## III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **NETWORK SECURITY**

[Computer Science and Systems Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Define DOS attack. Explain various types of DOS attacks with suitable examples.                          | CO1 | 8 Marks  |
|-----|----|----------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Discuss the benefits of good security practices.                                                         | CO1 | 6 Marks  |
|     |    | (OR)                                                                                                     |     |          |
| 2.  | a) | How to perform IP spoofing attack?                                                                       | CO1 | 8 Marks  |
|     | b) | Differentiate passive and active attacks.                                                                | CO1 | 6 Marks  |
|     |    | UNIT-II                                                                                                  |     |          |
| 3.  | a) | With a neat sketch, explain the working, advantages and disadvantages of packet filtering firewall.      | CO4 | 8 Marks  |
|     | b) | Describe the firewall rules for the router and firewall architecture.                                    | CO4 | 6 Marks  |
|     |    | (OR)                                                                                                     |     |          |
| 4.  | a) | List and explain about the key components of a VPN.                                                      | CO6 | 7 Marks  |
|     | b) | Describe the user VPN configuration and issues.                                                          | CO6 | 7 Marks  |
|     |    | UNIT-III                                                                                                 |     |          |
| 5.  | a) | What are the requirements of random numbers? Discuss various pseudo random number generators.            | CO3 | 6 Marks  |
|     | b) | Draw and explain the symmetric encryption model and its principles.                                      | CO2 | 8 Marks  |
|     |    | (OR)                                                                                                     |     |          |
| 6.  | a) | Explain how to generate stream using RC4 algorithm.                                                      | CO2 | 10 Marks |
|     | b) | List all the advantages of CTR mode.                                                                     | CO3 | 4 Marks  |
|     |    | UNIT-IV                                                                                                  |     |          |
| 7.  | a) | How to provide message authentication using MAC and one way hash functions.                              | CO6 | 5 Marks  |
|     | b) | Discuss the generation of message digest using SHA 512 algorithm. <b>(OR)</b>                            | CO6 | 9 Marks  |
| 8.  | a) | Explain the public key cryptography principles.                                                          | CO2 | 8 Marks  |
|     | b) | Perform encryption and decryption using the RSA algorithm if $p = 7$ , $q = 11$ , $e = 17$ and $M = 8$ . | CO2 | 6 Marks  |
|     |    |                                                                                                          |     |          |
| 9.  | a) | What is the role of honey pot in intrusion detection?                                                    | CO5 | 5 Marks  |
|     | b) | Discuss about the following malicious software's.                                                        | CO5 | 9 Marks  |
|     | ,  | (OR)                                                                                                     |     |          |
| 10. | a) | Explain the phases and structure of virus.                                                               | CO5 | 8 Marks  |
|     | b) | List and explain the four generations of antivirus software's.                                           | CO5 | 6 Marks  |
|     |    | \$P & \$P                                                                                                |     |          |

|      |               | (UNIT-I)                                                                                                                                                                                                        |     |          |
| 1.   | a)            | Discuss the applications and limitations of Mobile Computing.                                                                                                                                                   | CO1 | 7 Marks  |
|      | b)            | Define Mobile Computing? List the features of Mobile Computing.<br>(OR)                                                                                                                                         | CO1 | 7 Marks  |
| 2.   | a)            | Draw WCDMA protocol layered Architecture between MS and BTS.                                                                                                                                                    | CO5 | 7 Marks  |
|      | b)            | Elaborate the features of Long Term Evolution (LTE).                                                                                                                                                            | CO5 | 7 Marks  |
| 3.   | a)            | Compare explicit reservation and implicit reservation schemes with a timing diagram.                                                                                                                            | CO2 | 7 Marks  |
|      | b)            | Assume all stations can hear all other stations. One station wants to transmit and senses the carrier idle. Why can a collision still occur after the start of transmission? Analyze and provide solution. (OR) | CO2 | 7 Marks  |
| 4.   | a)            | Elaborate various protocols used to provide Bluetooth security.                                                                                                                                                 | CO4 | 7 Marks  |
|      | b)            | Discuss the basic structure of an IEEE 802.11 MAC data frame together with the content of frame control field.                                                                                                  | CO4 | 7 Marks  |
|      |               | (UNIT-III)                                                                                                                                                                                                      |     |          |
| 5.   | a)            | Explain the basic purpose of DHCP. Name the entities of DHCP. How can DHCP be used for mobility and support of mobile IP?                                                                                       | CO1 | 7 Marks  |
|      | b)            | Discuss the advantages and disadvantages of three encapsulation methods in mobile IP.                                                                                                                           | CO1 | 7 Marks  |
|      |               | (OR)                                                                                                                                                                                                            |     |          |
| 6.   | a)            | Explain the concept of Indirect TCP. How it is helpful for handover between different access points?                                                                                                            | CO1 | 7 Marks  |
|      | b)            | Explain mobile TCP and its advantages and disadvantages.                                                                                                                                                        | CO1 | 7 Marks  |
| 7.   | a)            | Compare database hoarding and data caching. Describe Database hoarding                                                                                                                                          | CO2 | 7 Marks  |
|      | b)            | Justify how web cache is maintained in mobile Environment.                                                                                                                                                      | CO2 | 7 Marks  |
| 8.   |               | Summarize on following Indexing techniques:<br>i) (I M) indexed method ii) Distributed Index based method                                                                                                       | CO1 | 14 Marks |
| _    |               | UNIT-V                                                                                                                                                                                                          |     |          |
| 9.   |               | Apply AODV Routing algorithm for the following network to find the shortest path from Node-1 to Node 14.                                                                                                        | CO3 | 14 Marks |
|      |               |                                                                                                                                                                                                                 |     |          |
|      |               |                                                                                                                                                                                                                 |     |          |
|      |               | (OP)                                                                                                                                                                                                            |     |          |
| 10.  |               | Sketch the WAP architecture. Explain its layers and components briefly.                                                                                                                                         | CO1 | 14 Marks |

#### III B.Tech II Semester (SVEC-16) Supplementary Examinations March - 2021

#### **CRYPTOGRAPHY AND NETWORK SECURITY**

[Electronics and Communication Engineering]

Time: 3 hours

7

Max. Marks: 70 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I 1. Sketch the model for network security and discuss each of its CO1 7 Marks a) components. List and briefly define categories of passive and active security attacks. CO1 7 Marks b) (**OR**) Decipher the message YITJP GWJOW FAQTQ XCSMA ETSQU 2. a) CO3 8 Marks SQAPU SQGKC PQTYJ using the Hill cipher with the inverse key 5 1 Show your calculations and result. 2 7 b) Distinguish between monoalphabetic cipher and polyalphabetic cipher. CO2 6 Marks UNIT-II Discuss about strengths of DES. 3. a) CO<sub>2</sub> 5 Marks b) Illustrate Diffie Hellman key Exchange in detail with an example. CO3 9 Marks (OR)Describe the key management of public key encryption in detail. CO3 7 Marks a) b) Explain RSA Algorithm with the following: CO4 7 Marks P=11, q=5, e=3 and PT=9. (UNIT-III) What is message authentication? List out various attacks that are to be CO3 a) identified while communication across a network. What are possible solutions to those attacks? Discuss about Message Authentication methods. CO3 b) (OR)Describe how SHA-512 is used to generate Message Digest and how it is CO4 a) different from SHA-1? b) Elaborate on Digital Signature standard and the approach used in it to CO<sub>4</sub> provide security. UNIT-IV Describe the architecture of IPSec COG 7 Marles Explain about counter measures to be considered for DDoS attacks. CO4. 6 Marks b) CO6 (**OR**) 10 Write a short note on: CO5 7 Marks a)

i) Viruses. ii) Firewalls. Discuss about spear phishing and phishing countermeasures. 7 Marks b) CO5

- 4.

#### **IV B.Tech I Semester (SVEC10) Supplementary Examinations February – 2021**

#### FINITE ELEMENT METHODS [Mechanical Engineering]

Time: 3 hours

#### Answer any FIVE questions All questions carry equal marks

- 1. a) Enumerate the advantage of FEM. List out some of the computer software packages available for FEM. Mention their general capabilities.
  - b) In a plane stress problem, we have  $\sigma_x$ =1000MPa,  $\sigma_y$ =-150MPa, E=200GPa, G=100GPa and v = 0.3. Deter the value of the stress  $\epsilon_x, \epsilon_y$  and  $\sigma_{xy}$ .
- 2. Derive the element stiffness matrix for a quadratic one dimensional bar element.
- 3. A cantilever beam of length 3.4m has an elastic spring support of stiffness 230kN/m at its free end, where a point load of 13kN acts. Take Young's modulus as 200GPa and area moment of inertia of the cross-section as 1 x 10<sup>-4</sup> m<sup>4</sup>. Determine the displacement and slope at the node and reactions.
- 4. For a triangular plate shown in the figure 1, determine the deflection at the point of load using one triangular element. Thickness is 10mm,  $E = 70 \times 10^3 MPa$ ,  $\mu = 0.3$

Fig. 1

- 5. Derive the element stiffness matrix for a quadrilateral element.
- 6. Heat is generated in a large plate with  $k = 0.7 \text{ w/m}^{\circ}\text{c}$  at the rate of 3000 w/m<sup>3</sup>, the plate is 20cm thickness, outside surface of plate is exposed to atmospheric air at 35°c with convective heat transfer coefficient, h=25w/m<sup>2</sup> °c. Determine the temperature distribution in plate by taking 2 elements.
- 7. Explain the basic differential equations for fluid flow problems, its one dimensional formulation and corresponding finite element equations and also method of solving by taking a suitable example.
- 8. Determine the lowest Eigen value and corresponding mode for the beam shown in the Fig.2. Take E = 200GPa,  $\rho = 7840$ kg/m<sup>3</sup>, I = 2000mm<sup>4</sup>, A = 240mm<sup>2</sup>.

IV B.Tech I Semester (SVEC14) Supplementary Examinations August - 2021

#### **STEEL STRUCTURES**

[ Civil Engineering ]

Max. Marks: 70

SVEC-14

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

## UNIT-I )

1 Mention the standard specifications and codes of steel structures. Mention 14 Marks mechanical properties of steel.

(OR)

2 Define rolled steel sections and mention the types of rolled steel sections with a 14 Marks neat sketch representing the shapes and dimensions.

## UNIT-II)

Two ISF sections 200mm x 10mm each and 1.5m long are to be jointed to make a member length of 3.0m. Design a butt joint with the bolts arranged in the diamond pattern. The flats are supposed to carry a factored tensile force of 450KN. Steel of grade Fe410 .20mm diameter bolts of a grade 4.6 are used to make the connection also determine the net tensile strength or the main plate and corner plate.

#### (OR)

4 Design a fillet weld to join a tension member consisting of 2 ISA 14 Marks 100mm x 75mm x 8mm to a 12mm thick gusset plate. The factored tensile load is 410 KN.

### (UNIT-III)

5 Design a single angle to carry a tension of 150kN. The end connection is to be 14 Marks done using M20 bolts of product Grade C and property class 4.6. The yield and ultimate strengths of the steel are 250MPa and 410MPa, respectively.

#### (**OR**)

6 Design a single angle discontinuous strut to carry a factored axial compressive 14 Marks load of 65 kN. The length of strut is 3.0m between intersections. It is connected to 12mm thick gusset plate by 20mm diameter 4.6 grade bolts. Use steel of grade Fe 410.

## UNIT-IV

7 Design a laterally unsupported beam for the following data: 14 Marks Effective span = 4 m; Maximum bending moment = 550 kN-m; Maximum shear force=200 kN; Steel of grade Fe = 410. (OR)

8 Design a column of effective length 5.90 m. It is subjected to a factored axial 14 Marks compressive load of 2000 kN. Provide two channels back to back connected with battens by site welded connections. Use steel of grade Fe 410.

## UNIT-V

9 A column of ISMB 400 is subjected to an axial force of 750kN. Use appropriate 14 Marks techniques to analyse and design suitable base plate. Assume necessary data required.

## (OR)

10 A built up column consists ISHB 400@ 77.40 kg/m with one 14 Marks 300mm x 12mm flange plate on each side. The column carries an axial load of 2600kN. Determine the suitable dimension for a gusseted base, if the column is supported on concrete pedestal with a bearing pressure of 5N/mm<sup>2</sup>.

TRANSPORTATION ENGINEERING-II

[ Civil Engineering ]

Max. Marks: 70

SVEC-14

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- a) A vehicle of weight 2.0 tonneshidsthreough a distance equal to 40 m before 7 Marks colliding with another parked vehicle of weight 1.0 tonne. After collision both the vehicles skid through a distance equal to 12 m before stopping. Compute the initial speed of the moving vehicle. Assume coefficient of friction as 0.5.
  - b) Discuss about accident studies and records. Analyse accident rate with respect 7 Marks to time

#### (OR)

7 Marks

b) Analyse graphically and through formulae, the relationship between Speed, 7 Marks Travel time, Volume, Density and Capacity.

## UNIT-II

- 3 a) Indicate the how the traffic volume data are presented and results used in traffic 7 Marks volume studies?
  - b) A vehicle skids through a distance equal to 40 m before colliding with another 7 Marks parked vehicle, the weight of which is 75 per cent of the former. After collision if both the vehicles skid through 14 m before stopping compute the initial speed of moving vehicle. Assume friction coefficient of 0.62.

#### (OR)

- 4 a) Explain traffic capacity, basic capacity, possible capacity, practical capacity 7 Marks and PCU.
  - b) Calculate the basic capacity of traffic lane at a speed of 50 kmph. Assume that 7 Marks all the vehicles are of average length 5 m.

## UNIT-III

5 What are various traffic signs and explain with neat sketches. 14 Marks

#### (OR)

6 At a right-angled intersection of two roads, Road 1 has four lanes with a total 14 Marks width of 12.00 m and Road 2 has two lanes with a total width of 6.6m. The volume of traffic approaching the intersection during design hour are 900 and 743 PCU/hour on the two approaches of Road 2. Design the signal timings as per IRC guidelines.

## UNIT-IV

- 7 The spot speeds at a particular location are normally distributed with a mean of 14 Marks 51.7 KPH and a standard deviation of 8.3 KPH. What is the probability that
  - i) The sppeds exceed 65 KPH.

Explain Road user and Vehicle characteristics.

- ii) And the speeds lie between 40 KPH and 70 KPH.
- iii) What is the 85<sup>th</sup> percentile speed?

#### (OR)

8 At a highway location with poor geometrics, the mean spot speed observed with a sample of 200 vehicles was 58.3 KPH with a standard deviation of 12.2 KPH. After effecting improvements to the geometrics, the mean speed observed with a sample of 250 vehicles was 61.2 KPH with a standard deviation of 9.8 KPH. Has there been a significant increase in the speed after the improvements?

# UNIT-V

| 9  | a) | Explain briefly the methodology of Road safety Audit.                             | 7 Marks |

[ Electrical and Electronics Engineering ]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Derive the condition for economical load dispatch among various generating 7 Marks plants. Also explain with flow chart for the solution of economical load dispatch problem by  $\lambda$ -iteration method
  - b) Determine the operating schedule of 2-generator case of 100MW each whose 7 Marks incremental characteristics are given by

$$\frac{dF_1}{dF_2} = 2 + 0.012P_1 \qquad \frac{dF_2}{dP_2} = 1.5 + 0.015P_2$$

The minimum load on each unit is 10MW .The total load to be supplied is 150MW

#### (**OR**)

- 2 a) Derive transmission line loss equation in terms of B-Coefficients.
  - b) Three plants of total capacity 500Mw are scheduled for operation to supply a 7 total system load Of 310Mw. Evaluate the optimum load scheduling .If the plants have the following incremental cost characteristics and the limitations

$$\frac{dc_1}{dp_{g_1}} = 0.12P_{G1} + 30Rs / MWh$$
$$\frac{dc_2}{dp_{g2}} = 0.2P_{G2} + 40.0Rs / MWh$$
$$\frac{dc_3}{dp_{g3}} = 0.15P_{G3} + 10Rs / MWh$$
$$30 \le P_{G1} \le 150 \qquad 20 \le P_{G2} \le 100 \qquad 50 \le P_{G3} \le 250.$$
$$\textbf{UNIT-II}$$

3 Obtain the Optimal Operation of a fundamental hydro thermal system with 14 Marks necessary equations.

(OR)

- 4 a) Obtain the short-term scheduling of hydrothermal power system using penalty 7 Marks factor.
  - b) Derive and explain about Hydro Power Equation. 7 Marks

5 Draw the flowchart and explain the unit commitment problem using priority 14 Marks list method.

#### (**OR**)

- 6 a) Explain the dynamic programming method used for unit commitment of 7 Marks power flow.
  - b) Explain the various constraints in unit commitment problem. 7 Marks

7 Marks

7 Marks

## UNIT-IV

- 7 a) Derive the Model of a Speed governing systems and represent it by a block 7 Marks diagram.
  - b) Explain the effect of varying excitation of a Synchronous generator 7 Marks

(OR)

- 8 a) Draw the block diagram representation of steam turbine and obtain the 7 Marks approximate linear model.
  - b) Derive the Model of a Generator Load model and represent it by a block 7 Marks diagram.

## UNIT-V

- 9 a) Explain about LFC of isolated power system; derive the steady state frequency 8 Marks error.
  - b) Define the terms: Tie Line, Coherent group, Control Area. 6 Marks

(OR)

- 10 a) Explain the concept of 'control area' with respect to power system and 7 Marks develop the appropriate block diagram representation of two area LFC and explain.
  - b) What are tie-line oscillations? What determines the frequency of these 7 Marks oscillations?

POWER SYSTEM ANALYSIS [Electrical and Electronics Engineering]

Time: 3 hours

2

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

1 Develop all incidence matrices A, A<sup>^</sup>, B, B<sup>^</sup>, C and C<sup>^</sup> for the network shown 14 Marks in fig 1.consider bus 1 as reference.

## (OR)

a) Deduce the equation to form Y bus using singular transformation method.
b) State and explain primitive network.
6 Marks

## UNIT-II

3 Develop the design procedure of modification of existing Z<sub>Bus</sub> by adding branch from new bus (p) to reference node, from new bus (p) to existing bus (k), from existing bus (k) to reference node and between existing buses (j) and (k).

#### (**OR**)

- 4 a) With the help of expressions, explain the procedure of representing tap changing 7 Marks transformers.
  - b) Write down the expressions and explain the terms in Park's and Clarke's 7 Marks transformations.

## (UNIT-III)

- 5 a) Explain the algorithm for Gauss seidel load flow method. 10 Marks
  - b) Explain the significance of slack bus in load flow studies. What is the data 4 Marks needed for load flow studies?

(OR)

6 Determine bus voltages at the end of  $2^{nd}$  iteration by Gauss-Seidal method. Take 14 Marks acceleration factor as 1.6.

| Table 1  |                      |  | Table 2  |                       |                          |          |         |
|----------|----------------------|--|----------|-----------------------|--------------------------|----------|---------|
| Bus Code | Admittances<br>(p.u) |  | Bus Code | P <sub>D</sub> in p.u | Q <sub>D</sub> in<br>p.u | V in p.u | Remarks |

UNIT-I

## (UNIT-IV)

- 7 a) Derive the necessary expressions for Jacobian matrix elements for N-R method in 10 Marks Polar form.
  - b) Compare the features of Gauss Seidel and Newton Raphson load flow 4 Marks methods.

#### (OR)

8 Explain with a flow chart the computational procedure for load flow solution 14 Marks using Newton Raphson method.

## UNIT-V

- 9 a) Write a note on methods of improving steady state and transient stabilities of a 7 Marks power system network.
  - b) Explain point by point method of solving Swing equation by deriving necessary 7 Marks equations.

#### (**OR**)

10 a) Define the following terms:

7 Marks

- i) Steady state stability. ii) Dynamic stability.
- iii) Transient stability. iv) Steady state stability limit.
- v) Synchronizing power co-efficient.
- b) List the assumptions made in stability solution. Also discuss the various methods 7 Marks of improving stability.

## FINITE ELEMENT METHODS

[ Mechanical Engineering ]

Max. Marks: 70

SVEC-14

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1 a) List the advantages, disadvantages and limitations of FEM. 7 Marks
b) Describe the general steps of the finite element method. 7 Marks
(OR)
2 For the three stepped bar shown in below Fig.1. 14 Marks
Consider E<sub>1</sub>=70 GPa, E<sub>2</sub>=105 GPa, E<sub>3</sub>=200 GPa, A<sub>1</sub>=900 mm<sup>2</sup>, A<sub>2</sub>= 400 mm<sup>2</sup>

#### Determine

- (a) i) The displacement at Nodes 2 and 3.
  - ii) Stresses in three sections.
  - iii) Reactions at the ends.

## UNIT-II

3 For the beam shown in Fig.2 calculate the deflection under the load and 14 Marks construct the shear force and bending moment diagrams for the beam. Take  $E = 20 \times 10^6 \text{ N/cm}^2$  and  $I = 2500 \text{ cm}^4$ .

4 Derive the element stiffness matrix and the nodal load matrices for a B-nodal 14 Marks triangular element.

5 Derive the element stiffness matrix and load vector and traction for a CST 14 Marks element.

#### (**OR**)

For a long cylinder of inside diameter 8cm and outside diameter 12cm snugly 14 Marks fits in a hole over its full length as shown in Fig.3. The cylinder is subjected to an internal pressure of 5 MPa. Using two element model over a length of 1cm, Evaluate nodal displacements and element stresses. Take  $E = 20 \times 10^6 N = cm^2$ and k = 0.3

Fig.3

## UNIT-IV

7 Consider a brick wall thickness 0.3m with the thermal conductivity of 14 Marks 0.7 W/mK. The inner surface is at 28°C and the outer surface is exposed to cold air with the heat transfer coefficient of 40 W/m<sup>2</sup> K at -15°C. Determine the steady state temperature distribution and also the heat flux through the wall. Use two elements and obtain the solution.

#### (OR)

8 Discuss the formulation of 4-noded iso parametric element and derive the 14 Marks stiffness matrix for it.

UNIT-V

9 Derive the element consistent mass matrix for a CST element. 14 Marks

(OR)

10 Determine the natural frequencies of the stepped bar shown in Fig. 4. Take 14 Marks E=200GPa and density=7850 kg/m<sup>3</sup>.

Fig. 4.

Marks: 70 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I 1 Briefly explain simulation of inventory system. 7 Marks a) Describe how arrays are used for List Processing. 7 Marks b) (**OR**) 2 Discuss in detail various features when selecting simulation software. 14 Marks UNIT-II) 3 Explain the following continuous distribution: 6 Marks a) i) Uniform distribution. ii) Exponential distribution. Explain the properties of a Poisson process. 8 Marks b) (**OR**) 4 a) Discuss about non stationary Poisson process. 7 Marks Describe empirical distributions. 7 Marks b) UNIT-III) List out the measures of performance of queuing systems. 5 14 Marks (**OR**) Describe the steady state behavior of finite population model. 6 7 Marks a) The malfunctions occur in a widget making machines follows Poisson 7 Marks b) process with rate of malfunctions at 1.5 per hour. The repair times by the single mechanic takes with mean time of 30 minutes and standard deviation of 20 minutes. What is the steady time average number of broken machines? UNIT-IV What is a random number and what are its properties? 7 Marks 7 a) b) Describe the process to test the uniformity using Kolmogorov -Smirnov 7 Marks test. (**OR**) 8 Describe the method of generating random numbers using combined linear 7 Marks a) congruential method. Describe the method of generating random variates for the exponential b) 7 Marks distribution. UNIT-V List out the precautions to be taken while collecting the data. 9 7 Marks a) What are the parameter estimators for Poisson, Exponential and Normal **b**) 7 Marks **Distributions**? (**OR**) 10 Describe the general strategy to obtain Batch means for interval estimation 14 Marks in steady state simulation.

## **POWER SEMICONDUCTOR DRIVES**

#### [Electrical and Electronics Engineering]

Time: 3 hours

**Answer One Ouestion from each Unit** All questions carry equal marks

## UNIT-I

| 1 | a) | State the advantages of electric drives over other drives.  | 7 Marks |
|---|----|-------------------------------------------------------------|---------|
|   | b) | List and explain various components of load torques.        | 7 Marks |
|   |    | (OR)                                                        |         |
| 2 | a) | Describe the closed loop configurations in electric drives. | 7 Marks |
|   | b) | Discuss the nature and classification of load torque.       | 7 Marks |
|   |    |                                                             |         |

## UNIT-II

- 3 Explain rectifier control of **dc** series motor. a)
  - Speed of a dc series motor coupled to a fan load is controlled by variation of 7 Marks b) armature voltage. When armature voltage is 400 V, motor takes 20A and the fan speed is 250 r.p.m. The combined resistance of armature and field is  $1.0\Omega$ . Calculate:

i) Motor armature voltage for the fan speed of 350 r.p.m.

ii) Motor speed for the armature voltage of 250 V.

#### (**OR**)

- Explain continuous and discontinuous operation of three phase semi controlled 4 a) 7 Marks converter connected to separately excited dc motor.
  - A 220V, 1200 r.p.m 15A separately excited motor has the armature resistance 7 Marks b) and Inductance of 1.8  $\Omega$  and 32mH respectively. This motor is controlled by a single phase fully controlled rectifier with an AC source voltage of 230V, 50Hz. Identify modes and calculate developed speeds for:
    - i)  $\alpha = 45^{\circ}$  and Torque = 40 N-m.
    - ii)  $\alpha = 45^{\circ}$  and Torque = 10 N-m.

## UNIT-III)

5 Explain closed loop control scheme for speed control of dc separately excited 14 Marks motor.

#### (**OR**)

- Explain the speed control of dc series motor fed from two quadrant choppers. 6 7 Marks a) Draw the motoring and regenerative braking characteristics.
  - A 220 V, 24 A, 1000 r.p.m dc separately excited motor has an armature 7 Marks b) resistance of  $2\Omega$ . Motor is controlled by a basic chopper with frequency of 500Hz and source voltage of 230V. Calculate the duty ratio for 1.2 times rated torque and 500 r.p.m.

## UNIT-IV

- Explain speed control of Induction motors using AC voltage controller. 7 6 Marks a) 8 Marks b)
  - Explain with circuit and waveforms for speed control of induction motor by Static rotor resistance.

Max. Marks: 70

7 Marks

(OR)

- 8 a) Why stator voltage control is suitable for speed control of induction motors in 7 Marks fan and pump drives.
  - b) With necessary block diagram, explain operation of variable frequency control 7 Marks of 3-phase Induction motor.

## UNIT-V

| 9  | a) | Discuss modes of operation of switched reluctance motor.                        | 8 Marks |
|----|----|---------------------------------------------------------------------------------|---------|
|    | b) | State the advantages and disadvantages of stepper motors.                       | 6 Marks |
|    |    | (OR)                                                                            |         |
| 10 | a) | Discuss torque-stepping rate characteristics of stepper motor.                  | 6 Marks |
|    | b) | Explain converter circuits and modes of operation of switched reluctance motor. | 8 Marks |

#### POWER SYSTEM OPERATION AND CONTROL

[Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1 a) Derive the condition for economical load dispatch among various generating 7 Marks plants. Also explain with flow chart for the solution of economical load dispatch problem by  $\lambda$ -iteration method
  - b) Determine the operating schedule of 2-generator case of 100MW each whose 7 Marks incremental characteristics are given by

$$\frac{dF_1}{dF_2} = 2 + 0.012P_1 \qquad \frac{dF_2}{dP_2} = 1.5 + 0.015P_2$$

The minimum load on each unit is 10MW. The total load to be supplied is 150MW

#### (**OR**)

2 a) Incremental fuel costs for a power plant consisting of 3 generating units are  $IC_1=20+0.3P_1$   $IC_2=30+0.4P_2$   $IC_3=30$ . 7 Marks

Where  $p_1$  is the power in MW generated by unit i for i=1, 2 and 3. Assume that all the generators are operating all the time. Minimum and maximum loads on each unit are 50MW and 300MW respectively. If the plant is operating on economic load dispatch to supply the total power demand of 700MW, the power generated by each unit is?

b) Derive the Exact coordination equation (economic operation of power system 7 Marks considering losses).

## UNIT-II)

- 3 a) Derive the co-ordination equation for the optimal scheduling of hydrothermal 7 Marks interconnected power plants.
  - b) Explain different constraints to be considered for mathematical modeling of 7 Marks hydrothermal scheduling.

#### (OR)

- 4 a) Obtain the short-term scheduling of hydrothermal power system using penalty 7 Marks factor.
  - b) Derive and explain about Hydro Power Equation. 7 Marks

## (UNIT-III)

- 5 a) Discuss the dynamic programming method to solve unit commitment problem in 7 Marks a power system.
  - b) What is the cost function for unit commitment? Explain its significance in unit 7 Marks commitment.

#### (OR)

6 What are the various methods of unit commitment? Explain each of them with 14 Marks relevant equations.

## UNIT-IV

- 7 a) Draw the block representation of a complete AC excitation system and explain 7 Marks its features.
  b) Explain the various performance requirements of avaitation system.
  7 Marks
  - b) Explain the various performance requirements of excitation system. 7 Marks

#### (OR)

8 Draw a neat sketch of a typical turbine speed governing system and derive its 14 Marks block representation and transfer function.

#### UNIT-V)

9 Define the terms: 5 Marks a) i) Control Area. ii) Coherent Group. iii) Area Control Error. Deduce with necessary equations, Dynamic response of LFC of an isolated 9 Marks b) power system with integral controller. (**OR**) Explain about LFC of isolated power system; derive the steady state frequency 10 a) 8 Marks error

| b) | Define the following terms: |                    |                    | 6 Marks |
|----|-----------------------------|--------------------|--------------------|---------|
|    | i) Tie Line                 | ii) Coherent group | iii) Control Area. |         |

#### POWER SYSTEM ANALYSIS [Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

2 Marks

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1 a) For the network of the Fig.1, draw the graph and write a tie-set schedule. 7 Marks Using the tie-set schedule obtain the loop equations and find the currents in all branches.

b) For the network of Fig.1, write a cut-set schedule, obtain modal equations and 7 Marks find branch currents.

#### (OR)

- 2 a) What is primitive network matrix and represent its forms? Prove 10 Marks  $Y_{bus} = A_t[y]A$  using singular transformation.
  - b) What is the difference between element-node incidence matrix and bus- 2 Marks incidence matrix?
  - c) What is primitive network matrix?

#### UNIT-II

3 a) Starting from Z<sub>bus</sub> for a partial network describe step - by - step how you 7 Marks willobtain the Z<sub>bus</sub> for a modified network when a new line is to be added to a bus in the existing network.
b) Obtain the Park's Transformation matrix. 7 Marks

#### (OR)

- 4 a) Describe the procedure for the modification of  $Z_{bus}$  when a line with mutual 8 Marks impedance is added or removed.
  - b) Explain the purpose of Parks's transformation with neat diagram and relevant 6 Marks equations.

## UNIT-III)

- 5 a) What are the initial conditions assumed for the power flow studies by GS 7 Marks method? What is acceleration factor? What is its role in GS method for power flow studies?
  - b) Draw and explain the flow chart for Gauss Seidel load flow method. 7 Marks

| Ta       | ble 1                |          |                       | Table 2                  | 2        |         |  |
|----------|----------------------|----------|-----------------------|--------------------------|----------|---------|--|

| 2-3      | 0.6 – j2.6           | 3        | 0.4                   | 0.3                      | -        | PQ      |  |

6 Determine bus voltages at the end of  $2^{nd}$  iteration by Gauss-Seidal method. 14 Marks Take acceleration factor as 1.6.

## (UNIT-IV)

Develop static load flow equations in rectangular form. 7 Marks 7 a)

Compare different methods of load flow studies. b)

8

7 Marks

(**OR**)

- 7 Marks
- Explain fast decoupled load flow studies with relevant equations. a) Deduce the equations of elements of Jacobin matrix in rectangular 7 Marks b) coordinates.

## UNIT-V

- 9 Derive the expression for Swing equation of a SMIB system. What is the 7 Marks a) significance of swing curve?
  - With the help of Equal area criterion for one machine connected to Infinite 7 Marks b) bus, derive the expressions for critical clearing angle and critical clearing time

#### (**OR**)

- 10 a) With the help of relevant expressions, explain the procedure of solving 7 Marks transient stability problem by Step by Step method.
  - A 50HZ generator is delivering 50% of the power that is capable of delivering 7 Marks b) through a transmission line to an infinite bus. A fault occurs that increases the reactance between generator and infinite bus 500% of the value before fault. When the fault is isolated the maximum power that can be delivered is 75% of the original maximum value. Determine the critical clearing angle for the condition delivered.

#### FINITE ELEMENT METHODS [Mechanical Engineering]

Time: 3 hours

6

#### Answer One Question from each Unit All questions carry equal marks

Max. Marks: 70

## UNIT-I

| 1 | a) | Write short notes on plane stress problem with suitable examples.                 | 7 Marks |
|---|----|-----------------------------------------------------------------------------------|---------|
|   | b) | Derive the material constitutive matrix for a plane strain problem .              | 7 Marks |
|   |    | (OR)                                                                              |         |
| 2 | a) | Derive the stress-strain relation matrix for a two-dimensional plane stress case. | 7 Marks |
|   | b) | Discuss the philosophy of finite element method.                                  | 7 Marks |

## UNIT-II)

| 3 | a) | Plot Hermite shape functions of a beam element and discuss the end conditions. | 7 Marks |
|---|----|--------------------------------------------------------------------------------|---------|
|---|----|--------------------------------------------------------------------------------|---------|

b) Explain the procedure used to determine support reactions of beam in FEM. 7 Marks

#### (OR)

4 A cantilever beam of 1m length carries a single point load at the end of the 14 Marks beam of 10kN. Calculate the deflection at the end of the beam using FEM, if E = 70Gpa, A=500mm<sup>2</sup> and I = 2500mm<sup>4</sup>.

## UNIT-III

| 5 | a)  | Derive the stiffness matrix of a constant strain triangle from fundamentals using | 8 Marks |
|---|-----|-----------------------------------------------------------------------------------|---------|
|   |     | Potential Energy approach.                                                        |         |
|   | 1 \ |                                                                                   |         |

b) Define plane stress and plane strain conditions with examples. 6 Marks

#### (OR)

- a) Give four different examples of axisymmetric problems with sketches. 7 Marks
  - b) Derive traction force vector for a uniformly distributed load acting on one of 7 Marks the sides of a linear Axisymmetric triangular element.

## UNIT-IV

7 Discuss the formulation of 4-noded iso-parametric element and derive the 14 Marks stiffness matrix for it.

#### (OR)

8 a) Discuss in detail about the concept of iso parametric element.
b) Differentiate sub parametric and super parametric elements.
7 Marks

## UNIT-V

- 9 a) Discuss about Lumped mass matrix and Consistent mass matrix.6 Marksb) Derive the elemental mass matrix for CST element.8 Marks(OR)
- 10 a) Derive the element mass matrix for 1-D bar element.
  b) Explain the features of Hamilton's interpolation function with an example.
  7 Marks
  7 Marks

Time: 3 hours

**Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

Define "Interchangeability" and discuss its importance. 5 Marks 1 a) Describe in brief the construction and working of an optical comparator with a 9 Marks **b**) neat sketch. (**OR**) What is meant by the term "fit". Explain the various types of fits. 2 7 Marks a) b) State and explain Taylor's Principe of limit gauging. 7 Marks UNIT-II ) 3 Outline the importance of providing standards of length while measuring. 7 Marks a) What is sine bar? How is it used for angle measurements? 7 Marks b) (**OR**) 4 Explain the principle of working of a sine bar for angular measurement with the 9 Marks a) help of a diagram. List the advantages and limitations of sine bar. With the help of sketches, explain the working of an external micrometer. b) 5 Marks (UNIT-III) 5 Discuss the following terms in connection with surface finish measurement. 6 Marks a) i) Waviness. ii) Lay. iii) Sampling Length. iv) R<sub>z</sub> value. Explain the principle of Talysurf surface recorder with neat sketch. 8 Marks b) (**OR**) List out various BIS symbols for indication of surface finish. 6 a) 7 Marks What are the elements of screw thread? Also explain errors in screw threads. 7 Marks b) UNIT-IV) 7 Mention various types of electrical transducers and explain in detail the working 14 Marks of inductance type of transducers with its advantages and disadvantages. (**OR**) 8 List out different types of speed measuring devices and explain about 14 Marks Mechanical Tachometer and Electrical Tachometer. UNIT-V Explain the calibration procedure in temperature measurement. 9 7 Marks a) What is the principle of Radiation methods of measuring temperature? 7 Marks b)

#### (**OR**)

- 10 a) Explain the principle of dead weight gauge. 7 Marks Explain the principle of Prony brake Dynamometer. 7 Marks b)

### **REFRIGERATION AND AIR CONDITIONING**

[ Mechanical Engineering ]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| a)<br>b) | Compare air refrigeration systems with vapor compression systems.<br>A Bell Coleman refrigeration cycle works between 1 bar and 5 bar. The adiabatic efficiency of compressor is 85% and expander is 90%. Find out COP of the system and its tonnage when air flow rate is 2 kg/s. The ambient temperature is 27°C and the air coming out of refrigerator is 0°C.                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |  |  |  |

| a)       | Explain the factors on which comfort feeling of people in A/C depends.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | 6 Marks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| 0)       | Discuss Air to Air neat pump circuit and list its applications.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | 8 Marks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| a)       | What is the importance of 'Thermodynamics of human body' in A/C system design?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | 8 Marks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
| b)       | Discuss the ways adopted to dehumidify the air in A/C systems.<br>$\circledast \ \circledast \ \circledast$                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | 6 Marks                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |  |  |  |
|          | <ul> <li>a)</li> <li>b)</li> </ul> | <ul> <li>a) Compare air refrigeration systems with vapor compression systems.</li> <li>b) A Bell Coleman refrigeration cycle works between 1 bar and 5 bar. The adiabatic efficiency of compressor is 85% and expander is 90%. Find out COP of the system and its tonnage when air flow rate is 2 kg/s. The ambient temperature is 27°C and the air coming out of refrigerator is 0°C. (OR)</li> <li>a) Sketch and explain the working of Boot strap cooling system used in Aircrafts.</li> <li>b) Discuss the concepts of Heat engines, Refrigerators and Heat pumps. UNIT-II</li> <li>a) Explain Vapor compression refrigeration system and sketch the processes on T-S and P-h property charts.</li> <li>b) What is ASHRAE coding of refrigerants? Give examples for each class. (OR)</li> <li>a) Discuss the effects of superheating and sub cooling on the performance of simple vapor compression refrigeration cycle.</li> <li>b) What are the types of refrigerants and discuss the need of new refrigerants. (OR)</li> <li>a) Explain the working principle of steam jet refrigeration system.</li> <li>b) Explain the working principle of steam jet refrigerator. (OR)</li> <li>a) Define the following. <ul> <li>i) Specific humidity.</li> <li>ii) Specific humidity.</li> <li>iii) Sensible heating.</li> <li>iv) Sensible cooling. v) Humidification and dehumidification.</li> <li>b) List the differences between summer and winter air conditioning systems. (OR)</li> </ul> </li> <li>a) Explain the following and represent it on psychometric chart. <ul> <li>i) Cooling and dehumidification.</li> <li>ii) Adiabatic saturation temperature.</li> <li>iv) Sensible cooling.</li> <li>i) Adiabatic saturation temperature.</li> <li>iv) Sensible cooling.</li> <li>i) Explain the factors on which comfort feeling of people in A/C depends.</li> <li>b) Discuss Air to Air heat pump circuit and list its applications.</li> <li>iii) Adiabatic saturation temperature.</li> <li>iv) Bapas factor.</li> </ul> </li> <li>b) Define the factors on which comfort feeling of people in A/C depends.</li> &lt;</ul> |  |  |  |

### SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

IV B.Tech I Semester (SVEC14) Supplementary Examinations February – 2021

#### LIGHT WAVE COMMUNICATIONS [Electronics and Communication Engineering]

Lieuronics and Communication Engineer

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

### UNIT-I )

| 1  | a) | State and derive Snell's Law.                                                                                                                                                             | 6 Marks  |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
|    | b) | Explain about various types of fiber materials.                                                                                                                                           | 8 Marks  |
|    |    | (OR)                                                                                                                                                                                      |          |
| 2  | a) | Discuss briefly about fiber fabrication.                                                                                                                                                  | 7 Marks  |
|    | b) | What is the basic principle of light propagation in optical fiber? Explain in detail.                                                                                                     | 7 Marks  |
|    |    | UNIT-II                                                                                                                                                                                   |          |
| 3  | a) | Explain linear scattering losses in fibers.                                                                                                                                               | 7 Marks  |
|    | b) | Discuss dispersion mechanisms with regard to single mode fibers indicating the dominating effects. Hence describe how intermodal dispersion may be minimized within a single mode region? | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                      |          |
| 4  |    | Write a short note on fiber connectors and explain types of connectors.                                                                                                                   | 14 Marks |
|    |    | UNIT-III)                                                                                                                                                                                 |          |
| 5  |    | Discuss PIN and Avalanche photo diode.                                                                                                                                                    | 14 Marks |
| -  |    | (OR)                                                                                                                                                                                      |          |
| 6  | a) | Discuss the principle working of distributed feedback laser.                                                                                                                              | 7 Marks  |
|    | b) | What is the resonant frequency of laser? Derive the expression of wavelength spacing between two modes.                                                                                   | 7 Marks  |
|    |    | UNIT-IV                                                                                                                                                                                   |          |
| 7  | a) | Discuss in detail about fiber splicing and connectors.                                                                                                                                    | 7 Marks  |
|    | b) | Derive an expression for coupling of a total power from LED to graded index fiber.                                                                                                        | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                      |          |
| 8  | a) | Draw and explain various fiber alignment and joint losses.                                                                                                                                | 7 Marks  |
|    | b) | Discuss briefly about fiber-fiber joints.                                                                                                                                                 | 7 Marks  |
|    |    | UNIT-V                                                                                                                                                                                    |          |
| 9  | a) | Explain the design and operation of a polarization independent isolator.                                                                                                                  | 7 Marks  |
| -  | b) | Discuss the concept of SONET.                                                                                                                                                             | 7 Marks  |
|    | ,  | (OR)                                                                                                                                                                                      |          |
| 10 |    | What is rise time budget analysis? Derive an expression for the total system rise time budget in terms of transmitter fiber and receiver rise time.                                       | 14 Marks |

|------|--------|-----------------------------------------------------------------------------------|--------------------|
|      |        | Answer One Question from each Unit<br>All questions carry equal marks             |                    |
|      |        | UNIT-I                                                                            |                    |
| 1    | a)     | Explain in detail multimedia software tools.                                      | 7 Marks            |
|      | b)     | Write short notes on various image data types.                                    | 7 Marks            |
| 2    | a)     | Explain various color model s in images.                                          | 7 Marks            |
|      | b)     | Write short notes on Digital Video.                                               | 7 Marks            |
|      |        | UNIT-II                                                                           |                    |
| 3    | a)     | Describe about Bound methods in Action Script.                                    | 7 Marks            |
|      | b)     | Write about associative arrays and objects.                                       | 7 Marks            |
| 4    | a)     | Write about overloading of methods in ACTION SCRIPT.                              | 7 Marks            |
|      | b)     | Write a program that shows the usage of data types.                               | 7 Marks            |
|      |        | UNIT-III)                                                                         |                    |
| 5    | a)     | Explain Subclasses of Movieclip.                                                  | 7 Marks            |
|      | b)     | Discuss MPEG4.                                                                    | 7 Marks            |
| ~    |        | (OR)                                                                              |                    |
| 6    |        | Write about.                                                                      |                    |
|      |        | i) Digital Video                                                                  | 7 Marks<br>7 Marks |
|      |        |                                                                                   |                    |
|      |        | UNIT-IV                                                                           |                    |
| 7    |        | Describe the steps in the JPEG Encoder with a block diagram.                      | 14 Marks           |
| 8    | a)     | Explain Dictionary-Based Coding with an example.                                  | 7 Marks            |
|      | b)     | Explain the following.                                                            | 7 Marks            |
|      |        | i) Differential Coding of Images. ii) Lossless JPEG                               |                    |
|      |        | UNIT-V                                                                            |                    |
| 9    | a)     | Discuss various parameters to improve the quality of multimedia dat transmission. | a 6 Marks          |
|      | b)     | Explain RTP and RTCP in detail.                                                   | 8 Marks            |
|      |        | (OR)                                                                              |                    |
| 10   | a)     | Write short notes on video bitrates over ATM.                                     | 6 Marks            |
|      | b)     | Explain Staggered Broadcasting and Pyramid Broadcasting.                          | 8 Marks            |

|    | ,        | (OR)                                                                                                                                                                                                                                                                                                                                                                         |                    |
| 2  | a)<br>b) | Describe the issues in the evaluation and selection of simulation software.<br>Describe the time advance algorithm.                                                                                                                                                                                                                                                          | 7 Marks<br>7 Marks |
|    |          | UNIT-II                                                                                                                                                                                                                                                                                                                                                                      |                    |
| 3  | a)       | Discuss about properties of a Poisson process.                                                                                                                                                                                                                                                                                                                               | 7 Marks            |
|    | b)       | Discuss about empirical distributions.                                                                                                                                                                                                                                                                                                                                       | 7 Marks            |
|    |          | (OR)                                                                                                                                                                                                                                                                                                                                                                         |                    |
| 4  | a)       | Explain any two discrete distributions and give equation for probability mass function. Also calculate mean and variance of same.                                                                                                                                                                                                                                            | 8 Marks            |
|    | b)       | Illustrate the use of empirical distribution.                                                                                                                                                                                                                                                                                                                                | 6 Marks            |
|    |          | UNIT-III                                                                                                                                                                                                                                                                                                                                                                     |                    |
| 5  |          | List out the measures of performance of queuing systems. (OR)                                                                                                                                                                                                                                                                                                                | 14 Marks           |
| 6  | a)<br>b) | Describe the steady state behavior of finite population model.<br>The malfunctions occur in a widget making machines follows Poisson process<br>with rate of malfunctions at 1.5 per hour. The repair times by the single<br>mechanic takes with mean time of 30 minutes and standard deviation of<br>20 minutes. What is the steady time average number of broken machines? | 7 Marks<br>7 Marks |
|    |          | UNIT-IV                                                                                                                                                                                                                                                                                                                                                                      |                    |
| 7  | a)       | Define random number. Explain statistical properties of random numbers with example.                                                                                                                                                                                                                                                                                         | 7 Marks            |
|    | b)       | Explain the various testes used for testing random numbers for their desirable properties.                                                                                                                                                                                                                                                                                   | 7 Marks            |
|    |          | (OR)                                                                                                                                                                                                                                                                                                                                                                         |                    |
| 8  |          | Categorize the distributions where the inverse transform technique can be used for sampling.                                                                                                                                                                                                                                                                                 | 14 Marks           |
|    |          | UNIT-V                                                                                                                                                                                                                                                                                                                                                                       |                    |
| 9  | a)       | Discuss about Chi-Square test applied to Poisson assumption for goodness of it                                                                                                                                                                                                                                                                                               | 7 Marks            |
|    | b)       | Discuss about AR[1] model.                                                                                                                                                                                                                                                                                                                                                   | 7 Marks            |
|    |          | (OR)                                                                                                                                                                                                                                                                                                                                                                         |                    |
| 10 | a)       | Explain data collection and analysis for input modeling.                                                                                                                                                                                                                                                                                                                     | 7 Marks            |
|    | b)       | What is time series - input model? Explain AR (1) and EAR (1) model.                                                                                                                                                                                                                                                                                                         | 7 Marks            |

#### **MANAGEMENT SCIENCE** [Information Technology]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1. a) Describe the Nature and Importance of Management in Modern Business CO1 7 Marks Context. b) Discuss the Henry Fayol principles of Management. CO<sub>2</sub> 7 Marks (OR)2. a) Discuss critically the principles of Organisation. CO3 7 Marks b) What do you understand by SWOT analysis? CO1 7 Marks UNIT-II "Product Layout is better than process Layout". Do You agree with this 3 a) CO1 7 Marks statement? Support your answer. The following information is about the shock absorbers used by CO4 7 Marks b) automobile workshop: Annual Demand - 4800 Units Unit Price: Rs.300/-Cost of Placing an Order - Rs.50/-Storage Cost 3% Per Annum Interest Rate 15% Per Annum. Calculate: i) EOQ. ii) How many orders to be placed? (OR) a) Define Marketing. Explain the functions of Marketing. 4. CO1 7 Marks b) For each of the 14 Days, a number of magnets used in electric relays are CO4 7 Marks inspected and the number of defectives is recorded. The total number of magnets tested is 14,000. The following are the particulars of the number of defectives found every day. You are required to construct P chart. Day Number 1 2 3 4 5 6 7 8 9 10 11 12 13 14 Number of 100 150 50 200 150 50 80 120 60 14 50 70 40 140 Defectives (UNIT-III) Explain the nature and scope of HRM. 5. a) CO1 7 Marks What do you understand by Abraham Maslow's theory of Motivation? b) CO1 7 Marks (OR)a) Identify the role of HR Manager in an Organisation. CO1 7 Marks 6. Explain the methods of Job Evaluation. CO1 7 Marks b)

# 2

UNIT-IV

- 7. a) Define Entrepreneurship. Explain the Entrepreneurial Traits.
  - b) Consider the following activity:

| Activity                | Α  | В  | С    | D    | Е  | F    | G    | Н    | Ι    |
|-------------------------|----|----|------|------|----|------|------|------|------|
| Predecessor<br>Activity | -  | -  | A, B | A, B | В  | D, E | C, F | D, E | G, H |
| Time<br>(Days)          | 30 | 20 | 20   | 20   | 10 | 10   | 40   | 20   | 30   |

i) Draw the Project work.

ii) Identify the Critical Path.

(OR)

8. The following table gives the information about various activities of a project work.

| Activity | Normal Duration<br>(Days) | Normal Cost<br>(Rs/-) | Crash Time<br>(Days) | Crash cost<br>(Rs/-) |
|----------|---------------------------|-----------------------|----------------------|----------------------|
| 1-2      | 9                         | 8,000                 | 7                    | 10,000               |
| 1-3      | 5                         | 5,000                 | 3                    | 8,000                |
| 2-3      | 7                         | 7,000                 | 5                    | 8,600                |
| 2-4      | 8                         | 6,000                 | 6                    | 7,000                |
| 3-4      | 6                         | 9,000                 | 4                    | 11,400               |

The overhead costs are Rs.1,300 per day. Determine the optimum cost and duration of the project.

### UNIT-V

9. a) Explain the basic concepts of MRP.
b) Discuss the concept of Six Sigma.

## Answer One Question from each Unit

### All questions carry equal marks

### UNIT-I

| 1.  |    | Discuss at length with suitable examples the various functions of communication and the role of manager.          | CO1 | 14 Marks |
|-----|----|-------------------------------------------------------------------------------------------------------------------|-----|----------|
|     |    | (OR)                                                                                                              |     |          |
| 2.  | a) | Elaborate on Interpersonal Communication.                                                                         | CO5 | 7 Marks  |
|     | b) | What are the various 'Communication Barriers'? How to overcome them?                                              | CO5 | 7 Marks  |
|     |    | UNIT-II                                                                                                           |     |          |
| 3.  |    | Illustrate the concept of cross-cultural communication.                                                           | CO4 | 14 Marks |
|     |    | (OR)                                                                                                              |     |          |
| 4.  | a) | Differentiate 'Corporate Citizenship' and 'Corporate Social Responsibility'.                                      | CO2 | 7 Marks  |
|     | b) | Interpret why a plan for handling crisis situation is a must for companies.                                       | CO2 | 7 Marks  |
|     |    | UNIT-III                                                                                                          |     |          |
| 5.  |    | Describe the importance of written business communication with examples. Elaborate on types of business messages. | CO3 | 14 Marks |
|     |    | (OR)                                                                                                              |     |          |
| 6.  | a) | Discuss and illustrate the components of a business letter.                                                       | CO1 | 7 Marks  |
|     | b) | What are the various strategies for writing the body of a letter? Discuss.                                        | CO1 | 7 Marks  |
|     |    | UNIT-IV                                                                                                           |     |          |
| 7.  |    | "A resume that has to be sent through e-mail needs to be developed with a specific process." Illustrate.          | CO4 | 14 Marks |
|     |    | (OR)                                                                                                              |     |          |
| 8.  | a) | Analyze the basic patterns of the main body/text of the business presentation.                                    | CO2 | 7 Marks  |
|     | b) | Examine online recruitment process.                                                                               | CO2 | 7 Marks  |
|     |    |                                                                                                                   |     |          |
| 9.  |    | Elaborate on the various stages of Campus Interviews and the strategies to be successful in the Interviews.       | CO3 | 14 Marks |
|     |    | (OR)                                                                                                              |     |          |
| 10. | a) | Discuss the various types of interviews and the importance of nonverbal aspects in interviews.                    | CO5 | 7 Marks  |
|     | b) | Elaborate on types of interviewing questions and the styles of interviewing.                                      | CO5 | 7 Marks  |
|     |    |                                                                                                                   |     |          |

|               |    | Answer One Question from each Unit<br>All questions carry equal marks                                                |                |          |  |
|               |    | UNIT-I                                                                                                               |                |          |  |
| 1.            |    | Write the process of knowing yourself. Explain with benefits.                                                        | CO1            | 14 Marks |  |
|               |    | (OR)                                                                                                                 |                |          |  |
| 2.            | a) | How your self- image will not be in conflict with your life experiences? Interpret with diagram.                     | CO1            | 7 Marks  |  |
|               | b) | Explain stages of self-improvement.                                                                                  | CO3            | 7 Marks  |  |
|               |    | UNIT-II                                                                                                              |                |          |  |
| 3.            |    | Attitude is one of the types of learning. Illustrate.                                                                | CO2            | 14 Marks |  |
|               |    | (OR)                                                                                                                 |                |          |  |
| 4.            | a) | Illustrate how attitudes are influential in relationship?                                                            | CO2            | 7 Marks  |  |
|               | b) | How negative attitude can be modified towards positive attitude?                                                     | CO3            | 7 Marks  |  |
|               |    | UNIT-III)                                                                                                            |                |          |  |
| 5.            |    | Differentiate between critical thinking and creative thinking.                                                       | CO2            | 14 Marks |  |
|               |    | (OR)                                                                                                                 |                |          |  |
| 6.            | a) | Explain efficient work habits in details.                                                                            | CO3            | 7 Marks  |  |
|               | b) | Explain motivation and its sources.                                                                                  | CO4            | 7 Marks  |  |
|               |    | UNIT-IV                                                                                                              |                |          |  |
| 7.            |    | Bring out a few real life situations in an organization for effective communication with supervisor and subordinate. | CO4            | 14 Marks |  |
|               |    | (OR)                                                                                                                 |                |          |  |
| 8.            | a) | "Ethics is the foundation of leadership". Justify.                                                                   | CO3            | 7 Marks  |  |
|               | b) | How criticism can be handled in efficient way?                                                                       | CO4            | 7 Marks  |  |
|               |    | UNIT-V                                                                                                               |                |          |  |
| 9.            |    | "Safety rules are necessary on workplace". Justify the statement.                                                    | CO5            | 14 Marks |  |
|               |    | (OR)                                                                                                                 |                |          |  |
| 10.           | a) | Describe career goal and its planning.                                                                               | CO1            | 7 Marks  |  |
|               | b) | Explain a career path.                                                                                               | CO1            | 7 Marks  |  |
|               |    |                                                                                                                      |                |          |  |

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### **METROLOGY AND MEASUREMENTS**

#### [Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

What do you mean by unilateral and bilateral methods of tolerancing? 1. CO1 7 Marks a) Explain with neat diagrams. Distinguish between clearance and allowance. CO1 7 Marks b) (**OR**) 2. A hole and mating shaft are to have a nominal assembly size of 55mm. 14 Marks CO<sub>2</sub> The assembly is to have a maximum clearance of 0.04mm and a minimum clearance of 0.02mm. The hole tolerance is 1.5 times the shaft tolerance. Determine the limits for both hole and shaft by using hole basis system.

### UNIT-II

- With the help of neat sketches, explain how a sine bar is used to CO1 3. 7 Marks a) determine the taper angle of an inclined surface.
  - b) What is the working principle of LVDT? CO1 7 Marks
- Describe about mechanical comparator. Write the advantages and CO4 4. 14 Marks disadvantages of the mechanical comparator.

### UNIT-III)

5. In the measurement of surface roughness, heights of 20 successive peaks CO3 14 Marks and valleys from the datum were measured to be 35, 25, 40, 22, 35, 18, 42, 25, 35, 22, 36, 18, 42, 22, 32, 21, 37, 18, 35, 20 microns. Determine the CLA and RMS values of surface roughness over a sampling length of 20mm.

#### (**OR**)

- Name the various numerical methods of assessment of surface finish. CO2 6. 7 Marks a) Explain them in detail with an example.
  - Describe the working principle of an auto collimator. 7 Marks b) CO5

### (UNIT-IV)

- Explain how effective diameter of screw thread is measured using three 7. CO2 7 Marks a) wire method. Include the sketches.
  - What is the "best size" wire? Derive an expression for the same in terms CO3 7 Marks b) of the pitch and angle of the thread.

#### (**OR**)

8. What are the different methods of measuring gear tooth thickness? CO5 14 Marks Explain the chordal thickness method. Sketch and describe how chordal thickness is measured using gear tooth vernier.

### UNIT-V

| 9.  | a)   | Explain working principle of electrical strain gauge with neat sketch.                    | CO1 | 7 Marks |  |  |  |  |
|-----|------|-------------------------------------------------------------------------------------------|-----|---------|--|--|--|--|
|     | b)   | Define Strain Rosette. How it is used for strain measurement?                             | CO1 | 7 Marks |  |  |  |  |
|     | (OR) |                                                                                           |     |         |  |  |  |  |
| 10. | a)   | Explain working principle of thermocouples.                                               | CO1 | 7 Marks |  |  |  |  |
|     | b)   | Explain how pressure can be measured with bourdon tube pressure gauge with a neat sketch. | CO5 | 7 Marks |  |  |  |  |

IV B.Tech I Semester (SVEC-16) Supplementary Examinations February - 2021

**REFRIGERATION AND AIR CONDITIONING** 

#### [Mechanical Engineering]

#### Time: 3 hours

#### **Answer One Question from each Unit** All questions carry equal marks

#### UNIT-I

An air refrigerator working on Bell-Coleman cycle takes air into the CO2 1. 14 Marks compressor at 1 bar and 268 K. It is compressed in a compressor to 5 bar and cooled to 298 K at the same pressure. It is further expanded in the expander to 1 bar and discharged to take the cooling load. The isentropic efficiencies of the compressor and expander are 85% and 90% respectively. Determine : (i) Refrigeration capacity of the system if the air circulated is 40 kg/ min; (ii) Power required for the compressor; and (iii) C.O.P of the system.

#### (OR)

- 2. a) What is refrigeration? Define one ton of refrigeration.
  - Determine the temperature ratio for a Carnot refrigerator whose C.O.P is 4. CO2 b) What is the refrigeration capacity of the machine in tons of refrigeration if the power consumption is 7.5 kW. If the cycle is used as a heat pump, find its COP.

### UNIT-II )

3. A vapour compression refrigeration machine, with Freon-12 as refrigerant, CO2 14 Marks has a capacity of 12 tonne of refrigeration operating between -28°C and 26°C. The refrigerant is subcooled by 4°C before entering the expansion valve and the vapour is superheated by 5°C before leaving the evaporator. The machine has a six-cylinder single-acting compressor with stroke equal to 1.25 times the bore. It has a clearance of 3% of the stroke volume. Determine: (i) Theoretical power required, (ii) C.O.P, (iii) Volumetric efficiency, (iv) Bore and stroke of cylinder. The speed of compressor is 1000 r.p.m. the following properties of Freon-12 may be used:

| Temperat<br>ure <sup>o</sup> C) | Pressure<br>bar | Sp.<br>Volume<br>of<br>vapour,<br>m3/kg | Liquid<br>heat<br>(kJ/kg) | Latent<br>heat<br>(kJ/kg) | Entrop<br>y of<br>liquid<br>(kJ/kg<br>K) | Entropy<br>of<br>Vapour<br>(kJ/kg K) |
|---------------------------------|-----------------|-----------------------------------------|---------------------------|---------------------------|------------------------------------------|--------------------------------------|
| -28                             | 1.093           | 0.1475                                  | 10.64                     | 175.11                    | 0.0444                                   | 0.7153                               |
| 26                              | 6.697           | 0.0262                                  | 60.67                     | 198.11                    | 0.2271                                   | 0.6865                               |
|                                 |                 |                                         | (OR)                      |                           |                                          |                                      |

- 4. a) Mention the advantages of vapour compression refrigeration system over air CO1 6 Marks refrigeration system.
  - A refrigerating machine using NH3 operates between the temperature limits CO3 b) 8 Marks of -5°C and 30°C. Find the COP of the system. Also find the corresponding value for a reversed Carnot cycle operating between the same temperatures. The properties of NH3 are given below:

| Temperature<br>⁰C | Pressure<br>bar | Liquid<br>heat<br>(kJ/kg) | Latent<br>heat<br>(kJ/kg) | Entropy<br>of<br>liquid<br>(kJ/kg<br>K) | Entropy of<br>Vapour<br>(kJ/kg K) |
|-------------------|-----------------|---------------------------|---------------------------|-----------------------------------------|-----------------------------------|
| -5                | 2.41            | 351                       | 1667.5                    | 3.95                                    | 9.05                              |
| 30                | 11.895          | 562                       | 1711                      | 4.69                                    | 8.48                              |

1

Max. Marks: 70

7 Marks

7 Marks

CO1

### UNIT-III)

- i) Absorber.
- ii) Rectifier.
- iii) Analyser.
- iv) Heat exchangers.
- b) Derive an expression for the C.O.P. of an ideal vapour absorption system in CO3 7 Marks terms of temperature at which heat is supplied to the generator, the temperature at which heat is absorbed in the evaporator and the temperature at which heat is discharged from condenser and absorber.

#### (OR)

- 6. a) Discuss the function of absorber in vapour absorption refrigeration system. CO1 6 Marks
  - b) Draw a neat line diagram of Electrolux refrigerator and explain its working CO1 8 Marks principle. What is the important role of hydrogen in this refrigeration system?

### UNIT-IV

- 7. The following data apply to an air conditioning system: CO6 14 Marks Room sensible heat=41868 kJ/hr room latent heat=41868 kJ/hr; inside design condition= 25°C, 50% RH, outside design condition=35°C, DBT, 27.8 WBT. Return air from the room is mixed with the outside air before entering the cooling coil in the ratio of 4:1. Return air from the room is mixed with the cooling air, i.e. after the cooling coil in the ratio of 1:4. Cooling coil by pass factor is 0.1. The air may be reheated if necessary before supplying to the conditioned space. Assume ADP as 10°C and determine:
  - i) Supply air conditions into the room.
  - ii) Refrigeration load due to the reheat.
  - iii) Total refrigeration capacity.
  - iv) The quantity of fresh air supplied.

#### (OR)

- 8. a) Represent the following process in a skeleton psychometric chart. CO5 6 Marks
  - i) Sensible cooling.
  - ii) Cooling and humidification.
  - iii) Adiabatic mixing of air streams.
  - b) In a laboratory test a psychometer recorded 36°C DBT and 30°C WBT CO4 8 Marks calculate the following terms.
    - i) Vapour pressure.
    - ii) Relative humidity.
    - iii) Specific humidity.
    - iv) Degree of saturation.
    - v) Sew point temperature.
    - vi) Enthalpy of the mixture.

### UNIT-V

- 9. a) What are the advantages and disadvantages of spray type dehumidifier over CO1 7 Marks a coil type dehumidifier
  - b) Explain the use of heat pump for heating and cooling cycle with neat CO1 7 Marks diagram

(OR)

- 10. a) What is effective temperature? How does it account for human comfort? CO1 7 Marks What is comfort equation?
  - b) What is the function of fan in air conditioning system? Explain the various CO1 7 Marks types of axial fans.

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### **COMPUTER NETWORKS**

[Electronics and Instrumentation Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

UNIT-I 1. List out the various forms of address in TCP Model and map them to OSI CO1 7 Marks a) Model layers. Compare the functionality of TCP/ IP over OSI Model. 7 Marks CO1 b) (OR)2. Explain the different methods of digital to analog representation methods CO1 14 Marks with neat sketches. UNIT-II ) 3. Explain the flow control protocols in a noise less channel. CO2 7 Marks a) Explain the concept of pure ALOHA with flow chart. **b**) CO2 7 Marks (**OR**) Calculate the hamming code for  $x^4+x^3+x+1$ . Assume even parity. 4. CO2 7 Marks a) List out the assumptions of dynamic channel allocation and explain each b) CO2 7 Marks in detail. UNIT-III) Draw the header format of IPv6 and explain each field. 5. CO2 8 Marks a) Compare the concept of virtual circuit and datagram subnets. CO2 6 Marks b) (**OR**) Describe the concept of class ful addressing in IPv4. CO3 6. a) 7 Marks Explain the transition strategies of logical addressing. CO3 7 Marks b) UNIT-IV) Draw the header format of UDP and explain each field in detail. 7. CO2 7 Marks a) Explain the concept of three-way handshaking in connection CO3 7 Marks b) establishment in TCP. (**OR**) Explain the concept of sliding window protocol in transport layer with CO3 8. 14 Marks and without errors UNIT-V 9 Explain the concept of DNS. CO27 Marks a) Describe the concept of web documents. CO3 7 Marks b) (**OR**) Explain in brief about the formats of HTTP request and response CO3 10. 7 Marks a) messages. b) What is a name server? List and explain the features of various name CO3 7 Marks servers.

### WEB TECHNOLOGIES

[Computer Science and Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1.  | a) | Which HTML tag is used to display the data in a tabular form? Discuss with an example.    | CO1 | 8 Marks |
|-----|----|-------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Describe the use of local storage in HTML5.                                               | CO1 | 6 Marks |
|     |    | (OR)                                                                                      |     |         |
| 2.  | a) | List new features which were not present in HTML but are added to HTML5 with an example.  | CO2 | 7 Marks |
|     | b) | Illustrate new Form input types in HTML5.                                                 | CO1 | 7 Marks |
|     |    | UNIT-II                                                                                   |     |         |
| 3.  | a) | Discuss the merits and demerits of Embedded Style Sheets.                                 | CO2 | 7 Marks |
|     | b) | Describe the need of window object with an example.                                       | CO2 | 7 Marks |
|     |    | (OR)                                                                                      |     |         |
| 4.  | a) | Elaborate different ways to include jQuery in a page.                                     | CO1 | 6 Marks |
|     | b) | List and explain different technologies used in AJAX.                                     | CO5 | 8 Marks |
|     |    | UNIT-III                                                                                  |     |         |
| 5.  | a) | Briefly discuss about Grid classes in the Bootstrap.                                      | CO5 | 8 Marks |
|     | b) | Explain about various key components of Bootstrap.                                        | CO5 | 6 Marks |
|     |    | (OR)                                                                                      |     |         |
| 6.  | a) | Discuss about Bootstrap Badges and Labels.                                                | CO5 | 7 Marks |
|     | b) | Discuss in detail about various types of layouts available in Bootstrap.                  | CO5 | 7 Marks |
|     |    | UNIT-IV                                                                                   |     |         |
| 7.  | a) | What are the different types of PHP variables? Explain.                                   | CO1 | 8 Marks |
|     | b) | Discuss various control structures in PHP with its syntax and an example on each of them. | CO4 | 6 Marks |
|     |    | (OR)                                                                                      |     |         |
| 8.  | a) | Write a PHP script to remove duplicate elements from an array.                            | CO3 | 7 Marks |
|     | b) | What is difference between method overriding and method overloading in PHP?               | CO3 | 7 Marks |
|     |    | UNIT-V                                                                                    |     |         |
| 9.  | a) | Write short note on Session Tracking.                                                     | CO6 | 5 Marks |
|     | b) | Discuss and give an example on how to retrieve HTML Form Data with PHP.                   | CO4 | 9 Marks |
|     |    | (OR)                                                                                      |     |         |
| 10. | a) | Describe how transactions are managed in PHP.                                             | CO3 | 7 Marks |
|     | b) | Illustrate how Cookies are created and retrieved in PHP.                                  | CO4 | 7 Marks |
|     |    |                                                                                           |     |         |

#### **COMPILER DESIGN**

#### [Computer Science and Engineering]

| Time | e: 3 ho | urs<br>Answer One Question from each Unit<br>All questions carry equal marks | Max. I | Marks: 70 |
|------|---------|------------------------------------------------------------------------------|--------|-----------|
|      |         | UNIT-I                                                                       |        |           |
| 1.   | a)      | Explain about compiler construction tools in detail.                         | CO5    | 7 Marks   |
|      | b)      | Define Interpreter. Explain about Recursive and Iterative interpreters.      | CO1    | 7 Marks   |

#### (**OR**)

- 2. a) Explain the input buffer scheme for scanning the source program. How CO1 8 Marks the use of sentinels can improve its performance?
  - b) Explain the role of the lexical analyzer. CO5 6 Marks

#### UNIT-II

- 3. Write an algorithm for construction of a predictive parsing table. And CO3 14 Marks construct a predictive parsing table for the following grammar:
  - $E \rightarrow T E^{I}$   $E^{I} \rightarrow + T E^{I} | \notin$   $T \rightarrow F T^{I}$   $T^{I} \rightarrow * F T^{I} | \notin$   $F \rightarrow (E) | id$

appropriate example.

#### (**OR**)

4. Convert the following grammar into LL(1) grammar and construct the CO3 14 Marks LL(1) Parsing table.
bexpr → bexpr or bterm | bterm
bterm → bterm and bfactor | bfactor
bfactor → not bfactor | ( bexpr) | true | false

### UNIT-III)

5. a) Write a note on the type equivalence using example. CO4 7 Marksb) What is a type conversion? Explain the type conversion with an CO1 7 Marks

#### (**OR**)

- 6. a) Construct the syntax tree for an arithmetic expression a \* (b + c). CO3 7 Marks
  - b) Write short notes on the following.i) S attributed definitions.ii) L attributed definitions .

### UNIT-IV

Explain about Block and Non Block structure storage allocation for: CO6 14 Marks
 i) Dynamic scoping. ii) Parameter passing mechanisms.

#### (OR)

#### 1

SVEC-16

- 8. a) Write about different data structures suitable for Symbol Table. CO1 7 Marks
  - b) Generate the three-address code for the following C program fragment CO2 7 Marks while(a > b)

### UNIT-V

- 9. a) What is a flow graph? Explain how a given program can be converted CO3 7 Marks into a flow graph.
  - b) What are the various machine dependent code optimization techniques? CO2 7 Marks

#### (**OR**)

10.Explain about Code-Generation algorithm.CO214 Marks

\$} \$} \$

#### **RURAL TECHNOLOGY**

#### [Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

#### Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Rama wants to grow cotton in his crop field through traditional method in CO1 7 Marks Hosoor village. What is the process involved from sowing seeds to storage?
  - b) Explain the role of technology poverty eradication in rural development. CO1 7 Marks

#### (**OR**)

- 2. a) Thandrapadu is one of the backward village in Kurnool district with lack CO4 7 Marks of infrastructure facilities. Choose the technology that can improve the rural infrastructure.
  - b) Write about various organizations related to innovation of technology for CO2 7 Marks rural development.

### UNIT-II

- 3. a) Day by day waste generation is increasing more and to minimize this CO4 7 Marks waste 3R principle use is necessary. What is meant by 3R principle? State the advantages of 3R principle.
  - b) Kumar is a young doctorate in mechanical engineering from NIT Tirchy CO4 7 Marks and carried out of his research in renewable energy sources. He wants to implement his ideas in rural areas. How can he help rural areas in using solar energy?

#### (OR)

- 4. a) The increase of wood waste and animal waste is more in the village CO4 7 Marks Ramapuram which is near to the forest area. Show how the waste can use by the rural people with the technology for cooking.
  - b) Explain the process, advantages and disadvantages of biogas. CO2 7 Marks

#### (UNIT-III)

- 5. a) Define tissue culture. Explain briefly how the production of one of the CO4 7 Marks ornamental plant orchids can be increased by the plant tissue culture.
  - b) Explain the building materials used in the rural areas. CO2 7 Marks

#### (**OR**)

6. The government of India is giving training to the rural women who are CO1 14 Marks unemployed. Discus in detail the rural of cottage industries in rural development.

Max. Marks: 70

### UNIT-IV

- 7. a) Raghunath is an agricultural scientist wants to give awareness to the rural CO6 7 Marks people about the usage of organic fertilizers in the crop field. Suggest the importance uses of bio fertilizer.
  - b) Explain methodologies used for water conservation in rural development. CO1 7 Marks

#### (**OR**)

- 8. a) Write the importance of medical and aromatic plants and explains their CO5 7 Marks need in community development.
  - b) Explain the importance of environment and sanitation in community CO4 7 Marks development.

### UNIT-V

9. a) What is meant by CSR? How development can be achieved with the CO3 7 Marks involvement of private sector participation in the rural area?

b) Write short note on village adoption schemes in India. CO2 7 Marks

#### (**OR**)

10. Information technology for the rural development is a boon or bane and CO2 14 Marks applies its principle for a specific purpose.

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

#### **SOFTWARE TESTING** [Information Technology]

Time: 3 hours Max. Marks: 70 **Answer One Ouestion from each Unit** All questions carry equal marks UNIT-I 1. Differentiate error, bug, defect, fault, failure, testware and incident giving CO2 a) 7 Marks examples of each. List the states of software bug. b) CO1 7 Marks (**OR**) 2 Explain software testing methodology. CO1 7 Marks a) Describe about testing life cycle model. CO1 7 Marks b) UNIT-II Explain cyclomatic complexity in with example. 3. CO1 8 Marks a) Explain guidelines for basic path testing. b) CO1 6 Marks (**OR**) 4. Explain about the different criteria for logic coverage. CO1 8 Marks a) How do you calculate the number of decision nodes foe switch-case? 6 Marks b) CO1 (UNIT-III) 5. With a neat sketch, explain the decision table. 7 Marks a) CO1 A program calculates the total salary of an employee with the conditions CO3 7 Marks b) that if the working hours are less than or equal to 48, then give normal salary. The hours over 48 on normal working days are calculated at the rate of 1.25 of the salary. However, on holidays or Sundays, the hours are calculated at the rate of 2.00 times of the salary. Design test cases using decision table testing. (**OR**) What is an immaterial case? Explain its role in decision tables. 6. CO1 7 Marks a) b) List the steps involved in checking the consistency and completeness of CO2 7 Marks specifications using decision tables. UNIT-IV) 7. Illustrate the major activities in V and V planning. CO1 7 Marks a) Discuss the role of users/clients in preparing the test plans. CO1 7 Marks b) (**OR**) Justify the role of classifying software metrics on monitoring the progress CO4 8. 7 Marks a) of the software project. What type of projects can be best counted with function point analysis? CO1 7 Marks b) UNIT-V 9. With a neat diagram, explain the selective retest technique. a) CO1 7 Marks Design test cases by using regression testing to produce quality software. b) CO5 7 Marks (**OR**) 10. Implement data driven testing on flight reservation application using CO6 14 Marks regression testing tool.

|     |    | (UNIT-III)                                                                                                                                      |     |          |
| 5.  | a) | Explore on State Table based testing and Error guessing.                                                                                        | CO2 | 7 Marks  |
|     | b) | What is the need for minimizing test cases in a project? Illustrate with an                                                                     | CO3 | 7 Marks  |
|     | ,  | example.                                                                                                                                        |     |          |
|     |    | (OR)                                                                                                                                            |     |          |
| 6.  | a) | Explain Bottom-up Integration testing with suitable example and compare                                                                         | CO1 | 7 Marks  |
|     |    | it with Top-Down Integration.                                                                                                                   |     |          |
|     | b) | How do you represent Graph matrices for testing process? Device the same with example.                                                          | CO4 | 7 Marks  |
|     |    | (UNIT-IV)                                                                                                                                       |     |          |
| 7.  | a) | What is Test Suit Prioritization? How should prioritize test cases in Software Testing?                                                         | CO3 | 7 Marks  |
|     | b) | Explain the steps involved in automated testing process.                                                                                        | CO5 | 7 Marks  |
|     | -) | (OR)                                                                                                                                            |     | ,        |
| 8.  | a) | List the difference between size oriented metrics and function point analysis metrics.                                                          | CO2 | 7 Marks  |
|     | b) | Discuss the key components of test management.                                                                                                  | CO1 | 7 Marks  |
|     |    | UNIT-V                                                                                                                                          |     |          |
| 9.  | a) | Explain about testing of web based systems.                                                                                                     | CO5 | 7 Marks  |
|     | b) | What are the different regression testing tools and techniques? Explain in                                                                      | CO5 | 7 Marks  |
|     |    | detail.                                                                                                                                         |     |          |
|     |    | (OR)                                                                                                                                            |     |          |
| 10. | a) | List the quality aspects of a website and perform performance testing for                                                                       | CO6 | 7 Marks  |
|     |    | it.                                                                                                                                             |     |          |
|     | b) | List and explain various guidelines Automated testing.                                                                                          | CO6 | 7Marks   |
|     |    |                                                                                                                                                 |     |          |

### **CLOUD COMPUTING**

[Computer Science and Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1.  | a) | Does VMM acts as an interface in virtualization? Justify.                                                                                                       | CO5 | 7 Marks  |
|-----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Define Virtualization and explain the taxonomy of virtualization.                                                                                               | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                                            |     |          |
| 2.  |    | Compare and Contrast any two virtualization technologies of Cloud Computing.                                                                                    | CO4 | 14 Marks |
|     |    | UNIT-II                                                                                                                                                         |     |          |
| 3.  | a) | Illustrate about various services of Cloud Computing with a neat sketch.                                                                                        | CO3 | 7 Marks  |
|     | b) | List and explain five characteristics of Cloud.                                                                                                                 | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                                            |     |          |
| 4.  | a) | List and explain various risks and challenges in Cloud.                                                                                                         | CO1 | 7 Marks  |
|     | b) | Define Cloud Computing as per NIST and explain the origin of Cloud.                                                                                             | CO1 | 7 Marks  |
|     |    | UNIT-III                                                                                                                                                        |     |          |
| 5.  |    | Outline the following Cloud Enabled Technologies.<br>i) Cloud Bursting.                                                                                         | CO4 | 14 Marks |
|     |    | <ul><li>ii) Load Balancing.</li><li>iii) Elastic Resource Capacity.</li></ul>                                                                                   |     |          |
|     |    | (OR)                                                                                                                                                            |     |          |
| 6.  |    | Analyse various components in Cloud Architecture and explain each in detail.                                                                                    | CO4 | 14 Marks |
|     |    | UNIT-IV                                                                                                                                                         |     |          |
| 7.  | a) | Compare and contrast SaaS and IaaS based on their services.                                                                                                     | CO4 | 7 Marks  |
|     | b) | Explain in detail on Capacity Planning and Cloud Scale.                                                                                                         | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                                            |     |          |
| 8.  |    | i) Host Security ii) Network Security                                                                                                                           | CO2 | 14 Marks |
|     |    |                                                                                                                                                                 |     |          |
|     |    | UNIT-V                                                                                                                                                          |     |          |
| 9.  |    | Design and develop bucket instance with 4GB storage space using Amazon Simple storage service Cloud.                                                            | CO5 | 14 Marks |
|     |    | (OR)                                                                                                                                                            |     |          |
| 10. |    | Sales force is a Cloud Computing service specializes in Customer<br>Relationship Management (CRM). Justify the above statement and list<br>few benefits of CRM. | CO6 | 14 Marks |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

### ESTIMATION AND QUANTITY SURVEYING

### [Civil Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. Estimate the detailed quantity for the following items of two roomed CO4 14 Marks building from the given plan and cross section as shown in Fig.1. By using long wall and short wall method.
  - i) Earth work excavation.
  - ii) Brick work in CM (1:4) for substructure up to plinth level.
  - iii) R.C.C. slab with (1:1.5:3)
  - iv) Inside Plastering in cm (1:5) with 12 mm thick.

(OR)

- 2. a) Define estimate? List out the various quantity surveying for residential CO1 10 Marks building along with units.
  - b) Clearly distinguish between long wall and short wall method. CO1 4 Marks

- 3. a) Calculate the quantity of earth work for 350 meter length for a portion of CO4 8 Marks road in a uniform ground the heights of banks at the two ends being 1.00 meter and 1.75 meters. The formation width is 12.0 meters and side slopes 2:1 (Horizontal: Vertical). Assume that there is no transverse slope. Use the following methods and justify which method is good.
  - (i) Mid sectional area method
  - (ii) Prismoidal formula.
  - b) Calculate the quantity of cement concrete for cement concreting two CO2 6 Marks kilometers length of 7.50 meters wide road for 8.50 cm thick layer. And also prepare a detailed estimate. Cost at the rate of Rs.750.00 per cu.m.

### (OR)

SVEC-16

| 4. |    | Prepare a detailed estimate for supplying, laying and jointing 300mm diameter glazed stone ware pipe line jointing with 1:3 cement mortar. Measurement of trench is 600m x $0.9m \times 0.8m$ , sand filling with 230mm depth around the pipe.                                                                                                                                                                                                                                                                         | CO2 | 14 Marks |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
| 5. |    | Workout cost per unit for the following items of work.<br>i) Brick work in CM (1:6) for foundation.<br>ii) PCC in 1:3:6 for foundation.<br>iii) R.C.C for M20 grade concrete (1:1.5:3).<br>iv) Painting for walls.                                                                                                                                                                                                                                                                                                     | CO6 | 14 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |          |
| 6. | a) | What is the purpose and method of writing specification? Describe briefly general and detailed specification.                                                                                                                                                                                                                                                                                                                                                                                                          | CO1 | 8 Marks  |
|    | b) | What is the necessity and importance of the specification related to civil engineering constructions?                                                                                                                                                                                                                                                                                                                                                                                                                  | CO5 | 6 Marks  |
|    |    | (UNIT-IV)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |     |          |
| 7. | a) | Discuss in brief about different contracts.                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | CO1 | 8 Marks  |
|    | b) | What is meant by arbitration? Explain advantages of setting the disputes by arbitration.                                                                                                                                                                                                                                                                                                                                                                                                                               | CO1 | 6 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |          |
| 8. | a) | A building is to be constructed on a site of dimensions 30m x 20m. Prepare a contract document for the construction of the building.                                                                                                                                                                                                                                                                                                                                                                                   | CO7 | 8 Marks  |
|    | b) | Summarize the contents of contract document.                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | CO1 | 6 Marks  |
|    |    | UNIT-V                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |     |          |
| 9. |    | A three storied building has been constructed on a plot of land measuring 800m <sup>2</sup> . The plinth area of each story is 400m <sup>2</sup> . The life of the building structure may be taken as 70 years. The building fetches a gross rent of Rs 5000/- per month. Calculate the capitalized value of the property on the basis of 10% net yield. For sinking fund 3% compound interest may be assumed. Cost of land may be taken as Rs 500/- per m <sup>2</sup> , other data required may be assumed suitably. | CO3 | 14 Marks |

Answer One Question from each Unit All questions carry equal marks

### 

| 1.  | a)       | Define Arerial Photogrammetry and its types.                                           | CO1    | 7 Marks  |  |  |  |
|-----|----------|----------------------------------------------------------------------------------------|--------|----------|--|--|--|
|     | b)       | Explain determination of scale of Aerial Photographs.                                  | CO1    | 7 Marks  |  |  |  |
|     |          | (OR)                                                                                   |        |          |  |  |  |
| 2.  |          | Explain briefly about methods of mosaicing.                                            | CO2    | 14 Marks |  |  |  |
|     |          | UNIT-II)                                                                               |        |          |  |  |  |
| 3.  |          | Review in detail about the various elements of image interpretation in remote sensing. | CO3    | 14 Marks |  |  |  |
|     |          | (OR)                                                                                   |        |          |  |  |  |
| 4.  | a)       | Explain the various Energy Interactions with Earth's surface and atmosphere.           | CO3    | 7 Marks  |  |  |  |
|     | b)       | Explain are the types of Remote Sensing Platforms.                                     | CO3    | 7 Marks  |  |  |  |
|     |          |                                                                                        |        |          |  |  |  |
| 5   | a)       | Explain the hardware and software components of GIS                                    | CO1    | 7 Marks  |  |  |  |
| 5.  | a)<br>b) | Distinguish between Raster GIS and Vector GIS                                          | $CO^2$ | 7 Marks  |  |  |  |
|     | 0)       | (OR)                                                                                   | 002    |          |  |  |  |
| 6.  |          | Write the polyconic projection of traformation of map.                                 | CO2    | 14 Marks |  |  |  |
|     |          | UNIT-IV                                                                                |        |          |  |  |  |
| 7.  | a)       | Write overview of data management in GIS.                                              | CO4    | 7 Marks  |  |  |  |
|     | b)       | Explain functions of Global Positioning System.                                        | CO4    | 7 Marks  |  |  |  |
|     |          | (OR)                                                                                   |        |          |  |  |  |
| 8.  |          | Evaluate various surface analysis tools and explain the slope analysis in GIS.         | CO6    | 14 Marks |  |  |  |
|     | UNIT-V   |                                                                                        |        |          |  |  |  |
| 9.  | a)       | Elaborate the application of GIS in traffic congestion analysis.                       | CO5    | 7 Marks  |  |  |  |
|     | b)       | Enumerate the applications of Watershed management for sustainable management.         | CO7    | 7 Marks  |  |  |  |
|     |          | (OR)                                                                                   |        |          |  |  |  |
| 10. |          | Brief on land use land cover classification. $\circledast \ \circledast \ \circledast$ | CO5    | 14 Marks |  |  |  |

### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### **RAILWAY, AIRPORT AND HARBOUR ENGINEERING**

#### [Civil Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1. | a) | Discuss different types of rail joints with help of neat sketches and give their merits and limitations.                                                                                                                                                               | CO1 | 7 Marks |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | Discuss merits and limitations of railways.                                                                                                                                                                                                                            | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                   |     |         |
| 2. | a) | How do you define super elevation? What are the objectives of providing super elevation on a railway track?                                                                                                                                                            | CO1 | 7 Marks |
|    | b) | If a $8^{\circ}$ curve track diverges from a main curve of 50 in an opposite direction in the layout of a standard gauge track. Calculate the super elevation and speed on the branch line, if the maximum speed permitted on the main line is 45 kmph.                | CO3 | 7 Marks |
|    |    | UNIT-II                                                                                                                                                                                                                                                                |     |         |
| 3. | a) | Summarize how poor soil is being stabilized and explain the methods in detail.                                                                                                                                                                                         | CO5 | 7 Marks |
|    | b) | Discuss the materials required for track laying and list the factors considered in the construction of railway track.                                                                                                                                                  | CO6 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                   |     |         |
| 4. | a) | Describe the different types of marshaling yards with neat sketches.                                                                                                                                                                                                   | CO4 | 7 Marks |
|    | b) | What is a gradient? What are they provided on railway track? How are they classified?                                                                                                                                                                                  | CO5 | 7 Marks |
|    |    | UNIT-III                                                                                                                                                                                                                                                               |     |         |
| 5. | a) | Draw a neat sketch of aeroplane showing its parts. Also explain the functions of the component parts.                                                                                                                                                                  | CO1 | 7 Marks |
|    | b) | What are the factors affecting airport operating capacity?                                                                                                                                                                                                             | CO4 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                   |     |         |
| 6. | a) | Explain about different types of surveys for site selection.                                                                                                                                                                                                           | CO3 | 7 Marks |
|    | b) | What are the essential features of a runway lightning system?                                                                                                                                                                                                          | CO3 | 7 Marks |
|    |    | UNIT-IV                                                                                                                                                                                                                                                                |     |         |
| 7. | a) | What is basic runway length? How it is determined and what are the corrections applied?                                                                                                                                                                                | CO3 | 7 Marks |
|    | b) | The length of runway under standard conditions is 1620m. The airport site has an elevation of 270m. Its reference temperature is $32.90^{\circ}$ C. If the runway is to be constructed with an effective gradient of $0.20\%$ . Determine the corrected runway length. | CO3 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                   |     |         |
|    |    |                                                                                                                                                                                                                                                                        |     |         |

- 8. a) Write the construction procedure of the wind rose diagram. CO3 6 Marksb) Determine length of runway under standard conditions is 1900m the CO3 8 Marks
  - airport is to be provided at an elevation of 400m above the mean sea level. The airport reference temperature is 40°C. If the runway is to be constructed with an effective gradient of 0.4%, determine the corrected runway length.

### UNIT-V

| 9.  | a) | Explain the function and role of dry docks in detail.                                     | CO1 | 7 Marks |
|-----|----|-------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Explain working principle of Light House with neat sketch.                                | CO1 | 7 Marks |
|     |    | (OR)                                                                                      |     |         |
| 10. | a) | Explain the classification of ports and enumerate the factors involved in site selection. | CO1 | 7 Marks |
|     | b) | Mention the benefits and constraints of Water Transportation.                             | CO1 | 7 Marks |

|      |          | Answer One Question from each Unit                                                                                                                                                                                                                                                                                                                                               |            |                    |
|      |          | All questions carry equal marks                                                                                                                                                                                                                                                                                                                                                  |            |                    |
|      |          | UNIT-I                                                                                                                                                                                                                                                                                                                                                                           |            |                    |
| 1.   | a)       | Explain Vesic's theory of bearing capacity. How it differ from the Terzaghi's bearing capacity theory?                                                                                                                                                                                                                                                                           | CO1        | 8 Marks            |
|      | b)       | Consider a square footing of size $2m \times 2m$ constructed on saturated clay.<br>The depth of the foundation is 1.5m and rock layer is at a depth of 0.75m from base of the footing. The clay is having $\gamma = 18$ kN/m <sup>3</sup> , C <sub>u</sub> = 60kN/m <sup>2</sup> and $\phi = 0^{\circ}$ . Estimate the ultimate bearing capacity of foundation.<br>Take F.S = 3. | CO2        | 6 Marks            |
|      |          | OR)                                                                                                                                                                                                                                                                                                                                                                              |            |                    |
| 2.   | a)<br>b) | Explain the 3-dimensional consolidation theory of settlements.<br>Find the dimensions of a square footing which carries a column load of 480kN. The dimensions of the columns is 0.4m x 0.4m and the allowable bearing pressure of soil is 100kPa.                                                                                                                               | CO2<br>CO2 | 8 Marks<br>6 Marks |
|      |          | (UNIT-II)                                                                                                                                                                                                                                                                                                                                                                        |            |                    |
| 3.   | a)       | How the point bearing resistance of the pile is determined from SPT and CPT tests?                                                                                                                                                                                                                                                                                               | CO5        | 8 Marks            |
|      | b)       | Determine the load carrying capacity of a cast in-situ pile of length 15m and size 0.5m x 0.5m constructed in a clayey soil with average $C_n = 50 \text{kN/m}^2$ and $\gamma = 17.5 \text{kN/m}^3$ .                                                                                                                                                                            | CO2        | 6 Marks            |
|      |          | (OR)                                                                                                                                                                                                                                                                                                                                                                             |            |                    |
| 4.   | a)       | Explain the load carrying capacity of the pile by using $\alpha$ -method for cohesive soils.                                                                                                                                                                                                                                                                                     | CO1        | 7 Marks            |
|      | b)       | Explain in brief about the ultimate capacity of pile groups during pull out and lateral loads.                                                                                                                                                                                                                                                                                   | CO1        | 7 Marks            |
|      |          | (UNIT-III)                                                                                                                                                                                                                                                                                                                                                                       |            |                    |
| 5.   | a)       | What is a sheet pile wall? Explain the procedure for determining the embedment depth of free cantilever sheet pile wall.                                                                                                                                                                                                                                                         | CO2        | 7 Marks            |
|      | b)       | A bulk head with free earth support retains cohesion-less soil up to a height of 5m. The soil have frictional angel of $20^{\circ}$ , unit weigh of $19$ kN/m <sup>3</sup> . Determine the force developed in the tie rod placed at 1 m below the top of the surface.                                                                                                            | CO3        | 7 Marks            |
| 6    | 2)       | (UK)<br>With an aid of nost skatch combine the measure for determining the                                                                                                                                                                                                                                                                                                       | CO1        | 7 Marila           |
| 0.   | a)       | embedded depth required for a bulk head with fixed earth support.                                                                                                                                                                                                                                                                                                                |            | / Marks            |
|      | b)       | A cantilever sheet pile wall supporting a cohesive soil up to a height of 6 above the dredge level. The soil has $C_u = 35 \text{kN/m}^2$ and $\gamma = 17 \text{kN/m}^3$ . Determine the depth embedded. Take F.S = 1.                                                                                                                                                          | CO3        | 7 Marks            |
|      |          | ( IINTT-TV $)$                                                                                                                                                                                                                                                                                                                                                                   |            |                    |

### ENVIRONMENTAL IMPACT ASSESSMENT AND MANAGEMENT

### [Civil Engineering]

| Time | : 3 ha | burs                                                                                                                                | Max. I | Marks: 70 |
|------|--------|-------------------------------------------------------------------------------------------------------------------------------------|--------|-----------|
|      |        | Answer One Question from each Unit<br>All questions carry equal marks                                                               |        |           |
|      |        | UNIT-I                                                                                                                              |        |           |
| 1.   | a)     | Explain main stages of EIA process.                                                                                                 | CO1    | 7 Marks   |
|      | b)     | Discuss about the need of EIA in engineering projects.                                                                              | CO1    | 7 Marks   |
|      |        | (OR)                                                                                                                                |        |           |
| 2.   | a)     | What are the Elements of EIA?                                                                                                       | CO1    | 7 Marks   |
|      | b)     | What is Initial environmental examination?                                                                                          | CO1    | 7 Marks   |
|      |        | UNIT-II                                                                                                                             |        |           |
| 3.   | a)     | Explain network method of EIA.                                                                                                      | CO2    | 7 Marks   |
|      | b)     | Explain matrix method of EIA.                                                                                                       | CO2    | 7 Marks   |
|      |        | (OR)                                                                                                                                |        |           |
| 4.   | a)     | Explain the criteria for the selection of EIA methodology.                                                                          | CO2    | 7 Marks   |
|      | b)     | Explain matrix method of EIA.                                                                                                       | CO2    | 7 Marks   |
|      |        | UNIT-III                                                                                                                            |        |           |
| 5.   | a)     | Explain the methodology for the assessment of Soil.                                                                                 | CO3    | 7 Marks   |
|      | b)     | Discuss the need for public awareness on EIA.                                                                                       | CO3    | 7 Marks   |
|      |        | (OR)                                                                                                                                |        |           |
| 6.   | a)     | What are the mitigation measures to be taken for reducing the impact on surface water quality by the use of agricultural chemicals? | CO3    | 7 Marks   |
|      | b)     | Explain impacts on surface water environment.                                                                                       | CO3    | 7 Marks   |
|      |        | UNIT-IV                                                                                                                             |        |           |
| 7.   | a)     | What are the causes and effects of Deforestation?                                                                                   | CO4    | 7 Marks   |
|      | b)     | What is the necessity of delineation of study area of EIA?                                                                          | CO4    | 7 Marks   |
|      |        | (OR)                                                                                                                                |        |           |
| 8.   | a)     | Explain the generalized approach for assessment of air pollution impact.                                                            | CO4    | 7 Marks   |
|      | b)     | Explain the impact of developmental activities on vegetation.                                                                       | CO4    | 7 Marks   |
|      |        | UNIT-V                                                                                                                              |        |           |
| 9.   | a)     | Explain the Types of environmental audit.                                                                                           | CO5    | 7 Marks   |
|      | b)     | Explain briefly about Air Act and Water Act.                                                                                        | CO5    | 7 Marks   |
|      |        | (OR)                                                                                                                                |        |           |
| 10.  |        | Explain one case study on EIA in Industries.                                                                                        | CO5    | 14 Marks  |
|      |        |                                                                                                                                     |        |           |

WATER RESOURCES SYSTEMS PLANNING AND MANAGEMENT

### [Civil Engineering]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

#### 

| 1. | a)<br>b) | Describe the concept of system analysis to water resources applications.<br>Explain the system approach to water resources system management.  | CO1<br>CO1 | 7 Marks<br>7 Marks |
|----|----------|------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|    |          | (OR)                                                                                                                                           |            |                    |
| 2. | a)       | What is the role of constraints in modeling of water resources systems?                                                                        | CO2        | 7 Marks            |
|    | b)       | Discuss the applicability of different optimization techniques used in water resources systems                                                 | CO2        | 7 Marks            |
|    |          | UNIT-II                                                                                                                                        |            |                    |
| 3. | a)       | Give a general mathematical formulation of LPP. Explain all terms.                                                                             | CO2        | 7 Marks            |
|    | b)       | Solve the following LPP by using graphical method.                                                                                             | CO4        | 7 Marks            |
|    | <i>.</i> | Maximize $\mathbf{Z} = 2\mathbf{x}_1 + 3\mathbf{x}_2$                                                                                          |            |                    |
|    |          | Subjected to constraints                                                                                                                       |            |                    |
|    |          | $2x_1 + x_2 \leq 2$                                                                                                                            |            |                    |
|    |          | $3x_1 + 4x_2 \ge 12$                                                                                                                           |            |                    |
|    |          | $\mathbf{x}_1, \mathbf{x}_2 \geq 0$                                                                                                            |            |                    |
|    |          | (OR)                                                                                                                                           |            |                    |
| 4. |          | Solve the following LPP.                                                                                                                       | CO4        | 14 Marks           |
|    |          | $Maximize \mathbf{Z} = \mathbf{x}_1 + 4\mathbf{x}_2$                                                                                           |            |                    |
|    |          | Subjected to constraints                                                                                                                       |            |                    |
|    |          | $3\mathbf{x}_1 + \mathbf{x}_2 \leq 3$                                                                                                          |            |                    |
|    |          | $2\mathbf{x}_1 + 3\mathbf{x}_2 \le 6$                                                                                                          |            |                    |
|    |          | $4\mathbf{x}_1 + 5\mathbf{x}_2 \geq 20$                                                                                                        |            |                    |
|    |          | $\mathbf{x}_1, \mathbf{x}_2 \geq 0$                                                                                                            |            |                    |
|    |          | (UNIT-III)                                                                                                                                     |            |                    |
| 5. | a)       | Explain Bellman's principle of optimality.                                                                                                     | CO5        | 7 Marks            |
|    | b)       | What is the role of dimensionality in dynamic programming problem.                                                                             | CO5        | 7 Marks            |
|    |          | (OR)                                                                                                                                           |            |                    |
| 6. |          | Solve the following 4-user water allocation problem to maximize the total returns using <b>backward recursion</b> of dynamic programming water | CO4        | 14 Marks           |

returns using **backward** recursion of dynamic programming water available foe allocation = 60units, to be allocated in discrete units of 0, 10, 20 ..... 60. Returns from the four users for a given allocation are given in the table below.

| Allocation | Returns from |        |        |        |  |
|------------|--------------|--------|--------|--------|--|
| Anocation  | User 1       | User 2 | User 3 | User 4 |  |
| 0          | 0            | 0      | -3     | 1      |  |
| 10         | 3            | 4      | 3      | 1      |  |

| 30         | 6            | 4      | 5      | 7      |  |
| 40         | 3            | 4      | 4      | 8      |  |
| 50         | 3            | 6      | 2      | 10     |  |
| 60         | 3            | 7      | 0      | 10     |  |

1ax, wiaiks, 70

### (UNIT-IV)

7. Minimize  $Z=2x_1^2+x_2^2+3x_3^2+10x_1+8x_2+6x_3-100$ subject to  $x_1+x_2+x_3=20$  $x_1,x_2 \ge 0$ 

CO4 14 Marks

(OR)

8. a) Explain any one classical method of optimization with suitable example. CO5 7 Marks
b) What is the procedure for applying simulation in water resource CO5 7 Marks planning?

UNIT-V

9. There are two alternatives to water supply in an irrigation district. Plan A CO8 14 Marks is to construct an open channel at an initial cost of Rs. 50 lakhs with O and M cost of Rs. 4 lakhs per year. The alternative plan B is to go for a piping system at an initial cost of Rs.90 lakhs and an O and M cost of Rs. 50000 per year. Money is available for 6% interest rate and sinking fund will improve at 4% interest. Useful life of the project in both cases is 20 years. Select the more economical of the two alternatives.

#### (OR)

10. a) What are the economics considered in planning of reservoir system? CO7 7 Marks
b) Explain the concept of conjunctive use of surface and sub-surface water CO6 7 Marks resources.

#### IV B.Tech I Semester (SVEC-16) Supplementary Examinations February - 2021

EARTHQUAKE RESISTANT DESIGN OF STRUCTURES

#### [Civil Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Explain in detail any five Building characteristics that are to be CO1 7 Marks considered during the earthquake resistant design.
  - b) Define lateral load resisting system and explain its types. CO1 7 Marks

#### (**OR**)

- 2. a) Explain about Response reduction factor and Zone factor during the CO2 7 Marks seismic analysis.
  - b) Explain about various classifications of earthquakes. Explain in detail CO1 7 Marks about magnitude and intensity of earthquakes.

### UNIT-II

- 3. Derive the equation of motion of SDOF system for free vibration and find CO2 14 Marks the solution for:
  - i) Under damped system. ii) Over damped system.

iii) Critically damped system.

#### (OR)

- 4. a) Explain about the importance of ductility and what are the general CO4 7 Marks requirements of ductility.
  - b) Define Ductility and explain various types of Ductility in detail. CO2 7 Marks

#### (UNIT-III)

- 5. a) Explain the step by step procedure for seismic design coefficient method CO4 7 Marks in detail.
  - b) The plan and elevation of a 2, 3 story RCC college building. The building CO2 7 Marks is in 36% of Peak Ground Acceleration (PGA) or very serious seismic intensity. The type of soil encountered is medium stiff and it is proposed to design the building with a frame meeting ductile requirement of RC building. The intensity of DL is 10kN/m<sup>2</sup> and Intensity of Live load of floors is 3kN/m<sup>2</sup>. Determine the design seismic loads on the structure by static analysis.

(OR)

- 6. For an RCC (OMRF, not conforming to ductile detailing requirements) CO1 14 Marks building frame for office the loads on the floors are DL (including equivalent weight of brick infill masonry  $8kN/m^2$  on each floor and  $7.5kN/m^2$  on roof, LL =  $4kN/m^2$  on each floor and  $1.5kN/m^2$  on roof. The story heights are ground story = 4.2m, first story = 3.2m, second story = 3.2m and third story = 3.2m. The building frame is of four bays of each 5m in both directions and founded on hard soil, situated in zone IV. The plan dimensions of the building are  $20m \times 20m$  and the total height of the building is 13.8m. The damping in the structure is 7%. Determine the seismic forces by:
  - i) Equivalent lateral force procedure considering the framed structure.
  - ii) The stiffness of brick masonry infill, neglecting the stiffness of brick masonry infill. Compare the results of both the cases and explain.

- 7. a) Explain about the ductile detailing of beam as per IS 13920-2016 CO4 7 Marks recommendations.
  - b) An inner beam of 300mm x 600mm with span 6m of a RC frame having a CO1 7 Marks negative moment of 300kN-m and a shear force of 250kN at the face of beam column joint due to gravity and earthquake loads. Design the beam for ductility. Consider M25 and Fe415

#### (**OR**)

- 8. a) Explain about Plan Configuration and Torsion Irregularities in a multi CO6 7 Marks storied structure.
  - b) Define load path and explain about vertical discontinuities in load path. CO6 7 Marks

### UNIT-V

- 9. a) Explain about period shifting of structure and mode of vibration in base CO3 7 Marks isolation technique.
  - b) Explain about Hydraulic dampers and Viscous dampers in detail. CO1 7 Marks

### (OR)

Design a ductile shear wall of an effective length 6.4m to resist seismic CO3 14 Marks forces using M25 and Fe415. The beams and columns are 600mm x 300mm. Each floor is of 3m. The seismic shear forces for each floor is shown in figure. Axial load acting on the building is 1000kN.

INDUSTRIAL WASTEWATER TREATMENT

#### [Civil Engineering]

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

| 1. | a)  | Draw and explain a typical oxygen sag curve in a stream subjected to pollution.                                                                                                                                  | CO1         | 7 Marks            |
|----|-----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------|
|    | b)  | Explain the oxygen sag curve in streams when industrial wastewater is disposed into streams.                                                                                                                     | CO1         | 7 Marks            |
|    |     | OR)                                                                                                                                                                                                              |             |                    |
| 2. | a)  | How are the characteristics of industrial waste water expressed?                                                                                                                                                 | CO1         | 7 Marks            |
|    | b)  | What is the importance of dissolved oxygen which is present in water?<br>How does it help for the treatment of waste water? How the dissolved<br>oxygen level is maintained in the stream?                       | CO1         | 7 Marks            |
|    |     | (UNIT-II)                                                                                                                                                                                                        |             |                    |
| 3. | a)  | Draw the neat sketch and describe briefly about the growth phases of microorganisms.                                                                                                                             | CO2         | 7 Marks            |
|    | b)  | Define the mean cell residence time. Determine the mean cell residence time if volume of the aeration tank is 5000m <sup>3</sup> with MLSS concentration 2000 mg/l is maintained and the underflow concentration | CO2         | 7 Marks            |
|    |     | is 10000 mg/l and about 50m <sup>3</sup> /day sludge is wasted                                                                                                                                                   |             |                    |
|    |     | (OR)                                                                                                                                                                                                             |             |                    |
| 4  | a)  | Draw flow sheets and explain contact stabilization process                                                                                                                                                       | $CO^2$      | 7 Marks            |
| 1. | b)  | Explain the significant design criteria and steps for designing a                                                                                                                                                | CO2         | 7 Marks<br>7 Marks |
|    | ,   | conventional activated sludge process.                                                                                                                                                                           |             |                    |
|    |     | (UNIT-III)                                                                                                                                                                                                       |             |                    |
| 5. | a)  | What are the various empirical equations used for the design of                                                                                                                                                  | CO3         | 7 Marks            |
|    |     | trickling filters? State the limitations of these equations.                                                                                                                                                     |             |                    |
|    | b)  | Explain briefly the nitrogen removal by biological nitrification and denitrification.                                                                                                                            | CO3         | 7 Marks            |
|    |     | (OR)                                                                                                                                                                                                             |             |                    |
| 6. | a)  | Explain the oxidation and reduction treatment systems in detail.                                                                                                                                                 | CO3         | 7 Marks            |
|    | b)  | Explain the different types of anaerobic treatment processes. Anaerobic                                                                                                                                          | CO3         | 7 Marks            |
|    |     | treatment is not generally accepted for wastewater treatment. Why?                                                                                                                                               |             |                    |
| 7. | a)  | What is the purpose of equalization? What are the methods of                                                                                                                                                     | CO4         | 7 Marks            |
|    | • ` | equalization and explain any two methods of mixing?                                                                                                                                                              | <b>GO</b> 4 | - > < 1            |
|    | b)  | What is the purpose of neutralization? What are the methods of neutralization?                                                                                                                                   | CO4         | 7 Marks            |
| _  |     | (OR)                                                                                                                                                                                                             |             |                    |
| 8. | a)  | How to control industrial waste water by neutralization? What are its advantages?                                                                                                                                | CO4         | 7 Marks            |
|    | b)  | Describe the massive lime Treatment for color Removal in pulp and paper mill.                                                                                                                                    | CO4         | 7 Marks            |

# UNIT-V

| 9.  | a)       | Explain the impact of distillery effluent on aquatic environment if discharged without treatment.                                     | CO5        | 7 Marks            |
|-----|----------|---------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|     | b)       | What are the merits and demerits of common effluent treatment plants?                                                                 | CO5        | 7 Marks            |
| 10. | a)<br>b) | Draw a neat sketch of the process of Tanneries Industry.<br>Give the values of different characteristics of Tanneries Industry waste. | CO5<br>CO5 | 7 Marks<br>7 Marks |

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

# BRIDGE ENGINEERING

[Civil Engineering]

Time: 3 hours

Max. Marks: 70

## Answer One Question from each Unit All questions carry equal marks

(Use of codes IRC:6-2014, IRC:21-2000, IS 456:2000, IRC:83-(Part-I)-1999, IRC:83-(Part-II)-1987 and Pigeaud's curves are permitted in the examination hall)

# UNIT-I

| 1. | a) | Briefly explain the loading standards used for the highway bridges.<br>Compare the same with the railway bridge loading standards.          | CO1  | 7 Marks  |
|----|----|---------------------------------------------------------------------------------------------------------------------------------------------|------|----------|
|    | b) | Explain the various components of the culvert along with the design procedure.                                                              | CO1  | 7 Marks  |
|    |    | (OR)                                                                                                                                        |      |          |
| 2. | a) | Explain the basic forms of a bridge structure.                                                                                              | CO2  | 7 Marks  |
|    | b) | How the foundation and pier of the bridge affect the economy and cost<br>of the construction? Explain briefly with example.                 | CO2  | 7 Marks  |
|    |    | UNIT-II                                                                                                                                     |      |          |
| 3. |    | A reinforced concrete box culvert is required for a national highway crossing. The clear vent way of the box culvert is 4m x 4m. Design the | CO33 | 14 Marks |
|    |    | box culvert assuming a super imposed dead load of 12kN/m <sup>2</sup> and a live                                                            |      |          |
|    |    | load of 50kN/m <sup>2</sup> . The density of the soil is 16kN/m. Use M 25 grade of concrete and Fe415 steel                                 |      |          |
|    |    | (OR)                                                                                                                                        |      |          |
| 4. |    | A road bridge deck consists of a reinforced concrete slab continuous                                                                        | CO3  | 14 Marks |
|    |    | over tee beams spaced at 2m centers and cross girders spaced at 5m                                                                          |      |          |
|    |    | centers. Thickness of wearing coat = 100mm. Type of loading is IRC                                                                          |      |          |
|    |    | class AA. Using M20 grade concrete and Fe415 grade HYSD bars.                                                                               |      |          |
|    |    | Design the using given data and draw the cross section of the deck slab                                                                     |      |          |
|    |    | over two spans showing reinforcement details.                                                                                               |      |          |
|    |    | (UNIT-III)                                                                                                                                  |      |          |
| 5. |    | Design a R.C.C. Tee beam and slab deck to suit the following data.                                                                          | CO5  | 14 Marks |
|    |    | Effective span of girders = 16m, width of kerbs = 600mm, clear width of                                                                     |      |          |
|    |    | roadway = $7.5m$ , thickness of wearing coat = $80mm$ , No.of main                                                                          |      |          |
|    |    | girders = 4, spacing of main girders = $2.5m$ , Spacing of cross                                                                            |      |          |

#### UNIT-IV) Write the different types of bearings used in the bridge. 7. CO1 4 Marks a) What is the purpose to provide the bearings in the bridge? CO1 4 Marks b) Compare the steel rock and roller bearing with elastometric bearing CO2 6 Marks c) along with the application. (**OR**) Write the general features of bearings used in the bridge. 8. a) CO1 7 Marks Explain design principles of steel rocker bearing. CO1 7 Marks b) UNIT-V Explain the various types loads and forces to be considered in the design 9. CO2 7 Marks a) of piers. Explain general features of a bed block. b) CO2 7 Marks (**OR**) 10. What are the materials used for piers and abatements mention them? CO1 5 Marks a) Explain briefly for the following forces acting on the abutments with CO2 9 Marks b) their design steps: i) Force due to breaking. ii) Active earth pressure.

iii) Horizontal force due to temperature and shrinkage.

#### UNIT-I Explain the impact at ground surface method of densifying granular soils. 1. CO1 7 Marks a) Explain the field procedure for compaction of soils. CO<sub>2</sub> 7 Marks b) (**OR**) Explain the construction methods used for the construction of stabilized CO1 2. 7 Marks a) roads. b) Differentiate between consolidation and compaction of soils and give CO4 7 Marks examples. UNIT-II 3. Explain the design steps for a dewatering system. CO3 7 Marks a) Explain the electro osmotic method of dewatering for ground CO1 b) 7 Marks improvement. (**OR**) Explain in detail the vacuum well point system of dewatering. 4. a) CO1 7 Marks Write a short note on following: CO1 7 Marks b) i) Preloading techniques. ii) Knitted. UNIT-III) 5. What is a stone column? What are the methods of installing a stone CO1 7 Marks a) column? Explain how the engineering properties of soil are changed by the process CO5 7 Marks b) of bituminous stabilization. (**OR**) Describe the vibroflotation technique of densifying granular soil. 6. CO6 7 Marks a) What are the types of vertical drains? Explain. 7 Marks b) CO1 (UNIT-IV) 7. Explain in detail the mechanical soil stabilization. CO1 7 Marks a) Explain the principle and application of soil-lime stabilization. b) CO5 7 Marks (**OR**) Explain in detail the different stages of grouting with the help of a neat 8. CO1 7 Marks a) sketch. Define grouting. What are the objectives of grouting in various Civil b) CO4 7 Marks engineering applications? UNIT-V What are the design principles of reinforced earth wall? 9. a) CO1 7 Marks Explain different functions of geo-textiles with neat sketches. 7 Marks b) CO6 (**OR**) Explain in detail the use of geo-synthetics as a reinforcement in various CO5 10. a) 7 Marks Civil engineering applications. Why geo-synthesis used in roadways on soft sub grades are more CO7 7 Marks b) beneficial? Explain

### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### POWER SYSTEM OPERATION AND CONTROL [Electrical and Electronics Engineering]

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

- 1. a) Derive the condition for economical load dispatch among various CO2 7 Marks generating plants by considering transmission losses.
  - b) Explain the importance of load forecasting and explain any one method of CO1 7 Marks load forecasting.

#### (**OR**)

- 2. a) Derive transmission line loss equation in terms of B-Coefficients. CO2 7 Marks
  - b) Incremental fuel costs in Rs/MWh for a plant consisting of two units are CO6 7 Marks

$$\frac{df_1}{dpg_1} = 0.2pg_1 + 40 \qquad \frac{df_2}{dpg_2} = 0.25pg_2 + 30$$

Assume both units are operating at all times and total load varies from 40MW to 250MW and maximum and minimum loads are to be 125 and 20MW respectively. How will the loads be shared between the two units as the system load varies in steps of 50MW over full range? What are the corresponding values of the plant incremental costs?

### UNIT-II)

- 3. a) Derive the coordination equation for the optimal scheduling of CO4 7 Marks hydrothermal interconnected power plants.
  - b) Explain short term hydro scheduling by  $\gamma \lambda$  iteration method. CO5 7 Marks

#### (OR)

4. Describe the hydro-thermal economic load scheduling. Derive the CO4 14 Marks necessary equations.

# (UNIT-III)

- 5. a) Develop the mathematical model for the forward Dynamic programming CO2 8 Marks algorithm, taking into account the start up costs of the units
  - b) Draw the flowchart for the Priority list method of unit commitment. CO2 6 Marks

#### (**OR**)

- 6. a) Explain the procedure for solving Unit commitment problem using CO1 8 Marks Priority list scheme based on simple shutdown algorithm.
  - b) Explain the various constraints in unit commitment problem. CO1 6 Marks

# UNIT-IV

- 7. a) Draw the block representation of a complete DC excitation system and CO1 7 Marks explain its features.
  - b) Explain the block diagram representation of IEEE Type-1 excitation CO5 7 Marks system.

(OR)

Max. Marks: 70

8. Derive the transfer function of Generator – load model of power system 7 Marks CO2 a) Explain the block diagram of LFC system. CO1 b) 7 Marks UNIT-V 9. Derive dynamic response of a load frequency control of an isolated power CO2 7 Marks a) system. Draw a block diagram, with illustrative transfer function of a single area 7 Marks b) CO1 frequency control system. Explain the function of different components of such a control system. (**OR**) Derive the expression for the change in tie-line power when the loads 10. CO4 7 Marks a) change in the control areas. Two areas are connected with a tie line .The characteristics are as follows. b) CO6 7 Marks Area 1 : R=0.015, D=0.8, base MVA = 500 Area 2 : R=0.01 pu ,D=1 pu , base MVA =500 A load change of 100 MW occurs in area 1 .What is the new frequency and tie-line flow change .The nominal frequency is 50 Hz.

### FLEXIBLE AC TRANSMISSION SYSTEMS

#### [Electrical and Electronics Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

| 1.  | a) | What is the need of transmission interconnection for a given power system?                                     | CO1 | 7 Marks |
|-----|----|----------------------------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Describe the power flow control in an AC transmission system with necessary diagrams.                          | CO1 | 7 Marks |
|     |    | (OR)                                                                                                           |     |         |
| 2.  | a) | Identify the importance of controllable parameters in transmission systems.                                    | CO5 | 7 Marks |
|     | b) | What are FACT controllers and explain different categories of FACT controllers                                 | CO2 | 7 Marks |
|     |    |                                                                                                                |     |         |
| 3.  | a) | Discuss different types reactive compensation equipment for electrical power transmission system               | CO2 | 7 Marks |
|     | b) | Discuss about the effect of load compensation on transmission system.<br>(OR)                                  | CO2 | 7 Marks |
| 4.  | a) | Differentiate compensated and uncompensated transmission lines.                                                | CO2 | 7 Marks |
|     | b) | Discuss the effect of series compensation on power transfer capacity of transmission line.                     | CO2 | 7 Marks |
|     |    | UNIT-III                                                                                                       |     |         |
| 5.  | a) | Propose a system for transmission line to increase the power transfer capacity.                                | CO3 | 7 Marks |
|     | b) | Describe the basic operation of Thyristor Switched Capacitor with necessary waveforms and characteristics.     | CO2 | 7 Marks |
| 6.  | a) | Design a block diagram for general control of Static VAR Compensator (SVC)                                     | CO3 | 7 Marks |
|     | b) | What is a STATCOM? Discuss its construction and working.                                                       | CO1 | 7 Marks |
| 7.  | a) | Discuss the principle of operation of TSSC.                                                                    | CO2 | 7 Marks |
|     | b) | Draw and discuss the V-I operating characteristics in voltage control mode and reactance control mode of TCSC. | CO2 | 7 Marks |
|     |    | (OR)                                                                                                           |     |         |
| 8.  | a) | Illustrate the operation of SSSC with relevant diagrams.                                                       | CO1 | 7 Marks |
|     | b) | How power oscillations damping is obtained using series compensation.                                          | CO4 | / Marks |
| 9.  | a) | How power flow control is achieved by phase angle regulators?                                                  | CO4 | 7 Marks |
|     | b) | Discuss the operation of TCVR with a circuit diagram. (OR)                                                     | CO2 | 7 Marks |
| 10. | a) | Answer the transmission control capabilities of UPFC.                                                          | CO5 | 7 Marks |
|     | b) | Propose a system to control power flow between Transmission lines and discuss the operating principle of it.   | CO3 | 7 Marks |
|     |    | \$\$ \$\$ \$\$                                                                                                 |     |         |

# POWER SYSTEM AUTOMATION

[Electrical and Electronics Engineering]

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1.  | a)       | What is power system control? Explain its role and responsibility in nower system operation                                                                                       | CO1         | 5 Marks            |
|-----|----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------|
|     | b)       | Describe different modes of operation of power systems.                                                                                                                           | CO1         | 9 Marks            |
| 2.  | a)       | Describe the function of supervisory control systems in power system<br>operator process interaction                                                                              | CO2         | 7 Marks            |
|     | b)       | Explain the power system operator activities in detail.                                                                                                                           | CO1         | 7 Marks            |
| 3.  | a)       | Draw and explain the flow chart which represents the use of SCADA in power systems                                                                                                | CO3         | 7 Marks            |
|     | b)       | Describe various application functions of transmission SCADA.                                                                                                                     | CO4         | 7 Marks            |
| 4.  | a)       | Draw and explain the block diagram representation of a small master station.                                                                                                      | CO3         | 7 Marks            |
|     | b)       | Describe the concept of multiple master–multiple remote configuration.                                                                                                            | CO4         | 7 Marks            |
| 5.  | a)<br>b) | Explain the layout of conventional substation and its wiring requirements.<br>Describe the integrated protection functions via hard wiring and LAN with their neat diagrams.      | CO1<br>CO5  | 7 Marks<br>7 Marks |
| 6   |          | (OR)                                                                                                                                                                              | ao <b>-</b> |                    |
| 6.  | a)       | What is intelligent bus failover? Explain the intelligent bus failover demonstration.                                                                                             | CO5         | 7 Marks            |
|     | b)       | Explain the equipment condition monitoring devices in detail.                                                                                                                     | CO2         | 7 Marks            |
| 7.  | a)       | Describe the data concepts in a customer information system.                                                                                                                      | CO5         | 8 Marks            |
|     | b)       | Explain how the data will be exchanged between GIS and DMS. <b>(OR)</b>                                                                                                           | CO5         | 6 Marks            |
| 8.  | a)       | Explain the overview of the DMS application functions and demonstrates the interdependence of the functions.                                                                      | CO5         | 7 Marks            |
|     | b)       | Explain the DMS coordination with OMS.                                                                                                                                            | CO5         | 7 Marks            |
| 9.  | a)<br>b) | Describe the operational planning activities of ISO in pool based market.<br>Explain various advantages of deregulated power systems over vertically<br>integrated power systems. | CO2<br>CO1  | 8 Marks<br>6 Marks |
|     | ,        | (OR)                                                                                                                                                                              | ~ ~ •       |                    |
| 10. | a)<br>b) | Describe the types of restructuring models in detail.<br>Discuss about power exchange and market operations in detail.                                                            | CO2<br>CO1  | 6 Marks<br>8 Marks |
|     |          |                                                                                                                                                                                   |             |                    |

# ANALYSIS OF POWER ELECTRONIC CONVERTER

#### [Electrical and Electronics Engineering]

Max. Marks: 70

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1. | a) | Elaborate the switching characteristics of GTOs with the help of cross sectional view and necessary circuit diagram.                                                                                                                                                                                                                                                        | CO7         | 8 Marks  |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|----------|
|    | b) | List out the various advanced power semiconductor devices with steady state characteristics.                                                                                                                                                                                                                                                                                | CO5         | 6 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                        |             |          |
| 2. | a) | Compare the different types of thyristors with switching characteristics.                                                                                                                                                                                                                                                                                                   | CO1         | 6 Marks  |
|    | b) | Discuss the constructional features and applications of COOLMOS device with cross sectional view.                                                                                                                                                                                                                                                                           | CO2         | 8 Marks  |
|    |    | UNIT-II                                                                                                                                                                                                                                                                                                                                                                     |             |          |
| 3. | a) | With the help of neat schematic diagram, explain the gate drive circuit of Power BJT.                                                                                                                                                                                                                                                                                       | CO1         | 7 Marks  |
|    | b) | Discuss the significance of pulse-transformer and opto-coupler in power electronic converters.                                                                                                                                                                                                                                                                              | CO1         | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                        |             |          |
| 4. | a) | Explain thyristor converter gating circuit using isolation transformer with relevant diagram.                                                                                                                                                                                                                                                                               | CO2         | 7 Marks  |
|    | b) | Brief about various gate drive ICs for MOSFET and IGBT.                                                                                                                                                                                                                                                                                                                     | CO2         | 7 Marks  |
| 5. |    | Analyze the operation of 12-pulse fully controlled bridge converter with circuit diagram and trace the output load voltage with highly inductive load.                                                                                                                                                                                                                      | CO6,<br>CO8 | 14 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                        |             |          |
| 6. | a) | Explain the operation of 3-pulse semi-controlled bridge converter with circuit diagram.                                                                                                                                                                                                                                                                                     | CO6         | 6 Marks  |
|    | b) | A three-phase full-wave converter is operated from a three-phase Y-connected 208-V, 60-Hz supply and the load resistance is $R = 10\Omega$ . If it is required to obtain an average output voltage of 50% of the maximum possible output voltage, calculate (i) the delay angle $\alpha$ , (ii) the r.m.s and average output currents, (iii) the TUF and (iv) the input PF. | CO8         | 8 Marks  |
| -  |    |                                                                                                                                                                                                                                                                                                                                                                             | 000         |          |
| 1. | a) | Explain buck regulator modes of operation with neat circuit diagram and relevant waveforms.                                                                                                                                                                                                                                                                                 | CO2         | 6 Marks  |
|    | b) | Design a buck regulator has an input voltage of $V_s = 12V$ . The required average output voltage is $V_a = 5V$ at $R = 500\Omega$ and the peak-to-peak                                                                                                                                                                                                                     | CO4         | 8 Marks  |

output ripple voltage is 20mV. The switching frequency is 25kHz. If the peak-to-peak ripple current of inductor is limited to 0.8A, determine (i) the duty cycle k, (ii) the filter inductance L, (iii) the filter capacitor C, and (iv) the critical values of L and C.

(OR)

8. Design a suitable converter for Cuk Converter operation. Explain its CO2, 14 Marks modes of operation with neat circuit diagram and relevant waveforms. CO4 Also deduce the condition for continuous inductor current and capacitor voltage.

# UNIT-V

9. a)Discuss about Selective Harmonic Elimination PWM technique.CO67 Marksb)Compare various advanced PWM techniques.CO37 Marks

#### (OR)

- 10. a) Describe the process of phase displacement control with neat waveforms. CO8 7 Marks
  - b) Explain third harmonics injection modulation techniques employed in CO3 7 Marks inverter.

#### **POWER QUALITY**

[Electrical and Electronics Engineering]

Time: 3 hours

#### Max. Marks: 70

# Answer One Question from each Unit

All questions carry equal marks

# UNIT-I

- 1. Discuss the responsibilities of suppliers and end users of electrical power. CO1 7 Marks a) Explain the use of setting standards to power quality. Name any Five b) CO1 7 Marks power quality standers. (**OR**) Define power quality. With neat sketches, explain the different types of CO1 8 Marks 2. a) power quality problems. Discuss in detail about the Computer Business Equipment Manufacturer's 6 Marks b) CO1 Association (CBEMA). Explain about the events described in the curve. (UNIT-II) 3. Discuss the following electrical power quality terms: CO2 14 Marks i) Notching. i) ii) Inter-Harmonics. ii) iii) Voltage fluctuations. iii) iv) Waveform distortion. iv) v) Short-duration variation. v) (**OR**) 7 Marks 4. Define waveform distortion. Explain the wave form distortion categories. CO<sub>2</sub> a) b) List out general mitigation methods for number of faults and fault CO1 7 Marks clearing time can be reduced. (UNIT-III) 5. In presence of harmonics, how the power system quantities are change? CO1 14 Marks (**OR**) 6. Explain the effect of harmonic distortion. CO2 14 Marks i) impact on capacitors. ii) impact on transformers. iii) impact on motor. iv) impact on telecommunications. v) impact on energy and demand metering. UNIT-IV) 7. Illustrate how the locations will be choosing for power quality CO4 7 Marks a) monitoring. Elucidate the historical perspective of power quality measuring CO5 7 Marks b) instruments in power system. (**OR**) 8. Identify the suitable power quality monitoring and measuring device to CO4 8 Marks a) measure flicker and explain with functional blocks.
  - b) Tell the importance of power quality monitoring standards in power CO1 6 Marks system and list them.

# UNIT-V

9. Elucidate in detail about the distributed generation and its impacts on the CO6 14 Marks network.

# (OR)

10. Discuss about following of distributed generation.

CO5 14 Marks

- i) Islanding issues.
- ii) Distribution line compensation.
- iii) Heavy load and light load connection.
- iv) Real generation.
- v) Protection issues.

### **SMART GRID TECHNOLOGY**

[Electrical and Electronics Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

|     |     | (UNIT-I)                                                                                                                       |      |         |
|-----|-----|--------------------------------------------------------------------------------------------------------------------------------|------|---------|
| 1.  | a)  | Discuss the need of modernization of electric grid                                                                             | CO1  | 4 Marks |
|     | b)  | Give comparison between existing grid and smart grid                                                                           | CO1  | 4 Marks |
|     | c)  | Discuss the advantages and disadvantages of smart grid                                                                         | CO1  | 6 Marks |
|     |     | (OR)                                                                                                                           |      |         |
| 2.  | a)  | Elaborate the smart grid features with respect to technical and nontechnical challenges.                                       | CO1  | 7 Marks |
|     | b)  | Explain in detail the concept of Resilient and Self healing of a grid.                                                         | CO3  | 7 Marks |
| 3.  | a)  | Describe the distribution system tools and Remote terminal unit architecture with neat legible sketch.                         | CO1  | 7 Marks |
|     | b)  | Point out the features and applications of a DMS.                                                                              | CO1  | 7 Marks |
| 4   | a)  | Describe the role of wide-area monitoring system in smart grids                                                                | CO1  | 7 Marks |
|     | b)  | Explain the benefits and functions of Energy Management System.                                                                | CO3  | 7 Marks |
|     | - ) | (UNIT-III)                                                                                                                     |      |         |
| 5.  | a)  | Differentiate the advanced metering and traditional electro-mechanical meters                                                  | CO1  | 7 Marks |
|     | b)  | Discriminate the key components of smart metering.                                                                             | CO4  | 7 Marks |
| 6.  | a)  | Elaborate how the reliability of the smart grid can be enhanced by integrating intelligence electronic units (IED)'s in to it. | CO1  | 7 Marks |
|     | b)  | Discriminate how automatic meter reading can make the system smarter.                                                          | CO4  | 7 Marks |
|     | ,   | UNIT-IV)                                                                                                                       |      |         |
| 7.  | a)  | Describe power quality issues of grid connected renewable energy sources.                                                      | CO1  | 7 Marks |
|     | b)  | Discuss about the concept of Power Quality and EMC in smart grids.<br>(OR)                                                     | CO4  | 7 Marks |
| 8.  | a)  | Illustrate the Power Quality Audit system in smart grids.                                                                      | CO4  | 7 Marks |
|     | b)  | Explain the need of software and hard ware requirements of a "Web based power quality monitoring".                             | CO1  | 7 Marks |
|     |     | UNIT-V                                                                                                                         |      |         |
| 9.  | a)  | Distinguish between Wired and Wireless Communication.                                                                          | CO2  | 7 Marks |
|     | b)  | Write short notes on Wide Area Networks and Home Area Networks for smart grid applications.                                    | CO2  | 7 Marks |
|     |     | (OR)                                                                                                                           |      |         |
| 10. | a)  | Deliberate the Internet Protocols for smart grid applications.                                                                 | CO1, | 7 Marks |
|     |     |                                                                                                                                | CO5  |         |
|     | b)  | Discuss about the need of cloud computing and its properties.                                                                  | CO4  | 7 Marks |
|     |     |                                                                                                                                |      |         |

#### Answer One Question from each Unit All questions carry equal marks

# (UNIT-I)

| 1.  | a) | Differentiate Supervised learning and Unsupervised leaning.                                                                                                                                                                                                                     | CO1 | 7 Marks  |
|-----|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Illustrate different Activation Functions in Neural Network.                                                                                                                                                                                                                    | CO1 | 7 Marks  |
|     |    | OR)                                                                                                                                                                                                                                                                             |     |          |
| 2.  | a) | Describe the concept of Hebb learning algorithm and explain with a flow chart.                                                                                                                                                                                                  | CO1 | 7 Marks  |
|     | b) | Solve the AND function using McCulloch Pitts Neural Model.                                                                                                                                                                                                                      | CO1 | 7 Marks  |
|     |    | UNIT-II)                                                                                                                                                                                                                                                                        |     |          |
| 3.  | a) | Demonstrate the Learning Factors of Back Propagation Network.                                                                                                                                                                                                                   | CO2 | 8 Marks  |
|     | b) | Find the weights using Perceptron Network for ANDNOT function<br>when all the inputs are presented only one time. Use bipolar inputs and<br>targets.                                                                                                                            | CO2 | 6 Marks  |
|     |    | (OR)                                                                                                                                                                                                                                                                            |     |          |
| 4.  | a) | Describe the concept of Bidirectional Associative Memory.                                                                                                                                                                                                                       | CO2 | 7 Marks  |
|     | b) | Illustrate the architecture of Discrete Hopfield Network and explain the process with a suitable algorithm.                                                                                                                                                                     | CO2 | 7 Marks  |
|     |    | UNIT-III)                                                                                                                                                                                                                                                                       |     |          |
| 5.  | a) | Define Classical Sets and explain the operations of Crispset.                                                                                                                                                                                                                   | CO3 | 7 Marks  |
|     | b) | Differentiate Crisp set and Fuzzy set.                                                                                                                                                                                                                                          | CO3 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                                                                                                            |     |          |
| 6.  |    | i) Membership Function. ii) Rank Ordering.                                                                                                                                                                                                                                      | CO3 | 14 Marks |
|     |    | (UNIT-IV)                                                                                                                                                                                                                                                                       |     |          |
| 7.  | a) | Analyze the concept of Lambda Cuts for fuzzy sets and fuzzy relations.                                                                                                                                                                                                          | CO4 | 6 Marks  |
|     | b) | Two fuzzy relations are given as: Obtain the fuzzy relation (T) using.<br>i) Max-min composition.<br>ii) Max-product composition.<br>$\vec{R} = \begin{bmatrix} 0.6 & 0.3 & 0.5 \\ 0.5 & 0.5 \end{bmatrix}$<br>$\vec{S} = \begin{bmatrix} 0.9 & 0.5 \\ 0.5 & 0.5 \end{bmatrix}$ | CO4 | 8 Marks  |
|     |    |                                                                                                                                                                                                                                                                                 |     |          |
|     |    | (OR)                                                                                                                                                                                                                                                                            |     |          |
| 8.  |    | Demonstrate the following:<br>i) Speed Control of DC Motor. ii) Selection of Membership Functions.                                                                                                                                                                              | CO4 | 14 Marks |
|     |    | UNIT-V                                                                                                                                                                                                                                                                          |     |          |
| 9.  | a) | Draw and explain the model of Chromosome, Genotype and Reproduction.                                                                                                                                                                                                            | CO5 | 7 Marks  |
|     | b) | Describe in briefly the Pseducode for Genetic algorithm.                                                                                                                                                                                                                        | CO5 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                                                                                                            |     |          |
| 10. | a) | Differentiate Value Encoding and Permutation Encoding in GA.                                                                                                                                                                                                                    | CO5 | 7 Marks  |
|     | b) | Explain in briefly different crossover operations and explain each operation.                                                                                                                                                                                                   | CO5 | 7 Marks  |
|     |    |                                                                                                                                                                                                                                                                                 |     |          |

#### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

# **AUTOMOBILE ENGINEERING**

#### [Mechanical Engineering]

Time: 3 hours

Max. Marks: 70

#### **Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

1. Elucidate the working of four-wheel drive arrangement in automobiles CO1 14 Marks with a neat sketch

#### (**OR**)

- 2. Explain briefly the function and arrangement of lubricating oil filters. CO2 7 Marks a)
  - Explain the factors that limit the extent of supercharging of S.I and C.I 7 Marks b) CO2 engines.

# UNIT-II

3. List out the functions of ignition system and explain the working of CO1 14 Marks battery ignition system with a neat diagram.

#### (**OR**)

Name different methods of engine cooling. Explain air-cooling method in CO3 4. 14 Marks detail.

# UNIT-III)

5. Explain about the engine emission control by three-way catalytic CO4 14 Marks converter system in detail.

#### (**OR**)

Enumerate various techniques of pollution control in CI engines. In what 6. CO6 14 Marks way it follows national standards? What benefit it has on the environment?

# UNIT-IV

7. Sketch and explain Davis steering mechanism. CO<sub>4</sub> 14 Marks

(**OR**)

- Explain the necessity of clutches in automobile. Suggest some design CO3 8. 7 Marks a) changes in clutch system to improve transmission efficiency.
  - Illustrate the working of universal joints used in automobiles with a neat CO1 7 Marks b) diagram.

# UNIT-V

9. Differentiate independent suspension system and rigid axle suspension CO5 14 Marks system with suitable example.

#### (**OR**)

10. Classify various brakes used in automobiles. Discuss the working of CO1 14 Marks hydraulic brake with a neat sketch.

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### FINITE ELEMENT METHOD [Mechanical Engineering]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1. | a) | Discuss the engineering applications of finite element method. | CO1 | 4 Marks  |
|----|----|----------------------------------------------------------------|-----|----------|
|    | b) | Derive stress strain relations for plane stress condition.     | CO1 | 10 Marks |

#### (OR)

2. Consider the bar shown in Fig.1, an axial load  $P = 200 \times 103$  N is applied as CO1 14 Marks shown. Calculate the nodal displacements.

- 3. a) Write load vector for 2 noded beam elements.
  - b) Determine the deflection at the point of load application using one element CO2 12 Marks model shown in Fig.2.

4. Derive element stiffness matrix for 2 noded beam elements. CO2 14 Marks

1

SVEC-16

CO2 2 Marks

# UNIT-III

- 5. a) Derive strain displacement B matrix for CST element. CO3 10 Marks
  - b) Determine the Jacobian for the  $(x, y) (\xi, \eta)$  transformation for the element CO3 4 Marks shown in Fig.3.

6. An axisymmetric body with a linearly distributed load on the conical surface CO3 14 Marks is shown in Fig.4. Determine the equivalent point loads at nodes 2, 4 and 6.

- 7. a) Write short notes on sub parametric, super parametric and iso parametric CO4 7 Marks elements.
  - b) Differentiate between h- refinement and p- refinement. CO4 7 Marks

#### (**OR**)

8. A composite wall consists of 4cm thick wood, 10cm glass fiber insulation CO4 14 Marks and 1cm thick plaster. If the temperature on wood and plaster faces are 20°C and -20°C respectively, determine the temperature distribution in the wall. Assume the thermal conductivity of wood, glass fibre and plaster are 0.17, 0.035 and 0.5W/m K respectively and colder side heat transfer coefficient is 25W/m<sup>2</sup>K.

# UNIT-V

9. Determine the Eigen values and Eigen vectors for the stepped bar shown in CO5 14 Marks Fig.5.

# (OR)

| 10. | a) | Derive element mass matrix for 1-D bar element. | CO5 | 6 Marks |
|-----|----|-------------------------------------------------|-----|---------|
|     | b) | Derive element mass matrix for truss element.   | CO5 | 8 Marks |

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. What are the different types of cooling towers? Explain with a neat CO1 14 Marks sketch.

#### (**OR**)

2. a) Explain different types of dust collectors used in thermal power plant.
b) Enumerate and explain the steps involved in coal handling.
CO1 7 Marks
CO1 7 Marks

## (UNIT-II)

3. List the essential components of a diesel power plant and explain them CO2 14 Marks briefly.

# (OR)

4. Explain the working details of gas turbine power plant with its layout CO2 14 Marks indicating all auxiliaries.

#### (UNIT-III)

- 5. a) What are typical ponds and storage units suitable for installation of hydro- CO3 7 Marks electric power plants? Explain them.
  - b) What is the importance of spill ways in hydro-electric power projects? CO2 7 Marks Explain their practical applications.

#### (**OR**)

- 6. a) Explain the construction and working of the pressurised water reactor CO2 7 Marks nuclear power plant with a layout.
  - b) Discuss the characteristics of hydrographs with respect to the power CO3 7 Marks generation along with the suitable curves.

#### (UNIT-IV)

7. Explain the working of magneto hydrodynamics system with a schematic CO2 14 Marks layout.

#### (OR)

- 8. a) How to make use of solar energy for the generation of power? Discuss the CO4 7 Marks merits and demerits.
  - b) How to make use of the tides for power generation based on their CO4 7 Marks capacities? Explain the principle of operation.

# UNIT-V

9. The data for a 2000 kW diesel power plant is as follows: CO6 14 Marks The peak load on the plant = 1500kW, load factor = 0.5, capital cost per kW installed = Rs.15000, annual costs = 15% of capital cost, annual operating costs = Rs.60000, annual maintenance costs = Rs.10000 (fixed) and Rs.20000 (variable), cost of fuel = Rs.0.8 per kg, cost of lubricating oil = Rs.40 per kg, calorific value of fuel = 40000 kJ/kg, consumption of fuel = 0.5kg/kWh, consumption of lubricating oil = 0.0025kg/kWh. Determine the annual energy generated and cost of generation in Rupees per kWh.

#### (OR)

10. a)Briefly explain various methods of reducing thermal pollution.CO57 Marksb)Discuss the pollution due to nuclear power plant.CO57 Marks

## **CELLULAR AND MOBILE COMMUNICATIONS**

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

# Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1. | a) | Describe the principle of operation and explain various components of a cellular mobile system with a neat diagram                                                                 | CO1 | 7 Marks |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | What is hand off and explain its strategies.                                                                                                                                       | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                               |     |         |
| 2. | a) | Design Co-channel interference and derive the relation for Co-channel interference factor in a cell with its K <sup>th</sup> Co-channel interfering cell.                          | CO2 | 7 Marks |
|    | b) | Explain how frequency reuse principle is used in improving the system capacity.                                                                                                    | CO1 | 7 Marks |
|    |    | UNIT-II                                                                                                                                                                            |     |         |
| 3. | a) | Summarize about umbrella pattern effect and list the benefits of umbrella patter <b>n</b> .                                                                                        | CO1 | 7 Marks |
|    | b) | What is diversity receiver? Illustrate how diversity receiver can be used to improve performance of the system even in low transmitted power levels.                               | CO6 | 7 Marks |
|    |    | (OR)                                                                                                                                                                               |     |         |
| 4. | a) | Classify and describe about various adjacent channel interference mechanisms.                                                                                                      | CO1 | 7 Marks |
|    | b) | Illustrate how cell site location, decrease in power and antenna height effect coverage and interference problems.                                                                 | CO4 | 7 Marks |
|    |    | UNIT-III                                                                                                                                                                           |     |         |
| 5. | a) | What are the characteristics of basic antenna structure?                                                                                                                           | CO3 | 7 Marks |
|    | b) | Define ground incident angle and ground elevation angle.                                                                                                                           | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                               |     |         |
| 6. | a) | In a mobile radio environment, if average cell site antenna height is 50m,<br>mobile antenna height is 3m and path length is 5km, find:<br>i) Incident angle. ii) Elevation angle. | CO3 | 7 Marks |
|    | b) | Explain long distance propagation and point to point prediction model.                                                                                                             | CO3 | 7 Marks |
|    |    |                                                                                                                                                                                    |     |         |
| 7. | a) | Differentiate soft handoff and hard handoff. Explain hard handoffs in CDMA systems                                                                                                 | CO5 | 7 Marks |
|    | b) | Explain non-fixed channel assignment.                                                                                                                                              | CO4 | 7 Marks |
|    |    | (OR)                                                                                                                                                                               |     |         |
| 8. | a) | Analyze how adjacent channel and Co-channel interference can be controlled using underlay overlay arrangement.                                                                     | CO4 | 7 Marks |
|    | b) | Outline various methods used to solve the problem of channel assignment to travelling mobile units.                                                                                | CO4 | 7 Marks |

# UNIT-V

| 9.  | a) | Write short notes on:                                                                      | CO6 | 7 Marks |
|-----|----|--------------------------------------------------------------------------------------------|-----|---------|
|     |    | i) Upper layer.                                                                            |     |         |
|     |    | ii) W-CDMA.                                                                                |     |         |
|     | b) | Differentiate three standard 3G systems; also mention the features of 3G standard systems. | CO6 | 7 Marks |
|     |    | (OR)                                                                                       |     |         |
| 10. | a) | Draw GSM architecture and explain.                                                         | CO1 | 7 Marks |

b) Discuss CDMA-2000 layering structure CO6 7 Marks

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. Write a detailed note on functional block diagram of MSP430 CO1 14 Marks microcontroller and explain the various languages used to program the microcontrollers. (**OR**) 2. Explain the memory map of the MSP430 microcontroller. CO<sub>2</sub> 7 Marks a) Write a brief note on Interrupts and Resets. CO2 7 Marks b) UNIT-II ) Explain the registers in the CPU of MSP430 microcontroller and 3. CO5. 14 Marks operation of the stack in the MSP430 microcontroller. CO1 (**OR**) Explain the Register mode and Indirect Register mode with examples. 7 Marks 4. a) CO5 b) Reproduce the condition code/status register contents of MSP430. CO5 7 Marks

#### (UNIT-III)

Write a program for interfacing LED with MSP430 microcontroller. CO5 7 Marks 5. a)

- CO5 Explain how to control the Clock Module through the status register. 7 Marks b) (**OR**)
- Write a program to copy string from one location in memory to another CO3 6. 7 Marks a) memory location.
  - b) Explain how to use the subroutines in embedded programming with an CO3 7 Marks example.

# UNIT-IV )

Explain the use of WDT and associated WDTCTL register format. 7. CO4 7 Marks a) Write a brief note on non-maskable interrupts and the shared data CO4 b) 7 Marks problem.

#### (**OR**)

8. With a neat sketch, explain the architecture of comparator A. CO5 7 Marks a) Explain the operation of Successive-Approximation ADC. b) CO5 7 Marks UNIT-V

#### Write a brief note on Finite State Machines. 9. CO6 7 Marks a) Write a detailed note on IOT communication models. CO6 b) 7 Marks (**OR**)

#### 10. Write a short note on Data path architecture. CO6 7 Marks a) List the privacy considerations and interoperability issues to be CO6 7 Marks b) considered while developing IOT devices.

|    |          | Beam voltage $V_0$ = 900V, Beam current $I_0$ = 30mA, frequency f = 8GHz,                                                                                                                                          |            |                    |
|    |          | Gap spacing in either cavity $d = 1$ mm cavity, Spacing between centers of                                                                                                                                         |            |                    |
|    |          | cavities $L = 4$ cm, Effective shunt impedance $R_{sh} = 49G\Omega$ . Determine:                                                                                                                                   |            |                    |
|    |          | i) The electron velocity.                                                                                                                                                                                          |            |                    |
|    |          | 11) The dc transit time of electron.                                                                                                                                                                               |            |                    |
|    |          | iv) The voltage gain in decibels                                                                                                                                                                                   |            |                    |
|    | h)       | Explain the limitations of conventional tubes                                                                                                                                                                      | CO1        | 7 Marks            |
|    | 0)       | (OR)                                                                                                                                                                                                               | 001        |                    |
| 4. | a)       | Explain the bunching process of two cavity klystron with neat sketch.                                                                                                                                              | CO2        | 8 Marks            |
|    | b)       | Explain velocity modulation in reflex klystron with applegate diagram.                                                                                                                                             | CO2        | 6 Marks            |
|    | ,        | UNIT-III                                                                                                                                                                                                           |            |                    |
| 5. | a)       | Explain the operation of RWH-two valley theory with suitable diagrams.                                                                                                                                             | CO2        | 6 Marks            |
|    | b)       | Explain about domain formation in Gunn diode. Explain various oscillating modes of Gunn diode.                                                                                                                     | CO2        | 8 Marks            |
|    |          | (OR)                                                                                                                                                                                                               |            |                    |
| 6. | a)       | What are the avalanche transit time devices? Explain the working of TRAPATT diode.                                                                                                                                 | CO2        | 7 Marks            |
|    | b)       | In a Gunn diode with active length of $20\mu m$ , the drift velocity of electrons                                                                                                                                  | CO3        | 7 Marks            |
|    |          | is 2 x $10^7$ cm. Calculate the rational frequency and critical voltage of the diode.                                                                                                                              |            |                    |
|    |          | UNIT-IV                                                                                                                                                                                                            |            |                    |
| 7. | a)       | Calculate the VSWR of a transmission system operating at 20GHz TE <sub>10</sub>                                                                                                                                    | CO4        | 7 Marks            |
|    |          | mode is propagating through waveguide of dimension $(6.4 \times 3.2)$ cm <sup>2</sup> . The distance between two successive minima is 1.6mm.                                                                       |            |                    |
|    | b)       | Two identical 30dB directional couplers are used to simple incident and reflected power in a wave guide VSWR=2 and the output of the coupler sampling incident power = 4.5mw.What is the value of reflected power? | CO4        | 7 Marks            |

# (OR)

Time: 3 hours
- 8. a) Describe the functioning of each component in a microwave bench setup. CO2 6 Marks
  - b) With the help of necessary experimental setup, describe the measurement CO3 8 Marks of unknown load impedance using slotted line.

## UNIT-V

9. a) Explain in detail about space wave propagation.
b) The observed critical frequencies of E and F layers at Guwahati at CO5 8 Marks particular times are 2.5MHz and 8.4MHz respectively. Calculate the

# maximum electron concentrations of the layers. (OR)

- 10. a) Explain about effect of the earth's magnetic field on ionosphere radio CO6 6 Marks wave propagation.
  - b) Define radio horizon and calculate its value. What is the radio horizon of CO5 8 Marks a television antenna placed at a height of 166m? If the signal is to be received at a distance of 66km, what should be the height of receiving antenna?

#### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### SATELLITE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours

#### **Answer One Ouestion from each Unit** All questions carry equal marks

#### UNIT-I

- With the help of block diagram, demonstrate the operation principle in CO1 1. a) 8 Marks satellite communication system.
  - Write about satellite frequency band designation and associated CO1 6 Marks b) applications.

#### (**OR**)

- 2. Derive the elevation and azimuth angles for geo-stationary satellites with CO2 8 Marks a) necessary equations.
  - A satellite is in a 322 km high circular orbit. Assuming average radius of CO4 6 Marks b) earth 6378 km. determine:
    - i) Orbital velocity in meters per second.
    - ii) The orbital period in minutes.
    - iii) The orbital angular velocity in radians per second.

#### UNIT-II

Enumerate the steps involved while designing a satellite communication CO3 3. 8 Marks a) link.

Explain with neat sketch. CO1 b)

- i) Earth station receiver.
- ii) Earth station transmitter.

#### (**OR**)

- 4. Derive an expression for the orbital period of circular orbit by considering CO2 8 Marks a) Newton's Laws of motion and gravitation.
  - The earth rotates once per sidereal day of 23 h 56 min 4.09 secs. Show CO4 6 Marks b) that the height of Geo-synchronous orbit is about 36,000 kms.

#### UNIT-III)

- Discuss briefly how the demand assignment may be implemented in a 5 CO5 8 Marks a) TDMA network. What is the advantage of TDMA over FDMA in this respect?
  - CO1 Mention in detail about various satellite codes. 6 Marks b)

#### (OR)

- 6. Discuss the basic types and relationships of satellite antennas. 7 Marks CO1 a)
  - Write a short note on AOCS (Altitude and Orbit Control System) of a CO1 7 Marks b) satellite.

### UNIT-IV)

7. Analyze and discuss the Delay and Throughput considerations in a CO2 7 Marks a) satellite system.

1

b) Summarize the advantages and disadvantages of low and medium earth CO1 7 Marks orbits.

SVEC-16

Max. Marks: 70

6 Marks

#### (OR)

8. a) Compare geostationary and geosynchronous satellites. CO1 7 Marks
b) An earth station antenna has a diameter of 30m has an overall efficiency of 68% and is used to receive a signal at 4150MHz. Calculate gain of the antenna.
9. a) Explain the generation of GPS signals with a neat sketch. CO5 8 Marks

| 9.  | a) | Explain the generation of GPS signals with a neat sketch.           | CO5 | 8 Marks |
|-----|----|---------------------------------------------------------------------|-----|---------|
|     | b) | Briefly explain about spread spectrum techniques.                   | CO5 | 6 Marks |
|     |    | (OR)                                                                |     |         |
| 10. | a) | Explain are the successful measurements in a GPS C/A code receiver. | CO1 | 8 Marks |
|     | b) | Write short notes on Satellite Signal Acquisition.                  | CO1 | 6 Marks |

| 7.                                               | a)  | List out the applications of Bluetooth.                                                 | CO1            | 7 Marks  |  |  |
|                                                  | b)  | Explain the protocol architecture of Bluetooth.                                         | CO1            | 7 Marks  |  |  |
|                                                  |     | (OR)                                                                                    |                |          |  |  |
| 8.                                               | a)  | Explain the concept of Bluetooth usage models.                                          | CO2            | 7 Marks  |  |  |
|                                                  | b)  | Describe the base band specifications of Bluetooth.                                     | CO2            | 7 Marks  |  |  |
|                                                  |     |                                                                                         |                |          |  |  |
| 9.                                               | a)  | Explain the concept of wireless ATM.                                                    | CO2            | 7 Marks  |  |  |
|                                                  | b)  | Explain the general structure of ATM switch.                                            | CO2            | 7 Marks  |  |  |
|                                                  | ,   | (OR)                                                                                    |                |          |  |  |
| 10.                                              | a)  | Discuss about CDPD.                                                                     | CO2            | 7 Marks  |  |  |
|                                                  | b)  | Explain in detail about physical layer in CDPD.                                         | CO2            | 7 Marks  |  |  |
|                                                  |     |                                                                                         |                |          |  |  |

#### LOW POWER CMOS VLSI DESIGN

[Electronics and Communication Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | State the sources of power dissipation in digital integrated circuits.                                                                                                | CO6 | 7 Marks  |
|-----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Explain about technology and device innovations with respect to low power.                                                                                            | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                  |     |          |
| 2.  | a) | Elaborate about static power dissipation in CMOS circuits. Give the alternates to reduce it.                                                                          | CO3 | 7 Marks  |
|     | b) | How to estimate power dissipation at architecture level?                                                                                                              | CO1 | 7 Marks  |
|     |    | UNIT-II                                                                                                                                                               |     |          |
| 3.  |    | Compute the transition density and static probability of $Y = A + B + C$<br>given $P(a) = 0.2$ , $P(b) = 0.3$ , $P(c) = 0.4$ , $D(a) = 1$ , $D(b) = 2$ , $D(c) = 3$ . | CO4 | 14 Marks |
|     |    | (OR)                                                                                                                                                                  |     |          |
| 4.  | a) | Give the relation between static probability and conditional probability.                                                                                             | CO3 | 7 Marks  |
|     | b) | Probabilistic power analysis techniques are preferred or not. Justify.                                                                                                | CO2 | 7 Marks  |
|     |    | UNIT-III                                                                                                                                                              |     |          |
| 5.  | a) | How to drive large capacitive loads? Explain in detail.                                                                                                               | CO2 | 7 Marks  |
|     | b) | Explain about double edge triggered flip flops.                                                                                                                       | CO6 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                  |     |          |
| 6.  |    | Whether pre-computation logic can reduce power dissipation or not. Justify.                                                                                           | CO2 | 14 Marks |
|     |    | UNIT-IV                                                                                                                                                               |     |          |
| 7.  |    | Explain about low power techniques which can be implemented for SRAM cell.                                                                                            | CO1 | 14 Marks |
|     |    | (OR)                                                                                                                                                                  |     |          |
| 8.  | a) | Elaborate on clock tree distribution.                                                                                                                                 | CO6 | 7 Marks  |
|     | b) | Explain about reduced swing clock.                                                                                                                                    | CO4 | 7 Marks  |
|     |    | UNIT-V                                                                                                                                                                |     |          |
| 9.  | a) | How to reduce power dissipation in digital filters?                                                                                                                   | CO1 | 7 Marks  |
|     | b) | Explain about parallel processing with voltage reduction.                                                                                                             | CO6 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                  |     |          |
| 10. | a) | Where do we use tri-state keeper circuits? Explain.                                                                                                                   | CO6 | 7 Marks  |
|     | b) | Explain about pulsed word-line and reduced bit-line swing.                                                                                                            | CO6 | 7 Marks  |
|     |    | \$P \$P \$P                                                                                                                                                           |     |          |

|               |    | All questions carry equal marks                                                             |     |         |
|               |    |                                                                                             |     |         |
| 1             | a) | Describe the behaviour of a resistor over all frequency                                     | CO3 | 7 Marks |
| 1.            | h) | What is loss tangent and explain its significance?                                          | CO3 | 7 Marks |
|               | 0) | OR)                                                                                         | 005 | / Winto |
| 2.            | a) | What is the origin of the presence of a capacitor in an inductor?                           | CO3 | 7 Marks |
|               | b) | What are the parameters that are to be considered while designing an RF transformer?        | CO3 | 7 Marks |
|               |    | UNIT-II                                                                                     |     |         |
| 3.            | a) | Draw and explain the equivalent circuit of a transmission line.                             | CO2 | 7 Marks |
|               | b) | Explain the construction and operation of micro strip line.                                 | CO2 | 7 Marks |
|               |    | (OR)                                                                                        |     |         |
| 4.            | a) | Derive the expressions for voltages and currents along the length of a transmission line/   | CO2 | 7 Marks |
|               | b) | Define VSWR and explain its significance/                                                   | CO2 | 7 Marks |
|               |    | (UNIT-III)                                                                                  |     |         |
| 5.            | a) | Explain any of the two discrete component matching methods/                                 | CO3 | 7 Marks |
|               | b) | Explain the matched network design using micro strip lines/<br>(OR)                         | CO3 | 7 Marks |
| 6.            | a) | Write the differences between lumped and distributed approaches for filter design.          | CO4 | 7 Marks |
|               | b) | Describe the operation of the diode used for RF applications.                               | CO3 | 7 Marks |
|               | ,  |                                                                                             |     |         |
| 7.            | a) | Draw and explain the block diagram of generic amplifier system.                             | CO5 | 7 Marks |
|               | b) | What is stability and how to find whether the transistor is stable or not?                  | CO3 | 7 Marks |
|               | ,  | (OR)                                                                                        |     |         |
| 8.            | a) | How to design frequency compensated matching network?                                       | CO5 | 7 Marks |
|               | b) | What is a balanced amplifier and how to design it?                                          | CO5 | 7 Marks |
|               |    |                                                                                             |     |         |
| 9.            | a) | Draw and explain the principle of operation of negative resistance oscillator.              | CO4 | 7 Marks |
|               | b) | Derive the expression for frequency of oscillations generated by varactor diode oscillator. | CO4 | 7 Marks |
|               |    | (OR)                                                                                        |     |         |
| 10.           | a) | What are the characteristics of a mixer?                                                    | CO5 | 7 Marks |
|               | b) | What are the advantages of a crystal oscillator?                                            | CO4 | 7 Marks |
|               |    | \$P\$ \$P\$ \$P\$                                                                           |     |         |

#### SPEECH PROCESSING

[Electronics and Communication Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a)       | Draw the block diagram for a discrete time model of speech production<br>and explain about each block in detail                | CO5 | 7 Marks    |
|-----|----------|--------------------------------------------------------------------------------------------------------------------------------|-----|------------|
|     | b)       | Describe the terms Diphthongs, Unvoiced and Voiced fricatives and<br>artifacts as applied to the production of speech.<br>(OR) | CO1 | 7 Marks    |
| 2.  | a)       | Discuss the effect of radiation at the lips.                                                                                   | CO1 | 6 Marks    |
|     | b)       | Derive the Transfer function of the lossless tube model.                                                                       | CO3 | 8 Marks    |
|     |          | UNIT-II)                                                                                                                       |     |            |
| 3.  | a)       | Explain the effect of size and shape of window in analysis of speech.                                                          | CO5 | 8 Marks    |
|     | b)       | Describe the following time domain parameters.                                                                                 | CO1 | 6 Marks    |
|     |          | i) Short-time average energy and Magnitude.                                                                                    |     |            |
|     |          | 11) Short-time average ZCR.                                                                                                    |     |            |
| 4   | 2)       | (UR)<br>Define short term outcoorrelation. What are its applications?                                                          | CO6 | 9 Martra   |
| 4.  | a)       | Explain how nitch period is estimated using parallel processing approach                                                       | CO0 | 6 Marks    |
|     | 0)       | UNIT-III                                                                                                                       | COJ | U WIAIKS   |
| 5.  | a)       | Explain the spectrum analysis of voiced speech using a window.                                                                 | CO4 | 7 Marks    |
|     | b)       | Explain the procedure for extracting the impulse response of speech production using Homomorphic system.                       | CO2 | 7 Marks    |
|     |          | (OR)                                                                                                                           |     |            |
| 6.  | a)       | Discuss the properties of complex cepstrum.                                                                                    | CO1 | 7 Marks    |
|     | b)       | Discuss the estimation of formants in a speech signal.                                                                         | CO2 | 7 Marks    |
|     |          | (UNIT-IV)                                                                                                                      |     |            |
| 7.  | a)       | Explain LPC analysis with a mathematical model.                                                                                | CO5 | 7 Marks    |
|     | b)       | Compute LP coefficients using Cholesky decomposition solution for                                                              | CO3 | 7 Marks    |
|     |          | covariance method.                                                                                                             |     |            |
| 0   | a)       | (UR)                                                                                                                           | CO4 | 7 Morka    |
| 0.  | a)       | LPC coefficient extraction                                                                                                     | 004 | / IVIALKS  |
|     | h)       | Explain how vocal tract system is modeled using I P parameters                                                                 | CO3 | 7 Marks    |
|     | 0)       | INTT-V                                                                                                                         | 005 | / 10101113 |
| 0   | a)       | Discuss the features that distinguish the speakers                                                                             | CO4 | 6 Marka    |
| 9.  | a)<br>h) | Explain the concept of evaluating the similarities of speech patterns in                                                       | CO4 | 8 Marks    |
|     | 0)       | speech recognition.                                                                                                            | 004 | 0 IVIAIRS  |
|     |          | (OR)                                                                                                                           |     |            |
| 10. | a)       | Explain the steps in Viterbi algorithm and its applications.                                                                   | CO6 | 8 Marks    |
|     | b)       | Compare speech recognition and speaker recognition system.                                                                     | CO4 | 6 Marks    |

## **BIG DATA ANALYTICS**

## [Computer Science and Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1. Discuss Four V's of Big Data. CO1 7 Marks a) Briefly explain Outlier Detection and Treatment. b) CO1 7 Marks (**OR**) Briefly explain Analytics Process model. CO1 7 Marks 2. a) Explain different types of Data Sources and Sampling Techniques. CO1 7 Marks b) UNIT-II 3. What is Hadoop Ecosystem? Discuss various components of Hadoop CO2 7 Marks a) Ecosystem. Describe the basic building blocks of Hadoop in detail. 7 Marks CO2 b) (**OR**) 4. Briefly explain Hadoop File Systems. CO2 7 Marks a) Describe HDFS concepts. b) CO2 7 Marks UNIT-III) 5. Explain anatomy of a Map Reduce. CO3 7 Marks a) Apply the implementation of map reduce concept classic Architecture and CO4 7 Marks b) explain with an example. (**OR**) 6. Explain Shuffle and Sort. CO3 7 Marks a) b) Describe different types of failures in Classic MapReduce. CO3 7 Marks UNIT-IV) What do you mean by HiveQL Data Definition Language? Explain any 7. CO5 7 Marks a) three HIVE QL DDL command with its syntax and example. Compare HIVE with traditional databases. CO4 7 Marks b) (**OR**) Identify the importance of Data Processing Operators of Pig. 8. a) CO<sub>2</sub> 7 Marks Explain Querying Data in HIVE with an Example. CO4 b) 7 Marks UNIT-V ) 9. Investigate about Nutch Search Engine in detail. CO6 7 Marks a) Describe about Crunch and Spark. b) CO6 7 Marks (**OR**) Describe about SEDA. 10. CO1 7 Marks a) Design Hadoop Data flow architecture at Rackspace. CO1 7 Marks b)

#### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### ANALYTICAL INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

| 1.  | a)<br>b) | Describe the working principle of Sodium analyzer with a neat sketch.                                                            | CO1 | 7 Marks<br>7 Marks |
|-----|----------|----------------------------------------------------------------------------------------------------------------------------------|-----|--------------------|
|     | 0)       | (OR)                                                                                                                             | COI |                    |
| 2.  | a)       | Discuss the working principle of direct reading pH meter.                                                                        | CO1 | 7 Marks            |
|     | b)       | Explain the working principle of Dissolved oxygen analyzer with a neat sketch                                                    | CO1 | 7 Marks            |
|     |          | UNIT-II                                                                                                                          |     |                    |
| 3.  | a)       | Explain different detectors used in UV and Visible Spectrophotometers.                                                           | CO1 | 7 Marks            |
|     | b)       | Compare single beam and double beam spectrometers. (OR)                                                                          | CO2 | 7 Marks            |
| 4.  | a)       | Elucidate the working of any one type of IR spectrometer and mention<br>how the chemical solution is analyzed.                   | CO4 | 7 Marks            |
|     | b)       | What is a spectrophotometer? Explain in detail about the construction and working principle of Fourier Transform IR Spectrometer | CO1 | 7 Marks            |
|     |          |                                                                                                                                  |     |                    |
| 5.  | a)       | Specify the significance of flame photometer in analysis of chemical                                                             | CO5 | 7 Marks            |
|     |          | solutions and explain the working of clinical flame photometer.                                                                  |     |                    |
|     | b)       | Describe the working principle of atomic absorption spectrometer with relevant application.                                      | CO3 | 7 Marks            |
|     |          | (OR)                                                                                                                             |     |                    |
| 6.  | a)       | Explain in detail about Magnetic deflection type Mass spectrometer.                                                              | CO1 | 7 Marks            |
|     | b)       | What is meant by Nuclear Magnetic Resonance? Explain the construction and working principle of NMR Spectrometer.                 | CO1 | 7 Marks            |
|     |          | (UNIT-IV)                                                                                                                        |     |                    |
| 7.  | a)       | Describe how gas chromatography is used to provide valid conclusions by analyzing chemical solutions with an example.            | CO3 | 7 Marks            |
|     | b)       | Explain argon ionization detector in detail.                                                                                     | CO1 | 7 Marks            |
|     |          | (OR)                                                                                                                             |     |                    |
| 8.  | a)       | List the different detectors used in liquid chromatography. Explain any one.                                                     | CO1 | 7 Marks            |
|     | b)       | Explain the working principle of liquid chromatography with a neat sketch.                                                       | CO1 | 7 Marks            |
|     |          | UNIT-V                                                                                                                           |     |                    |
| 9.  | a)       | Write short notes on the Scintillation counter and Proportional counter.                                                         | CO1 | 7 Marks            |
|     | b)       | Explain the working of X-ray detector.                                                                                           | CO1 | 7 Marks            |
|     |          | (OR)                                                                                                                             |     |                    |
| 10. | a)       | Outline the instrumentation involved in hydrocarbons estimation in pollution monitoring.                                         | CO6 | 7 Marks            |
|     | b)       | Explain GM counter with neat construction.                                                                                       | CO1 | 7 Marks            |

#### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

## **BIOMEDICAL SIGNAL PROCESSING**

[Electronics and Instrumentation Engineering]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

## 

- 1. a) With the help of a block diagram, explain the objectives of biomedical CO1 6 Marks signal analysis.
  - b) Explain the following biomedical signals. Draw the waveforms and give CO6 8 Marks the frequency ranges relevant to these signals. (i) ECG (ii) EEG.

#### (OR)

- 2. Sketch the diagram of computer aided diagnosis based upon the CO1 14 Marks biomedical signal analysis.
  - UNIT-II

| 3.  | a) | Write a short note on Physiological interference and compare stationary and non-stationary process.                              | CO2 | 7 Marks  |
|-----|----|----------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Explain about homomorphic filtering.                                                                                             | CO2 | 7 Marks  |
|     |    | (OR)                                                                                                                             |     |          |
| 4.  |    | Illustrate how noise is removed with case studies.                                                                               | CO2 | 14 Marks |
|     |    | (UNIT-III)                                                                                                                       |     |          |
| 5.  |    | What are the advantages of adaptive filters over static filter? Design an adaptive filter using LMS algorithm.                   | CO3 | 14 Marks |
|     |    | (OR)                                                                                                                             |     |          |
| 6.  |    | Explain the significance in phase sensitive detector in biomedical signal processing and explain its operation with neat sketch. | CO3 | 14 Marks |
|     |    | UNIT-IV                                                                                                                          |     |          |
| 7.  |    | Explain in detail about QRS detection algorithm.                                                                                 | CO5 | 14 Marks |
|     |    | (OR)                                                                                                                             |     |          |
| 8.  |    | Write a short note on:                                                                                                           | CO4 | 14 Marks |
|     |    | i) Detection of Dicrotic notch.                                                                                                  |     |          |
|     |    | 11) Correlation analysis of EEG channels.                                                                                        |     |          |
|     |    | UNIT-V                                                                                                                           |     |          |
| 9.  |    | Explain the Welch method for power spectral. Density determination.                                                              | CO6 | 14 Marks |
|     |    | (OR)                                                                                                                             |     |          |
| 10. |    | Explain the following terms.                                                                                                     | CO6 | 14 Marks |
|     |    | i) Direct FFT. ii) Window functions.                                                                                             |     |          |
|     |    | \$P & \$P                                                                                                                        |     |          |
|     |    | 1                                                                                                                                |     |          |

[Electronics and Instrumentation Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | Draw the block diagram of power supply unit and explain.                                                                                                                                                                                              | CO1 | 7 Marks |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | Describe the similarities and differences between PLC ladder logic and relay ladder logic.                                                                                                                                                            | CO2 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                  |     |         |
| 2. | a) | List out memory types in PLC and explain in detail.                                                                                                                                                                                                   | CO1 | 5 Marks |
|    | b) | Write short notes on:                                                                                                                                                                                                                                 | CO1 | 9 Marks |
|    |    | i) Photodiode and bidirectional opto isolators.                                                                                                                                                                                                       |     |         |
|    |    | ii) Basic sequence of operation for a PLC.                                                                                                                                                                                                            |     |         |
|    |    | UNIT-II                                                                                                                                                                                                                                               |     |         |
| 3. | a) | A fan is to be started and stopped from any one of three locations. Each location has a start and a stop button. Note that normally closed stops should be in series and normally open starts in parallel. Describe the operation using ladder logic. | CO4 | 8 Marks |
|    | b) | What are the different data transfer and logical operations in a PLC?                                                                                                                                                                                 | CO3 | 6 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                  |     |         |
| 4. | a) | Explain the function of relay logic in PLC programming.                                                                                                                                                                                               | CO2 | 5 Marks |
|    | b) | Explain PLC timer and counter functions with suitable ladder logic example.                                                                                                                                                                           | CO2 | 9 Marks |
|    |    | UNIT-III                                                                                                                                                                                                                                              |     |         |
| 5. | a) | What is Distributed Control System? What are its merits and demerits? Explain how data bus works in a DCS using block diagram.                                                                                                                        | CO1 | 8 Marks |
|    | b) | Discuss the local control unit communication facilities used in any process industry.                                                                                                                                                                 | CO2 | 6 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                  |     |         |
| 6. | a) | Explain the general architecture of DCS.                                                                                                                                                                                                              | CO2 | 6 Marks |
|    | b) | Compare the CSMA/CD, Token ring and Token bus communication protocols in DCS.                                                                                                                                                                         | CO6 | 8 Marks |
|    |    | UNIT-IV                                                                                                                                                                                                                                               |     |         |
| 7. | a) | How the communication takes place in RTU? Explain in detail.                                                                                                                                                                                          | CO4 | 6 Marks |
|    | b) | Explain the selection procedure of SCADA system for industrial automation.                                                                                                                                                                            | CO4 | 8 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                  |     |         |
| 8. | a) | Draw the overview of the SCADA system.                                                                                                                                                                                                                | CO1 | 5 Marks |
|    | b) | Explain in detail of Master terminal unit.                                                                                                                                                                                                            | CO2 | 9 Marks |
|    |    | 1                                                                                                                                                                                                                                                     |     |         |

## UNIT-V

- 9. a) Briefly explain the concept of HART. Explain different HART CO6 6 Marks commands.
  - b) What are the basic requirements of field bus standard? Explain in brief CO5 8 Marks about interoperability and interchangeability.

#### (OR)

- 10. a) What is HART protocol? Explain its operation with a neat block diagram. CO6 6 Marks
  - b) Explain the architecture of Intelligent Field bus device. State its CO4 8 Marks advantages and disadvantages.

## POWER PLANT INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Explain the operation of Hydro power generation with the help of layout in detail                  | CO1 | 7 Marks |
|-----|----|----------------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Classify different instruments in a power plant.                                                   | CO2 | 7 Marks |
| 2.  | a) | Explain the process of nuclear energy developed in Nuclear reactor.                                | CO1 | 7 Marks |
|     | b) | Elaborate the significance of Co-generation.                                                       | CO2 | 7 Marks |
|     |    | UNIT-II                                                                                            |     |         |
| 3.  | a) | Select a suitable measuring device to measure steam temperature and explain its working principle. | CO3 | 7 Marks |
|     | b) | Elaborate the operation of differential pressure transmitter with a neat sketch.                   | CO1 | 7 Marks |
|     |    | (OR)                                                                                               |     |         |
| 4.  | a) | Illustrate the schematic diagram and explain the operation of Steam flow measurement.              | CO4 | 7 Marks |
|     | b) | Justify how the differential pressure method is used for drum level control.                       | CO2 | 7 Marks |
|     |    | UNIT-III)                                                                                          |     |         |
| 5.  | a) | Explain the significance of feed forward plus feedback controller in steam temperature control     | CO4 | 7 Marks |
|     | b) | Elaborate the operation of Furnace draft control -1 with neat sketch.<br>(OR)                      | CO2 | 7 Marks |
| 6.  | a) | Illustrate with schematic diagram and explain the operation of cascade steam temperature control.  | CO5 | 7 Marks |
|     | b) | Select a suitable circuit for combustion control mechanism.                                        | CO3 | 7 Marks |
| 7   | a) | Explain the principle parts of steam turbine                                                       | CO3 | 7 Marks |
| 7.  | b) | Illustrate the different types of parameters for measurement in Turbine system.                    | CO4 | 7 Marks |
|     |    | (OR)                                                                                               |     |         |
| 8.  | a) | Explain the significance of lubrication system and its control.                                    | CO4 | 7 Marks |
|     | b) | Elaborate the operation of Turbo alternator cooling system.                                        | CO3 | 7 Marks |
| 9.  | a) | Mention the key aspects of maintenance of measuring instruments.                                   | CO6 | 7 Marks |
|     | b) | Discuss in detail the safety interlocks and start up and shutdown interlocks.                      | CO1 | 7 Marks |
|     |    | (OR)                                                                                               |     |         |
| 10. | a) | Elaborate the term intrinsic safety of instruments.                                                | CO1 | 7 Marks |

b) Discuss the various explosion hazards in instrument maintenance. CO2 7 Marks

#### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

## **BIG DATA TECHNOLOGIES**

#### [Information Technology]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a)<br>b) | Explain about characteristics, advantages and applications of Big data.<br>Explain Apache Hadoop and Hadoop Ecosystem with example.                                                                                                | CO1<br>CO1 | 7 Marks<br>7 Marks |
|-----|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
| 2.  | a)<br>b) | Explain about the processing of a job in hadoop with a neat sketch.<br>List the various operational modes of hadoop cluster configuration and explain in detail about configuring/installing the hadoop in local/ standalone mode. | CO2<br>CO2 | 7 Marks<br>7 Marks |
|     |          | UNIT-II                                                                                                                                                                                                                            |            |                    |
| 3.  | a)<br>b) | Explain the hadoop distributed file system architecture with a neat sketch.<br>How google file system differs from the hadoop file system and explains<br>the google file system architecture with a neat sketch?                  | CO2<br>CO2 | 7 Marks<br>7 Marks |
| 4.  | a)       | Distinguish between the old and new versions of hadoop API for Map<br>Reduce frame work                                                                                                                                            | CO5        | 7 Marks            |
|     | b)       | Explain about the implementation of map reduce concept with a small example.                                                                                                                                                       | CO5        | 7 Marks            |
|     |          |                                                                                                                                                                                                                                    |            |                    |
| 5.  | a)       | Explain the role of combiner, record reader and partitioner within a map                                                                                                                                                           | CO5        | 7 Marks            |
|     | b)       | Distinguish between the old and new versions of hadoop API for Map<br>Reduce frame work.                                                                                                                                           | CO5        | 7 Marks            |
|     |          | (OR)                                                                                                                                                                                                                               |            |                    |
| 6.  | a)       | Explain the architecture of a pig with a neat sketch.                                                                                                                                                                              | CO5        | 6 Marks            |
|     | D)       | Explain the syntax of a pig program with a suitable example.                                                                                                                                                                       | COS        | 8 Marks            |
|     |          | (UNIT-IV)                                                                                                                                                                                                                          |            |                    |
| 7.  | a)       | Explain about the configuration of CLI client and WI client while<br>interacting with HIVE with neat sketch                                                                                                                        | CO5        | 7 Marks            |
|     | b)       | Explain about the various data types supported by HIVEQL with an example.                                                                                                                                                          | CO5        | 7 Marks            |
|     |          | (OR)                                                                                                                                                                                                                               |            |                    |
| 8.  | a)       | Explain the operators supported by pig with respect to Data access,                                                                                                                                                                | CO1        | 7 Marks            |
|     | b)       | Explain the syntax of a pig program with suitable example.                                                                                                                                                                         | CO1        | 7 Marks            |
|     |          | UNIT-V                                                                                                                                                                                                                             |            |                    |
| 9.  |          | Elaborate Zookeeper in production.                                                                                                                                                                                                 | CO5        | 14 Marks           |
| 10. |          | Explain Pig and Wukong to explore Billion-Edge network graphs.<br>$\circledast \ \circledast \ \circledast$                                                                                                                        | CO5        | 14 Marks           |

### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### **MOBILE APPLICATION DEVELOPMENT**

#### [Information Technology, Computer Science and Systems Engineering]

| Time | e: 3 ho | Answer One Question from each Unit                                                                         | Max. | Marks: 70 |
|------|---------|------------------------------------------------------------------------------------------------------------|------|-----------|
|      |         | All questions carry equal marks                                                                            |      |           |
|      |         | UNIT-I                                                                                                     |      |           |
| 1.   | a)      | Compare and contrast different Mobile Platforms.                                                           | CO1  | 7 Marks   |
|      | b)      | Explain components of Android Stack with a neat sketch.                                                    | CO1  | 7 Marks   |
|      |         | (OR)                                                                                                       |      |           |
| 2.   | a)      | Describe various design patterns in Mobile Information design.                                             | CO1  | 7 Marks   |
|      | b)      | What is Dalvik? Write the steps for creating virtual device.                                               | CO1  | 7 Marks   |
|      |         | UNIT-II                                                                                                    |      |           |
| 3.   | a)      | What are different types of intents? Explain in detail.                                                    | CO1  | 7 Marks   |
|      | b)      | Create an Android Application to listen User Interface Notifications.                                      | CO4  | 7 Marks   |
|      |         | (OR)                                                                                                       |      |           |
| 4.   | a)      | Write the steps for sending and receiving implicit intents.                                                | CO1  | 7 Marks   |
|      | b)      | Develop an Android Application to manage changes to screen orientation.                                    | CO3  | 7 Marks   |
|      |         | UNIT-III)                                                                                                  |      |           |
| 5.   |         | What is difference between View and View group? Explain various View Group elements with suitable example. | CO1  | 14 Marks  |
|      |         | (OR)                                                                                                       |      |           |
| 6.   | a)      | How to create user interface programmatically? Explain with an example.                                    | CO2  | 7 Marks   |
|      | b)      | Create an Android Application to save data to the internal storage.                                        | CO4  | 7 Marks   |
|      |         | UNIT-IV                                                                                                    |      |           |
| 7.   | a)      | Create an Android Application to receive SMS.                                                              | CO6  | 7 Marks   |
|      | b)      | Develop an Android Application for downloading binary data.                                                | CO4  | 7 Marks   |
|      |         | (OR)                                                                                                       |      |           |
| 8.   | a)      | Create an Android Application to get location data.                                                        | CO6  | 7 Marks   |
|      | b)      | Develop an Android Application for downloading text data.                                                  | CO4  | 7 Marks   |
|      |         | UNIT-V                                                                                                     |      |           |
| 9.   | a)      | How to invoke an activity from a service? Explain in detail.                                               | CO5  | 7 Marks   |
|      | b)      | Write about Objective-C classes and control structures.                                                    | CO1  | 7 Marks   |
|      |         | (OR)                                                                                                       |      |           |
| 10.  | a)      | Explain the Anatomy of an IOS App.                                                                         | CO1  | 7 Marks   |
|      | b)      | How to debug IOS Apps? Explain in detail.                                                                  | CO2  | 7 Marks   |
|      |         |                                                                                                            |      |           |

#### **INFORMATION RETRIEVAL SYSTEMS**

[Computer Science and Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a)  | Illustrate in detail about Digital Libraries and Data Warehouse.                              | CO1 | 7 Marks  |
|----|-----|-----------------------------------------------------------------------------------------------|-----|----------|
|    | b)  | What are objectives of Information Retrieval System and explain in detail?                    | CO1 | 7 Marks  |
|    |     | (OR)                                                                                          |     |          |
| 2. | a)  | Differentiate item normalization and text normalization with suitable examples.               | CO1 | 9 Marks  |
|    | b)  | Define Multimedia and index data base search. How it relates to Information Retrieval System? | CO1 | 5 Marks  |
|    |     | (UNIT-II)                                                                                     |     |          |
| 3. | a)  | What is Ingest? Explain with a suitable example.                                              | CO2 | 6 Marks  |
|    | b)  | Define Zoning. How to process Tokens in Information Retrieval System?                         | CO2 | 8 Marks  |
|    | - ) | (OR)                                                                                          |     |          |
| 4. |     | Discuss in Brief :                                                                            | CO3 | 14 Marks |
|    |     | i) Indexing by Term.                                                                          |     |          |
|    |     | ii) Indexing by Concept.                                                                      |     |          |
|    |     | iii) Multimedia Indexing.                                                                     |     |          |
|    |     | UNIT-III)                                                                                     |     |          |
| 5. | a)  | Illustrate the concept of similarity measures for a document.                                 | CO3 | 7 Marks  |
|    | b)  | Describe in briefly weighted Searches of Boolean Systems in Information<br>Retrieval.         | CO3 | 7 Marks  |
|    |     | (OR)                                                                                          |     |          |
| 6. |     | Discuss the following:                                                                        | CO3 | 14 Marks |
|    |     | i) Term – Term Matrix. ii) Term Relationship Matrix.                                          |     |          |
|    |     | iii) Vector Representation. iv) Iterated Class Assignments.                                   |     |          |
|    |     | UNIT-IV                                                                                       |     |          |
| 7. |     | State and explain different ways to display Hit list of items.                                | CO4 | 14 Marks |
|    |     | (OR)                                                                                          |     |          |
| 8. | a)  | Illustrate the concept of Hidden Markov Models.                                               | CO4 | 7 Marks  |
|    | b)  | Explain Page Ranking algorithms in detail.                                                    | CO4 | 7 Marks  |
|    |     | UNIT-V                                                                                        |     |          |
| 9. | a)  | Differentiate Text Search Optimization and Software Search                                    | CO4 | 5 Marks  |
|    | ,   | Optimization.                                                                                 |     |          |
|    | b)  | Summarize the following Software Search Optimization algorithms.                              | CO5 | 9 Marks  |
|    |     | i) Boyer-Moore algorithm.                                                                     |     |          |
|    |     | ii) Aho-Corasick algorithm.                                                                   |     |          |
|    |     | iii) Knuth morris-pratt algorithm.                                                            |     |          |
|    |     | (OR)                                                                                          |     |          |
| 10 |     | What is Information System Evaluation and give overview on                                    | CO5 | 14 Marks |

10. What is Information System Evaluation and give overview on CO5 14 Marks Evaluation?

#### [Information Technology]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

| 1. | a)  | Outline following cryptanalysis attacks.                                                                                       | CO2    | 7 Marks        |
|----|-----|--------------------------------------------------------------------------------------------------------------------------------|--------|----------------|
|    |     | i) Known-plaintext                                                                                                             |        |                |
|    |     | ii) Chosen-plaintext                                                                                                           |        |                |
|    | h)  | Illustrate the components of Conventional Encryption Model with near                                                           | $CO^2$ | 7 Marks        |
|    | 0)  | diagram Explain each component in detail                                                                                       | 002    |                |
|    |     | (OR)                                                                                                                           |        |                |
| 2. | a)  | Apply Playfair cipher with the Key word "KEYWORD" and encrypt the following plaintext "GOODLUCK".                              | CO1    | 7 Marks        |
|    | b)  | Apply columnar transposition for the plain text "SREE VIDYANIKETHAN ENGINEERING COLLEGE" using encryption Key "6 4 3 5 1 7 2". | CO3    | 7 Marks        |
|    |     | UNIT-II                                                                                                                        |        |                |
| 3. | a)  | Users A and B use the Diffie-Hellman key exchange technique with a                                                             | CO3    | 7 Marks        |
|    |     | common prime $q = 11$ and a primitive root a =2.                                                                               |        |                |
|    |     | i) If user A has public key $Y_A=9$ , what is A's private key $X_A$ ?                                                          |        |                |
|    |     | ii) If user B has public key $Y_B=3$ , what is B's private key $X_B$ ?                                                         |        |                |
|    | b)  | List applications of public-key cryptography.                                                                                  | CO1    | 7 Marks        |
|    |     | (OR)                                                                                                                           |        |                |
| 4. | a)  | Describe in detail the key generation in AES algorithm and its expansion format.                                               | CO1    | 7 Marks        |
|    | b)  | With a neat sketch, explain the Elliptic curve cryptography with an example.                                                   | CO1    | 7 Marks        |
|    |     | (UNIT-III)                                                                                                                     |        |                |
| 5  | a)  | What is Digital Signature? Explain how it is created at the sender end and                                                     | CO4    | 7 Marks        |
|    | ,   | retrieved at receiver end differentiate digital signature from digital certificate                                             |        | ,              |
|    | b)  | Discuss about the objectives of HMAC and its security features                                                                 | CO1    | 7 Marks        |
|    | 0)  | (OR)                                                                                                                           | 001    | / 1/10/110     |
| 6. | a)  | Write down the steps involved in Elgamal Digital Signature Scheme and                                                          | CO4    | 7 Marks        |
|    | ,   | Schnorr Digital Signature Scheme used for authenticating a person.                                                             |        |                |
|    | b)  | Illustrate simple Hash functions with necessary examples.                                                                      | CO3    | 7 Marks        |
|    |     | UNIT-IV                                                                                                                        |        |                |
| 7. | a)  | Discuss about Anti-Replay Service in Encapsulating Security Payload.                                                           | CO5    | 7 Marks        |
|    | b)  | Compare security association database and security policy database.                                                            | CO5    | 7 Marks        |
|    |     | (OR)                                                                                                                           |        |                |
| 8. | a)  | Examine the key rings and its significance in PGP. Show how the                                                                | CO5    | 7 Marks        |
|    |     | message generation from sender to receiver and explain with suitable                                                           |        |                |
|    | 1 \ | diagram.                                                                                                                       | ac -   | <b>5</b> ) ( 1 |
|    | b)  | Differentiate between transport modes vs. tunnel mode encryption in IPsec.                                                     | CO5    | / Marks        |

Time: 3 hours

## UNIT-V

- 9. a) Discuss the various measures that may be used for intrusion detection. CO1 7 Marks
  - b) What are viruses? Explain the virus related threats and the counter CO3 7 Marks measures applied.

#### (OR)

- 10. a) Discuss how firewalls help in the establishing a security framework for an CO1 7 Marks organization.
  - b) Explain in detail about the password selection strategies. CO3 7 Marks

#### IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

#### SYSTEM MODELING AND SIMULATION

[Computer Science and Systems Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I What are the steps in simulation study? Explain. CO1 8 Marks 1. a) List out the advantages and disadvantages of Simulation. CO1 6 Marks b) (OR)2. Name the entities, attributes, activities, events and state variables for the CO1 8 Marks a) system shown below: i) Library. ii) Bank. iii) Airport. iv) Grocery store. Define simulation. List any five circumstances, when the simulation is CO1 6 Marks b) the appropriate tool and when it is not. UNIT-II ) 3. Write R code to find the factorial of a number (use recursion). CO3 7 Marks a) Write R code for calculating the coefficient of correlation using the CO3 b) 7 Marks following data. 24 24 10 12 18 27 13 18 12 25 30 10 (**OR**) 4. How to pass default values for arguments in R? Give example. CO3 7 Marks a) Discuss about ANOVA. CO3 7 Marks b) UNIT-III) Explain any two discrete distributions. CO1 7 Marks 5. a) What is Poisson process? Mention the properties of Poisson process. CO<sub>2</sub> 7 Marks b) (**OR**) 6. Six dump trucks are used to haul coal from entrance of a small mine to CO4 14 Marks the rail road. Each truck is loaded by one of the two loaders. After loading, truck immediately moves to the scale to be weighed as soon as possible. Both loaders and scale have FCFS for trucks. Travel time from loader to scale is negligible. After being weighed, a truck begins a travel time and then returns to loader queue. Simulate for clock = 20. Find average loader utilization and average scale utilization. The activity times arc given in the following table: Loading Time 5 5 15 10 10 10 10 Weighing Time 12 12 12 16 12 16 Traveling time 60 100 40 40 80 UNIT-IV 7. Explain any two long-run measures of performance of queuing systems. CO2 7 Marks a) Explain about Networks of queues. CO2 7 Marks b) (**OR**) Explain inverse-transform technique of producing random variates for CO3 8. 3 Marks a) exponential distribution. Generate three Poison variates with mean  $\alpha = 0.2$ . b) CO3 4 Marks

Explain the types of simulation with respect to output analysis with CO3 7 Marks c) example.

- 9. a) Differentiate between terminating or transient simulation and steady state CO6 7 Marks simulation with examples.
  - b) Briefly explain the measure of performance of a simulation system. CO6 7 Marks

(OR)

10. Demonstrate an appropriate method for collecting the data from stale CO6 14 Marks data and time varying data.

#### SYSTEMS ENGINEERING

[Computer Science and Systems Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Compare Traditional Engineering and System Engineering disciplines. 1. CO1 7 Marks a) Briefly explain various system engineering activities and products. CO1 7 Marks b) (**OR**) 2. Explain what Modularity is with an example and give its characteristics. CO1 7 Marks a) b) Briefly explain about origins of systems engineering. CO1 7 Marks UNIT-II 3. Discuss about the Model of Complex System. CO<sub>2</sub> 14 Marks (**OR**) 4. Explain System Life Cycle. CO2 14 Marks UNIT-III) 5. Explain the process of producing needs and requirement analysis in CO3 7 Marks a) system engineering. What are system functional specifications? CO3 b) 7 Marks (OR)6. What are the advantages of using the system design team approach for a 7 Marks CO3 a) large development project? What do we need operational requirements analysis. CO3 7 Marks **b**) UNIT-IV 7. List the characteristics of a set of well stated operational requirements for CO4 5 Marks a) analyzing their adequacy. Explain functional analysis and formulation. CO<sub>4</sub> 9 Marks b) (OR)8. Define the primary systems engineering activities that contribute to CO4 7 Marks a) products of the needs analysis phase. Explain about concept validation. b) CO4 7 Marks UNIT-V 9. Discuss with examples of different activities in the advanced development CO5 14 Marks phase. (OR)10. Explain the steps for transition from development to production. CO5 7 Marks a) b) Discuss In- Service support. CO5 7 Marks

Roll No.

#### IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

#### MANAGEMENT SCIENCE [Information Technology]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. Identify different functions of management and explain each one of them CO1 14 Marks with examples.

#### (**O**R)

- 2. a) What are the advantages of Centralization and Decentralization? Explain. CO3 6 Marks
  b) Write the organization structure of your college. What type of structure is CO3 8 Marks
  - that?

## UNIT-II

3. a) Explain the basic steps of Method study.
b) Explain briefly the basic principles involved in preparing the layout of CO2 7 Marks any industrial plant indicating the important techniques available for the purpose.

#### (**OR**)

4. a) List and explain the steps involved in work-measurement. CO1 7 Marks
b) Enumerate the factors affecting quality and explain how to overcome CO1 7 Marks them.

#### (UNIT-III)

5. a) Write the differences between on-job training and off-job training. CO1 6 Marks
b) What is performance appraisal? List the objectives and steps involved in CO1 8 Marks performance appraisal.

#### (OR)

- 6. a) Explain the methods of merit rating with examples. CO1 8 Marks
  - b) Enumerate the assumptions of McGregor's theory of 'X' and 'Y'. CO1 6 Marks

## UNIT-IV

7. A small project is composed of 8 activities whose time estimates are CO4 14 Marks listed in the table below.

| Activity | Dradaaassar | Estimated duration(Weeks) |             |             |  |  |
|----------|-------------|---------------------------|-------------|-------------|--|--|
| Activity | Fledecessol | Optimistic                | Most likely | Pessimistic |  |  |
| А        | -           | 1                         | 1           | 7           |  |  |
| В        |             | 1                         | 4           | 7           |  |  |
| С        |             | 2                         | 2           | 8           |  |  |
| D        | А           | 1                         | 1           | 1           |  |  |
| Е        | В           | 2                         | 5           | 14          |  |  |
| F        | С           | 2                         | 5           | 8           |  |  |
| G        | D,E         | 3                         | 6           | 15          |  |  |
| Н        | F,G         | 1                         | 2           | 3           |  |  |

i) Draw the project network and determine the expected project completion time.

ii) What duration will have 95% confidence of project completion?

(**OR**)

1

| 8.  | a) | Explain the term 'Entrepreneur'. State the characteristics of an    | CO5 | 6 Marks |
|-----|----|---------------------------------------------------------------------|-----|---------|
|     |    | entrepreneur.                                                       |     |         |
|     | b) | Differentiate between entrepreneur and manager.                     | CO5 | 8 Marks |
|     |    | UNIT-V                                                              |     |         |
| 9.  | a) | What is meant by Business Process Outsourcing? Also state its need. | CO6 | 7 Marks |
|     | b) | Explain the concept of Just-In-Time and state its advantages.       | CO6 | 7 Marks |
|     |    | (OR)                                                                |     |         |
| 10. | a) | Explain the concept of six sigma.                                   | CO6 | 7 Marks |
|     | b) | Discuss in detail the role of BPO in the area of manufacturing.     | CO6 | 7 Marks |
|     |    |                                                                     |     |         |

## **REFRIGERATION AND AIR CONDITIONING**

[Mechanical Engineering]

Max. Marks: 70

Time: 3 hours

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a)       | "The COP of an air refrigeration cycle is very low, but still a refrigeration<br>system is most common in the Air craft" discuss the statement                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | CO1        | 6 Marks             |
|----|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------|
|    | b)       | A Bell-Coleman refrigeration cycle works between 1 bar and 6 bar. The adiabatic efficiency of compression is 90% and expansion is 95%. Find the COP of the system and its tonnage when the air flow rate is 2 kg/sec. The ambient temperature is 25°C and refrigerator temperature is -5°C. (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | CO3        | 8 Marks             |
| 2. | a)<br>b) | Derive an expression for the COP of Bell- Coleman cycle.<br>The capacity of a refrigerator is 200 TR when working between - 8°C and 26°C. Determine the mass of ice produced per day from water at 26°C.<br>Also find the power required to drive the unit. Assume that the cycle operates on reversed Carnot cycle and latent heat of ice is 335 kJ/kg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | CO1<br>CO2 | 6 Marks<br>8 Marks  |
| 3. | a)       | How does the increase in condenser temperature affect COP? Also<br>explain the influence of evaporator temperature on COP. Which of the<br>two temperatures have more influence on COP?                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | CO1        | 6 Marks             |
|    | b)       | A vapour compression machine is used to maintain a temperature of<br>-23°C in a refrigerated space. The ambient temperature is 37°C. The<br>compressor takes in dry saturated vapour of F-12. A minimum 10°C<br>temperature difference is required at the evaporator as well as at<br>condenser. There is no sub cooling of the liquid If the refrigerant flow<br>rate is 1 kg/min, Find:<br>i) Tonnage of refrigeration.<br>ii) Power requirement.<br>iii) Ratio of COP of this cycle to COP of Carnot cycle.<br>(OR)                                                                                                                                                                                                                                                                                                                                | CO4        | 8 Marks             |
| 4. | a)<br>b) | What are essential properties of a good refrigerant?<br>A four cylinder, single acting R-12 compressor 30 cm x 40 cm runs at<br>960 r.p.m. The compressor clearance factor is 0.03 and the law of<br>compression $PV^{1,1} = C$ . The operating pressures for the vapour<br>compression refrigeration system are: 8.47 bar (35°C) and 1.004 bar<br>(-30°). The refrigerant temperatures are: entering the compressor -20°C,<br>leaving the compressor 50°C; entering the condenser 45°C, leaving the<br>condenser 25°C, entering the expansion valve 30° and leaving the<br>evaporator dry saturated. Assuming that heat removed in the compressor<br>is 25 kJ/sec. calculate:<br>i) The refrigerating capacity.<br>ii) The compressor power.<br>iii) COP.<br>iv) Mass of condensing cooling water assuming the rise<br>in term evaporator to be 10°C | CO1<br>CO4 | 4 Marks<br>10 Marks |
|    |          | in temperature to be 10°C.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |            |                     |

v) Also tabulate energy balance for 1 kg of refrigerant.

## UNIT-III)

5. Discuss the advantages of vapour absorption refrigeration system over CO1 7 Marks a) vapour compression refrigeration system. In a vapour absorption refrigeration system, heating, cooling and CO3 7 Marks b) refrigeration takes place at the temperatures of 100°C, 20°C and -5°C respectively. Find the maximum C.O.P of the system. (OR)What is thermo electric refrigeration system? List out the merits and 6. CO2 7 Marks a) demerits of thermo-electric refrigeration system over other refrigeration system. What are the fields of its applications? Determine the COP of a vapour absorption refrigeration system when the b) CO2 7 Marks temperature of generator is 120°C, the temperature of the condenser is 30°C and the temperature of the evaporator is -20°C. What would be its COP if it were a Carnot. UNIT-IV) 7. The following data apply to an air conditioning system: CO5 14 Marks Room sensible heat =41868kJ/hr; room latent heat=41868 kJ/hr; inside design condition= 25°, 50% RH, outside design condition=35°C,DBT, 27.8 WBT. Return air from the room is mixed with the outside air before entering the cooling coil in the ratio of 4:1. Return air from the room is mixed with the cooling air, i.e. after the cooling coil in the ratio of 1:4. Cooling coil by pass factor is 0.1. The air may be reheated if necessary before supplying to the conditioned space. Assume ADP as 10°C and determine, i) Supply air conditions into the room. ii) Refrigeration load due to the reheat. iii) Total refrigeration capacity. iv) The quantity of fresh air supplied. (OR) 8. Explain in brief, an adiabatic saturation process. Represent the same on a CO1 6 Marks a) psychrometric chart. Ten grams of moisture per kg of dry air is removed from atmospheric air CO6 8 Marks b) when it is passed through an air conditioning system and its temperature becomes 20°C. The atmospheric conditions are 40°C DBT and 60% RH. Find the following for the conditioned air: i) Relative humidity. ii) Wet-bulb temperature. iii) Dew point temperature. iv) Enthalpy change for the air. Assume standard atmospheric pressure. UNIT-V 9. Discuss the filters used in air conditioning systems. CO1 7 Marks a) Explain the use of heat pump for heating and cooling cycle with a neat CO1 b) 7 Marks diagram. (OR)10. Define human comfort and explain the factors which affect human a) CO1 7 Marks comfort. Discuss various types of duct systems and their applications. CO1 7 Marks b) රුවු ද්ම କ୍ରେ

Roll No.

|    | b) | With a neat diagram, explain ISO - OSI reference model.                                                                                                                                                                                                                                                                                                                                                                                 | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                    |     |         |
| 2. | a) | What are the reasons for using layered protocols? Explain in detail.                                                                                                                                                                                                                                                                                                                                                                    | CO1 | 7 Marks |
|    | b) | List the requirements in building a computer network.                                                                                                                                                                                                                                                                                                                                                                                   | CO1 | 7 Marks |
|    |    | (UNIT-II)                                                                                                                                                                                                                                                                                                                                                                                                                               |     |         |
| 3. | a) | Suppose we want to transmit the "message 1011 0010 0111 and protect it<br>from errors using the CRC polynomial $x^4 + x^2 + 1$ . Use polynomial long<br>division to determine the message that should be transmitted. Suppose the<br>leftmost bit of the message is inverted due to noise on the transmission<br>link. What is the result of the 'receiver's CRC calculation? How does the<br>receiver know that an error has occurred? | CO4 | 7 Marks |
|    | b) | Explain the algorithm used for reliable transmission and flow control. <b>(OR)</b>                                                                                                                                                                                                                                                                                                                                                      | CO1 | 7 Marks |
| 4. | a) | Describe random access protocols with their merits and demerits.                                                                                                                                                                                                                                                                                                                                                                        | CO1 | 7 Marks |
|    | b) | Compare Fast Ethernet and Gigabit Ethernet Technologies.                                                                                                                                                                                                                                                                                                                                                                                | CO2 | 7 Marks |
|    |    | UNIT-III                                                                                                                                                                                                                                                                                                                                                                                                                                |     |         |
| 5. | a) | Draw and explain about Header format of Internet Protocol version 4.                                                                                                                                                                                                                                                                                                                                                                    | CO1 | 7 Marks |
|    | b) | A network on the Internet has a subnet mask of 255.255.240.0. What is the maximum number of nodes it can handle?                                                                                                                                                                                                                                                                                                                        | CO3 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                    |     |         |
| 6. | a) | What is meant by Anycast Routing? Explain with an example.                                                                                                                                                                                                                                                                                                                                                                              | CO1 | 6 Marks |
|    | b) | Recall various Network Layer design issues.                                                                                                                                                                                                                                                                                                                                                                                             | COI | 8 Marks |
| _  |    | UNIT-IV                                                                                                                                                                                                                                                                                                                                                                                                                                 |     |         |
| 7. | a) | Compare TCP congestion control mechanisms.                                                                                                                                                                                                                                                                                                                                                                                              | CO2 | 8 Marks |
|    | b) | What is the total size of the minimum TCP MTU, including TCP and IP overhead but not including data link layer overhead?                                                                                                                                                                                                                                                                                                                | CO2 | 6 Marks |
| 0  |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                    | 004 |         |
| 8. | a) | A client uses UDP to send data to server. The data length is 16 bytes.<br>Calculate the efficiency of this transmission at the UDP level (ration of<br>useful bytes to total bytes).                                                                                                                                                                                                                                                    | CO4 | 6 Marks |
|    | b) | <ul><li>Briefly explain the following Timers in TCP.</li><li>i) Retransmission Time Out.</li><li>ii) Persistence Timer</li></ul>                                                                                                                                                                                                                                                                                                        | CO1 | 8 Marks |

## UNIT-V

| 9.  | a) | Describe the Distribution of Domain Name System(DNS) Name Space. | CO1 | 6 Marks |
|-----|----|------------------------------------------------------------------|-----|---------|
|     | b) | Consider DNS servers.                                            | CO2 | 8 Marks |
|     |    | i) Compare two approaches, obtaining a name from a file          |     |         |
|     |    | in a remote machine and from a DNS server of the local ISP.      |     |         |
|     |    | ii) Describe the relationship between a domain name taken        |     |         |
|     |    | from a DNS server and an IP address subnet.                      |     |         |
|     |    | (OR)                                                             |     |         |
| 10. | a) | Summarize the principles of application layer protocols.         | CO2 | 6 Marks |
|     | b) | Explain in detail about Simple Mail Transfer Protocol.           | CO1 | 8 Marks |
|     |    |                                                                  |     |         |

Answer One Question from each Unit All questions carry equal marks Max. Marks: 70

#### 

| 1.  | a) | Name different types of lists sup<br>HTML and HTML5. | pported by HTML. Distinguish between      | CO1<br>CO2 | 7 Marks  |
|-----|----|------------------------------------------------------|-------------------------------------------|------------|----------|
|     | b) | Explain the following HTML tag                       | s with suitable example.                  | CO1        | 7 Marks  |
|     | ,  | i) <pre>ii) &lt;</pre>                               | <canvas></canvas>                         |            |          |
|     |    | iii) <img/> iv)                                      | <div></div>                               |            |          |
|     |    | , <u> </u>                                           | (OR)                                      |            |          |
| 2.  | a) | Explain various form elements of                     | THTML with suitable example.              | CO1        | 7 Marks  |
|     | b) | Explain the following HTML tag                       | s with suitable example.                  | CO1        | 7 Marks  |
|     |    | i) <font> ii)</font>                                 | <meta/>                                   |            |          |
|     |    | iii) iv)                                             | <video></video>                           |            |          |
|     |    |                                                      | UNIT-II                                   |            |          |
| 3.  | a) | Classify CSS selectors and explai                    | n.                                        | CO2        | 7 Marks  |
|     | b) | Design a web page that display                       | credit card type and then validate the    | CO6        | 7 Marks  |
|     |    | entered card number according to                     | the card type.                            |            |          |
|     |    | -                                                    | (OR)                                      |            |          |
| 4.  | a) | Explain the following pre-defined                    | l objects of JavaScript.                  | CO1        | 7 Marks  |
|     |    | i) Window. ii) I                                     | Document.                                 |            |          |
|     | b) | Develop a web page to convert 1                      | Indian rupees to Foreign currency. Read   | CO6        | 7 Marks  |
|     |    | the Indian rupees through input                      | t dialog and select foreign currency to   |            |          |
|     |    | which Indian rupees are converted                    | d using drop down menu.                   |            |          |
|     |    |                                                      | (UNIT-III)                                |            |          |
| 5.  |    | Develop a mobile optimized w                         | ebsite for displaying the images using    | CO5        | 14 Marks |
|     |    | responsive classes.                                  |                                           |            |          |
|     |    |                                                      | (OR)                                      |            |          |
| 6.  |    | Develop Contact Us Web Page us                       | sing the grid system in bootstrap.        | CO5        | 14 Marks |
|     |    |                                                      | (UNIT-IV)                                 |            |          |
| 7.  | a) | Build a PHP Page that reads User                     | Name and Favorite Color from the html     | CO4        | 8 Marks  |
|     |    | form and then display user name                      | ne in green color and sets user favorite  |            |          |
|     |    | color as a background color to the                   | e web page.                               |            |          |
|     | b) | Demonstrate the implementation                       | of Object Cloning in PHP.                 | CO1        | 6 Marks  |
|     |    |                                                      | (OR)                                      |            |          |
| 8.  | a) | Develop a PHP code to implement                      | nt constructor.                           | CO3        | 8 Marks  |
|     | b) | Demonstrate OOP principles with                      | n suitable example using PHP.             | CO1        | 6 Marks  |
|     |    |                                                      | UNIT-V                                    |            |          |
| 9.  | a) | Define a prepared statement. Exp                     | lain in detail with the suitable program. | CO3        | 7 Marks  |
|     | b) | Create a web page to perform for                     | m data validation in PHP.                 | CO4        | 7 Marks  |
|     |    |                                                      | (OR)                                      |            |          |
| 10. | a) | List the different authentication n                  | nethodologies used in PHP.                | CO1        | 7 Marks  |
|     | b) | Design a web page to store the co                    | ontact us form data in the database using | CO3        | 7 Marks  |
|     |    | PHP. (Note: contact us page con                      | tains the following fields Name, Email,   |            |          |
|     |    | subject, message and submit butto                    | on).                                      |            |          |

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | Compare Recursive interpreters and Iterative interpreters.                                         | CO1 | 7 Marks  |
|----|----|----------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Write the specification of YACC parser generator and explain with example.                         | CO5 | 7 Marks  |
|    |    | (OR)                                                                                               |     |          |
| 2. | a) | Explain Input buffering with example.                                                              | CO1 | 7 Marks  |
|    | b) | Give the Specification of Tokens.                                                                  | CO1 | 7 Marks  |
|    |    | UNIT-II)                                                                                           |     |          |
| 3. |    | Form ACTION/GOTO table for the following grammar                                                   | CO3 | 14 Marks |
|    |    | $S \rightarrow L=R  R $                                                                            |     |          |
|    |    | $L \rightarrow R \mid id$                                                                          |     |          |
|    |    | $R \rightarrow L$                                                                                  |     |          |
|    |    | Justify whether the grammar is $LR(0)$ or not.                                                     |     |          |
|    |    | (OR)                                                                                               |     |          |
| 4. | a) | Define Ambiguous grammar. Eliminate ambiguity for the grammar $E \rightarrow E + E/E - E/(E)/id$ . | CO3 | 7 Marks  |
|    | b) | Give the limitations of Recursive descent parser.                                                  | CO1 | 7 Marks  |
|    |    | UNIT-III                                                                                           |     |          |
| 5. | a) | List out some typical semantic errors. Explain how they can be rectified.                          | CO1 | 7 Marks  |
|    | b) | Define static checking. Give some examples of static checks.                                       | CO1 | 7 Marks  |
|    |    | (OR)                                                                                               |     |          |
| 6. | a) | Write a syntax directed translation scheme for desk calculator grammar                             | CO4 | 8 Marks  |
|    |    | L→En                                                                                               |     |          |
|    |    | $E \rightarrow E + T$                                                                              |     |          |
|    |    | $E \rightarrow T$                                                                                  |     |          |
|    |    | $T \rightarrow T^*F$                                                                               |     |          |
|    |    | $T \rightarrow F$                                                                                  |     |          |
|    |    | $F \rightarrow (E)$                                                                                |     |          |
|    |    | $F \rightarrow digit.$                                                                             |     |          |
|    | b) | Write Type Expression for the type an array of pointers to real, where the                         | CO1 | 6 Marks  |
|    |    | array index ranges from 1 to 100.                                                                  |     |          |
|    |    | UNIT-IV                                                                                            |     |          |
| 7. | a) | Compare various forms of three address code.                                                       | CO1 | 7 Marks  |

b) Convert the following arithmetic expression into syntax tree and three CO4 7 Marks address code  $b^* - (a + b)$ .

#### (OR)

| 8.  | a)     | Explain the usage of search tree in implementing symbol table.                                                   |     | 7 Marks |  |
|-----|--------|------------------------------------------------------------------------------------------------------------------|-----|---------|--|
|     | b)     | b) Differentiate between formal parameters and actual parameters. Explain about activation of procedure/function |     | 7 Marks |  |
|     | UNIT-V |                                                                                                                  |     |         |  |
| 9.  | a)     | Discuss various object code forms.                                                                               | CO1 | 7 Marks |  |
|     | b)     | Design an algorithm for code generation from there address code.                                                 | CO3 | 7 Marks |  |
|     | (OR)   |                                                                                                                  |     |         |  |
| 10. | a)     | With an example, explain peephole optimization.                                                                  | CO2 | 7 Marks |  |
|     | b)     | Explain code generation algorithm with the function GETREG.                                                      | CO1 | 7 Marks |  |
|     |        |                                                                                                                  |     |         |  |

## 

| 1. | a)<br>b) | Discuss briefly about impacts occurred while transferring the technology.<br>Explain the role of technology in poverty eradication in rural development.                                                                                   | CO1<br>CO1 | 7 Marks<br>7 Marks |
|----|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|    |          | (OR)                                                                                                                                                                                                                                       |            |                    |
| 2. | a)       | Thandrapadu is one of the backward village in Kurnool District with lack<br>of infrastructure facilities. Choose the technologies that can improve the<br>rural infrastructure.                                                            | CO4        | 7 Marks            |
|    | b)       | List out and explain the different ways how you will eradicate poverty.                                                                                                                                                                    | CO1        | 7 Marks            |
|    |          | UNIT-II)                                                                                                                                                                                                                                   |            |                    |
| 3. | a)       | Kumar is a young doctorate in Mechanical engineering from NIT Trichy<br>and carried out his research in renewable energy sources. He wants to<br>implement his ideas in rural areas. How can he help rural areas in using<br>solar energy? | CO4        | 7 Marks            |
|    | b)       | Ramesh who supplies solar cooker from Bangalore and want to sell in the village. What is the principle behind the working of solar cooker?                                                                                                 | CO2        | 7 Marks            |
|    |          | (OR)                                                                                                                                                                                                                                       |            |                    |
| 4. | a)       | The increase of wood waste and animal waste is more in the village<br>Ramapuram which is near to the forest area. Show how the waste can be<br>used by the rural people with the technology for cooking?                                   | CO4        | 7 Marks            |
|    | b)       | Explain briefly about procedure involved in concentration solar power<br>and photovoltaic cells for generation of electricity.                                                                                                             | CO2        | 7 Marks            |
|    |          | UNIT-III)                                                                                                                                                                                                                                  |            |                    |
| 5. | a)       | Define tissue culture. Explain briefly how the production of one of the ornamental plant orchids can be increased with the plant tissue culture.                                                                                           | CO4        | 7 Marks            |
|    | b)       | Explain the role of food and agro based technologies in rural development.                                                                                                                                                                 | CO4        | 7 Marks            |
|    |          | (OR)                                                                                                                                                                                                                                       |            |                    |
| 6. |          | Discuss how food and agro based technologies gives employment and profits to community with government partnership.                                                                                                                        | CO1        | 14 Marks           |
|    |          | UNIT-IV                                                                                                                                                                                                                                    |            |                    |
| 7. | a)       | Raghunath is an agricultural scientist wants to give awareness to the rural people about the usage of organic fertilizers in the crop filed. Suggest the                                                                                   | CO6        | 7 Marks            |

importance and uses of bio fertilizers.b) Pandurangapuram which is one of the villages in the drought prone area CO4 7 Marks of the Rayalaseema area. Show how rain water technology is useful for the village.

#### (OR)

1
- 8. a) Write the importance of medical and aromatic plants and explain their CO5 7 Marks need in community development.
  - b) Give solution how dry land can be converted to farming land keeping in CO2 7 Marks view of bio-fertilizers.

- 9. a) What is meant by CSR? How development can be achieved with the CO3 7 Marks involvement of private sector participation in the rural area?
  - b) Write a short note on Sansaad Aadarsh Gram Yojana. CO1 7 Marks

#### (OR)

10. What are the various ICT applications? How it is applicable to rural CO2 14 Marks India?

#### SOFTWARE TESTING

#### [Computer Science and Systems Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Define early testing. List the benefits of early testing. 1. CO1 7 Marks a) b) What is the psychology behind testing by an independent team? CO1 7 Marks (**OR**) 2. Compare manual testing and automated testing. CO2 8 Marks a) b) Define test strategy matrix. Explain. CO1 6 Marks UNIT-II 3. What is loop testing? Explain various loops. CO1 8 Marks a) Explain data flow testing in detail. CO1 b) 6 Marks (**OR**) Differentiate statement coverage and condition coverage. 4. CO<sub>2</sub> 8 Marks a) b) Explain multiple condition coverage. CO1 6 Marks (UNIT-III) List the steps involved in deriving test cases using cause effect graphing 5. a) CO<sub>2</sub> 7 Marks based testing. Derive the test cases for the following scenario. CO3 7 Marks b) "A program has been designed to determine the nature of roots of a quadratic equation. The quadratic equation takes three input values from the range [0, 100]." (OR)Design a finite state machine which accepts "aabb" character sequence in 6. CO3 7 Marks a) a given text. Write an algorithm that simulates the behavior of finite state machine. b) CO1 7 Marks UNIT-IV) 7. Test the Auto Teller Machine software by developing the following. CO6 14 Marks i) Unit test plan. ii) Integration test plan. iii) System test plan. (**OR**) CO4 8. Consider a project with the following components: 14 Marks EI(Simple)=30, EO(average)=20, EQ(average)=35, ILF(complex)=8, ELF(complex)=05. In addition, the system requires significant end-user efficiency, moderate distributed data processing, critical data communications, and other GSCs are incidental. Compute the function points for this system using FPA. UNIT-V 9. Explain the need for automated testing tools. a) CO1 7 Marks Analyze the steps involved in selecting software testing tools. b) CO<sub>2</sub> 7 Marks (**OR**) 10. Evaluate the role software size metrics on software quality. CO5 14 Marks

SOFTWARE TESTING

[Computer Science and Systems Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Explain Software Testing Model with neat diagram. CO1 8 Marks 1. a) b) Explain Software testing as process. Justify? CO1 6 Marks (**OR**) Define STLC and explain each step in detail. 8 Marks 2. CO1 a) Compare Positive and Negative testing. CO<sub>2</sub> 6 Marks b) UNIT-II Distinguish between decision node and junction node. 3. CO<sub>2</sub> 7 Marks a) Design Test cases for Statement coverage and Branch coverage. Explain CO3 7 Marks b) with an appropriate example. (**OR**) 4. Explain data flow testing in detail. CO1 6 Marks a) Write a program to display the prime numbers up to a given number. b) CO4 8 Marks Draw the control flow graph and calculate the cyclomatic complexity number for the given program. (UNIT-III) 5. List and explain the elements of state testing. CO1 7 Marks a) Identify the possible states, inputs of a software process and draw its CO2 b) 7 Marks corresponding state table. (**OR**) Describe the need of state table. Explain the process of converting state 7 Marks 6. CO3 a) table into test cases. "Error Guessing is an ad hoc approach for testing." Comment on this CO1 7 Marks b) statement UNIT-IV) 7. Discuss the key components of test management. CO1 7 Marks a) Analyze the role testing group activities for conducting software testing CO2 7 Marks b) effectively. (**OR**) List the differences between size oriented metrics and function point 8. CO<sub>2</sub> 7 Marks a) analysis metrics. Explain the process of calculating function points of real time software. CO4 7 Marks b) UNIT-V 9. Identify the different parameters required for evaluating regression test CO2 7 Marks a) selection techniques. T contains 90 tests of which 20 are modification-revealing for P and P' CO4 7 Marks b) and M selects 12 of these 20 tests, then calculate the inclusiveness of M relative to P, P' and T. (**OR**) Apply the regression testing techniques on measuring software quality. 10. 7 Marks CO<sub>5</sub> a) Use web application testing tool to insert standard checkpoints for flight CO6 7 Marks b) application.

SOFTWARE PROJECT MANAGEMENT

[Computer Science and Engineering]

Max. Marks: 70

SVEC-16

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

1. How do we estimate software? Explain various components of a good CO1 14 Marks cost estimate process with example.

#### (OR)

2. What are the ways of achieving better economics in software? Explain CO1 14 Marks with some examples.

### UNIT-II)

3. How do you evaluate the completion of each of the four phases in CO1 14 Marks software life cycle?

#### (OR)

4. Illustrate the modern principles of software project management. CO2 14 Marks

### UNIT-III

5. What are the 7 workflows in the life cycle? Explain the artifacts of each CO3 14 Marks of them.

### (OR)

- 6. Illustrate the Model based Architecture with example. CO2 14 Marks
- 7. Explain in detail about the check point of process. CO4 14 Marks

#### (OR)

8. Explain in detail about the project organization and responsibilities. CO5 14 Marks

### UNIT-V

9. List all quality indicators and management indicators. Explain their role CO6 14 Marks in project control.

#### (**OR**)

10. What are roles of Project manager in the Agile management and benefits CO3 14 Marks of Agile management?

#### **ESTIMATION AND QUANTITY SURVEYING**

#### [Civil Engineering]

Max. Marks: 70

SVEC-16

Time: 3 hours

Answer One Question from each Unit All questions carry equal marks

#### UNIT-I

- 1. Estimate the detailed quantity for the following items of two roomed CO4 14 Marks building from the given plan and cross section as shown in Fig.1, by using long wall and short wall method.
  - i) Earth work excavation.
  - ii) Brick work in CM (1:4) for substructure up to plinth level.
  - iii) R.C.C. slab with (1:1.5:3)
  - iv) Inside Plastering in cm (1:5) with 12 mm thick.

(OR)

- 2. Estimate the quantities of the building items of a hexagonal room from CO4 14 Marks the given plan and section as shown in Fig.2, by using center line method.
  - i) Earthwork excavation for foundation.
  - ii) I-Class brick work for super structure.
  - iii) Plastering in CM (1:5), 20 mm thick for inside walls.

# UNIT-II

- a) Estimate the quantity of sanitary line using NP<sub>2</sub> RCC Hume pipe line for CO2 7 Marks 1 km with a trench size of 75 cm breadth and 1.50 m depth and alround sand filling with 40 cm thick including refilling the excavated earth etc. complete.
  - b) Estimate the quantities of the retaining wall shown in figure below. CO2 7 Marks

#### (OR)

- 4. a) What are the different methods for computation of earth work excavation CO1 6 Marks in road embankments?
  - b) Prepare a detailed estimate for construction of a new state highway for CO2 8 Marks 1km length. The formation width of the road is 10m, average height of the bank is 1m and side sloes are 2:1. The metal width is 3.7 meters with bottom layer PCC 1:4:8 with 150mm thick and top layers CC 1:1.5:3 with 300mm thick.

### UNIT-III)

- 5. a) Write the types of specification. Give their advantages and disadvantages. CO1 7 Marks
  - b) Describe the general specification for first class buildings. CO3 7 Marks

#### (OR)

- 6. Evaluate the cost of the following items of work as per SSR. CO4 14 Marks i) Brick masonry in CM (1:6) for superstructure.
  - ii) Plastering in CM (1:4), 12 mm thickness.
  - iii) White washing with 3 coats including primary coat for walls.

### UNIT-IV

7. CO3 7 Marks a) Describe the legal requirements of a contract. What is negotiated contract? Describe briefly labour contract. CO1 7 Marks b) (**OR**) 8. 7 Marks CO1 a) Define arbitration. What are the requirements of arbitration? CO1 7 Marks b) Discuss the types of termination of contract.

| 9.  | a) | List the different methods of depreciation.                                                                                                                                                                                                                                                     |                       | CO1 | 6 Marks |  |  |
|-----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|-----|---------|--|--|
|     | b) | Calculate the annual rent of a building with                                                                                                                                                                                                                                                    | n the following data. | CO2 | 8 Marks |  |  |
|     |    | Cost of land = $Rs.20,000/-$                                                                                                                                                                                                                                                                    |                       |     |         |  |  |
|     |    | Cost of building = Rs.80,000/-                                                                                                                                                                                                                                                                  |                       |     |         |  |  |
|     |    | Estimate life = 80years                                                                                                                                                                                                                                                                         |                       |     |         |  |  |
|     |    | Return expected = $5\%$ on land $6\%$ on build                                                                                                                                                                                                                                                  | ling                  |     |         |  |  |
|     |    | Annual repairs are expected to be 0.7% of the cost construction and other out goings will be 25% of the gross rent.                                                                                                                                                                             |                       |     |         |  |  |
|     |    | (0)                                                                                                                                                                                                                                                                                             | R)                    |     |         |  |  |
| 10. | a) | State the following terms :                                                                                                                                                                                                                                                                     |                       | CO1 | 6 Marks |  |  |
|     |    | i) Scrap valve. ii) S                                                                                                                                                                                                                                                                           | alvage valve.         |     |         |  |  |
|     |    | iii) Book valve. iv) N                                                                                                                                                                                                                                                                          | larket valve.         |     |         |  |  |
|     | b) | An old building has been purchased by a person at a cost of Rs.30,000/-<br>excluding the cost of the land. Evaluate the amount of annual sinking<br>fund at 4% interest assuming the future life of the building as 20 years<br>and scarp value of the building as 10% of the cost of purchase. |                       |     | 8 Marks |  |  |

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

1. What is a sleeper? List the functions, types of sleepers and compare one CO1 7 Marks a) another. What are the requirements of an ideal rail joint? Also explain the various CO1 7 Marks b) rail joints used in railways with neat sketches. (**OR**) 2. Compare the widening of gauges on curves with formula and coning of CO2 a) 7 Marks wheels with neat sketches. If the wheel base of a vehicle moving on a B.G track is 6m, the diameter 7 Marks b) CO6 of wheel is 1.5m and depth of flange below the top of rail is 3.17 cm. Determine the extra width required to be provided on a gauge, if the radius of the curve is 160 m. UNIT-II ) 3. Describe in detail about plate laying techniques. CO5 7 Marks a) Discuss in detail about the modern methods of maintenance of railway CO4 7 Marks b) tracks. (**OR**) Summarize how poor soil is being stabilized and explain the methods in CO1 4. 7 Marks a) detail Discuss the materials required for track laying and list the factors b) CO1 7 Marks considered in the construction of railway track. (UNIT-III) List the factors to be considered for the selection of site for a commercial CO1 5. 7 Marks a) airport. What are the basic patterns of runway configurations? Discuss each CO1 7 Marks b) pattern. (**OR**) Explain the importance of airport planning. 6. CO1 7 Marks a) b) What are the characteristics of a good airport layout? CO1 7 Marks UNIT-IV) What are the items to be considered in the geometric design of runway 7. CO3 7 Marks a) and explain it in detail? Write the construction procedure of the windrose diagram. b) CO5 7 Marks (**OR**) Write in detail the various design elements to be considered in taxiway CO8 8. 7 Marks a) laying as per IS standards. The length of a runway at mean sea level, standard temperature and zero CO3 7 Marks b) gradients is 1600m. The site has an elevation of 320m, with a reference temperature of 33.6°C. The runway has to be constructed with an effective gradient of 0.25%. Calculate the actual length of the runway at site.

- 9. a) Write in detail about Inland water transports and coastal protection works. CO5 7 Marks
  - b) Discuss the factors to be considered while selecting a suitable site for the CO1 7 Marks construction of a port.

#### (OR)

- 10. a) Discuss in detail about the environmental concern required for port CO7 7 Marks operation.
  - b) What are the components of a harbour? Draw neat sketches of the layout CO1 7 Marks of an artificial harbour and road stead.

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Write a short note on determination of bearing pressure using Pressure CO1 6 Marks meter and Dilatometer.
  - b) Calculate the net allowable bearing pressure and ultimate load of CO2 8 Marks rectangular footing 2 m x 4 m in plan, founded at a depth of 1.8 m below ground surface. The load on footing acts at an angle of 15° to the vertical and is eccentric in the direction of width and length by 20 cm and 30 cm respectively. The saturated unit weight of the soil is 18 kN/m<sup>3</sup>. Natural water table is at a depth of 2 m below ground level. The unit cohesion of soil is 30 kN/m<sup>2</sup> and soil friction angle is 27°.

#### OR)

- 2. a) Where do you provide a combined footing? Discuss the procedure for the CO1 6 Marks design of rectangular combined footing.
  - b) The figure shows a shallow foundation in clay. The following data are CO6 8 Marks given: B=1.2 m; D<sub>f</sub>=1.2 m; b=0.8 m; H=6.3 m; slope angle=30<sup>o</sup>, unit weight of soil=17.5 kN/m<sup>3</sup>,  $\varphi$ =0 and c=50 kN/m<sup>2</sup>. Determine the gross allowable bearing capacity with a factor of safety 4. N<sub>c</sub>=6.3.

- 3. a) Describe briefly Reese and Matlocks theory of analysis and design of CO1 6 Marks laterally loaded piles.
  - b) A concrete pile of 13 m length and 405 mm x 405 mm in cross section is CO6 8 Marks embedded in saturated clay ( $c_u=85 \text{ kN/m}^2$ ,  $\gamma = 18 \text{ kN/m}^3$ ). Determine the allowable load that the pile can carry (F.S = 4). Use the  $\alpha$  method for determining the skin resistance ( $\alpha = 0.6$ ).

#### (OR)

- 4. a) Discuss the evaluation of lateral resistance of rigid and flexible piles. CO1 6 Marks
  b) A friction pile group is carrying a load of 3000 kN including the weight of CO2 8 Marks
  - b) A friction pile group is carrying a load of 3000 kN including the weight of CO2 the pile cap at a site where the soil is uniform clay to a depth of 20 m, underlain by rock. The clay may be assumed to be of normal sensitivity and normally loaded, with liquid limit 60%. Number of piles =16, length of pile = 11 m, diameter of pile = 0.5, spacing of piles = 1.5 m centre to centre, unit weight = 16 kN/m<sup>3</sup>, initial void ratio = 1.0. Compute the settlement of the group.

Time: 3 hours

# UNIT-III

- 5. Write about the cantilever sheet piling in granular soils. a)
  - A cantilever sheet pile is to be constructed to retain sandy soil to a depth of CO3 8 Marks b) 6 m. The dry unit weight of sand is 16 kN/m<sup>3</sup> and the saturated unit weight is 20 kN/m<sup>3</sup>. The angle of shearing resistance of sand is 32<sup>o</sup>. The water level is 3 m above the dredge line. Design the depth of embedment of the sheet pile.

### (**OR**)

- 6. Sketch a typical section of a braced cut and show the various components. **CO8** a) CO3
  - Design an anchored bulkhead for its depth and determine the force in the b) tie rod of the anchored bulkhead shown in figure. The backfill and the soil below the dredge line is sand, having the following properties: G=2.6, e=1.0 and  $\phi$ =30°. Use the free earth support method.

- 7. How to classify an expansive soil based on its liquid limit, plasticity index, a) CO1 7 Marks shrinkage limit and percentage of clay fraction?
  - How lime column technique minimizes the swelling and shrinkage CO5 7 Marks b) characteristics of expansive soils?

#### (**OR**)

- 8. Describe the method of replacement of the expansive soil with a good CO4 7 Marks a) quality soil. How would you solve the problem of constructing a footing using this method?
  - Determine the capacity of 5.0m long single under-reamed pile of stem CO<sub>2</sub> 7 Marks b) diameter 40 cm. The stratum is a deep deposit of medium dense sand having  $\gamma = 18$  kN/m<sup>3</sup> and  $\phi = 30^{\circ}$ .

# UNIT-V

| 9. | a) | What are the different types of marine structures? Explain types and choice | CO1 | 6 Marks |
|----|----|-----------------------------------------------------------------------------|-----|---------|
|    |    | of breakwaters in brief.                                                    |     |         |
|    | b) | Write a brief note on the design of Rubble Mound Breakwaters as per IS      | CO7 | 8 Marks |
|    |    | code.                                                                       |     |         |

### Answer One Question from each Unit All questions carry equal marks

(Use of codes IRC:6-2014, IRC:21-2000, IS 456:2000, IRC:83-(Part-I)-1999, IRC:83-(Part-II)-1987 and Pigeaud's curves are permitted in the examination hall)

### UNIT-I

| 1. | a) | What are the different types of live loads considered in the design of RCC bridges? Explain them                                                                                                                                                                                           | CO1 | 8 Marks   |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|-----------|
|    | b) | Explain the gauges which are used in railways                                                                                                                                                                                                                                              | CO1 | 6 Marks   |
|    | 0) | (OR)                                                                                                                                                                                                                                                                                       | COI | 0 WILLING |
| 2. | a) | Discuss about general design requirements of bridges.                                                                                                                                                                                                                                      | CO8 | 7 Marks   |
|    | b) | Mention the importance of investigation of site in bridge design.                                                                                                                                                                                                                          | CO1 | 7 Marks   |
|    | ,  | UNIT-II                                                                                                                                                                                                                                                                                    |     |           |
| 3. |    | Design the RC box culvert bridge, situated in the state highway with following data:                                                                                                                                                                                                       | CO3 | 14 Marks  |
|    |    | Width of the bridge : 12 m                                                                                                                                                                                                                                                                 |     |           |
|    |    | Wearing course : 56 mm thick                                                                                                                                                                                                                                                               |     |           |
|    |    | Condition of exposure: Moderate                                                                                                                                                                                                                                                            |     |           |

|    |    | (OR)                                                                                                                                                                                                                                                                                       |     |           |
| 4. |    | Design a reinforced concrete slab bridge using the following data:                                                                                                                                                                                                                         | CO3 | 14 Marks  |
|    |    | Clear width of road way $= 7.8 \text{m}$                                                                                                                                                                                                                                                   |     |           |
|    |    | Clear span = 11m                                                                                                                                                                                                                                                                           |     |           |
|    |    | Live load $=$ IRC class AA.                                                                                                                                                                                                                                                                |     |           |
|    |    | Use M-25 grade concrete and Fe 415 steel.                                                                                                                                                                                                                                                  |     |           |
|    |    | (UNIT-III)                                                                                                                                                                                                                                                                                 |     |           |
| 5. |    | Design the interior slab panel of a reinforced concrete T-beam bridge<br>using the following data by Pigeauds method.                                                                                                                                                                      | CO5 | 14 Marks  |
|    |    | Clear width of road way $= 8m$                                                                                                                                                                                                                                                             |     |           |
|    |    | Effective span $= 16m$                                                                                                                                                                                                                                                                     |     |           |
|    |    | Live load $=$ class AA.                                                                                                                                                                                                                                                                    |     |           |
|    |    | Use M-20 grade of concrete and Fe 415 steel.                                                                                                                                                                                                                                               |     |           |
|    |    | (OR)                                                                                                                                                                                                                                                                                       |     |           |
| 6. |    | Design the intermediate longitudinal girder of the bridge by Courbon's method for the maximum loading of class AA tracked vehicle. An RCC bridge consists of 3 longitudinal girders of span 15 m each with 4 cross beams at appropriate places. Assume the other preliminary dimensions of | CO5 | 14 Marks  |
|    |    | this two lane bridge as per the IRC specifications, moderate exposure and                                                                                                                                                                                                                  |     |           |

cement concrete wearing coat.

| 7.  | a) | Explain the forces acting on bridge bearings.                                                                 | CO2 | 5 Marks  |
|-----|----|---------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Design a steel rocker bearing for transmitting a vertical reaction of                                         | CO3 | 9 Marks  |
|     |    | 1100kN and a horizontal reaction of 150kN at the support of a bridge                                          |     |          |
|     |    | girder, assuming the following permissible stresses according to IRC.                                         |     |          |
|     |    | Permissible compressive stress in concrete bed $block = 5 \text{ N/mm}^2$                                     |     |          |
|     |    | Permissible bending stress in steel plate = $165 \text{ N/mm}^2$                                              |     |          |
|     |    | Permissible bearing stress in steel plate = $190 \text{ N/mm}^2$                                              |     |          |
|     |    | Permissible shear stress in steel = $110 \text{ N/mm}^2$                                                      |     |          |
|     |    | Sketch the typical details of the rocker bearing.                                                             |     |          |
|     |    | (OR)                                                                                                          |     |          |
| 8.  |    | Design an elastomeric pad bearing to support a tee beam girder of a major<br>bridge using the fallowing data: | CO3 | 14 Marks |
|     |    | Maximum dead load reaction/bearing $= 340 \text{ kN}$                                                         |     |          |
|     |    | Maximum load reaction/ bearing $= 550 \text{ kN}$                                                             |     |          |
|     |    | Longitudinal force due to friction for each bearing $= 35 \text{ kN}$                                         |     |          |
|     |    | Effective span of the girder $= 23 \text{ m}$                                                                 |     |          |
|     |    | Estimated rotation at bearing of the girder due to dead and live loads =                                      |     |          |
|     |    | 0.003 radians. M20 grade concrete is used. Total estimated shear strain                                       |     |          |
|     |    | due to creep, shrinkage and temperature = $5 \times 10^{-4}$ units.                                           |     |          |
|     |    | Draw the details of the bearing.                                                                              |     |          |
|     |    | UNIT-V                                                                                                        |     |          |
| 9.  | a) | List out the various forces acting on piers.                                                                  | CO1 | 7 Marks  |
|     | b) | Specify the design principles of abutment as per code.                                                        | CO8 | 7 Marks  |
|     |    | (OR)                                                                                                          |     |          |
| 10. |    | Write short note on:                                                                                          | CO1 | 14 Marks |
|     |    | 1) Bed block.                                                                                                 |     |          |
|     |    | 1) Wing walls and approach slab.                                                                              |     |          |
|     |    | 111) Bridge foundations.                                                                                      |     |          |
|     |    |                                                                                                               |     |          |

### **GROUND IMPROVEMENT TECHNIQUES**

#### [Civil Engineering]

Max. Marks: 70

SVEC-16

#### Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1. | a) | What are the factors to be considered in the selection of best technique for the ground improvement?                                                 |     | 6 Marks    |
|----|----|------------------------------------------------------------------------------------------------------------------------------------------------------|-----|------------|
|    | b) | Explain the suitability of ground improvement technique for different types of soils.                                                                | CO5 | 8 Marks    |
|    |    | (OR)                                                                                                                                                 |     |            |
| 2. | a) | List out the methods of ground improvement.                                                                                                          | CO1 | 7 Marks    |
|    | b) | How the performance of black cotton soil can be improved. Discuss.                                                                                   | CO2 | 7 Marks    |
| 3. | a) | What are dewatering methods available for the fine grained soils? Explain any one.                                                                   | CO1 | 7 Marks    |
|    | b) | Explain the vacuum method of dewatering, in detail. Is this method environmental friendly. Discuss.                                                  | CO7 | 7 Marks    |
|    |    | (OR)                                                                                                                                                 |     |            |
| 4. | a) | Discuss the uses of single stage well point installation.                                                                                            | CO1 | 7 Marks    |
|    | b) | Explain in detail about electro–osmosis dewatering system.                                                                                           | CO5 | 7 Marks    |
| 5  | a) | What is the principle of soil densification? List out the factors that affect                                                                        | CO1 | 7 Marks    |
| 5. | u) | compaction and discuss in brief.                                                                                                                     | 001 | / 10101113 |
|    | b) | List out the various in–situ densification methods in granular soils.<br>Describe briefly vibro–compaction methods.                                  | CO5 | 7 Marks    |
|    |    | (OR)                                                                                                                                                 |     |            |
| 6. | a) | What are the benefits of preloading a saturated clay deposit? Infer how the stone columns are useful for improving the properties of cohesive soils. | CO4 | 7 Marks    |
|    | b) | Explain the impact at ground surface and impact at depth methods of densifying granular soils in brief                                               | CO5 | 7 Marks    |
|    |    | UNIT-IV                                                                                                                                              |     |            |
| 7  | a) | What are the various soil stabilization techniques? Write their suitability                                                                          | CO1 | 7 Marks    |
| /. | u) | with respect to the soil type.                                                                                                                       | 001 | / IVIUIRD  |
|    | b) | Write short notes on:                                                                                                                                | CO1 | 7 Marks    |
|    | ,  | i) Pre-grout investigation. ii) Post grout test.                                                                                                     |     |            |
|    |    | iii) Grout holes pattern. iv) Selection of grout characteristics.                                                                                    |     |            |
|    |    | (OR)                                                                                                                                                 |     |            |
| 8. | a) | Describe in detail how chemicals are used in stabilizing the soil with the help of an example.                                                       | CO1 | 7 Marks    |
|    | b) | Write a note on suspension and solution grouting techniques and their effectiveness in improving the in-situ soil conditions.                        | CO5 | 7 Marks    |

Time: 3 hours

- 9. a) What is soil reinforcement? List various materials to be used as soil CO6 7 Marks reinforcement. Discuss the internal stability aspects of reinforced earth walls.
  - b) Provide one application each of geomembrane and geogrid types of CO1 7 Marks reinforcements.

#### (OR)

- 10. a) Explain the factors governing the design of reinforced soil walls. Write the CO1 5 Marks construction sequence of a reinforced earth wall with vertical faces.
  - b) Design a 7m high geogrid-reinforced wall where the reinforcement spacing CO3 9 Marks must be at 1.0m spacings, since the wall facing is of the articulated precast concrete type of this same dimension. The coverage ratio is 0.8 (i.e., geogrids do not cover the entire ground surface at each lift: they are slightly separated). The length-to-height ratio or the reinforced soil wall should not be less than 0.7 (i.e.,  $L \sim 4.9m$ ). Additional details of the problem including soil and geogrid data are shown in the diagram below.

# POWER SYSTEM OPERATION AND CONTROL

[Electrical and Electronics Engineering]

Max. Marks: 70

#### Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1. A thermal power plant has three units with the following fuel cost CO4 14 Marks characteristics:

| $F_1(P_1) = 570 + 7.5P_1 + 0.0017P_1^2 \text{ Rs/Hr}$ | $600 \text{MW} \le \text{P}_1 \le 150 \text{MW}$ |
|-------------------------------------------------------|--------------------------------------------------|
| $F_2(P_2) = 380 + 7.8P_2 + 0.002P_2^2 \text{ Rs/Hr}$  | $500 \text{MW} \le \text{P}_1 \le 125 \text{MW}$ |
| $E(D) = 200 \pm 7.0D \pm 0.005D^2 D_{a}/U_{a}$        | $(00)$ AUV $\neq$ D $\neq$ 150 AUV               |

 $F_3(P_3) = 200 + 7.9P_3 + 0.005P_3^2 \text{ Rs/Hr}$  600MW  $\leq P_1 \leq 150$ MW

Obtain the economic operation schedule for these units for a total load demand of 750MW.

- i) without considering generator limits.
- ii) considering generator limits.
- iii) total cost of operation for the above two cases and hence comment on the results.

#### (**OR**)

- 2. a) List the various performance indicators to quantify the accuracy of the CO1 7 Marks forecasting modal.
  - b) The load curve of an utility observed over a period of time is as follows: CO5 7 Marks

| Year      | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 | 2018 | 2019 |
|-----------|------|------|------|------|------|------|------|------|------|
| Load (MW) | 425  | 450  | 466  | 478  | 410  | 398  | 375  | 352  | 362  |

Estimate the load for the year 2020 using the moving average of order 4 and determine various errors to quantify the forecast accuracy.

#### UNIT-II

- 3. a) What are the important methods of hydro-thermal coordination? CO1 2 Marks
  - b) Derive the condition for economic generation of steam and hydro plants CO6 12 Marks for short term scheduling. State the assumptions made.

#### (OR)

4. Describe the hydro-thermal economic load scheduling. Derive the CO2 14 Marks necessary equations.

### UNIT-III)

- 5. a) What do you mean by unit commitment? Discuss various constraints CO2 7 Marks related to unit commitment problem.
  - b) Does Unit Commitment guarantee economic power of power generation? CO2 7 Marks Justify your answer.

(OR)

6. Discuss in detail, the priority list method for the solution of unit CO2 14 Marks commitment problem with an example.

### UNIT-IV

7. a) Describe the fundamental characteristics of an excitation system. CO1 7 Marks b) Draw and explain the block diagram representation of IEEE Type-1 CO2 7 Marks

b) Draw and explain the block diagram representation of IEEE Type-1 CO2 7 Marks model.

#### (OR)

- 8. a) Design a static var compensator for a low voltage distribution system with CO3 7 Marks the following specifications.
  - System voltage= 400VFrequency, f= 50HzCoil inductance L= 5.37mh

The inductor saturates at 950 A and settles of 1.8mH at 1800A. Compensation is required over a range of -80KVAR to +30KVAR per phase.

b) Brief the merits of uncompensated transmission lines over compensated CO2 7 Marks transmission lines.

#### UNIT-V

9. For a single area system, show that the static error in frequency can be CO2 14 Marks reduced to zero with integral control.

#### (OR)

10. Explain the functioning of speed governing system and obtain its CO1 14 Marks necessary mathematical modeling with neat diagram.

Roll No.

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | With a neat sketch, enumerate the difference between definite time and inverse characteristic of relays                                                                                                                                                                                                                                                                                                                                                                                                     | CO1 | 7 Marks  |
|----|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Explain the principle of impedance type distance relay and its characteristics on V-I and R-X planes.                                                                                                                                                                                                                                                                                                                                                                                                       | CO1 | 7 Marks  |
|    |    | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |     |          |
| 2. | a) | Write short notes on:<br>i) Reactance relay.<br>ii) Mho relay.                                                                                                                                                                                                                                                                                                                                                                                                                                              | CO1 | 6 Marks  |
|    | b) | Explain the directional impedance relay and its characteristic on R-X plane                                                                                                                                                                                                                                                                                                                                                                                                                                 | CO2 | 8 Marks  |
|    |    | (UNIT-II)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |     |          |
| 3. | a) | Compare and analyze the properties of the $SF_6$ gas with other insulating mediums used for arc quenching in the circuit breakers                                                                                                                                                                                                                                                                                                                                                                           | CO2 | 7 Marks  |
|    | b) | Discuss the principle of operation of air-blast circuit breaker.                                                                                                                                                                                                                                                                                                                                                                                                                                            | CO1 | 7 Marks  |
| 4. | a) | Define and explain the following terms concerned to the protective device fuse.                                                                                                                                                                                                                                                                                                                                                                                                                             | CO1 | 6 Marks  |
|    |    | i) Fusing current. ii) Cut off current.                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |     |          |
|    | b) | What are the advantages and disadvantages of using air as the arc quenching medium?                                                                                                                                                                                                                                                                                                                                                                                                                         | CO1 | 8 Marks  |
|    |    | (UNIT-III)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |     |          |
| 5. | a) | List the various abnormal conditions that occur in a generator and also mention the protective schemes available for the protection of generator.                                                                                                                                                                                                                                                                                                                                                           | CO1 | 6 Marks  |
|    | b) | Design suitable CTs on the HV side for a three-phase, $11 \text{ kV}/ 132 \text{ kV}$ , delta-star connected power transformer protected by differential protection. The CT's on the LV side have a current ratio of 500/5.                                                                                                                                                                                                                                                                                 | CO3 | 8 Marks  |
| 6. |    | <ul> <li>An alternator rated at 11 kV protected by the balanced circulating current system has its neutral grounded through a resistance of 12Ω. The protective relay is set to operates when these is an out of balance current of 1.8 A in the pilot wires, which are connected to the secondary of 1000/5 ratio current transformers. Determine: <ol> <li>The percentage of the winding which remains unprotected.</li> <li>The minimum value of the earthing resistance required</li> </ol> </li> </ul> | CO4 | 14 Marks |
|    |    | to protect 80% of the winding.                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |     |          |

# (UNIT-IV)

| 7.  | a) | Explain the principle of distance relaying applied to protection of radial transmission line. | CO1 | 7 Marks |
|-----|----|-----------------------------------------------------------------------------------------------|-----|---------|
|     | b) | Distinguish between reactance, impedance and mho relays as regards                            | CO2 | 7 Marks |
|     | -) | their applications to distance protection.                                                    |     |         |
|     |    | (OR)                                                                                          |     |         |
| 8.  | a) | Discuss various methods of protection of a transmission line and                              | CO2 | 7 Marks |
|     | ,  | enumerate the advantages and disadvantages of each method.                                    |     |         |
|     | b) | What is a surge absorber? Write a short note on Ferranti surge absorber.                      | CO1 | 7 Marks |
|     |    | UNIT-V                                                                                        |     |         |
| 9.  | a) | A 132 kV, 3-phase, 50 Hz transmission line 200 km long consists of three                      | CO5 | 7 Marks |
|     |    | conductors of effective diameter 20mm arranged in a vertical plane with                       |     |         |
|     |    | 4m spacing and regularly transposed. Find the inductance and kVA rating                       |     |         |
|     |    | of the arc suppression coil in the system.                                                    |     |         |
|     | b) | What are the various adverse effects of not following the proper earthing                     | CO6 | 7 Marks |
|     |    | techniques in designing of generators and transformers?                                       |     |         |
|     |    | (OR)                                                                                          |     |         |
| 10. | a) | Write a short notes on:                                                                       | CO1 | 6 Marks |
|     |    | i) Reactance grounding.                                                                       |     |         |
|     |    | ii) Arc suppression coil grounding.                                                           |     |         |
|     | b) | A 50 Hz overhead line has line to earth capacitance of 1.2 $\mu$ F. It is desired             | CO4 | 8 Marks |
|     |    | to use earth fault neutralizer. Determine the reactance to neutralize the                     |     |         |
|     |    | capacitance of :                                                                              |     |         |
|     |    | i) 100% of the length of the line.                                                            |     |         |
|     |    | (1) 000/ - f 41 - 1 41 - f 41 - 1                                                             |     |         |

- ii) 90% of the length of the line.iii) 80% of the length of the line.

situation.

| 1    | a)             | Discuss the need of reactive newer control in electrical transmission                                                                                                                                                                                                                                                                                              | CO1    | 7 Mortes    |
| 1.   | a)<br>b)       | Explain the concept of power flow in a simple two machine system                                                                                                                                                                                                                                                                                                   | CO1    | 7 Marks     |
|      | 0)             | Determine the active and reactive power flows in the system.                                                                                                                                                                                                                                                                                                       | 002    | / IVIAIKS   |
|      |                | (OR)                                                                                                                                                                                                                                                                                                                                                               |        |             |
| 2.   | a)             | Enumerate the relative importance of controllable parameters.                                                                                                                                                                                                                                                                                                      | CO1    | 8 Marks     |
|      | b)             | Give the advantages of FACTS controllers                                                                                                                                                                                                                                                                                                                           | CO2    | 6 Marks     |
|      | ,              |                                                                                                                                                                                                                                                                                                                                                                    |        |             |
| 3.   | a)             | Mention the significance and control of reactive power in transmission lines.                                                                                                                                                                                                                                                                                      | CO1    | 6 Marks     |
|      | b)             | Distinguish the line and load compensators and mention their applicability.                                                                                                                                                                                                                                                                                        | CO1    | 8 Marks     |
|      |                | (OR)                                                                                                                                                                                                                                                                                                                                                               |        |             |
| 4.   | a)             | Enumerate the types of reactive power compensators and explain any one type of compensator briefly.                                                                                                                                                                                                                                                                | CO1    | 6 Marks     |
|      | b)             | Derive the necessary equations of a shunt compensator connected at the<br>end of the transmission line.                                                                                                                                                                                                                                                            | CO2    | 8 Marks     |
|      |                | UNIT-III)                                                                                                                                                                                                                                                                                                                                                          |        |             |
| 5.   | a)             | The voltage magnitudes at the buses are reducing with the enhancement<br>of the load. If the load is still increased, the system may collapse. Show<br>with an appropriate compensation, the voltage profile should be<br>maintained with the increase in the load                                                                                                 | CO4    | 6 Marks     |
|      | b)             | Draw the control scheme for STATCOM and explain                                                                                                                                                                                                                                                                                                                    | $CO^2$ | 8 Marks     |
|      | 0)             | (OR)                                                                                                                                                                                                                                                                                                                                                               | 002    | 0 Ivitariks |
| 6.   | a)             | Explain the working of STATCOM with a neat sketch. In what way it differs from SVC?                                                                                                                                                                                                                                                                                | CO1    | 6 Marks     |
|      | b)             | Compare various types of shunt compensators.                                                                                                                                                                                                                                                                                                                       | CO2    | 8 Marks     |
|      |                | (UNIT-IV)                                                                                                                                                                                                                                                                                                                                                          |        |             |
| 7.   | a)             | Describe the steps involved in modelling of TCSC.                                                                                                                                                                                                                                                                                                                  | CO1    | 7 Marks     |
|      | b)             | Compare various types of static series compensators.                                                                                                                                                                                                                                                                                                               | CO2    | 7 Marks     |
|      |                | (OR)                                                                                                                                                                                                                                                                                                                                                               |        |             |
| 8.   | a)             | Explain the V-I capability characteristics of single module TCSC.                                                                                                                                                                                                                                                                                                  | CO1    | 6 Marks     |
|      | b)             | For a two bus system, bus-1 is generator and bus-2 is load bus. The power<br>in the transmission line between bus-1 and bus-2 is 40 MW. The<br>respective transmission line capacity is 50 MW. If there is a sudden<br>increase in the load up to 20 MW at bus-2, what happens to the<br>transmission line? Design a suitable compensator for rectifying the above | CO3    | 8 Marks     |

- 9. a) A FACTS device having a combination of two or more series CO5 7 Marks compensators connected in the power system can be used to analyze the power flow in the transmission line. Explain in detail the operation of those types of controllers.
  - b) Derive the expression for real and reactive power between two nodes of CO2 7 Marks UPFC

### (OR)

- 10. a) Write the objectives of Voltage and Phase Angle Regulators. Explain the CO1 7 Marks power flow control by Phase Angle Regulators.
  - b) Explain the power transfer capability of UPFC and compare its CO2 7 Marks capabilities with other FACTS controllers.

#### **POWER QUALITY**

[Electrical and Electronics Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I What is power quality and explain various power quality issues in detail? CO1 7 Marks Discuss the responsibilities of suppliers and end users of electric power. CO1 7 Marks (**OR**) Explain the various types of power quality disturbances and their impact CO1 7 Marks on power systems. Mention major reasons for the increased concern in power quality. CO2 7 Marks UNIT-II ) Define waveform distortion. Explain the wave form distortion categories. CO1 7 Marks With neat schematic, explain in detail about short duration variations. CO1 7 Marks (**OR**) Investigate the role of UPS system in providing solution for power quality CO4 14 Marks problems and improvement of power quality. UNIT-III) Explain briefly about harmonic distortion and waveform distortion. 7 Marks CO1 Brief out the effect of harmonic distortion on capacitors and transformers. CO1 7 Marks (**OR**) Explain a Passive filter design criteria and practical considerations used CO3 14 Marks for design. UNIT-IV) Explain the significance of Power quality monitoring. What are the CO1 10 Marks important power quality monitoring standards? What are the advanced measuring devices for power quality monitoring? CO1 4 Marks (**OR**) Illustrate the power quality benchmarking process. CO1 7 Marks Identify a suitable power quality monitoring and measuring device to CO5 7 Marks measure flicker and explain with functional blocks. UNIT-V Explain in detail about the distributed generation and its impacts on the CO1 14 Marks network. (**OR**) Briefly discuss the power quality issues related to DG integration in CO6 14 Marks distribution networks.

#### FINITE ELEMENT METHOD [Mechanical Engineering]

Max. Marks: 70

SVEC-16

#### **Answer One Question from each Unit** All questions carry equal marks

### UNIT-I

- Explain natural coordinate system. Derive expression for relation between CO1 1. a) 7 Marks natural and Cartesian coordinate systems.
  - Explain the significance of node numbering and element numbering CO1 b) 7 Marks during the discretization Process.

(**OR**)

2. For the bar assemblages shown in figure, determine the nodal CO1 14 Marks displacements, element stresses and support reactions.

steel  
Aluminium  

$$2m$$
  
 $2m$   
 $2m$   
 $2m$   
 $20KN$   
 $A_{st}=4*10^{-4}m^{2}$   
 $E_{al}=70Gpa$   
 $A_{al}=2*10^{-4}m^{2}$ 

### UNIT-II )

3. Consider the plane truss shown in figure. Determine the nodal CO2 14 Marks displacements and support reactions. Take  $E= 2 \times 10^{5} \text{N/mm}^{2}$ . A=1500 mm<sup>2</sup>.

For the loaded beam shown in figure, determine the slope and deflection CO2 4. 14 Marks at node 2 using finite element concept. Take EI=900 Nm<sup>2</sup>.

### UNIT-III

5. A long cylinder of inside diameter 80 mm and outside diameter 120 mm CO3 14 Marks fits in a hole over its full length. The cylinder is then subjected to an internal pressure of 2 MPa. Using 2 elements on the 10mm length, find the displacements at the inner radius. E = 200 GPa and  $\mu = 0.3$ .

#### (OR)

 Determine the stiffness matrix for the Constant Strain Triangle (CST) CO3 14 Marks element shown in figure. The co-ordinates are given in mm. Assume plane stress conditions. Take Young's modulus 210 GPa, Poisson's ratio 0.25 and thickness 10mm.

7. Consider a quadrilateral element as shown in fig the local coordinates are CO1 14 Marks  $\xi = 0.5$ ,  $\eta = 0.5$ . Evaluate Jacobin matrix and strain- Displacement matrix.

(**OR**)

8. Determine the temperature distribution through the composite wall shown CO4 14 Marks in figure when convective heat loss occurs on the left surface. Assume unit area. Thickness  $t_1 = 4$ cm,  $t_2 = 2$ cm,  $K_1 = 0.5$ W/cm K,  $K_2 = 0.05$ W/cm K,  $T\alpha = -5^{0}$ C, h = 0.1 W/cm<sup>2</sup> K.

9. Determine the Eigen values and Eigen Vectors for the stepped bar as CO5 14 Marks shown in figure.

10. Evaluate the lowest Eigen value and the corresponding Eigen modes for CO6 14 Marks the beam shown in figure. E=200 GPa and  $\rho = 7840$ kg/m<sup>3</sup>, I=2000 mm<sup>4</sup>, A=240 mm<sup>2</sup>, L=300mm.

Max. Marks: 70

SVEC-16

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1. Old hens can be bought for Rs. 20 each but young one costs Rs. 50 each. CO1 14 Marks The old hens lay three eggs per week and young ones five eggs per week, each egg worth Rs. 3. It costs Rs. 10 per week to feed each hen. If I have only Rs. 800 to spend for purchasing hens, how many of each kind should I buy assuming that I cannot house more than 20 hens? Formulate the problem as LPP and solve using graphical method.

#### (**OR**)

2. Solve the following problem using Big-M Method Maximize  $Z = 2X_1 + 4X_2$ , Subject to the constraints

 $2X_1 + X_2 \leq 18$  $3X_1 + 2X_2 \ge 30$  $X_1 + 2X_2 = 26$  $X_1, X_2 \ge 0.$ 

#### UNIT-II

- 3. Outline the steps in Hungarian method. a)
  - Consider the problem in which two factories supply three stores with a b) commodity. The number of supply units available at sources 1 and 2 is 200 and 300; those demanded at stores 1, 2 and 3 are 150, 200 and 50 respectively. Units may be transshipped among the factories and the stores before reaching their final destination. Find the optimal shipping schedule based on the unit costs (Rs.) given below:

|            | F1 | F2 | <b>S1</b> | <b>S2</b> | <b>S3</b> |  |  |
|------------|----|----|-----------|-----------|-----------|--|--|
| F1         | 0  | 5  | 7         | 4         | 9         |  |  |

### UNIT-III)

- 5. a) What do you understand by zero sum and non zero sum game? What CO6 7 Marks do you mean by strategy, dominance and saddle point?
  - b) Solve the following game using graphical approach.

CO6 7 Marks

|              | B's Strategy |   |    |    |  |  |
|--------------|--------------|---|----|----|--|--|
| A's Strategy | 8            | 5 | -7 | 9  |  |  |
|              | -6           | 6 | 4  | -2 |  |  |
| (OR)         |              |   |    |    |  |  |

6. The probability distribution of the failure time of certain time of electric CO6 14 Marks bulb is given below

| Week                      | 1    | 2    | 3    | 4    | 5    | 6    | 7    | 8   |
|---------------------------|------|------|------|------|------|------|------|-----|
| Probability<br>of failure | 0.05 | 0.13 | 0.25 | 0.43 | 0.68 | 0.88 | 0.96 | 1.0 |

The cost of individual replacement is Rs. 4 per bulb. The cost of group replacement is Rs 1 per bulb. if there are 1000 bulbs in use find the optimal replacement policy under:

- i) Individual replacement.
- ii) Group replacement.

### UNIT-IV

7. The following table gives the data for the activities

CO5 14 Marks

| Job(i-j)                   | 1-2 | 1-3 | 2-4 | 2-6 | 3-4 | 3-5 | 4-5 | 5-6 |
|----------------------------|-----|-----|-----|-----|-----|-----|-----|-----|
| Opt. time (days)           | 1   | 5   | 3   | 1   | 8   | 2   | 5   | 2   |
| Most likely<br>time(days)  | 4   | 10  | 3   | 4   | 15  | 4   | 5   | 5   |
| Pessimistic time<br>(days) | 7   | 17  | 3   | 7   | 26  | 8   | 5   | 8   |

i) Draw the network and find the expected project completion time.

ii) What is the probability that it would take 5 days more than the expected duration?

iii) Find the project completion time which will have 95% confidence.

#### (**OR**)

8.

For the following data, draw the network diagram, and then crash the CO5 14 Marks activities to find the time cost trade-off points that company should want to consider. Start with the plan that has the longest duration.

| Activity | Preceding | Time (v | veeks) | Cost (Rs.) |       |  |
|----------|-----------|---------|--------|------------|-------|--|
| Activity | Activity  | Normal  | Crash  | Normal     | Crash |  |
| А        | -         | 2       | 1      | 20000      | 20700 |  |
| В        | -         | 3       | 1      | 29000      | 33000 |  |
| С        | А         | 2       | 1      | 25000      | 26100 |  |
| D        | В         | 4       | 3      | 47000      | 47750 |  |
| Е        | С         | 4       | 2      | 55000      | 57000 |  |
| F        | С         | 3       | 2      | 29000      | 29500 |  |
| G        | D, E      | 5       | 3      | 79000      | 80800 |  |
| Н        | F,G       | 2       | 1      | 15000      | 17900 |  |

- 9. a) What are the basic elements of a waiting line model?
  - b) An oil company is constructing a service station on a high way. Traffic CO3 analysis indicated that customers' arrivals over most of the day would approximate a poisson distribution with a mean of 40 automobiles per hour, with that service time distribution approximating the negative exponential. If 5 pumps are installed.
    - i) What is the probability that an arrival would have to wait in line?
    - ii) Find out the average waiting time, average time spent in the system and the average number of automobiles in the system.

#### (OR)

10. A dentist schedules all her patients for 30 minutes appointments. Some of CO5 14 Marks the patients take more or less than 30 minutes depending on the type of dental work to be done. The following summary shows the various categories of work, their probabilities and time needed to complete the work.

| Category   | Time required<br>(Minutes) | Probability of<br>category |
|------------|----------------------------|----------------------------|
| Filling    | 45                         | 0.4                        |
| Crown      | 60                         | 0.15                       |
| Cleaning   | 15                         | 0.15                       |
| Extraction | 45                         | 0.1                        |
| Checkup    | 15                         | 0.2                        |

Simulate the dentist's clinic for four hours and determine the average waiting time for the patients as well as the idleness of the doctor. Assume that all the patients show up at the clinic at exactly their scheduled arrival times, starting at 8 A.M. Use the following random numbers for handling the above problem: 40, 82, 11, 34, 25, 66, 17, 79.

.

| 1.  | a) | Give the RIA definition of a Robot. Explain the important components of a Robot.                                                                                                                                                                                                                   | CO1 | 7 Marks  |
|-----|----|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Distinguish electrical and hydraulic drive systems.                                                                                                                                                                                                                                                | CO2 | 7 Marks  |
|     |    | (OR)                                                                                                                                                                                                                                                                                               |     |          |
| 2.  | a) | Classify end effectors. Explain any one type of gripper in detail.                                                                                                                                                                                                                                 | CO1 | 7 Marks  |
|     | b) | List out the type of grippers. Discuss about magnetic grippers.                                                                                                                                                                                                                                    | CO1 | 7 Marks  |
|     |    | UNIT-II                                                                                                                                                                                                                                                                                            |     |          |
| 3.  |    | Discuss the working principle of Servo motors. List out its advantages and disadvantages.                                                                                                                                                                                                          | CO2 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                                                                                               |     |          |
| 4.  |    | Point out any two methods of mechanical transmission system with their limitations.                                                                                                                                                                                                                | CO2 | 14 Marks |
|     |    | UNIT-III                                                                                                                                                                                                                                                                                           |     |          |
| 5.  |    | The Coordinates of the point P on the body given by $\{1, 2, 3\}^{T}$ . The point moved by 7 units along X axis, then rotation of 30 <sup>o</sup> about Z axis followed by rotation of 45 <sup>o</sup> about Y axis. Determine the new coordinates of the point P with respect to the fixed frame. | CO3 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                                                                                               |     |          |
| 6.  |    | Derive Forward Kinematics solution for a 3R manipulator.                                                                                                                                                                                                                                           | CO3 | 14 Marks |
|     |    | UNIT-IV                                                                                                                                                                                                                                                                                            |     |          |
| 7.  |    | Define trajectory planning. Write about various methods of trajectory planning.                                                                                                                                                                                                                    | CO1 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                                                                                               |     |          |
| 8.  | a) | Derive the necessity of failsafe hazard sensor systems in the robots.                                                                                                                                                                                                                              | CO2 | 7 Marks  |
|     | b) | Demonstrate any two position sensors with a neat sketch.                                                                                                                                                                                                                                           | CO5 | 7 Marks  |
|     |    | UNIT-V                                                                                                                                                                                                                                                                                             |     |          |
| 9.  |    | Explain the features of AL and AML languages.                                                                                                                                                                                                                                                      | CO1 | 14 Marks |
|     |    | (OR)                                                                                                                                                                                                                                                                                               |     |          |
| 10. |    | Report the applications of Modern Robots in the society. Also enumerate the challenges faced in the development. $\bigotimes \ \bigotimes \ \bigotimes$                                                                                                                                            | CO6 | 14 Marks |
|     |    |                                                                                                                                                                                                                                                                                                    |     |          |

#### IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

#### PRODUCTION AND OPERATIONS MANAGEMENT

[Mechanical Engineering]

Time: 3 hours

Answer One Question from each Unit

Max. Marks: 70

SVEC-16

# All questions carry equal marks

### UNIT-I

| 1. | a) | Enumerate operations Management with a block diagram                   | CO2 | 7 Marks |
|----|----|------------------------------------------------------------------------|-----|---------|
|    | b) | Write a brief note on historical development of Operations Management. | CO2 | 7 Marks |
|    |    | (OR)                                                                   |     |         |
| 2. | a) | Explain in brief the factors affecting Productivity.                   | CO3 | 7 Marks |
|    | b) | Give a brief note on the significance of production systems decisions. | CO5 | 7 Marks |
|    |    | UNIT-II                                                                |     |         |

3. From the choice of simple moving average, weighted moving average, CO3 14 Marks exponential smoothing and linear regression analysis, which forecasting technique would you consider the most accurate? Why?

#### (OR)

4. A manufacturer of tricycles for children in the age group of two to four CO3 14 Marks years commissioned a market research firm to understand the factors that influenced the demand for its product. After some detailed studies, the market research firm concluded that the demand was a simple linear function of the number of newly married couples in the city. Based on this assumption, build a causal model for forecasting the demand for the product using the data given in table collected for a residential area in a city. Also estimate the demand for tricycles if the number of new marriages is 150 and 250.

| X | New marriages           | 201 | 236 | 211 | 198         | 225 | 240 | 218 | 226 |
|---|-------------------------|-----|-----|-----|-------------|-----|-----|-----|-----|
| Y | Demand for<br>tricycles | 175 | 194 | 180 | <b>16</b> 5 | 190 | 172 | 182 | 170 |

### UNIT-III

5. Write a brief note on Chase, Level and mixed strategies for Aggregate CO1 14 Marks Production Planning.

#### (OR)

6. "Mixed strategies are always superior to pure strategies in an aggregate CO1 14 Marks production planning exercise". Comment on this statement."

### UNIT-IV

7. List out the functions of CRP using block diagram and explain the CO1 14 Marks function with an example.

#### (OR)

8. Give the difference between MRP and MRP II and explain MRP – II with CO1 14 Marks Block diagram.

Explain Johnson's algorithm in Flow shop scheduling. There are 5 jobs CO6 14 Marks each of which must go through 2 machines A and B in order immediately processing Times are given below.

|            | J1 | J2 | J3 | J4 | J5 |
|------------|----|----|----|----|----|
| Time for A | 5  | 1  | 9  | 3  | 10 |
| Time for B | 2  | 6  | 7  | 8  | 4  |

Determine the sequence for 5 jobs that will minimize, the elapsed time calculates the total idle time for machines in this Period.

#### (OR)

10. Consider the following flow shop scheduling problem where there are CO6 14 Marks 5 jobs and 3 machines.

Solve the following using Palmer's heuristic and CDS heuristic Technique. Find the make span of this scheduling process and also goodness of this problem with respect to Heuristic solution.

|    | Α  | В  | С  |
|----|----|----|----|
| J1 | 18 | 12 | 16 |
| J2 | 10 | 11 | 14 |
| J3 | 20 | 15 | 13 |
| J4 | 15 | 19 | 19 |
| J5 | 16 | 16 | 15 |

IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

#### POWER PLANT ENGINEERING [Mechanical Engineering]

Max. Marks: 70

SVEC-16

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

- 1. a) Draw a neat diagram of the cyclone burner and explain its outstanding CO1 7 Marks features.
  - b) What are the feeding systems of pulverized coal into the furnace? What CO3 7 Marks are the two design conditions to be satisfied to burn pulverized coal successfully?

#### (OR)

2. Describe the components and working of electrostatic precipitator dust CO2 14 Marks collection in a steam power plant.

#### UNIT-II)

- 3. a) Draw a neat diagram of a cooling system used for the diesel power plant. CO1 7 Marks
  - b) What are the various factors to be considered while selecting the site for CO3 7 Marks diesel engine power plant?

#### (**OR**)

4. Identify essential components of a simple open cycle gas turbine plant. CO4 14 Marks How inter cooling and regeneration help in improving the thermal efficiency of the plant?

### UNIT-III)

- 5. a) Draw the line diagram and explain the working of the pressurized water CO1 7 Marks reactor.
  - b) Explain with neat sketch the working of gas cooled type reactor. CO1 7 Marks

#### (**OR**)

6. What is the Hydrological cycle? Discuss its significance in locating the CO4 14 Marks site and design of hydroelectric power plants.

### UNIT-IV)

- 7. a) Explain the working principle of thermoelectric conversion system. CO2 7 Marks
  - b) Describe with necessary diagrams, the principle of working of a CO2 7 Marks geothermal power plant.

#### (OR)

8. Classify biogas plants and explain anyone type of biogas plant with neat CO2 14 Marks sketch.

Time: 3 hours
## UNIT-V

- 9. a) The yearly duration curve of a certain plant can be considered as a CO6 7 Marks straight line from 150MW to 40MW. The power is supplied with one generating unit of 100MW and two units of 40MW each. Calculate installed capacity, load factor, Plant factor, utilization factor and Maximum demand.
  - b) Draw the load curve for the power requirement in India and discuss the CO6 7 Marks methods to accomplish the part load conditions.

#### (OR)

- 10. a) Identify the impact on the environment and human health for the effluents CO5 7 Marks released from the thermal power plants.
  - b) Discuss the harmful effects of CO<sub>2</sub>, CO, compounds of sulphur and CO5 7 Marks oxides of Nitrogen.

## **CELLULAR AND MOBILE COMMUNICATIONS**

[Electronics and Communication Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) List the characteristics used to specify the uniqueness of Mobile radio CO1 7 Marks environment and brief about the model of transmission medium.
  - b) Using the concept of Frequency Reuse channels, derive the relation for CO2 7 Marks Frequency Reuse distance 'D' as a function of reuse pattern and cell size.

### (OR)

- 2. a) Illustrate various criteria used to specify the performance of a cellular CO1 7 Marks system.
  - b) Define Co-channel Interference and derive the relation for Co-channel CO2 7 Marks Interference factor in a cell with its k<sup>th</sup> Co-channel Interfering cell.

## UNIT-II

- 3. a) Classify and describe about various adjacent channel Interference CO1 7 Marks mechanisms.
  - b) What is Diversity receiver? Illustrate how diversity receiver can be used CO6 7 Marks to improve performance of the system even in low transmitted power levels.

#### (**OR**)

- 4. a) Summarize about Umbrella pattern effect and List the benefits of CO1 7 Marks Umbrella pattern.
  - b) Illustrate how cell site location, decrease in power and Antenna height CO4 7 Marks effect coverage and interference problems.

## UNIT-III

- 5. a) Define Ground Incident angle and Ground elevation angle. CO1 6 Marks
  - b) In a mobile radio environment, if average cell site antenna height is 50m, CO3 8 Marks Mobile antenna height is 3m and Path length is 5km, Find;
    - i) Incident angle. ii) Elevation angle.

### (OR)

- 6. a) Give reason behind using 1-mi intercept in finding path-loss curves. CO6 6 Marks
  - b) In a mobile radio environment, if average cell site antenna height is 50m, CO3 8 Marks Mobile antenna height is 3m and Path length is 5km and Height of mountain on which base station is erected H=100m. Compare
    - i) Ground Incident angle.
    - ii) Reflection Point obtained from accurate and approximate methods.

## UNIT-IV

- 7. a) Analyze how adjacent channel and Co-channel interference can be CO4 7 Marks controlled using Underlay-overlay arrangement.
  - b) Differentiate Soft handoff and Hard handoff. Conclude the usage of Soft CO5 7 Marks handoffs in CDMA systems.

#### (OR)

- 8. a) Outline various methods used to solve the problem of channel assignment CO4 7 Marks to travelling mobile units.
  - b) Identify the handoff algorithm which is more appropriate during CO5 7 Marks unavailability of free channels when crossing a cell boundary.

### UNIT-V

- 9. a) Draw OSI model of GSM architecture and explain. CO1 7 Marks
  - b) Differentiate physical layer of WCDMA-FDD and WCDMA-TDD CO6 7 Marks standards.

#### (OR)

- 10. a) Differentiate three standard 3G systems. Also mention the features of 3G CO6 7 Marks standard systems.
  - b) Define Authentication and explain about Authentication of MS data CO1 7 Marks bursts.

#### **EMBEDDED SYSTEMS**

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Computer Science and Systems Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Discuss memory classification in a typical embedded system. CO3 1. 7 Marks a) Review various functional blocks in MSP430. b) CO1 7 Marks (**OR**) 2. Generalize the characteristics of a typical Embedded system. CO1 7 Marks a) Interpret with an example embedded system where MSP430X can fit. b) CO3 7 Marks UNIT-II Discuss MSP430 instructions which can be used to control program flow. CO5 3. 7 Marks a) b) Explore conditions of MSP430 after reset. CO2 7 Marks (**OR**) 4. Discuss various shift and rotate instructions possible in assembly CO5 7 Marks a) programming. Give out example instructions for binary arithmetic instructions with two CO2 b) 7 Marks operands. UNIT-III) Interrupts are like functions that are called by hardware rather than 5. CO6 7 Marks a) software - support the statement with suitable reasoning. Paraphrase the importance of interrupts and issues associated while CO5 7 Marks b) describing Interrupt service routines. (**OR**) Demonstrate passing parameters and returning results using subroutines 6. a) CO6 7 Marks with suitable example. Distinguish the similarities and dissimilarities with reference to ISR CO5 b) 7 Marks (Interrupt Service Routine) to a subroutine. UNIT-IV) Discuss various modes of operation of USCI-A. 7. CO1 7 Marks a) Compose configuring Real Time Clock and associate control register to b) CO3 7 Marks handle interrupt from basic timer 1. (**OR**) Paraphrase the Architecture and operation of ADC10 in MSP430. 8. CO1 a) 7 Marks Develop mechanism to measure charging and discharging times of RC b) CO3 7 Marks circuit using comparator A and timer 2. UNIT-V 9. Explore architectural models suitable for synthesis of co-design models. CO<sub>2</sub> 7 Marks a) List various technical communication models suitable for IOT CO4 7 Marks b) implementation. (**OR**) 10. Define Model. List the qualities a good model should process. CO1 7 Marks a) IPV6 has made the ground ready for IOT to take on – discuss the issue CO4 b) 7 Marks with an eye on IPV4 limitations.

|    | b)       | Justify the role of Magnetron in microwave communication system.<br>(OR)                                                                                                                                                                                          | CO6        | 7 Marks            |
| 4. | a)       | What is a slow wave structure? Explain different types of slow wave structures used in microwave tubes.                                                                                                                                                           | CO1        | 7 Marks            |
|    | b)       | Identify a microwave device which has a theoretical efficiency of 27.78% in amplification process. Explain the same.                                                                                                                                              | CO6        | 7 Marks            |
| -  | ``       |                                                                                                                                                                                                                                                                   | 000        |                    |
| 5. | a)       | Develop a Gunn diode using N-type GaAs Specimen and explain its operation.                                                                                                                                                                                        | CO3        | / Marks            |
|    | b)       | Draw the characteristics of TRAPATT diode and show how its exhibits negative resistance.                                                                                                                                                                          | CO2        | 7 Marks            |
|    |          | (OR)                                                                                                                                                                                                                                                              |            |                    |
| 6. | a)       | Compare working principle of Avalanche and Transferred electron devices.                                                                                                                                                                                          | CO2        | 7 Marks            |
|    | b)       | Develop the construction of IMPATT diode and explain its operation.                                                                                                                                                                                               | CO3        | 7 Marks            |
| 7. | a)       | Draw the block diagram of microwave bench set up and explain each block in detail                                                                                                                                                                                 | CO1        | 7 Marks            |
|    | b)       | In a microwave power measurement set up, the microwave pulse had an average power of 250W and a duration of $5\mu$ Sec. If the time interval between pulses are measured as $2m/sec$ , determine the value of the peak power                                      | CO4        | 7 Marks            |
|    |          | (OR)                                                                                                                                                                                                                                                              |            |                    |
| 8. | a)       | Draw the bench setup for measuring low VSWR and explain its operation                                                                                                                                                                                             | CO1        | 7 Marks            |
|    | b)       | Build a bench setup for measuring Attenuation using RF substitution method.                                                                                                                                                                                       | CO3        | 7 Marks            |
|    |          |                                                                                                                                                                                                                                                                   |            |                    |

Time: 3 hours

## UNIT-V

CO1 8 Marks

- 9. a) Explain the terms :
  - i) Ray path.
  - ii) Critical frequency.
  - iii) Lowest usable frequency.
  - b) Calculate the skip distance for flat earth with MUF of 10 MHz if the wave CO4 6 Marks is reflected from a height of 300km where the maximum value of 'n' is 0.9.

### (OR)

- 10. a) Describe any two types of fading normally encountered in radio wave CO1 8 Marks propagation.
  - b) Derive the relation between Maximum Usable Frequency and skip CO2 6 Marks distance assuming the earth is flat.

|     | ,  | UNIT-II                                                                                                                                                          |     |         |
| 3.  | a) | Discuss about WML scripts.                                                                                                                                       | CO1 | 7 Marks |
|     | b) | Analyze the protocols used for registration in mobile IP.<br>(OR)                                                                                                | CO2 | 7 Marks |
| 4.  | a) | Explain the steps involved in operation of mobile IP.                                                                                                            | CO1 | 6 Marks |
|     | b) | Demonstrate data transfer process in wireless network.                                                                                                           | CO2 | 8 Marks |
|     |    | i) From a mobile node to a fixed node vice-versa.                                                                                                                |     |         |
|     |    | ii) From a mobile node at foreign location to other mobile                                                                                                       |     |         |
|     |    | node at foreign location.                                                                                                                                        |     |         |
|     |    | UNIT-III                                                                                                                                                         |     |         |
| 5.  | a) | Draw the protocol architecture of IEEE 802 and extend it to different protocols.                                                                                 | CO6 | 7 Marks |
|     | b) | Write a short note on Microwave LANS.                                                                                                                            | CO1 | 7 Marks |
|     |    | (OR)                                                                                                                                                             |     |         |
| 6.  | a) | Discuss about the protocols used in WLAN.                                                                                                                        | CO1 | 6 Marks |
|     | b) | Draw the configuration of IEEE 802.11. Explain.                                                                                                                  | CO6 | 8 Marks |
|     | ,  | UNIT-IV                                                                                                                                                          |     |         |
| 7.  | a) | Develop a Wireless Local Loop network to provide data and voice services to its users.                                                                           | CO3 | 8 Marks |
|     | b) | Write the functions of Link manager specification Layer in Bluetooth. (OR)                                                                                       | CO1 | 6 Marks |
| 8.  | a) | Draw the packet formats of LLCAP protocol of Bluetooth.                                                                                                          | CO1 | 7 Marks |
|     | b) | Develop an algorithm to build a sync word in Bluetooth.                                                                                                          | CO3 | 7 Marks |
|     | ,  | UNIT-V                                                                                                                                                           |     |         |
| 9.  | a) | Draw and explain the general structure of an ATM switch.                                                                                                         | CO1 | 7 Marks |
|     | b) | Identify appropriate functionalities of Wireless ATM and write its Services.                                                                                     | CO5 | 7 Marks |
|     |    | (OR)                                                                                                                                                             |     |         |
| 10. | a) | Explain about forward channel and reverse channel in CDPD physical laver                                                                                         | CO1 | 7 Marks |
|     | b) | Apply overlay technology to a wireless network and illustrate the operation of GPRS.                                                                             | CO5 | 7 Marks |

#### IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

## LOW POWER CMOS VLSI DESIGN

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) Organize the different sources of power dissipation in digital CMOS CO1 7 Marks circuit.
  - b) Illustrate the constraints on Vt reduction which is used to minimize CO6 7 Marks dynamic power dissipation.

### (OR)

- 2. a) Write an explanatory notes on physics of power dissipation in MOSFET CO1 7 Marks Devices.
  - b) Appraise the technology and device innovations for novel high speed low CO6 7 Marks power VLSI devices.

## UNIT-II

- 3. a) Evaluate the modeling and analysis of a transistor using SPICE. CO2 7 Marks
  - b) From experience, the standard deviation of the power samples measured CO4 7 Marks from a circuit has been observed to have  $\pm 10\%$  fluctuation from the mean. How many samples are required so that we are 95% confidence that the error of sample mean is within  $\pm 10\%$ ?

#### (OR)

- 4. a) Illustrate the advantages and disadvantages of SPICE power analysis. CO2 7 Marks
  - b) From experience, the standard deviation of the power samples measured CO4 7 Marks from a circuit has been observed to have ±20% fluctuation from the mean. How many samples are required so that we are 99% confidence that the error of sample mean is within ±5%?

## UNIT-III

- 5. a) Design and explain pre computation logic with an example. CO3 7 Marks
  - b) Justify, in detail about Adjustable Device threshold Voltage with its CO6 7 Marks applications.

### (OR)

- 6. a) Design a differential latch for high speed low power application and CO3 7 Marks discuss its functionality.
  - b) Discuss Bus invert encoding to achieve low power with relevant CO2 7 Marks equations.

## UNIT-IV

| 7. | a) | Write the limitations of low swing bus technique. | CO5 | 7 Marks |
|----|----|---------------------------------------------------|-----|---------|
|    | b) | Discuss the methods to improve speed in memory.   | CO4 | 7 Marks |
|    |    |                                                   |     |         |

#### (OR)

8. a) Develop Low Power Techniques for SRAM.
b) How to limit bit line swing in SRAM explain with neat sketch.
CO4 7 Marks

## UNIT-V

- 9. a) Explain the basic principles to update the filter order length in digital CO1 7 Marks filters.
  - b) Categorize the Power dissipation of uniprocessing and parallel processing CO2 7 Marks systems.

## (OR)

- 10. a) Explain the Switching Activity Reduction with examples. CO1 7 Marks
  - b) Compose the method of Charge sharing for half swing with its neat CO4 7 Marks sketches

SPEECH PROCESSING

[Electronics and Communication Engineering]

Time: 3 hours

Max. Marks: 70

SVEC-16

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | A commonly used approximation to glottal pulse is $g(n) = \begin{cases} na^n & n \ge 0 \\ 0 & otherwise \end{cases}$                                                                             | CO2 | 7 Marks |
|----|----|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    |    | i) Find the 7 transforms of a (u) and elected its forming transforms                                                                                                                             |     |         |
|    | b) | With a Schematic diagram of the vocal apparatus, explain the mechanism of speech production.                                                                                                     | CO1 | 7 Marks |
|    |    | (OR)                                                                                                                                                                                             |     |         |
| 2. | a) | What are the types of phonemes in American English? Explain about anyone with an example.                                                                                                        | CO1 | 8 Marks |
|    | b) | Show how 'a' should be chosen so that                                                                                                                                                            | CO2 | 6 Marks |
|    |    | $20 \log G(ej0)  - 20 \log G(ej\pi)  = 60dB$                                                                                                                                                     |     |         |
|    |    | UNIT-II                                                                                                                                                                                          |     |         |
| 3. | a) | State and prove the following properties of short time auto correlation function,                                                                                                                | CO4 | 8 Marks |
|    |    | i) $R_n(k) = R_n(-k)$ ii) $R_n(k) \le R_n(0)$ .                                                                                                                                                  |     |         |
|    | b) | Define short time average magnitude difference function and contrast with autocorrelation function.                                                                                              | CO1 | 6 Marks |
|    |    | (OR)                                                                                                                                                                                             |     |         |
| 4. | a) | How pitch, energy and average magnitude function of a speech signal are extracted? Bring out the features of these parameters that will help us to build an automatic speech recognition system. | CO2 | 7 Marks |
|    | b) | What is autocorrelation and state some of the properties.                                                                                                                                        | CO1 | 7 Marks |
|    |    | (UNIT-III)                                                                                                                                                                                       |     |         |
| 5. | a) | Consider all pole model for the combined vocal tract, glottal pulse and radiation system of the form $H(Z) = \frac{G}{1 - \sum_{r=1}^{P} A_r Z^{-K}}$ .                                          | CO4 | 7 Marks |
|    |    | Obtain The Recursion Relation Between The Complex Censtrum Of $H(n)$                                                                                                                             |     |         |
|    |    | and $\{\alpha_k\}$ .                                                                                                                                                                             |     |         |
|    | b) | Discuss the properties of complex cepstrum.                                                                                                                                                      | CO2 | 7 Marks |
|    | ,  | (OR)                                                                                                                                                                                             |     |         |
| 6. | a) | Estimate magnitude and phase spectrum of homomorphic filter for a voiced speech signal.                                                                                                          | CO2 | 7 Marks |
|    | b) | Demonstrate practical implementation of system for obtaining complex cepstrum.                                                                                                                   | CO4 | 7 Marks |

## UNIT-IV

- 7. Explain in detail how to solve LPC equations using Cholesky CO3 7 Marks a) decomposition method. Explain how to tract the formants using LPC. **b**) CO5 7 Marks (**OR**) Discuss the Durbin's recursive method and Cholesky decomposition CO3 8. 8 Marks a) method used for estimating and obtaining LPC of a speech signal. Determine speech segment and the limits on the prediction error CO5 6 Marks b) summation using covariance method. UNIT-V
- 9. a) Derive the decision rule which minimizes the probability of error for CO6 8 Marks identifying the speaker
  - b) Compare and contrast between Speaker Verification vs. recognition. CO2 6 Marks

(OR)

- 10. a) Draw the block diagram of a speaker identification system and Explain its CO1 8 Marks features.
  - b) Discuss briefly about basic pattern recognition approaches in the speech CO1 6 Marks recognition system.

### **BIG DATA ANALYTICS**

[Computer Science and Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | What are the kinds of Data Elements in Big data? Explain with the suitable examples for each.                                                      | CO1 | 7 Marks  |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | What is Standardizing data? List the different procedures of Standardization.                                                                      | CO1 | 7 Marks  |
|    |    | (OR)                                                                                                                                               |     |          |
| 2. | a) | What is Missing Values? Explain the popular schemes deal with the Missing Values.                                                                  | CO1 | 7 Marks  |
|    | b) | Define Big data and Explain the 4 V's Big Data characteristics in brief.                                                                           | CO1 | 7 Marks  |
|    |    | UNIT-II)                                                                                                                                           |     |          |
| 3. | a) | Interpret the Hadoop Framework and explain the basic building blocks of Hadoop with suitable architecture diagram.                                 | CO3 | 7 Marks  |
|    | b) | Sketch and discuss about Master/Slave method in HDFS architecture.                                                                                 | CO3 | 7 Marks  |
|    |    | (OR)                                                                                                                                               |     |          |
| 4. | a) | Describe about the Hadoop Ecosystem and explain the various components of Hadoop Ecosystem.                                                        | CO2 | 10 Marks |
|    | b) | What is replication factor in HDFS define about the default value.                                                                                 | CO1 | 4 Marks  |
|    |    | UNIT-III                                                                                                                                           |     |          |
| 5. | a) | Demonstrate the working of Job Tracker and Task Tracker in the Classic Mapreduce 1.                                                                | CO3 | 7 Marks  |
|    | b) | Interpret the basic anatomy of Map Reduce and demonstrate about the YARN architecture Map reduces.                                                 | CO3 | 7 Marks  |
|    |    | (OR)                                                                                                                                               |     |          |
| 6. | a) | Differentiate the Map-Reduce Implementation between the Word counts,<br>Write Types of keys and Values mapper, Reducer, Combiner with<br>examples. | CO4 | 7 Marks  |
|    | b) | Define the following Scheduler:                                                                                                                    | CO1 | 7 Marks  |
|    |    | i) FIFO Scheduler                                                                                                                                  |     |          |
|    |    | ii) Capacity Scheduler.                                                                                                                            |     |          |
|    |    | UNIT-IV                                                                                                                                            |     |          |
| 7. | a) | Appraise any Four HiveQL DDL command with its syntax and explain with examples.                                                                    | CO5 | 7 Marks  |
|    | b) | Select and explain the proper steps of the working principle of Hive architecture along with the suitable diagram.                                 | CO5 | 7 Marks  |
|    |    | (OR)                                                                                                                                               |     |          |
| 8. | a) | Describe the components of Pig Execution Environment.                                                                                              | CO2 | 7 Marks  |
|    | b) | Discuss about the various data types supported by Pig in its data model                                                                            | CO2 | 7 Marks  |

with an example.

# UNIT-V

| 9.  | a) | Design Hadoop data flow architecture at Rackspace.                | CO6 | 7 Marks |
|-----|----|-------------------------------------------------------------------|-----|---------|
|     | b) | Investigate the case studies of Mahout and Sqoop in detail.       | CO6 | 7 Marks |
|     |    | (OR)                                                              |     |         |
| 10. | a) | Sketch and explain the Data warehousing architecture at Facebook. | CO6 | 7 Marks |
|     | b) | Investigate the case studies of Crunch and Spark in detail.       | CO6 | 7 Marks |
|     |    |                                                                   |     |         |

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | List and explain the set of principles guided the design of Xerox STAR.            | CO3 | 7 Marks  |
|-----|----|------------------------------------------------------------------------------------|-----|----------|
|     | b) | Explain the characteristics of a web interface in detail.                          | CO2 | 7 Marks  |
|     |    | (OR)                                                                               |     |          |
| 2.  | a) | Differentiate the characteristics of internet and intranet with brief explanation. | CO2 | 7 Marks  |
|     | b) | Briefly explain the concept of direct manipulation.                                | CO1 | 7 Marks  |
|     |    | UNIT-II                                                                            |     |          |
| 3.  | a) | How to determine the requirements of a user?                                       | CO2 | 10 Marks |
|     | b) | Define Business.                                                                   | CO1 | 4 Marks  |
|     |    | (OR)                                                                               |     |          |
| 4.  | a) | Explain how to conduct a Face-to-Face interview for requirement analysis.          | CO4 | 7 Marks  |
|     | b) | Describe the process of understanding the User's mental model.                     | CO2 | 7 Marks  |
|     |    | UNIT-III                                                                           |     |          |
| 5.  | a) | Classify various types of statistical graphics.                                    | CO1 | 6 Marks  |
|     | b) | Explain any four qualities which provide visually pleasing composition.            | CO1 | 8 Marks  |
|     |    | (OR)                                                                               |     |          |
| 6.  | a) | What is a Screen? What is the purpose of a screen?                                 | CO1 | 4 Marks  |
|     | b) | Elaborate the steps for organizing and ordering of screen elements.                | CO2 | 10 Marks |
|     |    | UNIT-IV                                                                            |     |          |
| 7.  | a) | Explain the procedure for choosing colors in screen design.                        | CO2 | 7 Marks  |
|     | b) | Predict what are the possible problems with color.                                 | CO5 | 7 Marks  |
|     |    | (OR)                                                                               |     |          |
| 8.  | a) | Define an icon. Describe different kinds of icons in detail.                       | CO1 | 6 Marks  |
|     | b) | Articulate the good icon design guide lines in detail.                             | CO3 | 8 Marks  |
|     |    | UNIT-V                                                                             |     |          |
| 9.  | a) | How speech-based interface design helps the disabled people? Explain               | CO6 | 7 Marks  |
|     | b) | Explain the Indirect pointing devices and drivers.                                 | CO2 | 7 Marks  |
|     |    | (OR)                                                                               |     |          |
| 10. | a) | Explain the criterion for finding the right interface building tools.              | CO5 | 7 Marks  |
|     | b) | Explain the features interface building tools.                                     | CO2 | 7 Marks  |
|     |    | \$P \$P \$P                                                                        |     |          |

### ANALYTICAL INSTRUMENTATION

## [Electronics and Instrumentation Engineering]

Max. Marks: 70

SVEC-16

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a)       | Classify the electrodes used in liquid and gas analyzers and explain their working in detail                                                | CO1      | 7 Marks            |
|-----|----------|---------------------------------------------------------------------------------------------------------------------------------------------|----------|--------------------|
|     | b)       | Brief the effect of temperature on conductivity measurement.                                                                                | CO1      | 7 Marks            |
| 2.  | a)       | "Sodium analyzer places a vital role in treatment of boiler feed water"                                                                     | CO2      | 7 Marks            |
|     | b)       | Write a short note on silica analyzer.                                                                                                      | CO1      | 7 Marks            |
| 3.  | a)       | Explain how beer Lambert's law is implemented analysis of chemical solution by using spectrometers                                          | CO5      | 10 Marks           |
|     | b)       | Explain the light sources used in spectrometers.                                                                                            | CO1      | 4 Marks            |
| Δ   | a)       | Differentiate single and double beam colorimeters                                                                                           | $CO^2$   | 7 Marks            |
| ч.  | a)<br>b) | Pagell the working of FT IP spectrometers.                                                                                                  | $CO_{1}$ | 7 Marko            |
|     | 0)       | UNIT-III                                                                                                                                    | COI      | / IVIAIKS          |
| 5.  | a)       | Elaborate the appropriate spectroscopic technique which is used to<br>analyze chemical solution by using atomic emission as the key factor. | CO4      | 7 Marks            |
|     | b)       | Describe the different types of burners used in flame photometers.<br>(OR)                                                                  | CO1      | 7 Marks            |
| 6.  | a)       | Compare magnetic deflection and time of flight mass spectrometer.                                                                           | CO2      | 7 Marks            |
|     | b)       | Select an appropriate spectroscopic technique to analyze given chemical sample by using magnetic resonance phenomenon                       | CO4      | 7 Marks            |
|     |          | UNIT-IV                                                                                                                                     |          |                    |
| 7.  | a)       | Explain how gaschromatography provides valid solution by analyzing the given sample.                                                        | CO3      | 7 Marks            |
|     | b)       | List the columns used in liquid chromatography and explain its importance in the analysis of chemical solution. (OR)                        | CO1      | 7 Marks            |
| 8.  | a)       | With neat sketch, explain fluorescence detector in detail.                                                                                  | CO1      | 7 Marks            |
|     | b)       | Classify gaschromatography and explain the importance of oven<br>thermostats in gaschromatography.                                          | CO1      | 7 Marks            |
|     |          |                                                                                                                                             |          |                    |
| 0   | a)       | With a next sketch, explain the working of NO <sub>2</sub> monitor                                                                          | CO1      | 7 Marks            |
| ).  | b)       | Justify the role environment pollution monitoring device in the day to day<br>life in the society                                           | CO6      | 7 Marks<br>7 Marks |
|     |          | (OR)                                                                                                                                        |          |                    |
| 10. | a)       | Explain the necessity of X- ray detectors in day today life.                                                                                | CO6      | 7 Marks            |
| 1 . | b)       | With a neat sketch, explain the working of Turbidity and Nephelometer.                                                                      | CO1      | 7 Marks            |
|     |          |                                                                                                                                             |          |                    |

#### **BIOMEDICAL SIGNAL PROCESSING** [Electronics and Instrumentation Engineering]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  |    | What is the need of Biomedical signal processing and explain the process    | CO1 | 14 Marks |
|-----|----|-----------------------------------------------------------------------------|-----|----------|
|     |    | with a neat block diagram and explain each block in detail?                 |     |          |
|     |    | (OR)                                                                        |     |          |
| 2.  |    | Sketch the diagram of Computer Aided Diagnosis based upon the               | CO1 | 14 Marks |
|     |    | biomedical signal analysis.                                                 |     |          |
|     |    | UNIT-II                                                                     |     |          |
| 3.  |    | What are the potential sources of instrumentation and physiological         | CO2 | 14 Marks |
|     |    | artifacts in recording the Biomedical signal? Propose non-electronic        |     |          |
|     |    | methods to prevent or suppress the latter type of artifacts.                |     |          |
|     |    | (OR)                                                                        |     |          |
| 4.  |    | Explain about the following.                                                | CO2 | 14 Marks |
|     |    | i) Time and frequency domain filtering.                                     |     |          |
|     |    | ii) Homomorphism filtering.                                                 |     |          |
|     |    | UNIT-III)                                                                   |     |          |
| 5.  | a) | Design an adaptive filter using LMS algorithm.                              | CO3 | 7 Marks  |
|     | b) | Write the differences between static filter and adaptive filter and explain | CO3 | 7 Marks  |
|     | ,  | the principle of an adaptive filter.                                        |     |          |
|     |    | (OR)                                                                        |     |          |
| 6.  |    | Explain the significance in Phase Sensitive detector in biomedical signal   | CO3 | 14 Marks |
|     |    | processing and explain its operation with neat sketch.                      |     |          |
|     |    | (UNIT-IV)                                                                   |     |          |
| 7.  |    | Write short notes on:                                                       | CO4 | 14 Marks |
|     |    | i) Detection of Dicrotic notch.                                             |     |          |
|     |    | ii) Correlation Analysis of EEG channels.                                   |     |          |
|     |    | (OR)                                                                        |     |          |
| 8.  |    | Describe the turning point algorithms for ECG data compression in terms     | CO5 | 14 Marks |
|     |    | of data reduction with suitable figures and its disadvantages.              |     |          |
|     |    | UNIT-V                                                                      |     |          |
| 9.  |    | Explain the following terms.                                                | CO6 | 14 Marks |
|     |    | i) Direct FFT.                                                              |     |          |
|     |    | ii) Window functions.                                                       |     |          |
|     |    | (OR)                                                                        |     |          |
| 10. |    | Write a note on spectral estimation in biomedical signals. Explain the      | CO6 | 14 Marks |
|     |    | types of power spectrum estimation.                                         |     |          |

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I )

- 1. a) With reference to the PLC discrete input modules, what types of field CO2 7 Marks input devices are suitable for use with them?
  - b) Compare the functions of the CPU and memory sections of a PLC CO2 7 Marks processor.

#### (**OR**)

- 2. a) There are three machines, each with its own start-stop buttons. Only one CO3 7 Marks may run at a time. Construct a circuit with appropriate interlocking.
  - b) Asses FAIL-SAFE circuits in PLC. Which PLC may be appropriate? CO5 7 Marks Provide justifications for your choice.

## UNIT-II

- Explain about PLC counter and timer operation in a single application. CO1 14 Marks (OR)
   Select a Suitable PLC for develop a sequencer control system to operate a CO5 14 Marks
- 4. Select a Suitable PLC for develop a sequencer control system to operate a CO5 14 Marks basic robot.

## UNIT-III

5. Explain how Token ring and Token Bus Communication Topology for CO1 14 Marks transmit data in Distributed Control Systems.

#### (**OR**)

- 6. a) Illustrate about DCS Integration with PLCs and Computers with an CO1 7 Marks example.
  - b) Describe in detail about DCS supervisory computer tasks. CO1 7 Marks

## UNIT-IV

- 7. a) Describe about how MTU message calls for Analog Output of particular CO1 7 Marks register.
  - b) Describe about SCADA Analog Output Card with neat diagram. CO1 7 Marks

#### (OR)

8. Inexpensive memory has led more and more information to be stored in CO2 14 Marks the MTU. What technology may turn that trend around? Why?

# UNIT-V

9. a) Illustrate about how HART protocol utilizes the OSI reference model. CO1 7 Marks

b) Explain about basic requirements of field bus standard for Local Area CO1 7 Marks Network of industrial automation field.

### (OR)

10.Describe in detail about field bus.<br/>i) interoperability.CO114 Marks14 Marks

POWER PLANT INSTRUMENTATION

## [Electronics and Instrumentation Engineering]

Max. Marks: 70

CO1

14 Marks

#### Answer One Question from each Unit All questions carry equal marks

# 

- a) Explain the wind power generation with the help of block diagram in CO1 7 Marks detail.
   b) Explain the difference between the help of block diagram in CO2 7 Marks
  - b) Explain the difference between conventional and non conventional CO2 7 Marks sources.

#### (OR)

- 2. a) With neat sketch, describe the process of electric power generation using CO1 7 Marks solar energy.
  - b) Emphasize the objectives of instrumentation and control in power CO2 7 Marks generation.

# UNIT-II

- 3. a) Illustrate the schematic diagram and explain the operations of pressurized CO1 9 Marks water nuclear reactor boiling water reactor.
  - b) Justify how the differential pressure method is used for drum level CO2 5 Marks measurement

#### (**OR**)

- 4. a) Design a measurement system setup to measure steam pressure and steam CO3 7 Marks temperature.
  - b) Select a suitable circuit to measure flue gas presents in boiler and explain CO5 7 Marks its working principle.

## UNIT-III

- 5. a) Describe Cascade steam temperature control with neat sketch, CO1 6 Marks
  - b) Name and explain the different methods used for controlling superheated CO1 8 Marks steam temperature.

#### (OR)

- 6. a) Explain an engineering solution to control the combustion for solid fuel CO4 7 Marks fired boiler.
  - b) Design a controller to control Fire side steam temperature and Steam CO3 7 Marks pressure.

## UNIT-IV

- 7. a) With neat block diagram, explain the principle parts of steam turbine. CO1 7 Marks
  b) Design a system to measure mechanical parameters in the measurement CO3 7 Marks
- of turbine in power plants. (OR)
- 8. a) Illustrate the schematic diagram of turbo alternator cooling system and CO1 7 Marks describe briefly.
  - b) Emphasize the safety measures in controlling the turbine control system. CO6 7 Marks
- 9. a) Specify the importance of electrical safety and maintenance of measuring CO6 7 Marks instruments in power plants.
  - b) Write short notes on explosion hazards and intrinsic safety CO1 7 Marks

10. Discuss in detail about interlocks for boiler operation.

## **BIG DATA TECHNOLOGIES**

[Information Technology]

Max. Marks: 70

SVEC-16

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Define Big Data. Illustrate major dimensions of Big Data.                            | CO1        | 7 Marks  |
|-----|----|--------------------------------------------------------------------------------------|------------|----------|
|     | b) | Explain Hadoop distributed file system with suitable example.                        | CO1        | 7 Marks  |
|     |    | (OR)                                                                                 |            |          |
| 2.  | a) | What is Hadoop? Categorize the components of Hadoop Ecosystem.                       | CO1<br>CO2 | 7 Marks  |
|     | b) | Illustrate Various Big Data Sources.                                                 | CO         | 7 Marks  |
|     |    | UNIT-II)                                                                             |            |          |
| 3.  |    | Describe HDFS Architecture with Examples.                                            | CO2        | 14 Marks |
|     |    | (OR)                                                                                 |            |          |
| 4.  | a) | List and explain HDFS features.                                                      | CO2        | 7 Marks  |
|     | b) | Explain Hadoop Input / Output procedures.                                            | CO1        | 7 Marks  |
|     |    | UNIT-III                                                                             |            |          |
| 5.  | a) | Categorize MapReduce Library Classes.                                                | CO2        | 8 Marks  |
|     | b) | Explain various tools supported by Hadoop Framework.                                 | CO6        | 6 Marks  |
|     |    | (OR)                                                                                 |            |          |
| 6.  |    | Explain how to create Name node and Data node of Hadoop Cluster in Hadoop Framework. | CO4        | 14 Marks |
|     |    | UNIT-IV                                                                              |            |          |
| 7.  | a) | Distinguish between HIVE and Traditional Databases.                                  | CO2        | 7 Marks  |
|     | b) | Compare and contrast HBase with RDBMS.                                               | CO2        | 7 Marks  |
|     |    | (OR)                                                                                 |            |          |
| 8.  |    | Elaborate installation and services of Hive.                                         | CO5        | 14 Marks |
|     |    |                                                                                      | CO6        |          |
|     |    | UNIT-V                                                                               |            |          |
| 9.  |    | Outline features and services of SQOOP in detail.                                    | CO2        | 14 Marks |
|     |    |                                                                                      | CO5        |          |
|     |    | (OR)                                                                                 |            |          |

### **MOBILE APPLICATION DEVELOPMENT**

#### [Information Technology]

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

### UNIT-I

| 1.  | a) | Explain the mobile web presence briefly.                                                                           | CO1 | 7 Marks  |
|-----|----|--------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Explain the reasons to create a mobile application.                                                                | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                               |     |          |
| 2.  | a) | Compare any two mobile OSs and explain the behavior of mobile user web browsing.                                   | CO1 | 7 Marks  |
|     | b) | What is Android and explain its features.                                                                          | CO1 | 7 Marks  |
|     | ,  | UNIT-II                                                                                                            |     |          |
| 3.  | a) | Sketch the life cycle of an Activity and discuss its events.                                                       | CO1 | 7 Marks  |
|     | b) | Develop an android program to illustrate the usage of all events of an activity.                                   | CO3 | 7 Marks  |
|     |    | (OR)                                                                                                               |     |          |
| 4.  |    | Create an Android application to add action items to the action bar.                                               | CO4 | 14 Marks |
|     |    | UNIT-III                                                                                                           |     |          |
| 5.  | a) | Create an Android application to display the long list of items which are stored in an xml file using ListView.    | CO4 | 7 Marks  |
|     | b) | List and explain the different views for displaying images.                                                        | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                               |     |          |
| 6.  | a) | Develop an Android program to perform image transition using ImageSwitcher View.                                   | CO3 | 9 Marks  |
|     | b) | Distinguish different ways to save and load of User Preferences.                                                   | CO2 | 5 Marks  |
|     |    | UNIT-IV                                                                                                            |     |          |
| 7.  | a) | Create an Android application to send SMS message using Intent class.                                              | CO6 | 7 Marks  |
|     | b) | Develop an Android program to zoom in or zoom out of the Google Map.                                               | CO3 | 7 Marks  |
|     |    | (OR)                                                                                                               |     |          |
| 8.  | a) | Discuss the procedure to prevent the standard messaging application from receiving a SMS message.                  | CO1 | 7 Marks  |
|     | b) | Create an Android application to send an e-mail.                                                                   | CO6 | 7 Marks  |
|     |    | UNIT-V                                                                                                             |     |          |
| 9.  | a) | Discuss the tools required to develop the applications for an Ios.                                                 | CO5 | 7 Marks  |
|     | b) | Define Service and discuss the functionality a Service with a suitable example.                                    | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                               |     |          |
| 10. | a) | Outline the anatomy of an iOS app.                                                                                 | CO1 | 7 Marks  |
|     | b) | Develop an Android program to start a counter from zero and stop the counter using Runnable, Thread and AsyncTask. | CO3 | 7 Marks  |

Max. Marks: 70

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1. | a) | Explain the limitations of Mobile computing.                                                                                      | CO1     | 7 Marks |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------|---------|---------|
|    | b) | What are the various constraints of mobile computing?                                                                             | CO1     | 7 Marks |
|    |    | (OR)                                                                                                                              |         |         |
| 2. | a) | Explain security services offered by GSM with relevant Algorithms.                                                                | CO1     | 7 Marks |
|    | b) | List the features of WiMAX.                                                                                                       | CO5     | 7 Marks |
|    |    | UNIT-II                                                                                                                           |         |         |
| 3. | a) | Differentiate Packet reservation multiple access with Demand assigned multiple access methods.                                    | CO2     | 7 Marks |
|    | b) | CO3                                                                                                                               | 7 Marks |         |
|    |    | (OR)                                                                                                                              |         |         |
| 4. | a) | What is a MAC layer of Bluetooth? Explain in detail.                                                                              | CO1     | 7 Marks |
|    | b) | Demonstrate Protocol Architecture and bridging of IEEE 802.11 WLAN.                                                               | CO4     | 7 Marks |
|    |    | UNIT-III                                                                                                                          |         |         |
| 5. | a) | Explain the working of Mobile IP with the help of neat diagram.                                                                   | CO4     | 7 Marks |
|    | b) | Elaborate the creation Mobile IP along with basic requirements.                                                                   | CO4     | 7 Marks |
|    |    | (OR)                                                                                                                              |         |         |
| 6. | a) | Examine the reason why congestion occurs in network. Analyze how does TCP detect and handle congestion.                           | CO2     | 7 Marks |
|    | b) | Modify Normal TCP to M-TCP for working Efficiently in wireless mobile networks.                                                   | CO5     | 7 Marks |
|    |    | UNIT-IV                                                                                                                           |         |         |
| 7. | a) | What are the hoarding techniques and explain in detail.                                                                           | CO1     | 6 Marks |
|    | b) | Explain the concepts of Cache Invalidation mechanisms and what is importance of data cache maintenance and web cache maintenance? | CO1     | 8 Marks |
|    |    | (OR)                                                                                                                              |         |         |
| 8. | a) | What is meant by balanced Push-Pull mechanism? In detail explain about IPP.                                                       | CO1     | 7 Marks |
|    | b) | The push based broadcast is not suitable for large data size. Justify.                                                            | CO4     | 4 Marks |
|    | c) | Which type of indexing is suitable for broad casting data through wireless Channel, why?                                          | CO2     | 3 Marks |

## UNIT-V

- 9. a) How does dynamic source routing handle routing? What is the motivation CO1 7 Marks behind dynamic source routing compared to other routing algorithms in fixed networks?
  - b) What are the security threats to a MANET? Why a MANET faces grater CO1 7 Marks security threats than a fixed infrastructure networks?

### (OR)

- 10. a) Name mechanisms to improve web access for handheld devices. What is CO1 7 Marks their common problem and what led finally to the development of WAP?
  - b) Explain briefly about the Wireless Datagram Protocol (WDP) of transport CO1 7 Marks layer.

# CRYPTOGRAPHY AND NETWORK SECURITY

[Information Technology]

Max. Marks: 70

Time: 3 hours

## Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | "Exact realization of a symmetric Block cipher depends on the choice of certain parameters and design features" What are they? Explain.     | CO2 | 7 Marks  |
|-----|----|---------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Compute the cipher text for the message " <b>cryptography and network</b> security" using transposition technique with the key 4 3 1 2 5 6. | CO4 | 7 Marks  |
|     |    | (OR)                                                                                                                                        |     |          |
| 2.  | a) | Explain active and passive network security threats.                                                                                        | CO1 | 7 Marks  |
|     | b) | Define Caesar cipher. Discuss the characteristics of it that help the cryptanalyst using Brute-force attack.                                | CO2 | 7 Marks  |
|     |    | UNIT-II                                                                                                                                     |     |          |
| 3.  | a) | State the purpose of the S-boxes in DES.                                                                                                    | CO1 | 7 Marks  |
|     | b) | Distinguish between a block cipher and a stream cipher.                                                                                     | CO2 | 7 Marks  |
|     |    | (OR)                                                                                                                                        |     |          |
| 4.  | a) | Write the difference between diffusion and confusion.                                                                                       | CO2 | 7 Marks  |
|     | b) | List and explain the approaches to attack the RSA algorithm.                                                                                | CO2 | 7 Marks  |
|     |    | UNIT-III                                                                                                                                    |     |          |
| 5.  | a) | Compare and contrast the positive and negative aspects of ITA 2000.                                                                         | CO6 | 7 Marks  |
|     | b) | Explain the Digital Signature Standard in detail.                                                                                           | CO6 | 7 Marks  |
|     |    | (OR)                                                                                                                                        |     |          |
| 6.  | a) | Differentiate a message authentication code and a one-way hash function                                                                     | CO2 | 7 Marks  |
|     | b) | List the problems that can be addressed by Kerberos.                                                                                        | CO1 | 7 Marks  |
|     |    | UNIT-IV                                                                                                                                     |     |          |
| 7.  | a) | Explain IP Security scenario along with benefits.                                                                                           | CO1 | 7 Marks  |
|     | b) | Explain OAKLEY key determination protocol.                                                                                                  | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                                                        |     |          |
| 8.  | a) | Make use of SSL protocol to solve web security issues.                                                                                      | CO3 | 7 Marks  |
|     | b) | Explain about SSL handshake protocol.                                                                                                       | CO1 | 7 Marks  |
|     |    | UNIT-V                                                                                                                                      |     |          |
| 9.  | a) | Discuss various methods of phishing.                                                                                                        | CO1 | 7 Marks  |
|     | b) | Differentiate software and hardware key loggers.                                                                                            | CO2 | 7 Marks  |
|     |    | (OR)                                                                                                                                        |     |          |
| 10. |    | With a neat diagram, analyze how virus spread through:                                                                                      | CO2 | 14 Marks |
|     |    | i) The internet.                                                                                                                            |     |          |
|     |    | ii) A stand alone computer.                                                                                                                 |     |          |
|     |    | 111) Local networks.                                                                                                                        |     |          |

#### IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

#### SYSTEM MODELING AND SIMULATION

[Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

### UNIT-I

1. a) Name several entities, attributes, activities, events and state variables for CO1 9 Marks the following systems.

i) A cafeteria. ii) A grocery store. iii) A hospital emergency room.

- b) What are the events and activities associated with the use of your check CO1 5 Marks book?
- (OR)
   Consider the following continuously operating job shop. Inter-arrival CO2 14 Marks times of jobs are distributed as follows:

| Time Between<br>Arrivals (Hours) | Probability |  |  |  |  |  |  |
|----------------------------------|-------------|--|--|--|--|--|--|
| 0                                | 0.23        |  |  |  |  |  |  |
| 1                                | 0.37        |  |  |  |  |  |  |
| 2                                | 0.28        |  |  |  |  |  |  |
| 3                                | 0.12        |  |  |  |  |  |  |

Processing times for jobs are normally distributed, with mean 50 minutes and standard deviation 8 minutes. Construct a simulation table and perform a simulation for 10 new customers. Assume that, when the simulation begins, there is one job being processed (scheduled to be completed in 25 minutes) and there is one job with a 50-minute processing time in the queue.

- i) What was the average time in the queue for the 10 new jobs?
- ii) What was the average processing time of the 10 new jobs?
- iii) What was the maximum time in the system for the 10 new jobs?

## UNIT-II

3. a) Write a R program to find sum, mean and product of a vector.
b) Write a R program to find factorial of a given number.
CO3 7 Marks CO3 7 Marks
(OR)
4. a) Design a simple calculator using R program.
CO3 7 Marks

b) Write a R program to check whether a given number is prime or not. CO3 7 Marks

- 5. a) List and explain terminology and concepts of statistical models in CO1 9 Marks simulation.
  - b) A production process manufactures alternators for outboard engines used CO3 5 Marks in recreational boating. On the average, 1% of the alternators will not perform up to the required standards when tested at the engine assembly plant. When a large shipment of alternators is received at the plant, 100 are tested, and, if more than two are nonconforming, the shipment is returned to the alternator manufacturer. What is the probability of returning a shipment?

#### (OR)

- Describe useful statistical models and its situations that arise to conduct CO1 6. a) 9 Marks simulation. An industrial chemical that will retard the spread of fire in paint has been CO4 5 Marks b) developed. The local sales representative has estimated, from past experience that 48% of the sales calls will result in an order. i) What is the probability that the first order will come on the fourth sales call of the day? ii) If eight sales calls are made in a day, what is the probability of receiving exactly six orders? iii) If four sales calls are made before lunch, what is the probability that one or fewer results in an order? (UNIT-IV) 7. Explain the characteristics of queuing systems. CO1 14 Marks (**OR**) 8. Describe important considerations of generating random numbers. 9 Marks CO1 a) Generate random numbers on the interval [0, 1] with 2-digit accuracy. b) CO<sub>4</sub> 5 Marks UNIT-V Synthesize a suitable method for collecting data from stale data and time CO5 9. 14 Marks varying data. (**OR**) Explain the methods for selecting families of input distributions when 10. CO1 11 Marks a) data available is independent and identically distributed.
  - b) Design probability density functions of the Erlang distribution where CO6 3 Marks  $\theta = 2$  and k = 1, 2, 4, and 8.

#### SYSTEMS ENGINEERING [Computer Science and Systems Engineering]

Time: 3 hours

Max. Marks: 70

CO2

14 Marks

SVEC-16

#### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) Compare and contrast between systems engineering and traditional CO1 7 Marks engineering disciplines.
  - b) Write a paragraph explaining what is meant by the statement "Systems CO1 7 Marks engineering is focused on the system as a whole." State what characteristics of a system are thought as this statement implies and how they are applied to systems engineering.

#### (**OR**)

- 2. a) Discuss systems engineering in the perspective of project management. CO1 7 Marks
  - b) What is meant by the term "modularity?" What characteristics does a CO1 7 Marks modular system possess? Give a specific example of a modular system and identify the modules.

### UNIT-II)

3. Discuss about the Model of a Complex System.

#### (OR)

4. Give three key activities of a systems engineer that require technical CO2 14 Marks knowledge down to the component level. Under what circumstances should the systems engineer need to probe into the subcomponent level for a particular system component?

## UNIT-III)

- 5. a) Illustrate the process of eliciting the needs and requirement analysis in CO3 6 Marks System Engineering.
  - b) Describe the general type of the organizational structure. CO2 8 Marks

#### (OR)

- 6. a) Illustrate how needs of systems engineering are validated. CO3 6 Marks
  - b) Discuss the advantages of using the system design team approach for a CO3 8 Marks large development project.

## UNIT-IV

- 7. a) Illustrate the types of software systems with respect to systems CO1 9 Marks engineering while in a systems development cycle.
  - b) List the characteristics of a set of well-stated operational requirements, CO4 5 Marks that is, the qualities that you would look for in analyzing their adequacy. For each, state what could be the result if a requirement did not have these characteristics?

#### (**OR**)

- 8. a) What are the measures taken to reduce the program risks during systems CO2 9 Marks development cycle? Illustrate.
  - b) Describe and define the principal outputs (products) of the needs analysis CO4 5 Marks phase. List and define the primary systems engineering activities that contribute to these products.

## UNIT-V

9. What specific activities in the advanced development phase sometimes CO1 14 Marks cause it to be referred to as a "risk reduction" phase? Give an example of each activity considering a real or hypothetical system.

### (OR)

10. Graphical user interface software is generally difficult to design and test. CO1 14 Marks Explain why this is true, giving at least three situations to illustrate your points. What types of development tests would you propose for each situation?

\$P \$P \$P

| 1.   | a)      | Describe the limitations that affect the size of IP datagrams.                | CO1 | 7 Marks |
|      | b)      | Distinguish between User Datagram Protocol and Transmission Control Protocol. | CO2 | 7 Marks |
|      |         | OR)                                                                           |     |         |
| 2.   | a)      | Explain about Byte ordering Functions.                                        | CO1 | 7 Marks |
|      | b)      | Describe about listen and accept functions.                                   | CO1 | 7 Marks |
|      |         | UNIT-II                                                                       |     |         |
| 3.   | a)      | Apply str_echo and str_cli functions for string operations.                   | CO3 | 7 Marks |
|      | b)      | Describe about signal handling on a POSIX-complaint system.                   | CO1 | 7 Marks |
|      |         | (OR)                                                                          |     |         |
| 4.   | a)      | List out various I/O models that are available in UNIX.                       | CO1 | 7 Marks |
|      | b)      | Explain the need for getsockopt and setsockopt functions.                     | CO1 | 7 Marks |
|      |         | UNIT-III)                                                                     |     |         |
| 5.   | a)      | Implement UDP Echo Server.                                                    | CO4 | 7 Marks |
|      | b)      | Explain about outgoing interface with UDP.                                    | CO1 | 7 Marks |
|      |         | (OR)                                                                          |     |         |
| 6.   | a)      | Discuss about gethost byname function.                                        | CO1 | 7 Marks |
|      | b)      | Explain about Domain Name System.                                             | CO1 | 7 Marks |
|      |         | UNIT-IV                                                                       |     |         |
| 7.   | a)      | Explain source code portability.                                              | CO4 | 7 Marks |
|      | b)      | Discuss about IPV4 client-IPV6 server.                                        | CO1 | 7 Marks |
|      |         | (OR)                                                                          |     |         |
| 8.   | a)      | Describe about Namespaces for IPC.                                            | CO1 | 7 Marks |
|      | b)      | Write about the usage of uname function.                                      | CO5 | 7 Marks |
|      |         | UNIT-V                                                                        |     |         |
| 9.   | a)      | Explain about Interprocess communication.                                     | CO1 | 7 Marks |
|      | b)      | Apply Message queues for process communication.                               | CO6 | 7 Marks |
|      |         | (OR)                                                                          |     |         |
| 10.  | a)      | Explain about RPC Transparency issues.                                        | CO1 | 7 Marks |
|      | b)      | Write about Implementation of rlogin for remote access.                       | CO1 | 7 Marks |

### **INTERNET OF THINGS**

#### [Computer Science and Engineering, Computer Science and Systems Engineering]

| 3 hours |                                    | Max. Marks: 70 |
|---------|------------------------------------|----------------|
|         | Answer One Question from each Unit |                |
|         | All questions carry equal marks    |                |
|         |                                    |                |
|         |                                    |                |

| 1.  | a) | Explain Internet of Things (IoT) with example.                                                       | CO1 | 9 Marks  |
|-----|----|------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | With neat sketch, describe the structure of IOT device.                                              | CO2 | 5 Marks  |
|     |    | (OR)                                                                                                 |     |          |
| 2.  | a) | Discuss about Web socket communication in IOT.                                                       | CO1 | 6 Marks  |
|     | b) | Explain the physical design of IOT.                                                                  | CO2 | 8 Marks  |
|     |    | UNIT-II                                                                                              |     |          |
| 3.  | a) | Explain Arduino. What are the things need to be considered for developing an application on Arduino? | CO2 | 7 Marks  |
|     | b) | Describe Raspberry pi interfaces.                                                                    | CO3 | 7 Marks  |
|     |    | (OR)                                                                                                 |     |          |
| 4.  | a) | Describe the IOT applications for Smart Cities.                                                      | CO6 | 7 Marks  |
|     | b) | Discuss about the building blocks of an IOT Device.                                                  | CO3 | 7 Marks  |
|     |    | UNIT-III                                                                                             |     |          |
| 5.  | a) | Explain the types of sensor devices with example.                                                    | CO2 | 7 Marks  |
|     | b) | Describe internet communications in IOT.                                                             | CO1 | 7 Marks  |
|     |    | (OR)                                                                                                 |     |          |
| 6.  |    | List and explain Application layer protocols.                                                        | CO3 | 14 Marks |
|     |    | UNIT-IV                                                                                              |     |          |
| 7.  | a) | Discuss about Requirement specifications in IOT.                                                     | CO4 | 9 Marks  |
|     | b) | Explain the operational view specifications in IOT.                                                  | CO1 | 5 Marks  |
|     |    | (OR)                                                                                                 |     |          |
| 8.  | a) | Differentiate between Device and component integration.                                              | CO4 | 7 Marks  |
|     | b) | Describe process specifications in IOT.                                                              | CO4 | 7 Marks  |
|     |    | UNIT-V                                                                                               |     |          |
| 9.  |    | Explain the Hadoop Ecosystem with neat sketch.                                                       | CO5 | 14 Marks |
|     |    | (OR)                                                                                                 |     |          |
| 10. | a) | Discuss about Hadoop Map reduce for batch data analysis.                                             | CO5 | 7 Marks  |
|     | b) | Describe YARN Components in detail.                                                                  | CO6 | 7 Marks  |

IV B.Tech II Semester (SVEC14) Supplementary Examinations June - 2021

HVDC AND FACTS

[ ELECTRICAL AND ELECTRONICS ENGINEERING ]

Time: 3 hours

## Answer One Question from each Unit

Max. Marks: 70

# All questions carry equal marks

## UNIT-I

| 1  | a) | Explain the advantages of HVDC transmission over EHV-AC transmission for transmitting power from point to point.             | CO1 | 7 Marks |
|----|----|------------------------------------------------------------------------------------------------------------------------------|-----|---------|
|    | b) | Draw and explain the converter bridge characteristics of rectifier and inverter configurations from its equivalent circuits. | CO2 | 7 Marks |
| 2  | a) | Draw a schematic diagram of a 12 pulse converter circuit, AC current waveform and list the different modes of operation.     | CO2 | 8 Marks |
|    | b) | Discuss the technical considerations for reliable operation of HVDC transmission.                                            | CO1 | 6 Marks |
|    |    | UNIT-II                                                                                                                      |     |         |
| 3  | a) | Explain in detail about individual phase control firing scheme. Also mention the drawbacks of this scheme.                   | CO2 | 7 Marks |
|    | b) | What are the adverse effects of harmonics produced by the HVDC converters?                                                   | CO2 | 7 Marks |
|    |    | (OR)                                                                                                                         |     |         |
| 4  | a) | Discuss about the principles of DC link control.                                                                             | CO1 | 7 Marks |
|    | b) | Discuss the need for reactive power control in HVDC power stations.                                                          | CO1 | 7 Marks |
| 5  | a) | Explain power flow in AC transmission system and with parallel paths and meshed connections.                                 | CO1 | 8 Marks |
|    | b) | Discuss the need of transmission interconnections.<br>(OR)                                                                   | CO3 | 6 Marks |
| 6  | a) | Define the following.<br>i) FACTS.<br>ii) FACTS Controller.                                                                  | CO1 | 6 Marks |
|    | b) | Discuss basic types of FACTS controllers with a neat sketch.                                                                 | CO1 | 8 Marks |
| 7  | a) | Explain basic operating principle of STATCOM with neat sketch and discuss its characteristics                                | CO1 | 8 Marks |
|    | b) | Discuss comparisons between shunt compensators.                                                                              | CO1 | 6 Marks |
| 8  | a) | Discuss basic operating control scheme for SSSC.                                                                             | CO2 | 7 Marks |
|    | b) | Explain operating principle and characteristics of TCSC with neat sketch.                                                    | CO1 | 7 Marks |
|    |    | UNIT-V                                                                                                                       |     |         |
| 9  | a) | Explain control scheme of inter line power flow controller in detail.                                                        | CO1 | 7 Marks |
|    | b) | Explain the role of UPFC in real and reactive power flow control. (OR)                                                       | CO1 | 7 Marks |
| 10 | a) | Explain basic operating principle of UPFC with neat block diagram.                                                           | CO1 | 7 Marks |
|    | b) | Write short notes on generalized and multidimensional FACTS controller.<br>$\circledast  \circledast$                        | CO1 | 7 Marks |

[ MECHANICAL ENGINEERING ]

**Answer One Question from each Unit** All questions carry equal marks UNIT-I Describe the role of mechatronics systems in production and CO1 14 Marks manufacturing process with an application. (**OR**) With neat sketch, explain data conversion process with the help of signal CO2 14 Marks conditioner. List out the ideal characteristics of operational amplifier. UNIT-II Distinguish between Hydraulics and Pneumatics systems. CO1 4 Marks a) What is Electro-mechanical transient performance? Derive mathematical CO2 b) 10 Marks solution for linear torque-speed characteristic. (**OR**) Write about: i) Piezoelectric actuators. CO3 5 Marks ii) DC servo motor. CO3 5 Marks iii) Stepper Motors. CO3 4 Marks UNIT-III Explain the following. CO3 9 Marks a) i) Notch filter. ii) Low pass filter. iii) Band stop filter. Discuss the functional operation of circuit breaker with schematic CO3 5 Marks b) diagram. (**OR**) Explain the working principle of transistor with a schematic diagram. CO3 6 Marks a) Discuss about Discrete Fourier Transformations (DFT) used in signal CO3 8 Marks **b**) processing. UNIT-IV) Explain the working principle of DA converter with a neat sketch. And a) CO3 9 Marks discuss the application. Recognize the factors needed for selection of a micro controller. b) CO3 5 Marks (**OR**) Demonstrate the architecture of 8051 micro controller with a neat sketch CO3 14 Marks and discuss its applications UNIT-V Design a system involving a PLC for the coin-operated barriers for a car CO4 14 Marks park. (**OR**) Explain about the working principle of PID controller with a neat CO3 10 a) 7 Marks sketch. CO1 Explain different types of Control modes. 7 Marks **b**)

# PRESTRESSED CONCRETE

[ Civil Engineering ]

Time: 3 hours

Max. Marks: 70

7 Marks

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- Explain various losses of prestress in pre-tensioning and post-tensioning. CO1 14 Marks (OR)
   Explain about materials used for prestressed concrete. CO1 14 Marks
   Marks
   A concrete beam of cross section 250 x 500mm spanning over 8m .The CO2 14 Marks beam is prestressed by a straight cable with an eccentricity of 100mm
- beam is prestressed by a straight cable with an eccentricity of 100mm from soffit and 5 number of 7mm diameter wires subjected to a stress of 1250N/mm<sup>2</sup>. The live load on the beam is 2 KN/m. Draw the stress distribution diagram at the central section for following.
  - i) prestress + selfweigth
  - ii) prestress + selfweigth + live load

Take the density of concrete as  $24 \text{ KN/m}^3$ 

#### (OR)

- A simply supported prestressed concrete beam spanning over 10m is of rectangular cross section 500mm wide by 750mm deep the beam is prestressed by a parabolic cable having an eccentricity of 200mm at the centre of the span and zero at end supports. The effective force in the cable is 1600kN. If the beam supports a total uniformly distributed load of 40kN/m including selfweight,
  - i) evaluate the extreme fibre stresses at the mid span section. CO2 7 Marks
  - ii) calculate the force required in the cable having the same CO2 eccentricity to balance a total load of 50kN/m on the beam.

## UNIT-III)

5 A double T section having a flange 1200mm wide and 150mm thick is CO3 14 Marks prestressed by 4700mm<sup>2</sup> of high tensile steel located at an effective depth of 1600mm. The ribs have a thickness of 150mm each. If the cube strength of concrete is 40N/mm<sup>2</sup> and tensile strength of steel is 1600N/mm<sup>2</sup>, determine the flexural strength of the double T girder using IS 1343 provisions.

### (OR)

6 The support section of a prestressed concrete beam, 100mm wide and CO2 14 Marks 300mm deep is required to support an ultimate shear force of 80KN. The compressive prestresss at the centrodial axis is 5N/mm<sup>2</sup>. The characteristic cube strength of concrete is 40N/mm<sup>2</sup>. The cover to the tension reinforcement is 50mm. If the characteristic tensile strength of steel in 220N/mm<sup>2</sup>, design shear reinforcement at the section.

## (UNIT-IV)

7 Explain Guyon's method to calculate bursting tension in case of evenly CO1 14 Marks distributed forces and in case of forces not evenly distributed.

#### (OR)

8 Write a note on anchorage zone reinforcement with neat figures. CO1 14 Marks

1

## UNIT-V

Determine the short term deflection and maximum deflection arising in CO2 9 14 Marks pre-stressed concrete beam for the following data. span = 15m, Cross section area =  $300 \times 600$ mm Area of steel =  $600 \text{mm}^2$ Stress = 100Mpa Density of concrete = 24kN/m<sup>3</sup>. Elastic modulus of composite = 42 Gpa. (**OR**) 10 Explain short term deflections of uncracked members. CO1 14 Marks (A)

(F) 운
(An Autonomous Institution, Affiliated to JNTUA, Anantapur) IV B.Tech II Semester (SVEC14) Supplementary Examinations March - 2021 ESTIMATION, COSTING AND VALUATION

[ Civil Engineering ]

Time: 3 hours

## Answer One Question from each Unit

### All questions carry equal marks

## UNIT-I

- 1 a) Explain the arch masonry calculations for various types of arches. CO1 7 Marks
  - b) Explain the methods of estimating.

### (OR)

- 2 a) Define Estimating and list out the methods of estimating.
  - b) Estimate the quantities of the building from the given plan and section as CO2 10 Marks shown in figure.
    - i) Stone masonry for substructure.
    - ii) Outside plastering in CM (1: 5) with 20 mm thickness.

UNIT-II

- 3 a) How can the number of main bars and distribution bars in slabs be found CO2 3 Marks out? Mention the formula.
  - b) Prepare a detailed estimate for supplying and laying 175mm dia glazed CO2 11 Marks stone ware pipe for 100m length joining with 1:1.5 cement mortar including trenching up to a depth of 85cm. Estimate should be prepared to include all materials. (take length of pipe is 60cm)

### (OR)

4 Prepare a detailed estimate for supplying, laying and jointing 200mm CO1 14 Marks diameter glazed stone ware pipe line jointing with 1:2 cement mortar. Measurement of trench is 120m x 0.6m x 0.6m.

## UNIT-III

| 5 | Write the detailed specifications for the following items. |                 |  | 14 Marks |
|---|------------------------------------------------------------|-----------------|--|----------|
|   | i) Mosaic flooring.                                        | ii) Plastering. |  |          |

iii) RCC work in detail.

## (OR)

- 6 a) What is the purpose and method of writing specification? Describe briefly CO1 7 Marks general and detailed specification.
  - b) Write detail specification of RCC (1:2:4) for beam concrete and painting CO1 7 Marks for walls.

7 Marks

4 Marks

Max. Marks: 70

CO1

(UNIT-IV)

| 7  | a) | Prepare a contract document for giving a building on lease.                 | CO3 | 10 Marks |
|----|----|-----------------------------------------------------------------------------|-----|----------|
|    | b) | Discuss in brief about different contracts.                                 | CO1 | 4 Marks  |
|    |    | (OR)                                                                        |     |          |
| 8  | a) | Prepare a tender schedule for a school building to be executed on behalf of | CO3 | 7 Marks  |
|    |    | Department of Higher Education.                                             |     |          |
|    | b) | Write note on Arbitration and legal requirements.                           | CO3 | 7 Marks  |
|    |    | UNIT-V                                                                      |     |          |
| 9  | a) | What do you mean by valuation and explain various purposes of valuation.    | CO1 | 10 Marks |
|    | b) | Explain capitalized value with example.                                     | CO4 | 4 Marks  |
|    |    | (OR)                                                                        |     |          |
| 10 | a) | What is Obsolescence?                                                       | CO1 | 2 Marks  |
|    | b) | Explain the methods of calculating the depreciation.                        | CO1 | 12 Marks |
|    |    |                                                                             |     |          |

### HVDC AND FACTS

### [Electrical and Electronics Engineering]

Time: 3 hours Max. Marks: 70 **Answer One Question from each Unit** All questions carry equal marks UNIT-I Discuss the technical advantages of DC over AC transmission. CO1 7 Marks 1 a) What are the types of HVDC links? Explain. b) CO1 7 Marks (OR)With neat sketches, explain the different kinds of DC links available. 2 CO1 7 Marks a) Explain the effect of overlap angle on the performance of converter b) CO1 7 Marks circuit. Explain the combined characteristics of rectifier and inverter. UNIT-II Explain the process of starting and stopping of a DC link in HVDC 3 a) CO1 7 Marks system. Explain in detail the convertor control characteristics of HVDC systems. 7 Marks CO<sub>2</sub> **b**) (**OR**) Explain the hierarchical control structure of a DC link with the help of a CO2 7 Marks 4 a) block diagram. Discuss the current and extinction angle control. b) CO4 7 Marks UNIT-III) 5 What are the causes of reactive power deficit in power systems? a) CO1 7 Marks Explain. Explain the power flow in AC transmission with meshed connections. CO1 7 Marks b) (**OR**) 6 Explain the basic types of FACTS controllers and their relative CO2, 14 Marks importance. CO3 UNIT-IV 7 Explain the methods of controllable VAR generation. CO3 14 Marks (**OR**) 8 Explain the control scheme of STATCOM. CO<sub>2</sub> 7 Marks a) Explain the operation of TCSC. CO2 7 Marks **b**) UNIT-V 9 Differentiate between UPFC and IPFC. CO2 7 Marks a) Explain how UPFC is different from VSC. CO2 7 Marks b) (OR)Explain basic operating principle and control structure of a UPFC. 10 a) CO1 7 Marks Explain the role of IPFC in real and reactive power flow control. b) CO2 7 Marks

[Electronics and Communication Engineering]

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

Max. Marks: 70

## UNIT-I

| 1 | a)       | Draw the geometry of geostationary link showing elevation azimuth and range and also derive the expression for elevation and azimuth angle.                                                                                                                                                                                                                                                                                                                                                                                                                  | CO1        | 7 Marks             |
|---|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|---------------------|
|   | b)       | A geostationary satellite moving in an equational circular orbit is at a height of a 5786 km from the earth surface. If the earth radius is taken as 6378 km. Determine the theoretical maximum coverage angle and maximum slant range.                                                                                                                                                                                                                                                                                                                      | CO2        | 7 Marks             |
| 2 | a)       | ( <b>OR</b> )<br>What are the Kepler's three laws of planetary motion? Give the                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | CO1        | 7 Marks             |

**BIG DATA** 

[ Computer Science and Engineering ]

Max. Marks: 70

Time: 3 hours

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1  | a) | Identify the requirements for analytical model.                                                | CO1 | 7 Marks  |
|----|----|------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Define Missing Values also identify the schemes to deal with missing values.                   | CO1 | 7 Marks  |
|    |    | (OR)                                                                                           |     |          |
| 2  | a) | Define Big Data and Explain its characteristics briefly.                                       | CO1 | 7 Marks  |
|    | b) | Write basic nomenclature for Big Data Analytics.                                               | CO1 | 7 Marks  |
|    |    | UNIT-II                                                                                        |     |          |
| 3  | a) | Explain Hadoop Ecosystem.                                                                      | CO2 | 7 Marks  |
|    | b) | Explain Building blocks of Hadoop.                                                             | CO2 | 7 Marks  |
|    | ,  | (OR)                                                                                           |     |          |
| 4  |    | What are the components of the Hadoop ecosystem in the market and list out their applications? | CO1 | 14 Marks |
|    |    | UNIT-III)                                                                                      |     |          |
| 5  |    | Illustrate Anatomy of Map Reduce with a neat sketch.<br>(OR)                                   | CO1 | 14 Marks |
| 6  | a) | Explain failures in Map Reduce.                                                                | CO1 | 7 Marks  |
|    | b) | Differentiate Map reduce 1.0 and 2.0.                                                          | CO1 | 7 Marks  |
|    |    | UNIT-IV                                                                                        |     |          |
| 7  | a) | Illustrate with an example different clauses supported by HiveQL.                              | CO1 | 7 Marks  |
|    | b) | Identify the importance of aggregate functions of HiveQL.                                      | CO2 | 7 Marks  |
| 8  | a) | Define an expression and explain different expressions supported by Pig                        | CO1 | 7 Marks  |
| 0  | b) | Identify the importance of Data Processing Operators of Pig.                                   | CO2 | 7 Marks  |
|    |    | UNIT-V                                                                                         |     |          |
| 9  | a) | Explain Hadoop usage at Last fm.                                                               | CO1 | 7 Marks  |
| -  | b) | Explain Data Architecture at Facebook.                                                         | CO1 | 7 Marks  |
|    | ,  | (OR)                                                                                           |     |          |
| 10 |    | Explain Nutch Search Engine with its data structures and Architecture.                         | CO1 | 14 Marks |
|    |    |                                                                                                |     |          |

|      |         | All questions carry equal marks                                                                                                                                                                                                             |      |           |
|      |         | UNIT-I                                                                                                                                                                                                                                      |      |           |
| 1.   | a)      | What are the different types of self-excited DC generators? Obtain the terminal voltage and current expressions for each of them.                                                                                                           | CO1  | 8 Marks   |
|      | b)      | Explain the various losses in DC machine.                                                                                                                                                                                                   | CO1  | 6 Marks   |
| 2.   | a)      | Explain the load characteristics of Shunt, Series and Compound motors                                                                                                                                                                       | CO6  | 7 Marks   |
|      | b)      | Explain various methods to control the speed of DC shunt motor.                                                                                                                                                                             | CO5  | 7 Marks   |
| 2    | 2)      | UNIT-II                                                                                                                                                                                                                                     | CO2  | 7 Marilar |
| 3.   | a)      | 182 and 40 turns on primary and secondary respectively. Neglecting the losses calculate i) no load secondary e.m.f. ii) full load primary and secondary currents. iii) flux in the core.                                                    | 02   | / Marks   |
|      | b)      | Develop the equivalent circuit of a single phase transformer.<br>(OR)                                                                                                                                                                       | CO2  | 7 Marks   |
| 4.   | a)      | Draw the equivalent circuit of a transformer and show how the constants<br>of primary and secondary windings may be combined to give a simplified<br>equivalent circuit with the values of constants given in terms of secondary<br>winding | CO1  | 7 Marks   |
|      | b)      | A 3300/240V single phase transformer takes a no load current of 2 A at a p.f. of 0.25 lagging. Determine the primary current and p.f., when the transformer supplying a load of 60 A at a p.f. of 0.9 lagging.                              | CO2  | 7 Marks   |
| 5.   | a)      | A three phase balanced delta connected load of $(5+j8)\Omega$ per phase is<br>connected 400V. Calculate the i) phase currents ii) line currents iii) total<br>power consumed by the load                                                    | CO2  | 7 Marks   |
|      | b)      | Two wattmeter method is used to measure the power taken by a three phase induction motor on no-load. The wattmeter readings are 375W and -50W. Calculate power factor, phase angle difference of voltage and current in two wattmeters.     | CO2  | 7 Marks   |
|      |         | (OR)                                                                                                                                                                                                                                        |      |           |
| 6.   | a)      | Explain the generation of three phase voltages                                                                                                                                                                                              | CO1  | 4 Marks   |
|      | b)      | A balanced star connected load of $(4+j3)\Omega$ per phase is connected to<br>balanced three phase supply. The phase current is 12 A. Find active power,<br>reactive power and apparent power.                                              | CO2  | 6 Marks   |
|      | c)      | A balanced delta connected load of $(4+j8)\Omega$ per phase is connected 400 V balanced three phase supply. Determine phase and line currents.                                                                                              | CO2  | 4 Marks   |
| 7.   | a)      | Explain how a rotating magnetic field is produced in a three phase induction mater with the help of a past diagram                                                                                                                          | CO1  | 10 Marks  |
|      | b)      | A three phase, 6 pole, 50Hz induction motor develops 4kW including friction and windage losses at 950 r.p.m. If the stator loss is 250W, find the                                                                                           | CO2  | 4 Marks   |

rotor frequency.

(**OR**)

- 8. a) Derive the condition for maximum running torque of three phase induction CO1 7 Marks motor.
  - b) A 4-pole, three phase induction motor operates from a supply whose CO2 7 Marks frequency is 50Hz. Calculate i) the speed at which the magnetic field of the stator is rotating ii) the speed of the rotor when the slip is 0.04 iii) the frequency of the rotor currents when the slip is 0.03 (iv) the frequency of the rotor currents at standstill.

## UNIT-V

- 9. a) Draw and explain the constructional details of shaded-pole motor. CO1 7 Marks
  - b) Explain the working principle of operation of universal motor and list out CO1 7 Marks its applications.

### (OR)

- 10. a) List out the different types of stepper motors according to their CO1 7 Marks construction.
  - b) Explain the differences between capacitor start, capacitor start-capacitor CO2 7 Marks run and permanent split capacitor motors.

## SWITCHING THEORY AND LOGIC DESIGN

[Electronics and Instrumentation Engineering]

Max. Marks: 70

### Answer One Question from each Unit All questions carry equal marks

## UNIT-I

| 1.  | a) | Explain the properties of EX-OR gate.                                                               | CO1        | 7 Marks  |
|-----|----|-----------------------------------------------------------------------------------------------------|------------|----------|
|     | b) | Realize the Boolean expression [[(A+B) C]' D] using NAND gate.                                      | CO3        | 7 Marks  |
| 2.  | a) | Explain about Boolean Laws and Theroms.                                                             | CO1        | 7 Marks  |
|     | b) | Express the binary word 1011 in terms of seven bit even parity hamming code.                        | CO3        | 7 Marks  |
|     |    | UNIT-II)                                                                                            |            |          |
| 3.  | a) | Obtain the expression for the function "F" with minimum number of literals using tabulation method. | CO4        | 10 Marks |
|     |    | $F(A, B, C, D, E) = \sum m (1, 4, 6, 10, 20, 22, 24, 26).$                                          |            |          |
|     | b) | Reduce the following function using K-map.<br>$F(A, B, C, D, E) = \sum m (1, 4, 6, 10).$            | CO5        | 4 Marks  |
|     |    | (OR)                                                                                                |            |          |
| 4.  | a) | Reduce the following function using K-map<br>$F(A, B, C, D) = \Pi M(0, 2, 3, 8, 9, 12, 13, 15).$    | CO5        | 7 Marks  |
|     | b) | Obtain the simplified expression in sum of products                                                 | CO4        | 7 Marks  |
|     |    | $F(A, B, C, D) = \Sigma m(1, 2, 4, 11, 12, 13) + d(0, 3, 6, 10).$                                   |            |          |
| _   |    | UNIT-III)                                                                                           |            |          |
| 5.  | a) | Explain 1-line to 8-line de-multiplexer with an example.                                            | CO1        | 7 Marks  |
|     | b) | Distinguish between an encoder and decoder.                                                         | CO2        | 7 Marks  |
| 6   | a) | Explain 1-line to 4-line de-multiplexer with an example                                             | CO1        | 7 Marks  |
| 0.  | b) | Implement the function with a MUX: $F(A, B, C) = \Sigma m(1, 3, 5, 6)$ .                            | CO1<br>CO2 | 7 Marks  |
|     | ,  |                                                                                                     |            |          |
| 7.  | a) | Draw the truth and excitation tables for all Flip-Flops.                                            | CO6        | 7 Marks  |
|     | b) | Design Mod-10 counter using T Flip-Flops.                                                           | CO3        | 7 Marks  |
|     |    | (OR)                                                                                                |            |          |
| 8.  | a) | Design a sequential circuit with two D Flip-Flops A and B and one input                             | CO6        | 7 Marks  |
|     |    | X. when X=0, the state of the circuit remains the same. When X=1, the                               |            |          |
|     |    | circuit goes through the state transition from 00 to 11; 11 to 10 back to 00 and repeats?           |            |          |
|     | b) | Design of a synchronous BCD up counter using T Flip-Flop.                                           | CO3        | 7 Marks  |
|     |    | UNIT-V                                                                                              |            |          |
| 9.  | a) | Distinguish between PROM, PLA and PAL.                                                              | CO1        | 7 Marks  |
|     | b) | Implement the following Boolean functions using PLA.                                                | CO2        | 7 Marks  |
|     |    | $W(A,B,C,D) = \Sigma m(0,2,6,7,8,9,12,13),$                                                         |            |          |
|     |    | $X(A,B,C,D)=\Sigma m(0,2,6,7,8,9,12,13,14).$                                                        |            |          |
| 10  |    | (OR)                                                                                                | 001        | 7 ) ( 1  |
| 10. | a) | Distinguish between Moore and Mealy machine.                                                        | COL        | / Marks  |
|     | D) | binary number and generates its equivalent Excess-3 code.                                           | 006        | / Marks  |

[ Computer Science and Systems Engineering ]

| Time: | 3 | hours |
|-------|---|-------|
|-------|---|-------|

|                                    | Max. Marks: 70 |
|------------------------------------|----------------|
| Answer One Question from each Unit |                |
| All questions carry equal marks    |                |
| UNIT-I                             |                |

### 1. Show with a diagram, the steps involved in a mobile terminated call CO1 7 Marks a) (a station calling a mobile station) in GSM. What are the software layers and components needed in mobile computing b) CO1 7 Marks devices? (**OR**) 2. a) Name the main elements of the GSM system architecture and describe CO1 7 Marks their functions. List the peak data transfer rates for LTE. Explain its functioning. CO5 7 Marks b) UNIT-II 3. Perceive the problem of hidden and exposed terminals. Determine what CO1 7 Marks a) happens in the case of such terminals if Aloha, slotted Aloha, reservation Aloha or MACA is used. Summarize the benefits of reservation schemes. How are collisions CO1 7 Marks b) avoided during data transmission, why is the probability of collisions lower in reservation schemes compared to classical Aloha? (**OR**) Compare IEEE 802.11 and Bluetooth with regard to their ad-hoc 4. a) CO1 7 Marks capabilities. If Bluetooth is a commercial success, what are remaining reasons for the CO4 7 Marks b) use of infrared transmission for WLANs? Justify. (UNIT-III) Explain packet flow, if two mobile nodes communicate and both are in 5. a) CO5 7 Marks foreign networks. What additional routes do packets take if reverse tunneling is required? What is the role of reverse tunneling in route optimization? Explain. CO5 7 Marks b) (**OR**) How and why does I-TCP isolate problems on the wireless link? What are 6. CO1 7 Marks a) the main drawbacks of this solution? Discuss the TCP characteristics to be considered when developing CO1 7 Marks b) applications over 2.5/3G wireless networks (UNIT-IV) 7. Illustrate the situations in which a database can crash. Explain how does CO2 8 Marks a) database recovery can be done using a recovery manager. Define power aware computing. Enlist the power aware computing CO2 6 Marks b) techniques. (**OR**) Compare and contrast Push Data delivery and Pull Data delivery 8. CO2 8 Marks a) mechanisms. Explain the functions of Hybrid mechanisms with a neat sketch. 6 Marks b) CO2

## UNIT-V

9. a) Discuss the challenges and issues in implementing MANETs. CO3

b) Apply DSR Routing Algorithm for the following network to find the CO3 9 Marks shortest path from Node-S to Node-N.

5 Marks

(OR)

- 10. a) Explain Wireless transport layer security in WAP with respective service CO4 7 Marks primitives.
  - b) Which WTP class reflects typical best web access? Discuss how CO4 7 Marks unnecessary overhead is occurring when using WSP on top of this class for web browsing.

Roll No. SREE VIDYANIKETHAN ENGINEERING COLLEGE (An Autonomous Institution, Affiliated to JNTUA, Anantapur) M.C.A. I Semester (SVEC16) Supplementary Examinations August – 2021 **PROGRAMMING IN C** Time: 3 hours Max. Marks: 60 **Answer One Question from each Unit** All questions carry equal marks UNIT-I ) Write about the structure of C program with suitable example. 1. 6 Marks a) Sketch the block diagram to create and run the C program in Turbo C. b) 6 Marks (OR)2 Label any two major components of a computer system. a) 6 Marks Identify the steps in creating and running a C program. 6 Marks b) UNIT-II) What is two-dimensional array? How they are stored in memory? 3. a) 6 Marks Explain Memory Allocation Functions with suitable example. 6 Marks b) (OR)Write a C Program to swap two elements without using third variable. 4. 6 Marks a) Differentiate "if" statement and "if - else" statement with an example program. 6 Marks b) (UNIT-III) State which value is automatically assigned to those array elements that are not 5. 5 Marks a) explicitly initialized with an example. State various types of functions used in C. b) 7 Marks (OR) Formulate n<sup>th</sup> Fibonacci number generation using recursion. 6 Marks 6. a) Define function and explain about system defined functions with suitable 6 Marks b) example. UNIT-IV) Argue about Enumerated types in C with an example for creating Colors type. 7. 3 Marks a) Explain about nested structure with an example. 4 Marks b) Differentiate structures and Unions in C. 5 Marks c) (OR)8. How to declare structure and its variables? Specify accessing operators for 12 Marks structures. UNIT-V Relate conditional Preprocess directives with suitable example. 9. a) 7 Marks Specify various access modes for text files. 5 Marks b) (OR)Write a C program to demonstrate sequential file access. 10. 12 Marks (A) <del>(</del>@} <del>(</del> \_

ii) between Rs. 69 and Rs.72 using R.

## UNIT-IV

7. Find the rank correlation for the following data using R and 12 Marks L4 CO3 PO2 comment on the result.

| Χ | 65 | 63 | 67 | 64 | 68 | 62 | 70 | 66 | 68 | 67 | 69 | 71 |
|---|----|----|----|----|----|----|----|----|----|----|----|----|
| Y | 68 | 66 | 68 | 65 | 69 | 66 | 68 | 65 | 71 | 67 | 68 | 70 |

### (**OR**)

8. Compute the coefficient of correlation and the two lines of 12 Marks L4 CO4 PO3 regression for the following data.

| Price X:  | 14 | 16 | 17 | 18 | 19 | 20 | 21 | 22 | 23 |
|-----------|----|----|----|----|----|----|----|----|----|
| Demand Y: | 84 | 78 | 70 | 75 | 66 | 67 | 62 | 58 | 60 |

## UNIT-V

9. A random sample of size 25 from a normal population has the 6 Marks L3 a) CO<sub>2</sub> PO2 mean  $\overline{X}$  = 47.5 and the standard deviation S = 8.4. Does this information tend to support or refute the claim that the mean of the population is  $\mu = 42.5$ ? A study shows that 16 out of 200 tractors produced one assembly b) 6 Marks L3 CO<sub>2</sub> PO4 line required extensive adjustments before they could be shopped, while the same was true for 14 of 400 tractors produced on another assembly line. At the 0.01 level of significance, does this support the claim that the second production line does superior work? (**OR**) Pumpkins were grown under two experimental conditions. Two 10. a) 6 Marks L3 CO2 **PO2** random samples of 11 and 9 pumpkins. Show the sample standard deviations of their weights as 0.8 and 0.5 respectively. Assuming that the weight distributions are normal, test hypothesis that the true variances are equal. From the following data, find whether there is any significant 6 Marks b) L3 CO<sub>2</sub> PO4 liking in the habit of taking soft drinks among the categories of employees.

| Soft Drinks | Clerks | Teachers | Officers |
|-------------|--------|----------|----------|
| Pepsi       | 10     | 25       | 65       |
| Thumsup     | 15     | 30       | 65       |
| Fanta       | 50     | 60       | 30       |

| 2. | a)     | Why parity checks and check sum are used? Explain parity checks and check summing methods with an example.                                                                                                                                                                                                                                                                                                                                                           | 6 Marks  | L2       | CO1    | PO1 |
|    | b)     | Compare Optical Fibers and Copper Cable Guided Transmission<br>Media.                                                                                                                                                                                                                                                                                                                                                                                                | 6 Marks  | L4       | CO1    | PO2 |
|    |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |          |        |     |
| 3  | a)     | Differentiate classical ALOHA and slotted ALOHA                                                                                                                                                                                                                                                                                                                                                                                                                      | 6 Marks  | I 4      | CO3    | PO2 |
| 5. | b)     | Illustrate the Sliding window protocol using <i>Go-Back N</i> and <i>Selective Repeat</i> techniques                                                                                                                                                                                                                                                                                                                                                                 | 6 Marks  | L4<br>L3 | CO2    | PO2 |
|    |        | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |          |        |     |
| 4. | a)     | Suppose we want to transmit the "message 1011 0010 0111 and<br>protect it from errors using the cyclic redundancy check (CRC)<br>polynomial $x^4 + x^2 + 1$ . Use polynomial long division to determine<br>the message that should be transmitted. Suppose the leftmost bit<br>of the message is inverted due to noise on the transmission link.<br>What is the result of the 'receiver's CRC calculation? How does<br>the receiver know that an error has occurred? | 6 Marks  | L4       | CO2    | PO3 |
|    | b)     | What is channel allocation problem? Explain types of channel allocation.                                                                                                                                                                                                                                                                                                                                                                                             | 6 Marks  | L1       | CO2    | PO1 |
|    |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |          |        |     |
| 5. | a)     | Apply least-cost-path routing algorithm to find a shortest path between source and destination with an example                                                                                                                                                                                                                                                                                                                                                       | 6 Marks  | L3       | CO3    | PO3 |
|    | b)     | Sketch the IPV4 packet format and explain the importance of IP protocol in the internet.                                                                                                                                                                                                                                                                                                                                                                             | 6 Marks  | L2       | CO3    | PO2 |
|    |        | (OR)                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |          |        |     |
| 6. | a)     | Sketch the IPV4 packet format and explain the importance of IP protocol in the internet.                                                                                                                                                                                                                                                                                                                                                                             | 7 Marks  | L4       | CO3    | PO3 |
|    | b)     | What are the techniques to be followed to achieve good quality of service?                                                                                                                                                                                                                                                                                                                                                                                           | 5 Marks  | L2       | CO3    | PO1 |
|    |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |          |        |     |
| 7. |        | Differentiate the TCP header and the UDP header formats.<br>Identify the fields in the TCP header that are not part of the UDP header. Give the reasons for each missing field.                                                                                                                                                                                                                                                                                      | 12 Marks | L2       | CO3    | PO2 |

(OR)

8. 6 Marks Although TCP provides a reliable service and UDP does not, L3 CO4 PO4 a) many applications fit better in the communication system by using UDP. Investigate the reasons behind UDP supporting for many applications. Define the term Silly Window Syndrome. Examine the factors b) 6 Marks L2 CO4 PO4 that cause silly window syndrome problem and how it can be avoided.

## UNIT-V

9. Analyze the addressing system used by SMTP. Explain the 12 Marks L2 CO4 PO2 Simple Mail Transfer Protocol (SMTP) protocol.

### (OR)

- 10. a) Discuss the need for name resolution. Illustrate the domain name 6 Marks L2 CO4 PO3 hierarchy and the steps in resolution.
  - b) Define MIME. Tabulate the MIME header and explain the 6 Marks L2 CO4 PO2 content types.

| 1.  | a)    | Outline the architecture of Database Management System and explain its components.                                                                         | 8 Marks  | L2             | CO2 | PO2 |
|     | b)    | List and identify the advantages of using database systems.<br>(OR)                                                                                        | 4 Marks  | L1             | CO1 | PO1 |
| 2.  |       | Explain the classification of Database Management System.                                                                                                  | 12 Marks | L2             | CO2 | PO2 |
| 3.  | a)    | Mention different attribute data types used in Structured Query Language (SOL).                                                                            | 4 Marks  | L1             | CO3 | PO3 |
|     | b)    | Create a table in SQL by specifying attribute constraints and attribute defaults.                                                                          | 8 Marks  | L3             | CO3 | PO3 |
|     |       | (OR)                                                                                                                                                       |          |                |     |     |
| 4.  |       | Translate any Entity Relationship diagram into a collection of tables with associated constraints to a relational database schema.                         | 12 Marks | L2             | CO3 | PO3 |
|     |       | (UNIT-III)                                                                                                                                                 |          |                |     |     |
| 5.  |       | With relevant example, analyze various types of normal forms used in relational database.                                                                  | 12 Marks | L3             | CO2 | PO2 |
|     |       | (OR)                                                                                                                                                       |          |                |     |     |
| 6.  |       | <ul><li>Write SQL query language for the following commands:</li><li>i) Insert command.</li><li>ii) Delete command.</li><li>iii) Update command.</li></ul> | 12 Marks | L3             | CO4 | PO4 |
|     |       |                                                                                                                                                            |          |                |     |     |
| 7.  |       | Describe the following concepts:<br>i) Serializability.<br>ii) Two-phase locking protocol.                                                                 | 12 Marks | L3             | CO5 | PO5 |
|     |       | (OR)                                                                                                                                                       |          |                |     |     |
| 8.  | a)    | What is a precedence graph or serializability graph? How is it related to conflict serializability?                                                        | 6 Marks  | L3             | CO5 | PO5 |
|     | b)    | Discuss the relative merits of lock upgrades and lock downgrades.                                                                                          | 6 Marks  | L3             | CO5 | PO5 |
|     |       | UNIT-V                                                                                                                                                     |          |                |     |     |
| 9.  |       | List out the characteristics of a B+ tree and explain a dynamic index structure B+ tree.                                                                   | 12 Marks | L3             | CO2 | PO2 |
|     |       | (OR)                                                                                                                                                       |          |                |     |     |
| 10. |       | Describe the Indexed Sequential Access Method (ISAM) index structure with a neat sketch and explain with a suitable example.                               | 12 Marks | L3             | CO2 | PO2 |

SVEC-20

## SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

### M.C.A. I Semester (SVEC-20) Supplementary Examinations November – 2021

## DATA STRUCTURES AND ALGORITHMS

Time: 3 hours

# 

Roll No.

Max. Marks: 60

## All questions carry equal marks

|     |          | UNIT-I                                                                                                                                                                   |                    |          |            |            |
|-----|----------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|----------|------------|------------|
| 1.  | a)<br>b) | Differentiate Linear and Nonlinear data structures.<br>What is Time complexity? What are Asymptotic notations?<br>Discuss the purpose of three notations.                | 4 Marks<br>8 Marks | L2<br>L4 | CO1<br>CO1 | PO2<br>PO2 |
|     |          | (OR)                                                                                                                                                                     |                    |          |            |            |
| 2.  | a)       | What is Recursion? Design the recursive algorithm for bubble sort.                                                                                                       | 6 Marks            | L3       | CO2        | PO2        |
|     | b)       | Differentiate linear and binary search methods. Discuss when and where they are used.                                                                                    | 6 Marks            | L2       | CO2        | PO2        |
|     |          | UNIT-II )                                                                                                                                                                |                    |          |            |            |
| 3.  | a)       | What is Linked List? Explain types of linked lists with a note with its applications.                                                                                    | 6 Marks            | L2       | CO3        | PO3        |
|     | b)       | Implement Radix sort using linked list.                                                                                                                                  | 6 Marks            | L3       | CO3        | PO3        |
| 4.  | a)       | How deletion operations at any position in singly linked list is performed?                                                                                              | 6 Marks            | L3       | CO3        | PO3        |
|     | b)       | Write a routine to add two polynomials using single linked list.                                                                                                         | 6 Marks            | L3       | CO3        | PO3        |
| 5   | a)       | Write a program to implement stack using array                                                                                                                           | 6 Marks            | L2       | CO4        | PO1        |
|     | b)       | Write an algorithm to insert and delete an element from the circular queue.                                                                                              | 6 Marks            | L3       | CO4        | PO1        |
|     |          | (OR)                                                                                                                                                                     |                    |          |            |            |
| 6.  | a)       | Write a program to reverse the given string using stack.                                                                                                                 | 6 Marks            | L3       | CO4        | PO1        |
|     | b)       | Write a program to implement queue using array.                                                                                                                          | 6 Marks            | L2       | CO4        | PO1        |
| 7.  | a)       | What is a Binary tree? What are its applications? Define different tree traversal techniques.                                                                            | 6 Marks            | L2       | CO5        | PO1        |
|     | b)       | Show at each step the AVL tree built from following sequence of insertions: 8,15,1,19,16,4,25,12,23,20,17. Start with empty tree. Label the rotations according to type. | 6 Marks            | L3       | CO5        | PO1        |
|     |          | (OR)                                                                                                                                                                     |                    |          |            |            |
| 8.  | a)<br>b) | What is Heap? Explain types of Heap.<br>Write an algorithm for heap sort and trace out by taking an example.                                                             | 6 Marks<br>6 Marks | L2<br>L3 | CO5<br>CO5 | PO1<br>PO1 |
|     |          | UNIT-V                                                                                                                                                                   |                    |          |            |            |
| 9.  | a)       | Explain different graph representation methods.                                                                                                                          | 6 Marks            | L2       | CO5        | PO1        |
|     | b)       | Illustrate the insertion operation in B Tree of order 4 by using the following keys: {23,46,57,89,3,4,67,194,45,2,8,90,109,234,78}.                                      | 6 Marks            | L3       | CO5        | PO1        |
| 10  | 8)       | (UK)<br>Write a program to implement Breadth First Search algorithm                                                                                                      | 6 Marks            | 13       | CO5        | PO1        |
| 10. | b)       | What is collision? What are different methods of collision resolution in hashing?                                                                                        | 6 Marks            | L2       | CO6        | PO2        |

**PO2** 

## Answer One Question from each Unit

All questions carry equal marks

## UNIT-I

- 1. What is accounting? Explain different accounting principles. 12 Marks L2 CO1 PO2 (OR)
- 2. From the following transactions, make the journal entries in the 12 Marks L3 CO1 PO3 books of Pradeep Business.

| 2021  |                                               | Rs.    |
|-------|-----------------------------------------------|--------|
| Jan 1 | Pradeep brought capital for starting business | 40,000 |
| 2     | Purchased goods for cash                      | 10,000 |
| 6     | Purchased goods form Murali                   | 4,000  |
| 10    | Sold goods to Murali on credit                | 10,000 |
| 12    | Cash received from Murali                     | 5,000  |
| 19    | Cash paid to Murali                           | 1,000  |
| 24    | Cash paid to Das                              | 2,000  |
| 27    | Drawn for personal use                        | 100    |
| 29    | Rent paid to landlord                         | 200    |
| 31    | Salaried paid                                 | 500    |
|       |                                               |        |

## UNIT-II

3. From the following trial balance of M/s Ram & Sons, prepare 12 Marks L3 Trading and Profit and loss account for the year ending

| 31 <sup>s</sup> | 1 <sup>st</sup> March, 2021 and the Balance sheet as on that date: |             |              |  |  |  |  |  |

**CODE No.: 20MC20101** SVEC-20 Roll No. SREE VIDYANIKETHAN ENGINEERING COLLEGE (An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu) M.C.A. II Semester (SVEC-20) Regular Examinations November – 2021 DATA WAREHOUSING AND DATA MINING Time: 3 hours Max. Marks: 60 **Answer One Question from each Unit** All questions carry equal marks UNIT-I ) Explain the typical architecture of Data warehouse. 1. 6 Marks L3 PO3 CO1 a) Define data warehouse. Briefly describe the need for data b) 6 Marks L1 CO1 PO1 warehousing. (**OR**) Describe the steps involved in data mining when viewed as a 2. 7 Marks L3 CO1 PO3 a) process of knowledge discovery. Differentiate star and fact constellation schemas. b) 5 Marks L3 CO1 PO<sub>3</sub> UNIT-II ) 3. What kinds of patterns can be mined? 6 Marks L2 CO2 PO<sub>2</sub> a) Explain various disciplines that influences the development of b) 6 Marks L4 CO2 PO4 data mining methods. (**OR**) 4. a) Explain major tasks in data pre-processing. 6 Marks L4CO<sub>2</sub> **PO4** Discuss the approaches of data cleaning process. b) 6 Marks L4 CO2 PO4 (UNIT-III) 5. How to improve the efficiency of Apriori-based mining? 4 Marks L3 CO3 PO4 a) Explain Apriori algorithm for discovering frequent itemsets for b) 8 Marks L2 CO3 PO5 mining Boolean association rules. (**OR**) Explain how classification work with neat diagram. 6. a) 7 Marks L2 CO3 **PO2** Discuss the techniques to improve classification accuracy. 5 Marks L3 CO3 PO3 b) UNIT-IV) 7. Define Cluster analysis. Explain requirements of clustering in 5 Marks L2 CO4 PO4 a) data mining. Describe about partitioning methods k-means and k-medoids. 7 Marks L3 PO<sub>2</sub> b) CO4 (**OR**) 8. Differentiate agglomerative and divisive hierarchical clustering. PO3 a) 6 Marks L3 CO4 Discuss the technique to find dense regions in density-based 6 Marks L4 CO4 PO4 b) clustering. UNIT-V Explain how data mining useful for financial data analysis with 9. 6 Marks L2 PO1 a) CO5 suitable examples. b) Describe how web mining can be organized. 6 Marks L2 CO5 PO1 (**OR**) Describe various complex types of data for mining. 10 a) 6 Marks L3 CO5 PO<sub>3</sub> Discuss various statistical data mining techniques. b) 6 Marks L4 CO5 PO1

#### **OBJECT ORIENTED ANALYSIS AND DESIGN**

[ MASTER OF COMPUTER APPLICATIONS ]

Max. Marks: 60

Time: 3 hours

**Answer One Question from each Unit** All questions carry equal marks

## UNIT-I

| 1.  | a) | What are the application areas of UML? Give any five.                                                | CO4 | 5 Marks  |
|-----|----|------------------------------------------------------------------------------------------------------|-----|----------|
|     | b) | Explain the scenario of modeling mechanisms of different levels of abstraction.                      | CO2 | 7 Marks  |
|     |    | (OR)                                                                                                 |     |          |
| 2.  |    | Draw software architecture with explanation. Represent 4+1 view model of systems architecture.       | CO3 | 12 Marks |
|     |    | UNIT-II                                                                                              |     |          |
| 3.  | a) | Enumerate the steps to model webs of relationships.                                                  | CO2 | 8 Marks  |
|     | b) | Contrast simple aggregation with composite aggregation. What is association class?                   | CO4 | 4 Marks  |
|     |    | (OR)                                                                                                 |     |          |
| 4.  | a) | List and explain the uses of class diagram.                                                          | CO2 | 6 Marks  |
|     | b) | Adapt the steps to reverse engineer a class diagram.                                                 | CO2 | 6 Marks  |
|     |    | UNIT-III                                                                                             |     |          |
| 5.  |    | Design use case diagram that depict the context of a credit card validation system. Explain briefly. | CO5 | 12 Marks |
|     |    | (OR)                                                                                                 |     |          |
| 6.  |    | Explain the following with regard to interaction diagrams.<br>i) Object life line.                   | CO1 | 12 Marks |
|     |    | ii) < <create>&gt; and &lt;<destroy>&gt; messages.</destroy></create>                                |     |          |
|     |    | iii) Focus of control.                                                                               |     |          |
|     |    | iv) Dewey decimal numbering.                                                                         |     |          |
|     |    | v) Nesting of tours of control.                                                                      |     |          |
|     |    | vi) Semantic equivalence.                                                                            |     |          |
|     |    | UNIT-IV                                                                                              |     |          |
| 7.  | a) | Differentiate between a Process and a Thread.                                                        | CO2 | 3 Marks  |
|     | b) | Identify standard stereotypes that can be applied to active class.                                   | COL | 3 Marks  |
|     | c) | Model the benavior of an ATM machine with the help of a state chart                                  | CO4 | 6 Marks  |
|     |    | (OR)                                                                                                 |     |          |
| 8   |    | Infer the states that are associated with Borrowing a book from a library                            | CO5 | 12 Marks |
| 0.  |    | system. Draw the state chart diagram that explains various states of a book                          | 000 |          |
|     |    | during the processing.                                                                               |     |          |
|     |    | UNIT-V                                                                                               |     |          |
| 9.  |    | Demonstrate various objects participating in the library information                                 | CO5 | 12 Marks |
|     |    | system. Explain the object diagram that is associated with various                                   |     |          |
|     |    | interactions with a neat diagram.                                                                    |     |          |
|     |    | (OR)                                                                                                 |     |          |
| 10. |    | Adapt common modeling techniques to implement deployment.                                            | CO3 | 12 Marks |

Marks: 60                                                                                                                                                                                                                                                                                                      |          |          |            |            |  |  |  |  |  |  |  |  |
|     | UNIT-I   |                                                                                                                                                                                                                                                                                                                     |          |          |            |            |  |  |  |  |  |  |  |  |
| 1   |          | Define a Madel What is the importance of modeling?                                                                                                                                                                                                                                                                  | 6 Martra | т 1      | CO1        |            |  |  |  |  |  |  |  |  |
| 1.  | a)<br>b) | Explain the role of object-oriented modeling in design.                                                                                                                                                                                                                                                             | 6 Marks  | L1<br>L1 | CO1<br>CO1 | PO1<br>PO2 |  |  |  |  |  |  |  |  |
| 2.  |          | Enumerate the steps for the following:<br>i) Modeling different views of a system.<br>ii) Modeling different levels of abstraction.                                                                                                                                                                                 | 12 Marks | L2       | CO1        | PO3        |  |  |  |  |  |  |  |  |
| 2   |          | List the store to model simple collaborations                                                                                                                                                                                                                                                                       | 6 Martra | тэ       | CO1        |            |  |  |  |  |  |  |  |  |
| 5.  | a)<br>b) | What do you mean by the term Classifier? Identify all the types of classifiers that UML provides in modeling.                                                                                                                                                                                                       | 6 Marks  | L2<br>L3 | CO1<br>CO2 | PO3<br>PO2 |  |  |  |  |  |  |  |  |
| 4.  | a)       | ( <b>OK</b> )<br>What is an Association class? Compare simple aggregation with<br>composite aggregation                                                                                                                                                                                                             | 4 Marks  | L2       | CO2        | PO4        |  |  |  |  |  |  |  |  |
|     | b)       | Design a class diagram rendering an ATM system using the following:                                                                                                                                                                                                                                                 | 8 Marks  | L4       | CO4        | PO5        |  |  |  |  |  |  |  |  |
|     |          | i) Notes.<br>iii) Stereotypes.<br>iii) Other Adornments.<br><b>iv</b> ) Tagged Values.<br><b>UNIT-III</b>                                                                                                                                                                                                           |          |          |            |            |  |  |  |  |  |  |  |  |
| 5.  | a)       | Draw a Use case diagram for the scenario of cellular network that<br>place a phone call correctly and also schedule the receiving and<br>conference calls.                                                                                                                                                          | 6 Marks  | L4       | CO3        | PO4        |  |  |  |  |  |  |  |  |
|     | b)       | Explain the steps to model the context of a system. (OR)                                                                                                                                                                                                                                                            | 6 Marks  | L2       | CO2        | PO3        |  |  |  |  |  |  |  |  |
| 6.  |          | <ul> <li>Explain the following with respect to interaction diagrams:</li> <li>i) Object lifeline ii) &lt;<create>&gt; and &lt;<destroy>&gt; messages.</destroy></create></li> <li>iii) Focus of control. iv) Dewey decimal numbering.</li> <li>v) Nesting of tours of control. vi) Semantic equivalence.</li> </ul> | 12 Marks | L2       | CO3        | PO2        |  |  |  |  |  |  |  |  |
| 7.  |          | Infer the states that are associated with " <i>borrowing a book</i> " from<br>a Library Management System. Draw the state chart diagram and<br>explain various states of a book during the transaction.<br>(OR)                                                                                                     | 12 Marks | L2       | CO3        | PO5        |  |  |  |  |  |  |  |  |
| 8.  |          | Compare the following:<br>i) Event and Signal.<br>ii) Sequential substates and Concurrent substates.                                                                                                                                                                                                                | 12 Marks | L4       | CO3        | PO4        |  |  |  |  |  |  |  |  |
| 9.  | a)       | Explain the deployment diagram for modeling an embedded system.                                                                                                                                                                                                                                                     | 6 Marks  | L2       | CO3        | PO3        |  |  |  |  |  |  |  |  |
|     | b)       | Design a model to represent " <i>issuing a book</i> " operation using UML collaboration diagram with appropriate notations. <b>(OR)</b>                                                                                                                                                                             | 6 Marks  | L2       | CO3        | PO3        |  |  |  |  |  |  |  |  |
| 10. | a)       | Enumerate the steps in Modeling Adaptable Systems.                                                                                                                                                                                                                                                                  | 6 Marks  | L2       | CO3        | PO3        |  |  |  |  |  |  |  |  |
|     | b)       | Illustrate the process of forward and reverse engineering the                                                                                                                                                                                                                                                       | 6 Marks  | L3       | CO3        | PO3        |  |  |  |  |  |  |  |  |

## MCA V Semester (SVEC-16) Supplementary Examinations August - 2021

#### **INFORMATION SECURITY** [Master of Computer Applications]

Max. Marks: 60

#### Answer One Question from each Unit All questions carry equal marks

# 

| 1  | a)<br>b) | Analyze the problems associated with the One-Time pad.<br>What is a Transposition Cipher? Demonstrate Rail Fence cipher technique | CO2<br>CO3 | 4 Marks<br>8 Marks |
|----|----------|-----------------------------------------------------------------------------------------------------------------------------------|------------|--------------------|
|    | 0)       | with an example.                                                                                                                  | 005        | 0 WILLING          |
|    |          | (OR)                                                                                                                              |            |                    |
| 2  | a)       | What are the essential ingredients and the two basic functions used in encryption algorithms of a symmetric cipher?               | CO2        | 6 Marks            |
|    | b)       | On what dimensions do the cryptographic systems are characterized?<br>Explain different types of cryptanalysis attacks.           | CO2        | 6 Marks            |
|    |          | (UNIT-II)                                                                                                                         |            |                    |
| 3  | a)       | Draw the Stream cipher structure and list the important design considerations for a stream cipher.                                | CO2        | 6 Marks            |
|    | b)       | Explain the RC4 stream cipher technique used for encryption and decryption.                                                       | CO1        | 6 Marks            |
|    |          | (OR)                                                                                                                              |            |                    |
| 4  | a)       | Write Diffie-Hellman Key exchange algorithm and explain with an example.                                                          | CO5        | 8 Marks            |
|    | b)       | Analyze the possible approaches in attacking the RSA algorithm.                                                                   | CO3        | 4 Marks            |
|    |          | (UNIT-III)                                                                                                                        |            |                    |
| 5  | a)       | Discuss various authentication procedures supported in X.509.                                                                     | CO1        | 7 Marks            |
|    | b)       | Identify the Hash Function requirements.                                                                                          | CO2        | 5 Marks            |
| _  |          | (OR)                                                                                                                              |            |                    |
| 6  |          | Overview Kerberos and analyze the Kerberos version 4 simple<br>authentication dialogue and more secure authentication dialogue.   | CO2        | 12 Marks           |
|    |          |                                                                                                                                   |            |                    |
| 7  |          | Illustrate the operational description and implementation of PGP. <b>(OR)</b>                                                     | CO4        | 12 Marks           |
| 8  | a)       | Discuss about the S/MIME content types.                                                                                           | CO1        | 6 Marks            |
|    | b)       | Why is the segmentation and reassembly function in PGP needed?                                                                    | CO3        | 6 Marks            |
|    |          | UNIT-V                                                                                                                            |            |                    |
| 9  | a)       | Brief about the Password Management.                                                                                              | CO1        | 6 Marks            |
|    | b)       | What are typical phases of operation of a virus or worm?<br>(OR)                                                                  | CO2        | 6 Marks            |
| 10 |          | What is a Firewall? Classify the types of firewalls and list the capabilities and limitations of firewall.                        | CO2        | 12 Marks           |
|    |          |                                                                                                                                   |            |                    |

Time: 3 hours

M.C.A. II Semester (SVEC-19) Supplementary Examinations February – 2021

#### SOFTWARE ENGINEERING

[Master of Computer Applications]

Time: 3 hours Max. Marks: 60 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 1. Identify different levels of abstraction for the software design. 6 Marks L2 CO1 PO1 a) PO<sub>2</sub> Elucidate in detail about Adaptive Software Development. 6 Marks b) L1 CO1 PO1 (**OR**) Inspect the situations where Waterfall Model is most appropriate. PO1 2. a) 6 Marks L3 CO1 PO<sub>2</sub> L2 CO1 b) List out generic process framework activities. 6 Marks PO1 PO2 UNIT-II **PO1** 3. Design the state diagram for analysis classes for the control panel 6 Marks L3 CO<sub>2</sub> a) class. PO<sub>3</sub> Elucidate in detail about Class-Responsibility Collaborator L2 b) 6 Marks CO1 PO1 modeling. (**OR**) Explain in detail about the following concepts: 12 Marks L1 CO1 PO1 4. i) Cardinality and Modality. ii) Relationships. UNIT-III) Design Data Centered Architecture and the Data Flow 5. 12 Marks L2 CO<sub>2</sub> PO1 Architecture from the Architectural Styles with explanation. PO<sub>3</sub> (**OR**) 6. Write the design steps to map data flow diagram into 12 Marks L3 CO<sub>2</sub> PO1 architecture. Represent the context level Data Flow Diagram PO<sub>3</sub> (DFD) for the Safe Home security function. UNIT-IV What is the purpose of Unit Testing? What are the unit test L4 CO1 7. a) 6 Marks PO1 considerations to be focused? PO2 Illustrate strategic issues in Testing strategies. CO1 PO1 b) 6 Marks L3 PO<sub>3</sub> (**OR**) 8. How user analysis can be done in interface analysis with suitable 12 Marks L4 CO<sub>2</sub> PO1 example? PO2 PO3 UNIT-V Distinguish between Reactive Vs proactive risk strategies in 9. 12 Marks L2 CO1 PO1 detail. PO2 (**OR**) 10 Explain in detail about formal technical reviews. 5 Marks L2 CO1 PO1 a) PO<sub>2</sub> Provide measures of software quality which provide useful 7 Marks I.4 CO<sub>2</sub> PO1 b) indicators for the project team. PO<sub>3</sub> ලි ٢ŵ ැබ

## MCA III Semester (SVEC-16) Supplementary Examinations February – 2021

#### **OBJECT ORIENTED ANALYSIS AND DESIGN**

[Master of Computer Applications]

Max. Marks: 70

#### Answer One Question from each Unit All questions carry equal marks

|    |    | (UNIT-I)                                                                                                                               |            |          |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------|------------|----------|
| 1  |    | State and explain the classification of things with UML notation. (OR)                                                                 | CO1        | 12 Marks |
| 2  | a) | Justify which UML diagrams give a static view and which give a dynamic view of a system.                                               | CO2        | 6 Marks  |
|    | b) | <ul> <li>i) Represent how model simple dependencies.</li> <li>ii) Write a short note on structural relationships.</li> </ul>           | CO3<br>CO1 | 6 Marks  |
| 3  | a) | Contrast object diagram with class diagram.                                                                                            | CO4        | 6 Marks  |
|    | b) | Represent advanced classes and advanced relationships with suitable example.                                                           | CO3        | 6 Marks  |
|    |    | (OR)                                                                                                                                   |            |          |
| 4  | a) | Enumerate the steps involved in modeling Logical database schema.                                                                      | CO2        | 6 Marks  |
|    | b) | The cellular network must place the phone call correctly and also schedule<br>the receiving and conference calls. Draw a class diagram | CO5        | 6 Marks  |
|    |    |                                                                                                                                        |            |          |
| _  | `` |                                                                                                                                        | 005        | 7 1 1    |
| 3  | a) | Draw a collaboration diagram that specifies the flow of control involved in                                                            | 005        | / Marks  |
|    | h) | Elucidate usecase diagram with suitable example                                                                                        | CO1        | 5 Marks  |
|    | 0) | (OR)                                                                                                                                   | COI        | JIVIAINS |
| 6  | a) | How to model flows of control by organization in UML?                                                                                  | CO3        | 7 Marks  |
|    | b) | Enumerate the modeling techniques to model usecase.                                                                                    | CO2        | 5 Marks  |
|    | ,  | (UNIT-IV)                                                                                                                              |            |          |
| 7  | a) | Explain the need of synchronization along with the three properties.                                                                   | CO1        | 6 Marks  |
|    | b) | What is state and transition? Develop state chart diagram for Library Management system.                                               | CO4        | 6 Marks  |
|    |    | (OR)                                                                                                                                   |            |          |
| 8  |    | Compare the following:                                                                                                                 | CO2        | 12 Marks |
|    |    | i) Event vs Signal.                                                                                                                    |            |          |
|    |    | ii) Sequential substates vs Concurrent substates.                                                                                      |            |          |
|    |    | UNIT-V                                                                                                                                 |            |          |
| 9  | a) | Define node. Contrast node with components.                                                                                            | CO2        | 4 Marks  |
|    | b) | Illustrate modeling mechanisms for a fully distributed system.                                                                         | CO2        | 4 Marks  |
|    | c) | Explain active object in library system.                                                                                               | CO1        | 4 Marks  |
| 10 | `` | (OR)                                                                                                                                   | 001        |          |
| 10 | a) | Explain the following terms:                                                                                                           | COI        | 6 Marks  |
|    |    | i) Doploymont Diagram.                                                                                                                 |            |          |
|    | b) | Explain the interaction diagrams for "renewal of a book" operation in a library application.                                           | CO5        | 6 Marks  |

M.C.A. III Semester (SVEC-19) Regular Examinations February - 2021

#### **COMPUTER NETWORKS**

Time: 3 hours Max. Marks: 60 **Answer One Question from each Unit** All questions carry equal marks UNIT-I What is a primitive? List the service primitives for 6 Marks L1 CO1 PO1 1. a) implementing a connection-oriented service. Distinguish between coaxial cable and Twisted pair cables in PO<sub>2</sub> b) 6 Marks L3 CO<sub>2</sub> guided transmission media. (**OR**) 2. Demonstrate ISO/OSI reference model with a neat sketch. L2 CO1 PO3 12 Marks UNIT-II PO1 3. a) Why parity checks and check sum are used? Explain parity 7 Marks L3 CO<sub>2</sub> checks and check summing methods with an example. Compare slotted Aloha and Pure Aloha random access CO<sub>2</sub> PO2 b) 5 Marks L3 protocols. (**OR**) 4. a) Illustrate the Sliding window protocol using Go-Back N and 7 Marks L3 CO<sub>2</sub> PO<sub>3</sub> Selective Repeat techniques. What is the remainder obtained by dividing  $x^7+x^5+1$  by the 5 Marks L2 CO<sub>2</sub> PO5 b) generator polynomial  $x^{3}+1$ ? UNIT-III) Describe hierarchical routing with an example. Mention its L2 CO<sub>3</sub> 5. a) 8 Marks PO1 advantages and disadvantages. State the attributes on which networks differ. 4 Marks L2 CO<sub>3</sub> PO1 b) (**OR**) Sketch the IPV4 packet format and explain the importance of L3 CO3 PO<sub>2</sub> 6. a) 6 Marks IP protocol in the internet. Define Congestion. Identify the factors that lead to congestion. CO3 PO4 b) 6 Marks L4 UNIT-IV) 12 Marks L2 CO3 PO1 7. Discuss about the elements of Transport protocols. (**OR**) 8. Discuss the two-army problem. Design the protocol scenarios 7 Marks L2 CO3 PO3 a) for releasing a connection with a neat sketch. How an error-control and flow control mechanisms can be L2 **PO2** b) 5 Marks CO3 implemented in transport layer? UNIT-V What is DNS? Discuss about the Domain Name System (DNS). 9. 12 Marks L2 CO<sub>4</sub> PO<sub>2</sub> (**OR**) Summarize the complaints associated with an electronic mail in 10 6 Marks L3 CO4 **PO4** a) the early days. Explain in detail about File Transfer Protocol (FTP). 6 Marks CO<sub>4</sub> PO1 b) L1

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

## M.C.A. III Semester (SVEC-19) Regular Examinations February - 2021 **PYTHON PROGRAMMING**

| r  | Time: 3 hours |                                                                                                                                                                |          |    |     | Max. Marks: 60 |  |  |
|----|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|----|-----|----------------|--|--|
|    |               | Answer One Question from each Unit<br>All questions carry equal marks                                                                                          |          |    |     |                |  |  |
|    |               |                                                                                                                                                                |          |    |     |                |  |  |
| 1. | a)            | Write short note on computational problem solving.                                                                                                             | 6 Marks  | L1 | CO1 | PO1            |  |  |
|    | b)            | List and explain the features of python programming language.<br>(OR)                                                                                          | 6 Marks  | L1 | CO1 | PO1            |  |  |
| 2. |               | Explain syntax, semantics and problem translations with examples.                                                                                              | 12 Marks | L2 | CO1 | PO1            |  |  |
|    |               | (UNIT-II)                                                                                                                                                      |          |    |     |                |  |  |
| 3. | a)            | Write a python program to prompt the user to enter month and vear to display no of days in a given month.                                                      | 6 Marks  | L3 | CO3 | PO3            |  |  |
|    | b)            | Explain solution control statement in python with example.<br>(OR)                                                                                             | 6 Marks  | L2 | CO1 | PO1            |  |  |
| 4. | a)            | How to traverse a list? Illustrate with the help of an example.                                                                                                | 6 Marks  | L2 | CO3 | PO3            |  |  |
|    | b)            | Explain the difference between lists and tuples in python.                                                                                                     | 6 Marks  | L2 | CO1 | PO1            |  |  |
|    |               | UNIT-III)                                                                                                                                                      |          |    |     |                |  |  |
| 5. |               | Illustrate local variable-local scope and global variable-global<br>scope using a program to calculate semester GPA and cumulative<br>GPA for a given student. | 12 Marks | L2 | CO3 | PO3            |  |  |
|    |               | (OR)                                                                                                                                                           |          |    |     |                |  |  |
| 6. |               | Recall the development of a programmer defined module using stack mechanism.                                                                                   | 12 Marks | L1 | CO2 | PO2            |  |  |
|    |               |                                                                                                                                                                |          |    |     |                |  |  |
| 7. |               | Implement bouncing balls program to illustrate creation of multiple turtles.                                                                                   | 12 Marks | L3 | CO3 | PO3            |  |  |
|    |               | (OR)                                                                                                                                                           |          |    |     |                |  |  |
| 8. |               | What is encapsulation? Discuss the development of python fraction class with suitable example.                                                                 | 12 Marks | L2 | CO4 | PO1            |  |  |
|    |               | UNIT-V                                                                                                                                                         |          |    |     |                |  |  |
| 9. |               | Describe the ways of building user interfaces using more than one widget.                                                                                      | 12 Marks | L1 | CO5 | PO3            |  |  |
|    |               | (OR)                                                                                                                                                           |          |    |     |                |  |  |
| 10 |               | How to build reusable GUI components with classes?                                                                                                             | 12 Marks | L2 | CO5 | PO3            |  |  |

Max. Marks: 60

Time: 3 hours

## Answer One Question from each Unit All questions carry equal marks

# UNIT-I

| 1  | a) | Select and apply appropriate techniques to reduce the software product size                                                                        | CO5 | 6 Marks  |
|----|----|----------------------------------------------------------------------------------------------------------------------------------------------------|-----|----------|
|    | b) | Identify the ways of achieving better economics in software.                                                                                       | CO2 | 6 Marks  |
| 2  | a) | List the general quality improvements with a modern process over<br>conventional process. Explain the key practices to improve software<br>quality | CO2 | 6 Marks  |
|    | b) | Describe the three generations of basic technology advancement in tools, components and processes.                                                 | CO1 | 6 Marks  |
| 3  |    | Explain the principles of conventional software engineering.                                                                                       | CO1 | 12 Marks |
| 4  |    | Elaborate on Inception and Construction life cycle phase activities.                                                                               | CO1 | 12 Marks |
| 5  | a) | Illustrate the work break down structure to meet specific needs of software project development.                                                   | CO3 | 6 Marks  |
|    | b) | Specify the process of Iteration workflows of a software development project.                                                                      | CO1 | 6 Marks  |
|    |    | (OR)                                                                                                                                               |     |          |
| 6  | a) | Use appropriate techniques for effective cost and schedule estimation of a software project.                                                       | CO5 | 7 Marks  |
|    | b) | Identify various Minor milestones required to provide checkpoint of the process                                                                    | CO2 | 5 Marks  |
|    |    | (UNIT-IV)                                                                                                                                          |     |          |
| 7  |    | Write short notes on:<br>i) Roundtrip Engineering.<br>ii) Change Management.<br>(OR)                                                               | CO1 | 12 Marks |
| 8  | a) | Identify the roles and responsibilities in a software line-of-business                                                                             | CO2 | 6 Marks  |
|    | b) | Select appropriate tool components to automate the software development process with respect to various process workflows.                         | CO5 | 6 Marks  |
| 9  |    | Evaluate the critical dimensions of tailoring the software development process.                                                                    | CO4 | 12 Marks |
|    |    | (OR)                                                                                                                                               |     |          |
| 10 |    | Apply seven core metrics with their perspectives and purpose to manage a modern software process.                                                  | CO5 | 12 Marks |
|    |    | \$P \\$P                                                                                                                                           |     |          |

M.Tech I Semester (SVEC-19) Regular/Supplementary Examinations, August - 2021

#### **ADVANCED ALGORITHMS**

#### [Computer Science]

Max. Marks: 60

Answer One Question from each Unit All questions carry equal marks

## UNIT-I

- 1. a) What are the advantages of algorithms compared to flow charts? 6 Marks L2 CO1 PO1 Discuss.
  - b) In an algorithm that tests a given integer whether prime or not, 6 Marks L3 CO1 PO2 discuss the complexity of algorithm, when iteration construct is used.

#### (OR)

2. a) Maximize total profit of only one job, which can be scheduled at 6 Marks L2 CO1 PO1 any time:

Input : Five Jobs with following deadlines and profits

| JobID | Deadline | Profit |
|-------|----------|--------|
| a     | 2        | 100    |
| b     | 1        | 19     |
| с     | 2        | 27     |
| d     | 1        | 25     |
| e     | 3        | 15     |

b) Define 0/1 Knapsack problem. How the do the control abstract of 6 Marks L3 CO1 PO2 divide and conquer will apply to the solution of 0/1 Knapsack Problem? Discuss.

# UNIT-II

- a) Discuss how the problem solving methodology "Dynamic 6 Marks L2 CO1 PO1 Programming" be selected for solving a problem. State the CO2 requirement criteria.
   b) Discuss how the Transline Schemenen method here he scheme densing (Marks L2 CO2 PO1 CO2)
  - b) Discuss how the Traveling Salesperson problem be solved using 6 Marks L3 CO2 PO1 Dynamic Programming.

#### (OR)

- 4. a) Discuss how backtracking manifests as a 'dynamic programming 6 Marks L2 CO1 PO2 problem solving methodology' in the case of *n*-queen problem. CO2
  - b) Given a set of non-negative integers, and a value sum, determine 6 Marks L3 CO2 PO2 if there is a subset of the given set with sum equal to given sum. set[] = {3, 34, 4, 12, 5, 2}, sum = 9.

#### UNIT-III

| 5. | a)                                                               | State the difference between NP, NP complete and NP-hard | 6 Marks | L2 | CO1 | PO1 |
|----|------------------------------------------------------------------|----------------------------------------------------------|---------|----|-----|-----|
|    |                                                                  | problem.                                                 |         |    | CO2 |     |
|    | b) Define polynomial reducible. Write about undecidable problem. |                                                          | 6 Marks | L3 | CO1 | PO2 |
|    |                                                                  |                                                          |         |    | CO2 |     |

SVEC-19

|    |    | (OR)                                                                                                                                                                                                            |         |    |            |     |
|----|----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|----|------------|-----|
| 6. | a) | Define set cover. How a set cover contributes to greedy method of programming methodology?                                                                                                                      | 6 Marks | L2 | CO1<br>CO2 | PO1 |
|    | b) | 'A set cover problem can overcome in approximation', discuss<br>the problem is NP-complete.                                                                                                                     | 6 Marks | L2 | CO1        | PO1 |
|    |    | UNIT-IV                                                                                                                                                                                                         |         |    |            |     |
| 7. | a) | Define maximum flow in the directed capacitated network. Write about flow rules.                                                                                                                                | 6 Marks | L2 | CO1        | PO1 |
|    | b) | Discuss how to obtain residual network in the application of Ford-Fulkerson algorithm.                                                                                                                          | 6 Marks | L4 | CO2        | PO1 |
|    |    | (OR)                                                                                                                                                                                                            |         |    |            |     |
| 8. | a) | "For any integer <i>a</i> and any positive integer <i>n</i> , there exist unique integers <i>q</i> and <i>r</i> such that $0 \le r < n$ and $a = qn + r$ ". Discuss the properties of the said division theorem | 6 Marks | L2 | CO1<br>CO2 | PO1 |
|    | b) | Discuss the worst-case runtime of Euclid algorithm for determining gcd of three integers $a, b, c$ .                                                                                                            | 6 Marks | L4 | CO2        | PO1 |
|    |    | UNIT-V                                                                                                                                                                                                          |         |    |            |     |
| 9. | a) | What is dictionary? Discuss the role of dictionary in string-<br>pattern matching.                                                                                                                              | 6 Marks | L2 | CO1        | PO1 |
|    | b) | Write about the runs of the naïve pattern-matching algorithm for the following:                                                                                                                                 | 6 Marks | L2 | CO2        | PO1 |
|    |    | Search string : ababbaabaaab                                                                                                                                                                                    |         |    |            |     |
|    |    | Pattern string : abaa                                                                                                                                                                                           |         |    |            |     |
|    | ,  | (OR)                                                                                                                                                                                                            | () ( )  |    | 001        | DOI |
| 10 | a) | Discuss how tries contribute in string-pattern matching algorithms.                                                                                                                                             | 6 Marks | L2 | COI        | PO1 |
|    | b) | Write about randomized algorithms. How do they contribute to                                                                                                                                                    | 6 Marks | L2 | CO1        | PO1 |

obtain the optimal solutions when compared with traditional problem solving methodologies?

# UNIT-V

- 9. a) Give an example graph which is Hamiltonian but not Eulerian.
  - b) Using depth first search method, determine the spanning tree **T** for the following graph with the vertex *e* as the root of **T**.

#### (**OR**)

- 10 a) Let G be the non directed graph of order 9 such that each vertex 6 Marks L2 CO2 PO2
  has degree 5 or 6. Prove that atleast 5 vertices have degree 6 or atleast 6 vertices have degree 5.
  - b) Determine the number of edges in: i)  $K_n$  ii)  $K_{m,n}$  iii)  $P_n$ .

#### ANALOG CMOS VLSI DESIGN

#### [VLSI]

Max. Marks: 60

Answer One Question from each Unit All questions carry equal marks

UNIT-I 1. a) Find the voltage gain of the circuit shown below.  $M_{1} V_{DD}$   $V_{in} \circ V_{out}$   $V_{out} \circ V_{DD}$ 

|    | b)       | Explain about cascode stage amplifier with resistive load.                                                                                       | 7 Marks            | L1       | CO1        | PO1        |
|----|----------|--------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|----------|------------|------------|
| 2. | a)<br>b) | Illustrate how a MOS transistor can act like current source.<br>Develop the large signal model for CG Configuration with necessary equations     | 5 Marks<br>7 Marks | L2<br>L3 | CO1<br>CO1 | PO1<br>PO2 |
|    |          | UNIT-II                                                                                                                                          |                    |          |            |            |
| 3. | a)<br>b) | Compare allowable voltages in a cascode with resistive load.<br>Demonstrate the shielding property of cascode stage amplifier.                   | 6 Marks<br>6 Marks | L2<br>L2 | CO1<br>CO1 | PO1<br>PO1 |
|    |          | (OR)                                                                                                                                             |                    |          |            |            |
| 4. | a)<br>b) | Explain the effect of Noise in source follower.<br>Develop a differential pair with current source as a load and<br>show the frequency response. | 5 Marks<br>7 Marks | L2<br>L3 | CO1<br>CO1 | PO1<br>PO2 |
|    |          | UNIT-III                                                                                                                                         |                    |          |            |            |
| 5. | a)       | Classify the different types of Feedback topology and explain any one of them.                                                                   | 7 Marks            | L2       | CO2        | PO1        |
|    | b)       | Illustrate Noise in Op Amps.                                                                                                                     | 5 Marks            | L2       | CO2        | PO1        |
|    |          | (OR)                                                                                                                                             |                    |          |            |            |
| 6. | a)       | Develop the expression for power-supply rejection ratio of Two-<br>stage op-amps.                                                                | 7 Marks            | L3       | CO2        | PO2        |
|    | b)       | Define the following:<br>i) Gain Boosting. ii) Input range limitations.                                                                          | 5 Marks            | L1       | CO2        | PO1        |
|    |          | UNIT-IV                                                                                                                                          |                    |          |            |            |
| 7. | a)       | Model a two stage op amp to explain the trade off involved in selecting the input stage as p-channel or n-channel.                               | 7 Marks            | L3       | CO3        | PO3        |
|    | b)       | Demonstrate PTAT Current generation.                                                                                                             | 5 Marks            | L2       | CO3        | PO1        |
| 0  | a)       | (OR)                                                                                                                                             | 6 Marka            | T 1      | CO3        |            |
| 0. | a)       | i) Supply-Independent Biasing ii) Phase Margin.                                                                                                  | UIVIAIKS           | LI       | 003        | rui        |
|    | b)       | Classify the temperature independent references.                                                                                                 | 6 Marks            | L2       | CO3        | PO1        |

|               |         | Answer One Question from each Unit                                                                                                                                       |             |       |     |                |  |  |  |
|               |         | All questions carry equal marks                                                                                                                                          |             |       |     |                |  |  |  |
|               |         |                                                                                                                                                                          |             |       |     |                |  |  |  |
| 1.            | a)      | Write in detail about potential balance and charge balance of two<br>terminal MOS structure                                                                              | 6 Marks     | L1    | CO1 | PO1            |  |  |  |
|               | b)      | Categorize the different Regions of inversions in MOS structure.                                                                                                         | 6 Marks     | L4    | CO1 | PO1            |  |  |  |
| 2             | a)      | Explain in detail about ninch-off voltage and body effect                                                                                                                | 6 Marks     | L2    | CO1 | PO1            |  |  |  |
| 2.            | h)      | Show the CV characteristics of a MOS structure                                                                                                                           | 6 Marks     | $L_2$ | CO1 | PO1            |  |  |  |
|               | 0)      | UNIT-II                                                                                                                                                                  | 0 101001115 |       | 001 | 101            |  |  |  |
| 3.            | a)      | Compare complete and simplified charge sheet models with necessary equations.                                                                                            | 6 Marks     | L2    | CO1 | PO1            |  |  |  |
|               | b)      | Illustrate the general charge sheet models.                                                                                                                              | 6 Marks     | L2    | CO1 | PO1            |  |  |  |
|               |         | (OR)                                                                                                                                                                     |             |       | ~ ~ |                |  |  |  |
| 4.            | a)      | Show the necessary diagrams of IDS-VDS characteristics in<br>weak inversion with VGS as a parameter and explain the<br>comparison to weak and strong inversion equations | 6 Marks     | L1    | CO1 | PO1            |  |  |  |
|               | h)      | Compare and contrast the regions of operation of a transistor                                                                                                            | 6 Marks     | 12    | CO1 | PO1            |  |  |  |
|               | 0)      | UNIT-III                                                                                                                                                                 |             |       | COI | 101            |  |  |  |
| 5.            | a)      | Show the structure of LOCUS isolated MOSFET and explain.                                                                                                                 | 8 Marks     | L1    | CO2 | PO1            |  |  |  |
|               | b)      | Explain:                                                                                                                                                                 | 4 Marks     | L2    | CO2 | PO1            |  |  |  |
|               | ,       | i) Break down in MOS. ii) Effective threshold voltage. <b>(OR)</b>                                                                                                       |             |       |     |                |  |  |  |
| 6.            | a)      | Define Carrier velocity Saturation. Analyze its importance in small dimensions with necessary equations                                                                  | 8 Marks     | L2    | CO2 | PO1            |  |  |  |
|               | b)      | Briefly explain short channel effects                                                                                                                                    | 4 Marks     | L2    | CO2 | PO1            |  |  |  |
|               | UNIT-IV |                                                                                                                                                                          |             |       |     |                |  |  |  |
| 7.            | a)      | Discuss in detail about terminal currents and charges in Quasi                                                                                                           | 6 Marks     | L3    | CO3 | PO1            |  |  |  |
|               | 1 \     | static operation under DC excitation.                                                                                                                                    |             | т о   | 001 | DO 1           |  |  |  |
|               | b)      | Explain the evaluation of charges in strong inversion for non-<br>saturation with necessary expressions.                                                                 | 6 Marks     | L2    | 03  | POI            |  |  |  |
|               |         | (OR)                                                                                                                                                                     |             |       |     |                |  |  |  |
| 8.            | a)      | Explain the evaluation of charges in weak inversion of a MOS transistor with necessary expressions.                                                                      | 6 Marks     | L2    | CO3 | PO1            |  |  |  |
|               | b)      | What is Non quasi-static analysis? How is it different from Quasi-static analysis?                                                                                       | 6 Marks     | L1    | CO3 | PO1            |  |  |  |
|               |         | (UNIT-V)                                                                                                                                                                 |             |       |     |                |  |  |  |
| 9.            | a)      | Compare the gate capacitances and junction capacitance with neat structures.                                                                                             | 5 Marks     | L2    | CO3 | PO1            |  |  |  |
|               | b)      | Develop a low frequency small signal model for the intrinsic part<br>of MOS Device and Explain.                                                                          | 7 Marks     | L3    | CO3 | PO2            |  |  |  |
|               |         | (OR)                                                                                                                                                                     |             |       |     |                |  |  |  |
| 10            |         | Develop small signal model of a MOS transistor including extrinsic capacitance and resistance.                                                                           | 12 Marks    | L4    | CO3 | PO2            |  |  |  |
|               |         | -<br>& & &                                                                                                                                                               |             |       |     |                |  |  |  |

## DIGITAL CMOS VLSI DESIGN

#### [VLSI]

Max. Marks: 60

# Answer One Question from each Unit

All questions carry equal marks

## UNIT-I )

| 1.  | a) | Interpret the dynamic behaviour of CMOS inverter by computing<br>the conscitutes and propagation delay | 7 Marks   | L2 | CO1 | PO1 |
|-----|----|--------------------------------------------------------------------------------------------------------|-----------|----|-----|-----|
|     | h) | Survey the leakage issues in dynamic CMOS circuits                                                     | 5 Marks   | 14 | CO1 | PO1 |
|     | 0) | (OR)                                                                                                   | J WILLING | LT | COI | 101 |
| 2.  | a) | Let $Z = (ABCDE + FGH)'$ . Develop a BiCMOS and Domino                                                 | 6 Marks   | L4 | CO1 | PO2 |
|     |    | CMOS implementation of the Boolean function Z.                                                         |           |    |     |     |
|     | b) | Conclude the various dynamic CMOS designs.                                                             | 6 Marks   | L4 | CO1 | PO2 |
|     |    | UNIT-II)                                                                                               |           |    |     |     |
| 3.  | a) | Identify and summarize logic styles for pipelined structures.                                          | 6 Marks   | L3 | CO2 | PO1 |
|     | b) | Recall the design and functionality of Bi-stable and Non Bi-stable elements.                           | 6 Marks   | L1 | CO2 | PO1 |
|     |    | (OR)                                                                                                   |           |    |     |     |
| 4.  | a) | Illustrate the functionality of dynamic sequential circuits.                                           | 6 Marks   | L1 | CO2 | PO1 |
|     | b) | Develop and explain a circuit to overcome threshold voltage drops in dynamic circuits.                 | 6 Marks   | L3 | CO2 | PO1 |
|     |    | UNIT-III)                                                                                              |           |    |     |     |
| 5.  | a) | Apply the design considerations of a 4-bit SRAM and develop its CMOS logic diagram.                    | 5 Marks   | L3 | CO3 | PO2 |
|     | b) | List various types of memory classifications and explain in brief. <b>(OR)</b>                         | 7 Marks   | L1 | CO3 | PO1 |
| 6.  | a) | Illustrate the method of logical effort for transistor sizing.                                         | 5 Marks   | L1 | CO3 | PO1 |
|     | b) | Model a 3T DRAM cell and explain its operation in detail.                                              | 7 Marks   | L3 | CO3 | PO2 |
|     |    | UNIT-IV                                                                                                |           |    |     |     |
| 7.  | a) | Explain the importance of multiplier with pipelined algorithm for future implementations.              | 5 Marks   | L2 | CO3 | PO1 |
|     | b) | Show the general arrangement of 4 bit arithmetic processor. <b>(OR)</b>                                | 7 Marks   | L1 | CO3 | PO1 |
| 8.  | a) | Illustrate the various considerations to implement ALU functions with an adder.                        | 6 Marks   | L1 | CO3 | PO1 |
|     | b) | Develop a 4x4 Barrel shifter and list some of its applications.                                        | 6 Marks   | L3 | CO3 | PO2 |
| 9.  | a) | Recall the behavioral synthesis design flow for a CMOS System.                                         | 5 Marks   | L1 | CO4 | PO1 |
|     | b) | Identify the significance of Design Economics for future implementations in digital design.            | 7 Marks   | L3 | CO4 | PO1 |
|     |    | (OR)                                                                                                   |           |    |     |     |
| 10. | a) | What are the elements for cost to produce an integrated circuit?                                       | 6 Marks   | L1 | CO4 | PO1 |
|     | b) | Outline the details present in Data Sheets that contribute future<br>enhancement of digital circuits.  | 6 Marks   | L2 | CO4 | PO1 |

| 2   | a)       | Define oxidation                                                                                                                                                                                                                  | 3 Marks            | L1       | CO1        | PO1        |
|     | b)       | Explain and justify the oxidation induced defects.                                                                                                                                                                                | 4 Marks            | L2       | COI        | PO1        |
|     | c)       | List the rules to maintain clean room and its safety.                                                                                                                                                                             | 5 Marks            | L1       | CO1        | PO1        |
|     | ,        |                                                                                                                                                                                                                                   |                    |          |            |            |
| 3.  | a)       | Explain how Electron Lithography Technique is used in IC fabrication.                                                                                                                                                             | 6 Marks            | L2       | CO2        | PO3        |
|     | b)       | Examine the reactive plasma etching techniques. Apply any one technique for IC fabrication.                                                                                                                                       | 6 Marks            | L4       | CO1        | PO3        |
|     |          | (OR)                                                                                                                                                                                                                              |                    |          |            |            |
| 4.  | a)       | Identify the techniques for Reactive Plasma Etching.                                                                                                                                                                              | 6 Marks            | L2       | CO1        | PO3        |
|     | b)       | Explain the process of :                                                                                                                                                                                                          | 6 Marks            | L2       | CO1        | PO1        |
|     |          | i) X-ray Lithography. ii) Anisotropy etch mechanism.                                                                                                                                                                              |                    |          |            |            |
|     |          | UNIT-III)                                                                                                                                                                                                                         |                    |          |            |            |
| 5.  | a)       | Briefly discuss about Fick's one dimensional diffusion theory.                                                                                                                                                                    | 6 Marks            | L2       | CO1        | PO1        |
|     | b)       | Give a brief account on doping, oxidation and properties of polysilicon.                                                                                                                                                          | 6 Marks            | L2       | CO1        | PO1        |
|     |          | (OR)                                                                                                                                                                                                                              |                    |          |            |            |
| 6.  | a)       | Evaluate the Low Pressure CVD (LPCVD) and explain how uniform deposition can be achieved in LPCVD.                                                                                                                                | 8 Marks            | L5       | CO1        | PO1        |
|     | b)       | Analyze the VLSI shallow junctions using ion implantation.                                                                                                                                                                        | 4 Marks            | L4       | CO1        | PO1        |
| 7.  | a)       | Discuss the problems associated with Al-Cu interconnect.                                                                                                                                                                          | 6 Marks            | L2       | CO2        | PO3        |
|     | b)       | Identify the different metallization problems in processing and predict methods to eradicate or minimize the related issues.                                                                                                      | 6 Marks            | L2       | CO2        | PO1        |
|     |          | (OR)                                                                                                                                                                                                                              |                    |          |            |            |
| 8.  | a)       | Identify the problems encountered in metallization and suggest<br>the methods to overcome them.                                                                                                                                   | 8 Marks            | L2       | CO2        | PO3        |
|     | b)       | Calculate the RC time constant for a 1 cm long doped polysilicon interconnection runner on 1 $\mu$ m thick SiO <sub>2</sub> . The polysilicon has a resistance of 5000 $\Omega$ and a resistivity $\rho$ of 1000 $\mu\Omega$ /cm. | 4 Marks            | L5       | CO2        | PO1        |
| 9   | a)       | Memorize the concept of "beam specimen interactions that the                                                                                                                                                                      | 6 Marks            | L1       | CO3        | PO1        |
|     | )        | analytical beams with materials".                                                                                                                                                                                                 | ~                  |          | 200        | - 01       |
|     | b)       | Classify VLSI assembly technologies for multidisciplinary applications.                                                                                                                                                           | 6 Marks            | L2       | CO3        | PO1        |
|     |          | (OR)                                                                                                                                                                                                                              |                    |          |            |            |
| 10. |          | With flow diagram, explain the generic assembly sequence for plastic and ceramic packages.                                                                                                                                        | 12 Marks           | L2       | CO3        | PO3        |

## **CLOUD COMPUTING**

[ Computer Science] Time: 3 hours Max. Marks: 60 **Answer One Question from each Unit** All questions carry equal marks UNIT-I 6 Marks 1. Explain the virtualization process involved in Amazon Web L2 CO<sub>2</sub> PO1 a) Services. CO<sub>2</sub> b) Compare Grid computing and Cloud computing. 6 Marks L2 PO1 (**OR**) 2. a) Examine how VMware turned as a pioneer in the commercial 6 Marks L4 CO1 PO2 market of virtualization as a service provider. Compare Type-I and Type-II Hypervisors. b) 6 Marks L2 CO1 PO1 UNIT-II ) 3. a) Explain the risks and challenges of using cloud environment. 6 Marks L2 CO1 **PO1** Distinguish public cloud and private cloud model used for 6 Marks L2 CO<sub>2</sub> PO1 b) deployment. (**OR**) Examine the need for combining Infrastructure as a Service, 4. a) 6 Marks L4 CO<sub>2</sub> PO<sub>2</sub> Platform as a Service and Software as a Service. Explain the threat agents that can be considered while building b) 6 Marks L2 CO<sub>2</sub> PO1 cloud environment. (UNIT-III) Explain the basic services provided in cloud environment. 6 Marks 5. a) L2 CO<sub>2</sub> PO1 b) Model user authentication in Identity as a Service. Discuss with 6 Marks L3 CO2 PO<sub>2</sub> an example. (**OR**) Outline the characteristics of Platform as a Service in cloud. 6. a) 6 Marks L2 CO<sub>2</sub> PO1 Distinguish the characteristics of Platform as a Service and b) 6 Marks L2 CO<sub>2</sub> PO1 Software as a Service models with respect to specific cloud service providers. UNIT-IV Identify a suitable reference model for workflow management CO2 7. a) 6 Marks L3 PO2 system. b) Explain the characteristics of Message Passing Interface. 6 Marks L2 CO<sub>2</sub> PO1 (**OR**) Explain the additional properties of application model with CO2 8. 6 Marks L2 PO1 a) respect to embarrassingly parallel application. Summarize the achievement of using throughput computing to L2 CO<sub>2</sub> PO1 b) 6 Marks create a cloud environment. UNIT-V Explain the types of services provided by Microsoft Azure. 9. a) 6 Marks L2 CO<sub>2</sub> PO1 Outline the architecture for SQL Azure. 6 Marks b) L2 CO2 PO1 (**OR**) Explain the storage service provided through Amazon S3. 6 Marks L2 CO<sub>2</sub> PO1 10 a) Identify the energy management aspects used to build cloud 6 Marks L3 CO2 PO<sub>2</sub> b) environment in GoogleApp engine. ද්ම <u>(</u> (R)

|               |          | All questions carry equal marks                                                                               |                    |          |            |            |
|               |          |                                                                                                               |                    |          |            |            |
| 1.            | a)       | Summarize schematic cross section of a GaAs SRAM memory cell                                                  | 9 Marks            | L2       | CO1        | PO1        |
|               | b)       | Criticize what are the necessary steps to add to obtain high performance CMOS from Core CMOS process.         | 3 Marks            | L1       | CO1        | PO1        |
| 2.            | a)<br>b) | Demonstrate Three Transistor DRAM cell with neat sketch.<br>Construct a simple Trench cell structure of DRAM. | 6 Marks<br>6 Marks | L3<br>L3 | CO1<br>CO1 | PO1<br>PO1 |
| 3.            | a)<br>b) | Write short notes on CMOS PROMs.<br>Explain FLOTAX technology with neat sketch.                               | 6 Marks<br>6 Marks | L1<br>L2 | CO1<br>CO1 | PO1<br>PO1 |
| 4.            | a)       | Appraise the main requirements for the design of address detection circuitry                                  | 4 Marks            | L3       | CO1        | PO1        |
|               | b)       | Classify the Flash memory architecture explain any one of the architecture with neat diagram.                 | 8 Marks            | L2       | CO1        | PO1        |
|               |          | (UNIT-III)                                                                                                    |                    |          |            |            |
| 5.            | a)       | Examine the traditional approach to memory selection and hardness assurance program for space application     | 8 Marks            | L3       | CO2        | PO3        |
|               | b)       | Categorize the different reliability simulators.                                                              | 4 Marks            | L2       | CO2        | PO1        |
| 6.            | a)       | Calculate Gamma distribution and Weibull distribution in the reliability modeling.                            | 7 Marks            | L3       | CO2        | PO3        |
|               | b)       | Identify the various radiation hardening process issues on MOS devices.                                       | 5 Marks            | L1       | CO2        | PO3        |
|               |          | (UNIT-IV)                                                                                                     |                    |          |            |            |
| 7.            | a)       | Construct the FRAM cell structure with neat sketch and explain its operation.                                 | 6 Marks            | L4       | CO3        | PO2        |
|               | b)       | Identify the importance of memory cards used in the high density<br>memory packaging technologies.            | 6 Marks            | L1       | CO3        | PO1        |
|               |          | (OR)                                                                                                          |                    |          |            |            |
| 8.            | a)       | Illustrate the VLSI chip on silicon technology used in 2D hybrid memory.                                      | 6 Marks            | L3       | CO3        | PO3        |
|               | b)       | Build single electron memory cell with neat sketch.                                                           | 6 Marks            | L4       | CO3        | PO2        |
| 9.            | a)       | Model memory cell transistor layout for double buffered memory testing technique.                             | 7 Marks            | L3       | CO4        | PO3        |
|               | b)       | Summarize the general testing requirement for the application specific memory.                                | 5 Marks            | L2       | CO4        | PO1        |
|               |          | (OR)                                                                                                          |                    |          |            |            |
| 10            | a)       | Discuss the commonly used error detection and correction codes used in the memory chip and cards.             | 8 Marks            | L2       | CO4        | PO3        |
|               |          |                                                                                                               |                    |          |            |            |

Identify the functional faults usually occur in nonvolatile 4 Marks b) L1 CO4 PO1 memory modeling.

Time: 3 hours

M.Tech II Semester (SVEC-19) Supplementary Examinations February - 2021

NANO MATERIALS AND NANOTECHNOLOGY

[VLSI]

Max. Marks: 60

#### **Answer One Question from each Unit** All questions carry equal marks UNIT-I Define intrinsic and extrinsic size effects. 1. 5 Marks L1CO1 PO1 a) Illustrate the different properties of nano particles to the same b) 7 Marks L2 CO1 PO1 materials in bulk. (**OR**) 2. Demonstrate the Gleiter's classification strategy of nanostructures 12 Marks L3 CO1 **PO1** materials. UNIT-II ) 3. Interpret the principal working and application of transmission 12 Marks L2 CO1 PO1 electron microscopy for the characterization of nano materials. (OR)Identify the role of nano scale dimension on the physical 6 Marks 4. L3 CO1 PO1 a) properties of Nano materials (Melting points and lattice constants) of materials. Solve the mean size of a nano crystallites (nm), where, crystallite 6 Marks b) L3 CO1 PO1 shape factor a good approximation is 0.9, 1.54060 Å is the X-ray wavelength, 0.5 angle ( $\theta$ ) is the full width at half the maximum (FWHM) of the X-ray diffraction peak and the Braggs' angle is 10 deg. (UNIT-III) 5. Relate the application and advantages of MEMS in the current 12 Marks L1 CO<sub>2</sub> PO1 technology. (**OR**) Summarize different fabrication steps to develop MEMS based 6 Marks L2 CO<sub>2</sub> **PO2** 6. a) structure such cantilever. b) Contrast the concept MEMS and NEMS with respect to their 6 Marks L4 CO<sub>2</sub> PO1 design and applications. UNIT-IV) 7. a) Outline the semiconducting and metallic properties of CNT 6 Marks L2 CO3 PO1 based on chiral indices (n, m). b) Construct the flowchart of one of the growth methods of Carbon 6 Marks L3 CO3 PO1 Nano tubes. (**OR**) Analyze and contribute views on versatile applications of CNTs 8. 12 Marks L4 CO3 PO1 in multidisciplinary research in nanotechnology. UNIT-V 9. Identify working principle of a nanodevice for biological 12 Marks L3 CO3 **PO2** applications of Nano particles. (**OR**) Analyze different quantum devices considering the synthetic CO<sub>4</sub> PO1 10 a) 6 Marks I.4 tailoring of band gaps. Illustrate the catalysis by gold nano particles. PO1 b) 6 Marks L2 CO4 ନ୍ଦେ (j) (j)
