed six times the full load current.

## UNIT-V

9. a) Discuss the various factors affecting the transient stability of the system. CO1 7 Marks
b) Explain the equal area criterion. How it is useful for predicting system CO4 7 Marks stability?

#### (**OR**)

a) Write short notes on assumptions made in deducing equal area criterion. CO1 7 Marks
b) Define steady state stability and explain the methods for improving steady CO5 7 Marks state stability.

DESIGN AND ESTIMATION OF ELECTRICAL SYSTEMS

[Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

## Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. |    | Estimate the quantity of material required along the cost for conduit (PVC) wiring in one room of dimensions $20 \times 8 \times 5$ meters. The following are to be points to be fitted and draw the layout of the given system.  | CO3,<br>CO4,<br>CO7 | 14 Marks |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|----------|
|    |    | <ul> <li>i) Lights points - 8 Nos x 20W</li> <li>ii) Fan Points - 6 Nos x 60W</li> <li>iii) Plug Points - 3 point socket type - 3 x 100W</li> </ul>                                                                               |                     |          |
|    |    | iv) AC - 2 x 1.5 Ton (appox. rating assume 2kW).                                                                                                                                                                                  |                     |          |
| ~  | `` |                                                                                                                                                                                                                                   | 001                 | 7 ) ( 1  |
| 2. | a) | write the general rules to be considered for wiring systems and also<br>explain the estimation of Conductor size and selection cables for a<br>particular load (Assume necessary data for explanation)                            | CO1,<br>CO3         | / Marks  |
|    | b) | Explain tin brief different types of domestic and commercial wiring systems. List out all merits and demerits.                                                                                                                    | CO1,<br>CO3         | 7 Marks  |
|    |    | UNIT-II)                                                                                                                                                                                                                          |                     |          |
| 3. | a) | An overhead 3-phase, 415V distributor to be laid along route 450m long.<br>The end supports are terminal poles with 60m span in between. Prepare<br>list for laying distributor. Consider the following data:                     | CO1,<br>CO3         | 8 Marks  |
|    |    | Conductor: ACSR 6/1 x 2.11mm for phase, neutral and street light Earth wire, GI wire –6 SWG , 1.92kg /10m weight. L.T cable: 4 core, 60mm <sup>2</sup> , 1100V grade. Distance of first terminal pole from the substation is 10m. |                     |          |
|    | b) | Discuss the methods of installation of service line and overhead line.                                                                                                                                                            | CO3                 | 6 Marks  |
|    |    | (OR)                                                                                                                                                                                                                              |                     |          |
| 4. | a) | Find the material required for 1 phase overhead service line of a house<br>located 10 mts away from the pole, with following loads:<br>i) Lighting and other loads = 2.5 kW,                                                      | CO1,<br>CO3         | 7 Marks  |
|    |    | ii) AC Load: 10kW (Assume safety factor = 1.66)                                                                                                                                                                                   |                     |          |
|    | b) | Explain the procedure for estimation of H.T lines for distribution line.                                                                                                                                                          | CO1,<br>CO3         | 7 Marks  |
|    |    | (UNIT-III)                                                                                                                                                                                                                        |                     |          |
| 5. | a) | A 15HP 415V 3-Phase, 50Kz squirrel cage induction motor is to be                                                                                                                                                                  | CO3.                | 8 Marks  |

installed in a pump house, of dimensions given in below Fig. Show its CO4 wiring diagram layout and estimate the quantity of materials required and its cost.

b) Describe the selection of switch gears for 33kV/11kV substation and draw substation lay out.

CO2, 6 Marks CO3, CO6

|     |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                   |                             |         |
|-----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|---------|
| 6.  | a) | Explain in brief selection of distribution architecture.                                                                                                                                                                                                                                                                                                                                               | CO2,<br>CO3                 | 6 Marks |
|     | b) | Explain the how you will calculate full load current and decide size of the conductor size for the following motor.<br>i) DC Motor.                                                                                                                                                                                                                                                                    | CO3,<br>CO4                 | 8 Marks |
|     |    | ii) 3-phase induction motor (Assumerating of motor for explanation for both the cases).                                                                                                                                                                                                                                                                                                                |                             |         |
| 7.  | a) | A small area of 10 meters in diameter is to be illuminated by a lamp<br>suspended at a height of 4.5 meters over the center of area. A lamp having<br>an efficacy of 30 lumens per watt is fitted with a reflector which directs<br>the light output only over the surface to be illuminated. If the utilization<br>coefficient is 0.66 and illumination 850 lux, determine the wattage of the<br>lamp | CO1                         | 7 Marks |
|     | b) | Discuss inverse square law and cosine law of Illumination.                                                                                                                                                                                                                                                                                                                                             | CO1                         | 7 Marks |
| 8.  | a) | A hall of dimensions $40m \times 15m \times 5m$ is to be provided with a general illumination of 150 lumens/m <sup>2</sup> . Taking a coefficient of utilization of 0.6 and depreciation factor of 1.42, determine the number of fluorescent tubes required, their spacing, mounting height and total wattage. Taking luminous efficiency of florescent tube as 40 lumens/watt for 40W tube.           | CO1                         | 7 Marks |
|     | b) | The candle power of a lamp is 120. A plane surface is placed at a distance of 2.5m from this lamp. Calculate the illumination on the surface when it:<br>i) normal. ii) inclined to 45 <sup>0</sup> .                                                                                                                                                                                                  | CO1                         | 7 Marks |
|     |    | UNIT-V                                                                                                                                                                                                                                                                                                                                                                                                 |                             |         |
| 9.  | a) | A piece of an insulating material is to be heated by dielectric heating. The size of the piece is $10m \times 10 cm \times 3cm$ . A frequency of 20 MHz is used and the power absorbed is 450W. If the material has a relative permittivity of 6 and a power factor of 0.05, calculated the voltage necessary for heating and current that follows in the material.                                    | CO1,<br>CO4,<br>CO5,<br>CO7 | 8 Marks |
|     | b) | Explain the classifications of resistance welding. What are its advantages and disadvantages?                                                                                                                                                                                                                                                                                                          | CO1,<br>CO5                 | 6 Marks |
| 10  | a) | (UR)<br>A 50 kW single phase 220V resistance over employees sirgular                                                                                                                                                                                                                                                                                                                                   | CO1                         | 8 Marks |
| 10. | a) | A 50 kW single phase, 220V resistance oven employees circular<br>nichrome wire for its heating element. If the wire temperature is not to<br>exceed 1500°C and the temperature of the charge is to be 450°C, calculate<br>the size and length of wire required. Assume $e = 0.95$ and radiation<br>efficiency K = 0.65. What would be the temperature of wire when the<br>charge is cold (25°C)?       | CO4,<br>CO7                 | 8 Marks |
|     | b) | Explain the reasons for considering the electric heating as superior compared to other types of heating.                                                                                                                                                                                                                                                                                               | CO1                         | 6 Marks |

## DIGITAL SIGNAL PROCESSING FOR ELECTRICAL ENGINEERS

[Electrical and Electronics Engineering]

| Time: 3 hours |    |                                                                                                                                                                                                         | Max. Marks: 70 |            |
|---------------|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|------------|
|               |    | Answer One Question from each Unit<br>All questions carry equal marks                                                                                                                                   |                |            |
|               |    |                                                                                                                                                                                                         |                |            |
| 1.            | a) | Two signals $x(n)$ and $h(n)$ given as, $x(n) = \{1,2,3,4,5\}$ and<br>$h(n)=\{5,4,3,2,1\}$ .<br>Determine the following signals.<br>i) $p(n)=2+x(n)$<br>ii) $q(n) = x(n)h(n)$<br>iii) $r(n) = 1.5 h(n)$ | CO1            | 6 Marks    |
|               | b) | Solve the linear difference equation                                                                                                                                                                    | CO1            | 8 Marks    |
|               |    | $y(n) - 0.5 y(n-1) + 0.06 y(n-2) = 2 (0.1)^n$ with $y(-1) = 1$ and $y(-2) = 0$ .                                                                                                                        |                |            |
|               |    | (OR)                                                                                                                                                                                                    |                |            |
| 2.            | a) | Find the z-transform of the signal $x(n) = n(0.1)^n u(n)$ .                                                                                                                                             | CO1            | 7 Marks    |
|               | b) | Compare analog signal processing and digital signal processing.                                                                                                                                         | CO1            | 7 Marks    |
|               |    | UNIT-II                                                                                                                                                                                                 |                |            |
| 3.            | a) | Consider a finite length sequence $x(n) = \delta(n) + 2 \delta(n-5)$ . Find the 10-point DFT.                                                                                                           | CO2,<br>CO4    | 4 Marks    |
|               | b) | State and prove the circular frequency shifting and conjugate symmetry properties of DFT.                                                                                                               | CO2            | 10 Marks   |
|               |    | (OR)                                                                                                                                                                                                    |                |            |
| 4.            | a) | Discuss the properties of Radix-2 decimation in time algorithm. Find 8- point DFT of sequence. $x(n)=1, 0 \le n \le 7$ . Using DIT-FFT algorithm.                                                       | CO2,<br>CO4    | 10 Marks   |
|               | b) | Find the circular convolution of                                                                                                                                                                        | CO4            | 4 Marks    |
|               |    | $x(n) = \{1,3,4,-2,-5\} \text{ and } h(n) = \{1,2,-2,-5\}.$                                                                                                                                             |                |            |
|               |    | (UNIT-III)                                                                                                                                                                                              |                |            |
| 5.            | a) | Obtain direct form-I realization of the LTI system governed by the difference equation.<br>Y(n) = 1.5v(n-1) - 0.6v(n-2) - 0.2v(n-3) + r(n) - 1.5r(n-1)                                                  | CO3            | 8 Marks    |
|               | b) | Compare analog and digital filters                                                                                                                                                                      | CO1            | 6 Marks    |
|               | 0) | (OR)                                                                                                                                                                                                    | 001            | 0 10100110 |
| 6.            | a) | Design an IIR low-pass Butterworth filter using bilinear transformation for the following speciation's.                                                                                                 | CO3            | 9 Marks    |
|               |    | passband: $0.8 \le  H(e^{j\omega})  \le 1,  \omega  \le 0.2\pi$                                                                                                                                         |                |            |
|               |    | stopband: $ H(e^{j\omega})  \le 0.2, \ 0.6\pi \le  \omega  \le \pi$                                                                                                                                     |                |            |
|               | b) | What is Warping Effect? What is its effect on magnitude and phase response?                                                                                                                             | CO3            | 5 Marks    |

## UNIT-IV

7. Design an ideal differentiator with frequency response CO3 14 Marks  $H(e^{j\omega}) = j\omega$ ,  $-\pi \le \omega \le \pi$  using Hamming window for *N*=8 and also plot the magnitude response.

### (OR)

8. Design an ideal FIR LPF of length N=11 with cutoff frequency of 1KHz CO3 14 Marks and sampling frequency of 4KHz using Fourier series method. Find the non causal FIR filter impulse response and system function. Moreover find the causal FIR filter system function and frequency response.

## UNIT-V

- 9. a) How the memory is allocated in LF2407 DSP controller? Also give the CO5 8 Marks types of physical memory.
  b) List the common parts that are included in peripheral set of LF2407 CO5 (Marks)
  - b) List the components that are included in peripheral set of LF2407. CO5 6 Marks (OR)
- 10. Explain the control of stepper motor using LF2407 DSP controller in full CO5, 14 Marks step and half step modes. CO6

#### III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

#### **ELECTRICAL MACHINE DESIGN**

[Electrical and Electronics Engineering]

Time: 3 hours

Answer One Ouestion from each Unit

Max. Marks: 70

#### nswer One Question from each Uni All questions carry equal marks

## UNIT-I

- a) Illustrate the Faraday's Law of electro-magnetic induction and Justify the CO1 7 Marks "Change in flux linkages can be caused in three ways".
   b) What are the major considerations accounted for the good design of CO1 7 Marks
  - b) What are the major considerations accounted for the good design of CO1 7 Marks electrical machines?

#### (OR)

- 2. a) Discuss the design factors effecting temperature rise in electrical CO1 7 Marks machines during operation.
  - b) Calculate the specific electric and magnetic loading of 100HP, 300V, CO2 7 Marks 3-Phase, 50Hz, 8-pole, star connected, flame proof induction motor having stator core length of 0.5m and stator bore of 0.66m. Turns / phase are 286. Assume full load efficiency as 0.938 and pf as 0.86.

## UNIT-II

3. a) Explain the procedure of designing a shunt field coil of DC machine. CO1 7 Marks

b) Determine the main dimensions, number of poles and length of air gap of CO3 7 Marks a 600kW, 500V, 900 r.p.m DC generator. Assume average gap density as 0.6 Wb/m<sup>2</sup> and ampare conductors per meter as 35000. The ratio of pole arc to pole pitch is 0.75 and the efficiency as 91%.

The design limitations are:

Peripheral speed not to exceed 40 m/sec

Armature mmf/pole not to exceed 7500

The mmf required for the air gap is 50% of armature mmf.

Kg=1.15.

## (OR)

4. a) i) Prove that in a DC motor torque is proportional to the volume of active CO2 7 Marks material used.

ii) "Insulation decides the rating of the machines" - justify the statement.

b) Show that the output of a DC generator with a single coil is given by CO2 7 Marks ((0.03E'V.qA) / (P.N)) kW. where E' is the average voltage between adjacent commutator segments, V is the peripheral velocity in meters/sec, q is the specific electric loading in ac/motor, P is the number of poles and N is the speed in rpm.

## UNIT-III

- 5. a) Derive an expression for the leakage reactance of a transformer with CO1 7 Marks primary and secondary cylindrical coils of equal length.
  - b) Calculate the approximate overall dimensions for a 200 kVA, CO5 7 Marks 6600/440V, 50Hz, 3-Phase core type transformer. The following data may be assumed:
    EMF per turn = 10V, Maximum flux density = 1.3 Wb/m<sup>2</sup>. Current density = 2.5 A/mm<sup>2</sup>. Window space factor = 0.3, overall height overall width. Stacking factor = 0.9. Use a three stepped core. For a three stepped core, take a = 0.9d, Ai = 0.6d<sup>2</sup>, with usual notations.

(OR)

- 6. a) Obtain an expression for the no load current of a single and three phase CO4 9 Marks transformer.
  - b) Write an elaborated note on cooling of transformers. CO4 5 Marks

## UNIT-IV

- 7. a) Derive the power and voltage output equation of a three phase induction CO1 6 Marks motor.
  - b) A 15kW, 400V, 3-Phase, 50Hz, 6-pole induction motor has a diameter of CO3 8 Marks 30cm and core length of 12cm. The number of stator slots is 72 with 20 conductors per slot. The stator is delta connected. Calculate the magnetising current per phase if the length of the air gap is 0.55 mm. Assume gap contraction factor as 1.2. Assume, mmf required for the iron parts is 35% of the air mmf coil span = 11 slots.

#### (OR)

- 8. a) Explain the phenomenon of Cogging and Crawling of a 3-phase squirrel CO5 7 Marks cage induction motor. What are the rules used to avoid cogging and crawling on the torque speed characteristic of the motor?
  - b) A 90kW, 500V, 50Hz, 3-phase, 8-pole induction motor has a stator CO5 7 Marks connected stator winding kept in 63 slots with 6 conductors per slot. If the slip ring voltage on open circuit is to be 400V, find a suitable rotor winding stating:
    - i) Number of slots.
    - ii) Number of conductors per slot.
    - iii) Coil span.
    - iv) Slipping voltage on open circuit.
    - v) Full load current per phase in rotor.

Assume efficiency = 0.9, Power factor = 0.86.

## UNIT-V

- 9. a) Define short circuit ratio of a synchronous machine. What are its effects CO1 7 Marks on the machine performance?
  - b) Determine the main dimensions for a 10kVA, 3-phase, 400/230V, star CO2 7 Marks connected 1500 r.p.m, 50Hz, alternator. Assume  $B_{avg} = 0.45T$ , q = 22000 ac/m, winding factor = 0.96. Ratio of core length to pole pitch = 1. Also determine the number of slots and conductors per slot.

### (OR)

- 10. a) Derive the output equation of a synchronous machine and mention the CO1 7 Marks salient features
  - b) The field coils of a salient pole alternator are wound with a single layer CO2 7 Marks winding of bare copper strip 30mm deep, with separating insulation of 0.15mm thick. Determine suitable winding length, number of turns and thickness of conductor to develop an mmf of 12000 amp turns with a potential difference of 5V per coil and with a loss of 1200 Wb/m<sup>2</sup> of total coil surface. The mean length of turn is 1.2m. The resistivity of copper is  $0.021\Omega/m$  and mm<sup>2</sup>.

## HVDC TRANSMISSION

#### [Electrical and Electronics Engineering]

Time: 3 hours

2.

b)

Max. Marks: 70

**Answer One Ouestion from each Unit** All questions carry equal marks

## UNIT-I

- 1. Write a short note about the different types of DC links with neat CO1 8 Marks a) sketches.
  - Write a brief summary of technical advantages of DC over AC CO6 6 Marks b) transmission.

#### (**OR**)

- Classify the inherent problems associated with HVDC transmission. CO<sub>2</sub> 6 Marks a)
- Illustrate the applications of HVDC transmission system in detail. 8 Marks b) CO<sub>2</sub>

### UNIT-II)

Draw the schematic diagram of a 6-pulse Gratez's circuit and explain its 3. CO2 14 Marks operation with overlap angle less than 60° and represent relevant voltage and current waveforms.

#### (**OR**)

Analyze the converter bridge characteristics both in rectifier and inverter CO5 4. 14 Marks modes of operation.

## UNIT-III)

Explain about the two basic firing schemes in HVDC system and list out CO5 5. 14 Marks the drawbacks of EPC scheme.

#### (**OR**)

Draw the diagram of basic power controller and explain about power flow CO2 6. 14 Marks controller in detail.

## UNIT-IV

- What are non-characteristic harmonics? Explain the effect of pulse CO1 7. 7 Marks a) number on harmonics.
  - Briefly explain about the design criteria of AC filters. CO3 7 Marks

#### (**OR**)

- Mention different types of filters? Explain about design of a high pass 8. a) CO3 10 Marks filter with the relevant equations. b)
  - Explain about protection of filters. CO3 4 Marks

## UNIT-V

9. Write down the causes of over voltages in a converter station explain each CO2 14 Marks cause in detail.

### (**OR**)

Explain about the phenomena of protection against over currents in detail. 10. CO1 8 Marks a) Write a short note about arrangement a DC breaker with diagram. b) CO1 6 Marks

#### **ADVANCED CONTROL SYSTEMS** [Electrical and Electronics Engineering]

Time: 3 hours

**Answer One Question from each Unit** All questions carry equal marks

Max. Marks: 70

## UNIT-I

1. What is lag compensator? Explain the procedure for the design of lag CO3 14 Marks compensator using root locus technique.

#### (**OR**)

- 2. What is PI controller? What are its effects on system performance? CO1 4 Marks a)
  - A unity feedback system has an open loop transfer function, b) CO3 10 Marks  $G(s) = \frac{50}{(s+3)(s+1)}$ . Design PI controller so that the phase margin of the

system is 35° at a frequency of 1.2 rad/sec.

### UNIT-II

3. Describe the concept of controllability and observability. Explain any two CO<sub>2</sub> 14 Marks testing methods to check controllability and observability of a system.

#### (**OR**)

- 4. Describe the principle of duality. CO1 4 Marks a)
  - b) Convert the following system matrix to canonical form. CO1 10 Marks

|            | 4 | 1   | - 2 |
|------------|---|-----|-----|
| <i>A</i> = | 1 | 0   | 2   |

| 5. |    | Derive the expression for describing function of backlash non-linearity.                            | CO2 | 14 Marks |
|----|----|-----------------------------------------------------------------------------------------------------|-----|----------|
|    |    | (OR)                                                                                                |     |          |
| 6. |    | A linear second-order servo is described by the equation                                            | CO2 | 14 Marks |
|    |    | $\ddot{e} + 3\xi_n \dot{e} + 2_n^2 e = 0$ ; where $\xi = 0.5$ ; $n = 1$ ; $e(0) = 1 \dot{e}(0) = 0$ |     |          |
|    |    | Determine the singular points. Draw the phase trajectory using the method of isoclines.             |     |          |
|    |    | UNIT-IV                                                                                             |     |          |
| 7. | a) | Discuss in detail the direct method of Lyapunov for linear continuous time autonomous system.       | CO2 | 7 Marks  |
|    | b) | Test the stability of the system described by                                                       | CO4 | 7 Marks  |
|    |    | $\dot{x}_1 = -2x_1 + 5x_1^2 x_2, \qquad \dot{x}_2 = -3x_2$                                          |     |          |
|    |    | Determine the region of asymptotic stability using Krasovskii's method.                             |     |          |

8. Describe any two methods of generating Lyapunov functions. CO5 14 Marks
### UNIT-V

9. Explain necessary and sufficient conditions for the design of state CO4 14 Marks feedback control through pole placement.

### (OR)

10. Consider the closed loop poles at  $-1.5 \pm j4$ , -5.5, design a state feedback CO4 14 Marks controller, the closed loop transfer function of a plant is  $\frac{Y(s)}{U(s)} = \frac{7}{S^2 + 2S^2 + 5S + 9}$ with the help of state feedback control

u = -kx, it is desired to place the closed loop poles at  $-1 \pm j3.5$  and -4. Calculate the necessary state feedback gain matrix 'K'.

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1. | a) | Explain in detail the multi stack construction of Stepper Motor.                                                                                                                                                                                       | CO1 | 7 Marks |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | Explain the modes of excitation of Stepper Motor with neat diagram.                                                                                                                                                                                    | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                   |     |         |
| 2. | a) | Describe the principle of operation of Hybrid Stepper Motor.                                                                                                                                                                                           | CO1 | 7 Marks |
|    | b) | Explain briefly a closed-loop operation system using a Microprocessor for a hybrid Stepper Motor                                                                                                                                                       | CO1 | 7 Marks |
|    |    | UNIT-II)                                                                                                                                                                                                                                               |     |         |
| 3. | a) | Explain with neat diagram, the microprocessor based control of Switched Reluctance Motor.                                                                                                                                                              | CO1 | 9 Marks |
|    | b) | Derive the expression for static torque in Switched Reluctance Motor.                                                                                                                                                                                  | CO2 | 5 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                   |     |         |
| 4. | a) | Develop Switched Reluctance Motor using two converter topologies and draw relevant diagrams.                                                                                                                                                           | CO3 | 7 Marks |
|    | b) | Discuss the torque speed characteristics of Switched Reluctance Motor in detail.                                                                                                                                                                       | CO2 | 7 Marks |
|    |    | UNIT-III                                                                                                                                                                                                                                               |     |         |
| 5. | a) | Discuss in detail about the construction and working of Synchronous Reluctance Motor with neat diagrams.                                                                                                                                               | CO1 | 7 Marks |
|    | b) | Draw and discuss phasor diagram with Torque – Angle characteristics of Synchronous Reluctance Motor.                                                                                                                                                   | CO2 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                   |     |         |
| 6. | a) | Derive the expression for the torque equation of a Synchronous Reluctance Motor.                                                                                                                                                                       | CO2 | 7 Marks |
|    | b) | Describe in detail the speed – Torque characteristics of Synchronous Reluctance Motor.                                                                                                                                                                 | CO2 | 7 Marks |
|    |    | UNIT-IV                                                                                                                                                                                                                                                |     |         |
| 7. | a) | Discuss in detail about magnetic circuit analysis of PMBLDC Motor on open circuit.                                                                                                                                                                     | CO1 | 7 Marks |
|    | b) | Write the principle of operation of PMBLDC Motor.                                                                                                                                                                                                      | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                   |     |         |
| 8. | a) | What is the need of sensor less control? Explain in detail how sensor less control is implemented on BLDC Motor.                                                                                                                                       | CO5 | 7 Marks |
|    | b) | A BLPM Motor has a no load speed of 6000 r.p.m, when connected to a 120V DC supply. The armature resistance is 2 $\Omega$ . Rotational and iron losses may be neglected. Determine the speed when the supply voltage is 60V and the torque is 0.5 N-M. | CO4 | 7 Marks |

## UNIT-V

- 9. a) Discuss the construction and working of a transverse flux linear Induction CO1 7 Marks Motor.
  - b) For a Linear Induction Motor, the supply frequency is equal to 24Hz, CO4 7 Marks Input power = 6.3kW, Stator Copper and Iron losses = 1.3kW, Velocity of the Motor = 2.5m/s, pole pitch = 0.6cm. Determine the gross mechanical power developed and trust developed.

### (OR)

- 10. a) Discuss the construction and principle of operation of Linear CO1 9 Marks Synchronous Motor with neat diagrams.
  - b) Discuss about applications of LSM in Transport System. CO6 5 Marks

#### HEAT TRANSFER [Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

CO1

7 Marks

7 Marks

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

a) Discuss elaborately on thermal conductivity of solids, liquids and gases. CO1 7 Marks
 b) Describe different types of boundary conditions applied to heat CO1 7 Marks conduction problems.

#### (OR)

2. a) Derive 1D steady state heat conduction equation for a plane wall. CO2 7 Marks

b) A brick wall (k = 0.7 W/m K) is 0.3 m thick. If the temperatures of inner CO5 7 Marks and outer surfaces are maintained at 50°C and 30°C respectively, calculate the heat loss through one square meter area. Find also the temperature at an interior point of the wall 24cm distant from the outer wall.

### UNIT-II

- 3. a) Derive an expression for heat dissipated by a fin of uniform cross-section CO2 7 Marks with convective heat transfer at tip.
  - b) A copper cylinder 60cm diameter and 75cm long is initially at a uniform CO3 7 Marks temperature of 25°C. When the cylinder is exposed to hot flue gases, the surface temperature suddenly changes to 450°C. Make calculations for the temperature at the centre of cylinder 3 minutes after the operation of change in surface temperature. Also calculate the time required for the temperature at the centre to attain 375°C. Thermal diffusivity of copper is  $1.12 \times 10^{-4} \text{ m}^2/\text{s}$ .

#### (OR)

- 4. a) A very long copper rod 20mm in diameter extends horizontally from a CO3 7 Marks plane heated wall maintained at 100°C. The surface of the rod is exposed to an air at 20°C with heat transfer coefficient of 8.5 W/m<sup>2</sup> K. Workout the heat loss, if the thermal conductivity of copper is 400 W/m K. Further, considering it infinite, estimate the length of rod.
  b) Evaluate the significance of Healer and Craher shorts.
  - b) Explain the significance of Hesler and Grober charts. CO1 7 Marks

### (UNIT-III)

- 5. a) Explain the concept of boundary layer theory.
  - b) A 50cm long glass plate is hung vertically in air at 35°C while the CO4 temperature is maintained at 85°C. Calculate the boundary layer thickness at the leading edge of the plate. If a similar plate is placed in a wind tunnel and air is blown over it, at a velocity of 4m/s. Estimate the boundary layer thickness at its leading edge.

### (OR)

6. a) Derive the Von-Karman integral equation.
b) A plate of length 750mm and width 250mm has been placed CO4 7 Marks longitudinally in a stream of crude oil which flows with a velocity of 5m/s. If the oil has specific gravity 0.8 and kinematic viscosity 1 stoke, calculate:

i) Boundary layer thickness at the middle of plate.

ii) Shear stress at the middle of the plate.

iii) Friction drag on one side of plate.

2

7. Derive LMTD equation for counter flow heat exchanger. a)

A heat exchanger is to be designed to condense 8 kg/s of an organic liquid CO3 b)  $(t_{sat} = 80^{\circ}C: h_{fg} = 600 \text{ kJ/kg})$  with cooling water available at 15°C and at a flow rate of 60kg/s. The overall heat transfer coefficient is 480 W/m<sup>2</sup> K. Calculate:

- i) The number of tubes required. The tubes are to be of 25mm outer diameter, 2mm thickness and 4.85m length,
- ii) The number of tube passes. The velocity of the cooling water is not to exceed 2m/s.

### (**OR**)

8. Explain the regimes of Pool boiling curve. a)

- Water at atmospheric pressure is to be boiled in polished copper pan. The 7 Marks CO4 b) diameter of the pan is 350mm and is kept at 115°C. Calculate the following:
  - i) Power of the burner.
  - ii) Rate of evaporation in kg/hr.
  - iii) Critical heat flux.

### UNIT-V

9. a) Derive an expression  $E_b = \pi I_b$ .

> Determine the radiant heat exchange per m<sup>2</sup> area for two infinite parallel CO4 b) plates held at temperature of 800K and 400K respectively. Take emissivity as 0.6 for the hot plate and 0.4 for the cold plate. What should be the emissivity of a polished aluminum shield placed between them, if heat flow is to be reduced to 40% of its original value? Calculate the equilibrium temperature of the shield.

### (**OR**)

- 10. Discuss on shape factor algebra with simple sketches. a)
  - Estimate the solar radiation on a plate normal to the sun rays. Assume the b) CO3 8 Marks sun to be a black body at a temperature of 5520°C. The diameter of the sun is  $1.39 \times 10^{6}$  Km and its distance from the earth is  $1.5 \times 10^{8}$  km.

### NON-CONVENTIONAL ENERGY SOURCES

[Mechanical Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1  | a) | Explain the methods of direct energy conversion with examples.                                                                                        | CO1 | 6 Marks  |  |  |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|--|--|
|    | b) | Outline the various solar radiation measurement technologies in detail.                                                                               | CO2 | 8 Marks  |  |  |
|    |    | (OR)                                                                                                                                                  |     |          |  |  |
| 2  | a) | Define the terms:                                                                                                                                     | CO1 | 6 Marks  |  |  |
|    |    | i) Altitude angle. ii) Incident angle.                                                                                                                |     |          |  |  |
|    |    | iii) Zenith angle. iv) Solar Azimuth angle.                                                                                                           |     |          |  |  |
|    |    | v) Latitude angle. vi) Declination angle.                                                                                                             |     |          |  |  |
|    | b) | What is the present status of development of solar energy in India?                                                                                   | CO2 | 8 Marks  |  |  |
|    |    | UNIT-II                                                                                                                                               |     |          |  |  |
| 3  | a) | What are the important performance indices of a solar collector? Explain them briefly.                                                                | CO2 | 8 Marks  |  |  |
|    | b) | Explain the working of a flat plate collector with their thermal analysis. <b>(OR)</b>                                                                | CO2 | 6 Marks  |  |  |
| 4  | a) | Classify various types of air collectors with suitable sketches.                                                                                      | CO3 | 8 Marks  |  |  |
|    | b) | <ul> <li>b) Why orientation is needed in concentrating type collectors? Describe various method of sun tracking.</li> </ul>                           |     |          |  |  |
|    |    | UNIT-III)                                                                                                                                             |     |          |  |  |
| 5  | a) | Discuss about the applications of solar thermal energy.                                                                                               | CO3 | 8 Marks  |  |  |
|    | b) | Explain the types of PV cells and I-V curve characteristics in brief.                                                                                 | CO2 | 6 Marks  |  |  |
|    |    | (OR)                                                                                                                                                  |     |          |  |  |
| 6  | a) | Describe a passive space solar heating system.                                                                                                        | CO3 | 8 Marks  |  |  |
|    | b) | Discuss about Thermionic power generation.                                                                                                            | CO2 | 6 Marks  |  |  |
|    |    | UNIT-IV                                                                                                                                               |     |          |  |  |
| 7  | a) | Explain the working of horizontal axis wind turbine.                                                                                                  | CO3 | 7 Marks  |  |  |
|    | b) | Discuss about the utilization bio-mass in IC engines.                                                                                                 | CO5 | 7 Marks  |  |  |
|    |    | (OR)                                                                                                                                                  |     |          |  |  |
| 8  | a) | Describe the main considerations in selecting a site for wind power plants.                                                                           | CO3 | 7 Marks  |  |  |
|    | b) | With a neat diagram, discuss the biomass gasification methodology.                                                                                    | CO2 | 7 Marks  |  |  |
|    |    | UNIT-V                                                                                                                                                |     |          |  |  |
| 9  | a) | How is geothermal energy generated inside the earth crust? Explain the operational features of vapour dominated geo-energy system with a neat sketch. | CO4 | 7 Marks  |  |  |
|    | b) | What are the environmental impacts of geothermal energy? (OR)                                                                                         | CO5 | 7 Marks  |  |  |
| 10 |    | Explain with neat sketches the various methods of Tidal power generation.<br>What are the limitations of each method?                                 | CO5 | 14 Marks |  |  |

### III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

# GAS TURBINES AND JET PROPULSION

Time: 3 hours

# [Mechanical Engineering]

Max. Marks: 70

7 Marks

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Describe with neat sketches the working of a simple constant pressure CO1 7 Marks open cycle gas turbine and enumerate the various uses of gas turbine.
  - b) The gas turbine unit has a pressure ratio of 6:1 and maximum cycle CO2 7 Marks temperature of 610°C. The isentropic efficiencies of the compressor and turbine are 0.80 and 0.82 respectively. Calculate the power output in kilowatts when the air enters the compressor at 15°C at the rate of 16 kg/s.

### (OR)

2. The pressure ratio of open cycle gas turbine power plant is 5.6. Air is CO1, 14 Marks taken at 30°C and 1 bar. The compression is carried out in two stages with perfect inter-cooling in between. The maximum temperature of the cycle is limited to 700°C. Assuming the isentropic efficiency of each compressor stage as 85% and that of turbine as 90%, determine the power developed and efficiency of the power plant, if the air-flow is 1.2 kg/s. The mass of fuel may be neglected, and it may be assumed that  $c_p = 1.02 \text{ kJ/kg K}$  and  $\gamma = 1.41$ .

### UNIT-II

- 3. a) Explain the working of Centrifugal compressor with the aid velocity CO1, 7 Marks diagrams CO2
  - b) An axial flow compressor with an overall isentropic efficiency of 85% CO2 draws air at 20°C and compresses it in the pressure ratio of 4:1. The mean blade speed and flow velocity are constant throughout the compressor. Assuming 50% reaction blading and taking blade velocity as 180m/s and work input factor as 0.82, calculate flow velocity and number of stages. Take  $\alpha_1=12^\circ$  and  $\beta_1=42^\circ$ .

#### (OR)

4. a) Classify rotary compressors and explain the working of Roots blower. CO1 7 Marks
b) A centrifugal compressor running at 1440 r.p.m, handles air at 101kPa CO2 7 Marks and 20°C and compresses it to a pressure of 6 bar isentropically. The inner and outer diameters of the impeller are 14cm and 28cm respectively. The width of the blade at the inlet is 2.5 cm. The blade angles are 16° and 40° at entry and exit. Calculate mass flow rate of air, degree of reaction and power input and width of blades at outlet.

### UNIT-III

- 5. a) What are the requirements of Gas turbine combustion chamber? Explain CO3 7 Marks the various forms of combustion.
  - b) Explain the performance and operating characteristics of combustion CO4 7 Marks chamber.

#### (OR)

- 6. a) What are the various types of gas turbine combustion chambers? CO3 7 Marks
  - b) Explain various factors affecting combustion chamber design. CO4 7 Marks

# UNIT-IV

| Explain the working principle of Turbo-Jet with the aid of neat sketch<br>and define the following terms related to jet propulsion. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 7 Marks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

### HYDRAULICS AND PNEUMATICS

[Mechanical Engineering]

Max. Marks: 70

**Answer One Question from each Unit** All questions carry equal marks

### UNIT-I )

| 1. | a) | Elaborate hydraulic power systems advantage and applications.                                                                                                                                                                                                               | CO1 | 7 Marks |  |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|--|
|    | b) | b) What are the desirable properties of hydraulic fluids? Disuss any two of them in detail.                                                                                                                                                                                 |     |         |  |
|    |    | (OR)                                                                                                                                                                                                                                                                        |     |         |  |
| 2. | a) | A pump has a displacement volume of 90cm <sup>3</sup> . It delivers 0.75m <sup>3</sup> /s oil at 1000 r.p.m and 75bars. If the prime over input torque is 125 N-m, what is the overall efficiency of the pump? What is the theoretical torque required to operate the pump? | CO2 | 7 Marks |  |
|    | b) | How the capacity of variable displacement vane pump is adjusted? Explain with a diagram.                                                                                                                                                                                    | CO2 | 7 Marks |  |
|    |    | UNIT-II                                                                                                                                                                                                                                                                     |     |         |  |
| 3. | a) | How to calculate frictional losses in common valve and fittings.                                                                                                                                                                                                            | CO3 | 8 Marks |  |
|    | b) | Draw fluid power symbols of any six different types of valves.                                                                                                                                                                                                              | CO3 | 6 Marks |  |
|    |    | (OR)                                                                                                                                                                                                                                                                        |     |         |  |
| 4. | a) | Design a hydraulic circuit for operating shaping machine to achieve fast<br>and slow movement of ram.                                                                                                                                                                       | CO4 | 7 Marks |  |
|    | b) | Explain the working of five way two position direction control valve.                                                                                                                                                                                                       | CO3 | 7 Marks |  |
| 5. | a) | Draw the neat sketch of the pneumatic filter and explain its construction and working.                                                                                                                                                                                      | CO3 | 7 Marks |  |
|    | b) | Describe various pneumatic actuators with neat sketches.                                                                                                                                                                                                                    | CO3 | 7 Marks |  |
|    |    | (OR)                                                                                                                                                                                                                                                                        |     |         |  |
| 6. | a) | Enumerate types of pressure control valves and explain any one valve with neat sketch.                                                                                                                                                                                      | CO4 | 7 Marks |  |
|    | b) | Elaborate time delay and memory valves used in pneumatics.                                                                                                                                                                                                                  | CO4 | 7 Marks |  |
|    |    | UNIT-IV                                                                                                                                                                                                                                                                     |     |         |  |
| 7. | a) | What is cascade control? Explain with suitable example of circuit diagram.                                                                                                                                                                                                  | CO5 | 7 Marks |  |
|    | b) | Explain with neat block diagram an air pilot control circuit for a double acting cylinder.                                                                                                                                                                                  | CO5 | 7 Marks |  |
|    |    | (OR)                                                                                                                                                                                                                                                                        |     |         |  |
| 8. | a) | Explain with a circuit diagram how is the control of an air motor is achieved. A flow control valve used to adjust the speed of the motor.                                                                                                                                  | CO5 | 7 Marks |  |
|    | b) | Discuss motion and control diagrams.                                                                                                                                                                                                                                        | CO5 | 7 Marks |  |

Discuss motion and control diagrams. CO5 7 Marks

Time: 3 hours

## UNIT-V

9. Develop an electro pneumatic circuit for the following sequence CO6 14 Marks A+B+A-B- where A and B stand for cylinder (+) indicates extension and (-) indicates retraction of cylinders

### (OR)

- 10. a)Describe different logic gates used in pneumatic circuits.CO57 Marks
  - b) Explain pilot assisted solenoid control of directional control valves. CO5 7 Marks

#### SUPPLY CHAIN MANAGEMENT

[Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

1. Discuss the goal of Supply Chain Management and explain the impact of CO1 14 Marks Supply Chain decisions on the success of a firm.

### (OR)

2. Give an example of a Supply Chain of your choice that has evolved over CO1 14 Marks a period of time.

### UNIT-II

| 3. | a)  | a) Explicate the difference between FIFO and LIFO.            |     | 7 Marks |
|----|-----|---------------------------------------------------------------|-----|---------|
|    | b)  | Discuss five costs associated with Inventories.               | CO2 | 7 Marks |
|    |     | (OR)                                                          |     |         |
| 4. | a)  | Name and describe the categories of Inventory-Carrying costs. | CO2 | 7 Marks |
|    | 1 \ |                                                               | 000 | 7 ) ( 1 |

b) Explain the three main approaches used in Warehousing. CO2 7 Marks

### (UNIT-III)

5. Relate how Bullwhip effect leads to lack of coordination in a Supply CO3 14 Marks Chain.

#### (OR)

6. Examine the role of Information Technology in the supply chain of an CO3 14 Marks Automobile industry. Explicate with a practical example.

### UNIT-IV

7. Differentiate between Distribution Channel and Transaction Channel in CO4 14 Marks Supply Chain Transportation.

#### (**OR**)

8. Explicate the objectives of a Physical Distribution System. CO4 14 Marks

### UNIT-V

9. Determine the Inventory and Flow of Materials in Supply Chain CO2 14 Marks Management using Flow Chart.

#### (OR)

10. Examine the role of B2B and B2C in Supply Chain Management for a CO5 14 Marks global manufacturing company. Explicate the process and how it is done using a practical example.

#### ANTENNAS AND WAVEGUIDES

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

CO<sub>2</sub>

8 Marks

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1. a) Derive the wave equation for a TM wave and obtain the expression for CO1 8 Marks the field component in a rectangular wave guide.
  - b) An air-filled rectangular waveguide of inside dimensions 7 x 3.5cm CO1 6 Marks operates in the dominant  $TE_{10}$  mode.
    - i) Find the cutoff frequency.
    - ii) Determine the phase velocity of the wave in the guide at a frequency of 3 .5 GHz.
    - iii) Determine the guided wavelength at the same frequency.

#### (OR)

2. Derive the wave equation for TM wave and TE wave. Obtain the CO1 14 Marks expression for the field component in a rectangular wave guide.

### UNIT-II)

3. a) Explain the following terms:

- i) Antenna effective height.
- ii) Antenna aperture.
- iii) Current distribution on a thin wire antenna.
- b) An antenna has a radiation resistance of  $72\Omega$ , a loss resistance of  $8\Omega$  and CO3 6 Marks a power gain of 12-dB. Determine the antenna efficiency and its directivity.

#### (OR)

- 4. a) Define radiation resistance of an antenna. Calculate the radiation CO4 7 Marks resistance of a  $\lambda$  /10wire dipole in free space.
  - b) Explain the concept of short magnetic dipole. CO4 7 Marks

### UNIT-III)

- 5. a) What is the requirement for tapering of arrays? Describe the applications CO5 8 Marks of arrays.
  - b) Calculate: CO2

i) HPBW.

ii) Solid angle, if a linear array having 10 isotropic point source with  $\lambda/2$  spacing and phase difference  $\delta$ =900.

#### (**OR**)

- 6. a) What is a broadside array? Explain in detail the structure, radiation CO5 7 Marks pattern and the principle of operation of such an antenna.
  - b) Write a brief note on binomial arrays.

CO5 7 Marks

6 Marks

### UNIT-IV

- 7. a) With a neat sketch, explain the different types of horn antennas. Mention CO4 8 Marks merits and demerits of each type.
  - b) A Parabolic dish provides a power gain of 50dB at 10GHz, with 70% CO2 6 Marks efficiency. Find out i) HPBW. ii) BWFN.

### (OR)

- 8. a) What is spillover with reference to parabolic reflectors? Explain the CO4 7 Marks remedial measures to reduce spillover.
  - b) Explain the principle of parabolic reflector antenna and discuss on CO5 7 Marks different types of feeds.

### UNIT-V

- 9. a) Write short notes on source of errors and radiation pattern lobes. CO6 7 Marks
  - b) Select a suitable coordinate system for antenna measurements and explain CO5 7 Marks about it.

#### (OR)

- 10. a)Evaluate the directivity of:CO57 Marks
  - i) An isotropic source.
  - ii) Source with bidirectional  $\cos\theta$  power pattern.
  - b) Explain in detail the terms beam efficiency and directivity. Use relevant CO6 7 Marks expression a diagram.

### DIGITAL SIGNAL PROCESSING

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

# Answer One Question from each Unit

All questions carry equal marks

### UNIT-I

| 1. | a) | Check the following systems for time variance causality, linearity and stability.                                                                                                                 | CO4 | 7 Marks |
|----|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    |    | i) $y(n) = x(n) + x(n-1);$ ii) $y(n) = n x(n).$                                                                                                                                                   |     |         |
|    | b) | Given the sequence $x(n)=(5-n)[u9n0-u9n-5)$ , make a sketch of:                                                                                                                                   | CO2 | 7 Marks |
|    |    | i) $y(n) = x(4 - n);$ ii) $y(n) = x(n^2 - 2n + 1).$                                                                                                                                               |     |         |
|    |    | (OR)                                                                                                                                                                                              |     |         |
| 2. | a) | Discuss the concept of causality and stability with examples.                                                                                                                                     | CO2 | 7 Marks |
|    | b) | State and prove linearity, time shifting and symmetry properties of DFS.                                                                                                                          | CO4 | 7 Marks |
|    |    | (UNIT-II)                                                                                                                                                                                         |     |         |
| 3. | a) | Perform circular convolution of the following sequences.                                                                                                                                          | CO2 | 7 Marks |
|    |    | $x_1(n) = \{1, 2, 3, 4\}$ and $x_2(n) = \{1, 1, 2, 1\}$                                                                                                                                           |     |         |
|    | b) | With a neat derivation, explain the procedure to compute IDFT using Radix - 2 FFT.                                                                                                                | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                              |     |         |
| 4. | a) | An 8 point sequence is given by $x(n)$ {1,0,1,0,1,0,1,0}. Compute 8 point DFT of $x(n)$ by Radix - 2 DIT FFT.                                                                                     | CO1 | 7 Marks |
|    | b) | Determine 4 point Discrete time Fourier Transform of a sequence $x(n) = \{1, -1, 2, -2\}.$                                                                                                        | CO2 | 7 Marks |
|    |    | UNIT-III                                                                                                                                                                                          |     |         |
| 5. | a) | For the given analog transfer function $H_a(s) = 3/(s+1)(s+4)$ , determine $H(z)$ for T=1sec using impulse invariant method.                                                                      | CO5 | 7 Marks |
|    | b) | Obtain the direct form I and II form realization for the system                                                                                                                                   | CO2 | 7 Marks |
|    |    | y(n) = -0.1y(n-1) + 0.2y(n-2) + 3x(n) + 3.6x(n-1) + 0.6x(n-2)                                                                                                                                     |     |         |
|    |    | (OR)                                                                                                                                                                                              |     |         |
| 6. | a) | Design a digital low pass Butterworth digital IIR filter which is required to meet the following specifications.                                                                                  | CO5 | 7 Marks |
|    |    | Pass band attenuation $\leq 2$ dB, Pass band edge frequency = 4KHz, Stop band attenuation $\geq 40$ dB, Stop band edge frequency = 8KHz, Sampling rate = 24 KHz by using bilinear transformation. |     |         |
|    | b) | Derive an expression for order of the chebyshev analog proto type filter.                                                                                                                         | CO2 | 7 Marks |
|    |    | (UNIT-IV)                                                                                                                                                                                         |     |         |
| 7. | a) | Compare an FIR filter with IIR filter. What conditions are to be satisfied by the impulse response of an FIR filter in order to have a linear phase.                                              | CO2 | 7 Marks |
|    | b) | Obtain direct form and cascade form realizations for the transfer function<br>of an FIR system given by                                                                                           | CO3 | 7 Marks |
|    |    | $H(z) = \left(1 - \frac{1}{4}z^{-1} + \frac{3}{8}z^{-2}\right)\left(1 - \frac{1}{8}z^{-1} - \frac{1}{2}z^{-2}\right).$                                                                            |     |         |
|    |    | (OR)                                                                                                                                                                                              |     |         |

- 8. a) Analyse the characteristics of rectangular, Bartlet and Blackman windows CO3 7 Marks with neat sketch.
  - b) Design a Linear phase band pass FIR filter with cutoff frequencies in the CO3 7 Marks range  $0.4\pi$  to  $0.6\pi$  rad/sample by taking 7 samples of hamming window.

### UNIT-V

- 9. a) Explain various types of general purpose registers in TMS 320C6X DSP CO1 7 Marks processor.
  - b) Explain about various on-chip peripherals provided on DSP processors. CO1 7 Marks

#### (OR)

- 10. a) Explain the VLIW architecture with its block diagram. State the CO1 7 Marks advantages and disadvantages of VLIW architecture.
  - b) Discuss in detail bout pipelining of instruction execution in DSP CO1 7 Marks processors.

|     |          | UNIT-II)                                                                                                                     |            |                    |
| 3.  | a)       | Prove that the probability density function of a histogram equalized image is a uniform density function                     | CO2        | 7 Marks            |
|     | b)       | Explain image smoothing using ideal lowpass, butterworth and Gaussian                                                        | CO5        | 7 Marks            |
|     | ,        | lowpass filters in frequency domain.                                                                                         |            |                    |
|     |          | (OR)                                                                                                                         |            |                    |
| 4.  | a)       | Discuss about sharpening spatial filters.                                                                                    | CO1        | 7 Marks            |
|     | b)       | Discuss about homomorphic filtering.                                                                                         | CO1        | 7 Marks            |
|     |          | (UNIT-III)                                                                                                                   |            |                    |
| 5.  | a)       | Discuss different noise models used in image restoration.                                                                    | CO1        | 7 Marks            |
|     | b)       | Define image restoration. Explain the operation of inverse filtering.                                                        | CO3        | 7 Marks            |
| 6.  | a)       | Discuss about restoration in the presence of noise only spatial filtering.                                                   | CO1        | 7 Marks            |
|     | b)       | Explain the method of Constrained Least Squares Filtering for image restoration                                              | CO4        | 7 Marks            |
|     |          | (UNIT-IV)                                                                                                                    |            |                    |
| 7.  | a)       | Explain about general image compression system model with the help of                                                        | CO1        | 7 Marks            |
|     | ,        | a neat block diagram.                                                                                                        |            |                    |
|     | b)       | Discuss about bit plane coding.                                                                                              | CO2        | 7 Marks            |
|     |          | (OR)                                                                                                                         |            |                    |
| 8.  | a)       | Explain dictionary based compression with an example.                                                                        | CO6        | 7 Marks            |
|     | b)       | UNIT-V                                                                                                                       | COI        | / Marks            |
| 9.  | a)       | Explain global thresholding.                                                                                                 | CO6        | 7 Marks            |
|     | b)       | Describe the HIS colour model.                                                                                               | CO6        | 7 Marks            |
|     |          | (OR)                                                                                                                         |            |                    |
| 10. | a)       | Explain region growing by pixel aggregation for image segmentation.                                                          | CO5        | 7 Marks            |
|     | b)       | With neat diagram, explain intensity slicing in pseudo color image processing.                                               | CO2        | / Marks            |

III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August – 2021

#### **RADAR ENGINEERING**

### [Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- a) Draw the block diagram of Radar and explain its working in detail.
   b) Calculate the maximum range of Radar system which operates at 3cm
   CO4
   CO4
   7 Marks
  - b) Calculate the maximum range of Radar system which operates at 3cm CO4 7 wavelength with peak power of 500KW, if the power of minimum detectable signal is 10-12W, the effective aperture of the receiving Antenna is 5m<sup>2</sup>, and Radar cross section of the target is 20m<sup>2</sup>.

#### (**OR**)

- 2. a) Discuss the role of Radar in remote sensing, military, aircraft navigation. CO1 7 Marks
  b) A radar has repletion frequency of 1000Hz. Estimate range of radar. CO4 7 Marks
  - A radar has repletion requercy of roboriz. Estimate range of radar. CO4 / Marks Assume the presence of noise.

- 3. a) Summarize briefly about the Frequency Modulated Continuous Wave CO2 7 Marks radar system with suitable block diagram.
  - b) Describe briefly about the Doppler frequency shift in radar operation. A CO4 7 Marks continuous wave radar system is working at a frequency of 10 GHz. If the observed Doppler frequency is 1000 Hz, calculate the radial velocity of the target.

### (OR)

- 4. a) With neat diagram, explain the working principle of conventional CO1 7 Marks Continuous Wave (CW) radar.
  - b) Distinguish between Pulse Doppler Radar (PDR) and Moving Target CO1 7 Marks Indicator (MTI) Radar.

### UNIT-III)

5. Illustrate the working principle of conical scan tracking method with neat CO4 7 Marks a) diagram. Discuss about the working principle of sequential lobbing with neat CO4 7 Marks b) diagram for the application of target tracking. (**OR**) 6. Compare the advantages and disadvantages of different target trackers. CO5 7 Marks a) Draw the functional block diagram of the lobe switching tracking radar CO4 7 Marks b) system and explain its working principle. UNIT-IV 7. Discuss in brief about: CO1 a) 7 Marks i) branch-type duplexer. ii) circulator as duplexer. Explain how radar signals can be detected under noise considerations. b) CO5 7 Marks (OR)Describe the design procedure of matched filter receiver. 8 CO3 7 Marks a) Calculate the receiver bandwidth if the noise figure of a radar receiver is CO4 7 Marks b) 1 dB and the available gain is 400. The available noise output power of the receiver is 4 dB. Assume necessary data if required.

### (UNIT-V)

9. Explain the operation of VOR system. CO5 7 Marks a) Explain the operations of LORAN system. CO5 7 Marks b) (OR) 10. Explain the source of errors in VOR system. CO6 7 Marks a) Explain the operations DECCA systems. b) CO5 7 Marks \$\$ \$\$ \$\$

9.

#### INFORMATION THEORY AND CODING

[Electronics and Communication Engineering]

Answer One Question from each Unit All questions carry equal marks Max. Marks: 70

### UNIT-I )

1. Consider a discrete memory less source with source probabilities CO1 4 Marks a) {0.35, 0.25, 0.20, 0.15, 0.10}. Find the following: i) Calculate amount of information gained by observing the source emitting each of these symbols. ii) Calculate source entropy. b) Consider the following source: CO1 10 Marks S = (A, B, C, D, E, F)P = (0.10, 0.15, 0.25, 0.35, 0.08, 0.07)Apply Shannon-Fanon algorithm to find the code words and also find coding efficiency, redundancy. (**OR**) 2. Apply the Huffman coding procedure for the following message CO1 7 Marks a) ensemble:  $[X] = [x_1]$  $x_2$  $x_3$  $x_4$ *x*<sub>6</sub>  $x_8$  $x_5$  $x_7$  $[P] = \begin{bmatrix} 0.25 & 0.125 & 0.625 & 0.62 & 0.625 & 0.25 & 0.625 & 0.125 \end{bmatrix}$ Estimate code efficiency and redundancy. b) Let 'X' represent the outcome of a single roll of a fair die. Find the CO1 3 Marks entropy of 'X'. A certain digital frame consists of 15 fields. The first and the last field. Of CO1 4 Marks c) each frame are same. The remaining 13 fields can be filled by any of the 16 symbols with equal probability. Find the average information conveyed by the frame. Also find the average rate of information, if 100 frames are transmitted every second. UNIT-II Compute Channel capacity of the following channels: 3. CO2 7 Marks a) i) Lossless. ii) Deterministic. iii) Noiseless. iv) Binary Symmetric Channel. b) Consider a binary symmetric channel as shown in below figure. Estimate CO<sub>2</sub> 7 Marks the rate of Information transmission over this channel when 'p' value is 0.8. Assume that symbol rate is 2000 symbols/sec.

4.

A Binary symmetric Channel has the following noise matrix

CO3

14 Marks

$$p(X_1) = \frac{2}{3} \text{ and } p(X_2) = \frac{1}{3} p\left(\frac{Y}{X}\right) = \begin{bmatrix} \frac{3}{4} & \frac{1}{4} \\ \frac{1}{4} & \frac{3}{4} \end{bmatrix}$$

Estimate the following:

i) H(X) and H(Y).
ii) H(X,Y).
iii) H(Y/X) and H(X/Y).
iv) I(X,Y).

5. Consider a (6, 3) linear block code whose generator matrix is given by CO3 14 Marks

 $\begin{bmatrix} 1 & 0 & 0 & 1 & 0 & 1 \\ 0 & 1 & 0 & 1 & 1 & 0 \\ 0 & 0 & 1 & 0 & 1 & 1 \end{bmatrix}$ 

i) Find the parity check matrix.

ii) Find the minimum distance of the code.

iii) Draw the encoder and syndrome computation circuit.

#### (**OR**)

6. In a Linear Block Code, the syndrome is given by,

 $S_1 = r_1 + r_2 + r_{3+}r_5$ 

 $S_2 = r_1 + r_2 + r_{4+}r_6$ 

 $S_3 = r_1 + r_3 + r_{4+}r_7$ 

i) Find the parity check matrix [H].

ii) Draw the encoder circuit.

iii) Find the code word for all input sequences.

iv) How many errors it can detect and correct.

v) Estimate the syndrome for the received data 1 0 1 1 0 1 1.

#### UNIT-IV)

7. a) Consider a (7, 4) cyclic code with generator polynomial  $g(x) = 1 + x + x^2$ . CO4 7 Marks Obtain the code Polynomial in a systematic form for the following information sequences:

i) 1011. ii) 1001.

- b) Consider a (3, 1, 3) Convolution code with generator polynomials CO4 7 Marks  $g_1 = (1 \ 1 \ 1 \ 0), g_2 = (1 \ 0 \ 0 \ 1)$  and  $g_3 = (1 \ 1 \ 0 \ 1)$ . Do the following:
  - i) Draw its encoder diagram.
  - ii) Find the encoded sequence for the input (1 0 0 0 1 1 0 1) using time-domain approach

#### (**OR**)

- 8. a) Consider a (7, 4) cyclic code with  $g(x) = 1 + x + x^3$ . Obtain the syndrome CO4 7 Marks for the received polynomial  $r(x) = x^3 + x^5 + x^6$ .
  - b) Consider the convolution encoder as shown in below figure: CO4 7 Marks

Find n, k, m and code rate. Also find the output sequence for the input message sequence  $(1 \ 1 \ 0 \ 0 \ 1 \ 1)$  using time domain approach and transform domain approach.

9. Explain how Coding and Interleaving applied to the compact disc digital CO5 14 Marks audio system.

### (OR)

CO5 14 Marks

- 10. Write short note on:
  - i) R-S codes.
  - ii) Concatenated codes.
  - iii) Turbo codes.

### LIGHT WAVE COMMUNICATIONS

[Electronics and Communication Engineering]

Max. Marks: 70

### Answer One Question from each Unit.

#### All questions carry equal marks

### UNIT-I

CO1 1. Explain the law of Optics. 7 Marks a) A light wave is travelling in a semiconducter medium of refractive index CO4 7 Marks b) 3.6. It is incident on a different semiconducter medium of refractive index 3.4 and the angle of incidence is  $80^{\circ}$  will this result in TIR. (**OR**) 2. Explain the fundamental block diagram for fiber optics communication. CO1 7 Marks a) A light ray is incident from medium -1 to medium -2. if the refractive CO4 7 Marks b) indices of mediums are 1.8 and 1.5 respectively, then determine the angle of refraction for an angle of incidence of  $40^{\circ}$ . UNIT-II 3. Explain core and cladding losses. CO<sub>4</sub> 7 Marks a) b) Consider two silica fibers that are doped with 6% mole fractions of Geo2. CO<sub>4</sub> 7 Marks Compute the UV absorption loss at  $\lambda = 1.3 \mu m$ . (**OR**) 4. Write a short note on Intramodel dispersion. **CO4** 7 Marks a) Consider two silica fibers that are doped with 20% mole fractions of CO4 b) 7 Marks Geo2. Compute the UV absorption loss at  $\lambda$ =0.7µm. (UNIT-III) 5. Discuss the operation of edge-emitting double-hetero junction LED, with CO3 14 Marks neat schematic diagram. (**OR**) 6. Discuss about the signal frequency, single mode injection lasers with CO3 14 Marks fabry- perot structure and explain the methods of controlling longitudinal modes of ILDs. UNIT-IV) 7. 7 Marks a) Explain the concept of fiber joints. CO1 A Step index fiber has a core refractive index of 1.5 and core diameter of CO4 7 Marks b) 50µm. The fiber is jointed with a lateral misalignment between the core axes of 5µm. Estimate the insertion loss at the joint due to the lateral misalignment assuming a uniform distribution of power between all guided modes, when there is a small air gap at the joint. (**OR**) Explain the different fiber connectors in brief. 8. CO1 7 Marks a) b) Two single mode fibers with mode -field diameters of 9.2µm and 8.4µm CO<sub>4</sub> 7 Marks are to be connected together. Assuming no extrinsic losses, determine the loss at the connection due to the mode-field diameter mismatch. UNIT-V 9. Write short notes on optical networks. CO1 14 Marks i) network terminology. ii) network categories. iv) network topologies. iii) network layers. (**OR**) 10. Explain the principle of WDM networks. CO5 14 Marks

# SOFTWARE TESTING

[Computer Science and Engineering]

| Time: 3 hours |          |                                                                            | Max. Marks: 70 |            |
|---------------|----------|----------------------------------------------------------------------------|----------------|------------|
|               |          | Answer One Question from each Unit                                         |                |            |
|               |          | All questions carry equal marks                                            |                |            |
|               |          |                                                                            |                |            |
| 1             | a)       | What are goals of Software Testing? Explain                                | CO1            | 6 Marka    |
| 1.            | $a_{j}$  | Why Effective testing is hard? Explain with example                        | CO1            | 0 Marks    |
|               | 0)       | (OR)                                                                       | COI            | o wiaiks   |
| 2.            | a)       | With a neat diagram, explain about all the elements in Software Testing    | CO1            | 8 Marks    |
|               | -        | model.                                                                     |                |            |
|               | b)       | What is the difference between :                                           | CO2            | 6 Marks    |
|               |          | i) Verification and Validation;                                            |                |            |
|               |          | ii) Static and Dynamic testing.                                            |                |            |
|               |          | (UNIT-II)                                                                  |                |            |
| 3.            | a)       | What are the challenges in white box testing? Explain about Basis Path     | CO2            | 6 Marks    |
|               |          | testing with suitable example.                                             |                |            |
|               | b)       | How do you calculate the cyclomatic complexity number of the program       | CO2            | 8 Marks    |
|               |          | having many connected components? Explain with an example.                 |                |            |
|               | `        | (OR)                                                                       | <b>GO2</b>     | 0.14       |
| 4.            | a)       | Design and develop Data Flow testing with an example.                      | CO3            | 8 Marks    |
|               | b)       | What is the difference between primary and secondary mutants? Explain.     | CO2            | 6 Marks    |
|               |          | (UNIT-III)                                                                 |                |            |
| 5.            | a)       | Discuss in detail about various techniques that are to be used to generate | CO3            | 6 Marks    |
|               | • \      | test scenarios for effective black box testing.                            |                |            |
|               | b)       | Give examples of:                                                          | CO3            | 8 Marks    |
|               |          | 1) Decision-table lesting.                                                 |                |            |
|               |          | 11) Cause-Effect Graphic-based Testing.                                    |                |            |
| 6             | a)       | (UK)<br>Design and explain in detail about Equivalence Class testing       | CO3            | 8 Marks    |
| 0.            | a)<br>h) | What are the software implementation issues in state testing? Explain      | CO3            | 6 Marks    |
|               | 0)       |                                                                            | 004            | 0 Iviains  |
| 7             |          | Driefly write the stars of test planning and test process for finding      | CO4            | 9 Martra   |
| 1.            | a)       | factorial of a number                                                      | C04            | 8 IVIAIKS  |
|               | b)       | Describe about test case design for validating a user                      | CO4            | 6 Marks    |
|               | 0)       | (OR)                                                                       | 04             | 0 Iviai KS |
| 8             | a)       | Write short notes on Size Metrics                                          | CO5            | 8 Marks    |
| 0.            | b)       | Discuss in detail about classification of Software metrics.                | CO5            | 6 Marks    |
|               | - )      | UNIT-V                                                                     |                |            |
| 9.            | a)       | Why regression testing produces quality software? Explain.                 | CO3            | 8 Marks    |
|               | b)       | Explain in detail the need for Automated Testing tools.                    | CO5            | 6 Marks    |
|               | ,        | (OR)                                                                       |                |            |
| 10.           | a)       | Write in detail about the guidelines for Automated testing.                | CO5            | 8 Marks    |
|               | b)       | Give an overview of some available commercial testing tools.               | CO5            | 6 Marks    |

### III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

### SOFT COMPUTING

### [Computer Science and Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1. a) Explain Evolution of Neural Networks. CO1 7 Marks Explain Hebb Network. CO2 7 Marks b) (**OR**) Explain the classification of Hybrid Systems. 2. a) CO<sub>2</sub> 7 Marks Write about the applications of Soft Computing. CO2 7 Marks b) UNIT-II 3. Explain the Perceptron testing algorithm for Single and Multiple Output CO2 10 Marks a) Classes. What is supervised learning? CO1 4 Marks b) (**OR**) Explain the testing algorithm for back-Propagation Networks. 4. a) CO1 7 Marks Write about perceptron learning rule. CO3 b) 7 Marks (UNIT-III) What is self-organizing map and discuss the algorithm and features of CO2 5. 14 Marks Kohonen's map? (**OR**) 6. Construct and test the Hamming network to cluster four vectors. Given CO4 14 Marks the example Vectors are e(1)=[1 -1 -1 -1];e[2] = [-1 - 1 - 1 1]The bipolar input vectors are  $X_1 = [1 -1 1 -1]$  $X_2 = [-1 \ -1 \ 1 \ 1];$  $X_3 = [-1 \ -1 \ -1 \ +1];$  $X_4 = [1 \ 1 \ -1 \ -1].$ UNIT-IV) With the help of examples, explain various fuzzy prepositions. 7. a) CO5 7 Marks Show that the following fuzzy sets satisfy DeMorgan's law: CO4 7 Marks b) i)  $\mu A(x) = 1 / 1 + 5X$ ii)  $\mu B(\mathbf{x}) = (1 / 1 + 5x)^{1/2}$ (**OR**) Discuss in detail the operations and properties of fuzzy sets. 8. CO3 7 Marks a) Explain the different methods for fuzzy approximate reasoning. CO3 7 Marks b) UNIT-V 9. Explain in detail about various operators involved in genetic algorithm. a) CO3 7 Marks Explain the role of fitness function in Genetic algorithms. b) CO6 7 Marks (**OR**) 10. Explain the genetic operators and fitness functions in respect of CO6 14 Marks evolutionary computing.

#### WIRELESS NETWORKS

#### [Computer Science and Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1.  | a) | Explain in detail the methods of data services get integrated with Voice Oriented Networks.             | CO2 | 10 Marks |
|-----|----|---------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Explain in detail the architecture of the 2G GSM system.                                                | CO1 | 4 Marks  |
|     |    | (OR)                                                                                                    |     |          |
| 2.  | a) | Explain in detail the forward and reverse channels in W-CDMA and CDMA 2000.                             | CO2 | 10 Marks |
|     | b) | Explain about the handoff and power control mechanisms.                                                 | CO2 | 4 Marks  |
|     |    | UNIT-II                                                                                                 |     |          |
| 3.  | a) | What is location management? What are the three components of location management?                      | CO3 | 8 Marks  |
|     | b) | Explain in detail about wireless network topologies.                                                    | CO2 | 6 Marks  |
|     |    | (OR)                                                                                                    |     |          |
| 4.  | a) | Differentiate ADHOC network and infrastructures network topologies.                                     | CO2 | 8 Marks  |
|     | b) | Explain in brief about mobility management.                                                             | CO5 | 6 Marks  |
|     |    | (UNIT-III)                                                                                              |     |          |
| 5.  | a) | Why IEEE 802.11 standard has two divisions in the MAC layer? Explain in detail about the MAC sub layer. | CO2 | 8 Marks  |
|     | b) | Explain in detail about HAN Technologies.                                                               | CO5 | 6 Marks  |
|     |    | (OR)                                                                                                    |     |          |
| 6.  | a) | Explain in detail about 802.11b and 802.11a.                                                            | CO2 | 10 Marks |
|     | b) | Write short notes on FHSS, DFIR.                                                                        | CO3 | 4 Marks  |
|     |    | UNIT-IV                                                                                                 |     |          |
| 7.  | a) | Describe the different logical channels used in the GSM network.                                        | CO5 | 7 Marks  |
|     | b) | Explain the Waveform Encoding for the IS-95 reverse channel.                                            | CO5 | 7 Marks  |
|     |    | (OR)                                                                                                    |     |          |
| 8.  | a) | Compare GSM and CDMA.                                                                                   | CO1 | 7 Marks  |
|     | b) | Describe the different interface connection between MS and DTS in a GSM network.                        | CO5 | 7 Marks  |
|     |    | UNIT-V                                                                                                  |     |          |
| 9.  | a) | Explain in detail about HIPERLAN and BLUETOOTH.                                                         | CO6 | 10 Marks |
|     | b) | Explain the Physical and MAC layer details of Wimax Network.                                            | CO3 | 4 Marks  |
|     |    | (OR)                                                                                                    |     |          |
| 10. | a) | Explain in detail about the IEEE 802.15 WPAN standards.                                                 | CO5 | 10 Marks |
|     | b) | Write short notes of PICONETS and SCATTERNETS.                                                          | CO5 | 4 Marks  |
|     |    |                                                                                                         |     |          |

#### PRINCIPLES OF PROGRAMMING LANGUAGES

[Computer Science and Engineering]

Max. Marks: 70

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1.  | a) | What are the important factors that influence the basic design of programming language?                                                  | CO1 | 7 Marks |
|-----|----|------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Discuss language evaluation criteria and the characteristics that affect them.                                                           | CO1 | 7 Marks |
|     |    | (OR)                                                                                                                                     |     |         |
| 2.  | a) | Explain various user-defined ordinal types with examples.                                                                                | CO1 | 7 Marks |
|     | b) | What is meant by type checking? Differentiate between static type checking and dynamic type checking and give their relative advantages. | CO1 | 7 Marks |
|     |    | UNIT-II                                                                                                                                  |     |         |
| 3.  | a) | Distinguish between Counter-Controlled Loops and Logically Controlled Loops.                                                             | CO2 | 7 Marks |
|     | b) | Explain Short-Circuit Evaluation with examples.<br>(OR)                                                                                  | CO1 | 7 Marks |
| 4.  | a) | How does operand evaluation order interact with function side effects?                                                                   | CO2 | 7 Marks |
|     | b) | Compare the Boolean and Relational Expressions along with examples.                                                                      | CO2 | 7 Marks |
| 5.  | a) | What is meant by subprogram level concurrency? Explain.                                                                                  | CO1 | 7 Marks |
|     | b) | Explain about Co-Routines with an example.<br>(OR)                                                                                       | CO3 | 7 Marks |
| 6.  | a) | Write the Design Issues for Abstract Data Types and compare the Encapsulation and Information Hiding.                                    | CO1 | 7 Marks |
|     | b) | Discuss the applications of indirect subprogram calls.                                                                                   | CO4 | 7 Marks |
| 7.  | a) | What are the primary problems with using semaphores to provide Synchronization?                                                          | CO2 | 7 Marks |
|     | b) | Discuss the design issues of Exception Handling.                                                                                         | CO1 | 7 Marks |
| 8.  | a) | Compare and contrast the cooperation synchronization and competition synchronization in message passing                                  | CO2 | 7 Marks |
|     | b) | Describe the three possible levels of concurrency in programs.                                                                           | CO3 | 7 Marks |
| 9   | a) | Discuss Terms and Goal statements in Prolog with examples                                                                                | CO5 | 7 Marks |
|     | b) | Compare the importance of logic programming languages over functional programming languages                                              | CO5 | 7 Marks |
|     |    | (OR)                                                                                                                                     |     |         |
| 10. | a) | Explain about LISP functional programming language                                                                                       | CO5 | 7 Marks |

b) Examine the different types of propositions present in logic programming. CO5 7 Marks

#### III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

#### ARM PROCESSORS AND PIC MICROCONTROLLERS [Electronics and Instrumentation Engineering]

#### Time: 3 hours

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1. a) Compare Microcontrollers and general purpose Microprocessor. CO1 7 Marks
  - b) State the contents of the file register RAM locations 12H and WREG CO2 7 Marks after the following program:

MOVLW 0 MOVWF 12H MOVLW 22H ADDWF 12H, W ADDWF 12H, W ADDWF 12H, W ADDWF 12H, W.

#### (OR)

| 2. | a) | Explain in detail about PIC status register.                                                                                                                                                                                                                         | CO1 | 6 Marks |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | Write a program to                                                                                                                                                                                                                                                   | CO2 | 8 Marks |
|    |    | <ul> <li>i) place each of your 5-digit ID numbers into a RAM location starting at 0.</li> <li>ii) add each digit to WREG and store the sum in RAM location 6.</li> <li>iii) use the program listing and show the ROM memory addresses and their contents.</li> </ul> |     |         |
|    |    | UNIT-II                                                                                                                                                                                                                                                              |     |         |
| 3. | a) | Explain in detail about Timer 0 and 1.                                                                                                                                                                                                                               | CO1 | 8 Marks |

b) Assuming that XTAL =10 MHz, write a program to generate a square CO4 6 Marks wave of 50 Hz frequency on pin PORTB.7. Use Timer 0, 16 bit mode with prescaler = 128

### (OR)

- 4. a) Explain with example programming the PIC18 to receive the data serially. CO2 7 Marks
  - b) Describe the different DB9 pins used for handshaking in RS232. CO1 7 Marks

### UNIT-III

5. Design an interfacing circuit and write a program to send characters CO3 14 Marks (command/data) to the LCD without checking the busy flag and the delay between the issuing character is 5-10 ms(simple delay).

### (OR)

6. a) Write a program to rotate the stepper motor by an angle of 180°. Assume CO1 8 Marks step size of 1.8°.

1

b) Explain the steps in programming the A/D converter using polling. CO6 6 Marks

# (UNIT-IV)

| 7.  | a) | Mention the CORTEX-M3 Processor applications.                                                                           | CO1 | 7 Marks |  |  |
|-----|----|-------------------------------------------------------------------------------------------------------------------------|-----|---------|--|--|
|     | b) | With a neat sketch, explain the basic architecture of ARM CORTEX M3.                                                    | CO1 | 7 Marks |  |  |
|     |    | (OR)                                                                                                                    |     |         |  |  |
| 8.  | a) | List the different stages of a pipeline of an ARM CORTEX M3 processor<br>and explain them.                              | CO3 | 8 Marks |  |  |
|     | b) | List the registers present in different exception modes of ARM CORTEX M3 and explain the functionality of them.         | CO1 | 6 Marks |  |  |
|     |    |                                                                                                                         |     |         |  |  |
| 9.  | a) | Compare ARM Mode and Thumb Mode with example.                                                                           | CO1 | 7 Marks |  |  |
|     | b) | Explain Data transfer instructions, Pseudo instructions and Data processing instructions.                               | CO1 | 7 Marks |  |  |
|     |    | (OR)                                                                                                                    |     |         |  |  |
| 10. | a) | Write an ALP to perform multiplication of two numbers in arm mode and<br>then switch to thumb mode to perform addition. | CO1 | 7 Marks |  |  |
|     | b) | Explain call, unconditional and conditional branch instructions with example.                                           | CO1 | 7 Marks |  |  |

# PROCESS CONTROL INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Derive the transfer function of the tank interacting liquid system. 1. CO<sub>2</sub> 7 Marks a) Give the characteristics of thermal process and derive the transfer CO2 b) 7 Marks function for single time constant type thermal process. (**OR**) 2. Explain the elements of process control with a neat diagram. CO1 7 Marks a) b) Explain Servo and Regulatory operation in process control. CO1 7 Marks UNIT-II ) 3. Explain On-Off controller characteristics with suitable example. CO1 7 Marks a) Discuss the working of electronic PID controller and mention the b) CO1 7 Marks methods for adjusting P, I and D settings. (**OR**) 4. Explain in detail about Pneumatic PID controller with suitable example. CO1 7 Marks a) b) Compare the characteristics of P, PI and PID control actions. CO3 7 Marks (UNIT-III) 5. Describe the points to be considered in selecting controller modes. CO1 7 Marks a) Mention the criteria for good control. Compare and contrast the features of Ziegler-Nichol's and Cohen-Coon CO1 b) 7 Marks methods of tuning. (**OR**) 6. Explain the frequency response method in controller tuning. CO1 7 Marks a) Time integral criteria lead to unique solution to determine the controller b) CO3 7 Marks parameters. Justify. UNIT-IV 7. What is an actuator? List the types of actuators. CO1 7 Marks a) Identify suitable control valve with one part opening and one seat plug. 7 Marks b) CO6 Explain it with a neat diagram. (**OR**) 8. Explain clearly about hydraulic actuator. CO1 7 Marks a) Explain the operation of rotating shaft control valve with neat diagrams b) CO1 7 Marks UNIT-V 9. Write about the analysis of cascade control for set point changes and load CO6 7 Marks a) changes. b) Explain the role of load expression in implementing feed forward transfer CO6 7 Marks function. (**OR**) 10. Discuss the working of distillation column with suitable application. a) CO1 7 Marks Explain clearly about over-ride control with neat sketch. CO1 7 Marks b)

III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

#### **PROGRAMMABLE LOGIC CONTROLLERS**

[Electrical and Electronics Engineering]

Max. Marks: 70

# Answer One Question from each Unit

All questions carry equal marks UNIT-I List the benefits offer by PLC. Explain at least four in brief. 1. CO6 7 Marks a) Explain difference between fixed I/O's and modular I/O's. CO3 7 Marks b) (**OR**) Draw a block diagram of a PLC showing the main functional items and 2. CO1 7 Marks a) how busses link them, explaining the functions of each block. Compare ladder logic diagram and relay ladder diagram with examples. b) CO<sub>2</sub> 7 Marks (UNIT-II) Develop ladder logic diagram for each of the following Boolean 3. a) CO<sub>2</sub> 7 Marks expressions using AND, OR and NOT gates: ii) Y = AB + CD; i) Y = ABC + D; iii)  $Y = (A + B)(\overline{C} + D)$ . Describe in detail about output group register scheme. b) CO3 7 Marks (**OR**) Explain ON delay timer instruction of PLC with timing diagram and CO1 4. 7 Marks a) suitable ladder logic example. In an automatic car parking system entry and exit of a car is detected by CO6 7 Marks b) sensors. A PLC will keep a record of number of cars enter and exit. Maximum 50 numbers of cars in the parking area. An entry gate (controlled by electric motor) will be kept open only when number of cars in the parking area is less than 50. Design a ladder diagram to control the operation of the entry gate of the car parking system. (UNIT-III) Describe the operation of skip, jump function in PLC. 5. CO5 7 Marks a) Explain about Sweep functions and their application. 7 Marks b) CO5 (**OR**) Describe the number comparison functions. CO4 7 Marks 6. a) With neat ladder diagram an instruction list, show how more than one CO4 7 Marks b) master control relay can be used in a program. UNIT-IV 7. Explain with ladder diagram and the sequence signals of a 4-bit shift CO3 7 Marks a) register. Explain PLC sequencer functions in detail. CO4 b) 7 Marks (**OR**) 8. Describe controlling of three axis robots with PLC. CO6 7 Marks a) Explain the ONE shot (ONS) function with an application. CO3 7 Marks b) UNIT-V 9. Explain the PID control using PLC. CO4 7 Marks a) Explain how the monitor function is made operational and what data and b) CO5 7 Marks functions may be observed. (**OR**) Apply the analog IN PLC function operation to convert into discrete O/P. 10. a) CO5 7 Marks Explain the operation of networking of PLCS. b) CO4 7 Marks

| 1.   | a)     | Define Virtualization. Explain its characteristics and benefits.                                                                                                                                           | CO1    | 7 Marks   |
|      | b)     | Explain the various features of VMware technologies.                                                                                                                                                       | CO2    | 7 Marks   |
|      |        | (OR)                                                                                                                                                                                                       |        |           |
| 2.   | a)     | List and explain Pros and Cons of virtualization.                                                                                                                                                          | CO1    | 7 Marks   |
|      | b)     | Discuss various features of Hyper-V and Zen technologies.                                                                                                                                                  | CO2    | 7 Marks   |
|      |        | UNIT-II)                                                                                                                                                                                                   |        |           |
| 3.   | a)     | Explain about origins and characteristics of cloud computing.                                                                                                                                              | CO3    | 7 Marks   |
|      | b)     | Compare various cloud delivery models.                                                                                                                                                                     | CO1    | 7 Marks   |
|      | ,      | (OR)                                                                                                                                                                                                       |        |           |
| 4.   | a)     | Analyze various roles and boundaries in cloud.                                                                                                                                                             | CO4    | 7 Marks   |
|      | b)     | Differentiate horizontal and vertical scaling.                                                                                                                                                             | CO3    | 7 Marks   |
|      |        | (UNIT-III)                                                                                                                                                                                                 |        |           |
| 5.   |        | <ul> <li>Outline various Cloud-Enabling Technologies <ol> <li>Data Center Technology.</li> <li>Virtualization Technology.</li> <li>Web Technology.</li> <li>Multitenant Technology.</li> </ol> </li> </ul> | CO1    | 14 Marks  |
|      |        | (OR)                                                                                                                                                                                                       |        |           |
| 6.   |        | Explain the components in workload distribution and pooling architecture.                                                                                                                                  | CO1    | 14 Marks  |
|      |        | UNIT-IV                                                                                                                                                                                                    |        |           |
| 7.   | a)     | Discuss various security services in cloud.                                                                                                                                                                | CO1    | 7 Marks   |
|      | b)     | Analyze the need for disaster management in cloud.                                                                                                                                                         | CO2    | 7 Marks   |
|      |        | (OR)                                                                                                                                                                                                       |        |           |
| 8.   |        | Explain how security is provided to network and host in cloud.                                                                                                                                             | CO2    | 14 Marks  |
|      |        | UNIT-V                                                                                                                                                                                                     |        |           |
| 9.   | a)     | Distinguish between SaaS and IaaS.                                                                                                                                                                         | CO2    | 7 Marks   |
|      | b)     | What is platform as a service? Write in detail about Google App engine.                                                                                                                                    | CO5    | 7 Marks   |
|      |        | (OR)                                                                                                                                                                                                       |        |           |
| 10.  |        | Explain in detail about Amazon EC2 and NetFlix with a neat diagram.                                                                                                                                        | CO6    | 14 Marks  |

## AD-HOC AND WIRELESS SENSOR NETWORKS

[Information Technology]

Max. Marks: 70

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Draw the schematic diagram of the Ad-hoc wireless Internet and discuss<br>the major issues. | CO1 | 9 Marks    |
|-----|----|---------------------------------------------------------------------------------------------|-----|------------|
|     | b) | Why power management is important for Ad-hoc wireless networks?                             | CO3 | 5 Marks    |
|     |    | (OR)                                                                                        |     |            |
| 2.  | a) | Describe the design goals of a MAC protocol for Ad-hoc wireless networks.                   | COI | 6 Marks    |
|     | b) | How busy tone multiple access protocol overcomes the hidden terminal problem?               | CO2 | 8 Marks    |
|     |    | UNIT-II )                                                                                   |     |            |
| 3   | a) | Explain about the following challenges faced in designing a routing                         | CO2 | 6 Marks    |
| 0.  | )  | protocol for Ad-hoc wireless networks                                                       | 001 | 0 10100110 |
|     |    | i) Hidden and Exposed terminal problems                                                     |     |            |
|     |    | i) Mobility                                                                                 |     |            |
|     |    | iii) Bandwidth Constraint                                                                   |     |            |
|     |    | iv) Error Prone shared broadcast radio channel.                                             |     |            |
|     | b) | Explain the working of AODV with suitable example.                                          | CO5 | 8 Marks    |
|     | -) | (OR)                                                                                        |     |            |
| 4.  | a) | Differentiate source initiated and receiver initiated multicast protocols.                  | CO1 | 7 Marks    |
|     | b) | Describe the working of bandwidth efficient multicast routing protocol                      | CO2 | 7 Marks    |
|     |    | initialization phase and route optimization phase.                                          |     |            |
|     |    | (UNIT-III)                                                                                  |     |            |
| 5.  | a) | Illustrate the working of TCP congestion window.                                            | CO2 | 6 Marks    |
|     | b) | Discuss the issues to be considered while designing a transport layer                       | CO2 | 8 Marks    |
|     |    | protocol for Ad-hoc wireless networks.                                                      |     |            |
|     |    | (OR)                                                                                        |     |            |
| 6.  | a) | Explain the challenges faced when implementing security in Ad-hoc wireless networks         | CO4 | 6 Marks    |
|     | b) | Describe various network layer and transport layer attacks.                                 | CO2 | 8 Marks    |
|     | ,  |                                                                                             |     |            |
| 7   | a) | What is the need for energy management in Ad-hoc wireless networks?                         | CO3 | 5 Marks    |
| /.  | h) | Write about various energy conservation schemes for Ad-hoc networks                         | CO3 | 9 Marks    |
|     | 0) | (OR)                                                                                        | 005 | ) marks    |
| 8.  |    | Explain in detail about system power management schemes.                                    | CO4 | 14 Marks   |
|     |    |                                                                                             |     |            |
| 9.  |    | Explain the wireless sensor network architecture and applications.                          | CO5 | 14 Marks   |
|     |    | (OR)                                                                                        |     |            |
| 10. | a) | Compare rumor routing and sequential assignment routing protocols.                          | CO5 | 7 Marks    |
|     | b) | How location discovery is done in wireless sensor networks.                                 | CO1 | 7 Marks    |
|     |    |                                                                                             |     |            |

## III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

#### **CYBER SECURITY AND LAWS**

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

|     |    | UNIT-I                                                                       |     |          |
|-----|----|------------------------------------------------------------------------------|-----|----------|
| 1.  | a) | What do you mean by information security? Explain.                           | CO1 | 7 Marks  |
|     | b) | Discuss different issues and challenges in cyber crimes.                     | CO1 | 7 Marks  |
|     |    | (OR)                                                                         |     |          |
| 2.  | a) | Categorize the cyber laws under ITA2000.                                     | CO6 | 7 Marks  |
|     | b) | Why would social engineering be used by a cyber stalker?                     | CO4 | 7 Marks  |
|     |    | UNIT-II                                                                      |     |          |
| 3.  | a) | Briefly explain various types of viruses.                                    | CO1 | 7 Marks  |
|     | b) | What is DDoS attack? Explain.                                                | CO1 | 7 Marks  |
|     |    | (OR)                                                                         |     |          |
| 4.  |    | Briefly explain Phishing and Identity theft.                                 | CO1 | 14 Marks |
|     |    | UNIT-III                                                                     |     |          |
| 5.  | a) | What is the need of cyber laws?                                              | CO5 | 4 Marks  |
|     | b) | Explain the impact of Digital Signatures in ITA 2000.                        | CO2 | 10 Marks |
|     |    | (OR)                                                                         |     |          |
| 6.  | a) | State the consequences of not addressing the weakness in IT act.             | CO2 | 10 Marks |
|     | b) | Explain the various offences and punishments on cyber crime.                 | CO6 | 4 Marks  |
|     |    | UNIT-IV                                                                      |     |          |
| 7.  | a) | How social media marketing will impact organization security?                | CO4 | 7 Marks  |
|     | b) | Explain Organizational guidelines for internet usage.                        | CO6 | 7 Marks  |
|     |    | (OR)                                                                         |     |          |
| 8.  | a) | How peoples privacy is protected in organizations?                           | CO4 | 7 Marks  |
|     | b) | How cloud computing will affect the security and privacy of an organization? | CO3 | 7 Marks  |
|     |    | UNIT-V                                                                       |     |          |
| 9.  | a) | Describe in detail about Intellectual property in the cyber space.           | CO3 | 7 Marks  |
|     | b) | Briefly write about the Information warfare.                                 | CO3 | 7 Marks  |
|     |    | (OR)                                                                         |     |          |
| 10. | a) | Illustrate the ethical dimension of cyber crimes.                            | CO2 | 7 Marks  |
|     | b) | Briefly write about the purchasing goods and services scam.                  | CO2 | 7 Marks  |
|     |    | \$P & \$P                                                                    |     |          |

## III B.Tech II Semester (SVEC-16) Regular/Supplementary Examinations August - 2021

## DATA WAREHOUSING AND DATA MINING

[Computer Science and Engineering, Information Technology,

**Computer Science and Systems Engineering**]

Time: 3 hours

# Answer One Question from each Unit

All questions carry equal marks

## UNIT-I

| 1.  | a) | What is a concept hierarchy? Briefly describe the OLAP operations in the multidimensional data model                         | CO3 | 7 Marks |
|-----|----|------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Draw a multi tiered data warehouse architecture and explain.<br>(OR)                                                         | CO3 | 7 Marks |
| 2.  | a) | Explain the star schema of data warehouse model with the help of diagram.                                                    | CO2 | 7 Marks |
|     | b) | Discuss about the operations roll-up, drill down, slice and pivot in the design of data warehouse.                           | CO1 | 7 Marks |
|     |    | UNIT-II                                                                                                                      |     |         |
| 3.  | a) | What are various methods for data reduction? Explain with examples.                                                          | CO1 | 7 Marks |
|     | b) | Discuss the challenges that motivate the development of data mining.<br>(OR)                                                 | CO1 | 7 Marks |
| 4.  | a) | What is data integration? Discuss the issues to be considered for data integration.                                          | CO2 | 7 Marks |
|     | b) | Why do we need to preprocess data? What are the different forms of pre-processing?                                           | CO2 | 7 Marks |
|     |    | (UNIT-III)                                                                                                                   |     |         |
| 5.  | a) | What is meant by frequent item set? Write the Apriori algorithm for frequent item set generation Explain with example        | CO2 | 7 Marks |
|     | b) | Discuss Bayesian classification method with example.                                                                         | CO3 | 7 Marks |
| 6.  | a) | With an example, explain the classification by decision tree induction.                                                      | CO4 | 7 Marks |
|     | b) | What is association rule mining? Briefly describe the criteria for classifying association rules.                            | CO4 | 7 Marks |
|     |    | (UNIT-IV)                                                                                                                    |     |         |
| 7.  | a) | Explain k-means algorithm with an example. Describe the pros and cons of k-means in comparison with the k-medoids algorithm. | CO4 | 8 Marks |
|     | b) | Describe how categorization of major clustering methods is being done.<br>(OR)                                               | CO3 | 6 Marks |
| 8.  | a) | Explain DBSCAN clustering algorithm in detail.                                                                               | CO6 | 7 Marks |
|     | b) | Discuss in detail about hierarchical methods of clustering.                                                                  | CO5 | 7 Marks |
| 9.  | a) | Explain web content mining and how it is used for discovering useful information from the web.                               | CO6 | 7 Marks |
|     | b) | Describe sequential mining technique with an example.<br>(OR)                                                                | CO2 | 7 Marks |
| 10. | a) | Describe various trends in data mining.                                                                                      | CO2 | 6 Marks |
|     | b) | What is multimedia data mining? How similarity search can be performed on multimedia data?                                   | CO6 | 8 Marks |
|     |    | \$ \\$ \\$                                                                                                                   |     |         |

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Analyze the history of screen design.                                          | CO2 | 7 Marks  |
|-----|----|--------------------------------------------------------------------------------|-----|----------|
|     | b) | Discuss the characteristics of graphical user interface.                       | CO1 | 7 Marks  |
|     |    | (OR)                                                                           |     |          |
| 2.  | a) | What is direct and indirect manipulation? Differentiate both.                  | CO1 | 7 Marks  |
|     | b) | Discuss in detail the popularity of web user interface.                        | CO3 | 7 Marks  |
|     |    | UNIT-II                                                                        |     |          |
| 3.  | a) | Explain the Human considerations in Design.                                    | CO2 | 10 Marks |
|     | b) | Write short note on human interaction speeds.                                  | CO2 | 4 Marks  |
|     |    | (OR)                                                                           |     |          |
| 4.  |    | Discuss about users knowledge and experience in the design of business system. | CO1 | 14 Marks |
|     |    | UNIT-III                                                                       |     |          |
| 5.  | a) | Discuss about organizing and ordering of screen elements.                      | CO5 | 7 Marks  |
|     | b) | Explain any four qualities which provide visually pleasing composition.        | CO6 | 7 Marks  |
|     |    | (OR)                                                                           |     |          |
| 6.  | a) | Explain various guidelines for presenting information on screen.               | CO4 | 7 Marks  |
|     | b) | Write about technological considerations in interface design.                  | CO2 | 7 Marks  |
|     |    | UNIT-IV                                                                        |     |          |
| 7.  | a) | Discuss any five window operations.                                            | CO1 | 7 Marks  |
|     | b) | Explain the guidelines for selecting proper screen based controls.             | CO5 | 7 Marks  |
|     |    | (OR)                                                                           |     |          |
| 8.  | a) | Explain in detail text and messages.                                           | CO1 | 7 Marks  |
|     | b) | Illustrate the guidelines for creating images.                                 | CO5 | 7 Marks  |
|     |    | UNIT-V                                                                         |     |          |
| 9.  |    | Explain various features of interface building tools.                          | CO5 | 14 Marks |
|     |    | (OR)                                                                           |     |          |
| 10. | a) | What is multimedia? Discuss in detail about multimedia.                        | CO1 | 7 Marks  |
|     | b) | Write short note on pointing devices.                                          | CO6 | 7 Marks  |

#### Answer One Question from each Unit All questions carry equal marks

|     |          | UNIT-I                                                                                                                                                     |            |                    |
|-----|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
| 1.  | a)       | Describe and discuss the base Android OS Features.                                                                                                         | CO1        | 7 Marks            |
|     | b)       | Explain in detail Android OS Architecture five sections with neat sketch. (OR)                                                                             | CO2        | 7 Marks            |
| 2.  | a)       | Explain different Mobile Application users.                                                                                                                | CO1        | 7 Marks            |
|     | b)       | Write the Hello World first Android application with detailed steps.                                                                                       | CO4        | 7 Marks            |
| 3.  | a)       | Define Layoutd Discuss different layouts are available in Android.                                                                                         | CO2        | 7 Marks            |
|     | b)       | How to display activities as dialog windows explain with one example? (OR)                                                                                 | CO1        | 7 Marks            |
| 4.  | a)       | What is Intent? Discuss how to linking activities using Intent.                                                                                            | CO1        | 7 Marks            |
|     | b)       | Explain how to managing changes to a screen orientation.                                                                                                   | CO2        | 7 Marks            |
| 5.  | a)       | What is a List View? Explain how to use List View in long lists with an example.                                                                           | CO4        | 7 Marks            |
|     | b)       | Write an Android App to display the Date & Time by using Picker View.<br>(OR)                                                                              | CO3        | 7 Marks            |
| 6.  | a)       | What is Menu item? Discuss how to create Menu item with your Android App.                                                                                  | CO2        | 7 Marks            |
|     | b)       | Create an Android App Database connection steps with suitable example.                                                                                     | CO4        | 7 Marks            |
| 7.  | a)       | Explain how to send email messages from your Android App.                                                                                                  | CO6        | 7 Marks            |
|     | b)       | Develop an Android App how to display and switching another Google Map.                                                                                    | CO6        | 7 Marks            |
|     |          | (OR)                                                                                                                                                       |            |                    |
| 8.  | a)<br>b) | What is web service? How to consume the web service in Android OS?<br>Discuss the different ways in which you can send SMS message in your<br>Android App. | CO3<br>CO1 | 7 Marks<br>7 Marks |
|     |          | UNIT-V                                                                                                                                                     |            |                    |
| 9.  | a)       | Explain in detail how to establishing communication between a service and an activity.                                                                     | CO1        | 7 Marks            |
|     | b)       | Briefly discuss how to binding activities to services in your Android App. <b>(OR)</b>                                                                     | CO3        | 7 Marks            |
| 10. | a)       | Discuss how to building the Derby App in your iOS.                                                                                                         | CO4        | 7 Marks            |
|     | b)       | Describe and discuss the different iOS tools with suitable examples.                                                                                       | CO5        | 7 Marks            |

#### Answer One Question from each Unit All questions carry equal marks

|     |          | (UNIT-I)                                                                                                                                                                |            |                    |
|-----|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
| 1.  | a)       | Name the main elements of the GSM system architecture and describe their functions                                                                                      | CO1        | 7 Marks            |
|     | b)       | List the peak data transfer rates for LTE? Explain its functioning.                                                                                                     | CO5        | 7 Marks            |
| 2.  | a)<br>b) | Discuss the Applications and limitations of Mobile computing.<br>Explain security services offered by GSM with relevant Algorithms.                                     | CO1<br>CO1 | 7 Marks<br>7 Marks |
| 3.  | a)       | Compare IEEE 802.11 and Bluetooth with regard to their ad-hoc capabilities.                                                                                             | CO2        | 7 Marks            |
|     | b)       | Perceive the problem of hidden and exposed terminals. Determine what happens in the case of such terminals if Aloha, slotted Aloha, reservation Aloha, or MACA is used. | CO4        | 7 Marks            |
|     |          | (OR)                                                                                                                                                                    |            |                    |
| 4.  | a)       | Elaborate various protocols used to provide Bluetooth security.                                                                                                         | CO4        | 7 Marks            |
|     | b)       | Differentiate Packet reservation multiple access with Demand assigned multiple access methods.                                                                          | CO2        | 7 Marks            |
|     |          | (UNIT-III)                                                                                                                                                              |            |                    |
| 5.  | a)       | List advantages of IPv6 offer for mobility. Identify the additional messages for optimized Mobile IP protocol.                                                          | CO4        | 7 Marks            |
|     | b)       | Examine the reason why congestion occurs in network. Analyze how does TCP detect and handle congestion.                                                                 | CO2        | 7 Marks            |
|     |          | (OR)                                                                                                                                                                    |            |                    |
| 6.  | a)       | How and why does I-TCP isolate problems on the wireless link? What are the main drawbacks of this solution?                                                             | CO1        | 7 Marks            |
|     | b)       | Explain the working of Mobile IP with the help of neat diagram.                                                                                                         | CO4        | 7 Marks            |
| 7.  | a)       | Explain the concepts of Cache Invalidation mechanisms and what is importance of data cache maintenance and web cache maintenance.                                       | CO1        | 4 Marks            |
|     | b)       | Compare and contrast Push Data delivery and Pull Data delivery Mechanisms.                                                                                              | CO2        | 10 Marks           |
|     |          | (OR)                                                                                                                                                                    |            |                    |
| 8.  | a)       | Compare database hoarding and data caching. Describe Database hoarding techniques.                                                                                      | CO2        | 9 Marks            |
|     | b)       | Which type of indexing is suitable for broad casting data through wireless Channel, why?                                                                                | CO2        | 5 Marks            |
|     |          | UNIT-V                                                                                                                                                                  |            |                    |
| 9.  | a)       | Why does WAP define its own security layer and does not rely on the security provided by the mobile phone network?                                                      | CO1        | 5 Marks            |
|     | b)       | Sketch the WAP Architecture. Explain its layers and components briefly. (OR)                                                                                            | CO1        | 9 Marks            |
| 10. | a)       | Why doesn't WSP/B put responses into the same order as the requests?<br>Analyze the requests for different items on a web page.                                         | CO2        | 7 Marks            |

Elaborate on how to classify Wireless transaction protocol based on CO4 b) 7 Marks Services provided?

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY

[Mechanical Engineering, Computer Science and Engineering,

Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

#### Answer One Question from each Unit

#### All questions carry equal marks

## UNIT-I

1. "Managerial Economics is the discipline which deals with the application CO1 14 Marks of business management". Discuss.

#### (OR)

2. What is elasticity of demand? Explain different types of price elasticity of CO2 14 Marks demand.

## UNIT-II)

3. Define production function. How does a long run production function CO1. 14 Marks differ from short run production function? CO3

#### (OR)

- 4. From the following information calculate:
  - i) P/V Ratio.
  - ii) Break Even Point.
  - iii) Margin of Safety.
  - iv) Sales require to earn a profit of Rs. 2,40,000.

| Particulars            | Rs.      |  |  |
|------------------------|----------|--|--|
| Total Sales            | 6,00,000 |  |  |
| Selling price per unit | 150      |  |  |
| Variable cost per unit | 90       |  |  |
| Fixed costs            | 1,80,000 |  |  |
|                        |          |  |  |

#### (UNIT-III)

5. Explain the various features of a perfectly competitive market. How is CO1, 14 Marks price of a commodity determined under it? CO2

#### (**OR**)

6. How are price and output determined under monopoly? Show that under CO2 14 Marks monopoly, price is higher and output smaller than under perfect competition.

## UNIT-IV

7. What is Accounting? What are the accounting concepts and conventions? CO1, 14 Marks Explain any two accounting concepts in detail. CO4

#### (OR)

8. From the following transactions write Journal entries into the books of CO3 14 Marks Purohith

| Date         | Particulars                          | Rs.      |
|--------------|--------------------------------------|----------|
| 2018 April 5 | Started Business with Capital        | 2,00,000 |
| April 9      | Sold goods to Mudiliar on credit     | 60,000   |
| April 10     | Sold goods to Aswathama for cash     | 40,000   |
| April 13     | Goods returned by Mudiliar           | 2,200    |
| April 17     | Purchased goods from Madhu on credit | 45,000   |
| April 18     | Goods returned to Madhu              | 1,000    |
| April 24     | Paid cash to Madhu                   | 44,000   |

CO2 14 Marks

Max. Marks: 70

## UNIT-V

9. Explain the role of computerized accounting system in modern business CO3, 14 Marks organizations. CO4

#### (OR)

10. From the following Trail Balance of Gowham, prepare Trading Account, CO5 14 Marks Profit and Loss Account for year ending 31<sup>st</sup> March 2017 and Balance Sheet as on date.

| Particulars                        | Dr. Rs | Cr. Rs |
|------------------------------------|--------|--------|
| Buildings                          | 20,000 |        |
| Capital                            |        | 60,000 |
| Purchases and Sales                | 10,000 | 30,000 |
| Opening stock (1-4-2016)           | 5,000  |        |
| Debtors and Creditors              | 12,000 | 6,000  |
| Drawings account                   | 4,000  |        |
| Sales returns and Purchase returns | 2,000  | 500    |
| Freight                            | 2,500  |        |
| Office Salaries                    | 8,000  |        |
| Wages                              | 1,500  |        |
| Postage and Telegrams              | 1,000  |        |
| Machinery                          | 15,000 |        |
| Bills Receivables & Bills Payables | 8,000  | 2,000  |
| Advertisement                      | 2,000  |        |
| Cash in Hand                       | 3,500  |        |
| Loose Tools                        | 4,000  |        |
| Total                              | 98,500 | 98,500 |

#### Trail Balance as on 31<sup>st</sup> March, 2017

#### Adjustments:

- 1. Closing stock valued at Rs. 6,00/-
- 2. Depreciation on Buildings by 10% and Loose Tools by 20%.

3. Interest on Capital at 10%.

#### PYTHON PROGRAMMING [Information Technology]

Max. Marks: 70

7 Marks

CO1

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) Write notes on Python Standard Library.
- Write a simple Python program that prompts the user for a certain CO1. 7 Marks b) number of cities for the Traveling Salesman problem and displays the CO<sub>3</sub> total number of possible routes that can be taken. Your program should function as shown below. How many cities? 10 For 10 cities, there are 3628800 possible routes. (**OR**) 2. Write a Python program that prompts the user to enter an upper or lower CO1, 7 Marks a) case letter and displays the corresponding Unicode encoding. CO3 Algorithms and computers are a "perfect match". Justify. CO1 7 Marks b) UNIT-II ) 3. Write a brief notes on relational, membership and boolean operators CO1 7 Marks a) along with suitable examples. Write a Python program in which a student enters the number of college CO1-7 Marks b) credits earned. If the number of credits is greater than 90, 'Senior Status' CO3 is displayed; if greater than 60, 'Junior Status' is displayed; if greater than 30, 'Sophomore Status' is displayed; else, 'Freshman Status' is displayed. (**OR**) Create a dictionary named member table that contains users' email 4. CO1-7 Marks a) addresses as keys and their current password as the values. Write a CO3 function that generates a temporary new password for a given user and updates it in the table. Elaborate on dictionaries in Python, Set and Frozenset Types in Python. CO1, 7 Marks b) CO3 UNIT-III) Write a Python function named modCount that is given a positive 5. CO1-7 Marks a) integer, n, and a second positive integer,  $m \le n$ , and returns how many CO3 numbers between 1 and n are evenly divisible by m. Write notes on String Methods in Python. CO1 7 Marks b) (**OR**) 6 Write a python program segment that opens and reads a text file and CO1, 7 Marks a) displays how many lines of text are in the file. CO3 Write a python program segment that reads a text file named CO1. 7 Marks b) original text and displays how many times the letter 'e' occurs. CO3, CO5

1

# (UNIT-IV)

| 7.  | a) | Discuss the fundamental turtle attributes and behavior.                      | CO1  | 7 Marks  |
|-----|----|------------------------------------------------------------------------------|------|----------|
|     | b) | Using relative positioning, give a set of instructions for controlling the   | CO1, | 7 Marks  |
|     |    | turtle to draw an isosceles triangle on the screen (that is, a triangle with | CO4, |          |
|     |    | two equal-length sides).                                                     | CO5  |          |
|     |    | (OR)                                                                         |      |          |
| 8.  | a) | Describe what it means for a member of a class to be Private and to be       | CO1, | 7 Marks  |
|     |    | Public. How to denote Public and Private Class Members in Python?            | CO3  |          |
|     | b) | Implement a class named AvgList as a subclass of the built-in list class in  | CO1, | 7 Marks  |
|     |    | Python, able to compute the average of a list of numeric values. If the list | CO3- |          |
|     |    | contains any nonnumeric types, a ValueError exception should be raised.      | CO5  |          |
|     |    | UNIT-V                                                                       |      |          |
| 9.  | a) | Briefly Discuss tkinter Extensions.                                          | CO4, | 7 Marks  |
|     |    |                                                                              | CO5  |          |
|     | b) | With the aid of suitable examples, illustrate binding events.                | CO5  | 7 Marks  |
|     |    | (OR)                                                                         |      |          |
| 10. |    | Elaborate on reusable GUI components with classes.                           | CO5  | 14 Marks |
|     |    | \$P & \$P                                                                    |      |          |

#### DATABASE MANAGEMENT SYSTEMS

[Electronics and Communication Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

Differentiate between DDL and DML with examples. CO1 7 Marks 1. a) Discuss different notations used in ER model. Draw ER model for CO1 7 Marks b) university database. (**OR**) 2. Describe different types of users involved in database. CO1 7 Marks a) With a neat diagram, illustrate database architecture. b) CO3 7 Marks UNIT-II ) 3. Consider the following relations for a database that keeps track of CO2 7 Marks a) automobile sales in a car dealership (OPTION refers to some optional equipment installed on an automobile): CAR(Serial no, Model, Manufacturer, Price) OPTION(Serial no, Option name, Price) SALE(Salesperson id, Serial no, Date, Sale price) SALESPERSON(Salesperson id, Name, Phone) First, specify the foreign keys for this schema, stating any assumptions you make. Next, populate the relations with a few sample tuples, and then give an example of an insertion in the SALE and SALESPERSON relations that violates the referential integrity constraints and of another insertion that does not. b) Discuss in detail the operators SELECT, PROJECT and UNION with CO3 7 Marks suitable examples. (**OR**) What is Relational Calculus? Interpret Tuple and Domain Relation CO3 4. 7 Marks a) Calculus. Define Logical database design. Classify the properties of a Relational CO4 7 Marks b) Algebra. (UNIT-III) 5. Consider the table employee (empId, name, department, salary). CO2 7 Marks a) Assuming that department 5 has more than one employee. Write an SQL query to find the employees who get higher salary than anyone in the department 5. State and explain different Aggregate functions in SQL. CO4 7 Marks b) (**OR**) Define normalization. Explain 1NF, 2NF, 3NF Normal Forms. 6. CO1 7 Marks a) Consider the relation scheme R = (E, F, G, H, I, J, K, L, M, N) and the set CO6 7 Marks b) of functional dependencies:  $\{E, F\} \rightarrow \{G\}, \{F\} \rightarrow \{I,J\}, \{E,H\} \rightarrow \{K,L\}, \{E,H\} \rightarrow \{$  $\{K\} \rightarrow \{M\}, \{L\} \rightarrow \{N\}\}$  on R. What is the minimal key for R?

Max. Marks: 70

SVEC-16

## (UNIT-IV)

| 7. | a) | Briefly explain ACID property with an example.                 | CO3 | 7 Marks |
|----|----|----------------------------------------------------------------|-----|---------|
|    | b) | Demonstrate testing for serializability with suitable example. | CO4 | 7 Marks |
|    |    | (OR)                                                           |     |         |
| 8. | a) | Illustrate concurrent execution of transaction with examples.  | CO3 | 7 Marks |
|    | b) | Explain the following protocols for concurrency control:       | CO4 | 7 Marks |
|    |    | i) Lock-based protocols.                                       |     |         |
|    |    | ii) Time stamp based protocols.                                |     |         |
|    |    |                                                                |     |         |

## UNIT-V

9. Differentiate between clustered and unclustered indexes. CO5 7 Marks a) A PARTS file with Part# as the key field includes records with the CO6 7 Marks b) following Part# values: 23, 65, 37, 60, 46, 92, 48, 71, 56, 59, 18, 21, 10, 74, 78, 15, 16, 20, 24, 28, 39, 43, 47, 50, 69, 75, 8, 49, 33, 38. Suppose that the search field values are inserted in the given order in a B+-tree of order p = 4 and p leaf = 3; show how the tree will expand and what the final tree will look like.

#### (**OR**)

10. How can hashing be used to construct an index? Explain. CO5 7 Marks a) Write short notes on Indexed Sequential Access Methods (ISAM). CO1 7 Marks b)

> (A) (P) (j)

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **MECHATRONICS**

[Electronics and Instrumentation Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

Define the term Mechatronics. Describe the key elements of the CO1 1. 14 Marks Mechatronics System.

(OR)

2. Define the term feedback control system. Describe the characteristics of CO1 14 Marks feedback control system.

|    |    | (UNIT-II)                                                                                |     |          |
|----|----|------------------------------------------------------------------------------------------|-----|----------|
| 3. | a) | Explain the working principle of LVDT.                                                   | CO2 | 10 Marks |
|    | b) | Explain the principle of light sensor.                                                   | CO2 | 4 Marks  |
|    |    | (OR)                                                                                     |     |          |
| 4. |    | Explain the principle of operation and characteristics of DC motor.                      | CO2 | 14 Marks |
|    |    | UNIT-III)                                                                                |     |          |
| 5. |    | With a diagram, explain any two operational amplifiers.                                  | CO3 | 14 Marks |
|    |    | (OR)                                                                                     |     |          |
| 6. | a) | What do you mean by converters? Explain any one analog to digital converters.            | CO3 | 8 Marks  |
|    | b) | With circuit, explain current to voltage circuit.                                        | CO3 | 6 Marks  |
|    |    | UNIT-IV                                                                                  |     |          |
| 7. | a) | Explain proportional controller with application.                                        | CO4 | 8 Marks  |
|    | b) | Explain the procedure to select controller.                                              | CO4 | 6 Marks  |
|    |    | (OR)                                                                                     |     |          |
| 8. | a) | What is composite controller mode?                                                       | CO4 | 7 Marks  |
|    | b) | Explain adaptive controller with application.                                            | CO4 | 7 Marks  |
|    |    | UNIT-V                                                                                   |     |          |
| 9. | a) | Discuss the ethics to be followed in mechatronic design.                                 | CO6 | 7 Marks  |
|    | b) | Discus the merits and demerits of the coin counter designed as per mechatrnics approach. | CO5 | 7 Marks  |
|    |    | (OR)                                                                                     |     |          |

With the help of ladder diagram, explain the automatic car barrier system. 10. CO5 14 Marks

## III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **WEB TECHNOLOGIES**

[Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Create a simple HTML page which demonstrates the use of various types<br>of lists. Try adding a definition list which uses an unordered list to define<br>term                                 | CO1,<br>CO2 | 7 Marks  |
|-----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------|
|     | b) | Create a HTML document that has your image and your friend's image<br>with a specific height and width. Also when clicked on the images it<br>should be navigate to their respective profiles. | CO1,<br>CO2 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                           |             |          |
| 2.  | a) | Explain the frames and table tags of HTML with suitable example.                                                                                                                               | CO2         | 7 Marks  |
|     | b) | Explain the following HTML tags with suitable example.                                                                                                                                         | CO2         | 7 Marks  |
|     |    | $1) < \text{font}>. \qquad 11) < \text{meta}>. \qquad 111) . \qquad 1v) < v1deo>.$                                                                                                             |             |          |
|     |    | (UNIT-II)                                                                                                                                                                                      |             |          |
| 3.  | a) | Describe the different ways that CSS styles can be added to a page.                                                                                                                            | CO3         | 6 Marks  |
|     | b) | Explain the following terms related to CSS with examples.                                                                                                                                      | CO3         | 8 Marks  |
|     |    | i) Font-size. ii) Font-weight. iii) Text-decoration.                                                                                                                                           |             |          |
|     |    | iv) Text-transform. v) Padding. vi) Border style.                                                                                                                                              |             |          |
|     |    | (OR)                                                                                                                                                                                           |             |          |
| 4.  | a) | Explain the following built-in objects of java Script.                                                                                                                                         | CO3         | 8 Marks  |
|     |    | i) Window. ii) Document.                                                                                                                                                                       |             |          |
|     | b) | Write a JavaScript which validates registration form.                                                                                                                                          | CO4         | 6 Marks  |
|     |    | (UNIT-III)                                                                                                                                                                                     |             |          |
| 5.  | a) | Demonstrate in detail about JQuery selectors and events.                                                                                                                                       | CO5         | 7 Marks  |
|     | b) | How to access HTML elements and attributes using JQuery.                                                                                                                                       | CO5         | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                           |             |          |
| 6.  |    | Develop packaged components in bootstrap.                                                                                                                                                      | CO5         | 14 Marks |
|     |    | (UNIT-IV)                                                                                                                                                                                      |             |          |
| 7.  | a) | What is regular expression? Explain its functions in PHP.                                                                                                                                      | CO5         | 7 Marks  |
|     | b) | Explain the various operators and control structures in PHP with examples.                                                                                                                     | CO5         | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                           |             |          |
| 8.  | a) | Develop a PHP code to implement multi-level inheritance.                                                                                                                                       | CO5         | 8 Marks  |
|     | b) | Demonstrate OOP principals with suitable example using PHP.                                                                                                                                    | CO5         | 6 Marks  |
|     |    | UNIT-V                                                                                                                                                                                         |             |          |
| 9   |    | Demonstrate how to handle cookies and sessions in PHP                                                                                                                                          | CO5         | 14 Marks |
|     |    | (OR)                                                                                                                                                                                           |             |          |
| 10. | a) | List the different authentication methodologies used in PHP.                                                                                                                                   | CO6         | 7 Marks  |
|     | b) | Design a web page to store the contact us form data in the database using PHP. (Note: contact us page contains the following fields name, email-id, subject, message and submit button).       | CO6         | 7 Marks  |
|     |    |                                                                                                                                                                                                |             |          |

## SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

**III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021** 

### **OBJECT ORIENTED PROGRAMING**

[Electrical and Electronics Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Discuss fundamental principles of OOPs with respect to java language. 1. CO1 8 Marks a) Is Java Strongly Typed Language? Discuss. CO1 6 Marks b) (**OR**) Demonstrate various iterative statements in java with suitable examples. CO1, 8 Marks a) CO2 With the help of an example, explain constructor overloading in java. b) CO1 6 Marks UNIT-II ) Explain Creating Packages and Accessing a Package with examples. CO2 7 Marks a) What is inheritance? How inheritance is implemented in java? And CO1, 7 Marks b) discuss the advantages of inheritance. CO3 (**OR**) Define an interface. With an example, discuss how interfaces are CO<sub>2</sub> 8 Marks a) implemented and accessed in java. b) Explain the usage of super keyword with suitable example. CO2 6 Marks UNIT-III) 5. What do understand by Synchronization? Discuss with an example. CO<sub>2</sub> 8 Marks a) Illustrate the creation of user defined exception with an example. CO2 6 Marks b) (OR)Explain inter thread communication with suitable example. CO2 8 Marks a) Explain thread life cycle methods. CO1. 6 Marks b) CO3 UNIT-IV What is the need of layout managers? Explain different types of layout CO4 14 Marks managers available in AWT. (**OR**) Define an applet. Discuss applet life cycle methods with an example. CO<sub>4</sub> 7 Marks a) Write a java program to create single linked list with ten student names CO6 7 Marks b) using LinkedList collection java class. UNIT-V Explain various interfaces and classes available in javax.servlet Package CO5 8 Marks a) Write a java program using listeners for handling mouse events. 6 Marks b) CO5 (**OR**) What is the role of event listeners in event handling? List the Java event 10. CO5 a) 8 Marks listeners with suitable example. Discuss about any four Event Classes. CO5 6 Marks b)

SVEC-16

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### FOUNDATION ENGINEERING [Civil Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

 a) Explain in brief about various stages in soil exploration.
 b) Standard penetrate test was conducted in a deposit of fully submerged fine sand and field N value was reported as 56 at a depth of 4.5m. The average saturated unit weight of the soil is 21kN/m<sup>3</sup>. Calculate the corrected N value.

#### (OR)

 2. a) Discuss about following samplers. i) Split spoon sampler. ii) Rotary sampler. CO1 7 Marks CO1 7 Marks CO1 7 Marks

## UNIT-II

- 3. a) With an aid of neat sketch, explain how active earth pressure condition CO1 8 Marks can be determined using Culmann's graphical method.
  - b) A retaining wall, 5m high supports a backfill ( $c = 20 \text{kN/m}^2$ ,  $\Phi = 28^\circ$ , CO2 6 Marks  $\gamma = 21 \text{kN/m}^3$ ) with horizontal surface. The backfill carries surcharge load of  $25 \text{kN/m}^2$ . If the wall pushed towards backfill, compute the total thrust acting on retaining wall.

#### (**OR**)

- 4. a) What are assumptions of Coulomb's earth pressure theory? Give out the CO1 6 Marks analytical equation for determined the coefficient of active earth pressure using this theory.
  - b) A retaining wall with a smooth vertical back is 8m high and retains a CO2 8 Marks 2-layer sand backfill each having a depth of 4 m. For top layer  $\Phi' = 30^{0}$  and  $\gamma = 19$ kN/m<sup>3</sup> and for bottom layer  $\Phi' = 32^{0}$  and  $\gamma = 20$ kN/m<sup>3</sup>. Calculate the active thrust acting per meter run on the retaining wall. Show active earth pressure distribution.

## (UNIT-III)

- 5. a) Derive an equation for find out the stability of infinite slopes in cohesion- CO2 6 Marks less soil for steady seepage condition.
  - b) A 7m deep canal has side slope of 1:1. The soil has  $C_u = 20 \text{kN/m}^2$ , CO2 8 Marks  $\Phi_u=10^0$ , e = 0.8 and G = 2.67. Determine the factor of safety with respect to cohesion, when canal runs fully. Also, find the same in case of sudden drawdown condition.

For  $\Phi_{u} = 10^{0}$ , slope 1:1, take S<sub>n</sub>=0.11

For 
$$\Phi_{u} = 4.81^{\circ}$$
, slope 1:1, take S<sub>n</sub>=0.135.

#### (OR)

- 6. a) Explain about Swedish Circle method for slope stability analysis of finite CO2 8 Marks slopes.
  - b) An embankment of height 10m and slope with an inclination of  $40^{\circ}$  was CO2 6 Marks made with soil having c' = 25kN/m<sup>2</sup>,  $\phi = 28^{\circ}$ ,  $\gamma = 18$ kN/m<sup>3</sup>. Determine the critical height of the infinite slope for fully submerged condition and write a comment on stability of embankment.

## UNIT-IV

- 7. Mention the Terzaghi's bearing capacity equation. What are the major CO2 7 Marks a) assumptions made in the Terzaghi's bearing capacity theory? For a square footing that is B x B in plan, the following are given: CO2 7 Marks b)  $D_f = 1m$ ; vertical gross allowable load  $Q_{all} = 665kN$ ;  $\gamma = 18kN/m^3$ ;  $\Phi' = 40^0$ ; C' = 0; and factor of safety = 3; determine the size of the footing. (**OR**) 8. Give out equations for determining allowable bearing pressure from CO1 8 Marks a) following methods. i) Teng's Method. ii) Peck Method. iii) As per IS 6403-1971. iv) Bowle's method. A circular footing of size 2.5m rests on soil having  $c= 20 \text{kN/m}^2$ ,  $\Phi = 25^{\circ}$  CO2 6 Marks b) and  $\gamma = 17.5$  kN/m<sup>3</sup>. The depth of the foundation is 1m. Determine the gross allowable load on foundation with a factor of safety of 3. Assume general shear failure. (For  $\phi = 25^{\circ}$ , N<sub>c</sub>= 25.1, N<sub>g</sub>= 12.72 and N<sub>y</sub> = 8.34) UNIT-V 9. Classify the types of pile foundation based on: CO1 a) 8 Marks i) Material used. ii) Method of installation. iii) Mode of load transfer. iv) Displacement. A group of 16 bored pile are installed in clayey soil having unconfined b) CO2 6 Marks compression strength,  $q_u = 60 \text{kN/m}^2$  The piles are 8m long and 30cm diameter with c/c spacing of 90cm. Estimate the safe load of pile group. Take F.S = 3 and  $\alpha$  = 0.7. (**OR**)
- a) Discuss in detail about various components of well foundations.
   b) Explain about pneumatic caisson with the help of neat sketch.
   CO1 8 Marks
   CO1 6 Marks

| 6. | a) | Explain various road user characteristics that effect traffic performance.                                                                                                                                                                                                                                                                                                                                                                                                                                                        | CO4 | 7 Marks |
|    | b) | Discuss fundamental diagrams of traffic flow.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | CO6 | 7 Marks |
|    |    | UNIT-IV                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |     |         |
| 7. | a) | Enlist methods of travel time and delay study. Describe moving observer method.                                                                                                                                                                                                                                                                                                                                                                                                                                                   | CO6 | 7 Marks |
|    | b) | Mention the methods available for origin and destination survey. Explain<br>in detail home questionnaire survey.                                                                                                                                                                                                                                                                                                                                                                                                                  | CO8 | 7 Marks |

- 8. a) Explain the various factors that affect the level of service. Explain the CO7 7 Marks different types of level of service.
  - b) A test car was used on a north-south road 0.75 km long and the following CO6 7 Marks data given below was collected for the moving car was collected. Calculate traffic volume, average travel time and space mean speeds in both directions.

| North trip<br>no. | Travel Time<br>(along) in<br>min | No. of<br>vehicles met<br>Against | No of<br>vehicles<br>overtaking<br>test car | No of<br>vehicles<br>overtaken<br>by test car |
|-------------------|----------------------------------|-----------------------------------|---------------------------------------------|-----------------------------------------------|
| 1                 | 2.65                             | 85                                | 1                                           | 0                                             |

## UNIT-V

| 9. | a) | Discuss various advantages and disadvantages of traffic signals in detail. | CO6 | 7 Marks |
|----|----|----------------------------------------------------------------------------|-----|---------|
|----|----|----------------------------------------------------------------------------|-----|---------|

b) Explain the various types of off street parking systems in detail. CO7 7 Marks

## (OR)

- 10. a) Write a detailed note on various driver factors that cause accidents and CO7 7 Marks mention the concerned preventive measures.
  - b) Draw a neat sketch of rotary intersection, show all design components and CO7 7 Marks explain about them in brief.

#### **III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021**

#### STEEL STRUCTURES [Civil Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. A tie member consisting of an ISA 80mm x 50mm x 8mm is welded to a CO2 14 Marks 12mm thick gusset plate at site. Design welds to transmit load equal to the design strength of the member. Assume Fe 410 grade steel.

#### (**OR**)

2. Design a single bolted double cover butt joint to connect boiler plates of CO3 14 Marks thickness 12mm for maximum efficiency. Use M16 bolts of grade 4.6. Boiler plates are of Fe 410 grade. Find the efficiency of the joint.

### UNIT-II

3. Design a laterally supported beam of effective span 6 m for the following CO3 14 Marks data:

Grade of steel: Fe 410; Maximum bending moment: 160 kNm; Maximum shear force: 220 kN. Check for deflection is not required.

#### (OR)

- 4. A steel floor beam in a building has a span of 6m. It is simply supported CO2 14 Marks over supports and carries a uniform load of 40kN/m, inclusive of self weight. Design the beam (Fe 410) if,
  - i) the compression flange is restrained throughout the span against lateral bending.
  - ii) the lateral supports for the compression flange are provided only at the ends.

## UNIT-III)

5. Select a suitable angle section to carry a factored tensile force of 180 kN CO5 14 Marks assuming a single row of M20 bolts and assuming design strength as fy = 250 MPa.

#### (OR)

6. A double angle discontinuous strut 2.25m long consists of two CO7 14 Marks ISA 60 x 60 x 5 connected to the same side of the 8mm thick gusset plate by one bolt. Calculate the load that this strut can carry.

#### (UNIT-IV)

 Design a laced column 10m long to carry a factored axial load of 1100kN. CO3 14 Marks The column is restrained in position but not in direction at both ends. Provide single lacing system with bolted connection. Design the column with two channels back to back.

#### (OR)

8. A column ISHB 350 at 661.2 N/m carries an axial compressive factored CO3 14 Marks load of 1600kN. Design a suitable welded gusset base. The base rests on M-15 grade of concrete.

Max. Marks: 70

## UNIT-V

9. By using IS Codes, determine the design loads on the purlins of an CO7 14 Marks industrial building near Visakhapatnam: Given data:

| Class of building:   | General with life of 50 years. |
|----------------------|--------------------------------|
| Terrain:             | Category 2.                    |
| Maximum dimension:   | 40 m.                          |
| Width of building:   | 15 m.                          |
| Height at eve level: | 8 m.                           |
| Topography:          | $\theta$ less than 3°.         |
| Permeability:        | Medium                         |
| Span of truss:       | 15 m.                          |
| Pitch:               | 1/5.                           |
| Sheeting of purlins: | 1 <b>.</b> 35 m.               |
| Spacing of trusses:  | 4 m.                           |
|                      | (OR)                           |

10. Explain the following with neat sketches:

CO1 14 Marks

- i) Bracing system in roof trusses.
- ii) Anchorages of truss with concrete column.
- iii) Connection of purlin to rafter.

III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

**GROUNDWATER DEVELOPMENT AND MANAGEMENT** 

[Civil Engineering]

Time: 3 hours

Max. Marks: 70

## Answer One Question from each Unit

## All questions carry equal marks

## UNIT-I

| 1.  | a) | Explain vertical distribution of groundwater with a neat sketch.                                                                                                                                                                                                                 | CO1 | 7 Marks  |
|-----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Discuss various geological formations of aquifers with suitable examples.                                                                                                                                                                                                        | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                                                                                                             |     |          |
| 2.  |    | Describe Groundwater flow contours and their applications with respect to flownet analysis.                                                                                                                                                                                      | CO2 | 14 Marks |
|     |    | UNIT-II)                                                                                                                                                                                                                                                                         |     |          |
| 3.  | a) | Explain unconfined aquifer with a neat sketch.                                                                                                                                                                                                                                   | CO2 | 6 Marks  |
|     | b) | In an artesian aquifer, the drawdown is 1.2 meters at a radial distance of 10 meters from a well after two hours of pumping. On the basis of Thies, non-equilibrium equations, determine the pumping time for the same drawdown at a radial distance of 30 meters from the well. | CO2 | 8 Marks  |
|     |    | (OR)                                                                                                                                                                                                                                                                             |     |          |
| 4.  | a) | Derive an expression to determine the discharge through unconfined aquifer using Dupit's equation.                                                                                                                                                                               | CO3 | 7 Marks  |
|     | b) | A well is located in a 30m thick confined aquifer of permeability 35m per day and storage coefficient of 0.004. If the well is pumped at a rate of 1500 litres per minute, calculate the drawdown at a distance of 40m from the well after 20 hours of pumping.                  | CO3 | 7 Marks  |
|     |    | UNIT-III                                                                                                                                                                                                                                                                         |     |          |
| 5.  |    | Describe the shape of fresh salt water interface.                                                                                                                                                                                                                                | CO6 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                                                                             |     |          |
| 6.  |    | Explain the structure of the fresh salt water interface.                                                                                                                                                                                                                         | CO6 | 14 Marks |
|     |    | UNIT-IV                                                                                                                                                                                                                                                                          |     |          |
| 7.  | a) | Explain the advantages and disadvantages artificial recharge of groundwater.                                                                                                                                                                                                     | CO5 | 7 Marks  |
|     | b) | List artificial recharge methods and explain stream channel method with a neat sketch.                                                                                                                                                                                           | CO5 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                                                                                                             |     |          |
| 8.  |    | Describe the application of Remote Sensing in artificial recharge of groundwater along with a case study.                                                                                                                                                                        | CO4 | 14 Marks |
|     |    | UNIT-V                                                                                                                                                                                                                                                                           |     |          |
| 9.  |    | List surface methods in groundwater exploration and explain seismic refraction method with a neat sketch.                                                                                                                                                                        | CO4 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                                                                             |     |          |
| 10. |    | List the types of information that can be obtained from various logging techniques.                                                                                                                                                                                              | CO7 | 14 Marks |

**III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021** 

#### SOLID WASTE MANAGEMENT [Civil Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. Describe the effects of improper disposal of solid waste on human health CO6 7 Marks a) and environment. Explain the factors influencing solid waste generation. CO<sub>2</sub> 7 Marks b) (**OR**) 2. Write about the interrelationship of the functional elements in a solid CO4 14 Marks waste management system. UNIT-II Compose the impacts of public health and economic aspects of on-site CO6 3. 7 Marks a) solid waste storage system. Explain the factors that should be considered in evaluating onsite CO1 b) 7 Marks processing equipment. (**OR**) 4. Describe on-site segregation and handling of solid waste. CO9 14 Marks (UNIT-III) Discuss the methods adopted in India for collection and disposal of CO7 5. 14 Marks refuse. What changes would you recommend in these, so as to make the process more hygienic and aesthetic? (**OR**) 6. Describe the operation of hauled container system of waste collection. CO1 7 Marks a) Assess the various methods of house to house solid waste collection and CO2 7 Marks b) their advantage. UNIT-IV) 7. Describe the mechanical methods of volume reduction of solid waste. CO<sub>2</sub> a) 7 Marks Write short note on air pollution problems in incineration process and b) CO8 7 Marks suggest which act should be followed for safety implementation of incineration process. (**OR**) 8. Explain composting process of bio-degradable municipal solid waste. CO5 14 Marks ( UNIT-V ) 9. Write short note on environmental factors in sanitary landfill sites. CO1 7 Marks a) Explain different methods used for municipal solid waste on land. CO1 b) 7 Marks (**OR**) What is leachate? Design various methods for treatment and disposal of CO3 10. 14 Marks lleachate. <u></u>

Max. Marks: 70

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **RURAL TECHNOLOGY**

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- Ramu wants to construct an own house by taking loan from the bank CO1 1. a) 7 Marks through government schemes. List the schemes that are associated with housing and explain them. What are the safety issues that have to be taken while transferring any 7 Marks b) CO5 documents? (**OR**) 2. List out and explain the different ways how you will eradicate poverty. CO1 7 Marks a) Examine the role of financial institutions in rural development with CO4 7 Marks b) special emphasis on NABARD. UNIT-II ) What is meant by non-conventional energy? Mudipatla is a village having CO1 3. 14 Marks problem with electricity. Explain how it helps to prevent power deficiency problems in rural areas. (**OR**) What do you understand by 3R principle? How this can be useful for the CO4 4. 7 Marks a) rural people for the waste management? Explain in detail the production of biomass with the waste available in the CO1 b) 7 Marks village areas. (UNIT-III) 5. Enumerate the technologies involved in food processing units in detail. CO4 7 Marks a) Elaborate the role of cottage industry in rural development. CO1 7 Marks b) (**OR**) 6. What is plant tissue culture? How plant tissue culture is carried out in the CO2 14 Marks laboratory? (UNIT-IV) Suggest the rural people to construct various rainwater harvesting CO4 7. 7 Marks a) structures to store and to increasing the groundwater levels. What are the problems associated with poor water quality? Address the CO5 7 Marks b) issues that are involved in environment and sanitation. (**OR**) Educate the use of bio fertilizers to the rural people with the resources 8. CO6 14 Marks available in the rural area. What are the disadvantages of using chemical fertilizers? UNIT-V Explain how ICT are helpful to the rural people. List some of the ICT CO1 9. 14 Marks applications which are used in rural areas. (**OR**)
- 10. Carryout feasibility study on the public and private partnership for rural CO3 14 Marks development. Suggest the government in various ways how the village can be developed under adoption scheme.

Max. Marks: 70

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

# POWER SEMICONDUCTOR DRIVES

[Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | Explain about nature and classification of different load torques.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | CO1 | 7 Marks  |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Explain the multi-quadrant operation of an electric motor with relevant characteristics when the motor is driving a hoist load.                                                                                                                                                                                                                                                                                                                                                                                                                 | CO2 | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |     |          |
| 2. | a) | The electric motor drive develops a torque expressed by $T_M = a\omega + b$ where <b>a</b> and <b>b</b> are positive constants, the motor is supposed to drive the load torque which is given by $T_L = c\omega^2 + d$ where c and d are other positive constants, the total inertia of the rotating masses is J. Determine the relation among the among <b>a</b> , <b>b</b> , <b>c</b> and <b>d</b> in order to start the motor and load together and have an equilibrium operating speed and also calculate this equilibrium operating speed. | CO2 | 7 Marks  |
|    | b) | Develop a criterion for finding the steady state stability of an electric drive.                                                                                                                                                                                                                                                                                                                                                                                                                                                                | CO1 | 7 Marks  |
|    |    | UNIT-II                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |     |          |
| 3. | a) | Explain various relative operational merits and demerits of single phase fully controlled converters fed to DC motors.                                                                                                                                                                                                                                                                                                                                                                                                                          | CO2 | 4 Marks  |
|    | b) | Explain the operation of a separately excited dc motor supplied from $3-\Phi$ semi controlled rectifier and draw voltage and current waveforms.                                                                                                                                                                                                                                                                                                                                                                                                 | CO3 | 10 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |     |          |
| 4. | a) | Draw and explain the speed-torque characteristics of a DC separately excited motor fed by three phase semi converter with relevant equations.                                                                                                                                                                                                                                                                                                                                                                                                   | CO2 | 6 Marks  |
|    | b) | Explain the operation of single phase dual converter controlling the separately excited DC motor.                                                                                                                                                                                                                                                                                                                                                                                                                                               | CO5 | 8 Marks  |
|    |    | UNIT-III                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |     |          |
| 5. | a) | Describe the operation of DC separately excited motor fed by type-B chopper with relevant waveforms.                                                                                                                                                                                                                                                                                                                                                                                                                                            | CO3 | 7 Marks  |
|    | b) | Briefly explain the chopper control performance fed with separately excited DC motor in regenerative braking control mode with neat diagrams.                                                                                                                                                                                                                                                                                                                                                                                                   | CO2 | 7 Marks  |

#### (OR)

- 6. a) Draw the block diagram and explain the closed loop speed control of CO4 7 Marks separately excited DC motor.
  - b) Explain with circuit and waveforms of four quadrant chopper fed CO2 7 Marks separately excited DC motor.

## UNIT-IV

- 7. a) Illustrate the stator frequency control of induction motor with torque and CO5 7 Marks power limitations in real time applications.
  - b) Show that variable frequency control of induction motor is more efficient CO1 7 Marks than stator voltage control.

#### (OR)

- 8. a) Explain closed loop operation of CSI fed induction motor drives with a CO4 7 Marks neat diagram.
  - b) Explain static Scherbius drive control for speed control of induction CO2 7 Marks motor. Draw speed -torque characteristics

## UNIT-V

- 9. a) Describe the advantages of self-controlled variable speed synchronous CO1 6 Marks motor drive over the separate controlled drive.
  - b) In variable frequency control of a synchronous motor why (V/f) ratio is CO6 8 Marks maintained constant up to base speed and V constant above the base speed. Explain briefly with necessary waveforms.

#### (OR)

- 10. a) Explain the operation of self controlled synchronous motor fed by voltage CO4 7 Marks source inverter with a neat diagram.
  - b) Briefly explain the various drive circuits for stepper motor. CO5 7 Marks

#### **POWER SYSTEM ANALYSIS** [Electrical and Electronics Engineering]

Max. Marks: 70

5 Marks

CO1

**Answer One Question from each Unit** All questions carry equal marks

- 1. a) List the advantages of the p.u form of representation.
  - 9 Marks CO3 b) Obtain the per unit representation for the three-phase power system shown in figure

Generator 1 : 50 MVA; 10.5 KV; X = 1.8 ohm Generator 2 : 25 MVA; 6.6 KV; X = 1.2 ohm Generator 3 : 35 MVA; 6.6 KV; X = 0.6 ohm Transformer T1 : 30 MVA; 11/66 KV; X = 15 ohm/phase Transformer T2 : 25 MVA; 66/6.2 KV, as h.v. side X = 12 ohms Transmission line: XL = 20 ohm/phase

#### (**OR**)

- 2. CO2 7 Marks a) Why are Per phase analysis done in a symmetrical three-phase system?
  - CO2 7 Marks b) Discuss in detail about the modelling of transmission lines.

## UNIT-II

3. For the 3-bus system shown in the figure, Obtain  $Z_{BUS}$ . a)

CO3 7 Marks

Derive an expression for adding a branch element between two buses in the CO5 7 Marks b) Z<sub>BUS</sub> building algorithm.

(**OR**)

Time: 3 hours

4. For the system shown below, Obtain Y<sub>BUS</sub> by direct inspection method. Take CO4 9 Marks a) bus (1) as reference. The element impedances are indicated in p.u.

CO1 b) List the merits and demerits of Z<sub>BUS</sub> building algorithm.

#### UNIT-III)

5 Marks

- 5. Derive the generalized expressions for elements of Jacobian matrix for CO5 7 Marks a) decoupled load method.
  - Compare Gauss-Seidel method and Newton-Raphson method of load flow CO1 b) 7 Marks studies

#### (**OR**)

6. Explain clearly with detailed flowchart, the computational procedure for 14 CO5 load flow solution using N-R method when the system contains all types of Marks buses.

## UNIT-IV)

- 7. Illustrate the step by step procedure for systematic fault analysis using bus CO<sub>4</sub> 7 Marks a) impedance matrix.
  - CO1 b) What do you understand by short-circuit KVA? Explain. 7 Marks

#### (**OR**)

- 8. The short circuit MVA at the bus bars for a power plant A is 1200 MVA and CO3 7 Marks a) for another plant B is 1000 MVA at 33 KV. If these two are to be interconnected by a tie-line with reactance 1.2 ohm, determine the possible short circuit MVA at both the plants.
  - CO3 7 Marks b) Derive the expression for fault current for a single line-to-ground fault in a power system faulted through fault impedance Zf.

## UNIT-V

- 9. Derive the swing equation for a single machine connected to infinite bus CO<sub>4</sub> 7 Marks a) system. State the assumptions if any and state the usefulness of this equation. Neglect the damping.
  - CO1 Describe the methods of improving transient stability. 7 Marks b)

#### (**OR**)

- 10. State the bad effects of instability. Distinguish between steady state and CO1 7 Marks a) dynamic stability.
  - Explain critical clearing time and critical clearing angle, deriving the CO4 7 Marks b) expressions.

DESIGN AND ESTIMATION OF ELECTRICAL SYSTEMS [Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Explain briefly CTS and TRS systems of wiring with neat sketches and CO3 7 Marks mention advantages and disadvantages.
  - b) List out the general rules to be followed for internal wiring. CO1 7 Marks

#### (**OR**)

2. The plan of a residential building is shown in fig below. It is to be CO2 14 Marks provided with CTS system of wiring. Estimate the material required and its cost. Wattage of Lamps = 60W, Fan = 80W, 5A socket = 100W, 15 A socket = 1000W. Also draw the wiring diagram. Assume any missing date.

- 3. a) A 11kv line is to be erected to give supply to village 2km from existing CO1 7 Marks 11kv line. Prepare a schedule of materials required for the line. Assume an average span of 50m and 2 cut points in line.
  - b) Calculate the number of various insulators needed for the erection of CO3 7 Marks 500m, 3-phase, 11kv overhead line with two angled points and two turning points. The length of span is 70m.

#### (OR)

4. An OH 11kv, 50Hz, 3-phase line is to be tapped off from the existing CO3. 14 Marks 11kv line pole at about 90<sup>o</sup> angle. The proposed line has to be erected on 10m long RCC poles with ACSR conductor of size  $6/1 \times 2.11$ mm with average span of 100m. Line has to pass through the city area spreading about 500m long. Furnish the list of materials required and estimate the cost for 3.2km ling line.

# UNIT-III

- Categorize the power circuits on the basis of applications and explain. 5. CO5 7 Marks a) b) What are the advantages of Electric drives? CO4 7 Marks (**OR**) Calculate the size of the conductor to be used for wiring of 15HP, 400V, 6. CO4 7 Marks a) 3-phase, 50Hz Induction motor. Consider the efficiency and power factor of motor as 0.85 and 0.8 respectively.
  - b) State some important points that guides in carrying out wiring for a motor CO1 7 Marks installation.

# UNIT-IV

| 7.  | a)   | What do you understand by polar curves?                                            | CO1 | 7 Marks |  |  |  |  |
|-----|------|------------------------------------------------------------------------------------|-----|---------|--|--|--|--|
|     | b)   | Explain the principle of operation of sodiumvapor lamp with a neat                 | CO5 | 7 Marks |  |  |  |  |
|     |      | diagram. Mention its uses.                                                         |     |         |  |  |  |  |
|     |      | (OR)                                                                               |     |         |  |  |  |  |
| 8.  | a)   | State and explain different lighting schemes.                                      | CO5 | 7 Marks |  |  |  |  |
|     | b)   | State and explain laws of illumination.                                            | CO1 | 7 Marks |  |  |  |  |
|     |      | UNIT-V                                                                             |     |         |  |  |  |  |
| 9.  | a)   | Describe the construction and operation of an electric arc furnace.                | CO1 | 7 Marks |  |  |  |  |
|     | b)   | Describe the Ajax Wyatt type induction furnace and explain its working.            | CO1 | 7 Marks |  |  |  |  |
|     | (OR) |                                                                                    |     |         |  |  |  |  |
| 10. | a)   | Explain the principle of electric spot welding and seam welding.                   | CO5 | 7 Marks |  |  |  |  |
|     | b)   | What are the basic components of DC and AC welding sets and explain their working? | CO5 | 7 Marks |  |  |  |  |

DIGITAL SIGNAL PROCESSING FOR ELECTRICAL ENGINEERS [Electrical and Electronics Engineering]

Time: 3 hours

8.

Max. Marks: 70

2 Marks

CO1

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1. a) For each of the following systems, test whether or not the system is linear CO2 12 Marks or nonlinear, causal or non-causal and stable or not.

i) 
$$y(n) = x(n) + x^2 (n-1)$$
.  
ii)  $y(n) = ax(n) + bx(n-1)$ .  
iii)  $y(n) = |x(n)|$ 

b) List out the basic operations on discrete time signals.

#### (OR)

- 2. a) Discuss sampling and quantization methods in A/D conversion process in CO1 8 Marks detail.
  - b) Determine the solution of difference equation CO1 6 Marks  $y(n) = \frac{5}{6}y(n-1) - \frac{1}{6}y(n-2) + x(n) \text{ for the input } x(n) = 2^n u(n) \cdot$

## UNIT-II

3. a) Find the DFT of sequence  $x(n) = \{1, 2, 3, 4\}$  using Direct method. CO4 4 Marks b) Find the DFT of sequence  $x(n) = \{1, 1, 1, 1, 1, 1, 1, 1\}$  using DIF-FFT CO4 10 Marks algorithm.

#### (OR)

4. What is the advantage of FFT? Discuss decimation in time and CO1 14 Marks decimation in frequency algorithms in detail.

### (UNIT-III)

5. Design a digital IIR low pass filter with pass band edge of 1000Hz and CO3 14 Marks stop band edge at 1500Hz for a sampling frequency of 5000Hz. The filter is to have a pass band ripple of 0.5dB and a stop band ripple below 30dB. Design a Butterworth filter using the bilinear transformation.

#### (**OR**)

- 6. a) What is warping effect? What is its effect on magnitude and phase CO1 6 Marks response?
  - b) Convert the given analog filter with system function  $H(s) = \frac{1}{(s+3)(s+4)}$  CO3 8 Marks

into a digital filter using impulse invariant method assuming T=1s.

# UNIT-IV

7. a) Discuss the Fourier series method of designing FIR filters in detail.b) What are the advantages and disadvantages of FIR filters?CO1 6 Marks

(OR)

# Design an ideal lowpass filter with a frequency response CO3 14 Marks $H_d(e^{jw}) = 1$ for $-\frac{\pi}{2} \le \omega \le \frac{\pi}{2} = 0$ for $\frac{\pi}{2} \le |\omega| \le \pi$

Find the values of h(n) for N=11.

Find H(Z) using Fourier series method.

# UNIT-V

9. Implement the process of controlling stepper motor using TMSLF2407 CO5 14 Marks DSP controller in robotics.

### (OR)

10. Develop an algorithm by interfacing TMSLF2407 processor with stepper CO6 14 Marks motor drive system for controlling its speed.

#### **ELECTRICAL MACHINE DESIGN**

[Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. Explain various factors affecting the choice of the specific magnetic CO1 a) 7 Marks loading on a machine while designing. A 350kW, 500V, 450 RPM, 6 pole DC generator is built with an armature b) CO<sub>2</sub> 7 Marks diameter of 0.87m and a core length of 0.32m. The lap wound armature has 660 conductors. Calculate the specific magnetic and electric loadings. (**OR**) 2. List the classes of electrical conducting materials and describe their CO1 7 Marks a) properties and applications of those materials. Classify the insulating materials used in electrical machines according to 7 Marks b) CO1 their thermal stability. Comment on selection of class of insulating material. UNIT-II Select and explain suitable procedure for designing the series field of DC CO3 3. 8 Marks a) machine. Derive formula for air gap length of DC machine. CO<sub>2</sub> 6 Marks b) (**OR**) 4. List the guiding factors for selecting the armature slots. CO1 6 Marks a) Calculate the mmf required for air gap of a DC machine with an axial b) CO4 8 Marks length of 20cm (no ducts) and a pole arc of 18cm. The slot pitch = 27mm, slot opening = 12mm, air gap = 6mm and the useful flux per pole = 25mWb. Take Carter's coefficient for slot as 0.3. (UNIT-III) 5. Give the relationship between emf per turn and kVA rating of a CO1 6 Marks a) transformer. The tank of 1250 kVA, natural oil cooled transformer has the dimensions CO4 8 Marks b) length, width and height as 0.65 x 1.55 x 1.85 m respectively. The full load loss = 13.1 kW, loss dissipation due to radiations =  $6 \text{ W/m}^{2} \text{ }^{\circ}\text{C}$ , loss dissipation due to convection=6.5 W/m<sup>2</sup> <sup>0</sup>C, improvement in convection due to provision of tubes = 40%, temperature rise =  $40^{\circ}$ C, length of each tube=1m, diameter of tube = 50mm. Find the number of tubes for this transformer. Neglect the top and bottom surface of the tank as regards the cooling. (**OR**) 6. Derive the output equation of single phase transformer. CO2 7 Marks a) A 3-Phase, 50Hz, oil cooled core type transformer has the following CO4 7 Marks b) dimensions: Distance between core centres = 0.2m, Height of window
  - dimensions: Distance between core centres = 0.2m, Height of Window = 0.24m, Diameter of circumscribing circle = 0.14m, The flux density in the core = 1.25Wb/m<sup>2</sup>, The current density in the conductor = 2.5A/mm<sup>2</sup>. Assume a window space factor of 0.2 and the core area factor = 0.56. The core is two stepped. Estimate kVA rating of the transformer.

#### 1

# UNIT-IV

- 7. a) State and discuss the factors to be considered while determining the air CO1 7 Marks gap in case of 3-phase induction motors.
  - b) Determine the approximate diameter and length of stator core for a 10kW, CO4 7 Marks 415V, 3-phase, 4 pole, 1425 RPM, delta connected induction motor. Bav = 0.45Wb/m<sup>2</sup>, ac = 2300 amp. cond./m, full load efficiency = 0.85, Power factor = 0.88. Assume (L/ $\tau$ ) value is unity.

#### (OR)

8. Estimate the stator core dimensions number if stator slots and number of CO4 14 Marks stator conductors per slot for a 100kW, 3300V, 50Hz, 12 pole, star connected slip ring induction motor. Bav = 0.4Wb/m<sup>2</sup>, ac = 25000 amp.cond./m. the efficiency of machine is 90% and operating at 0.9 power factor. Compute main dimensions to give best power factor. The slot loading should not exceed 500 amp. conductors.

### UNIT-V

9. a) Discuss pole design procedure for salient pole synchronous generators. CO5 7 Marks
b) Determine core diameter and core length of 250kVA, 2200V, 12 pole, CO4 7 Marks 500 RPM, 3-phase alternator by assuming average gap density as 0.6 Wb/m<sup>2</sup> and specific electric loading of 30000 amp. cond./m. take (L/τ) value as 1.5.

#### (OR)

- 10. a) Formulate the output equation of a synchronous machine. CO2 7 Marks
  - b) Explain the step by step procedure for the design of field winding CO5 7 Marks of synchronous machine.

III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

# SPECIAL ELECTRICAL MACHINES

[Electrical and Electronics Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Explain the constructional details and working of a 3-phase variable CO1 9 Marks reluctance stepper motor with 4/2 poles.
  - b) Enlist the applications of different types of stepper motor. CO1 5 Marks

#### (OR)

- 2. a) What is bifilar winding? How it is used in a variable reluctance stepper CO1 4 Marks motor?
  - b) Show the rotor positions of a 4-phase VR stepper motor with 6 rotor teeth CO2 10 Marks when it rotates in a counter clockwise direction. Assume two-phase ON mode of excitation of phase windings.

### UNIT-II

- 3. a) What is the need for sensing the rotor position of a SRM? Discuss in CO1 7 Marks detail how an optical position sensor works.
  - b) Sketch the variation of inductance with rotor position of a three phase CO2 7 Marks switched reluctance motor by ignoring fringing and saturation effects.

#### (**OR**)

- 4. a) Show that the torque developed in a switched reluctance motor is CO1 7 Marks independent of the direction of the current.
  - b) Differentiate VR stepper motor from a switched reluctance motor. CO4 7 Marks

### (UNIT-III)

- 5. a) Show that a synchronous reluctance motor, develops maximum torque at CO2 7 Marks a load angle of 45<sup>o</sup>.
  - b) A 3-phase, 4 pole, 60Hz, 230V star connected synchronous reluctance CO4 7 Marks motor has direct axis and quadrature axis synchronous reactances of 22.5 $\Omega$  and 3.5 $\Omega$  respectively. The load toque is 12.5 N-m. The Voltage to frequency ratio is maintained constant at rated value. Find:

i) load angle. ii) line current. iii) power factor. Neglect rotational losses and armature resistance.

#### (**OR**)

- 6. a) Sketch the rotor structure of a line start synchronous reluctance motor and CO1 10 Marks explain why these type of motors are self starting.
  - b) Discuss how SyRM are effectively employed in industrial applications. CO6 4 Marks

#### Time: 3 hours

# UNIT-IV

- 7. a) A permanent magnet DC motor has an armature resistance of 1.03Ω. It CO4 7 Marks draws a current of 1.25A at no load with 50V supply and running at 2100 r.p.m. Find:
  - i) speed-voltage constant.
  - ii) rotational losses.
  - iii) constant power when it runs at 1700 r.p.m at 48V supply.
  - b) Sketch the drive circuit for a three phase BLDC motor and explain how CO2 7 Marks rotation is achieved in clockwise and anticlockwise directions.

#### (OR)

- 8. a) What are the disadvantages of sensor based control of BLDC motor? CO1 7 Marks Explain how sensor-less control will overcome these disadvantages with the help of a block diagram.
  - b) Explain in detail sensing and switching logic schemes of PMBLDC CO1 7 Marks motor.

### UNIT-V

- 9. a) Explain how a linear induction motor is developed from a cylindrical CO1 7 Marks rotor induction motor. Why the stator and rotor of equal lengths cannot move continuously? What modifications can be made to achieve propulsion force continuously?
  - b) Discuss how a double sided Linear induction motor is used in electric CO6 7 Marks traction with the help of a neat schematic diagram.

#### (**OR**)

- 10. a) Analyze the magnetic fields and forces within the air gap of a short- CO2 7 Marks primary long-secondary Double Sided Linear Induction Motor (DSLIM).
  - b) Derive the expression for the thrust of linear force developed in a linear CO1 7 Marks induction motor.

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### HEAT TRANSFER [Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

## Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) What are the mechanisms of heat transfer? How are they distinguished CO1 7 Marks from each other?
  - b) Super heated steam at an average temperature of  $200^{\circ}$ C is transported CO2, 7 Marks through a steel pipe (K = 50 w/m. K, D<sub>0</sub> = 8 cm, D<sub>i</sub> = 6 cm and L = 20m). CO5 The pipe is insulated with a 4-cm thick layer of gypsum plaster (K=0.5W/m.K). The insulated pipe is placed horizontally inside a warehouse where the average air temperature is  $10^{\circ}$ C. The steam and air heat transfer coefficients are estimated to be 800 and 200W/m<sup>2</sup>K respectively. Calculate:
    - i) the daily rate of heat transfer from the superheated steam.
    - ii) the temperature on the outside surface of the gypsum plaster insulation.

#### (OR)

- 2. a) Derive general three dimensional conduction equation for Rectangular CO1 7 Marks co-ordinate system and deduce from it equation applicable 1-Dimensional steady state heat transfer with heat generation.
  - b) Calculate the rate of heat flow per m<sup>2</sup> through a furnace wall consisting CO2, 7 Marks of 200 mm thick inner layer of chrome brick, a centre layer of Kaolin brick 100 mm thick and an outer layer of masonry brick 100 mm thick. The heat transfer coefficient at the inner surface is 74 W/m<sup>2</sup> °C and the outer surface temperature is 70°C. The temperature of the gases inside the furnace is 1670°C. What temperatures prevail at the inner and outer surface of the centre layer?
    - Take:  $K_{chromebrick} = 1.25 \text{ W/m}^{0}\text{C}$ ,  $K_{Kaolinbrick} = 0.074 \text{ W/m}^{0}\text{C}$  $K_{masonrybrick} = 0.555 \text{ W/m}^{0}\text{C}$

Assume steady heat flow.

# UNIT-II

- 3. a) Derive an expression for temperature distribution and for heat transfer CO2 7 Marks rate in the case of short fin with end insulated case.
  - b) Consider a very long rectangular fin attached to a flat surface such that CO5, 7 Marks the temperature at the end of the fin is essentially that of the surrounding CO4 air, i.e  $20^{\circ}$ C. Its width is 5cm; thickness is 1mm, thermal conductivity is 200W/m.K and base temperature is  $40^{\circ}$ C. The heat transfer coefficient is 20W/m<sup>2</sup>K. Estimate the fin temperature at a distance of 5cm from the base and the rate of heat loss from the entire fin.

#### (OR)

- 4. a) What is meant by Lumped system analysis? Derive the expression for CO2, 7 Marks temperature distribution in a body with respect to time variation. CO3
  - b) An aluminium sphere weighing 5.5 kg and initially at a temperature of CO5 7 Marks 290°C is suddenly immersed in a fluid at 15°C. The convective heat transfer coefficient is 58W/m²K. Estimate the time required to cool the aluminium sphere to 95°C, using lumped capacity method of analysis. Also determine the temperature attained by the sphere after 30 min.

### (UNIT-III)

- 5. a) Using dimensional analysis, obtain the general form of equation for CO2 7 Marks natural convective heat transfer.
  - b) Air at 20<sup>°</sup>C flows along a heated plate at 134<sup>°</sup>C with a velocity of 3 m/s. CO4 7 Marks The plate is 2m long and 1.5m wide. Calculate the thickness of the hydrodynamic boundary layer and the skin friction coefficient (Fanning Friction Factor) at 40cm from the leading edge of the plate. The Kinematic viscosity of air at 20<sup>°</sup>C may be taken as 15.06 x 10<sup>-6</sup>m<sup>2</sup>/s. Also calculate the local heat transfer coefficient at a distance of 0.4 m from the leading edge and heat transfer from the first 40cm of the plate.

#### (OR)

- 6. a) Explain the mechanism of heat flow by natural convection and define CO1 7 Marks Grashoff number and explain its significance in Natural convection heat transfer.
  - b) A 30cm long glass plate is hung vertically in the air at 2°C while its CO4 7 Marks temperature maintained at 77°C. Calculate the boundary layer thickness at the trailing edge of the plate. If a similar plate is placed in a wind tunnel and air is blown over it at a velocity of 4m/s, estimate the boundary layer thickness at its trailing edge.

# UNIT-IV

7. a) Derive an expression for LMTD of a counter flow heat exchanger. CO2 7 Marks
b) Hot oil with a Heat capacity rate of 2500 W/K flows through a double CO4 7 Marks pipe heat exchanger. It enters at 360°C and leaves at 300°C. Cold fluid enters at 30°C and leaves at 26°C. If the overall heat transfer coefficient is 800 W/m2K, determine the heat exchanger area required for:

i) Parallel flow. ii) Counter flow.

### (OR)

- 8. a) Explain various regimes in boiling heat transfer and distinguish between CO1 7 Marks filmwise and and dropwise condensation.
  - b) A heated polished copper plate is immersed in a pool of water boiling at CO4 7 Marks atmosphere pressure. If the surface temperature of copper plate is maintained at a temperature of 113°C, determine the surface heat flux and the evaporation rate per unit area of the plate.

# UNIT-V

9. a) What is Stefan-Boltzmann Law? Derive an expression for the same. CO1 7 Marks

- b) A black body having surface area 0.2m<sup>2</sup> has an effective temperature CO2, 7 Marks 800K. Determine the following.
  - i) Total emission.
  - ii) Intensity of radiation.
  - iii) Wavelength for maximum spectral emissive power.

### (OR)

- 10. a) Using the definition of radiosity and irradiation, deduce an expression for CO1 7 Marks the radiation interchange between two grey bodies.
  - b) Two large parallel planes with emissivities 0.4 are maintained at different CO2, 7 Marks temperatures exchange heat only by radiation. What percentage change in CO4 net radiation heat transfer would occur, if two equally large radiation shields with surface emissivities 0.04 are introduced in parallel to the plates?

### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

### HYDRAULICS AND PNEUMATICS

#### [Mechanical Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1.  | a) | State Pascal's law and explain in details about the application of Pascal's law with neat sketch.                                                               | CO1 | 7 Marks  |
|-----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Explain the construction and working of a vane pump.                                                                                                            | CO1 | 7 Marks  |
|     | ,  | (OR)                                                                                                                                                            |     |          |
| 2.  | a) | Explain the basic hydraulic system and its Components with neat sketch.                                                                                         | CO1 | 4 Marks  |
|     | b) | Explain the construction and working of Diaphragm Accumulator.                                                                                                  | CO2 | 10 Marks |
|     |    | UNIT-II                                                                                                                                                         |     |          |
| 3.  | a) | Explain the pressure control valve with graphical symbol.                                                                                                       | CO1 | 4 Marks  |
|     | b) | Explain the working of shuttle valve with symbolic representation with a neat sketch.                                                                           | CO2 | 10 Marks |
|     |    | (OR)                                                                                                                                                            |     |          |
| 4.  | a) | Draw the ANSI symbol for pressure relief valve and sequence valve.                                                                                              | CO1 | 4 Marks  |
|     | b) | Explain the construction and working of following.<br>i) Meter-in circuit.                                                                                      | CO1 | 10 Marks |
|     |    | ii) Meter-out circuit.                                                                                                                                          |     |          |
|     |    | UNIT-III                                                                                                                                                        |     |          |
| 5.  |    | With a neat sketch of the Quick Exhaust and flow control valve and explain its construction and working.                                                        | CO1 | 14 Marks |
|     |    | (OR)                                                                                                                                                            |     |          |
| 6.  | a) | Discuss the working principle of an air compressor.                                                                                                             | CO2 | 7 Marks  |
|     | b) | Explain with schematic sketch of FRL unit with ANSI symbol.                                                                                                     | CO4 | 7 Marks  |
|     |    | UNIT-IV                                                                                                                                                         |     |          |
| 7.  | a) | Explain the components present in a PLC and give their functions with block diagram.                                                                            | CO3 | 7 Marks  |
|     | b) | What is cascade control? Explain giving suitable example circuit.                                                                                               | CO3 | 7 Marks  |
|     |    | (OR)                                                                                                                                                            |     |          |
| 8.  |    | Discuss in detail the considerations taken while designing pneumatic circuits.                                                                                  | CO3 | 14 Marks |
|     |    | UNIT-V                                                                                                                                                          |     |          |
| 9.  |    | Explain the working principle of pilot assisted solenoid control of directional control valve with a neat sketch. Illustrate the graphical symbol of the valve. | CO6 | 14 Marks |
|     |    | (OR)                                                                                                                                                            |     |          |
| 10. |    | Design the electro pneumatic circuit for the following sequence. A1B1 A0B0, where 1 is extension and 0 is retraction                                            | CO5 | 14 Marks |

#### **III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021**

#### SUPPLY CHAIN MANAGEMENT [Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1. a) What are the decision phases in SCM? Discuss in full. CO1 7 Marks

 b) In what way did the supply chain flows affect the success or failure of a CO2 7 Marks firm? List any two supply chain decisions that have a significant impact on supply chain profitability.

#### (OR)

- 2. a) Explain the basic trade-off between responsiveness and efficiency for CO1 7 Marks each of the major drivers of supply chain performance.
  - b) Discuss the major obstacles that must be overcome to manage a supply CO1 7 Marks chain successfully.

## UNIT-II

- 3. a) How do firms determine the optimum level of cycle stock in a chain? CO4 7 Marks Discuss with a real world example.
  - b) What happened to the current inventory levels as we move backward, up CO1 7 Marks the supply chain from retailer to manufacturer? Why?

#### (OR)

- 4. a) What is bullwhip effect and what are the main causes of bullwhip effect? CO2 7 Marks What can a firm do to minimize demand distortions across the chain?
  - b) How could industrial supplies distributor use information to increase its CO3 7 Marks responsiveness?

## UNIT-III)

- 5. a) Explain the main transportation strategies used by the firms. How to CO1 7 Marks choose the optimum transportation strategy?
  - b) Discuss key drivers that may be used to tailor transportation. How does CO2 7 Marks tailoring help?

### (OR)

- 6. a) Explain why achieving strategic fit is critical to company's overall CO2 7 Marks success.
  - b) How do firms build successful partnerships in supply chains? CO2 7 Marks

# UNIT-IV

- 7. a) What are the basic building blocks of an effective mass customization CO2 7 Marks program? What kind of companywide cooperation is required for a successful mass customization program?
  - b) Explain the parameters to be considered in integrating supplies into new CO3 7 Marks product development.

### (OR)

- 8. a) What are the key challenges in adapting information technology to CO5 7 Marks improve the efficiency of supply chain?
  - b) Why is IT the key component of SCM system? "Successful CO2 7 Marks IT implementation is the outgrowth of the participation of knowledge workers". Comment with examples.

## UNIT-V

- 9. a) What are the global issues in SCM? Discuss them by giving an account to CO1 7 Marks cross border trade.
  - b) Elaborate on Supply Chain Management Metrics. CO3 7 Marks

#### (OR)

- 10. a) Discuss about the global issues and outsourcing problems in SCM in the CO3 7 Marks context of Indian industries perspective.
  - b) What do you understood by Mass Customization? Describe with CO2 7 Marks advantages and limitations.

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### ANTENNAS AND WAVEGUIDES

[Electronics and Communication Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## 

- 1. a) Obtain the expression for characteristic impedance of a rectangular CO1 9 Marks waveguide for TE mode of propagation.
  - b) A rectangular waveguide has a dimension of a = 22.86mm. Calculate the CO1 5 Marks b dimension such that cut-off wavelength of  $TE_{11}$  mode is half that of  $TE_{10}$  mode.

#### (OR)

- 2. a) Derive the expressions for cut-off frequency, guide wavelength, phase CO5 7 Marks velocity of TE mode in a rectangular waveguide and prove that  $V_pV_g=V_c^2$ .
  - b) A rectangular wave guide has dimensions 2.5cm x 5cm. Determine the CO2 7 Marks guide wave length, phase constant ( $\beta$ ) and phase velocity (V<sub>P</sub>) at a wavelength of 4.5 cms for the dominant mode.

### UNIT-II)

| 3. | a) | Explain the current distribution on a thin-wire antenna.                                                                             | CO3 | 7 Marks |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | For an infinitesimal dipole excited by a constant RF current I, determine radiation intensity U, maximum value of U and directivity. | CO5 | 7 Marks |
|    |    | (OR)                                                                                                                                 |     |         |
| 4. | a) | Explain the working principle of a single wire antenna.                                                                              | CO3 | 7 Marks |
|    | b) | Define effective height $(h_{eff})$ of an antenna? Discuss $h_{eff}$ for half wave dipole and short dipole antenna.                  | CO5 | 7 Marks |
|    |    | UNIT-III                                                                                                                             |     |         |
| 5. | a) | With a neat sketch, explain the operation of Yagi-Uda array.                                                                         | CO3 | 7 Marks |
|    | b) | Deduce an expression for the radiation pattern of an end-fire array with N vertical dipoles.                                         | CO6 | 7 Marks |
|    |    |                                                                                                                                      |     |         |

#### (OR)

- 6. a) Derive the array factor of N-element isotropic linear uniform distributed CO3 7 Marks Antenna.
  - b) An array contains 10 isotropic radiators with an inter element spacing of CO5 7 Marks  $0.5\lambda$ . It is required to produce broadside and end-fire beams:
    - i) Find Null-to-Null beam width and half-power beam width in degrees.
    - ii) Find the directivity of both forms of arrays.

#### Max. Marks: 70

# UNIT-IV

| 7.  | a) | Design and explain the working principle of a Microstrip antenna.                                                                   | CO4 | 7 Marks |
|-----|----|-------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Explain the working principle of a helical antenna in normal mode.                                                                  | CO5 | 7 Marks |
|     |    | (OR)                                                                                                                                |     |         |
| 8.  | a) | Find the directivity of 10 turn helix antenna having pitch angle $10^{\circ}$ , circumference C equal to $\lambda$ .                | CO5 | 5 Marks |
|     | b) | Explain the radiation mechanism of Microstrip antenna.                                                                              | CO6 | 5 Marks |
|     | c) | Describe the different types of Microstrip antennas.                                                                                | CO3 | 4 Marks |
|     |    | UNIT-V                                                                                                                              |     |         |
| 9.  | a) | Write short notes on Field regions on antenna.                                                                                      | CO3 | 4 Marks |
|     | b) | Define radiation intensity, directivity, and solid angle.                                                                           | CO5 | 6 Marks |
|     | c) | Calculate the directivity of an antenna, if HPBW on one plane is $30^{\circ}$ and $60^{\circ}$ on orthogonal plane.                 | CO2 | 4 Marks |
|     |    | (OR)                                                                                                                                |     |         |
| 10. | a) | State the reciprocity theorem for antennas. Prove that the self-impedance of an antenna in transmitting and receiving mode is same. | CO6 | 7 Marks |
|     | b) | Explain in detail the terms beam efficiency and directivity. Use relevant expression and diagrams.                                  | CO5 | 7 Marks |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

### **DIGITAL SIGNAL PROCESSING**

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1. | a)  | Define various elementary discrete time signals. Write notes on them and explain about their properties.                                                                                                                                                                                                         | CO4 | 7 Marks |
|----|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b)  | For the following discrete time signals, determine whether or not the system is linear, shift invariant, causal and stable.                                                                                                                                                                                      | CO4 | 7 Marks |
|    |     | i) $y(n) = x(n+7);$ ii) $y(n) = x^{3}(n).$                                                                                                                                                                                                                                                                       |     |         |
|    |     | (OR)                                                                                                                                                                                                                                                                                                             |     |         |
| 2. | a)  | Find the DFT of the sequence $x(N) = \cos(n\pi/3)u(n)$ .                                                                                                                                                                                                                                                         | CO4 | 7 Marks |
|    | b)  | Define stability of a system. Explain about BIBO stability criterion of a discrete system with an example.                                                                                                                                                                                                       | CO4 | 7 Marks |
|    |     | UNIT-II                                                                                                                                                                                                                                                                                                          |     |         |
| 3. | a)  | State and prove circular convolution property of DFT in frequency domain.                                                                                                                                                                                                                                        | CO2 | 7 Marks |
|    | b)  | Find the DFT of the send quence $x(n) = \{1,2,3,4,4,3,2,1\}$ using DIT-FFT algorithm.                                                                                                                                                                                                                            | CO1 | 7 Marks |
|    |     | (OR)                                                                                                                                                                                                                                                                                                             |     |         |
| 4. | a)  | Contrast the transforms DTFT, DFS and DFT.                                                                                                                                                                                                                                                                       | CO1 | 7 Marks |
|    | b)  | Draw the radix 2 DIF-FFT structure when $N = 16$ .                                                                                                                                                                                                                                                               | CO2 | 7 Marks |
|    |     | UNIT-III                                                                                                                                                                                                                                                                                                         |     |         |
| 5. | a)  | Analog filter with transfer function $H_a(s) = s + 0.1/(s + 0.1)^2 + 9$ . Convert into a digital IIR filter by using bilinear transformation.                                                                                                                                                                    | CO5 | 7 Marks |
|    | b)  | Discuss about different methods of realization of IIR systems.                                                                                                                                                                                                                                                   | CO2 | 7 Marks |
|    |     | (OR)                                                                                                                                                                                                                                                                                                             |     |         |
| 6. | a)  | Design a digital low pass Butterworth digital IIR filter which is required to meet the following specifications. Pass band attenuation $\leq 2$ dB. Pass band edge frequency = 4KHz stop band attenuation $\geq 40$ dB stop band edge frequency = 8KHz. Sampling rate = 24 KHz by using bilinear transformation. | CO5 | 7 Marks |
|    | b)  | Derive an expression for order of the Butterwort analog proto type filter.                                                                                                                                                                                                                                       | CO2 | 7 Marks |
|    |     | UNIT-IV                                                                                                                                                                                                                                                                                                          |     |         |
| 7. | a)  | Explain designing of FIR filter using frequency sampling technique.                                                                                                                                                                                                                                              | CO2 | 7 Marks |
|    | b)  | What is Gibbs phenomenon? How its effect can be reduced in the design of FIR filters.                                                                                                                                                                                                                            | CO1 | 7 Marks |
|    |     | (OR)                                                                                                                                                                                                                                                                                                             |     |         |
| 8. | a)  | Derive an expression for frequency response of linear phase FIR filter<br>when impulse response is symmetry having N odd number of samples.                                                                                                                                                                      | CO3 | 7 Marks |
|    | 1 \ |                                                                                                                                                                                                                                                                                                                  | 000 | 7 ) ( 1 |

b) Design a Linear phase low pass FIR filter with a cutoff frequency of  $\pi/2$  CO3 7 Marks rad/sec frequency sampling technique. Take N=11.

### III B.Tech II Semester (SVEC-16) Supplementary Examinations March – 2021

### **RADAR ENGINEERING**

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

# Answer One Question from each Unit

# All questions carry equal marks

# UNIT-I

| 1.  | a)         | Derive the simple form of radar range equation and explain how to calculate the range.                                                                                  | CO4        | 7 Marks            |
|-----|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|     | b)         | Analyze various system losses occurring in radar systems.                                                                                                               | CO2        | 7 Marks            |
| 2.  | a)         | Identify the need for integration of Radar Pulses. List their Types. Justify the best suited integration for practical applications                                     | CO6        | 7 Marks            |
|     | b)         | Calculate the Doppler frequency of stationary CW radar transmitting at 8 MHz frequency when a moving target approaches the radar with a radial velocity of 100 Km/Hour. | CO4        | 7 Marks            |
|     |            | UNIT-II                                                                                                                                                                 |            |                    |
| 3.  | a)         | Illustrate the operation of an MTI radar system with a power amplifier in the transmitter.                                                                              | CO1        | 7 Marks            |
|     | b)         | Apply appropriate techniques to determine Range and Doppler measurements in radar systems.                                                                              | CO5        | 7 Marks            |
|     |            | (OR)                                                                                                                                                                    |            |                    |
| 4.  | a)         | Sketch the block diagram of CW radar and explain the process of detection of radar signals.                                                                             | CO1        | 7 Marks            |
|     | b)         | Discuss the design constraints and band width requirements in a CW radar receiver.                                                                                      | CO3        | 7 Marks            |
|     |            | UNIT-III                                                                                                                                                                |            |                    |
| 5.  | a)         | Illustrate conical scan tracking technique for tracking targets and its advantages.                                                                                     | CO5        | 7 Marks            |
|     | b)         | Explain amplitude comparison monopulse tracking with neat diagrams. <b>(OR)</b>                                                                                         | CO1        | 7 Marks            |
| 6.  | a)         | Illustrate the techniques to measure range of a target and discuss how the target is tracked continuously in radar systems giving some examples.                        | CO5        | 10 Marks           |
|     | b)         | Identify the best search pattern for fire control tracking radar.                                                                                                       | CO2        | 4 Marks            |
| 7   | a)         | Design a Matched Filter receiver for optimum echo detection in the                                                                                                      | CO3        | 7 Marks            |
| /.  | u)         | presence of noise.                                                                                                                                                      | 005        | / IVIUIND          |
|     | b)         | Compare branch type and balance type of duplexer.<br>(OR)                                                                                                               | CO2        | 7 Marks            |
| 8.  | a)         | Compare Range Height Indicator (RHI) and Plan Position Indicator (PPI) radar displays.                                                                                  | CO2        | 7 Marks            |
|     | b)         | Demonstrate how beam width can be changed with steering angle in phased array antenna design.                                                                           | CO3        | 7 Marks            |
| 0   | <b>a</b> ) | Explain in detail about LOPAN navigation system                                                                                                                         | CO1        | 7 Marka            |
| Э.  | a)<br>b)   | Analyze and contrast between LORAN and DECCA navigation systems.                                                                                                        | CO1<br>CO2 | 7 Marks<br>7 Marks |
| 10. | a)         | Explain the salient features of VHF Omni Directional Range (VOR)                                                                                                        | CO4        | 7 Marks            |
|     | b)         | Identify some real time applications of Navigational aids in the present                                                                                                | CO6        | 7 Marks            |

era and its advantages.

#### **III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021**

#### **TELECOMMUNICATION SWITCHING SYSTEMS**

[Electronics and Communication Engineering]

Time: 3 hours **Answer One Question from each Unit** All questions carry equal marks UNIT-I Classify switching systems. With simple circuit, explain the working of CO1 1. 7 Marks a) telephone network. Why is it necessary to keep the magnetic diaphragm in an earphone b) CO3 7 Marks displaced from its unstressed position? How is this achieved? (**OR**) Explain 3 x 3 and 6 x 6 crossbar switching with neat sketches. 2. CO1 7 Marks a) b) What happens if the ratio  $\phi/\phi 0$  is not very small in case of an earphone? CO3 7 Marks UNIT-II ) Infer the objectives of numbering plan. How are they classified? 3. CO6 7 Marks a) Paraphrase the objectives of numbering plan with the help of example. CO1 7 Marks b) (**OR**) 4. Conclude the functions performed by subscriber line interface. Explain. CO1 7 Marks a) Analyze the objectives of charging plan. How are they classified? CO6 7 Marks b) (UNIT-III) 5. Originate channel associated and channel non associated mode of CO4 7 Marks a) signalling techniques. A group of 20 servers carry a traffic control of 10 erlangs. If the average CO3 7 Marks b) duration of a call is three minutes, calculate the number of calls put through by a single server and the group as a whole in a one hour period. (OR)What is grade of service? Obtain grade of service for three stage and four CO4 6. a) 7 Marks stage networks. On an average, one call arrives every 5 sec. During a period of CO3 b) 7 Marks 10 seconds, what is the probability that: i) No call arrives? ii) One call arrives? iii) Two call arrives? iv) More than two calls arrive? (UNIT-IV) What are the new services supported by ISDN? Explain any four of them CO5 7. 7 Marks a) in detail. Compare NISDN and BISDN. CO<sub>2</sub> 7 Marks b) (**OR**) 8. Summarize the motivation of ISDN. Explain its services, network and 7 Marks CO5 a) protocol architecture used for different applications. How functional modules are interconnected in BISDN and explain. b) CO<sub>2</sub> 7 Marks UNIT-V 9. What is CM and CMTS? Explain. CO1 7 Marks a) Compare ADSL, VDSL, HDSL and SDSL technologies. b) CO4 7 Marks (**OR**) 10. Write short notes on: CO1 7 Marks a) i) CM and CMTS. ii) DOCSIS. Explain in detail about ADSL with suitable block diagram. b) CO4 7 Marks

Max. Marks: 70

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### LIGHT WAVE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit. All questions carry equal marks

### UNIT-I

- a) Conclude the advantages of modified Chemical Vapor Deposition over CO2 7 Marks Vapor Phase Deposition.
   b) Design a silica optical fiber with a core diameter large enough to be CO3 7 Marks
  - b) Design a silica optical fiber with a core diameter large enough to be CO3 7 Marks considered by ray theory analysis having a core refractive index of 1.5 and a cladding refractive index of 1.47 for proper parametric values of numerical aperture, critical angle at core- cladding interface, acceptance angle in air for the fiber.

#### (OR)

2. a) Derive the numerical aperture of Step Index fiber (SI) from Snell's law. CO2 7 Marks
b) With relevant diagrams, appraise the different types of optical fibers CO3 7 Marks considering number of modes and material composition of core suited for practical applications.

### UNIT-II)

3. a) Discuss about nonlinear scattering losses in optical fiber.
b) A long single-mode optical fiber has an attenuation of 0.5dBkm<sup>-1</sup> when operating at a wavelength of 1.3 μm. The fiber core diameter is 6 μm and the laser source bandwidth is 600MHz. Compare the threshold optical powers for stimulated Brillouin and Raman scattering within the fiber at the wavelength specified.
CO1 7 Marks CO4 7 Marks

#### (**OR**)

- 4. a) Summarize the Signal Distortion in Single Mode Fibers. CO1 7 Marks
  b) Infer the contribution of various absorption mechanisms for losses in CO4 7 Marks
  - b) Infer the contribution of various absorption mechanisms for losses in CO4 7 Marks optical fibers.

### (UNIT-III)

- Conclude the effect of temperature on Avalanche Gain of a photo 5. CO6 7 Marks a) detector. b) Differentiate simulated and spontaneous Emissions. CO<sub>2</sub> 7 Marks (**OR**) Suggest improvements in Structures of InGaAs APDs to improve its 6. CO6 7 Marks a) performance. Contrast PIN Diode and Avalanche Photo Diode. CO2 7 Marks b) UNIT-IV) 7. A graded index fiber has a parabolic refractive index profile ( $\alpha = 2$ ) and a CO3 7 Marks a) core diameter of 50µm. Estimate the insertion loss due to a 3µm lateral misalignment at a fiber joint when there is index matching and assuming: i) there is uniform illumination of all guided modes only. ii) there is uniform illumination of all guided and leaky modes. The end faces of two optical fibres with core refractive indices of 1.5 are CO4 b) 7 Marks
  - perfectly aligned and have a small between them. This gap is filled with a gel having refractive index of 1.3. Find the optical losses in dB at this joint.
    - (OR)

- 8. a) Develop an expression to relate the power launched into a fiber and its CO3 7 Marks brightness. Justify the effect of equilibrium numerical aperture in a long fiber length.
  - b) A silica multimode step index fiber has a core refractive index of 1.46. CO4 7 Marks Determine the optical loss in decibels due to Fresnel reflection at a fiber joint with:
    - i) a small air gap.

ii) an index matching epoxy which has a refractive index of 1.40. It may be assumed that the fiber axes and end faces are perfectly aligned at the joint.

## UNIT-V

9. a) Explain the significance of Link Power budget. CO1 7 Marks
b) Define carrier-to-noise ratio. Identify the limiting conditions of the CO5 7 Marks receiver.

#### (**OR**)

10. a)List and summarize various multi-channel transmission techniques.CO17 Marksb)Develop a model setup for an ARQ Error Control Scheme.CO57 Marks

### SOFTWARE TESTING

[Computer Science and Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

|     |    | UNIT-I                                                                                            |     |         |
|-----|----|---------------------------------------------------------------------------------------------------|-----|---------|
| 1.  | a) | Discuss the evolution of software Testing. Also explain the different levels of Testing.          | CO1 | 6 Marks |
|     | b) | Differentiate between Effective and Exhaustive software testing.                                  | CO2 | 8 Marks |
|     |    | (OR)                                                                                              |     |         |
| 2.  | a) | What are the different schools of Software Testing? Explain.                                      | CO1 | 8 Marks |
|     | b) | Take a project and identify the Test Activities according to SDLC phases.                         | CO3 | 6 Marks |
|     |    | UNIT-II                                                                                           |     |         |
| 3.  | a) | What is the need of white-box testing? List out and explain various white box testing techniques. | CO2 | 8 Marks |
|     | b) | Explain about Graph Matrices based testing technique.                                             | CO2 | 6 Marks |
|     |    | (OR)                                                                                              |     |         |
| 4.  | a) | Explain loop testing with an example.                                                             | CO2 | 6 Marks |
|     | b) | Write short notes on:                                                                             | CO2 | 8 Marks |
|     |    | 1) Data Flow testing. 11) Mutation testing.                                                       |     |         |
|     |    | (UNIT-III)                                                                                        |     |         |
| 5.  | a) | Differentiate between White Box testing and Black Box testing techniques.                         | CO3 | 8 Marks |
|     | b) | Explain about Boundary Value Analysis in detail.                                                  | CO3 | 6 Marks |
|     |    | (OR)                                                                                              |     |         |
| 6.  | a) | Explain about software Test management in detail.                                                 | CO3 | 8 Marks |
|     | b) | What is meant by test plan? Give detailed test design for a sample test project.                  | CO3 | 6 Marks |
|     |    | (UNIT-IV)                                                                                         |     |         |
| 7.  | a) | What are Software metrics? Give an example.                                                       | CO4 | 8 Marks |
|     | b) | Explain about size metrics in testing.                                                            | CO4 | 6 Marks |
|     |    | (OR)                                                                                              |     |         |
| 8.  | a) | What are the costs incurred in adopting a testing tool? List out with examples.                   | CO3 | 8 Marks |
|     | b) | Differentiate between static and dynamic tools. Explain.                                          | CO3 | 6 Marks |
|     |    | UNIT-V                                                                                            |     |         |
| 9.  | a) | What is meant by Regression Testing? Give an example.                                             | CO4 | 8 Marks |
|     | b) | Mention about Progressive testing and Regressive testing in detail.                               | CO4 | 6 Marks |
|     |    | (OR)                                                                                              |     |         |
| 10. | a) | What is the use of automation? What are the costs involved in it? Explain.                        | CO5 | 8 Marks |
|     | b) | How do you test a project with commercial testing tool? Explain.                                  | CO5 | 6 Marks |

|     | ,        | (OR)                                                                                                                            |            |                    |
| 6.  | a)       | Illustrate the process involved in learning vector quantization.                                                                | CO2        | 7 Marks            |
|     | b)       | What is fixed weight competitive nets? Discuss in detail.                                                                       | CO5        | 7 Marks            |
|     |          | (UNIT-IV)                                                                                                                       |            |                    |
| 7.  | a)       | What is Fuzzy sets and membership function?                                                                                     | CO5        | 7 Marks            |
|     | )        | $A = \{ 0.1 / 2 + 0.6 / 3 + 0.4 / 4 + 0.3 / 5 + 0.8 / 6 \}$                                                                     | 000        | ,                  |
|     |          | $B = \{ 0.5/2 + 0.8/3 + 0.4/4 + 0.6/5 + 0.4/6 \}$                                                                               |            |                    |
|     |          | Calculate $A \cap B$ , $B \cap A$ using fuzzy operation.                                                                        |            |                    |
|     | b)       | Write a short note on classical sets with an example.                                                                           | CO1        | 7 Marks            |
|     |          | (OR)                                                                                                                            |            |                    |
| 8.  | a)       | Differentiate tolerance relations and equivalence relations.                                                                    | CO1        | 7 Marks            |
|     | b)       | Explain about non-interactive fuzzy sets with an example.                                                                       | CO2        | 7 Marks            |
|     |          |                                                                                                                                 |            |                    |
| 9.  |          | Illustrate the working principle of genetic algorithm with suitable example.                                                    | CO6        | 14 Marks           |
|     |          | (OR)                                                                                                                            |            |                    |
| 10. | a)       | Write a short note on measures of fuzziness.                                                                                    | CO4        | 7 Marks            |
|     | b)       | Discuss in detail extension principle.                                                                                          | CO1        | 7 Marks            |
|     |          | \$P \$P \$P                                                                                                                     |            |                    |

### SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### WIRELESS NETWORKS

### [Computer Science and Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1.  | a)<br>b) | Explain Non- Persistent, I-Persistent and P- Persistent CSMA protocols.<br>Explain the principle, frame structures and working of TDMA system. | CO2<br>CO1 | 8 Marks<br>6 Marks |
|-----|----------|------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|     |          | (OR)                                                                                                                                           |            |                    |
| 2.  | a)       | Explain in detail the performance of the random access scheme for data oriented networks                                                       | CO1        | 10 Marks           |
|     | b)       | Mention some key factors that contribute to security problems in wireless networks.                                                            | CO2        | 4 Marks            |
|     |          | UNIT-II)                                                                                                                                       |            |                    |
| 3.  | a)       | Explain in detail the random access for mobile data services and wireless LAN data services.                                                   | CO3        | 8 Marks            |
|     | b)       | What are the advantages and disadvantages of CDMA cellular network? (OR)                                                                       | CO3        | 6 Marks            |
| 4.  | a)       | Explain in detail about wireless network operations.                                                                                           | CO2        | 10 Marks           |
|     | b)       | Explain the techniques for improving coverage and capacity in cellular network.                                                                | CO4        | 4 Marks            |
|     |          | (UNIT-III)                                                                                                                                     |            |                    |
| 5.  | a)       | Explain IEEE802.11 with PHY and MAC layer.                                                                                                     | CO3        | 10 Marks           |
|     | b)       | Explain in detail about security requirements for wireless network.                                                                            | CO3        | 4 Marks            |
| 6.  | a)       | Write short notes on Home Access network.                                                                                                      | CO5        | 7 Marks            |
|     | b)       | Discuss the principle working of wireless LAN.                                                                                                 | CO3        | 7 Marks            |
|     |          | UNIT-IV                                                                                                                                        |            |                    |
| 7.  | a)       | Mention the key features of IS-95 systems and explain packets and frame format of IS-95 reverse channel.                                       | CO5        | 10 Marks           |
|     | b)       | Write short notes on SMS operations. (OR)                                                                                                      | CO5        | 4 Marks            |
| 8.  | a)       | Write a short note on protocol layers in GPRS.                                                                                                 | CO4        | 7 Marks            |
|     | b)       | Explain the mechanisms that support a mobile environment.                                                                                      | CO5        | 7 Marks            |
|     |          | UNIT-V                                                                                                                                         |            |                    |
| 9.  | a)       | Describe overall architecture of HomeRF-Architecture.                                                                                          | CO6        | 8 Marks            |
|     | b)       | Discuss how 3G Technology has revolutionized our lives in present scenario.                                                                    | CO6        | 6 Marks            |
|     |          | (OR)                                                                                                                                           | 96.5       |                    |
| 10. | a)       | Describe how the wireless home networking has changed the lives of the people in today's world.                                                | CO6        | 7 Marks            |
|     | b)       | Write short notes convergence layer.                                                                                                           | CO5        | 7 Marks            |
|     |          |                                                                                                                                                |            |                    |

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### PRINCIPLES OF PROGRAMMING LANGUAGES

[Computer Science and Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1. Why is it useful for a programmer to have some background in language 7 Marks a) CO1 design, even though he or she may never actually design a programming language? Explain the areas of computer applications and their associated languages. CO1 7 Marks b) (**OR**) 2. a) How pointers are implemented in Pascal? CO<sub>2</sub> 7 Marks b) List and explain briefly about user defined data types with examples. CO1 7 Marks UNIT-II ) 3. Explain about the switch statement in Algol with an example. CO4 7 Marks a) What is lazy evaluation? Explain the reasons why lazy evaluation may be b) CO4 7 Marks desirable. (**OR**) Describe the different categories of control flow mechanisms. 4. a) CO3 7 Marks Explain about control flow in Recursion. CO3 7 Marks b) (UNIT-III) 5. a) Explain about the models of parameter passing. CO4 7 Marks Explain about the co-routines with an example. CO2 7 Marks b) (**OR**) 6. Discuss about design issues of data abstraction. CO3 7 Marks a) b) List and explain about different abstract data types. CO1 7 Marks UNIT-IV 7. a) Define Monitor. Explain its concept. CO2 7 Marks Explain about the concurrency in Ada 95. CO4 7 Marks b) (**OR**) Describe the java throwable class hierarchy and the types of exceptions. 8. CO2 7 Marks a) Can you claim multiple exceptions in a method declaration? Illustrate by means of an example. What is exception? How to handle the exceptions in C++ with an b) CO1 7 Marks example? UNIT-V Explain the applications of logic programming. 9. CO4 7 Marks a) Describe about the search strategies in prolog. CO4 7 Marks b) (**OR**) 10. Explain the characteristics of functional programming languages. CO<sub>4</sub> 7 Marks a) b) Explain about the LISP, ML. CO6 7 Marks (f) *[*@} *[*]

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

### ARM PROCESSORS AND PIC MICROCONTROLLERS

[Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1. | a) | Differentiate microcontrollers versus general purpose microcontroller.                                                                                                                                                          | CO1 | 8 Marks |
|----|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | Write instructions to add the values 16H and CDH. Place the result in WREG register.                                                                                                                                            | CO1 | 6 Marks |
|    |    | (OR)                                                                                                                                                                                                                            |     |         |
| 2. | a) | Explain about file register and access bank in the PIC18.                                                                                                                                                                       | CO2 | 8 Marks |
|    | b) | Explain about:<br>i) COME ii) DECE iii) MOVEE                                                                                                                                                                                   | CO2 | 6 Marks |
|    |    |                                                                                                                                                                                                                                 |     |         |
| 3. | a) | Select appropriate clock frequency and timer in required mode, write a program in assembly or C generate a square wave on port A pin 1 using timer with a duty cycle of 40% with and without interrupt.                         | CO3 | 7 Marks |
|    | b) | Explain the time structure for use as a counter with a suitable example program.                                                                                                                                                | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                            |     |         |
| 4. | a) | Explain about serial communication.                                                                                                                                                                                             | CO1 | 7 Marks |
|    | b) | Write a program in assembly or C to read port A and transmit serially using interrupts with clock frequency of 1000MHZ and baud rate of 9600. For additional information refer to Register file summary provided for reference. | CO3 | 7 Marks |
|    |    | UNIT-III                                                                                                                                                                                                                        |     |         |
| 5. | a) | Write a program to interface a 7 segment display.                                                                                                                                                                               | CO4 | 7 Marks |
|    | b) | Write a program to interface a DAC.                                                                                                                                                                                             | CO4 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                            |     |         |
| 6. | a) | Write a program to interface a LCD.                                                                                                                                                                                             | CO4 | 7 Marks |
|    | b) | Write a program to interface a ADC.                                                                                                                                                                                             | CO4 | 7 Marks |
|    |    | UNIT-IV                                                                                                                                                                                                                         |     |         |
| 7. | a) | With a neat sketch, explain the basic architecture of ARM cortex M3.                                                                                                                                                            | CO5 | 7 Marks |
|    | b) | List the different stages of a pipeline of an ARM cortex M3 processor and explain them.                                                                                                                                         | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                            |     |         |
| 8. | a) | List the registers present in different exception modes of ARM cortex M3 and explain the functionality of them.                                                                                                                 | CO1 | 7 Marks |
|    | b) | Explain about various exception types in ARM.                                                                                                                                                                                   | CO1 | 7 Marks |

# UNIT-V

- 9. a) Explain about concept of pre indexing, auto indexing and post indexing CO1 7 Marks using suitable examples.
  - b) Write an ALP to perform division of two numbers in ARM mode and then CO6 7 Marks switch to thumb mode to perform subtraction.

### (OR)

- 10. a) Demonstrate the use of the following instructions using suitable example. CO1 7 Marks RSC, ADC, CMN, TST, BL.
  - b) Compare ARM mode and thumb p mode programming of ARM. CO6 7 Marks

## III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **OPTO-ELECTRONICS AND LASER INSTRUMENTATION** [Electronics and Instrumentation Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a)<br>b) | Derive an expression for numerical aperture of a step Index fibre.<br>Describe what is meant by the fusion splicing of optical fibers. Discuss<br>the advantages and drawbacks of these joining techniques.                                                                         | CO1<br>CO1 | 7 Marks<br>7 Marks |
|-----|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
| 2.  | a)       | Derive an expression for the internal optical power level generated in LEDs                                                                                                                                                                                                         | CO1        | 7 Marks            |
|     | b)       | The relative index difference between the core axis and the cladding of a graded index fibre is 0.7% when the refractive index at the core axis is 1.45. Estimate values for the numerical aperture of the fibre along the axis when the index profile is assumed to be triangular. | CO1        | 7 Marks            |
| 3.  | a)       | Explain the interferometric method of measurement of length by using an optical fibre.                                                                                                                                                                                              | CO2        | 7 Marks            |
|     | b)       | Explain the concept of polarization in optical fibers and discuss the polarization sensors.                                                                                                                                                                                         | CO3        | 7 Marks            |
|     |          | (OR)                                                                                                                                                                                                                                                                                |            |                    |
| 4.  | a)       | What are the properties that can be sensed using Fiber Optics?                                                                                                                                                                                                                      | CO3        | 7 Marks            |
|     | b)       | Explain the concept of polarization in optical fibers and discuss the polarization sensors.                                                                                                                                                                                         | CO3        | 7 Marks            |
|     |          | (UNIT-III)                                                                                                                                                                                                                                                                          |            |                    |
| 5.  | a)       | Explain the liquid dye laser in detail.                                                                                                                                                                                                                                             | CO6        | 7 Marks            |
|     | b)       | Explain the construction and operation of ruby laser with a neat diagram.                                                                                                                                                                                                           | CO6        | 7 Marks            |
| 6.  | a)       | With the aid of energy band-diagram, explain HE-NE laser in detail.                                                                                                                                                                                                                 | CO6        | 7 Marks            |
|     | b)       | Explain the construction and operation of gas laser with a neat diagram.                                                                                                                                                                                                            | CO6        | 7 Marks            |
|     | -)       | UNIT-IV                                                                                                                                                                                                                                                                             |            | ,                  |
| 7.  | a)       | Explain about laser interaction with tissue.                                                                                                                                                                                                                                        | CO6        | 7 Marks            |
|     | b)       | Mention the advantages of laser surgery and photo thermal application. (OR)                                                                                                                                                                                                         | CO5        | 7 Marks            |
| 8.  | a)       | List and explain how lasers are used in nonlinear optics for basic sciences.                                                                                                                                                                                                        | CO6        | 7 Marks            |
|     | b)       | What are the areas of medical laser surgery where laser will be used?                                                                                                                                                                                                               | CO5        | 7 Marks            |
| 9.  | a)       | Describe the construction and reconstruction of hologram.                                                                                                                                                                                                                           | CO1        | 7 Marks            |
|     | b)       | Explain about any three scientific applications of holography. <b>(OR)</b>                                                                                                                                                                                                          | CO1        | 7 Marks            |
| 10. |          | Define modulation and its types. Compare the types and explain about figure of merits.                                                                                                                                                                                              | CO1        | 14 Marks           |

## SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### AIRCRAFT INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1.  | a) | Discuss the reconfiguration of aircraft systems.                                                                                                                                                                       | CO1 | 7 Marks  |
|-----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | List the problems experienced by Wright Brothers in their first error manned flight.                                                                                                                                   | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                                                   |     |          |
| 2.  | a) | Differentiate qualitative and quantitative instruments.                                                                                                                                                                | CO2 | 7 Marks  |
|     | b) | List the most important aircraft instruments.                                                                                                                                                                          | CO1 | 7 Marks  |
|     |    | UNIT-II                                                                                                                                                                                                                |     |          |
| 3.  | a) | Calculate the mach number if aircraft is flying at a speed of 600 mph at sea level.                                                                                                                                    | CO4 | 4 Marks  |
|     | b) | Describe with a suitable, how the static ports are used to measure the ambient atmospheric pressure?                                                                                                                   | CO5 | 10 Marks |
|     |    | (OR)                                                                                                                                                                                                                   |     |          |
| 4.  |    | With the help of a diagram, explain the operation of combined Pitot-static tube.                                                                                                                                       | CO2 | 14 Marks |
|     |    | UNIT-III                                                                                                                                                                                                               |     |          |
| 5.  | a) | Discuss the different errors in a directional gyro.                                                                                                                                                                    | CO1 | 7 Marks  |
|     | b) | What are the limitations of a directional gyroscope?                                                                                                                                                                   | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                                                   |     |          |
| 6.  |    | List the properties of mechanical gyros and explain mechanical gyros with a neat sketch.                                                                                                                               | CO1 | 14 Marks |
|     |    | UNIT-IV                                                                                                                                                                                                                |     |          |
| 7.  |    | Define the Engine Pressure Ratio and how is it measured in a jet engine.                                                                                                                                               | CO5 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                   |     |          |
| 8.  |    | How does an electromagnetic vibrating pickup work? Discuss with the<br>help of a block schematic diagram the construction and operation of a<br>dedicated vibration monitoring system using an electromagnetic pickup. | CO5 | 14 Marks |
|     |    | UNIT-V                                                                                                                                                                                                                 |     |          |
| 9.  |    | Explain Flight director system with a neat sketch.                                                                                                                                                                     | CO1 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                   |     |          |
| 10. |    | How does a compensating probe compensate for changes in fuel's dielectric constant? Draw the sketch of a compensating probe along with the main probe.                                                                 | CO3 | 14 Marks |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

## III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **PROGRAMMABLE LOGIC CONTROLLERS**

[Electronics and Instrumentation Engineering]

| Time: 3 hours |    |                                                                                                |     | Marks: 70 |
|---------------|----|------------------------------------------------------------------------------------------------|-----|-----------|
|               |    | Answer One Question from each Unit                                                             |     |           |
|               |    | All questions carry equal marks                                                                |     |           |
|               |    |                                                                                                |     |           |
| 1.            |    | Explain the principle of operation of discrete ac input and output modules                     | CO1 | 14 Marks  |
|               |    | used in PLC with suitable diagrams.                                                            |     |           |
|               |    | (OR)                                                                                           |     |           |
| 2.            | a) | Draw the block diagram of I/O modules and explain it.                                          | CO1 | 7 Marks   |
|               | b) | Explain about Fail-safe circuits.                                                              | CO1 | 7 Marks   |
|               |    | UNIT-II                                                                                        |     |           |
| 3.            | a) | Implement following logic gates in ladder diagram.                                             | CO2 | 7 Marks   |
|               |    | 3 Input AND gate                                                                               |     |           |
|               |    | 2 Input NAND gate                                                                              |     |           |
|               |    | 3 Input NOR gate                                                                               |     |           |
|               |    | 2 Input NOR gate.                                                                              |     |           |
|               | b) | How will high speed counter module works describe with suitable application.                   | CO2 | 7 Marks   |
|               |    | (OR)                                                                                           |     |           |
| 4.            |    | Explain ladder diagram construction and flow chart for spray process system.                   | CO2 | 14 Marks  |
|               |    | (UNIT-III)                                                                                     |     |           |
| 5.            | a) | Explain about MOVE, FIFO functions and their applications.                                     | CO3 | 7 Marks   |
|               | b) | Describe the number conversion functions.                                                      | CO3 | 7 Marks   |
|               |    | (OR)                                                                                           |     |           |
| 6.            | a) | Explain Master control relay functions.                                                        | CO3 | 7 Marks   |
|               | b) | Describe the Arithmetic functions.                                                             | CO1 | 7 Marks   |
|               |    | UNIT-IV                                                                                        |     |           |
| 7.            | a) | Explain how bit patterns in registers can be used in machine control.                          | CO4 | 7 Marks   |
|               | b) | Explain basic two-axis robot with PLC sequencer control.                                       | CO6 | 7 Marks   |
|               |    | (OR)                                                                                           |     |           |
| 8.            | a) | Use matrix functions in combination to simulate combination gates such as NAND and NOR in PLC. | CO4 | 7 Marks   |
|               | b) | Explain how to change a Register Bit Status in detail.                                         | CO5 | 7 Marks   |
|               | ,  | UNIT-V                                                                                         |     |           |
| 9.            | a) | Explain various programming languages in PLC.                                                  | CO5 | 7 Marks   |
|               | b) | A machine is connected to a load cell that outputs a voltage. Proportional                     | CO4 | 7 Marks   |
|               | ,  | to the mass on a platform, when unloaded the cell outputs a voltage of                         |     |           |
|               |    | 1V. A mass of 500Kg results in a 6V output. Write a program that will                          |     |           |
|               |    | measure the mass when an input sensor (M) becomes true. If the mass is                         |     |           |
|               |    | not between 300Kg and 400Kg and alarm output (A) will be turned on.                            |     |           |
|               |    | Write a program and indicate the general settings for the analog I/O.                          |     |           |
|               |    | (OR)                                                                                           |     |           |
| 10.           | a) | Describe PID tuning functions and methods.                                                     | CO4 | 7 Marks   |
|               | b) | Explain about PLC auxiliary commands and functions.                                            | CO5 | 7 Marks   |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **CLOUD COMPUTING**

#### [Information Technology, Computer Science and Systems Engineering]

Time: 3 hours

b)

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Define Data center. Explain the need and benefits of virtualization on CO1 7 Marks Data center.
  - b) Describe the types of virtualization in cloud computing with suitable CO1 7 Marks examples.

#### (OR)

2. Compare the services and applications of Hyper-V and VMware CO2 14 Marks virtualization technologies.

## UNIT-II

3. a) Discuss the risks and challenges in cloud computing. CO1 7 Marks
b) Interpret the critical cloud computing challenges pertaining to IT CO1 7 Marks resources in public clouds.

#### (OR)

4. State and explain various cloud deployment models with suitable CO1 14 Marks examples.

#### (UNIT-III)

- 5. a) Illustrate multitenant technologies with suitable examples. CO2 7 Marks
  - b) State the web based services to process data in cloud computing. CO1 7 Marks

#### (OR)

6. Classify and analyze the components in cloud bursting architecture, CO4 14 Marks elastic disk provisioning architecture and redundant storage architectures with neat sketch.

#### (UNIT-IV)

7. a) Explain various applications of cloud security.
b) Explain cloud scale for disaster recovery in cloud.
(OR)
8. Analyze various disasters that can occur in cloud. Evaluate the CO2 14 Marks appropriate recovery measures.

#### 9. a) Compare and contrast IaaS, PaaS and SaaS with suitable examples each. CO2 7 Marks

Design and develop a web application in Google App Engine. CO5 7 Marks

(OR)

10. Outline the features of Amazon EC2 cloud and develop an Amazon CO4 14 Marks Machine Instance on EC2 cloud

\$\$ \$\$ \$\$

Max. Marks: 70

## III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

**AD-HOC AND WIRELESS SENSOR NETWORKS** 

#### [Information Technology]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a)<br>b)      | Explain the applications of Ad-hoc wireless networks.                                                                                                   | CO1  | 5 Marks<br>9 Marks         |
|-----|---------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|------|----------------------------|
|     | 0)            | and performance of an Ad-hoc wireless system.<br>i) Medium access scheme. ii) Routing. iii) Multicasting.                                               | 02   | 9 Walks                    |
| 2   | `             | (OR)                                                                                                                                                    | 001  |                            |
| 2.  | a)            | explain the following contention based MAC protocols of Ad-hoc networks.                                                                                | COI  | 9 Marks                    |
|     | 1 \           | 1) MACA. 11) MACAW.                                                                                                                                     | 001  | 5 3 6 1                    |
|     | b)            | Draw and explain the frame structure in D-PRMA protocol.                                                                                                | COI  | 5 Marks                    |
| 3.  | a)            | With suitable example, explain establishment and route maintenance in DSR.                                                                              | CO4  | 7 Marks                    |
|     | b)            | Write about hierarchical state routing protocol. Discuss the advantages of hierarchical topology based protocols over protocols that use flat topology. | CO5  | 7 Marks                    |
|     |               | (OR)                                                                                                                                                    |      |                            |
| 4.  | a)            | Explain the table driven routing protocol DSDV in detail.                                                                                               | CO5  | 8 Marks                    |
|     | b)            | i) Mesh initialization phase. ii) Mesh maintenance phase.                                                                                               | CO5  | 6 Marks                    |
|     |               | (UNIT-III)                                                                                                                                              |      |                            |
| 5.  | a)            | Why does TCP not perform well in Ad-hoc wireless networks?                                                                                              | CO2  | 7 Marks                    |
|     | b)            | Explain the working, advantages and disadvantages of TCP-ELFN. (OR)                                                                                     | CO2  | 7 Marks                    |
| 6.  | a)            | List and explain the network security requirements.                                                                                                     | CO1  | 5 Marks                    |
|     | b)            | Discuss about some of the multi-layer attacks in Ad-hoc wireless networks.                                                                              | CO2  | 9 Marks                    |
|     |               | (UNIT-IV)                                                                                                                                               |      |                            |
| 7   | a)            | Explain the following design choices for providing OOS system                                                                                           | CO4  | 9 Marks                    |
|     | )             | i) Hard state versus soft state resources reservation.                                                                                                  |      | <i>y</i> 1,1 <b>0</b> ,110 |
|     |               | ii) Stateful versus Stateless approach.                                                                                                                 |      |                            |
|     |               | iii) Hard OOS versus soft OOS.                                                                                                                          |      |                            |
|     | b)            | Describe the layer wise classification of OOS solutions.                                                                                                | CO4  | 5 Marks                    |
|     | ,             | (OR)                                                                                                                                                    |      |                            |
| 8.  |               | Explain in detail about transmission power management schemes.                                                                                          | CO3  | 14 Marks                   |
| 0   | a)            | Describe the power efficient gathering for sensor information systems                                                                                   | CO3  | 7 Marks                    |
| ).  | $\frac{a}{b}$ | Compare wireless sensor networks with Ad-hoc wireless networks                                                                                          | COJ  | 7 Marks                    |
|     | 0)            | (OR)                                                                                                                                                    | 0.01 | / 10101115                 |
| 10. |               | List and explain various MAC protocols of wireless sensor networks.<br>$\bigotimes \bigotimes \bigotimes$                                               | CO2  | 14 Marks                   |

Time: 3 hours

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

## III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### DATA WAREHOUSING AND DATA MINING

[Computer Science and Engineering, Information Technology,

Computer Science and Systems Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

Max. Marks: 70

# 

| 1.  | a) | Explain the three-tier data warehouse architecture and its various components                  | CO3 | 7 Marks |
|-----|----|------------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Describe the multidimensional data model with neat sketch.                                     | CO2 | 7 Marks |
| 2.  | a) | What is a data warehouse? Distinguish between operational database                             | CO1 | 7 Marks |
|     | b) | What are OLAP operations in the multidimensional data model? Explain.                          | CO3 | 7 Marks |
| 3.  | a) | What is data cleaning? Describe the approaches to fill missing values.                         | CO2 | 7 Marks |
|     | b) | What is datamining? Briefly explain the knowledge discovery process.                           | CO1 | 7 Marks |
| 4   | a) | Briefly describe various forms of data preprocessing                                           | CO3 | 7 Marks |
|     | b) | Describe in detail datamining functionalities and the different kinds of natterns can be mined | CO5 | 7 Marks |
|     |    | UNIT-III                                                                                       |     |         |
| 5   | a) | Discuss the F-P growth algorithm with an example                                               | CO4 | 7 Marks |
| 0.  | b) | What is association and correlation? With an example, describe classification and prediction.  | CO2 | 7 Marks |
|     |    | (OR)                                                                                           |     |         |
| 6.  | a) | Elucidate the steps in the decision tree classification process with an example.               | CO4 | 7 Marks |
|     | b) | Discuss the Apriori algorithm with an example.                                                 | CO4 | 7 Marks |
|     |    | (UNIT-IV)                                                                                      |     |         |
| 7.  | a) | Describe different grid-based methods in cluster analysis.                                     | CO2 | 7 Marks |
|     | b) | What do you mean by clustering? Explain different types of clusters. <b>(OR)</b>               | CO1 | 7 Marks |
| 8.  | a) | Write the DBSCAN algorithm and explain.                                                        | CO5 | 7 Marks |
|     | b) | What is partitioning method? Describe k-means clustering algorithm.                            | CO1 | 7 Marks |
