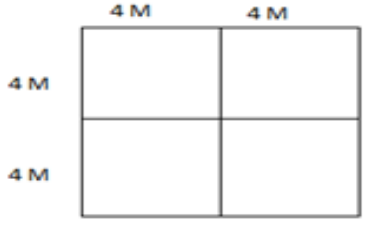
	b)	The plan and elevation of a 2, 3 story RCC college building. The building is in 36% of Peak Ground Acceleration (PGA) or very serious seismic intensity. The type of soil encountered is medium stiff and it is proposed to design the building with a frame meeting ductile requirement of RC building. The intensity of DL is 10kN/m^2 and Intensity of Live load of floors is 3kN/m^2. Determine the design seismic loads on the structure by static analysis.	CO2	7 Marks



PLAN

ELEVATION

(OR)

6. For an RCC (OMRF, not conforming to ductile detailing requirements) building frame for office the loads on the floors are DL (including equivalent weight of brick infill masonry 8kN/m² on each floor and 7.5kN/m² on roof, LL = 4kN/m² on each floor and 1.5kN/m² on roof. The story heights are ground story = 4.2m, first story = 3.2m, second story = 3.2m and third story = 3.2m. The building frame is of four bays of each 5m in both directions and founded on hard soil, situated in zone IV. The plan dimensions of the building are 20m x 20m and the total height of the building is 13.8m. The damping in the structure is 7%. Determine the seismic forces by:
   i) Equivalent lateral force procedure considering the framed structure.
   ii) The stiffness of brick masonry infill, neglecting the stiffness of brick masonry infill. Compare the results of both the cases and explain.

CO1 14 Marks

UNIT-IV

7. a) Explain about the ductile detailing of beam as per IS 13920-2016 recommendations. CO4 7 Marks

   b) An inner beam of 300mm x 600mm with span 6m of a RC frame having a negative moment of 300kN-m and a shear force of 250kN at the face of beam column joint due to gravity and earthquake loads. Design the beam for ductility. Consider M25 and Fe415 CO1 7 Marks

(OR)

8. a) Explain about Plan Configuration and Torsion Irregularities in a multi storied structure. CO6 7 Marks

   b) Define load path and explain about vertical discontinuities in load path. CO6 7 Marks

UNIT-V

9. a) Explain about period shifting of structure and mode of vibration in base isolation technique. CO3 7 Marks

   b) Explain about Hydraulic dampers and Viscous dampers in detail. CO1 7 Marks

(OR)

10. Design a ductile shear wall of an effective length 6.4m to resist seismic forces using M25 and Fe415. The beams and columns are 600mm x 300mm. Each floor is of 3m. The seismic shear forces for each floor is shown in figure. Axial load acting on the building is 1000kN. CO3 14 Marks

HIGHWAY CONSTRUCTION AND MAINTENANCE

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain various steps involved in the construction of WBM roads.	CO2	7 Marks
	b)	Explain the construction of cement concrete pavements in detail.	CO2	7 Marks
		(OR)		
2.	a)	Explain the construction of expansion and contraction joints in cement concrete pavement in detail.	CO2	7 Marks
	b)	Explain various steps in construction of a new highway pavement.	CO1	7 Marks

UNIT-II

3.	a)	Write a detailed note on soil-lime stabilization.	CO5	7 Marks
	b)	Write a detailed note on various special problems encountered during soil stabilization work.	CO1	7 Marks
		(OR)		
4.	a)	Explain the process of mechanical stabilization in detail.	CO5	7 Marks
	b)	Write a detailed note on various properties of soil aggregate mixes to be considered in soil stabilization.	CO1	7 Marks

UNIT-III

5.	a)	Explain the importance and various requirements of highway drainage.	CO3	7 Marks
	b)	Explain the construction of highway drainage in case of water logged areas.	CO3	7 Marks
		(OR)		
6.	a)	Write a detailed note on various factors effecting highway alignment in hilly roads.	CO7	7 Marks
	b)	Explain various problems encountered in maintenance of drainage in hilly areas.	CO1	7 Marks

UNIT-IV

7.		Write a short note on uses, advantages and limitations of the following equipment's. i) Bull Dozer. ii) Scrapper.	CO5	14 Marks
		(OR)		
8.		Discuss in detail various types of pile driving equipment available with neat sketch.	CO5	14 Marks

UNIT-V

9.	a)	Explain various failures in flexible pavements with neat sketch.	CO2	7 Marks
	b)	Write a detailed note on various ways to strengthen existing highway pavements by means of overlays.	CO4	7 Marks
		(OR)		
10.	a)	Explain various environment factors to be considered while planning and development of highways.	CO8	7 Marks
	b)	Write short notes on road side development and arboriculture.	CO6	7 Marks

CODE No.: 16BT70114 SVEC-16

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

INDUSTRIAL WASTEWATER TREATMENT

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Draw and explain a typical oxygen sag curve in a stream subjected to pollution.	CO1	7 Marks
	b)	Explain the oxygen sag curve in streams when industrial wastewater is disposed into streams.	CO1	7 Marks
		OR)		
2.	a)	How are the characteristics of industrial waste water expressed?	CO1	7 Marks
	b)	What is the importance of dissolved oxygen which is present in water? How does it help for the treatment of waste water? How the dissolved oxygen level is maintained in the stream?	CO1	7 Marks

UNIT-II

3.	a)	Draw the neat sketch and describe briefly about the growth phases of microorganisms.	CO2	7 Marks
	b)	Define the mean cell residence time. Determine the mean cell residence time if volume of the aeration tank is 5000m^3 with MLSS concentration 2000 mg/l is maintained and the underflow concentration is 10000 mg/l and about 50m^3/day sludge is wasted.	CO2	7 Marks
		(OR)		
4.	a)	Draw flow sheets and explain contact stabilization process.	CO2	7 Marks
	b)	Explain the significant design criteria and steps for designing a conventional activated sludge process.	CO2	7 Marks

UNIT-III

5.	a)	What are the various empirical equations used for the design of trickling filters? State the limitations of these equations.	CO3	7 Marks
	b)	Explain briefly the nitrogen removal by biological nitrification and denitrification.	CO3	7 Marks
		(OR)		
6.	a)	Explain the oxidation and reduction treatment systems in detail.	CO3	7 Marks
	b)	Explain the different types of anaerobic treatment processes. Anaerobic treatment is not generally accepted for wastewater treatment. Why?	CO3	7 Marks

UNIT-IV

7.	a)	What is the purpose of equalization? What are the methods of equalization and explain any two methods of mixing?	CO4	7 Marks
	b)	What is the purpose of neutralization? What are the methods of neutralization?	CO4	7 Marks
		(OR)		
8.	a)	How to control industrial waste water by neutralization? What are its advantages?	CO4	7 Marks
	b)	Describe the massive lime Treatment for color Removal in pulp and paper mill.	CO4	7 Marks

UNIT-V

9.	a)	Explain the impact of distillery effluent on aquatic environment if discharged without treatment.	CO5	7 Marks
	b)	What are the merits and demerits of common effluent treatment plants?	CO5	7 Marks
		(OR)		
10.	a)	Draw a neat sketch of the process of Tanneries Industry.	CO5	7 Marks
	b)	Give the values of different characteristics of Tanneries Industry waste.	CO5	7 Marks

CODE No.: 16BT70119 SVEC-16

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

BRIDGE ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

(Use of codes IRC:6-2014, IRC:21-2000, IS 456:2000, IRC:83-(Part-I)-1999, IRC:83-(Part-II)-1987 and Pigeaud's curves are permitted in the examination hall)

UNIT-I

1.	a)	Briefly explain the loading standards used for the highway bridges. Compare the same with the railway bridge loading standards.	CO1	7 Marks
	b)	Explain the various components of the culvert along with the design procedure.	CO1	7 Marks

(OR)

2.	a)	Explain the basic forms of a bridge structure.	CO2	7 Marks
	b)	How the foundation and pier of the bridge affect the economy and cost of the construction? Explain briefly with example.	CO2	7 Marks

UNIT-II

3.		A reinforced concrete box culvert is required for a national highway crossing. The clear vent way of the box culvert is 4m x 4m. Design the box culvert assuming a super imposed dead load of 12kN/m^2 and a live load of 50kN/m^2.The density of the soil is 16kN/m. Use M 25 grade of concrete and Fe415 steel.	CO33	14 Marks

(OR)

4.		A road bridge deck consists of a reinforced concrete slab continuous over tee beams spaced at 2m centers and cross girders spaced at 5m centers. Thickness of wearing coat = 100mm. Type of loading is IRC class AA. Using M20 grade concrete and Fe415 grade HYSD bars. Design the using given data and draw the cross section of the deck slab over two spans showing reinforcement details.	CO3	14 Marks

UNIT-III

5.		Design a R.C.C. Tee beam and slab deck to suit the following data. Effective span of girders = 16m, width of kerbs = 600mm, clear width of roadway = 7.5m, thickness of wearing coat = 80mm, No.of main girders = 4, spacing of main girders = 2.5m, Spacing of cross girders = 4m, Type of loading = IRC class 70R tracked vehicle – materials, M20 grade concrete and Fe415 grade HYSD bars. Design the deck slab and draw the details of reinforcement.	CO5	14 Marks

(OR)

6.		Design the interior slab panel of a T–beam bridge for the following data: • Clear width of roadway = 7.5m • Span C/C of bearings = 12m • Live load = IRC class AA tracked vehicle • Average thickness of wearing coat = 75mm • Use M 25 mix and Fe415 grades.	CO5	14 Marks

UNIT-IV

7.	a)	Write the different types of bearings used in the bridge.	CO1	4 Marks
	b)	What is the purpose to provide the bearings in the bridge?	CO1	4 Marks
	c)	Compare the steel rock and roller bearing with elastometric bearing along with the application.	CO2	6 Marks

(OR)

8.	a)	Write the general features of bearings used in the bridge.	CO1	7 Marks
	b)	Explain design principles of steel rocker bearing.	CO1	7 Marks

UNIT-V

9.	a)	Explain the various types loads and forces to be considered in the design of piers.	CO2	7 Marks
	b)	Explain general features of a bed block.	CO2	7 Marks

(OR)

10.	a)	What are the materials used for piers and abatements mention them?	CO1	5 Marks
	b)	Explain briefly for the following forces acting on the abutments with their design steps: i) Force due to breaking. ii) Active earth pressure. iii) Horizontal force due to temperature and shrinkage.	CO2	9 Marks

GROUND IMPROVEMENT TECHNIQUES

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the impact at ground surface method of densifying granular soils.	CO1	7 Marks
	b)	Explain the field procedure for compaction of soils.	CO2	7 Marks
		(OR)		
2.	a)	Explain the construction methods used for the construction of stabilized roads.	CO1	7 Marks
	b)	Differentiate between consolidation and compaction of soils and give examples.	CO4	7 Marks

UNIT-II

3.	a)	Explain the design steps for a dewatering system.	CO3	7 Marks
	b)	Explain the electro osmotic method of dewatering for ground improvement.	CO1	7 Marks
		(OR)		
4.	a)	Explain in detail the vacuum well point system of dewatering.	CO1	7 Marks
	b)	Write a short note on following: i) Preloading techniques. ii) Knitted.	CO1	7 Marks

UNIT-III

5.	a)	What is a stone column? What are the methods of installing a stone column?	CO1	7 Marks
	b)	Explain how the engineering properties of soil are changed by the process of bituminous stabilization.	CO5	7 Marks
		(OR)		
6.	a)	Describe the vibroflotation technique of densifying granular soil.	CO6	7 Marks
	b)	What are the types of vertical drains? Explain.	CO1	7 Marks

UNIT-IV

7.	a)	Explain in detail the mechanical soil stabilization.	CO1	7 Marks
	b)	Explain the principle and application of soil-lime stabilization.	CO5	7 Marks
		(OR)		
8.	a)	Explain in detail the different stages of grouting with the help of a neat sketch.	CO1	7 Marks
	b)	Define grouting. What are the objectives of grouting in various Civil engineering applications?	CO4	7 Marks

UNIT-V

9.	a)	What are the design principles of reinforced earth wall?	CO1	7 Marks
	b)	Explain different functions of geo-textiles with neat sketches.	CO6	7 Marks
		(OR)		
10.	a)	Explain in detail the use of geo-synthetics as a reinforcement in various Civil engineering applications.	CO5	7 Marks
	b)	Why geo-synthesis used in roadways on soft sub grades are more beneficial? Explain	CO7	7 Marks

POWER SYSTEM OPERATION AND CONTROL
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Derive the condition for economical load dispatch among various generating plants by considering transmission losses.	CO2	7 Marks
	b)	Explain the importance of load forecasting and explain any one method of load forecasting.	CO1	7 Marks
		(OR)		
2.	a)	Derive transmission line loss equation in terms of B-Coefficients.	CO2	7 Marks
	b)	Incremental fuel costs in Rs/MWh for a plant consisting of two units are $\frac{df_1}{dpg_1} = 0.2pg_1 + 40 \qquad \frac{df_2}{dpg_2} = 0.25pg_2 + 30$ Assume both units are operating at all times and total load varies from 40MW to 250MW and maximum and minimum loads are to be 125 and 20MW respectively. How will the loads be shared between the two units as the system load varies in steps of 50MW over full range? What are the corresponding values of the plant incremental costs?	CO6	7 Marks

UNIT-II

3.	a)	Derive the coordination equation for the optimal scheduling of hydrothermal interconnected power plants.	CO4	7 Marks
	b)	Explain short term hydro scheduling by $\gamma - \lambda$ iteration method.	CO5	7 Marks
		(OR)		
4.		Describe the hydro-thermal economic load scheduling. Derive the necessary equations.	CO4	14 Marks

UNIT-III

5.	a)	Develop the mathematical model for the forward Dynamic programming algorithm, taking into account the start up costs of the units	CO2	8 Marks
	b)	Draw the flowchart for the Priority list method of unit commitment.	CO2	6 Marks
		(OR)		
6.	a)	Explain the procedure for solving Unit commitment problem using Priority list scheme based on simple shutdown algorithm.	CO1	8 Marks
	b)	Explain the various constraints in unit commitment problem.	CO1	6 Marks

UNIT-IV

7.	a)	Draw the block representation of a complete DC excitation system and explain its features.	CO1	7 Marks
	b)	Explain the block diagram representation of IEEE Type-1 excitation system.	CO5	7 Marks
		(OR)		

8.	a)	Derive the transfer function of Generator – load model of power system	CO2	7 Marks
	b)	Explain the block diagram of LFC system.	CO1	7 Marks

UNIT-V

9.	a)	Derive dynamic response of a load frequency control of an isolated power system.	CO2	7 Marks
	b)	Draw a block diagram, with illustrative transfer function of a single area frequency control system. Explain the function of different components of such a control system.	CO1	7 Marks

(OR)

10.	a)	Derive the expression for the change in tie-line power when the loads change in the control areas.	CO4	7 Marks
	b)	Two areas are connected with a tie line .The characteristics are as follows. Area 1 : R=0.015 , D=0.8 , base MVA =500 Area 2 : R=0.01 pu ,D=1 pu , base MVA =500 A load change of 100 MW occurs in area 1 .What is the new frequency and tie-line flow change .The nominal frequency is 50 Hz.	CO6	7 Marks

SWITCHGEAR AND PROTECTION
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Elucidate the operation of Electromagnetic Induction disc type relay with relevant diagrams. Also derive the torque equation.	CO2	14 Marks

(OR)

2.	a)	Elucidate the advantages of static relays over electromagnetic relays.	CO1	7 Marks
	b)	Draw the block diagram of Microprocessor based over current relay and explain.	CO2	7 Marks

UNIT-II

3.	a)	Elucidate the operation of HRC fuse with diagram.	CO5	7 Marks
	b)	Elaborate on the application of Air, Oil, Vacuum, SF6 circuit breakers.	CO5	7 Marks

(OR)

4.	a)	Elaborate arc interruption theories.	CO1	10 Marks
	b)	Analyze current chopping.	CO1	4 Marks

UNIT-III

5.		Elaborate carrier current protection scheme for transmission line protection.	CO2	14 Marks

(OR)

6.		Design a differential protection scheme for star-delta transformer.	CO5	14 Marks

UNIT-IV

7.		Elucidate the causes of over voltages in power system.	CO1	14 Marks

(OR)

8.		Compare time graded and current graded protection schemes for feeders.	CO4	14 Marks

UNIT-V

9.		Analyze the use of Peterson coil with Phasor diagram for grounding.	CO3	14 Marks

(OR)

10.	a)	Elucidate grounding practice with diagram.	CO6	7 Marks
	b)	Discuss the advantages and disadvantages of ungrounded neutral systems.	CO6	7 Marks

ENERGY CONSERVATION AND MANAGEMENT

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Differentiate energy index and cost index.	CO1	7 Marks
	b)	Explain the different type of energy audits and procedures.	CO1	7 Marks
		(OR)		
2.	a)	Estimate energy saving potential in the following utilities. i) Educational institute. ii) Hostel building.	CO3	8 Marks
	b)	Explain the principles of energy management and various stages of energy management program.	CO2	6 Marks

UNIT-II

3.		Explain the role of renewable energy resources in present Indian energy scenario to meet the growing demand. Explain few existing conservation opportunities.	CO4	14 Marks
		(OR)		
4.	a)	Describe why designated consumers has energy management cell and explain its benefits.	CO2	7 Marks
	b)	Explain the role of Energy Managers in Industries.	CO1	7 Marks

UNIT-III

5.	a)	Explain the various factors effecting the efficiency and performance of the industrial motors.	CO5	7 Marks
	b)	List out the energy conservation opportunities for industrial lighting system.	CO2	7 Marks
		(OR)		
6.	a)	Is Variable Frequency Drives (VFDs) really conserve energy? Justify with a suitable case study.	CO5	7 Marks
	b)	Explain the role of timers, occupancy sensors and LED lamps in energy conservation in the lighting system.	CO5	7 Marks

UNIT-IV

7.	a)	Explain the function of data loggers and their importance in audit process.	CO2	6 Marks
	b)	Explain the general characteristics of capital investments.	CO5	8 Marks
		(OR)		
8.	a)	Briefly explain the tax considerations on capital investment on energy management.	CO2	5 Marks
	b)	Explain the following time value of money concepts with mathematical formulations. i) Simple interest calculation. ii) Compound interest calculation. iii) Single sum cash flows.	CO1	9 Marks

UNIT-V

9.	a)	What are the implementation issues of demand side management?	CO2	7 Marks
	b)	Explain how load management will reduce energy bill.	CO2	7 Marks
		(OR)		
10.	a)	List out different practical approaches of demand side management.	CO4	6 Marks
	b)	Elaborate the terms peak clipping and peak shifting with respect to energy	CO3	8 Marks

management.

FLEXIBLE AC TRANSMISSION SYSTEMS
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	What is the need of transmission interconnection for a given power system?	CO1	7 Marks
	b)	Describe the power flow control in an AC transmission system with necessary diagrams.	CO1	7 Marks
		(OR)		
2.	a)	Identify the importance of controllable parameters in transmission systems.	CO5	7 Marks
	b)	What are FACT controllers and explain different categories of FACT controllers.	CO2	7 Marks
		UNIT-II		
3.	a)	Discuss different types reactive compensation equipment for electrical power transmission system.	CO2	7 Marks
	b)	Discuss about the effect of load compensation on transmission system.	CO2	7 Marks
		(OR)		
4.	a)	Differentiate compensated and uncompensated transmission lines.	CO2	7 Marks
	b)	Discuss the effect of series compensation on power transfer capacity of transmission line.	CO2	7 Marks
		UNIT-III		
5.	a)	Propose a system for transmission line to increase the power transfer capacity.	CO3	7 Marks
	b)	Describe the basic operation of Thyristor Switched Capacitor with necessary waveforms and characteristics.	CO2	7 Marks
		(OR)		
6.	a)	Design a block diagram for general control of Static VAR Compensator (SVC).	CO3	7 Marks
	b)	What is a STATCOM? Discuss its construction and working.	CO1	7 Marks
		UNIT-IV		
7.	a)	Discuss the principle of operation of TSSC.	CO2	7 Marks
	b)	Draw and discuss the V-I operating characteristics in voltage control mode and reactance control mode of TCSC.	CO2	7 Marks
		(OR)		
8.	a)	Illustrate the operation of SSSC with relevant diagrams.	CO1	7 Marks
	b)	How power oscillations damping is obtained using series compensation.	CO4	7 Marks
		UNIT-V		
9.	a)	How power flow control is achieved by phase angle regulators?	CO4	7 Marks
	b)	Discuss the operation of TCVR with a circuit diagram.	CO2	7 Marks
		(OR)		
10.	a)	Answer the transmission control capabilities of UPFC.	CO5	7 Marks
	b)	Propose a system to control power flow between Transmission lines and discuss the operating principle of it.	CO3	7 Marks

POWER SYSTEM AUTOMATION

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is power system control? Explain its role and responsibility in power system operation.	CO1	5 Marks
	b)	Describe different modes of operation of power systems.	CO1	9 Marks
		(OR)		
2.	a)	Describe the function of supervisory control systems in power system operator process interaction.	CO2	7 Marks
	b)	Explain the power system operator activities in detail.	CO1	7 Marks

UNIT-II

3.	a)	Draw and explain the flow chart which represents the use of SCADA in power systems.	CO3	7 Marks
	b)	Describe various application functions of transmission SCADA.	CO4	7 Marks
		(OR)		
4.	a)	Draw and explain the block diagram representation of a small master station.	CO3	7 Marks
	b)	Describe the concept of multiple master–multiple remote configuration.	CO4	7 Marks

UNIT-III

5.	a)	Explain the layout of conventional substation and its wiring requirements.	CO1	7 Marks
	b)	Describe the integrated protection functions via hard wiring and LAN with their neat diagrams.	CO5	7 Marks
		(OR)		
6.	a)	What is intelligent bus failover? Explain the intelligent bus failover demonstration.	CO5	7 Marks
	b)	Explain the equipment condition monitoring devices in detail.	CO2	7 Marks

UNIT-IV

7.	a)	Describe the data concepts in a customer information system.	CO5	8 Marks
	b)	Explain how the data will be exchanged between GIS and DMS.	CO5	6 Marks
		(OR)		
8.	a)	Explain the overview of the DMS application functions and demonstrates the interdependence of the functions.	CO5	7 Marks
	b)	Explain the DMS coordination with OMS.	CO5	7 Marks

UNIT-V

9.	a)	Describe the operational planning activities of ISO in pool based market.	CO2	8 Marks
	b)	Explain various advantages of deregulated power systems over vertically integrated power systems.	CO1	6 Marks
		(OR)		
10.	a)	Describe the types of restructuring models in detail.	CO2	6 Marks
	b)	Discuss about power exchange and market operations in detail.	CO1	8 Marks

ANALYSIS OF POWER ELECTRONIC CONVERTER

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Elaborate the switching characteristics of GTOs with the help of cross sectional view and necessary circuit diagram.	CO7	8 Marks
	b)	List out the various advanced power semiconductor devices with steady state characteristics.	CO5	6 Marks
		(OR)		
2.	a)	Compare the different types of thyristors with switching characteristics.	CO1	6 Marks
	b)	Discuss the constructional features and applications of COOLMOS device with cross sectional view.	CO2	8 Marks

UNIT-II

3.	a)	With the help of neat schematic diagram, explain the gate drive circuit of Power BJT.	CO1	7 Marks
	b)	Discuss the significance of pulse-transformer and opto-coupler in power electronic converters.	CO1	7 Marks
		(OR)		
4.	a)	Explain thyristor converter gating circuit using isolation transformer with relevant diagram.	CO2	7 Marks
	b)	Brief about various gate drive ICs for MOSFET and IGBT.	CO2	7 Marks

UNIT-III

5.		Analyze the operation of 12-pulse fully controlled bridge converter with circuit diagram and trace the output load voltage with highly inductive load.	CO6, CO8	14 Marks
		(OR)		
6.	a)	Explain the operation of 3-pulse semi-controlled bridge converter with circuit diagram.	CO6	6 Marks
	b)	A three-phase full-wave converter is operated from a three-phase Y-connected 208-V, 60-Hz supply and the load resistance is R = 10Ω. If it is required to obtain an average output voltage of 50% of the maximum possible output voltage, calculate (i) the delay angle α, (ii) the r.m.s and average output currents, (iii) the TUF and (iv) the input PF.	CO8	8 Marks

UNIT-IV

7.	a)	Explain buck regulator modes of operation with neat circuit diagram and relevant waveforms.	CO2	6 Marks
	b)	Design a buck regulator has an input voltage of V_s = 12V. The required average output voltage is V_a = 5V at R = 500Ω and the peak-to-peak output ripple voltage is 20mV. The switching frequency is 25kHz. If the peak-to-peak ripple current of inductor is limited to 0.8A, determine (i) the duty cycle k, (ii) the filter inductance L, (iii) the filter capacitor C, and (iv) the critical values of L and C.	CO4	8 Marks

(OR)

8.		Design a suitable converter for Cuk Converter operation. Explain its modes of operation with neat circuit diagram and relevant waveforms. Also deduce the condition for continuous inductor current and capacitor voltage.	CO2, CO4	14 Marks

UNIT-V

9.	a)	Discuss about Selective Harmonic Elimination PWM technique.	CO6	7 Marks
	b)	Compare various advanced PWM techniques.	CO3	7 Marks

(OR)

10.	a)	Describe the process of phase displacement control with neat waveforms.	CO8	7 Marks
	b)	Explain third harmonics injection modulation techniques employed in inverter.	CO3	7 Marks

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

POWER QUALITY

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the responsibilities of suppliers and end users of electrical power.	CO1	7 Marks
	b)	Explain the use of setting standards to power quality. Name any Five power quality standers.	CO1	7 Marks

(OR)

2.	a)	Define power quality. With neat sketches, explain the different types of power quality problems.	CO1	8 Marks
	b)	Discuss in detail about the Computer Business Equipment Manufacturer's Association (CBEMA). Explain about the events described in the curve.	CO1	6 Marks

UNIT-II

3.		Discuss the following electrical power quality terms: i) i) Notching. ii) ii) Inter-Harmonics. iii) iii) Voltage fluctuations. iv) iv) Waveform distortion. v) v) Short-duration variation.	CO2	14 Marks

(OR)

4.	a)	Define waveform distortion. Explain the wave form distortion categories.	CO2	7 Marks
	b)	List out general mitigation methods for number of faults and fault clearing time can be reduced.	CO1	7 Marks

UNIT-III

5.		In presence of harmonics, how the power system quantities are change?	CO1	14 Marks

(OR)

6.		Explain the effect of harmonic distortion. i) impact on capacitors. ii) impact on transformers. iii) impact on motor. iv) impact on telecommunications. v) impact on energy and demand metering.	CO2	14 Marks

UNIT-IV

7.	a)	Illustrate how the locations will be choosing for power quality monitoring.	CO4	7 Marks
	b)	Elucidate the historical perspective of power quality measuring instruments in power system.	CO5	7 Marks

(OR)

8.	a)	Identify the suitable power quality monitoring and measuring device to measure flicker and explain with functional blocks.	CO4	8 Marks
	b)	Tell the importance of power quality monitoring standards in power system and list them.	CO1	6 Marks

UNIT-V

9.	Elucidate in detail about the distributed generation and its impacts on the network.	CO6	14 Marks

(OR)

10.	Discuss about following of distributed generation. i) Islanding issues. ii) Distribution line compensation. iii) Heavy load and light load connection. iv) Real generation. v) Protection issues.	CO5	14 Marks

SMART GRID TECHNOLOGY
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the need of modernization of electric grid	CO1	4 Marks
	b)	Give comparison between existing grid and smart grid	CO1	4 Marks
	c)	Discuss the advantages and disadvantages of smart grid	CO1	6 Marks
		(OR)		
2.	a)	Elaborate the smart grid features with respect to technical and nontechnical challenges.	CO1	7 Marks
	b)	Explain in detail the concept of Resilient and Self healing of a grid.	CO3	7 Marks

UNIT-II

3.	a)	Describe the distribution system tools and Remote terminal unit architecture with neat legible sketch.	CO1	7 Marks
	b)	Point out the features and applications of a DMS.	CO1	7 Marks
		(OR)		
4.	a)	Describe the role of wide-area monitoring system in smart grids.	CO1	7 Marks
	b)	Explain the benefits and functions of Energy Management System.	CO3	7 Marks

UNIT-III

5.	a)	Differentiate the advanced metering and traditional electro-mechanical meters	CO1	7 Marks
	b)	Discriminate the key components of smart metering.	CO4	7 Marks
		(OR)		
6.	a)	Elaborate how the reliability of the smart grid can be enhanced by integrating intelligence electronic units (IED)'s in to it.	CO1	7 Marks
	b)	Discriminate how automatic meter reading can make the system smarter.	CO4	7 Marks

UNIT-IV

7.	a)	Describe power quality issues of grid connected renewable energy sources.	CO1	7 Marks
	b)	Discuss about the concept of Power Quality and EMC in smart grids.	CO4	7 Marks
		(OR)		
8.	a)	Illustrate the Power Quality Audit system in smart grids.	CO4	7 Marks
	b)	Explain the need of software and hard ware requirements of a "Web based power quality monitoring".	CO1	7 Marks

UNIT-V

9.	a)	Distinguish between Wired and Wireless Communication.	CO2	7 Marks
	b)	Write short notes on Wide Area Networks and Home Area Networks for smart grid applications.	CO2	7 Marks
		(OR)		
10.	a)	Deliberate the Internet Protocols for smart grid applications.	CO1, CO5	7 Marks
	b)	Discuss about the need of cloud computing and its properties.	CO4	7 Marks

CODE No.: 16BT70210 SVEC-16

SOFT COMPUTING TECHNIQUES

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Differentiate Supervised learning and Unsupervised leaning.	CO1	7 Marks
	b)	Illustrate different Activation Functions in Neural Network.	CO1	7 Marks
		OR)		
2.	a)	Describe the concept of Hebb learning algorithm and explain with a flow chart.	CO1	7 Marks
	b)	Solve the AND function using McCulloch Pitts Neural Model.	CO1	7 Marks

UNIT-II

3.	a)	Demonstrate the Learning Factors of Back Propagation Network.	CO2	8 Marks
	b)	Find the weights using Perceptron Network for ANDNOT function when all the inputs are presented only one time. Use bipolar inputs and targets.	CO2	6 Marks
		(OR)		
4.	a)	Describe the concept of Bidirectional Associative Memory.	CO2	7 Marks
	b)	Illustrate the architecture of Discrete Hopfield Network and explain the process with a suitable algorithm.	CO2	7 Marks

UNIT-III

5.	a)	Define Classical Sets and explain the operations of Crispset.	CO3	7 Marks
	b)	Differentiate Crisp set and Fuzzy set.	CO3	7 Marks
		(OR)		
6.		Summarize the following: i) Membership Function. ii) Rank Ordering.	CO3	14 Marks

UNIT-IV

7.	a)	Analyze the concept of Lambda Cuts for fuzzy sets and fuzzy relations.	CO4	6 Marks
	b)	Two fuzzy relations are given as: Obtain the fuzzy relation $(T)\tilde{}$ using. i) Max-min composition. ii) Max-product composition. $\tilde{R} = \begin{bmatrix} 0.6 & 0.3 & 0.5 \\ 0.2 & 0.9 & 0.6 \end{bmatrix}$ $\tilde{S} = \begin{bmatrix} 0.9 & 0.5 \\ 0.4 & 0.1 \end{bmatrix}$	CO4	8 Marks
		(OR)		
8.		Demonstrate the following: i) Speed Control of DC Motor. ii) Selection of Membership Functions.	CO4	14 Marks

UNIT-V

9.	a)	Draw and explain the model of Chromosome, Genotype and Reproduction.	CO5	7 Marks
	b)	Describe in briefly the Pseducode for Genetic algorithm.	CO5	7 Marks
		(OR)		
10.	a)	Differentiate Value Encoding and Permutation Encoding in GA.	CO5	7 Marks
	b)	Explain in briefly different crossover operations and explain each operation.	CO5	7 Marks

CODE No.: 16BT70301 SVEC-16

AUTOMOBILE ENGINEERING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.		Elucidate the working of four-wheel drive arrangement in automobiles with a neat sketch.	CO1	14 Marks
		(OR)		
2.	a)	Explain briefly the function and arrangement of lubricating oil filters.	CO2	7 Marks
	b)	Explain the factors that limit the extent of supercharging of S.I and C.I engines.	CO2	7 Marks
		UNIT-II		
3.		List out the functions of ignition system and explain the working of battery ignition system with a neat diagram.	CO1	14 Marks
		(OR)		
4.		Name different methods of engine cooling. Explain air-cooling method in detail.	CO3	14 Marks
		UNIT-III		
5.		Explain about the engine emission control by three-way catalytic converter system in detail.	CO4	14 Marks
		(OR)		
6.		Enumerate various techniques of pollution control in CI engines. In what way it follows national standards? What benefit it has on the environment?	CO6	14 Marks
		UNIT-IV		
7.		Sketch and explain Davis steering mechanism.	CO4	14 Marks
		(OR)		
8.	a)	Explain the necessity of clutches in automobile. Suggest some design changes in clutch system to improve transmission efficiency.	CO3	7 Marks
	b)	Illustrate the working of universal joints used in automobiles with a neat diagram.	CO1	7 Marks
		UNIT-V		
9.		Differentiate independent suspension system and rigid axle suspension system with suitable example.	CO5	14 Marks
		(OR)		
10.		Classify various brakes used in automobiles. Discuss the working of hydraulic brake with a neat sketch.	CO1	14 Marks

CODE No.: 16BT70302 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

FINITE ELEMENT METHOD
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the engineering applications of finite element method.	CO1	4 Marks
	b)	Derive stress strain relations for plane stress condition.	CO1	10 Marks

(OR)

2.		Consider the bar shown in Fig.1, an axial load P = 200 x 103 N is applied as shown. Calculate the nodal displacements.	CO1	14 Marks

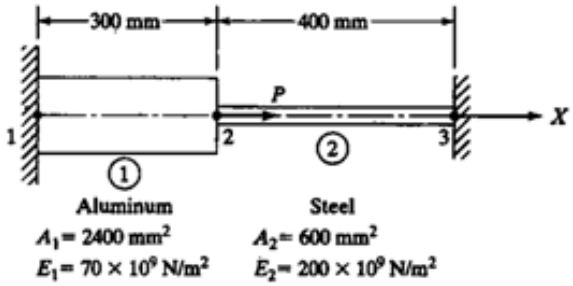

Fig.1

UNIT-II

3.	a)	Write load vector for 2 noded beam elements.	CO2	2 Marks
	b)	Determine the deflection at the point of load application using one element model shown in Fig.2 .	CO2	12 Marks

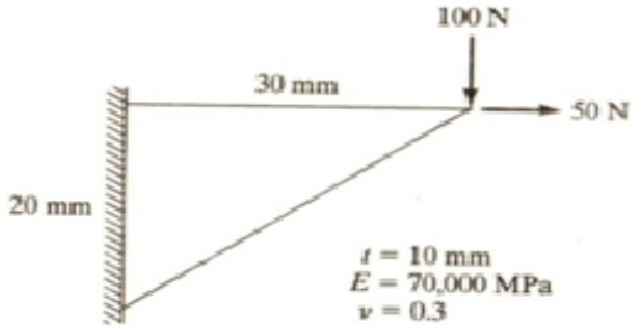

Fig.2 .

(OR)

4.		Derive element stiffness matrix for 2 noded beam elements.	CO2	14 Marks

UNIT-III

5. a) Derive strain displacement B matrix for CST element. CO3 10 Marks

   b) Determine the Jacobian for the (x, y) – (ξ, η) transformation for the element shown in Fig.3. CO3 4 Marks

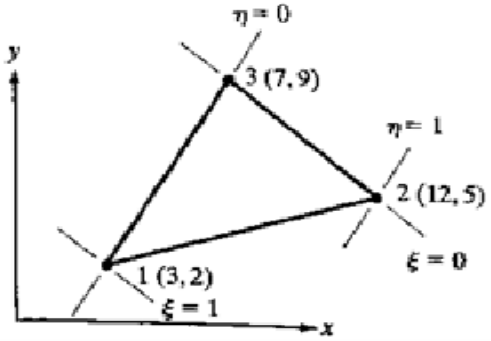

Fig.3

(OR)

6. An axisymmetric body with a linearly distributed load on the conical surface is shown in Fig.4. Determine the equivalent point loads at nodes 2, 4 and 6. CO3 14 Marks

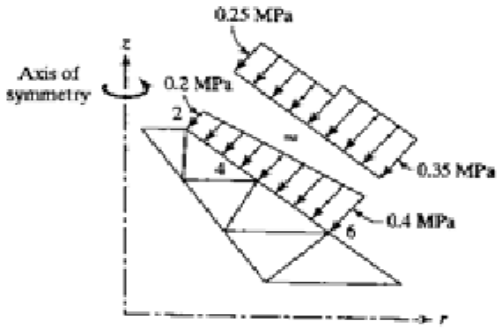

Fig.4

UNIT-IV

7. a) Write short notes on sub parametric, super parametric and iso parametric elements. CO4 7 Marks

   b) Differentiate between h- refinement and p- refinement. CO4 7 Marks

(OR)

8. A composite wall consists of 4cm thick wood, 10cm glass fiber insulation and 1cm thick plaster. If the temperature on wood and plaster faces are 20^0C and -20^0C respectively, determine the temperature distribution in the wall. Assume the thermal conductivity of wood, glass fibre and plaster are 0.17, 0.035 and 0.5W/m K respectively and colder side heat transfer coefficient is 25W/m^2K. CO4 14 Marks

UNIT-V

9.		Determine the Eigen values and Eigen vectors for the stepped bar shown in Fig.5.	CO5	14 Marks

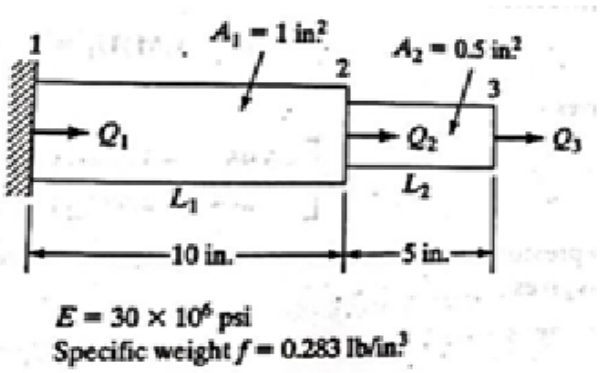

Fig.5.

(OR)

10.	a)	Derive element mass matrix for 1-D bar element.	CO5	6 Marks
	b)	Derive element mass matrix for truss element.	CO5	8 Marks

OPERATIONS RESEARCH
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Solve following problem through graphically CO1 14 Marks

Max $Z= 3X_1+5X_2$

Subject to $X_1+2X_2 \leq 2000$

$X_1-X_2 \leq 1500$

$X_2 \leq 600$, $X_1, X_2 \geq 0$

(OR)

2. Solve following problem through BIG-M method CO2 14 Marks

Min $Z= X_1+X_2$

Subject to $2X_1+X_2 \geq 4$

$X_1+7X_2 \geq 7$

$X_1, X_2 \geq 0$

UNIT-II

3. A manufacturer has distribution centers at X, Y and Z. These centers have availability 40, 20 and 40 units of his product. His retail outlet at A, B, C, D and E requires 25, 10, 20, 30 and 15 units respectively. The transport cost (in rupees) per unit between each center outlet is given below. Determine the optimal distribution to minimize the cost of Transportation. CO4 14 Marks

Distribution Center	Retail Outlets				
	A	B	C	D	E
X	55	30	40	50	50
Y	35	30	100	45	60
Z	40	60	95	35	30

(OR)

4. Company has 4 jobs to be done. The following matrix shows the return in rupees on assigning machines to jobs. Assign 4 jobs to 4 machines so as to maximize the total expected profit. CO3 14 Marks

		Machines			
		A	B	C	D
Jobs	1	32	35	40	28
	2	40	25	30	22
	3	42	27	34	30
	4	25	39	41	35

UNIT-III

5. Find solution to the game whose payoff matrix for player A is given below. CO6 14 Marks

	Player-B		
Player-A	-3	-2	6
	2	0	2
	5	-2	-4

(OR)

6. Solve the following game whose payoff matrix for player-A is given below and find the solution to the game. CO6 14 Marks

	Player-B	
Player-A	1	3
	4	2

UNIT-IV

7. Draw the PERT network for the activities whose three time estimates are given in the table. From the three time estimates obtain the expected times of all the activities and find Critical path, Project duration, Slack for all events, Probability of completing the project in 20 days. CO5 14 Marks

Activity	Optimistic time (days)	Most likely time (days)	Pessimistic time (days)
1 – 2	1	2	3
1 – 3	5	6	7
1 – 4	3	5	7
2 – 5	5	7	9
3 – 5	2	4	6
5 – 6	4	5	6
4 – 7	4	6	8
6 – 7	2	3	4

(OR)

8. The activities involved in Alpha Garment Manufacturing Company are listed with their time estimate as in the following table. Draw the network diagram for the given activities and find the Critical path, Total Float and Free Float. CO5 14 Marks

Activity	Precedence	Duration
A	-	10
B	-	7
C	A	5
D	C	3
E	D	2
F	B,E	1
G	F	14

UNIT-V

9. The demand per day for a belt used in an engine of automobile has the following probability distribution. Simulate the demand for 20 days and find average demand per day for next 20 days. Use random numbers 42, 62, 25, 34, 23, 7, 93, 44, 12, 26, 93, 1, 17, 49, 58, 98, 61, 41, 13, 73. CO5 14 Marks

Demand/Day	Probability
3	0.1
4	0.3
5	0.3
6	0.2
7	0.1

(OR)

10. At a certain petrol pump customer arrive in Poisson process with an average time of 5min between arrivals. The service time of petrol pump follows exponential distribution and as such mean time taken to service is 2min. On the basis of this information, find what is average queue length and what would be the average number of customers in the system. How long on an average a customer weight in the queue? How long on an average a customer thus spend in the system? What is the probability that the customer enter into the system gets service without waiting? CO3 14 Marks

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

CRYOGENICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Discuss methods to produce low temperatures.	CO1	14 Marks
		(OR)		
2.		How a cascade system can be used to produce liquid Nitrogen? Discuss.	CO2	14 Marks

UNIT-II

3.	a)	Outline thermal properties of material at cryogenic temperatures.	CO1	7 Marks
	b)	Explain super fluidity with the help of neat diagrams.	CO3	7 Marks
		(OR)		
4.		Explain the working of cryogenic refrigeration system with its schematic and T-S diagrams.	CO2	14 Marks

UNIT-III

5.	a)	Explain the working of liquification system for inert gases.	CO2	7 Marks
	b)	Derive the minimum work required for liquification.	CO3	7 Marks
		(OR)		
6.		Illustrate the working of a system used for the production of dry-ice. "The production of dry-ice is more difficult in hot summer compared with winter" – Discuss in detail.	CO4	14 Marks

UNIT-IV

7.	a)	Write briefly on production of low temperatures.	CO1	7 Marks
	b)	Explain with proper reasoning and graph, the effect of low temperature on two mechanical and two thermal properties of engineering materials.	CO4	7 Marks
		(OR)		
8.		Explain applications of low temperature in detail.	CO5	14 Marks

UNIT-V

9.	a)	Explain about Dewar vessels.	CO5	7 Marks
	b)	Discuss the hazards in cryogenic engineering.	CO5	7 Marks
		(OR)		
10.		Why insulations are required for Cryogenic systems? Explain the various types of insulations used. Explain about multi-layer insulation with their applications.	CO5	14 Marks

CODE No.: 16BT70306 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

QUALITY MANAGEMENT AND RELIABILITY ENGINEERING

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the sequential steps and stages involved in ISO 9000 certification for Indian Firms.	CO1	7 Marks
	b)	What is meant by cost of quality? Explain the components of cost of quality.	CO1	7 Marks

(OR)

2.	a)	Explain the Salient features of implementing POKA – YOKE.	CO6	7 Marks
	b)	Explain the secrets and steps towards establishing a successful Quality Circle (QC) program in a Firm.	CO1	7 Marks

UNIT-II

3.	a)	Define control chart and state the objectives of Mean and Range charts.	CO5	7 Marks
	b)	What is meant by process capability? How will you determine the same?	CO5	7 Marks

(OR)

4.		The cloth of the ABC manufacturer was inspected 100 square meters is taken as unit. The following defects per unit were recorded.	CO5	14 Marks

	Unit						
100 sq. m cloth length	1	2	3	4	5	6	7
No. of defects in each unit	0	3	2	1	4	5	3

State:

i) Whether data obtained during inspection is within control?
ii) What type of action is warranted by the management?

UNIT-III

5.	a)	Write the advantages and disadvantages of sampling plans.	CO2	7 Marks
	b)	Draw neat sketch of OC curve and explain its various parameters.	CO2	7 Marks

(OR)

6.	a)	Explain the effect of sample size and acceptance number on OC curve.	CO2	4 Marks
	b)	A shipment of 2,000 portable battery units for microcomputers is about to be inspected by a Malaysian importer. The Korean manufacturer and the importer have set up a sampling plan in which the risk is limited to 5% at an Acceptable Quality Level (AQL) of 2% defective and the risk is set to 10% at Lot Tolerance Percent Defective (LTPD) = 7% defective. To construct the OC curve for the plan of n = 120 sample size and an acceptance level of $c \leq 3$ defectives. Both firms want to know if this plan will satisfy their quality and risk requirements.	CO2	10 Marks

UNIT-IV

7.	a)	Elaborate various configurations of system reliability.	CO4	7 Marks
	b)	Explain the various types of Failure – Hazard models.	CO3	7 Marks

(OR)

8.		A System contains series string of components for which $\Sigma \lambda = 0.005$f/hr. What is the reliability of this system for a mission time of 10 hours? If a similar system is placed in parallel, what is the reliability of the configuration for a 10 hours mission.	CO4	14 Marks

UNIT-V

9.	a)	Explain Active and Standby Redundancies.	CO4	7 Marks
	b)	Explain Fault Tree analysis.	CO4	7 Marks
		(OR)		
10.	a)	Explain the following.	CO4	7 Marks
		i) Maintainability. ii) Availability.		
	b)	Describe the reliability optimization.	CO4	7 Marks

INDUSTRIAL ROBOTICS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Sketch and explain the four basic robot configurations classified according to the coordinate system.	CO1	14 Marks
		(OR)		
2.		Explain mechanical grippers and their linkage mechanisms with neat sketches.	CO1	14 Marks

UNIT-II

3.		Explain the various drive system used with an industrial robot and compare their features, merits and demerits.	CO2	14 Marks
		(OR)		
4.		Explain different types of transmission systems used in industrial robots.	CO2	14 Marks

UNIT-III

5.	a)	Discuss about the forward and inverse kinematics in detail.	CO3	7 Marks
	b)	Derive the forward kinematic equations using Denavit-Hartenberg notation for a three-link planner manipulator.	CO3	7 Marks
		(OR)		
6.		Determine the equations of motion for 2-RR planar manipulator using Lagrange-Euler formulation.	CO3	14 Marks

UNIT-IV

7.	a)	Discuss different features of trajectory planning in robots and their significance.	CO4	7 Marks
	b)	Explain skew motion in detail.	CO4	7 Marks
		(OR)		
8.	a)	Briefly explain the working principle of any two types of position sensors with neat sketch.	CO4	7 Marks
	b)	With a block diagram, explain a robotic machine vision system.	CO4	7 Marks

UNIT-V

9.	a)	Write about textual robot language programming as a path in space.	CO5	7 Marks
	b)	Discuss the following categories of program instructions in VAL robot programming: i) Robot configuration control. ii) Motion control.	CO5	7 Marks
		(OR)		
10.	a)	Discuss robot application for assembly and inspection.	CO5	7 Marks
	b)	Describe briefly the operations involved in robotic spot welding. What are the advantages of robotic welding over manual welding?	CO5	7 Marks

CODE No.: 16BT70311 SVEC-16

PRODUCTION AND OPERATIONS MANAGEMENT

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Discuss briefly Operations Management with block diagram. CO2 7 Marks
   b) Write a brief notes on Historical Development of Operations Management. CO2 7 Marks

(OR)

2. a) Explain in brief the factors affecting productivity. CO3 7 Marks
   b) Give a brief notes on the significances of production systems decisions. CO5 7 Marks

UNIT-II

3. Solve the problem through simple moving average and find mean absolute deviation, mean square error, mean forecast error and mean absolute percentage error for the following problem. CO3 14 Marks

Time (Months)	1	2	3	4	5	6	7	8	9	10	11	12
Demand	94	99	86	122	89	95	74	77	105	103	88	82

(OR)

4. Solve the problem through double moving average and find mean absolute deviation, mean square error, mean forecast error and mean absolute percentage error for the following problem. CO3 14 Marks

Time (Months)	1	2	3	4	5	6	7	8	9	10	11	12
Demand	95	100	87	123	90	96	75	78	106	104	89	83

UNIT-III

5. Estimate the total production cost by using **Hiring and Firing Strategy** with the following details. Inventory holding cost is Rs. 5/unit/month, sub contracting cost is Rs. 10/unit, average pay rate is Rs. 5/hr (40/day), over time pay rate is Rs. 7/hr (above 8 hr/ day), labour hours to produce a unit is 1.6 hr/unit, cost of increasing daily production rate is (hiring and training) is Rs. 300/unit and cost of decreasing daily production rate (layoff) is Rs. 600/unit. CO1 14 Marks

	JAN	FEB	MAR	APR	MAY	JUN
Demand Forecast	900	700	800	1200	1500	1100

(OR)

6. Estimate the Total production cost by using **Constant work force strategy** with the following details Inventory holding cost is Rs. 5/unit/month, sub contracting cost is Rs. 10/unit, average pay rate is Rs. 5/hr (40/day), over time pay rate is Rs. 7/hr (above 8 hr/day), labour hours to produce a unit is 1.6 hr/unit, cost of increasing daily production rate is (hiring and training) Rs. 300/unit and cost of decreasing daily production rate (layoff) is Rs. 600/unit CO1 14 Marks

	JAN	FEB	MAR	APR	MAY	JUN
Demand Forecast	900	700	800	1200	1500	1100
Working Days	22	18	21	21	22	20

UNIT-IV

7. Give the difference between MRP and MRP II and Explain MRP-II with block Diagram. CO1 14 Marks

(OR)

8. Enumerate the concepts of Enterprise resource planning, Just-in-Time, Kaizen, Pull method of materials flow and Preventive maintenance. CO1 14 Marks

UNIT-V

9. What is the purpose of Gantt chart and solve the 2-Machine and n-Jobs problem by using Johnson's Algorithm. CO6 14 Marks

Job	1	2	3	4	5	6	7	8
T1	5	2	1	7	6	3	7	5
T2	2	6	2	5	6	7	2	1

(OR)

10. Jobs have to be processed on 5 machines I, II, III, IV, V in the order I→II→III→IV→V. Processing times in minutes are given below. Determine the sequence that will minimize the elapsed time or cycle time. Also find the idle time in each machine. CO6 14 Marks

	Machines					
Jobs		I	II	III	IV	V
	1	11	14	17	10	19
	2	12	14	16	13	17
	3	17	12	11	15	19
	4	16	16	12	12	21
	5	14	16	10	11	19
	6	15	14	13	16	26

POWER PLANT ENGINEERING

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		What are the different types of cooling towers? Explain with a neat sketch.	CO1	14 Marks
		(OR)		
2.	a)	Explain different types of dust collectors used in thermal power plant.	CO1	7 Marks
	b)	Enumerate and explain the steps involved in coal handling.	CO1	7 Marks

UNIT-II

3.		List the essential components of a diesel power plant and explain them briefly.	CO2	14 Marks
		(OR)		
4.		Explain the working details of gas turbine power plant with its layout indicating all auxiliaries.	CO2	14 Marks

UNIT-III

5.	a)	What are typical ponds and storage units suitable for installation of hydro-electric power plants? Explain them.	CO3	7 Marks
	b)	What is the importance of spill ways in hydro-electric power projects? Explain their practical applications.	CO2	7 Marks
		(OR)		
6.	a)	Explain the construction and working of the pressurised water reactor nuclear power plant with a layout.	CO2	7 Marks
	b)	Discuss the characteristics of hydrographs with respect to the power generation along with the suitable curves.	CO3	7 Marks

UNIT-IV

7.		Explain the working of magneto hydrodynamics system with a schematic layout.	CO2	14 Marks
		(OR)		
8.	a)	How to make use of solar energy for the generation of power? Discuss the merits and demerits.	CO4	7 Marks
	b)	How to make use of the tides for power generation based on their capacities? Explain the principle of operation.	CO4	7 Marks

UNIT-V

9.		The data for a 2000 kW diesel power plant is as follows: The peak load on the plant = 1500kW, load factor = 0.5, capital cost per kW installed = Rs.15000, annual costs = 15% of capital cost, annual operating costs = Rs.60000, annual maintenance costs = Rs.10000 (fixed) and Rs.20000 (variable), cost of fuel = Rs.0.8 per kg, cost of lubricating oil = Rs.40 per kg, calorific value of fuel = 40000 kJ/kg, consumption of fuel = 0.5kg/kWh, consumption of lubricating oil = 0.0025kg/kWh. Determine the annual energy generated and cost of generation in Rupees per kWh.	CO6	14 Marks
		(OR)		
10.	a)	Briefly explain various methods of reducing thermal pollution.	CO5	7 Marks
	b)	Discuss the pollution due to nuclear power plant.	CO5	7 Marks

CELLULAR AND MOBILE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe the principle of operation and explain various components of a cellular mobile system with a neat diagram	CO1	7 Marks
	b)	What is hand off and explain its strategies.	CO1	7 Marks
		(OR)		
2.	a)	Design Co-channel interference and derive the relation for Co-channel interference factor in a cell with its K^{th} Co-channel interfering cell.	CO2	7 Marks
	b)	Explain how frequency reuse principle is used in improving the system capacity.	CO1	7 Marks

UNIT-II

3.	a)	Summarize about umbrella pattern effect and list the benefits of umbrella patter **n**.	CO1	7 Marks
	b)	What is diversity receiver? Illustrate how diversity receiver can be used to improve performance of the system even in low transmitted power levels.	CO6	7 Marks
		(OR)		
4.	a)	Classify and describe about various adjacent channel interference mechanisms.	CO1	7 Marks
	b)	Illustrate how cell site location, decrease in power and antenna height effect coverage and interference problems.	CO4	7 Marks

UNIT-III

5.	a)	What are the characteristics of basic antenna structure?	CO3	7 Marks
	b)	Define ground incident angle and ground elevation angle.	CO1	7 Marks
		(OR)		
6.	a)	In a mobile radio environment, if average cell site antenna height is 50m, mobile antenna height is 3m and path length is 5km, find: i) Incident angle. ii) Elevation angle.	CO3	7 Marks
	b)	Explain long distance propagation and point to point prediction model.	CO3	7 Marks

UNIT-IV

7.	a)	Differentiate soft handoff and hard handoff. Explain hard handoffs in CDMA systems	CO5	7 Marks
	b)	Explain non-fixed channel assignment.	CO4	7 Marks
		(OR)		
8.	a)	Analyze how adjacent channel and Co-channel interference can be controlled using underlay overlay arrangement.	CO4	7 Marks
	b)	Outline various methods used to solve the problem of channel assignment to travelling mobile units.	CO4	7 Marks

UNIT-V

9.	a)	Write short notes on: i) Upper layer. ii) W-CDMA.	CO6	7 Marks
	b)	Differentiate three standard 3G systems; also mention the features of 3G standard systems.	CO6	7 Marks

(OR)

10.	a)	Draw GSM architecture and explain.	CO1	7 Marks
	b)	Discuss CDMA-2000 layering structure	CO6	7 Marks

EMBEDDED SYSTEMS

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Write a detailed note on functional block diagram of MSP430 microcontroller and explain the various languages used to program the microcontrollers.	CO1	14 Marks
		(OR)		
2.	a)	Explain the memory map of the MSP430 microcontroller.	CO2	7 Marks
	b)	Write a brief note on Interrupts and Resets.	CO2	7 Marks

UNIT-II

3.		Explain the registers in the CPU of MSP430 microcontroller and operation of the stack in the MSP430 microcontroller.	CO5, CO1	14 Marks
		(OR)		
4.	a)	Explain the Register mode and Indirect Register mode with examples.	CO5	7 Marks
	b)	Reproduce the condition code/status register contents of MSP430.	CO5	7 Marks

UNIT-III

5.	a)	Write a program for interfacing LED with MSP430 microcontroller.	CO5	7 Marks
	b)	Explain how to control the Clock Module through the status register.	CO5	7 Marks
		(OR)		
6.	a)	Write a program to copy string from one location in memory to another memory location.	CO3	7 Marks
	b)	Explain how to use the subroutines in embedded programming with an example.	CO3	7 Marks

UNIT-IV

7.	a)	Explain the use of WDT and associated WDTCTL register format.	CO4	7 Marks
	b)	Write a brief note on non-maskable interrupts and the shared data problem.	CO4	7 Marks
		(OR)		
8.	a)	With a neat sketch, explain the architecture of comparator A.	CO5	7 Marks
	b)	Explain the operation of Successive-Approximation ADC.	CO5	7 Marks

UNIT-V

9.	a)	Write a brief note on Finite State Machines.	CO6	7 Marks
	b)	Write a detailed note on IOT communication models.	CO6	7 Marks
		(OR)		
10.	a)	Write a short note on Data path architecture.	CO6	7 Marks
	b)	List the privacy considerations and interoperability issues to be considered while developing IOT devices.	CO6	7 Marks

CODE No.: 16BT70403 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

MICROWAVE ENGINEERING

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the measurement of scattering parameters of a network	CO1	7 Marks
	b)	A 10mw signal is applied to a 20dB directional coupler. Determine the power available at the coupled port.	CO2	7 Marks
		(OR)		
2.	a)	What is ferrite device? Discuss in detail about circulator with neat diagram.	CO1	7 Marks
	b)	State and find the reciprocal condition in terms of S-parameters for a two port network.?	CO1	7 Marks

UNIT-II

3.	a)	A two cavity Klystron amplifier has the following specifications. Beam voltage V_o= 900V, Beam current I_o= 30mA, frequency f = 8GHz, Gap spacing in either cavity d = 1mm cavity, Spacing between centers of cavities L = 4cm, Effective shunt impedance R_{sh} = 49GΩ. Determine: i) The electron velocity. ii) The dc transit time of electron. iii) The input voltage for maximum output voltage. iv) The voltage gain in decibels.	CO4	7 Marks
	b)	Explain the limitations of conventional tubes.	CO1	7 Marks
		(OR)		
4.	a)	Explain the bunching process of two cavity klystron with neat sketch.	CO2	8 Marks
	b)	Explain velocity modulation in reflex klystron with applegate diagram.	CO2	6 Marks

UNIT-III

5.	a)	Explain the operation of RWH-two valley theory with suitable diagrams.	CO2	6 Marks
	b)	Explain about domain formation in Gunn diode. Explain various oscillating modes of Gunn diode.	CO2	8 Marks
		(OR)		
6.	a)	What are the avalanche transit time devices? Explain the working of TRAPATT diode.	CO2	7 Marks
	b)	In a Gunn diode with active length of 20μm, the drift velocity of electrons is 2×10^7cm. Calculate the rational frequency and critical voltage of the diode.	CO3	7 Marks

UNIT-IV

7.	a)	Calculate the VSWR of a transmission system operating at 20GHz TE_{10} mode is propagating through waveguide of dimension $(6.4 \times 3.2)cm^2$. The distance between two successive minima is 1.6mm.	CO4	7 Marks
	b)	Two identical 30dB directional couplers are used to simple incident and reflected power in a wave guide VSWR=2 and the output of the coupler sampling incident power = 4.5mw.What is the value of reflected power?	CO4	7 Marks
		(OR)		

8.	a)	Describe the functioning of each component in a microwave bench setup.	CO2	6 Marks
	b)	With the help of necessary experimental setup, describe the measurement of unknown load impedance using slotted line.	CO3	8 Marks

UNIT-V

9.	a)	Explain in detail about space wave propagation.	CO1	6 Marks
	b)	The observed critical frequencies of E and F layers at Guwahati at particular times are 2.5MHz and 8.4MHz respectively. Calculate the maximum electron concentrations of the layers.	CO5	8 Marks

(OR)

10.	a)	Explain about effect of the earth's magnetic field on ionosphere radio wave propagation.	CO6	6 Marks
	b)	Define radio horizon and calculate its value. What is the radio horizon of a television antenna placed at a height of 166m? If the signal is to be received at a distance of 66km, what should be the height of receiving antenna?	CO5	8 Marks

SATELLITE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	With the help of block diagram, demonstrate the operation principle in satellite communication system.	CO1	8 Marks
	b)	Write about satellite frequency band designation and associated applications.	CO1	6 Marks
		(OR)		
2.	a)	Derive the elevation and azimuth angles for geo-stationary satellites with necessary equations.	CO2	8 Marks
	b)	A satellite is in a 322 km high circular orbit. Assuming average radius of earth 6378 km, determine: i) Orbital velocity in meters per second. ii) The orbital period in minutes. iii) The orbital angular velocity in radians per second.	CO4	6 Marks

UNIT-II

3.	a)	Enumerate the steps involved while designing a satellite communication link.	CO3	8 Marks
	b)	Explain with neat sketch. i) Earth station receiver. ii) Earth station transmitter.	CO1	6 Marks
		(OR)		
4.	a)	Derive an expression for the orbital period of circular orbit by considering Newton's Laws of motion and gravitation.	CO2	8 Marks
	b)	The earth rotates once per sidereal day of 23 h 56 min 4.09 secs. Show that the height of Geo-synchronous orbit is about 36,000 kms.	CO4	6 Marks

UNIT-III

5.	a)	Discuss briefly how the demand assignment may be implemented in a TDMA network. What is the advantage of TDMA over FDMA in this respect?	CO5	8 Marks
	b)	Mention in detail about various satellite codes.	CO1	6 Marks
		(OR)		
6.	a)	Discuss the basic types and relationships of satellite antennas.	CO1	7 Marks
	b)	Write a short note on AOCS (Altitude and Orbit Control System) of a satellite.	CO1	7 Marks

UNIT-IV

7.	a)	Analyze and discuss the Delay and Throughput considerations in a satellite system.	CO2	7 Marks
	b)	Summarize the advantages and disadvantages of low and medium earth orbits.	CO1	7 Marks

(OR)

8.	a)	Compare geostationary and geosynchronous satellites.	CO1	7 Marks
	b)	An earth station antenna has a diameter of 30m has an overall efficiency of 68% and is used to receive a signal at 4150MHz. Calculate gain of the antenna.	CO3	7 Marks

UNIT-V

9.	a)	Explain the generation of GPS signals with a neat sketch.	CO5	8 Marks
	b)	Briefly explain about spread spectrum techniques.	CO5	6 Marks

(OR)

10.	a)	Explain are the successful measurements in a GPS C/A code receiver.	CO1	8 Marks
	b)	Write short notes on Satellite Signal Acquisition.	CO1	6 Marks

WIRELESS COMMUNICATION AND NETWORKS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Compare fixed and wireless tele networks.	CO1	7 Marks
	b)	List out and explain SS7 network services.	CO1	7 Marks
		(OR)		
2.	a)	Explain in detail about the frequency division multiple access with neat block diagram.	CO1	7 Marks
	b)	Explain about traffic routing in wireless networks.	CO1	7 Marks

UNIT-II

3.	a)	Define the general terminology used in mobile IP.	CO4	7 Marks
	b)	Explain the protocol stack of WAP.	CO2	7 Marks
		(OR)		
4.	a)	Describe the agent advertisement message with clear format.	CO1	7 Marks
	b)	Explain about wireless session protocol.	CO1	7 Marks

UNIT-III

5.	a)	List out the applications of WLAN.	CO1	7 Marks
	b)	Compare diffused and directed beam infrared LANs.	CO4	7 Marks
		(OR)		
6.	a)	List out the requirements of WLAN and explain each.	CO4	7 Marks
	b)	Explain the architecture and services of IEEE 802.11.	CO1	7 Marks

UNIT-IV

7.	a)	List out the applications of Bluetooth.	CO1	7 Marks
	b)	Explain the protocol architecture of Bluetooth.	CO1	7 Marks
		(OR)		
8.	a)	Explain the concept of Bluetooth usage models.	CO2	7 Marks
	b)	Describe the base band specifications of Bluetooth.	CO2	7 Marks

UNIT-V

9.	a)	Explain the concept of wireless ATM.	CO2	7 Marks
	b)	Explain the general structure of ATM switch.	CO2	7 Marks
		(OR)		
10.	a)	Discuss about CDPD.	CO2	7 Marks
	b)	Explain in detail about physical layer in CDPD.	CO2	7 Marks

LOW POWER CMOS VLSI DESIGN

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	State the sources of power dissipation in digital integrated circuits.	CO6	7 Marks
	b)	Explain about technology and device innovations with respect to low power.	CO1	7 Marks

(OR)

2.	a)	Elaborate about static power dissipation in CMOS circuits. Give the alternates to reduce it.	CO3	7 Marks
	b)	How to estimate power dissipation at architecture level?	CO1	7 Marks

UNIT-II

3.		Compute the transition density and static probability of $Y = A + B + C$ given $P(a) = 0.2$, $P(b) = 0.3$, $P(c) = 0.4$, $D(a) = 1$, $D(b) = 2$, $D(c) = 3$.	CO4	14 Marks

(OR)

4.	a)	Give the relation between static probability and conditional probability.	CO3	7 Marks
	b)	Probabilistic power analysis techniques are preferred or not. Justify.	CO2	7 Marks

UNIT-III

5.	a)	How to drive large capacitive loads? Explain in detail.	CO2	7 Marks
	b)	Explain about double edge triggered flip flops.	CO6	7 Marks

(OR)

6.		Whether pre-computation logic can reduce power dissipation or not. Justify.	CO2	14 Marks

UNIT-IV

7.		Explain about low power techniques which can be implemented for SRAM cell.	CO1	14 Marks

(OR)

8.	a)	Elaborate on clock tree distribution.	CO6	7 Marks
	b)	Explain about reduced swing clock.	CO4	7 Marks

UNIT-V

9.	a)	How to reduce power dissipation in digital filters?	CO1	7 Marks
	b)	Explain about parallel processing with voltage reduction.	CO6	7 Marks

(OR)

10.	a)	Where do we use tri-state keeper circuits? Explain.	CO6	7 Marks
	b)	Explain about pulsed word-line and reduced bit-line swing.	CO6	7 Marks

CODE No.: 16BT70409 SVEC-16

RF ENGINEERING

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Describe the behaviour of a resistor over all frequency.	CO3	7 Marks
	b)	What is loss tangent and explain its significance?	CO3	7 Marks
		OR)		
2.	a)	What is the origin of the presence of a capacitor in an inductor?	CO3	7 Marks
	b)	What are the parameters that are to be considered while designing an RF transformer?	CO3	7 Marks
		UNIT-II		
3.	a)	Draw and explain the equivalent circuit of a transmission line.	CO2	7 Marks
	b)	Explain the construction and operation of micro strip line.	CO2	7 Marks
		(OR)		
4.	a)	Derive the expressions for voltages and currents along the length of a transmission line/	CO2	7 Marks
	b)	Define VSWR and explain its significance/	CO2	7 Marks
		UNIT-III		
5.	a)	Explain any of the two discrete component matching methods/	CO3	7 Marks
	b)	Explain the matched network design using micro strip lines/	CO3	7 Marks
		(OR)		
6.	a)	Write the differences between lumped and distributed approaches for filter design.	CO4	7 Marks
	b)	Describe the operation of the diode used for RF applications.	CO3	7 Marks
		UNIT-IV		
7.	a)	Draw and explain the block diagram of generic amplifier system.	CO5	7 Marks
	b)	What is stability and how to find whether the transistor is stable or not?	CO3	7 Marks
		(OR)		
8.	a)	How to design frequency compensated matching network?	CO5	7 Marks
	b)	What is a balanced amplifier and how to design it?	CO5	7 Marks
		UNIT-V		
9.	a)	Draw and explain the principle of operation of negative resistance oscillator.	CO4	7 Marks
	b)	Derive the expression for frequency of oscillations generated by varactor diode oscillator.	CO4	7 Marks
		(OR)		
10.	a)	What are the characteristics of a mixer?	CO5	7 Marks
	b)	What are the advantages of a crystal oscillator?	CO4	7 Marks

SPEECH PROCESSING

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Draw the block diagram for a discrete time model of speech production and explain about each block in detail.	CO5	7 Marks
	b)	Describe the terms Diphthongs, Unvoiced and Voiced fricatives and artifacts as applied to the production of speech.	CO1	7 Marks
		(OR)		
2.	a)	Discuss the effect of radiation at the lips.	CO1	6 Marks
	b)	Derive the Transfer function of the lossless tube model.	CO3	8 Marks

UNIT-II

3.	a)	Explain the effect of size and shape of window in analysis of speech.	CO5	8 Marks
	b)	Describe the following time domain parameters. i) Short-time average energy and Magnitude. ii) Short-time average ZCR.	CO1	6 Marks
		(OR)		
4.	a)	Define short-term autocorrelation. What are its applications?	CO6	8 Marks
	b)	Explain how pitch period is estimated using parallel processing approach.	CO5	6 Marks

UNIT-III

5.	a)	Explain the spectrum analysis of voiced speech using a window.	CO4	7 Marks
	b)	Explain the procedure for extracting the impulse response of speech production using Homomorphic system.	CO2	7 Marks
		(OR)		
6.	a)	Discuss the properties of complex cepstrum.	CO1	7 Marks
	b)	Discuss the estimation of formants in a speech signal.	CO2	7 Marks

UNIT-IV

7.	a)	Explain LPC analysis with a mathematical model.	CO5	7 Marks
	b)	Compute LP coefficients using Cholesky decomposition solution for covariance method.	CO3	7 Marks
		(OR)		
8.	a)	Derive the equation for minimum energy using autocorrelation method of LPC coefficient extraction.	CO4	7 Marks
	b)	Explain how vocal tract system is modeled using LP parameters.	CO3	7 Marks

UNIT-V

9.	a)	Discuss the features that distinguish the speakers.	CO4	6 Marks
	b)	Explain the concept of evaluating the similarities of speech patterns in speech recognition.	CO4	8 Marks
		(OR)		
10.	a)	Explain the steps in Viterbi algorithm and its applications.	CO6	8 Marks
	b)	Compare speech recognition and speaker recognition system.	CO4	6 Marks

BIG DATA ANALYTICS
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss Four V's of Big Data.	CO1	7 Marks
	b)	Briefly explain Outlier Detection and Treatment.	CO1	7 Marks
		(OR)		
2.	a)	Briefly explain Analytics Process model.	CO1	7 Marks
	b)	Explain different types of Data Sources and Sampling Techniques.	CO1	7 Marks

UNIT-II

3.	a)	What is Hadoop Ecosystem? Discuss various components of Hadoop Ecosystem.	CO2	7 Marks
	b)	Describe the basic building blocks of Hadoop in detail.	CO2	7 Marks
		(OR)		
4.	a)	Briefly explain Hadoop File Systems.	CO2	7 Marks
	b)	Describe HDFS concepts.	CO2	7 Marks

UNIT-III

5.	a)	Explain anatomy of a Map Reduce.	CO3	7 Marks
	b)	Apply the implementation of map reduce concept classic Architecture and explain with an example.	CO4	7 Marks
		(OR)		
6.	a)	Explain Shuffle and Sort.	CO3	7 Marks
	b)	Describe different types of failures in Classic MapReduce.	CO3	7 Marks

UNIT-IV

7.	a)	What do you mean by HiveQL Data Definition Language? Explain any three HIVE QL DDL command with its syntax and example.	CO5	7 Marks
	b)	Compare HIVE with traditional databases.	CO4	7 Marks
		(OR)		
8.	a)	Identify the importance of Data Processing Operators of Pig.	CO2	7 Marks
	b)	Explain Querying Data in HIVE with an Example.	CO4	7 Marks

UNIT-V

9.	a)	Investigate about Nutch Search Engine in detail.	CO6	7 Marks
	b)	Describe about Crunch and Spark.	CO6	7 Marks
		(OR)		
10.	a)	Describe about SEDA.	CO1	7 Marks
	b)	Design Hadoop Data flow architecture at Rackspace.	CO1	7 Marks

HUMAN COMPUTER INTERACTION

[Computer Science and Engineering, Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the chronological history of GUI.	CO1	7 Marks
	b)	Explain about the principles of user interface design.	CO1	7 Marks
		(OR)		
2.	a)	What are the important human characteristics which have influence on interface and screen design?	CO2	7 Marks
	b)	Compare and contrast GUI versus Web page design.	CO2	7 Marks

UNIT-II

3.	a)	Explain briefly about the important human characteristics in design of a system.	CO3	7 Marks
	b)	Compare and contrast direct and indirect methods of requirements analysis.	CO2	7 Marks
		(OR)		
4.	a)	Why the system training and documentation are also an internal part of any development effort? Discuss.	CO4	7 Marks
	b)	What is the importance of user's tasks and needs important in design of a system?	CO1	7 Marks

UNIT-III

5.	a)	Explain the guidelines for displaying graphic components on screen.	CO4	7 Marks
	b)	Discuss in detail the technological considerations in interface design.	CO3	7 Marks
		(OR)		
6.	a)	What is the role of screen navigation and flow in good screen design?	CO2	7 Marks
	b)	What is a Screen? What is the purpose of a screen?	CO2	7 Marks

UNIT-IV

7.	a)	What are the guidelines for designing icons?	CO4	7 Marks
	b)	What are the various guidelines for presenting error messages on web?	CO2	7 Marks
		(OR)		
8.	a)	Explain the advantages and disadvantages of image maps, video and animation.	CO2	7 Marks
	b)	Discuss any 5 possible problems with colour.	CO4	7 Marks

UNIT-V

9.	a)	What are menu-selection and dialog box trees? And write it advantages.	CO1	7 Marks
	b)	What is the role of state charts in specification? Give an example of state-chart for file manipulation actions.	CO2	7 Marks
		(OR)		
10.	a)	Explain the importance of Interface – Building Tools.	CO2	7 Marks
	b)	What are the uses of video displays? Explain various video display devices in details.	CO5	7 Marks

CODE No.: 16BT71001 SVEC-16

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

ANALYTICAL INSTRUMENTATION
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe the working principle of Sodium analyzer with a neat sketch.	CO1	7 Marks
	b)	Explain any one method of conductivity measurement with a neat sketch.	CO1	7 Marks
		(OR)		
2.	a)	Discuss the working principle of direct reading pH meter.	CO1	7 Marks
	b)	Explain the working principle of Dissolved oxygen analyzer with a neat sketch.	CO1	7 Marks

UNIT-II

3.	a)	Explain different detectors used in UV and Visible Spectrophotometers.	CO1	7 Marks
	b)	Compare single beam and double beam spectrometers.	CO2	7 Marks
		(OR)		
4.	a)	Elucidate the working of any one type of IR spectrometer and mention how the chemical solution is analyzed.	CO4	7 Marks
	b)	What is a spectrophotometer? Explain in detail about the construction and working principle of Fourier Transform IR Spectrometer.	CO1	7 Marks

UNIT-III

5.	a)	Specify the significance of flame photometer in analysis of chemical solutions and explain the working of clinical flame photometer.	CO5	7 Marks
	b)	Describe the working principle of atomic absorption spectrometer with relevant application.	CO3	7 Marks
		(OR)		
6.	a)	Explain in detail about Magnetic deflection type Mass spectrometer.	CO1	7 Marks
	b)	What is meant by Nuclear Magnetic Resonance? Explain the construction and working principle of NMR Spectrometer.	CO1	7 Marks

UNIT-IV

7.	a)	Describe how gas chromatography is used to provide valid conclusions by analyzing chemical solutions with an example.	CO3	7 Marks
	b)	Explain argon ionization detector in detail.	CO1	7 Marks
		(OR)		
8.	a)	List the different detectors used in liquid chromatography. Explain any one.	CO1	7 Marks
	b)	Explain the working principle of liquid chromatography with a neat sketch.	CO1	7 Marks

UNIT-V

9.	a)	Write short notes on the Scintillation counter and Proportional counter.	CO1	7 Marks
	b)	Explain the working of X-ray detector.	CO1	7 Marks
		(OR)		
10.	a)	Outline the instrumentation involved in hydrocarbons estimation in pollution monitoring.	CO6	7 Marks
	b)	Explain GM counter with neat construction.	CO1	7 Marks

BIOMEDICAL SIGNAL PROCESSING
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	With the help of a block diagram, explain the objectives of biomedical signal analysis.	CO1	6 Marks
	b)	Explain the following biomedical signals. Draw the waveforms and give the frequency ranges relevant to these signals. (i) ECG (ii) EEG .	CO6	8 Marks
		(OR)		
2.		Sketch the diagram of computer aided diagnosis based upon the biomedical signal analysis.	CO1	14 Marks

UNIT-II

3.	a)	Write a short note on Physiological interference and compare stationary and non-stationary process.	CO2	7 Marks
	b)	Explain about homomorphic filtering.	CO2	7 Marks
		(OR)		
4.		Illustrate how noise is removed with case studies.	CO2	14 Marks

UNIT-III

5.		What are the advantages of adaptive filters over static filter? Design an adaptive filter using LMS algorithm.	CO3	14 Marks
		(OR)		
6.		Explain the significance in phase sensitive detector in biomedical signal processing and explain its operation with neat sketch.	CO3	14 Marks

UNIT-IV

7.		Explain in detail about QRS detection algorithm.	CO5	14 Marks
		(OR)		
8.		Write a short note on: i) Detection of Dicrotic notch. ii) Correlation analysis of EEG channels.	CO4	14 Marks

UNIT-V

9.		Explain the Welch method for power spectral. Density determination.	CO6	14 Marks
		(OR)		
10.		Explain the following terms. i) Direct FFT. ii) Window functions.	CO6	14 Marks

CODE No.: 16BT71003 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

INDUSTRIAL AUTOMATION
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Draw the block diagram of power supply unit and explain.	CO1	7 Marks
	b)	Describe the similarities and differences between PLC ladder logic and relay ladder logic.	CO2	7 Marks

(OR)

2.	a)	List out memory types in PLC and explain in detail.	CO1	5 Marks
	b)	Write short notes on: i) Photodiode and bidirectional opto isolators. ii) Basic sequence of operation for a PLC.	CO1	9 Marks

UNIT-II

3.	a)	A fan is to be started and stopped from any one of three locations. Each location has a start and a stop button. Note that normally closed stops should be in series and normally open starts in parallel. Describe the operation using ladder logic.	CO4	8 Marks
	b)	What are the different data transfer and logical operations in a PLC?	CO3	6 Marks

(OR)

4.	a)	Explain the function of relay logic in PLC programming.	CO2	5 Marks
	b)	Explain PLC timer and counter functions with suitable ladder logic example.	CO2	9 Marks

UNIT-III

5.	a)	What is Distributed Control System? What are its merits and demerits? Explain how data bus works in a DCS using block diagram.	CO1	8 Marks
	b)	Discuss the local control unit communication facilities used in any process industry.	CO2	6 Marks

(OR)

6.	a)	Explain the general architecture of DCS.	CO2	6 Marks
	b)	Compare the CSMA/CD, Token ring and Token bus communication protocols in DCS.	CO6	8 Marks

UNIT-IV

7.	a)	How the communication takes place in RTU? Explain in detail.	CO4	6 Marks
	b)	Explain the selection procedure of SCADA system for industrial automation.	CO4	8 Marks

(OR)

8.	a)	Draw the overview of the SCADA system.	CO1	5 Marks
	b)	Explain in detail of Master terminal unit.	CO2	9 Marks

UNIT-V

9.	a)	Briefly explain the concept of HART. Explain different HART commands.	CO6	6 Marks
	b)	What are the basic requirements of field bus standard? Explain in brief about interoperability and interchangeability.	CO5	8 Marks

(OR)

10.	a)	What is HART protocol? Explain its operation with a neat block diagram.	CO6	6 Marks
	b)	Explain the architecture of Intelligent Field bus device. State its advantages and disadvantages.	CO4	8 Marks

CODE No.: 16BT71009 SVEC-16

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

POWER PLANT INSTRUMENTATION
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the operation of Hydro power generation with the help of layout in detail.	CO1	7 Marks
	b)	Classify different instruments in a power plant.	CO2	7 Marks
		(OR)		
2.	a)	Explain the process of nuclear energy developed in Nuclear reactor.	CO1	7 Marks
	b)	Elaborate the significance of Co-generation.	CO2	7 Marks

UNIT-II

3.	a)	Select a suitable measuring device to measure steam temperature and explain its working principle.	CO3	7 Marks
	b)	Elaborate the operation of differential pressure transmitter with a neat sketch.	CO1	7 Marks
		(OR)		
4.	a)	Illustrate the schematic diagram and explain the operation of Steam flow measurement.	CO4	7 Marks
	b)	Justify how the differential pressure method is used for drum level control.	CO2	7 Marks

UNIT-III

5.	a)	Explain the significance of feed forward plus feedback controller in steam temperature control.	CO4	7 Marks
	b)	Elaborate the operation of Furnace draft control -1 with neat sketch.	CO2	7 Marks
		(OR)		
6.	a)	Illustrate with schematic diagram and explain the operation of cascade steam temperature control.	CO5	7 Marks
	b)	Select a suitable circuit for combustion control mechanism.	CO3	7 Marks

UNIT-IV

7.	a)	Explain the principle parts of steam turbine.	CO3	7 Marks
	b)	Illustrate the different types of parameters for measurement in Turbine system.	CO4	7 Marks
		(OR)		
8.	a)	Explain the significance of lubrication system and its control.	CO4	7 Marks
	b)	Elaborate the operation of Turbo alternator cooling system.	CO3	7 Marks

UNIT-V

9.	a)	Mention the key aspects of maintenance of measuring instruments.	CO6	7 Marks
	b)	Discuss in detail the safety interlocks and start up and shutdown interlocks.	CO1	7 Marks
		(OR)		
10.	a)	Elaborate the term intrinsic safety of instruments.	CO1	7 Marks
	b)	Discuss the various explosion hazards in instrument maintenance.	CO2	7 Marks

CODE No.: 16BT71201 SVEC-16

BIG DATA TECHNOLOGIES
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Explain about characteristics, advantages and applications of Big data.	CO1	7 Marks
	b)	Explain Apache Hadoop and Hadoop Ecosystem with example.	CO1	7 Marks
		(OR)		
2.	a)	Explain about the processing of a job in hadoop with a neat sketch.	CO2	7 Marks
	b)	List the various operational modes of hadoop cluster configuration and explain in detail about configuring/installing the hadoop in local/ standalone mode.	CO2	7 Marks
		UNIT-II		
3.	a)	Explain the hadoop distributed file system architecture with a neat sketch.	CO2	7 Marks
	b)	How google file system differs from the hadoop file system and explains the google file system architecture with a neat sketch?	CO2	7 Marks
		(OR)		
4.	a)	Distinguish between the old and new versions of hadoop API for Map Reduce frame work.	CO5	7 Marks
	b)	Explain about the implementation of map reduce concept with a small example.	CO5	7 Marks
		UNIT-III		
5.	a)	Explain the role of combiner, record reader and partitioner within a map reduce program model of hadoop.	CO5	7 Marks
	b)	Distinguish between the old and new versions of hadoop API for Map Reduce frame work.	CO5	7 Marks
		(OR)		
6.	a)	Explain the architecture of a pig with a neat sketch.	CO5	6 Marks
	b)	Explain the syntax of a pig program with a suitable example.	CO5	8 Marks
		UNIT-IV		
7.	a)	Explain about the configuration of CLI client and WI client while interacting with HIVE with neat sketch.	CO5	7 Marks
	b)	Explain about the various data types supported by HIVEQL with an example.	CO5	7 Marks
		(OR)		
8.	a)	Explain the operators supported by pig with respect to Data access, transformations and debugging operations.	CO1	7 Marks
	b)	Explain the syntax of a pig program with suitable example.	CO1	7 Marks
		UNIT-V		
9.		Elaborate Zookeeper in production.	CO5	14 Marks
		(OR)		
10.		Explain Pig and Wukong to explore Billion-Edge network graphs.	CO5	14 Marks

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

MOBILE APPLICATION DEVELOPMENT

[Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Compare and contrast different Mobile Platforms.	CO1	7 Marks
	b)	Explain components of Android Stack with a neat sketch.	CO1	7 Marks
		(OR)		
2.	a)	Describe various design patterns in Mobile Information design.	CO1	7 Marks
	b)	What is Dalvik? Write the steps for creating virtual device.	CO1	7 Marks

UNIT-II

3.	a)	What are different types of intents? Explain in detail.	CO1	7 Marks
	b)	Create an Android Application to listen User Interface Notifications.	CO4	7 Marks
		(OR)		
4.	a)	Write the steps for sending and receiving implicit intents.	CO1	7 Marks
	b)	Develop an Android Application to manage changes to screen orientation.	CO3	7 Marks

UNIT-III

5.		What is difference between View and View group? Explain various View Group elements with suitable example.	CO1	14 Marks
		(OR)		
6.	a)	How to create user interface programmatically? Explain with an example.	CO2	7 Marks
	b)	Create an Android Application to save data to the internal storage.	CO4	7 Marks

UNIT-IV

7.	a)	Create an Android Application to receive SMS.	CO6	7 Marks
	b)	Develop an Android Application for downloading binary data.	CO4	7 Marks
		(OR)		
8.	a)	Create an Android Application to get location data.	CO6	7 Marks
	b)	Develop an Android Application for downloading text data.	CO4	7 Marks

UNIT-V

9.	a)	How to invoke an activity from a service? Explain in detail.	CO5	7 Marks
	b)	Write about Objective-C classes and control structures.	CO1	7 Marks
		(OR)		
10.	a)	Explain the Anatomy of an IOS App.	CO1	7 Marks
	b)	How to debug IOS Apps? Explain in detail.	CO2	7 Marks

CODE No.: 16BT71203 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

INFORMATION RETRIEVAL SYSTEMS
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Illustrate in detail about Digital Libraries and Data Warehouse.	CO1	7 Marks
	b)	What are objectives of Information Retrieval System and explain in detail?	CO1	7 Marks
		(OR)		
2.	a)	Differentiate item normalization and text normalization with suitable examples.	CO1	9 Marks
	b)	Define Multimedia and index data base search. How it relates to Information Retrieval System?	CO1	5 Marks

UNIT-II

3.	a)	What is Ingest? Explain with a suitable example.	CO2	6 Marks
	b)	Define Zoning. How to process Tokens in Information Retrieval System?	CO2	8 Marks
		(OR)		
4.		Discuss in Brief : i) Indexing by Term. ii) Indexing by Concept. iii) Multimedia Indexing.	CO3	14 Marks

UNIT-III

5.	a)	Illustrate the concept of similarity measures for a document.	CO3	7 Marks
	b)	Describe in briefly weighted Searches of Boolean Systems in Information Retrieval.	CO3	7 Marks
		(OR)		
6.		Discuss the following: i) Term –Term Matrix. ii) Term Relationship Matrix. iii) Vector Representation. iv) Iterated Class Assignments.	CO3	14 Marks

UNIT-IV

7.		State and explain different ways to display Hit list of items.	CO4	14 Marks
		(OR)		
8.	a)	Illustrate the concept of Hidden Markov Models.	CO4	7 Marks
	b)	Explain Page Ranking algorithms in detail.	CO4	7 Marks

UNIT-V

9.	a)	Differentiate Text Search Optimization and Software Search Optimization.	CO4	5 Marks
	b)	Summarize the following Software Search Optimization algorithms. i) Boyer-Moore algorithm. ii) Aho-Corasick algorithm. iii) Knuth morris-pratt algorithm.	CO5	9 Marks
		(OR)		
10.		What is Information System Evaluation and give overview on Evaluation?	CO5	14 Marks

CODE No.: 16BT71204 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

MOBILE COMPUTING
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain in detail about handheld devices.	CO1	7 Marks
	b)	List the limitations of Mobile Computing.	CO1	7 Marks
		(OR)		
2.	a)	With neat sketch, explain GSM Architecture.	CO1	7 Marks
	b)	List out the various properties of LTE communication standards.	CO5	7 Marks

UNIT-II

3.	a)	Describe in detail about near and far terminals.	CO5	7 Marks
	b)	Explain the distinguished features of SDMA and TDMA.	CO5	7 Marks
		(OR)		
4.	a)	Explain in detail about MAC Management.	CO5	7 Marks
	b)	Describe in detail about physical layer and MAC layer in WLAN.	CO5	7 Marks

UNIT-III

5.	a)	Explain IP packet delivery and handover mechanism.	CO4	7 Marks
	b)	Explain routing optimization.	CO4	7 Marks
		(OR)		
6.	a)	Explain TCP over 2.5G/3G wireless network.	CO4	7 Marks
	b)	Explain selection transmission in mobile transport layer.	CO4	7 Marks

UNIT-IV

7.	a)	Define context-aware computing and explain different context types used in context-aware computing.	CO2	7 Marks
	b)	Explain catch invalidation mechanism.	CO2	7 Marks
		(OR)		
8.	a)	Discuss about classification of data delivery mechanisms.	CO2	7 Marks
	b)	Explain selective tuning techniques.	CO2	7 Marks

UNIT-V

9.	a)	List the applications of MANET.	CO3	7 Marks
	b)	What are the security issues in MANETs? Explain.	CO3	7 Marks
		(OR)		
10.	a)	Explain about wireless transaction protocol.	CO3	7 Marks
	b)	Describe about wireless application environment in WAP.	CO3	7 Marks

CODE No.: 16BT71205 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

CRYPTOGRAPHY AND NETWORK SECURITY
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Outline following cryptanalysis attacks. i) Cipher text-only. ii) Known-plaintext. iii) Chosen-plaintext.	CO2	7 Marks
	b)	Illustrate the components of Conventional Encryption Model with neat diagram. Explain each component in detail.	CO2	7 Marks
		(OR)		
2.	a)	Apply Playfair cipher with the Key word "KEYWORD" and encrypt the following plaintext "GOODLUCK".	CO1	7 Marks
	b)	Apply columnar transposition for the plain text "**SREE VIDYANIKETHAN ENGINEERING COLLEGE**" using encryption Key "6 4 3 5 1 7 2".	CO3	7 Marks

UNIT-II

3.	a)	Users A and B use the Diffie-Hellman key exchange technique with a common prime $q = 11$ and a primitive root a =2. i) If user A has public key Y_A=9, what is A's private key X_A? ii) If user B has public key Y_B=3, what is B's private key X_B?	CO3	7 Marks
	b)	List applications of public-key cryptography.	CO1	7 Marks
		(OR)		
4.	a)	Describe in detail the key generation in AES algorithm and its expansion format.	CO1	7 Marks
	b)	With a neat sketch, explain the Elliptic curve cryptography with an example.	CO1	7 Marks

UNIT-III

5.	a)	What is Digital Signature? Explain how it is created at the sender end and retrieved at receiver end differentiate digital signature from digital certificate.	CO4	7 Marks
	b)	Discuss about the objectives of HMAC and its security features.	CO1	7 Marks
		(OR)		
6.	a)	Write down the steps involved in Elgamal Digital Signature Scheme and Schnorr Digital Signature Scheme used for authenticating a person.	CO4	7 Marks
	b)	Illustrate simple Hash functions with necessary examples.	CO3	7 Marks

UNIT-IV

7.	a)	Discuss about Anti-Replay Service in Encapsulating Security Payload.	CO5	7 Marks
	b)	Compare security association database and security policy database.	CO5	7 Marks
		(OR)		
8.	a)	Examine the key rings and its significance in PGP. Show how the message generation from sender to receiver and explain with suitable diagram.	CO5	7 Marks
	b)	Differentiate between transport modes ***vs.*** tunnel mode encryption in IPsec.	CO5	7 Marks

UNIT-V

9.	a)	Discuss the various measures that may be used for intrusion detection.	CO1	7 Marks
	b)	What are viruses? Explain the virus related threats and the counter measures applied.	CO3	7 Marks

(OR)

10.	a)	Discuss how firewalls help in the establishing a security framework for an organization.	CO1	7 Marks
	b)	Explain in detail about the password selection strategies.	CO3	7 Marks

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February - 2021

SYSTEM MODELING AND SIMULATION

[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the steps in simulation study? Explain.	CO1	8 Marks
	b)	List out the advantages and disadvantages of Simulation.	CO1	6 Marks

(OR)

2.	a)	Name the entities, attributes, activities, events and state variables for the system shown below: i) Library. ii) Bank. iii) Airport. iv) Grocery store.	CO1	8 Marks
	b)	Define simulation. List any five circumstances, when the simulation is the appropriate tool and when it is not.	CO1	6 Marks

UNIT-II

3.	a)	Write R code to find the factorial of a number (use recursion).	CO3	7 Marks
	b)	Write R code for calculating the coefficient of correlation using the following data.	CO3	7 Marks

X	10	12	18	24	24	27
Y	13	18	12	25	30	10

(OR)

4.	a)	How to pass default values for arguments in R? Give example.	CO3	7 Marks
	b)	Discuss about ANOVA.	CO3	7 Marks

UNIT-III

5.	a)	Explain any two discrete distributions.	CO1	7 Marks
	b)	What is Poisson process? Mention the properties of Poisson process.	CO2	7 Marks

(OR)

6.		Six dump trucks are used to haul coal from entrance of a small mine to the rail road. Each truck is loaded by one of the two loaders. After loading, truck immediately moves to the scale to be weighed as soon as possible. Both loaders and scale have FCFS for trucks. Travel time from loader to scale is negligible. After being weighed, a truck begins a travel time and then returns to loader queue. Simulate for clock = 20. Find average loader utilization and average scale utilization. The activity times arc given in the following table:	CO4	14 Marks

Loading Time	10	5	5	10	15	10	10
Weighing Time	12	12	12	16	12	16	
Traveling time	60	100	40	40	80		

UNIT-IV

7.	a)	Explain any two long-run measures of performance of queuing systems.	CO2	7 Marks
	b)	Explain about Networks of queues.	CO2	7 Marks

(OR)

8.	a)	Explain inverse-transform technique of producing random variates for exponential distribution.	CO3	3 Marks
	b)	Generate three Poison variates with mean $\alpha = 0.2$.	CO3	4 Marks
	c)	Explain the types of simulation with respect to output analysis with example.	CO3	7 Marks

UNIT-V

9.	a)	Differentiate between terminating or transient simulation and steady state simulation with examples.	CO6	7 Marks
	b)	Briefly explain the measure of performance of a simulation system.	CO6	7 Marks
		(OR)		
10.		Demonstrate an appropriate method for collecting the data from stale data and time varying data.	CO6	14 Marks

CODE No.: 16BT71502 SVEC-16

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations February – 2021

SYSTEMS ENGINEERING
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Compare Traditional Engineering and System Engineering disciplines.	CO1	7 Marks
	b)	Briefly explain various system engineering activities and products.	CO1	7 Marks
		(OR)		
2.	a)	Explain what Modularity is with an example and give its characteristics.	CO1	7 Marks
	b)	Briefly explain about origins of systems engineering.	CO1	7 Marks
		UNIT-II		
3.		Discuss about the Model of Complex System.	CO2	14 Marks
		(OR)		
4.		Explain System Life Cycle.	CO2	14 Marks
		UNIT-III		
5.	a)	Explain the process of producing needs and requirement analysis in system engineering.	CO3	7 Marks
	b)	What are system functional specifications?	CO3	7 Marks
		(OR)		
6.	a)	What are the advantages of using the system design team approach for a large development project?	CO3	7 Marks
	b)	What do we need operational requirements analysis.	CO3	7 Marks
		UNIT-IV		
7.	a)	List the characteristics of a set of well stated operational requirements for analyzing their adequacy.	CO4	5 Marks
	b)	Explain functional analysis and formulation.	CO4	9 Marks
		(OR)		
8.	a)	Define the primary systems engineering activities that contribute to products of the needs analysis phase.	CO4	7 Marks
	b)	Explain about concept validation.	CO4	7 Marks
		UNIT-V		
9.		Discuss with examples of different activities in the advanced development phase.	CO5	14 Marks
		(OR)		
10.	a)	Explain the steps for transition from development to production.	CO5	7 Marks
	b)	Discuss In- Service support.	CO5	7 Marks

NETWORK PROGRAMMING

[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Explain about elementary TCP sockets.	CO1	7 Marks
	b)	Compare UDP and TCP.	CO2	7 Marks
		(OR)		
2.	a)	Describe about concurrent servers.	CO1	7 Marks
	b)	Explain about listen and accept functions.	CO1	7 Marks
		UNIT-II		
3.	a)	If TCP client doesn't call bind, how will the address be bound to the client socket?	CO3	7 Marks
	b)	Explain signal handling on a POSIX complaint system.	CO1	7 Marks
		(OR)		
4.	a)	Explain about TCP Echo server and Client functions.	CO1	7 Marks
	b)	Explain the need for getsockopt and setsockopt functions.	CO1	7 Marks
		UNIT-III		
5.	a)	Implement recvfrom and sendto functions.	CO4	7 Marks
	b)	Explain about outgoing interface with UDP.	CO1	7 Marks
		(OR)		
6.	a)	Explain about Lost Datagrams in UDP.	CO1	7 Marks
	b)	How does TCP deal with Lost Packet during transmission.	CO1	7 Marks
		UNIT-IV		
7.	a)	Discuss the use of gethostbyAddr function with an example.	CO4	7 Marks
	b)	Discuss about IPV6 Server and IPV4 Client.	CO1	7 Marks
		(OR)		
8.	a)	Explain about Domain Name System.	CO1	7 Marks
	b)	Write about the usage of uname function.	CO5	7 Marks
		UNIT-V		
9.	a)	Explain the scenario of One Server Multiple Clients.	CO1	7 Marks
	b)	Apply message queues for process communication.	CO6	7 Marks
		(OR)		
10.	a)	Explain about Full Duplex Pipes.	CO1	7 Marks
	b)	Write about implementation of rlogin for remote access.	CO1	7 Marks

INTERNET OF THINGS

[Computer Science and Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Define IOT. Discuss various application areas of IOT.	CO1	14 Marks
		(OR)		
2.		What are the four pillars of IOT? Describe each pillar with the help of suitable example.	CO1	14 Marks

UNIT-II

3.	a)	Explain Arduino. What are the things need to be considered for developing on the Arduino?	CO2	6 Marks
	b)	Why the python is the first choice for the Raspberry Pi language than C or C++?	CO1	8 Marks
		(OR)		
4.		How domain specific IOT systems are developed and managed? Illustrate specific cases.	CO2	14 Marks

UNIT-III

5.	a)	Explain the role of UDP and MAC address in IOT.	CO2	8 Marks
	b)	Describe any three different types of sensors with example.	CO2	6 Marks
		(OR)		
6.		Explain internet communication and list its different kinds of protocols.	CO3	14 Marks

UNIT-IV

7.	a)	Discuss about process specification in IOT.	CO2	7 Marks
	b)	Differentiate domain model specification and information model specification.	CO3	7 Marks
		(OR)		
8.		Illustrate the design of IoT for smart cities environment with automations.	CO3	14 Marks

UNIT-V

9.		Demonstrate in detail about Hadoop Map Reduce architecture for batch data analysis with an example	CO3	14 Marks
		(OR)		
10.	a)	What is Apache Oozie? Explain its work flow in detail.	CO3	7 Marks
	b)	Explain about HDFS architecture with an example.	CO3	7 Marks

MANAGEMENT SCIENCE
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write and explain the functions of management.	CO1	7 Marks
	b)	What is SWOT analysis? Explain.	CO2	7 Marks
		(OR)		
2.	a)	Describe the elements of corporate planning process.	CO1	7 Marks
	b)	Distinguish between matrix organization and network organization.	CO3	7 Marks

UNIT-II

3.	a)	What is plant location? Explain its principles in detail.	CO1	5 Marks
	b)	ABC Ltd. uses EOQ logic to determine the order quantity for its various components and is planning its orders. The Annual consumption is 80,000 units, Cost to place one order is Rs.1,200, Cost per unit is Rs. 50 and carrying cost is 6% of Unit cost. Find EOQ, No. of order per year and Total Cost of Inventory.	CO4	9 Marks
		(OR)		
4.	a)	Describe the control charts for variables with an example.	CO1	7 Marks
	b)	Explain about ABC analysis.	CO4	7 Marks

UNIT-III

5.	a)	Write about the functions of Human Resource Management.	CO1	7 Marks
	b)	Describe the job evaluation with examples.	CO1	7 Marks
		(OR)		
6.	a)	Explain about Maslow's hierarchy of human needs in detail.	CO1	7 Marks
	b)	Describe the Herzberg's two-factor theory of motivation with examples.	CO1	7 Marks

UNIT-IV

7.	a)	Distinguish between Entrepreneur and Manager.	CO5	7 Marks
	b)	Explain about Women as an Entrepreneur.	CO5	7 Marks
		(OR)		

8. An R and D project has a list of tasks to be performed whose time estimates are given in the Table, as follows: CO4 14 Marks

Time estimates for R & D Project

Activity	Activity Name	t_o	t_m (in days)	t_p
1-2	A	4	6	8
1-3	B	2	3	10
1-4	C	6	8	16
2-4	D	1	2	3
3-4	E	6	7	8
3-5	F	6	7	14
4-6	G	3	5	7
4-7	H	4	11	12
5-7	I	2	4	6
6-7	J	2	9	10

i) Draw the project network.

ii) Find the critical path.

iii) Find the probability that the project is completed in 19 days. If the probability is less than 20%, find the probability of completing it in 24 days.

UNIT-V

9. a) Explain about Enterprise resource planning in detail. CO1 7 Marks

b) Write about Value chain analysis with an example. CO4 7 Marks

(OR)

10. a) What is Total Quality Management (TQM)? Explain. CO5 7 Marks

b) Write about maintenance strategies in detail. CO6 7 Marks

CODE No.: 16BT6HS01 SVEC-16

Roll No. | | | | | | | | | | |

BUSINESS COMMUNICATION AND CAREER SKILLS

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Define grapevine communication and discuss its advantages and disadvantages.	CO1	14 Marks
		(OR)		
2.	a)	Discuss the important characteristic features of business communication.	CO1	7 Marks
	b)	"Horizontal communication plays a crucial role in an organization."Evaluate.	CO5	7 Marks

UNIT-II

3.		Justify the relevance of cross-cultural communication in the present scenario.	CO5	14 Marks
		(OR)		
4.	a)	"Crisis management is a must for a company." Analyze.	CO2	7 Marks
	b)	Differentiate 'corporate citizenship' and 'social responsibility.'	CO2	7 Marks

UNIT-III

5.		Design a format of a business letter and explain the significance of each component with example.	CO3	14 Marks
		(OR)		
6.	a)	Describe the importance of persuasive messages in the success of a company.	CO1	7 Marks
	b)	Differentiate 'positive messages' and 'negative messages.'	CO2	7 Marks

UNIT-IV

7.		Illustrate the basic patterns of business presentation.	CO4	14 Marks
		(OR)		
8.	a)	"A resume that captures the attention of the potential employer is essential to reach the top position in a corporate sector" Evaluate.	CO5	7 Marks
	b)	Examine the pros and cons of online recruitment process.	CO2	7 Marks

UNIT-V

9.		Describe different types of interview with their aims and objectives.	CO1	14 Marks
		(OR)		
10.	a)	"What you speak in an interview is not as important as how you speak." Justify.	CO5	7 Marks
	b)	Compare On-Campus interview with Off-Campus interview.	CO5	7 Marks

GERMAN LANGUAGE

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Ergäzen Sie : (ich, Sie, du, er, sie) CO1 7 Marks
   1. Mein Name ist Tina. Wie heißen _____?
   2. Hallo, ich bin Maria. Entschuldigung, wie heißt _____?
   3. Ich heiße Pia. Und wer bist _____?
   4. John kommt aus Frankfurt. _____ wohnt in Zürich.
   5. Das ist Frau Lang. _____ kommt aus Deutschland.
   6. _____ heiße Emma Reiter.
   7. Woher Kommen _____ ? Aus England?

   b) Der Vokal ist falsch. Wie heißt das Wort richtig? CO1 3 Marks
   1. Der Wog _____
   2. Das Lund _____
   3. Das Hatil _____
   4. Das Jihr _____
   5. Die A-Behn _____
   6. Der Boch _____

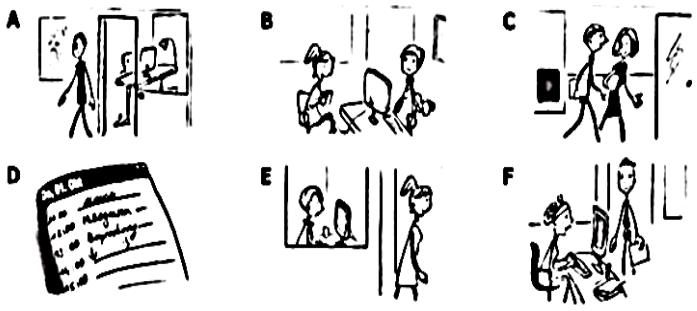
   c) Ergäzen Sie die Zahlen. CO1 4 Marks
   1. Null: _____
   2. Siebzig: _____
   3. Sechszehn:_____
   4. Dreiundfünfzig;_____
   5. 44:_____
   6. 75: _____
   7. 12: _____
   8. 66:_____

OR)

2. a) **Notieren Sie die Sprache(n).** CO1 4 Marks
   1. Portugal:_____
   2. Schweden: _____
   3. Thailand:_____
   4. Kanada : _____

   b) **Welches Bild passt? Ordnen Sie** CO1 6 Marks

a Welches Bild passt? Ordnen Sie zu.



1. ___ Die Besprechung ist nach dem Essen. **4. ___Er kommt mit einer Kollegin.**

2. ___ Er geht zu einer Kollegin. **5. ___ Sie ist bei einer Kollegin.**

3. ___ Er kommt aus dem Büro. **6. ___ Sie kommt von einer Kolleging.**

   c) **Schreiben Sie Sätze:** CO2 4 Marks
   1. Eva / sehr gern / fotografieren/.
   2. Eva / und Nina / gern / reisen/.
   3. Ina / sprechen / gern / Deutsch /.
   4. Boris / nicht gern / lesen/.

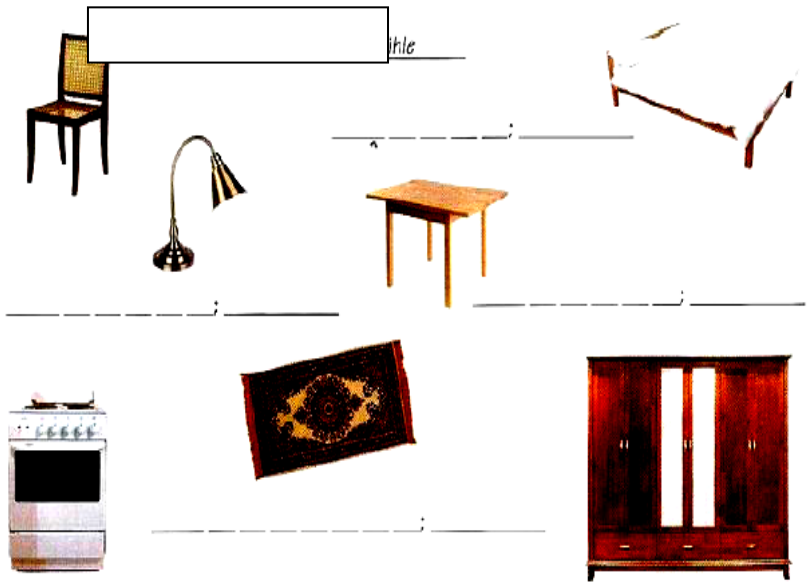
UNIT-II

3. **Ergänzen Sie die Verben.** CO3 14 Marks

a) (fahren) Wohin __1__ Herr Schmitt? – Er____2____ nach München.
b) (arbeiten) Wo ____3___ Herr Schmitt? – Er ___4___ bei Siemens.
c) (machen) Was __5__ Herr Hartmann? (fahren) Er ___6___ nach Haus.
d) (sprechen) Wir____7___ Deutsch. Er ____8____ Englisch.
e) (sprechen) Was __9_____ du? – Ich ____10____ Deutsch.
f) (fahren) Wir __11___ nach Italien. ___12____ du auch nach Italien?
g) (lesen) ___13_____ du?- Nein, ich ___14____ nicht.

(OR)

4. a) **Wie heißen die Sachen? Notieren Sie die Wörter mit Artikel.** CO2 7 Marks



b) **Wie viel ist das?** CO2 7 Marks

1. Neun+ Zehn + drei = ...
2. sechsundzwanzig– fünf + vier =.....
3. Sechzehn + elf – fuenf =.....
4. Neunundzwanzig + achtundachtzig =.....
5. Siebzehn + vierunfuenzig + zwanzig = ...
6. Sechsundzwanzig + Siebzehn- neun= .....
7. fünfzehn + achtundneunzig- eins = ...

UNIT-III

5. a) **Was ist richtig? Schreiben Sie**. CO3 7 Marks

1. Ich *reist / reise* gern.
2. Tom *kocht / kochen* nicht gern.
3. Nina *singst / singt* sehr gern.
4. Wir *lesen / lese* nicht gern.
5. Tom und Markus *spielen / spielt* gern.
6. Und du? *Liest / Lest* du gern?
7. *Tanzen / Tanzt* Sie gern, Frau Weber?

b) **Welches Wort passt nicht? Streichen Sie durch.** CO3 4 Marks

1. die Stunde	der Tag	der Mensch	die Woche
2. die Beruf	die Freizeit	die Journalistin	das Buch
3. das Kino	das Theater	der Frühling	das Museum
4. der Arzt	das Techniker	die Journalistin	das Buch

c) **Was müssen/können/wollen Sie machen? Beantworten Sie die Fragen.** CO3 3 Marks

1. Was müssen Sie am Wochenede machen?
2. Was Können Sie im Urlaub machen?
3. Was wollen Sie heute Aben machen?

(OR)

6. **Notieren Sie die Pluralformen.** CO2 14 Marks

Ärzte, Ärzinnen, Berfue, Bücher, Cafes, Frauen, Hobbys, Kinos, Miarbeiter, Nächte, Studentinnen, Taxifahrer, Techniker, Wörter

Singular	**Plural**	**Singular**	**Plural**
1. der Techniker	_____	8. die Frau	_____
2. der Taxifahrer	_____	9. die Studentin	_____
3. der Mitarbeiter	_____	10.die Ärztin	_____
4. der Beruf	_____	11. das Wort	_____
5. der Arzt	_____	12. das Buch	_____
6. die Nacht	_____	13. das Cafe	_____
7. das Hobby	_____	14. das Kino	_____

UNIT-IV

7. **Lessen Sie den Wochenkalender von Lea. Beantworten Sie die Fragen.** CO3 14 Marks

	Vormittag	Nachmittag	Abend
Montag	8:00–13:00 Uni	16:30–17:15 Saxophon	18:00–22:00 Taxi fahren
Dienstag	10:30–12:00 Uni	14:00–18:30 Uni	
Mittwoch	8:00–10:00 schwimmen	14:00–18:30 Uni	20:00 Kino
Donnerstag	8:00–12:00 Uni	14:00–18:30 Uni	
Freitag	8:00–13:00 Uni	14:00–18:00 Taxi fahren	21:00 tanzen
Samstag		15:00 Familienfeier von Tom ☺	
Sonntag	schlafen ☺☺		

1. Wann spielt Lea Saxophon?
2. Wann ist Lea in der Uni?
3. Wann fährt Lea Taxi?
4. Wann Schwimmt sie?
5. Wann geht sie ins Kino?
6. Wann tanzt sie?
7. Wann ist die Familienfeier?

(OR)

8. a) **Wie heißt das Gegenteil? Notieren Sie das passende Wort**. CO4 4 Marks
   1. Das zimmer ist nicht klein, es ist .....
   2. Im Garten ist es nicht leise, es ist .....
   3. Die Küche ist nicht dunkel, sie ist .....
   4. Das Haus liegt nicht weit weg, es liegt .....

   b) **Schreiben Sie die Fragen zu den Antworten.** CO1 3 Marks
   1. _____? * Fabio. Und du?
   2. _____? * Aus Rom.
   3. _____? * In Frankfurt.

   c) **Fragen und Antworten. Ordnen Sie zu.** CO4 7 Marks

1.	____Wie heißen Sie?	A	Aus Irland. Und Sie?
2.	____Wo wohnst du?	B	Englisch und Deutsch
3.	____Woher kommen Sie?	C	Emilia
4.	____Welche Sprachen sprechen Sie?	D	Mein Name ist Kunze.
5.	____ Wer bist du?	E	Aus Brasilien. Und du?
6.	____ Wo wohnen Sie?	F	In Stuttgart. Und Sie?
7.	____ Woher kommst du?	G	In Berlin. Und du?

UNIT-V

9. a) **Lessen Sie. Whoher kommen die Personen? Wo wohnen sie? Welche Sprachen sprechen sie?** CO6 12 Marks

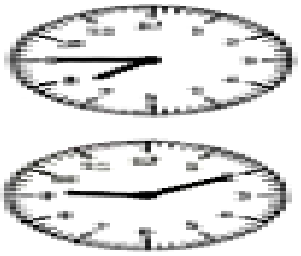
Rose Lewis kommt aus den USA. Sie wohnt in San Francisco. Sie spricht Englisch und Deutsch. Sie lernt Spanisch.

Boris Walder kommt aus Österreich. Er wohnt in Salzburg. Er spricht Deutsch und Englisch. Er lernt Arabisch.

Kateb Brahim kommt aus Algerien. Er wohnt in Genf. Er spricht Arabisch, Französisch und lernt Deutsch.

Hong Yang kommt aus China. Sie wohnt in Shanghai. Frau Hong spricht Chinesisch und Deutsch.

b) Wie Spät ist es? CO4 2 Marks



_____

_____

(OR)

10. a) **Wie heißen diese Berufe? Notieren Sie unter dem Bild. Ergänzen Sie in Ihrer Sprache.** CO5 7 Marks

der Hausmeister , die Juristin, die Lehrerin, der Elektriker, der Programmier

b) Lessen Sie. Schreiben Sie die Daten ins Formular. CO5 7 Marks

Tobias Gruber ist am 7. Dezember 1980 in Deutschland geboren. Er wohnt schon 3 Jahre in Wien. Er ist Programmierer und arbeitet in einem Krankenhaus. Er reist gern, und er geht auch gern ins Kino.

Vorname	Nachname
Geburtsdatum	Wohnort
Beruf	Hobbys

PERSONALITY DEVELOPMENT

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		"There is not one right personality. It differs by role". Explain.	CO1	14 Marks
		(OR)		
2.	a)	Explain the personality attribute in taking a bold decision.	CO2	7 Marks
	b)	What are the important traits a person should have for developing good interpersonal skills?	CO2	7 Marks

UNIT-II

3.		Attitude is a very critical personal attribute. Describe with illustrations.	CO3	14 Marks
		(OR)		
4.	a)	Taking up responsibility is strength. Illustrate.	CO2	7 Marks
	b)	Integrity and values are important for career growth. Explain.	CO2	7 Marks

UNIT-III

5.		Explain 80**:**20 rules with examples.	CO5	14 Marks
		(OR)		
6.	a)	Stress is required in life. Explain.	CO1	7 Marks
	b)	Self-management is essential for success. Give examples.	CO1	7 Marks

UNIT-IV

7.		"Leadership is the key to 99 percent of all successful efforts"-Erskine Bowles. Describe.	CO4	14 Marks
		(OR)		
8.	a)	Barriers in communicating with team. Explain with examples.	CO3	7 Marks
	b)	Important aspects to remember while communicating with superiors and other members.	CO3	7 Marks

UNIT-V

9.		Four main things to learn in the first week of the job. Explain.	CO5	14 Marks
		(OR)		
10.	a)	What is career planning? Why is it important?	CO4	7 Marks
	b)	Identifying work values will help your career growth. Illustrate.	CO4	7 Marks

WEB TECHNOLOGIES
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write an HTML document to provide a form that collects names and telephone number.	CO1	7 Marks
	b)	Explain in detail about client-side Storage.	CO1	7 Marks
		(OR)		
2.	a)	Write the HTML code to generate a login web page with fields user id, password and a submit button. Consider the following while writing the HTML code.	CO2	7 Marks
	b)	Name different types of offline web applications. Distinguish between HTML and HTML5.	CO2	7 Marks

UNIT-II

3.	a)	What are the benefits of using styles compared with placing formatting directly into the text of the web page?	CO2	7 Marks
	b)	Write a HTML code with Java script. Which will show an alert message “Hello” whenever user clicks a button?	CO1	7 Marks
		(OR)		
4.	a)	Explain about various java script functions and events.	CO3	7 Marks
	b)	Discuss about CSS Selectors and features of CSS3.	CO5	7 Marks

UNIT-III

5.	a)	Classify JQuery selectors and Explain in detail.	CO5	7 Marks
	b)	How to create responsive layouts using bootstrap CSS? Explain.	CO5	7 Marks
		(OR)		
6.	a)	Develop a login web page using the grid system in bootstrap.	CO7	6 Marks
	b)	Explain about responsive classes with suitable examples.	CO7	8 Marks

UNIT-IV

7.	a)	Describe the Integration of PHP and AJAX with an example.	CO5	7 Marks
	b)	Discuss different types of control structures in PHP.	CO5	7 Marks
		(OR)		
8.	a)	Discuss about Object Oriented PHP.	CO4	7 Marks
	b)	Explain the predefined and user defined functions in PHP with an example.	CO5	7 Marks

UNIT-V

9.	a)	Write a PHP script to retrieve the data from oracle database.	CO6	7 Marks
	b)	What are cookies? How can you create, access and delete a cookie in PHP with the help of an example?	CO4	7 Marks
		(OR)		
10.	a)	How the result set of Mysql is handled in PHP?	CO6	7 Marks
	b)	Discuss various authentication methodologies used in PHP.	CO4	7 Marks

COMPILER DESIGN
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain in detail about lexical analyzer generator LEX.	CO5	7 Marks
	b)	What is a compiler? Explain the structure of a compiler, showing the output of each phase using a simple expression.	CO1	7 Marks
		(OR)		
2.	a)	What is meant by input buffering? Explain the use of sentinels in recognizing tokens.	CO1	7 Marks
	b)	Compare compiler and interpreter with suitable diagrams.	CO1	7 Marks

UNIT-II

3.	a)	Construct SLR parser for the following grammar. $E \rightarrow E + T / T$ $T \rightarrow TF / F$ $F \rightarrow F^* / a / b$	CO3	10 Marks
	b)	Differentiate between Top down and Bottom up Parsing methods.	CO3	4 Marks
		(OR)		
4.	a)	What is recursive descent parsing? Write recursive descent parser for the following grammar after doing necessary transformations. $E \rightarrow E + T / T$ $T \rightarrow T * F / F$ $F \rightarrow (E) / id$	CO3	10 Marks
	b)	Why LR parsers are attractive?	CO1	4 Marks

UNIT-III

5.	a)	Explain about the type expressions and the type equivalences in detail.	CO4	7 Marks
	b)	Differentiate between Synthesized and Inherited attributes with suitable examples	CO4	7 Marks
		(OR)		
6.	a)	What is an Abstract syntax tree? How to construct it? Explain by writing syntax directed definition.	CO4	7 Marks
	b)	Define Type Checker. Write down the specification of a simple Type Checker.	CO4	7 Marks

UNIT-IV

7.	a)	Explain with an example, how to generate the intermediate code for the flow of control statements (for and while statements)	CO5	7 Marks
	b)	Compare three different storage allocation strategies.	CO6	7 Marks
		(OR)		
8.	a)	Translate the expression -(a+b)*(c+d)+(a+b+c) into quadruple, triple and indirect triple.	CO4	7 Marks
	b)	Explain with an example, how to generate the intermediate code for if-statements and go to statements.	CO3	7 Marks

UNIT-V

9.	a)	What are the principle sources of optimization? Give the classification of code optimization.	CO2	7 Marks
	b)	Explain with an example optimization of Basic blocks.	CO2	7 Marks
		(OR)		
10.	a)	Explain the functional issues to be considered while generating the object code.	CO3	7 Marks
	b)	Write the algorithm for simple code generator. And show with an example how instruction scheduling can affect the efficiency of generated code.	CO3	7 Marks

CODE No.: 16BT60114 SVEC-16

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations January – 2022

DISASTER MITIGATION AND MANAGEMENT

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write an account on the impact of disasters on life and environment.	CO2	7 Marks
	b)	Explain how the public awareness is helpful in risk reduction.	CO1	7 Marks
		OR)		
2.	a)	Explain about Hazard Assessment.	CO2	7 Marks
	b)	Explain about basic principles and elements of disaster mitigation.	CO4	7 Marks

UNIT-II

3.	a)	Give adverse effects of tsunami. Also discuss the tsunami mitigation measures.	CO2	7 Marks
	b)	Distinguish between active control and passive control systems. Draw the block diagram of both the systems.	CO6	7 Marks
		(OR)		
4.	a)	Discuss the consequences of natural disasters in Urban areas in view of earth quakes.	CO6	7 Marks
	b)	Consider a worst affected Earthquake hazard and what government role in its remedial measures was.	CO5	7 Marks

UNIT-III

5.	a)	Explain the necessary steps to be taken to avoid dangerous epidemics after a flood disaster.	CO2	7 Marks
	b)	Write a short note on the drought control measures adopted across the globe.	CO8	7 Marks
		(OR)		
6.	a)	Discuss the consequences of natural disasters in Urban areas in view of : i) cyclones. ii) floods.	CO4	7 Marks
	b)	Explain the disaster flood with the help of a case study.	CO7	7 Marks

UNIT-IV

7.	a)	Explain briefly different causes for landslides.	CO2	7 Marks
	b)	Discuss the types of landslides.	CO4	7 Marks
		(OR)		
8.	a)	Discuss the consequences of the natural disaster landslide.	CO2	7 Marks
	b)	Discuss the various methods of preventing landslides.	CO2	7 Marks

UNIT-V

9.	a)	Explain cost-benefit analysis with respect to various disaster management programs.	CO3	7 Marks
	b)	Discuss about a few emerging trends in disaster management.	CO4	7 Marks
		(OR)		
10.	a)	Discuss the role of knowledge based expert system in disaster Management.	CO3	7 Marks
	b)	Discuss the various functions of disaster mitigation organization.	CO4	7 Marks

CODE No.: 16BT60115 SVEC-16

ENVIRONMENTAL POLLUTION AND CONTROL

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss briefly about impacts of noise pollution.	CO1	7 Marks
	b)	Classify the impacts of noise pollution on humans.	CO1	7 Marks
		(OR)		
2.	a)	What are the various causes of Air pollution?	CO1	7 Marks
	b)	Analyze the behavior of plumes under different lapse rate.	CO1	7 Marks

UNIT-II

3.	a)	Write an account of causes and control methods of air pollutants.	CO2	7 Marks
	b)	Discuss in detail about harmful effects of air pollutants on materials.	CO2	7 Marks
		(OR)		
4.	a)	Explain the working principle of Electrostatic Precipitator with a neat sketch. What are its advantages and disadvantages?	CO2	7 Marks
	b)	With neat sketch, explain working principle of cyclones.	CO2	7 Marks

UNIT-III

5.	a)	What are the causes, sources and effects of water pollution?	CO3	7 Marks
	b)	Differentiate between surface and ground water quality.	CO3	7 Marks
		(OR)		
6.	a)	Write the drinking water quality standards as per IS10500**:**2012.	CO3	7 Marks
	b)	Write short notes on aeration of water.	CO3	7 Marks

UNIT-IV

7.		List out and explain the effects of soil pollutants which are considered as important.	CO4	14 Marks
		(OR)		
8.	a)	What are the measures to be taken to prevent soil pollution?	CO4	7 Marks
	b)	Differentiate between organic and synthetic fertilizer.	CO4	7 Marks

UNIT-V

9.	a)	What are the different methods of solid waste disposal? Explain the method of Composting.	CO5	7 Marks
	b)	Write a detailed note on solid waste management.	CO5	7 Marks
		(OR)		
10.		List out the various types of solid wastes generated in your locality. Select and explain suitable techniques to control solid wastes.	CO5	14 Marks

CODE No.: 16BT60118 SVEC-16

Roll No. | | | | | | | | | | |

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations January – 2022

RURAL TECHNOLOGY

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Explain role of technology in improving rural infrastructure.	CO1	14 Marks
		(OR)		
2.		Explain role of NABARD and CSIR in rural development.	CO1	14 Marks

UNIT-II

3.	a)	Fossil fuels will not support rising human needs on a long term anymore because of their faster consumption rates. What is the immediate action to be initiated to meet our energy needs? Suggest any two options in Indian context and their advantages.	CO2	7 Marks
	b)	Rural India is rich in biomass. Elaborate on the judicious use of the available biomass to meet the agricultural and energy needs of the villages.	CO4	7 Marks
		(OR)		
4.	a)	What is meant by 3 'R's? Explain the advantages of 3 R principle	CO1	7 Marks
	b)	Write in detail about any three types of alternative sources of energy.	CO2	7 Marks

UNIT-III

5.	a)	Explain how tissue culture is employed in vegetative propagation of nursery plants. State the role of nurseries in agro-forestry activities.	CO2	7 Marks
	b)	Write notes on any two agro-based technologies that contribute to economic development of the villages.	CO6	7 Marks
		(OR)		
6.		Discuss foods and agro based technologies which will give employment and profits to community.	CO4	14 Marks

UNIT-IV

7.	a)	What are Biofertilizers? Why are they superior to chemical fertilizers? Although organic farming is an age-old practice, why is it becoming difficult now to adopt the same? Give 2 reasons.	CO6	7 Marks
	b)	Central and State governments have contributed significantly to rural health by allocating funds for toilet construction to every household. Do you think 100% ODF (Open Defecation Free) has been achieved? If not, give any two reasons. Suggest two measures to achieve the target	CO4	7 Marks
		(OR)		
8.	a)	Explain water purification methods in context of rural suitability and sustainability.	CO5	7 Marks
	b)	Write a detailed note on rain water harvesting.	CO4	7 Marks

UNIT-V

9.		State the role of private sector in provision of employment and education in rural areas.	CO3	14 Marks
		(OR)		
10.		"Information technology" - Role and impact in development in rural areas, analyze clearly.	CO5	14 Marks

CODE No.: 16BT60501 SVEC-16

Roll No. | | | | | | | | | | |

SOFTWARE TESTING

[Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Find out some myths related to software testing and explain them in detail.	CO1	7 Marks
	b)	Differentiate between effective and exhaustive software testing.	CO2	7 Marks
		(OR)		
2.	a)	What are the factors for determining the limit of testing?	CO1	7 Marks
	b)	"Testing should be performed with a mindset of finding bugs. This suspicious strategy (destructive approach) helps in finding more and more bugs". Justify?	CO2	7 Marks
		UNIT-II		
3.	a)	Explain Loop Testing in detail.	CO1	7 Marks
	b)	What is Basis Path Testing? With an example, specify the Steps to Calculate the independent paths.	CO3	7 Marks
		(OR)		
4.	a)	List and explain the elements of State Testing.	CO1	7 Marks
	b)	Write a program to check if a number is prime. Find its basic blocks and compute defs, C-uses and p-uses and draw the def-use graph.	CO4	7 Marks
		UNIT-III		
5.	a)	Describe the need of state table? Explain the procedure for converting state table to a test case.	CO3	7 Marks
	b)	Give Boundary value analysis with an example.	CO2	7 Marks
		(OR)		
6.	a)	Explain the techniques followed for decision table testing with an example.	CO1	7 Marks
	b)	Demonstrate the cause-effect graphing based testing.	CO3	7 Marks
		UNIT-IV		
7.	a)	Explain the process of computing the functional points of a real time project.	CO2	7 Marks
	b)	Analyze the functional point's analysis metrics.	CO2	7 Marks
		(OR)		
8.	a)	What is the role of testing group for conduction of software testing effectively?	CO1	7 Marks
	b)	Discuss the key concepts of Test Organization.	CO1	7 Marks
		UNIT-V		
9.	a)	How to do regression testing? Mention the steps briefly.	CO1	7 Marks
	b)	"Can regression testing be used for measuring the quality of software?". Justify?	CO5	7 Marks
		(OR)		
10.	a)	Explain the need for Automation.	CO1	7 Marks
	b)	Differentiate between Progressive *Vs* Regression Testing.	CO2	7 Marks

CLOUD COMPUTING
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define virtualizations. Explain benefits of virtualizations in enterprises.	CO1	7 Marks
	b)	Write a short note on virtualization technologies.	CO1	7 Marks
		(OR)		
2.	a)	Explain in detail about Hypervisor.	CO1	7 Marks
	b)	Compare and contrast Zen and Virtual Iron.	CO1	7 Marks

UNIT-II

3.	a)	Define cloud computing. Enlist key characteristics of cloud computing.	CO2	7 Marks
	b)	Explain about risks and challenges in cloud computing.	CO2	7 Marks
		(OR)		
4.	a)	List and explain various cloud computing models.	CO2	7 Marks
	b)	Write a note on Cloud Deployment models.	CO2	7 Marks

UNIT-III

5.	a)	Outline Datacenter Technology with an example.	CO3	7 Marks
	b)	Evaluate cloud delivery models.	CO3	7 Marks
		(OR)		
6.	a)	Explain the process of workload distribution in cloud.	CO3	7 Marks
	b)	What is Dynamic Scaling? Explain how applications are scaled in cloud environment.	CO3	7 Marks

UNIT-IV

7.	a)	Compare and Contrast Data , Network and Cloud Security.	CO4	7 Marks
	b)	What are different cloud security solutions?	CO5	7 Marks
		(OR)		
8.		What is Disaster? Explain about Disaster recovery planning and management.	CO5	14 Marks

UNIT-V

9.	a)	Explain SQL Azure & Azure tables.	CO6	7 Marks
	b)	Write a note on Google App Engineer.	CO6	7 Marks
		(OR)		
10.	a)	List the policies of Cloud resource Management (CRM.).	CO6	7 Marks
	b)	What is Amazon S3? Explain in detail.	CO6	7 Marks

SOFTWARE PROJECT MANAGEMENT
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain various objectives used for measurement of software size.	CO1	7 Marks
	b)	Describe five improvements to the basic waterfall process.	CO1	7 Marks
		(OR)		
2.	a)	What is the impact of the documentation and review meetings? Explain about requirements Driven functional decomposition.	CO2	7 Marks
	b)	Compare Iterative and Incremental model to that of waterfall model.	CO2	7 Marks

UNIT-II

3.		Write short notes on: i) Round Trip engineering. ii) Forward Engineering. iii) Reverse engineering.	CO2	14 Marks
		(OR)		
4.	a)	What are the key practices that improve the overall software quality?	CO2	7 Marks
	b)	What are the primary objectives, essential activities and primary evaluation criteria during inception phase? Explain.	CO3	7 Marks

UNIT-III

5.	a)	Discuss about management Artifacts.	CO3	7 Marks
	b)	Explain the significance of software architecture in modern software development process.	CO3	7 Marks
		(OR)		
6.	a)	What are the seven workflows in the lifecycle?	CO3	7 Marks
	b)	What levels of activity take place in these workflows during each of the four phases (Inception, Elaboration, Construction and Transition)?	CO3	7 Marks

UNIT-IV

7.	a)	Write short notes on: i) The iteration planning process. ii) Pragmatic planning.	CO4	7 Marks
	b)	What are three types of joint management reviews? Explain.	CO4	7 Marks
		(OR)		
8.	a)	Discuss about initial operational capability milestone and product release milestone.	CO4	7 Marks
	b)	Define round trip engineering. Explain the concept of round trip engineering and change Management.	CO4	7 Marks

UNIT-V

9.	a)	What is process discriminate? Explain the factors involved in tailoring the process.	CO5	7 Marks
	b)	Explain about next generation software economics.	CO5	7 Marks
		(OR)		
10.	a)	Explain about modern software economics.	CO6	7 Marks
	b)	Discuss in detail about Quality indicators.	CO6	7 Marks

ESTIMATION AND QUANTITY SURVEYING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Estimate the following quantities of main items of work from the plan, section of a residential building by Long wall and Short wall method. CO4 14 Marks
   i) Earth work in excavation.
   ii) Brick work in foundation and Superstructure with deductions.
   iii) R.C.C Slab (M20).
   iv) Flooring.

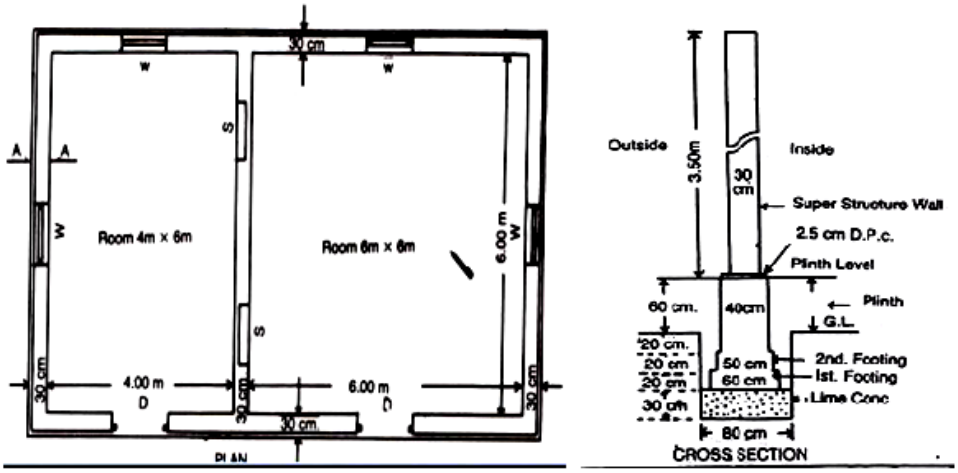

Fig. (1)

(OR)

2. a) Explain detailed estimate and Abstract of estimate with table formats. CO1 8 Marks
   b) Differentiate between long wall and short wall method and center line method with one room example. CO1 6 Marks

UNIT-II

3. Calculate the quantity of earth work on road embankment from chainage 0 to 120 m with the following data. CO4 14 Marks
   Formation width = 10.0 m
   Slope in banking = 2:1
   i) Mid sectional area method. ii) Prismoidal method.

Chainage (m)	0	30	60	90	120
Height of embankment (m)	3.42	2.78	1.62	1.48	1.32

(OR)

4. Prepare a detailed estimate for supplying, laying and jointing 300 mm diameter glazed stone ware pipe line jointing with 1:2 cement mortar. Measurement of trench is 500m x 0.9m x 0.6m. CO2 14 Marks

UNIT-III

5.		Write the detailed specifications for the following items. i) Mosaic flooring. ii) Plastering. iii) Brick work in super structure. iv) RCC work in detail.	CO1	14 Marks

(OR)

6.		List out the units of various items in buildings and also evaluate the cost of the following items of work. i) CC Flooring (1:1:3) with 20 mm thick. ii) Plain cement concrete (1:4:8) for bed concrete. iii) Plastering in CM (1:3) with 12 mm thick for ceiling.	CO2	14 Marks

UNIT-IV

7.		Explain the different types of contract systems. Explain any two methods with their advantages and disadvantages.	CO3	14 Marks

(OR)

8.	a)	What is tender? Explain briefly principles of tendering.	CO1	8 Marks
	b)	Summarize the contents of contract document.	CO1	6 Marks

UNIT-V

9.	a)	Explain the concept of sinking fund.	CO1	4 Marks
	b)	A leasehold property is to produce a net income of Rs.7000/- per annum for the next 40 years. Estimate the value of the property. Assume that the owner requires a return of 8.5% on his capital and that a sinking fund to replace the capital is also to be accumulated at 6%.	CO2	10 Marks

(OR)

10.	a)	Briefly explain the different methods of valuation.	CO1	7 Marks
	b)	Define the term depreciation and explain method of calculating depreciation.	CO3	7 Marks

CODE No.: 16BT70102 SVEC-16

Roll No. | | | | | | | | | | |

GEOSPATIAL TECHNOLOGIES
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the following. i) Types of aerial photographs. ii) Geometry of aerial photographs.	CO1	8 Marks
	b)	Explain the role of ground controls in aerial photographs.	CO1	6 Marks
		(OR)		
2.		What is photo mosaic? Discuss the methods used for mosaic construction.	CO1	14 Marks

UNIT-II

3.	a)	Discuss elements of remote sensing.	CO2	7 Marks
	b)	Compare the Spectral reflectance characteristics of vegetation and soil.	CO2	7 Marks
		(OR)		
4.	a)	List the sensor characteristics of LISS and PAN.	CO2	6 Marks
	b)	Define resolution. Explain any three of them.	CO2	8 Marks

UNIT-III

5.	a)	Define GIS? What are the GIS categories?	CO2	7 Marks
	b)	What are the fundamental operations of GIS?	CO2	7 Marks
		(OR)		
6.		Summarize the various map projections.	CO3	14 Marks

UNIT-IV

7.	a)	Explain how spatial data can be entered into GIS.	CO4	7 Marks
	b)	Explain digitization.	CO4	7 Marks
		(OR)		
8.		Classify the segments of GPS. Describe them briefly.	CO6	14 Marks

UNIT-V

9.		Justify the GIS as a tool for flood and drought impact assessment and monitoring.	CO7	14 Marks
		(OR)		
10.		Explain how watershed management for sustainable development can be done using GIS tools.	CO7	14 Marks

CODE No.: 16BT70103 SVEC-16

RAILWAY, AIRPORT AND HARBOUR ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	How railway development has been taken place in India? List out advantages of railways.	CO1	7 Marks
	b)	What are the requirements of an ideal rail joint and also explain various types of rail joints with neat sketches.	CO1	7 Marks
		(OR)		
2.	a)	Write a short note on different methods for welding of rails.	CO5	7 Marks
	b)	If the wheel base of a vehicle moving on a BG track is 6m, the diameter of wheel is 1.5m and depth of flange below the top of rail is 3.17cm. Determine the extra width required to be provided on gauge, if the radius of the curve is 170m.	CO6	7 Marks

UNIT-II

3.	a)	Describe in detail about plate laying techniques.	CO5	7 Marks
	b)	Explain various classifications of railway stations.	CO1	7 Marks
		(OR)		
4.		Discuss in detail about the modern methods of maintenance of railway tracks.	CO4	14 Marks

UNIT-III

5.	a)	A new airport is planned to be constructed in Andhra Pradesh for which list the factors to be considered for selection of site.	CO3	7 Marks
	b)	Explain about various aircraft characteristics.	CO1	7 Marks
		(OR)		
6.	a)	Explain the importance of airport planning.	CO1	7 Marks
	b)	Discuss in detail regarding airport lighting.	CO1	7 Marks

UNIT-IV

7.		The runway length required for landing at sea level is standard atmospheric conditions is 3000m. Runway length required for take-off at a level site at sea level in standard atmospheric conditions is 2500m. Aerodrome reference temperature is 25^0C and that of the standard atmospheric at aerodrome elevation of 150m is 14.025^0C. If the effective runway gradient is 0.5 percent, determine the runway length to be provided.	CO3	14 Marks
		(OR)		
8.	a)	Write the detail the various design elements to be considered in taxiway laying as per IS standards.	CO8	7 Marks
	b)	List out the characteristics and requirements of airport drainage. Explain in detail.	CO1	7 Marks

UNIT-V

9.	a)	Discuss various factors to be considered for selecting a suitable site for construction of a port.	CO1	7 Marks
	b)	Explain briefly about different types of harbors with neat sketch.	CO1	7 Marks
		(OR)		
10.	a)	Discuss in detail about the environmental concern required for port operations.	CO7	7 Marks
	b)	Discuss different types of docks.	CO1	7 Marks

CODE No.: 16BT70106 SVEC-16

ENVIRONMENTAL IMPACT ASSESSMENT AND MANAGEMENT
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	What are the basic concepts of EIA? Explain.	CO1	7 Marks
	b)	How an initial environmental examination helps for a full scale EIA?	CO2	7 Marks
		(OR)		
2.	a)	Explain the different characteristics that the impact evaluation methods should have.	CO5	7 Marks
	b)	Describe the elements of EIA.	CO2	7 Marks
		UNIT-II		
3.	a)	Describe Environmental media Quality Index method in detail.	CO5	7 Marks
	b)	Describe the matrix method of EIA.	CO1	7 Marks
		(OR)		
4.	a)	Give a brief account on cost benefit analysis of EIA.	CO2	7 Marks
	b)	Discuss about the need of EIA for engineering projects.	CO1	7 Marks
		UNIT-III		
5.	a)	Draw the schematic diagram for conceptual approach to the study focused on surface water environment impacts.	CO4	7 Marks
	b)	Write a detailed note on 'compilation of water Quantity-Quality information'.	CO3	7 Marks
		(OR)		
6.		Explain methodology for the assessment impacts on health and safety due to adverse changes in soil environment.	CO5	14 Marks
		UNIT-IV		
7.	a)	Write the steps involved in the EIA assessment of air environment.	CO3	7 Marks
	b)	Explain the development activities on vegetation with example.	CO4	7 Marks
		(OR)		
8.	a)	Differentiate between deforestation and forest degradation.	CO6	7 Marks
	b)	Explain the common causes of deforestation around the world.	CO4	7 Marks
		UNIT-V		
9.	a)	What is meant by Environmental Audit? What are the different objectives of it? Explain.	CO6	7 Marks
	b)	Discuss about the Water Act and the Air Act.	CO7	7 Marks
		(OR)		
10.	a)	Write a short note on Environmental Legislation.	CO8	7 Marks
	b)	Write a short note on Post Audit activities.	CO8	7 Marks

HIGHWAY CONSTRUCTION AND MAINTENANCE
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Mention the steps for construction of new highway on embankment and cutting.	CO1	7 Marks
	b)	Explain the important functions of highway embankment and sub grade in the performance of highway construction.	CO1	7 Marks
		(OR)		
2.	a)	Write a note on importance and construction of drainage layer for cement concrete pavement and dry lean concrete sub base course.	CO2	7 Marks
	b)	Explain with neat sketches, the method of construction of contract joints and expansion joints.	CO1	7 Marks

UNIT-II

3.	a)	Explain the principle application and method of construction of mechanical soil stabilization.	CO1	7 Marks
	b)	Discuss the principles and scope of soil cement stabilization.	CO1	7 Marks
		(OR)		
4.	a)	Mention the advantages and limitations of using soil cement in different pavement layer.	CO5	7 Marks
	b)	Discuss how soil bitumen mix id designed and stabilized road is constructed.	CO4	7 Marks

UNIT-III

5.	a)	Specify the details of geometrics design and standards of hill roads.	CO4	7 Marks
	b)	Mention the importance of sub surface drainage on hill roads.	CO5	7 Marks
		(OR)		
6.	a)	Design the cross section and longitudinal slope of trapezoidal drain assume bottom width of section to be 1m and cross slope to be 1 vertical and 1.6 horizontal. The allowable velocity of flow in the drain is 2.7m/sec and manning's roughness coefficient is 0.02. The maximum quantity of expected water in an open longitudinal drain on clayey soil is $3m^3$/sec	CO3	7 Marks
	b)	Discuss the maintenance problems on hill roads.	CO4	7 Marks

UNIT-IV

7.		Discuss the uses of highway construction equipments i.e bulldozer, grader, scraper	CO1	14 Marks
		(OR)		
8.	a)	Explain the importance of excavators, trucks and hauling equipments in highway construction.	CO1	7 Marks
	b)	Discuss about the equipment used in paving a cement concrete pavement.	CO1	7 Marks

UNIT-V

9.	a)	Explain the importance of preventive maintenance of road works.	CO7	7 Marks
	b)	Write a detailed note on premature failure of flexible pavement.	CO6	7 Marks
		(OR)		
10.	a)	Mention the causes of distress in CC pavements	CO6	7 Marks
	b)	Discuss the special maintenance and care required for road side planting.	CO6	7 Marks

CODE No.: 16BT70114 SVEC-16

Roll No. | | | | | | | | | | |

INDUSTRIAL WASTEWATER TREATMENT

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the effect of waste water on self purification capacity of streams.	CO1	7 Marks
	b)	Write a note on characteristics of industrial sewage.	CO1	7 Marks
		OR)		
2.	a)	A stream having a flow of 1 m^3/s and BOD 4 mg/l is saturated with DO. It receives an effluent discharge of 0.25m^3/s having BOD 20 mg/l and DO 4 mg/l. If the average velocity of flow is 0.15 m/s, calculate the DO deficit at points 20 km and 40 km downstream. Assume that the temperature is 20°C through out and BOD is measured at 5 days. Take rate constants for effluent and stream as 0.12 and 0.30 per day respectively, and saturation DO at 20°C as 9.17 mg/l.	CO4	7 Marks
	b)	Write the ISI limits for disposal of effluent into inland surface water and public sewers.	CO8	7 Marks

UNIT-II

3.	a)	Write short note on: i) Equalization. ii) Neutralization. iii) screen chamber. iv) Grit chamber.	CO5	7 Marks
	b)	Distinguish between aerobic, anaerobic and facultative micro-organisms and their role in the biological treatment.	CO1	7 Marks
		(OR)		
4.	a)	Explain the basic operations involved in the activated sludge process with the help of flow diagram.	CO1	7 Marks
	b)	Design a conventional activated sludge plant to treat settled domestic sewage for the following data: i) Population= 10,000 ii) Sewage contribution= 160 lpcd iii) Settled sewage BOD_5 = 200 mg/l iv) Effluent BOD_5 required= 20 mg/l v) F/M= 0.25 vi) MLSS= 3000 mg/l.	CO3	7 Marks

UNIT-III

5.	a)	Explain the process of nitrogen removal by nitrification and denitrification.	CO5	7 Marks
	b)	Write a detail note on the removal of phosphate by anaerobic filters.	CO5	7 Marks
		(OR)		
6.	a)	Write short notes on: i) Thermal reduction. ii) Air stripping. iii) Membrane systems.	CO5	7 Marks
	b)	List out the toxic chemicals present in any industrial wastewater. Explain Oxidation and reduction system to remove toxic chemicals.	CO4	7 Marks

UNIT-IV

7.	a)	Explain the sources and characteristics of wastewater of pulp and paper industry.	CO8	7 Marks
	b)	Explain the methods of treatment and disposal of wastewater from dairy industry.	CO8	7 Marks

(OR)

8.	a)	Draw an outline of sugar plant and explain the stages involved in treatment plant.	CO8	7 Marks
	b)	Discuss in brief the methods of treating wastewater from distillery industry.	CO8	7 Marks

UNIT-V

9.	a)	What are the analytical methods recommended for characterization of wastewater and explain any one method.	CO5	7 Marks
	b)	Write short note on: i) Waste volume and strength reduction. ii) Water conservation.	CO5	7 Marks

(OR)

10.		Discuss the hierarchy of waste management techniques with examples.	CO5	14 Marks

GROUND IMPROVEMENT TECHNIQUES

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the factors to be considered in the selection of the best technique for ground improvement.	CO2	7 Marks
	b)	Briefly explain methods for physical ground improvement and chemical ground improvement.	CO1	7 Marks
		(OR)		
2.	a)	List the various methods of ground improvement.	CO1	7 Marks
	b)	Discuss methods to improve performance of Alluvial Soils.	CO5	7 Marks

UNIT-II

3.	a)	Explain Vacuum Dewatering method in detail. Discuss the environmental effect of Vacuum Dewatering.	CO7	7 Marks
	b)	List the available dewatering methods for fine soils. Explain any one method in detail.	CO2	7 Marks
		(OR)		
4.	a)	Explain Electro-Kinetic Dewatering system in detail.	CO4	7 Marks
	b)	Explain well point system for dewatering of soil.	CO1	7 Marks

UNIT-III

5.	a)	Discuss the principles of In-situ soil densification. List the various methods of In-situ densification of granular soils.	CO1	7 Marks
	b)	Discuss the thermal methods for densification of cohesive soils.	CO4	7 Marks
		(OR)		
6.	a)	Explain in detail about Dynamic Compaction and Vibro-Compaction.	CO4	7 Marks
	b)	Discuss in detail about Blasting and Granular piles for densification of soils.	CO4	7 Marks

UNIT-IV

7.	a)	What are various soil stabilization techniques? Discuss their suitability with respect to type of soil.	CO1	7 Marks
	b)	Write short notes on soil stabilization using Grouting.	CO4	7 Marks
		(OR)		
8.	a)	Write short notes on Mechanical Stabilization and Bitumen Stabilization.	CO4	7 Marks
	b)	Write short notes on types of grouts, injection methods and Grout monitoring.	CO1	7 Marks

UNIT-V

9.	a)	Explain the concept of Soil Reinforcement. List the materials suitable to be used as Soil Reinforcement. Discuss the internal safety aspects of Reinforced Earth Walls.	CO6	7 Marks
	b)	Explain the components and applications of Reinforced Earth.	CO5	7 Marks
		(OR)		
10.	a)	Discuss the construction sequence of a Reinforced Earth wall with vertical faces.	CO3	7 Marks
	b)	Discuss one application each of Geomembrane and Geogrid reinforcements.	CO5	7 Marks

REHABILITATION AND RETROFITTING OF STRUCTURES

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Explain the various causes for deterioration of concrete structures.	CO1	7 Marks
	b)	Explain the various categories of inspection based on method and Interval.	CO1	7 Marks
		OR)		
2.	a)	Distinguish between repair and rehabilitation.	CO1	7 Marks
	b)	Illustrate in detail the six facets of maintenance.	CO1	7 Marks
		UNIT-II		
3.	a)	Explain the parameters affecting the quality of concrete Construction.	CO2	7 Marks
	b)	Explain the components of quality assurance for building.	CO2	7 Marks
		(OR)		
4.	a)	Explain the factors Influencing Strength of Concrete.	CO2	7 Marks
	b)	Define durability of concrete. How much importance should be given for durability in design and construction?	CO2	7 Marks
		UNIT-III		
5.	a)	Demonstrate the arrangement of vacuum treatment of concrete.	CO3	7 Marks
	b)	Explain Polymer Impregnated Concrete.	CO3	7 Marks
		(OR)		
6.	a)	Ilustrate Polymer Concrete (PC) in detail .	CO3	7 Marks
	b)	Discuss the procedure of properties, manufacture and uses of fiber reinforced concrete.	CO3	7 Marks
		UNIT-IV		
7.	a)	Explain the process of epoxy injection. Also explain routing and scaling with sketches.	CO4	7 Marks
	b)	Describe the preliminary procedures in demolition of a structure.	CO4	7 Marks
		(OR)		
8.	a)	Describe in detail about the impulsion method of demolition of structures.	CO4	7 Marks
	b)	Discuss the procedure of fusion bonded epoxy coating of rebars with a simple sketch. Also give the advantages and disadvantages.	CO4	7 Marks
		UNIT-V		
9.	a)	Explain the techniques available for protection of rebar.	CO5	7 Marks
	b)	Illustrate about polymer coating for rebars during repair.	CO5	7 Marks
		(OR)		
10.	a)	Write short notes on Shoring and Underpinning.	CO5	7 Marks
	b)	Discuss about Epoxy bonded epoxy motor.	CO5	7 Marks

POWER SYSTEM OPERATION AND CONTROL
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	The input –output curve characteristics of three units are: $F_1=750+6.49\ P_{G1}+0.0035P_{G1}^2$; $F_2=870+5.75P_{G2}+0.0015P_{G2}^2$; $F_3=620+8.56\ P_{G3}+0.001P_{G3}^2$; The fuel cost of unit 1, 2, 3 is 1.0 Rs / Mbtu. Total load is 800 MW. Calculate the economic load dispatch for a load is increased to 880 MW.	CO4	8 Marks
	b)	Derive relevant equations and state the significance and role of penalty factor.	CO1	6 Marks

(OR)

2.	a)	Derive coordination equation for economic dispatch including losses, in the power system. Give steps for economic dispatch calculation. Neglecting losses.	CO1	8 Marks
	b)	What are B- coefficients? Derive them.	CO1	6 Marks

UNIT-II

3.		Describe the hydro-thermal economic load scheduling. Derive the necessary equations.	CO2	14 Marks

(OR)

4.	a)	In a two plant operation system, the hydro plant is operated for 10 hrs, during each day and the steam plant is to operate all over the day. The characteristics of the steam and hydro plants are: $CT = 0.04\ PGT^2 + 30\ PGT + 10$ Rs./hr $WH = 0.12\ PGH^2 + 30\ PGH\ m^3/sec$ When both plants are running, the power owned from steam plant to load is 150 MW and the total quantity of water is used for the hydro plant operation during 10 hrs is $150 \times 10^6 m^3$. Determine the generation of hydro plant and cost of water used. Neglect the transmission losses.	CO4	10 Marks
	b)	Discuss the disadvantages of operation of power plants with hydro thermal combinations.	CO1	4 Marks

UNIT-III

5.		Discuss in detail, the priority list method for the solution of unit commitment problem with an example.	CO2	14 Marks

(OR)

6.	a)	Explain dynamic programming method using full load average production cost. State the merits and demerits.	CO1	5 Marks
	b)	Using the Dynamic programming method, how do you find the most economical combination of the units to meet a particular load demand?	CO2	9 Marks

UNIT-IV

7.	a)	Design a static var compensator for a low voltage distribution system with the following specifications, System Voltage=400V Frequency, f=50Hz Coil inductance L=5.37mH The inductor saturates at 950A and settles of 1.8mH at 1800A. Compensation is required over a range of -80KVAR to +30KVAR per phase.	CO3	8 Marks
	b)	Brief the merits of uncompensated transmission lines over compensated transmission lines.	CO2	6 Marks

(OR)

8.	a)	Compare the different types of compensating equipment for transmission system.	CO2	5 Marks
	b)	With a neat sketch, explain how a Series compensation of transmission system.	CO5	9 Marks

UNIT-V

9.	a)	What are the components of speed governor system of an alternator? Derive a transfer function and sketch a block diagram.	CO3	9 Marks
	b)	"Load frequency and economic dispatch control of the control area power system play a vital role", Justify with a neat diagram.	CO1	5 Marks

(OR)

10.	a)	With a neat block diagram, explain the single area load frequency control system.	CO3	6 Marks
	b)	Explain the effect of integral gain on the performance of load frequency control in two area load frequency control.	CO6	8 Marks

SWITCHGEAR AND PROTECTION
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Analyze the difference between the fuse and relay with an example.	CO2	7 Marks
	b)	Explain the construction and working of directional over current relay and its use.	CO1	7 Marks
		(OR)		
2.	a)	How amplitude comparator is used in the protective relay system? Explain with neat sketch.	CO2	7 Marks
	b)	List various advantages and disadvantages microprocessor based relays and draw its basic block diagram.	CO1	7 Marks
		UNIT-II		
3.	a)	Explain the construction and operation air blast circuit breaker with neat sketch.	CO1	7 Marks
	b)	Describe the construction and working of maximum oil circuit breaker with neat sketch and its merits.	CO1	7 Marks
		(OR)		
4.	a)	Explain the various types of fuses and draw its characteristics.	CO1	8 Marks
	b)	Explain the following terms. i) Current chopping. ii) Resistance switching.	CO1	6 Marks
		UNIT-III		
5.	a)	The neutral point of a three phase 20MVA, 11kV alternator is earthed through a resistance of 5Ω; the relay is set to operate when there is an out of balance current of 1.5A. The CT's have a ratio of 1000/5A. What is the percentage of winding protected? Also calculate the earthing resistance required to protect 90% of the winding.	CO3	7 Marks
	b)	Explain the restricted earth fault protection in detail.	CO1	7 Marks
		(OR)		
6.	a)	How to design current transformer ratios? Explain in detail.	CO2	7 Marks
	b)	Determine the ratios of CT's to be used on high voltage side, if a 3-phase transformer rated for 33/6.6kV is Y-Δ connected and the protection current transformers on the low voltage side have a ratio of 300/5A.	CO4	7 Marks
		UNIT-IV		
7.	a)	Discuss and compare briefly various bus bar arrangements in a power system.	CO1	7 Marks
	b)	Explain about carrier current protection of transmission lines with a neat sketch.	CO1	7 Marks
		(OR)		
8.	a)	What are surge absorbers and how do they differ from surge diverter?	CO1	7 Marks
	b)	What is the basic impulse level? Explain their significance in power system studies.	CO1	7 Marks

UNIT-V

9.	a)	Explain about effective and resistance grounding with diagrams.	CO1	8 Marks
	b)	Suggest a suitable grounding method for protecting the equipment in the house hold and industrial applications.	CO6	6 Marks

(OR)

10.	a)	Explain the construction and working of Peterson coil grounding and its use.	CO1	7 Marks
	b)	Differentiate the advantages of grounding system over ungrounded systems.	CO2	7 Marks

ENERGY CONSERVATION AND MANAGEMENT
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the different steps that are considered for detailed Energy Audit.	CO1	7 Marks
	b)	Define the terms energy index, pie charts and cost index in the context of energy efficiency.	CO1	7 Marks
		(OR)		
2.	a)	What are the best avenues to conserve energy for factories?	CO2	8 Marks
	b)	Define energy management and explain the importance of energy management.	CO1	6 Marks

UNIT-II

3.		What do you mean by energy conservation? Explain method of energy conservation used in industries.	CO4	14 Marks
		(OR)		
4.		Explain the energy conservation techniques used to reduce energy cost.	CO3	14 Marks

UNIT-III

5.	a)	Explain the concept of energy efficient motors and write the advantages and disadvantages of energy efficient motors.	CO5	8 Marks
	b)	Write the features of energy efficient motors.	CO1	6 Marks
		(OR)		
6.	a)	Explain any two methods adopted in energy efficient lighting systems.	CO5	7 Marks
	b)	List and explain energy savings opportunities in industrial lighting systems.	CO4	7 Marks

UNIT-IV

7.	a)	Write the different types of energy audit instruments and explain any two energy audit instruments.	CO5	7 Marks
	b)	Explain the significance of data logger and where there are used.	CO3	7 Marks
		(OR)		
8.	a)	Write the merits and demerits of time value of money.	CO1	7 Marks
	b)	Explain the principle of operation of thermo couple.	CO1	7 Marks

UNIT-V

9.	a)	Explain the terms: i) Peak clipping. ii) Peak shifting. iii) Valley filling.	CO1	7 Marks
	b)	Briefly explain the DSM planning and implementation.	CO2	7 Marks
		(OR)		
10.	a)	Write a note on Demand side management issues.	CO2	7 Marks
	b)	Explain multi-utility power exchange model.	CO1	7 Marks

FLEXIBLE AC TRANSMISSION SYSTEMS
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Derive the expression for active as well as reactive power flow in a lossless transmission line and draw its necessary phasor diagram.	CO2	7 Marks
	b)	Discuss importance of controllable parameters in transmission systems.	CO2	7 Marks
		(OR)		
2.	a)	Identify various stability issues that limit the transmission capabilities.	CO3	7 Marks
	b)	Explain the objective of FACTS controllers in the power system network.	CO1	7 Marks

UNIT-II

3.	a)	Explain significance of reactive power in electrical power transmission lines.	CO1	7 Marks
	b)	Describe the control of reactive power in electrical power transmission lines.	CO2	7 Marks
		(OR)		
4.	a)	How shunt compensation effects on power transfer capacity of transmission line?	CO4	7 Marks
	b)	Discuss the specification of the load compensation.	CO2	7 Marks

UNIT-III

5.	a)	Discuss the working and characteristics of TCR with relevant diagrams.	CO2	7 Marks
	b)	How shunt compensation improve transient stability?	CO4	7 Marks
		(OR)		
6.	a)	Briefly describe how transient is improved using STATCOM.	CO4	7 Marks
	b)	Differentiate SVC and STATCOM.	CO2	7 Marks

UNIT-IV

7.	a)	Discuss the working and characteristics of TCSC with relevant diagrams.	CO1	7 Marks
	b)	Design a block diagram for functional control of GCSC.	CO3	7 Marks
		(OR)		
8.	a)	Describe the working and characteristics of SSSC with relevant diagrams.	CO1	7 Marks
	b)	How do you improve transient stability using static series compensation?	CO4	7 Marks

UNIT-V

9.	a)	Describe transient stability enhancement can be solved by using phase angle regulators.	CO5	7 Marks
	b)	Configure thyristor tap changer for continuous and discrete control of TCVR and describe.	CO4	7 Marks
		(OR)		
10.	a)	Design the basic structure of UPFC.	CO3	7 Marks
	b)	Discuss the basic working principle of IPFC.	CO2	7 Marks

POWER SYSTEM AUTOMATION
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Illustrate the latest developments of operation and control in power system.	CO6	7 Marks
	b)	Describe the Operator activities in power system control.	CO1	7 Marks
		(OR)		
2.	a)	List and explain about the elements of computer control system.	CO2	7 Marks
	b)	Explain about time and mode decomposition in power system operation and control.	CO1	7 Marks

UNIT-II

3.	a)	Define SCADA and state its desirable properties.	CO1	7 Marks
	b)	Explain SCADA architecture in detail.	CO3	7 Marks
		(OR)		
4.	a)	Define RTU, HMI and IED.	CO1	7 Marks
	b)	Explain SCADA systems in operation and control of interconnected power system.	CO4	7 Marks

UNIT-III

5.	a)	List the advantages of substation automation.	CO2	7 Marks
	b)	Describe the substation automation architectures with neat sketches.	CO3	7 Marks
		(OR)		
6.		Illustrate about various equipment used in new integrated digital substation.	CO2	14 Marks

UNIT-IV

7.	a)	What are the hardware and software requirements of distribution automation?	CO2	7 Marks
	b)	State and explain the need for Distribution automation.	CO1	7 Marks
		(OR)		
8.	a)	List the advanced analytical Distributed Management System applications.	CO5	7 Marks
	b)	Explain about the Distributed Management System framework integration with subsystem.	CO5	7 Marks

UNIT-V

9.	a)	What is the need of deregulation in power system and also list its advantages?	CO1	7 Marks
	b)	Describe the concept of Power Exchange in power system restructuring.	CO1	7 Marks
		(OR)		
10.	a)	Explain various ISO (Independent System Operator) models.	CO1	7 Marks
	b)	Explain the various transmission pricing methods in power system restructuring.	CO5	7 Marks

POWER QUALITY
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define power quality and state the various reasons for poor power quality.	CO1	7 Marks
	b)	Describe about CBEMA and ITIC curves.	CO5	7 Marks
		(OR)		
2.		Discus the responsibilities of power suppliers and power users to maintain the power Quality in the grid connected power system	CO6	14 Marks

UNIT-II

3.	a)	Differentiate impulsive and oscillatory transients.	CO2	7 Marks
	b)	Differentiate among over voltages, under voltages, sags and swells in power system.	CO2	7 Marks
		(OR)		
4.	a)	Explain various sources of voltage sags and interruptions in power system.	CO1	7 Marks
	b)	Discus various methods of voltage sag mitigation methods.	CO4	7 Marks

UNIT-III

5.	a)	Differentiate transients versus harmonic distortion.	CO2	7 Marks
	b)	Discuss about harmonic sources from commercial loads.	CO3	7 Marks
		(OR)		
6.		Explain the design aspects of passive harmonic filter and state the standards on Harmonics.	CO3	14 Marks

UNIT-IV

7.	a)	Explain about various power quality measuring instruments.	CO5	7 Marks
	b)	State the significance and objectives of power quality monitoring.	CO1	7 Marks
		(OR)		
8.	a)	Describe historical perspective of power quality measuring instruments.	CO1	7 Marks
	b)	Explain assessment of power quality measurement data.	CO2	7 Marks

UNIT-V

9.	a)	Discuss the distributed generation connection requirements and impacts on the network.	CO6	7 Marks
	b)	Explain the interconnection and optimal location of DG in power system network.	CO6	7 Marks
		(OR)		
10.	a)	Describe various protection issues for distributed generation.	CO4	7 Marks
	b)	Explain various technologies for distributed generation.	CO1	7 Marks

SMART GRID TECHNOLOGY
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write a short note on "need of electricity". Draw the power distribution diagram defining all the sections of power grid.	CO1	7 Marks
	b)	Differentiate between resilience grid and self-healing grid.	CO1	7 Marks
		(OR)		
2.	a)	Describe the opportunities and challenges related to smart grid.	CO1	7 Marks
	b)	Discuss about present development in smart grid considering any one case study.	CO1	7 Marks

UNIT-II

3.	a)	Give the functions of Distribution management system.	CO2	7 Marks
	b)	Briefly discuss about Wide area monitoring system and its applications.	CO2	7 Marks
		(OR)		
4.		Develop functional models of : i) Substation automation. ii) Feeder automation.	CO2	14 Marks

UNIT-III

5.	a)	Compare conventional metering with smart metering.	CO3	7 Marks
	b)	Give importance of HAN in smart grid.	CO3	7 Marks
		(OR)		
6.		Discuss about various services provided by Demand side Integration in smart grid environment.	CO3	14 Marks

UNIT-IV

7.	a)	Why is it necessary to develop power quality monitoring systems in modern electrical grids with renewable interfacing?	CO4	7 Marks
	b)	Describe the functions of Electromagnetic Compatibility (EMC) in smart grids.	CO4	7 Marks
		(OR)		
8.		Develop schematic diagrams for hardware and software requirements for web based power quality monitoring systems.	CO4	14 Marks

UNIT-V

9.		Compare wired and wireless communication channels for smart grid applications.	CO5	14 Marks
		(OR)		
10.		Explain any four Networks used for communication in smart grid environment.	CO5	14 Marks

SOFT COMPUTING TECHNIQUES

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Illustrate the advantages of Neural Network and explain different disciplinary point of Neural Network.	CO1	7 Marks
	b)	Explain the concept of Biological Neural Network and demonstrate with a suitable example.	CO1	7 Marks
		OR)		
2.	a)	Describe the basic models of ANN.	CO1	7 Marks
	b)	Demonstrate the concept of McCulloch Pitts Neural Network Model and explain with a suitable example.	CO1	7 Marks

UNIT-II

3.	a)	Illustrate the architecture of Back propagation Network and describe the process with a flowchart.	CO2	6 Marks
	b)	Solve OR function with binary inputs and bipolar targets using perceptron training algorithm up to 5 epochs.	CO2	8 Marks
		(OR)		
4.	a)	List and explain different activation functions for BAM.	CO3	7 Marks
	b)	Analyze the concept of Hamming Distance and Energy function.	CO3	7 Marks

UNIT-III

5.	a)	Illustrate the Properties of Crisp set and Fuzzy Set.	CO3	7 Marks
	b)	Describe the cardinality of fuzzy relations.	CO3	7 Marks
		(OR)		
6.		Summarize the following: i) Operations of Fuzzy Relations. ii) Fuzzy Cartesian Product.	CO3	14 Marks

UNIT-IV

7.	a)	Illustrate the concept of defuzzification methods.	CO4	6 Marks
	b)	Two Fuzzy relations are given. Find Max-product composition of above two relations	CO4	8 Marks

R	y_1	y_2	y_3
x_1	0.4	0.6	0
x_2	0.9	1	0.1

S	z_1	z_2

IV B.Tech I Semester (SVEC-16) Regular/Supplementary Examinations January - 2022

AUTOMOBILE ENGINEERING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the advantages of front and rear wheel drives?	CO1	7 Marks
	b)	Explain the necessity of Super charger and its working with a neat sketch.	CO2	7 Marks
		(OR)		
2.		Explain construction and working of Fuel Injection Pump with a neat sketch.	CO2	14 Marks

UNIT-II

3.	a)	Explain the working of Coil ignition system with a neat sketch.	CO1	10 Marks
	b)	What are the requirements of a spark plug?	CO1	4 Marks
		(OR)		
4.	a)	What are the advantages and disadvantages of air cooling system?	CO3	5 Marks
	b)	With a neat sketch, explain the working of forced circulation cooling system of automobile.	CO1	9 Marks

UNIT-III

5.	a)	Explain briefly the Bharat stage-V pollution standards.	CO6	7 Marks
	b)	What is a catalytic converter? Explain its importance.	CO5	7 Marks
		(OR)		
6.	a)	Explain briefly the pollution control techniques for CI engines.	CO5	7 Marks
	b)	What are the merits and demerits of Biomass and LPG fuels?	CO4	7 Marks

UNIT-IV

7.	a)	Explain clearly double de-clutching.	CO1	4 Marks
	b)	Explain the working of Centrifugal clutch with a neat sketch.	CO1	10 Marks
		(OR)		
8.	a)	Define the following. i) Castor. ii) Camber. iii) Kingpin Inclination.	CO1	3 Marks
	b)	Explain the working of power steering with a neat sketch.	CO1	11 Marks

UNIT-V

9.	a)	Write short notes on stub axles.	CO1	6 Marks
	b)	Explain the function of full floating and semi-floating axles with the help of neat sketches.	CO1	8 Marks
		(OR)		
10.		Explain construction and working of Master cylinder of hydraulic braking system with a neat sketch.	CO1	14 Marks

FINITE ELEMENT METHOD

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Derive the equations of equilibrium for a three dimensional body. CO1 9 Marks
   b) Explain essential and natural boundary conditions. CO1 5 Marks

(OR)

2. Derive element stiffness matrix and force vectors for one dimensional bar element. CO1 14 Marks

UNIT-II

3. For the two-bar truss shown in Fig.1. Determine the displacements of node 1 and the stress in element 1-3. CO2 14 Marks

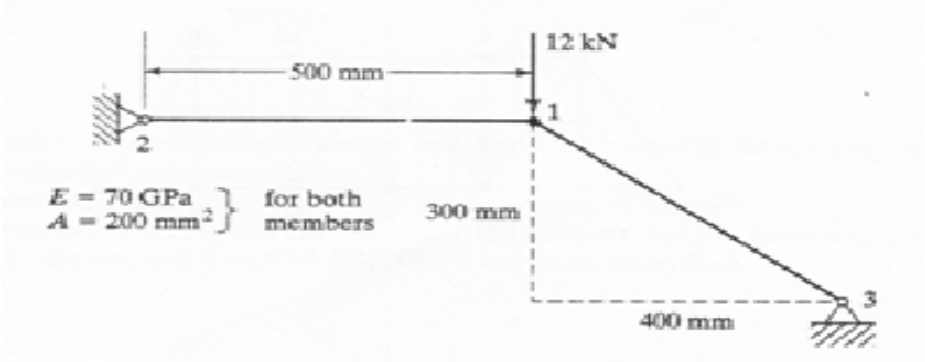

Fig.1

(OR)

4. For the beam and loading shown in fig 2. Determine the slopes at 2 and 3. CO2 14 Marks

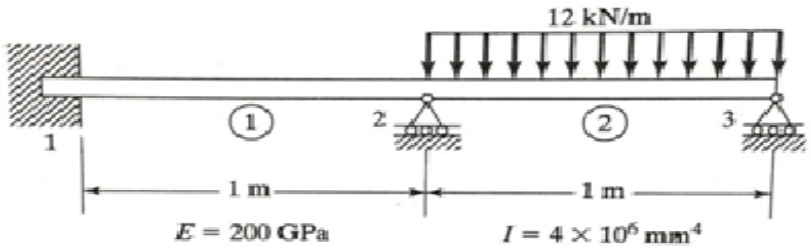

Fig.2

UNIT-III

5. For the triangular element shown in Fig.3.Obtain the strain-displacements relation matrix B and determine the strains εx, εy, and γxy. CO3 14 Marks

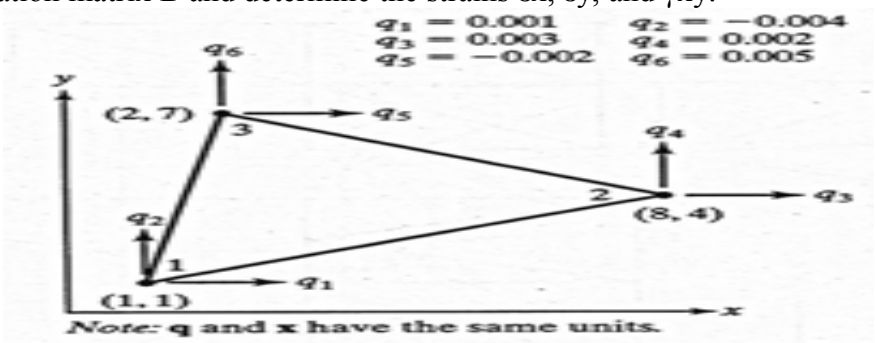

Fig.3

(OR)

6. Derive B matrix for axisymmetric triangular element. CO3 14 Marks

UNIT-IV

7. a) Derive w_1, w_2 and ξ_1, ξ_2 for 2 point formula. CO4 6 Marks

b) Evaluate using two point gauss quadrature. $I = \int_{-1}^{1} \left[3e^x + x^2 + \frac{1}{(x+2)} \right] dx$. CO4 8 Marks

(OR)

8. A composite wall consists of three materials, as shown in Fig.4 the outer temperature is T_o= 20°C.Convection heat transfer takes place on the inner surface of the wall with T_∞ = 800°C and h = 25 W/m^2.°C. Determine the temperature distribution in the wall. CO4 14 Marks

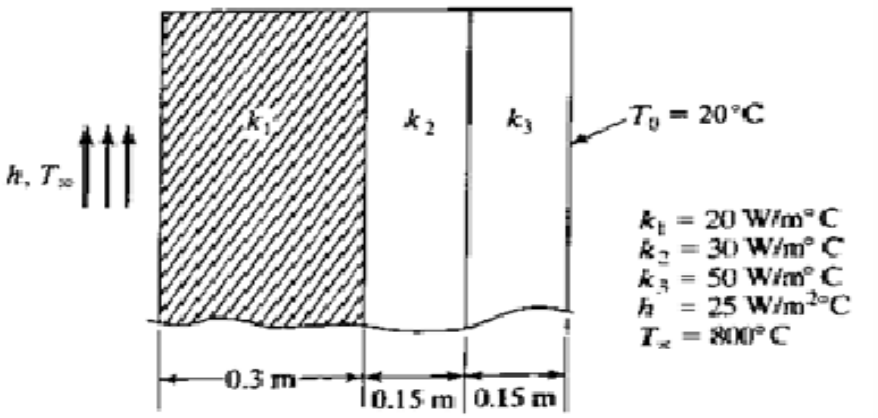

Fig.4

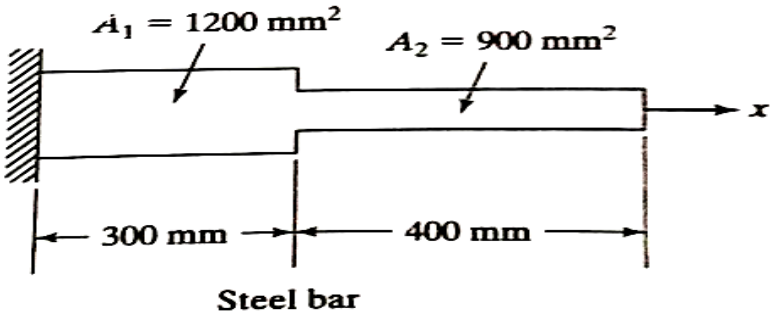
UNIT-V

9. Consider axial vibration of the steel bar shown. Determine the natural frequencies. CO5 14 Marks



Steel bar

(OR)

10. a) State Hamilton principle and explain with an example. CO5 10 Marks

b) Write lumped mass matrix for bar and truss elements. CO5 4 Marks

OPERATIONS RESEARCH
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Solve the following problem through graphically. CO1 14 Marks

Max $Z= 3X_1+2X_2$
S/t $X_1-2X_2 \leq 1$
$X_1+X_2 \geq 3$
$X_1, X_2 \geq 0$

(OR)

2. Solve the following problem through BIG-M method. CO2 14 Marks

Max $Z= 3X_1+2X_2$
S/t $X_1-X_2 \leq 1$
$X_1+X_2 \geq 3$
$X_1, X_2 \geq 0$

UNIT-II

3. A Company has 5 Jobs and 5 Persons to be performed. Time for each Person would take to perform each job is given in the following matrix. How the jobs should be allocated to each person so as to minimize the total time. CO4 14 Marks

Jobs

Persons	A	B	C	D	E
1	2	9	2	7	1
2	6	8	7	6	1
3	4	6	5	3	1
4	4	2	7	3	1
5	4	3	9	5	1

(OR)

4. A Company has 4 Sources which supplies goods to 3 destinations. Monthly Source supplies and destinations demand requirements are shown below. Unit shipping costs are also given in table. Determine the optimum distribution for this company to minimize shipping costs. CO3 14 Marks

Destination

Source	1	2	3	Supply
1	2	7	4	5
2	3	3	1	8
3	5	4	7	7
4	1	6	2	14
Demand	7	9	18	

UNIT-III

5. Solve the following game whose payoff matrix for Player-A is given below and Find the solution to the game. CO6 14 Marks

	Player-B				
Player-A	-2	0	0	5	3
	3	2	1	2	2
	-4	-3	0	-2	6
	5	3	-4	2	-6

(OR)

6. Solve the following game whose payoff matrix for player-A is given below and find the solution to the game. CO6 14 Marks

	Player-B	
Player-A	5	1
	3	4

UNIT-IV

7. Draw Network diagram and find Critical path, Project duration, Slack for all events, Probability of completing the projection 41 days from the following data. CO5 14 Marks

Activity (i-j)	Duration (days)		
	Optimistic time	Most likely time	Pessimistic time
1-2	3	6	15
1-6	2	5	14
2-3	6	12	30
2-4	2	5	8
3-5	5	11	17
4-5	3	6	15
6-7	3	9	27
5-8	1	4	7
7-8	4	19	28

(OR)

8. Consider the following Project, Construct the Network diagram and find Critical Path, Project Duration, Critical Activities and Non-critical Activities, Total Float and Free Float. CO5 14 Marks

Activity	Precedence	Duration
A	-	5
B	A	7
C	A	9
D	B	4
E	C	8
F	D,E	7

UNIT-V

9. A bakery keeps stock of popular brand of bread previous experience indicates the daily demand as given below. CO5 14 Marks

Daily Demand	Probability
0	0.01
10	0.2
20	0.15
30	0.5
40	0.12
50	0.02

Random Numbers: 48, 78, 19, 51, 56, 77, 15, 14, 86, 8.
Using the above sequence simulate the demand for next 10 days. Find out stock situation, if owner of Bakery decides to make 30 breads every day. Estimate the daily average demand for bread on the basis of simulated data.

(OR)

10. The Director of finance for a firm cooperative is concerned about the yields per acre. He can expect about this year corn crop, the probability distribution of the yields for the current weather conditions is given below. He would like to simulation of yield and he might expect over 10 years. Simulate the average yield by using the following random numbers 20, 72, 34, 54, 30, 22, 48, 74, 76, 2. CO5 14 Marks

Yield in Kg/acre	Probability
120	0.18
140	0.26
160	0.44
180	0.12

CRYOGENICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is the necessity of low temperature?	CO1	6 Marks
	b)	Explain the limitations of vapour compression refrigeration system for low temperature applications.	CO2	8 Marks
		(OR)		
2.		Discuss multi-stage refrigeration system with a neat sketch in detail.	CO1	14 Marks

UNIT-II

3.		List out the desired properties of cryogenic fluids and explain.	CO2	14 Marks
		(OR)		
4.	a)	Describe different molecular forms of hydrogen.	CO1	4 Marks
	b)	Discuss the properties of helium isotopes at cryogenics range.	CO3	10 Marks

UNIT-III

5.		Explain the different methods of liquefication of air. Discuss about Claude system in detail.	CO2	14 Marks
		(OR)		
6.	a)	Discuss Joule's Thomson effect.	CO1	7 Marks
	b)	Explain liquification of hydrogen.	CO2	7 Marks

UNIT-IV

7.		List out the applications of cryogenic refrigeration system and explain.	CO4	14 Marks
		(OR)		
8.		Write a note on low temperature properties of engineering materials.	CO4	14 Marks

UNIT-V

9.		List out health hazards of cryogenic liquids and explain.	CO5	14 Marks
		(OR)		
10.		What are different insulations used in cryogenic equipment and explain any two types of insulations?	CO5	14 Marks

QUALITY MANAGEMENT AND RELIABILITY ENGINEERING

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Explain the customers' perception of quality. CO1 7 Marks
   b) Explain the dimensions of product and service quality. CO1 7 Marks

(OR)

2. a) Explain the role of Deming Cycle in continuous quality improvement. CO1 7 Marks
   b) Describe the principles of six sigma. Explain its applications. CO1 7 Marks

UNIT-II

3. a) Explain the causes of variation of quality of product or process. CO5 7 Marks
   b) Differentiate between "Variable charts" and "Attribute charts". CO5 7 Marks

(OR)

4. In a factory producing spark plug the number of defectives found in inspection of 20 lots of 100 each , is given below: CO5 14 Marks

Lot No.	1	2	3	4	5	6	7	8	9	10
No. of Defectives	**5**	**10**	**12**	**8**	**6**	**4**	**6**	**3**	**3**	**5**
Lot No.	11	12	13	14	15	16	17	18	19	20
No. of Defectives	**4**	**7**	**8**	**3**	**3**	**4**	**5**	**8**	**6**	**10**

Construct appropriate control chart and state whether the process is in statistical control.

UNIT-III

5. a) Define the following terms. CO2 4 Marks
   i) AQL. ii) LTPD. iii) IQL. iv) AOQ.
   b) Describe the different types of sampling plans. CO2 10 Marks

(OR)

6. Use the cumulative Poisson table to construct an OC curve for this sample plan $N = 5000$; $n = 80$; $c = 2$. CO2 14 Marks

UNIT-IV

7. A system is composed of 10 components connected in series. Each component has an exponential time to failure distribution with a constant failure rate of 0.5 per 4000 hours. Compute the reliability of the system for 2000 hours of operation and find MTTF. CO3 14 Marks

(OR)

8. a) Explain the following. CO3 7 Marks
   i) MTTF, MTBF. ii) Weibull Distribution.
   b) How Reliability of a system could be enhanced? CO6 7 Marks

UNIT-V

9. a) What do you mean by redundancy? Explain with an example. CO4 7 Marks
   b) What is the role of Optimization in Reliability calculation? CO4 7 Marks

(OR)

10. a) Discuss the following. CO4 7 Marks
    i) Fault tree analysis. ii) Maintainability.
    b) How do you apply reliability to the maintenance programme? CO4 7 Marks

INDUSTRIAL ROBOTICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Describe the function of the four basic components of robot.	CO1	8 Marks
	b)	What do you understand by degree of freedom (DOF)? How many DOFs are required to position an end effector at any point in 3-D space?	CO1	6 Marks
		(OR)		
2.		Write short notes on: i) Vacuum Grippers. ii) Magnetic Grippers.	CO1	14 Marks
		UNIT-II		
3.		Describe the various power transmission devices used in robotics system with neat sketches.	CO2	14 Marks
		(OR)		
4.	a)	Explain the working of a hydraulic drive system used in robots.	CO2	7 Marks
	b)	Write short notes on Stepper motors.	CO2	7 Marks
		UNIT-III		
5.		Explain the lagrangian formulation for a planar 2R manipulator	CO1, CO4	14 Marks
		(OR)		
6.	a)	Determine the transformation matrix T that represents a rotation of β^o about x-axis and followed by a rotation of Θ^o about z-axis.	CO2	6 Marks
	b)	Write the homogenous transform matrix for a rotation of 90^o about the z-axis followed by a rotation of -90^o about the axis, followed by a translation of (4, 5,9).	CO2	8 Marks
		UNIT-IV		
7.	a)	Explain the skew motion and joint interpolated motion with path control.	CO1	8 Marks
	b)	Summarize the techniques of demonstrating points to robot space.	CO1	6 Marks
		(OR)		
8.	a)	Discuss any one non-optical position sensor with a neat sketch.	CO5	6 Marks
	b)	Explain Optical encoders in detail.	CO5	8 Marks
		UNIT-V		
9.	a)	Explain in detail manual lead through programming method in robot application.	CO1, CO6	8 Marks
	b)	Describe the capabilities of and limitations of lead through programming.	CO2	6 Marks
		(OR)		
10.	a)	What are the reasons for the successful application of robots in manufacturing industry?	CO6	7 Marks
	b)	Give over view of robot's future and present applications.	CO6	7 Marks

PRODUCTION AND OPERATIONS MANAGEMENT

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the role of production operations in industry.	CO2	7 Marks
	b)	Explain the role of scientific management in historic development of production systems.	CO2	7 Marks
		(OR)		
2.	a)	Discuss about the how workforce changes, innovation and technology affects productivity.	CO3	7 Marks
	b)	Explain about physical and informational flow in a production system.	CO5	7 Marks

UNIT-II

3.	a)	Explain the objectives and uses of forecasting.	CO1	7 Marks
	b)	Discuss about the moving average and weighted moving methods in forecasting.	CO1	7 Marks
		(OR)		
4.	a)	Explain how forecasting control is done in simple averages and exponential smoothing.	CO1	7 Marks
	b)	A firm uses simple exponential smoothing with $\alpha = 0.2$ to forecast demand. In April the forecast was for 200 units, and the actual demand was for 200 units. The actual demand in may and June was 250 and 260 respectively. Forecast the value for July.	CO4	7 Marks

UNIT-III

5.	a)	What is aggregate planning and explain the Objectives of aggregate planning.	CO1	7 Marks
	b)	Explain level and chase aggregate production planning strategies.	CO1	7 Marks
		(OR)		
6.	a)	Discuss about Magee's modified response model in aggregate planning.	CO1	7 Marks
	b)	Discuss about the functions of Master production schedule.	CO1	7 Marks

UNIT-IV

7.	a)	Discuss about Material Requirement Planning (MRP) logic, and its drawbacks.	CO6	7 Marks
	b)	What do you understand by Enterprise Resource Planning (ERP)? Explain its main functions.	CO4	7 Marks
		(OR)		
8.	a)	Explain the importance of preventive maintenance in production.	CO4	7 Marks
	b)	What is Just-In-Time and Explain the philosophy of Just-In-Time (JIT).	CO4	7 Marks

UNIT-V

9.	a)	Discuss the CDS heuristic in flow shop scheduling.	CO6	7 Marks
	b)	What is flow shop scheduling and give the algorithm for Johnson's rule for n job and 3 machines.	CO6	7 Marks
		(OR)		
10.	a)	Discuss the benefits and risks of supply chain.	CO1	7 Marks
	b)	Explain the role of suppliers in creating an effective supply chain.	CO1	7 Marks

POWER PLANT ENGINEERING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain in brief about coal handling system in a thermal power plant.	CO1	7 Marks
	b)	Discuss the factors to be considered for the site selection of thermal power plants.	CO1	7 Marks

(OR)

2.	a)	What is pulverized fuel firing? List its advantages over other methods.	CO1	7 Marks
	b)	Explain in brief about different dust collectors used in a thermal power plant.	CO1	7 Marks

UNIT-II

3.		With the help of a neat sketch, explain the components of a Diesel power plant.	CO2	14 Marks

(OR)

4.	a)	Give the applications where Gas turbine power plants are preferred and explain the reasons for their use.	CO3	8 Marks
	b)	Compare Open cycle and Closed cycle Gas turbine power plants.	CO2	6 Marks

UNIT-III

5.	a)	What is the use of spillway in a hydroelectric plant? Explain the different types.	CO3	8 Marks
	b)	What are the advantages of hydroelectric plants over other power plants?	CO3	6 Marks

(OR)

6.	a)	What is a moderator? Name common moderators used and discuss their advantages and limitations.	CO2	7 Marks
	b)	With the help of a sketch, explain the working of a Sodium-Graphite reactor.	CO2	7 Marks

UNIT-IV

7.	a)	With the help of a schematic diagram, explain OTEC system and give its merits and limitations.	CO3	7 Marks
	b)	What are the different types of Wind mills? Explain the conditions in which they are used. What are their limitations.	CO3	7 Marks

(OR)

8.	a)	Explain the Solar pond concept in generating electricity.	CO4	7 Marks
	b)	Discuss about thermo electric power generator and what are the materials considered for this conversion.	CO4	7 Marks

UNIT-V

9.	a)	Explain briefly about the following: i) Load curve. ii) Load duration curve.	CO6	4 Marks
	b)	The yearly duration curve of a certain plant can be considered as a straight line from 150 MW to 40 MW. Power is supplied with one generating unit of 100 MW capacity and two units of 50 MW capacities each. Determine: i) Installed capacity. ii) Load factor. iii) Plant factor. iv) Maximum demand. v) Utilization factor.	CO6	10 Marks

(OR)

10.	a)	How the FGD system is useful in the removal of SO2 from thermal plants?	CO5	7 Marks
	b)	What are the methods of storage or disposal of radioactive waste materials?	CO5	7 Marks

RAPID PROTOTYPING TECHNOLOGY
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Classify the RP systems with highlighting the applications.	CO2	7 Marks
	b)	Explore the development of RP industry in future.	CO1	7 Marks
		(OR)		
2.	a)	Identify the need for compression in product development.	CO1	7 Marks
	b)	Discuss about the history of the RP systems.	CO1	7 Marks

UNIT-II

3.	a)	Illustrate the 'Stereo-Lithography' system with principle of operation, process parameters, merits and de-merits with neat sketches.	CO3	10 Marks
	b)	List the applications of the 'Selective Laser Sintering' process.	CO2	4 Marks
		(OR)		
4.		What is FDM? Explain the principle of operation, process parameters, merits & de-merits and applications with neat sketches.	CO3	14 Marks

UNIT-III

5.		Illustrate the methodology of the 'Solid Ground Curing' with process parameters and applications with neat sketches.	CO3	14 Marks
		(OR)		
6.		Demonstrate the methodology of the 'Laminated Object Manufacturing' (LOM) with process parameters and applications with neat sketches.	CO3	14 Marks

UNIT-IV

7.		Explain the following Indirect rapid tooling methods. i) Aluminium filled epoxy tooling. ii) Silicon rubber tooling. iii) Spray metal tooling.	CO4	14 Marks
		(OR)		
8.		Differentiate between the Direct and In-direct rapid tooling with examples and highlight the merits and demerits.	CO4	14 Marks

UNIT-V

9.		Discuss about the various parameters influencing the part accuracy, data presentation error, finishing.	CO5	14 Marks
		(OR)		
10.		Explore the methodology for surface generation from point cloud method in RP technology with neat sketches.	CO2	14 Marks

CELLULAR AND MOBILE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Illustrate how cell splitting is implemented is done in cellular systems.	CO2	7 Marks
	b)	Compare different generations of cellular systems.	CO1	7 Marks
		(OR)		
2.	a)	Illustrate the concept of frequency reuse for improving the capacity of cellular system.	CO2	7 Marks
	b)	Summarize various performance criterion for cellular systems.	CO1	7 Marks
		UNIT-II		
3.	a)	Compare and contrast adjacent channel and near end far end interference.	CO1	7 Marks
	b)	Illustrate the role of antenna height, beam titling and power applied on interference and coverage area.	CO2	7 Marks
		(OR)		
4.	a)	Illustrate the need of diversity receiver.	CO3	7 Marks
	b)	Illustrate the effective technique for reducing interference at the receiving end of an antenna.	CO6	7 Marks
		UNIT-III		
5.	a)	Illustrate the concept of propagation over water or flat open area.	CO3	7 Marks
	b)	Give the general formula and remarks for Lee model.	CO3	7 Marks
		(OR)		
6.	a)	Differentiate between different mobile antennas.	CO3	7 Marks
	b)	In a mobile radio environment, the average cell-site antenna height is about 60m, the mobile antenna height is about 2m and communication path length is 4km, compute incident and elevation angle.	CO3	7 Marks
		UNIT-IV		
7.	a)	With neat sketch, explain the concept of hand-off strategies.	CO5	7 Marks
	b)	Compare and contrast the fixed and non fixed channel assignment strategies.	CO4	7 Marks
		(OR)		
8.	a)	Define dropped call rate and develop the expression for dropped call rate.	CO4	7 Marks
	b)	Give the concept of channel sharing and borrowing in brief.	CO4	7 Marks
		UNIT-V		
9.	a)	With neat sketch, explain the GSM subsystems in brief.	CO1	7 Marks
	b)	Give the limitations of conventional mobile systems and how are they overcome by cellular systems.	CO1	7 Marks
		(OR)		
10.	a)	Illustrate the concept of CDMA 2000.	CO6	7 Marks
	b)	With neat sketch, explain the architecture of North American TDMA.	CO1	7 Marks

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain what features make the MSP430 suitable for low-power and portable applications.	CO1	7 Marks
	b)	Analyze the Registers in the CPU of the MSP430.	CO1	7 Marks
		(OR)		
2.	a)	Compare and contrast Volatile and Non-volatile Memory.	CO1	7 Marks
	b)	Discuss pin out of MSP430.	CO1	7 Marks

UNIT-II

3.	a)	Derive number of machine cycles for any three instructions.	CO2	7 Marks
	b)	Explore Cycle-by-cycle operation of instructions of two operands with destination as register and indexed.	CO2	7 Marks
		(OR)		
4.	a)	Identify and review the MSP430 Stack Pointer.	CO2	7 Marks
	b)	Compose the program to Copy Blocks of Data using MSP430 instruction set.	CO2	7 Marks

UNIT-III

5.	a)	Detail out what happens when interrupt is requested.	CO2	7 Marks
	b)	Develop embed –c code to Flash Led by Software Delay using function.	CO3	7 Marks
		(OR)		
6.	a)	Explore how MSP430 will be awakening from a Low-Power Mode.	CO4	7 Marks
	b)	Elaborate the key Issues Associated with Interrupts.	CO4	7 Marks

UNIT-IV

7.	a)	Demonstrate the working SD16_A sigma–delta ADC Block using diagram.	CO5	7 Marks
	b)	Develop a code which displays the temperature measured by the internal sensor on the LCD to a resolution of 0.1ºC using ADC12.	CO5	7 Marks
		(OR)		
8.	a)	Construct a Relaxation oscillator based on Comparator A+.	CO5	7 Marks
	b)	Paraphrase the usage on ADC10 in MSP430.	CO5	7 Marks

UNIT-V

9.	a)	Elaborate the Device-To-Cloud Communications model in Internet Of Things.	CO6	7 Marks
	b)	Discuss IOT related security challenges in detail.	CO6	7 Marks
		(OR)		
10.		Discuss Key Considerations and Challenges in IOT Interoperability / Standards	CO6	14 Marks

MICROWAVE ENGINEERING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain construction details and operation of circulator.	CO5	7 Marks
	b)	A Three-port circulator has an insertion loss of 1dB isolation 30dB and VSWR = 1.5. Find the scattering matrix.	CO4	7 Marks
		(OR)		
2.	a)	Write a short note on various wave guide attenuators.	CO1	7 Marks
	b)	Discuss briefly about various coupling mechanism in wave guide discontinuities.	CO1	7 Marks

UNIT-II

3.	a)	Derive the expression for output power and efficiency of a reflex klystron.	CO4	7 Marks
	b)	What are differences between O-type and M-type tubes?	CO1	7 Marks
		(OR)		
4.	a)	Explain the operation of cylindrical travelling wave magnetron.	CO1	7 Marks
	b)	Explain, how amplification process takes place in TWT.	CO2	7 Marks

UNIT-III

5.	a)	Write a short note on Transfer Electronic Devices.	CO1	7 Marks
	b)	Explain the operation of Gunn diode in oscillation mode.	CO2	7 Marks
		(OR)		
6.	a)	Draw the characteristics of TRAPATT diode and show how it exhibits negative resistance.	CO2	7 Marks
	b)	Write a short notes on BARITT diode.	CO1	7 Marks

UNIT-IV

7.	a)	Describe briefly about each block of microwave bench.	CO1	7 Marks
	b)	Two identical directional are used in a wave guide to sample the incident and reflected powers. The output of the two couplers if founded to be 2.5mw and 0.15mw. Find the values of VSWR in the wave guide.	CO4	7 Marks
		(OR)		
8.	a)	Explain about measurement of Q of the cavity.	CO1	7 Marks
	b)	Draw the microwave bench setup for measurement of low VSWR and explain its operation.	CO3	7 Marks

UNIT-V

9.	a)	Write a short notes on: i) MUF ii) skip distance and give relation between MUF and skip distance assuming earth is flat.	CO1	7 Marks
	b)	Describe about various types of fading occurs in radio wave propagation.	CO1	7 Marks
		(OR)		
10.	a)	What are the various modes of wave propagation and explain dround wave propagation.	CO1	7 Marks
	b)	Explain about multihop propagation.	CO1	7 Marks

SATELLITE COMMUNICATIONS
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the factors which determine the choice of orbit for communication satellite.	CO1	5 Marks
	b)	Show that the height of Geo-synchronous orbit is about 36,000 Kms.	CO2	5 Marks
	c)	Find the coverage area of a satellite from which it is visible at a minimum elevation angle of 10^0 for the Geo-synchronous orbit.	CO3	4 Marks
		(OR)		
2.	a)	Explain the various reasons for preferring satellite than optical fibers which are providing very high band width.	CO2	8 Marks
	b)	A geosynchronous satellite moving in an equatorial circular orbit at a height of 35000 Km above the surface of the Earth gets inclined at an angle of 2^0. Calculate the maximum deviation in latitude and also maximum deviation in longitude. Determine the maximum displacements in Km caused by latitude and longitude displacements.	CO3	6 Marks

UNIT-II

3.	a)	Discuss the principle of N-S control of a spinner satellite using infrared sensor with a neat figure.	CO1	7 Marks
	b)	Discuss about the G/T Ratio for earth station.	CO2	7 Marks
		(OR)		
4.	a)	Write short notes on Equipment reliability and Space qualification.	CO5	7 Marks
	b)	Derive the power received from the satellite at the earth station from the basic transmission theory.	CO4	7 Marks

UNIT-III

5.	a)	Explain the Tracking, telemetry and Command sub system of a spacecraft.	CO1	8 Marks
	b)	Calculate the frame efficiency of TDMA frame of period 2.2 ms. Total frame: Length = 128000 symbols Guard interval = 110 symbols No. of Traffic bursts\ frame =14 No. of Reference burst\frame = 1 CDC during reference burst = 10 symbols No. of Preamble =208 symbols	CO4	6 Marks
		(OR)		
6.	a)	"Horn antennas are commonly used as primary radiators in reflector systems", Justify?	CO4	7 Marks
	b)	Discuss various modulation and multiplexing techniques used with satellite links.	CO3	7 Marks

UNIT-IV

7.	a)	What are the various NGSO constellation designs? Explain any two.	CO2	7 Marks
	b)	Explain satellite based store-and-forward messages.	CO4	7 Marks

(OR)

8.	a)	How the non-geo proposals are categorized?	CO2	7 Marks
	b)	Compare GEO and MEO satellites.	CO4	7 Marks

UNIT-V

9.	a)	Explain the generation of GPS signals with a neat sketch.	CO4	7 Marks
	b)	Compare GPS and differential GPS.	CO6	7 Marks

(OR)

10.	a)	Explain the signal processing techniques used in GPS receiver.	CO3	7 Marks
	b)	What are the successful measurements in a GPS C/A code receiver?	CO5	7 Marks

WIRELESS COMMUNICATION AND NETWORKS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Explain TDMA and FDMA. Compare them on the basis of their advantages.	CO1	7 Marks
	b)	Draw the architecture of ISDN and explain its working.	CO6	7 Marks
		(OR)		
2.	a)	With a neat diagram, discuss various spread spectrum multiple access techniques.	CO6	7 Marks
	b)	Explain various types of traffic routing in wireless networks and compare them.	CO	7 Marks
		UNIT-II		
3.	a)	In a typical Mobile IP implementation in a home agent, the agent maintains a mobility binding table to map a mobile node's home address to its care-of address for packet forwarding. What entries are essential for each row of the table?	CO5	6 Marks
	b)	What is tunneling? Discuss the features of Mobile IP.	CO2	8 Marks
		(OR)		
4.	a)	Discuss in detail Mobile IP discovery process and ICMP. Also describe the relationship between the two while in operation.	CO4	7 Marks
	b)	Write short notes on the functional areas supported by WML.	CO1	7 Marks
		UNIT-III		
5.	a)	What are the Physical and MAC layer differences in Wi-Fi and WiMAX systems?	CO1	8 Marks
	b)	Draw flow chart on the MAC layer operation in 802.11 standards.	CO3	6 Marks
		(OR)		
6.	a)	What are the requirements of a WLAN? Discuss with an example Infrared LANs.	CO2	8 Marks
	b)	Discuss various WLAN topologies.	CO3	6 Marks
		UNIT-IV		
7.	a)	Write notes on Bluetooth and 802.15 standards.	CO6	8 Marks
	b)	Discuss L2CAP protocol describing the packet formats.	CO6	6 Marks
		(OR)		
8.	a)	Discuss in detail error correction schemes used in Bluetooth.	CO5	7 Marks
	b)	Discuss Bluetooth base band logical channels.	CO1	7 Marks
		UNIT-V		
9.	a)	How many classes of QoS are supported by GPRS and what are the differences between them?	CO2	7 Marks
	b)	What is the difference between full-duplex and half-duplex CDPD operations?	CO1	7 Marks
		(OR)		
10.	a)	Compare and contrast HIPERLAN-1 and HIPERLAN-2.	CO5	7 Marks
	b)	What is the difference between logical and transport channels in HIPERLAN-2.	CO1	7 Marks

CODE No.: 16BT70408 SVEC-16

LOW POWER CMOS VLSI DESIGN
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the different types of power dissipation in CMOS circuit? Derive the expression for power dissipation in CMOS circuit.	CO1	7 Marks
	b)	Explain the variation of total output current in CMOS inverter under varying output capacitance.	CO1	7 Marks
		(OR)		
2.	a)	Explain two major sources of leakage current in MOS transistos.	CO1	7 Marks
	b)	Explain the basic principles of low power design.	CO1	7 Marks

UNIT-II

3.	a)	Explain about power model based on component operations.	CO2	7 Marks
	b)	Explain in detail about gate level power analysis.	CO2	7 Marks
		(OR)		
4.	a)	Explain the following. i) Sample correlation. ii) Negative correlation. iii) Uniform white noise region.	CO2	7 Marks
	b)	Explain in detail Monte carlo power simulation procedure.	CO2	7 Marks

UNIT-III

5.	a)	Explain in detail about driving high capacitance load using inverter cascade.	CO3	7 Marks
	b)	Write the mapping steps for mapping a Boolean function to a complex transistor network.	CO3	7 Marks
		(OR)		
6.	a)	With examples, explain the basic transformation operators.	CO3	7 Marks
	b)	Draw various logic implementations of signal gating.	CO3	7 Marks

UNIT-IV

7.	a)	Draw charge sharing circuit for half-swing clock.	CO4	7 Marks
	b)	Explain in detail about various clock power reduction techniques.	CO4	7 Marks
		(OR)		
8.	a)	Explain in detail about CMOS floating node and Tristate keeper circuit.	CO4	7 Marks
	b)	Explain in detail about low swing bus circuit techniques.	CO4	7 Marks

UNIT-V

9.	a)	Explain in detail about different performance management techniques.	CO5	7 Marks
	b)	Explain how to reduce power dissipation using switching activity reduction.	CO5	7 Marks
		(OR)		
10.	a)	Derive the expression for power dissipation of a pipelined system.	CO5	7 Marks
	b)	Explain in detail about operator transformation with an example.	CO5	7 Marks

RF ENGINEERING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the high frequency behaviour of a capacitor with equivalent circuit.	CO3	7 Marks
	b)	Draw and describe thin film resistor impedance as a function of frequency.	CO3	7 Marks
		OR)		
2.	a)	Write a short note on chip capacitors.	CO3	7 Marks
	b)	Compute the skin depths for Copper (σ_{Cu}= 64.516 x 10^6s/m), Aluminium(σ_{Al} = 40 x 10^6s/m) and Gold (σ_{Au}= 48.54 x 10^6s/m) at 1GHz and 10GHz.	CO3	7 Marks

UNIT-II

3.	a)	What is a quarter wave transformer and how to match the impedance using it?	CO2	7 Marks
	b)	Derive the relationship between VSWR and S_{11}.	CO2	7 Marks
		(OR)		
4.	a)	Derive the expression for characteristic impedance, Z_0 of a transmission line.	CO2	7 Marks
	b)	What is a lossless line and derive the expression for its characteristic impedance?	CO2	7 Marks

UNIT-III

5.	a)	Explain any of the two discrete component matching methods.	CO3	7 Marks
	b)	What is a tunable filter and how to design it?	CO4	7 Marks
		(OR)		
6.	a)	Draw and describe the construction and operation of varactor diode.	CO3	7 Marks
	b)	Describe the operation of FET intended for RF applications.	CO3	7 Marks

UNIT-IV

7.	a)	Distinguish between incident power, input power and available power.	CO4	7 Marks
	b)	Draw and explain stabilization techniques for input and output ports.	CO4	7 Marks
		(OR)		
8.	a)	What are the design principles of a broadband amplifier?	CO5	7 Marks
	b)	Draw and explain the operation of VGA amplifier.	CO5	7 Marks

UNIT-V

9.	a)	Draw and explain the principle of operation of feedback oscillator.	CO4	7 Marks
	b)	Draw and explain the operation of VCO.	CO4	7 Marks
		(OR)		
10.	a)	Write a short note on direct digital synthesizer.	CO5	7 Marks
	b)	Discuss frequency domain considerations of RF mixers.	CO5	7 Marks

CODE No.: 16BT70410 SVEC-16

SPEECH PROCESSING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Explain the unique properties of speech compared to other real time signals.	CO4	7 Marks
	b)	What is the vowel triangle? What functions do F_0 variations have in speech communication?	CO4	7 Marks
		(OR)		
2.	a)	Give the boundary conditions for lossless tube model of speech production and device its transfer function.	CO5	7 Marks
	b)	Distinguish between semi-vowels and vowels from the articulatory point of view.	CO4	7 Marks
		UNIT-II		
3.	a)	What are the advantages of time domain methods of speech processing over frequency domain methods?	CO1	7 Marks
	b)	How the short time energy is computed? What is its significance?	CO1	7 Marks
		(OR)		
4.	a)	Give a brief note about time domain methods of silence detection in speech signal.	CO3	7 Marks
	b)	Find the long-time autocorrelation function $\rho(k)$, for given signal x(n) and sketch the $\rho(k)$ as a function of k. $x(n)= A \cos(\omega_o n)$	CO	7 Marks
		UNIT-III		
5.	a)	Describe about homomorphic systems used in speech signal processing.	CO5	7 Marks
	b)	Short notes homomorphic vocoder.	CO2	7 Marks
		(OR)		
6.	a)	Explain properties of the complex cepstrum.	CO1	7 Marks
	b)	Explain formant estimation from cepstrally smoothed log spectra method.	CO5	7 Marks
		UNIT-IV		
7.		Derive the expression for gain from the prediction error .of linear prediction.	CO2	14 Marks
		(OR)		
8.	a)	Explain the pitch detection using LPC parameters.	CO2	7 Marks
	b)	Compare methods of solution of LPC analysis equation.	CO2	7 Marks
		UNIT-V		
9.	a)	Draw the block diagram of a speaker verification system and explain in detail.	CO6	7 Marks
	b)	Distinguish between speaker verification and speaker identification.	CO6	7 Marks
		(OR)		
10.		Explain the Isolated digit recognition system operation with neat block diagram.	CO6	14 Marks

HUMAN COMPUTER INTERACTION

[Computer Science and Engineering, Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is a user interface? Why it is so important in designing an application?	CO1	8 Marks
	b)	Compare and contrast the characteristics of Graphical user interface with Web user interface design.	CO3	6 Marks
		(OR)		
2.	a)	Illustrate the concept of direct manipulation in graphical systems.	CO1	8 Marks
	b)	Briefly describe the principles of user interface design.	CO1	6 Marks

UNIT-II

3.	a)	Briefly describe about advantages and disadvantages of graphical user interface. Explain the design goals in creating a user interface.	CO2	8 Marks
	b)	List and explain the important human characteristics that have an influence on interface design.	CO3	6 Marks
		(OR)		
4.	a)	Illustrate the goals of Interface design.	CO2	8 Marks
	b)	Discuss briefly about technological considerations in interface design.	CO3	6 Marks

UNIT-III

5.	a)	Explain about ordering and organizing of screen elements.	CO3	6 Marks
	b)	List and briefly explain any four screen based controls.	CO3	8 Marks
		(OR)		
6.	a)	List and discuss the qualities that provide visually pleasing composition for screen.	CO3	6 Marks
	b)	What is the importance of designing Menus in user interface? Explain about various design principles for single and multiple Menus.	CO3	8 Marks

UNIT-IV

7.	a)	State different types of windows and explain any four.	CO4	6 Marks
	b)	Describe all the guidelines to be considered for choosing the colors for an Icon.	CO4	8 Marks
		(OR)		
8.	a)	Explain various window operations.	CO4	6 Marks
	b)	Discuss the general guide lines of organizing and laying out components on window.	CO4	8 Marks

UNIT-V

9.	a)	Explain the role of user interface architects in building software tools. Also discuss about the specification methods of software tools.	CO5	8 Marks
	b)	When should the speech generation is preferable. Explain in detail.	CO5	6 Marks
		(OR)		
10.	a)	Explain any three pointing devices.	CO5	6 Marks
	b)	Describe about discrete word recognition and continuous speech recognition in detail.	CO5	8 Marks

ANALYTICAL INSTRUMENTATION
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe the working of pH meter with a neat sketch.	CO1	6 Marks
	b)	Explain magnetic wind oxygen analyzer with a neat sketch.	CO1	8 Marks
		(OR)		
2.	a)	Compare sodium analyzer with silica analyzer.	CO2	7 Marks
	b)	Explain the construction and working of conductivity meter.	CO1	7 Marks

UNIT-II

3.	a)	Explain the working of single beam and double beam null type UV-Visible Spectrophotometers with neat diagrams.	CO1	8 Marks
	b)	What is a spectrophotometer? Explain in detail about the construction and working principle of Fourier Transform IR Spectrometer.	CO1	6 Marks
		(OR)		
4.	a)	Outline the principles of visible spectroscopy and detailed comparison of various detecting units.	CO2	7 Marks
	b)	Elucidate the working of any one type of IR spectrometer and mention how the chemical solution is analyzed.	CO4	7 Marks

UNIT-III

5.	a)	Specify the significance of flame photometer in analysis of chemical solutions and explain the working of clinical flame photometer.	CO5	7 Marks
	b)	What is meant by Nuclear Magnetic Resonance? Explain the construction and working principle of NMR Spectrometer.	CO1	7 Marks
		(OR)		
6.	a)	Describe the working principle of atomic absorption spectrometer with relevant application.	CO1	7 Marks
	b)	Identify and explain the importance of time of flight mass spectrometers in medical applications.	CO3	7 Marks

UNIT-IV

7.	a)	List the different detectors used in liquid chromatography. Explain any one.	CO1	7 Marks
	b)	Explain the working principle of liquid chromatography with a neat sketch.	CO1	7 Marks
		(OR)		
8.	a)	Discuss the construction and working principle of gas chromatography and explain the role in chemical compound analysis.	CO5	7 Marks
	b)	Explain about Photo ionization detector and Flame ionization detector.	CO1	7 Marks

UNIT-V

9.	a)	Explain how Sulphur dioxide is measured in environment and discuss its pollution issues in environment.	CO6	6 Marks
	b)	With necessary diagrams explain the Proportional Counter and Ionization chamber.	CO1	8 Marks

(OR)

10.	a)	Explain the working of X-ray detectors.	CO1	8 Marks
	b)	Write short notes on GM counter and give its applications.	CO1	6 Marks

BIOMEDICAL SIGNAL PROCESSING
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	With a neat diagram, explain the computer aided diagnosis and therapy based upon biomedical signal analysis	CO1	14 Marks
	(OR)		
2.	Explain the following biomedical signals. Draw the waveforms and frequency ranges relevant to these signals. i) ECG. ii) EEG.	CO1	14 Marks

UNIT-II

3.	Identify three potential sources of physiological artifacts in recording the EEG signal. Explain how derivative based operators to remove low-frequency artifacts	CO2	14 Marks
	(OR)		
4.	Under what conditions synchronised averaging fail to reduce noise? Write a detailed note on frequency domain filters to remove low frequency noise and removal of periodic artifacts	CO2	14 Marks

UNIT-III

5.	Write a brief note on Adaptive Canceler. Design an adaptive filter using LMS algorithm.	CO3	14 Marks
	(OR)		
6.	What is the difference between static filters and adaptive filters? Explain how phase sensitive detectors used in biomedical signal analysis.	CO3	14 Marks

UNIT-IV

7.	Explain various methods used for QRS detection in ECG signals.	CO4	14 Marks
	(OR)		
8.	Explain the various data reduction techniques used in biomedical signal analysis.	CO5	14 Marks

UNIT-V

9.	Explain why the periodogram is not a consistent estimate of the power spectral density. Explain the use of windows in the estimation of power spectral density.	CO5	14 Marks
	(OR)		
10.	Write a short note on: i) Welch method for power spectral density. ii) Measures derived from power spectral density functions.	CO6	14 Marks

INDUSTRIAL AUTOMATION
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Classify The PLC. What are the differences between PLC and Computer? Explain.	CO1	8 Marks
	b)	Describe in detail about PLC I/O Modules.	CO2	6 Marks
		(OR)		
2.	a)	Describe the basic sequence of operation in a PLC.	CO2	8 Marks
	b)	Explain the bidirectional opto-isolator.	CO2	6 Marks

UNIT-II

3.	a)	Write a note of instruction sets of PLC ladder programming.	CO3	7 Marks
	b)	Explain the PLC comparison functions using switches and contact relays with a suitable example.	CO2	7 Marks
		(OR)		
4.	a)	Explain the PLC athematic functions using switches and contact relays with a suitable example.	CO2	9 Marks
	b)	Explain in detail od PID functions with diagram.	CO1	5 Marks

UNIT-III

5.	a)	What are the advantages of distributed control systems over centralized computer control of processes? How to program a DCS?	CO5	6 Marks
	b)	Explain in detail about Local Control Unit (LCU).	CO2	8 Marks
		(OR)		
6.	a)	List and explain advanced function blocks in the DCS system.	CO2	6 Marks
	b)	Discuss the need for automation in process industries.	CO3	8 Marks

UNIT-IV

7.	a)	Explain the different elements of SCADA in detail.	CO1	6 Marks
	b)	What is the role of master terminal unit in supervisory control system?	CO2	8 Marks
		(OR)		
8.	a)	Explain the selection procedure of SCADA system for industrial automation.	CO4	8 Marks
	b)	Explain, how to control analog parameters in by RTU in SCADA system.	CO5	6 Marks

UNIT-V

9.	a)	Explain communication modes of HART.	CO6	8 Marks
	b)	With neat sketch, explain the different ways in which devices are connected to the field bus.	CO3	6 Marks
		(OR)		
10.	a)	List different HART commands. Explain the operation of field bus with a neat diagram.	CO4	6 Marks
	b)	List and compare OSI layers used in HART protocol.	CO6	8 Marks

All questions carry equal marks

UNIT-I

1.	a)	Mention the principle of operation of SCR and explain its static characteristics with neat sketch.	CO1	7 Marks
	b)	Mention SCR communication techniques and differentiate.	CO1	7 Marks
		OR)		
2.	a)	Analyze two transistor model of SCR by deriving the total current in SCR.	CO2	7 Marks
	b)	Explain with necessary derivations how we can protect SCR from high voltages.	CO3	7 Marks

UNIT-II

3.	a)	Derive the load current for full wave control rectifier and explain its working in detail.	CO2	7 Marks
	b)	Discuss about chopper circuit configurations.	CO1	7 Marks
		(OR)		
4.	a)	Explain the operation and construction of cycloconverters in detail.	CO1	7 Marks
	b)	Describe the working of a single-phase half bridge inverter what it its main draw back. Explain how this drawback is overcome.	CO2	7 Marks

UNIT-III

5.	a)	Classify electronic timers, mention the role of digital timers in industries and mention its applications.	CO3	7 Marks
	b)	List out different types of resistance welding and explain in detail about any two of them.	CO2	7 Marks
		(OR)		
6.	a)	Explain the principle of operations and applications of high frequency heating and dielectric heating.	CO1	7 Marks
	b)	Discuss about Ultrasonic flaw detection and mention its applications.	CO1	7 Marks

UNIT-IV

7.	a)	Classify IC voltage regulators and explain about adjustable regulator.	CO4	7 Marks
	b)	Analyze the operation of series regulator with neat sketch.	CO2	7 Marks
		(OR)		
8.	a)	Explain with a neat sketch, how you can protect the 723 general purpose regulator from over current condition.	CO4	7 Marks
	b)	Illustrate the technique used in switching regulators and explain its working in detail.	CO3	7 Marks

UNIT-V

9.	a)	Discuss the basic concepts of numerical control and how these control the stepper motor and DC motor operations.	CO1	7 Marks
	b)	Explain data processing unit characteristics of CNC/DNC system in detail and compare it with N/C system.	CO2	7 Marks
		(OR)		
10.	a)	Explain the CNC typical system in detail.	CO1	7 Marks
	b)	Using appropriate technique explain the concept of CNC interfacing with machines.	CO2	7 Marks

POWER PLANT INSTRUMENTATION
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	With neat diagram explain the operation of solar power plant and mention the important parameters to be monitored in each block.	CO1	7 Marks
	b)	Briefly explain the importance of instrumentation in power generation.	CO2	7 Marks
		(OR)		
2.	a)	With neat diagram, explain the operation of wind power plant and mention the important parameters to be monitored in each block.	CO1	7 Marks
	b)	What is meant by cogeneration and also explain the topping and bottoming cycle operation of cogeneration systems?	CO2	7 Marks

UNIT-II

3.	a)	Explain in detail about the Drum level measurement with neat sketch.	CO3	7 Marks
	b)	Explain briefly about Dust measurement with clear diagram.	CO1	7 Marks
		(OR)		
4.	a)	Explain in detail about any three types of steam Temperature measurement.	CO4	7 Marks
	b)	Explain briefly about Smoke measurement with clear diagram.	CO2	7 Marks

UNIT-III

5.	a)	What is the need of connecting thermocouples in series and parallel during temperature measurement?	CO4	7 Marks
	b)	Why float type level measurement is not suitable for boiler drum level measurement?	CO2	7 Marks
		(OR)		
6.	a)	Explain about combustion control mechanisms.	CO5	7 Marks
	b)	Elaborate the furnace draft control in air fuel circuit.	CO3	7 Marks

UNIT-IV

7.	a)	Classify Instrumentation systems for vibrating monitoring.	CO3	7 Marks
	b)	Explain in detail about the Vibration monitoring and control.	CO4	7 Marks
		(OR)		
8.	a)	What are the monitoring parameters in vibration measurement?	CO4	7 Marks
	b)	Explain in detail about the Lubricant oil control for Pressure, flow and temperature.	CO3	7 Marks

UNIT-V

9.	a)	Elaborate the electrical safety and maintenance of electrical system.	CO6	7 Marks
	b)	Write short notes on explosion hazards and intrinsic safety.	CO1	7 Marks
		(OR)		
10.		Explain in detail about interlocks for boiler operation.	CO1	14 Marks

BIG DATA TECHNOLOGIES
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain Apache Hadoop and the Hadoop ecosystems.	CO1	7 Marks
	b)	Compare Hadoop with other systems.	CO1	7 Marks
		(OR)		
2.	a)	Explain file based data structures and Serialization.	CO2	7 Marks
	b)	Construct Architecture of Hadoop and explain each component in detail.	CO2	7 Marks

UNIT-II

3.	a)	Examine the process of Map reduce with an example.	CO4	7 Marks
	b)	Use Hive to perform a word count with an example.	CO4	7 Marks
		(OR)		
4.	a)	Explain about Hadoop streaming.	CO3	7 Marks
	b)	Explain map reduce types, input and output formats.	CO3	7 Marks

UNIT-III

5.	a)	Explain all user defined functions of Hive.	CO4	7 Marks
	b)	Compare Hbase and RDBMS.	CO4	7 Marks
		(OR)		
6.	a)	Explain Pig user defined functions.	CO5	7 Marks
	b)	Explain Pig data processing operation in detail.	CO1	7 Marks

UNIT-IV

7.	a)	Compare and contrast Pig, Hive, and HBase. List strengths and weaknesses of each tool set. Research and summarize three published use cases for each tool set.	CO4	7 Marks
	b)	Explain about Zookeeper service in detail.	CO4	7 Marks
		(OR)		
8.	a)	Explain the process of building application with Zookeeper.	CO4	7 Marks
	b)	Explain how Database exports are done in Sqoop and exports done in Sqoop.	CO4	7 Marks

UNIT-V

9.		Elaborate procedure for creating Face book Database in Hive environment.	CO5	14 Marks
		(OR)		
10.		Elaborate the procedure for importing and exporting database with an example.	CO5	14 Marks

MOBILE APPLICATION DEVELOPMENT
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write a short note on the benefits of creating a Mobile App.	CO1	6 Marks
	b)	List the features of Android and how can screen real estate be effectively used.	CO1	8 Marks
		(OR)		
2.	a)	Discuss in detail about content and controls in the Mobile information design with neat sketch.	CO1	8 Marks
	b)	What is Android? Briefly discuss about the history of android versions.	CO1	6 Marks

UNIT-II

3.	a)	Illustrate the Lifecycle of an activity with a neat diagram.	CO1	7 Marks
	b)	Analyze how to persist state information during changes in configuration.	CO2	7 Marks
		(OR)		
4.	a)	Discuss in detail about Adding Action items to the Action Bar.	CO4	9 Marks
	b)	Create an Android app to programmatically hide or display the Action Bar.	CO5	5 Marks

UNIT-III

5.	a)	Create an android app that illustrates the importance of AutoCompleteTextView.	CO5	8 Marks
	b)	Develop an android app which can choose a Date from a Dialog Pop-Up.	CO6	6 Marks
		(OR)		
6.	a)	Create an Android app to Add Images to Buttons and display an image by clicking that particular button.	CO4	9 Marks
	b)	Distinguish different ways to save and load of user preferences.	CO2	5 Marks

UNIT-IV

7.	a)	Discuss in detail about the two ways to send **sms** messages in the android application.	CO1	7 Marks
	b)	Develop an android app to download plain text content from a server and display it in the app.	CO2	7 Marks
		(OR)		
8.	a)	Develop an android application to send an email.	CO6	7 Marks
	b)	Explain in detail how to monitor SVEC location such that if the user is within a ten meter radius from that location, app has to fire intent to launch the web browser.	CO3	7 Marks

UNIT-V

9.	a)	Define Service and write an alarm clock service (prescheduled time has been reached, has to sound) that run persistently in the background.	CO6	8 Marks
	b)	Briefly describe the anatomy of an **ios** app.	CO1	6 Marks
		(OR)		
10.	a)	Define Service and discuss how to start and stop a service.	CO1	8 Marks
	b)	Write short notes on Debugging **ios** Apps.	CO1	6 Marks

INFORMATION RETRIEVAL SYSTEMS
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Define Information Retrieval System. Explain Objectives of Information Retrieval Systems.	CO1	7 Marks
	b)	Outline the functional overview of Information Retrieval System.	CO1	7 Marks
		(OR)		
2.	a)	Differentiate fuzzy searches and term masking.	CO1	7 Marks
	b)	Explain how Search and browse capabilities are crucial to assist the user in locating relevant items.	CO2	7 Marks
		UNIT-II		
3.	a)	Demonstrate the Stemming Process and describe the dictionary look-up stemmers.	CO3	10 Marks
	b)	What is meant by entity processing? Explain in detail.	CO3	4 Marks
		(OR)		
4.	a)	Discuss Automatic Indexing and User Search techniques.	CO1	6 Marks
	b)	Define vector weighting and discuss any two algorithms of vector weighting.	CO2	8 Marks
		UNIT-III		
5.	a)	Define term clustering. Describe various types of automatic term clustering techniques.	CO4	8 Marks
	b)	Why are there three levels of binding in the creation of a search?	CO2	6 Marks
		(OR)		
6.	a)	Discuss Weighted Searches of Boolean Systems for User Search Techniques.	CO1	8 Marks
	b)	What are some potential ambiguities in use of relevance feedback on hypertext documents?	CO2	6 Marks
		UNIT-IV		
7.	a)	Explain various information visualization techniques.	CO1	9 Marks
	b)	What is meant by display of the item in information presentation.	CO1	5 Marks
		(OR)		
8.	a)	Describe multimedia information retrieval.	CO5	8 Marks
	b)	Exemplify about TREC results.	CO5	6 Marks
		UNIT-V		
9.		Explain Software Text Search algorithms Hardware Text Search Systems.	CO5	14 Marks
		(OR)		
10.	a)	Give introduction to Information System Evaluation.	CO1	5 Marks
	b)	Discuss measures used in System Evaluations.	CO4	9 Marks

CRYPTOGRAPHY AND NETWORK SECURITY
[Computer Science and Engineering, Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Differentiate threat and attack. What are the different types of attacks?	CO2	7 Marks
	b)	Generate the cipher text for the message "CRYPTOGRAPHY" using ceaser cipher with the key as 5.	CO4	7 Marks
		(OR)		
2.	a)	Briefly discuss about a model for network security.	CO1	7 Marks
	b)	What is a transposition cipher? Explain the rail fence technique with an example.	CO4	7 Marks

UNIT-II

3.	a)	State and explain the principles of public key cryptography.	CO1	7 Marks
	b)	List the improvements of Oakley compared to Diffie-Hellman algorithm.	CO1	7 Marks
		(OR)		
4.	a)	Discuss about the following block cipher modes of operation. i) Cipher feedback mode. ii) Output feedback mode.	CO3	6 Marks
	b)	Explain the working of RSA algorithm with an example.	CO3	8 Marks

UNIT-III

5.	a)	Describe HMAC algorithm in detail.	CO1	7 Marks
	b)	Explain the classification of message authentication function in detail.	CO1	7 Marks
		(OR)		
6.	a)	What are the various approaches to producing message authentication?	CO3	7 Marks
	b)	Identify the role of digital signature in e-commerce.	CO4	7 Marks

UNIT-IV

7.	a)	Differentiate between transport and tunneling modes.	CO6	7 Marks
	b)	What is the role of security association in IP Security? List the parameters used to identify the security association.	CO6	7 Marks
		(OR)		
8.	a)	Explain about S/MIME in detail.	CO5	7 Marks
	b)	Write about transport layer security.	CO6	7 Marks

UNIT-V

9.	a)	Explain detail the password selection strategies.	CO5	7 Marks
	b)	Write a short note on intrusion detection.	CO1	7 Marks
		(OR)		
10.	a)	Write a short notes on "Firewalls".	CO5	7 Marks
	b)	Write a short notes on "Viruses".	CO5	7 Marks

SYSTEM MODELING AND SIMULATION
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain various components and organization of discrete event simulation model.	CO1	6 Marks
	b)	What are the simulation diagrams? Explain them with neat sketches.	CO1	8 Marks
		(OR)		
2.		Explain about discrete event simulation in detail.	CO1	14 Marks

UNIT-II

3.	a)	Explain about basic math functions and variables of R with examples.	CO2	7 Marks
	b)	Justify the "R functions are first-class objects".	CO2	7 Marks
		(OR)		
4.	a)	Write R code to implement Binary Search Tree.	CO2	7 Marks
	b)	Write R function to check whether the given number is prime or not.	CO2	7 Marks

UNIT-III

5.	a)	Explain the various probability terminologies and concepts.	CO2	7 Marks
	b)	Explain the following continuous distribution. i) Uniform distribution. ii) Exponential distribution.	CO1	7 Marks
		(OR)		
6.		A company uses 6 trucks to haul manganese are from Kolar to industry. There are two loaders, to load each truck. After loading, a truck moves to the weighing scale to be weighed. The queue discipline is FIFO. When it is weighed, a truck travels to the industry and returns to the loader queue. The distribution of loading time, weighing time and travel time are as follows:	CO4	14 Marks

Loading time	10	5	5	10	15	10	10
Weigh time	12	12	12	16	12	16	
Travel time	60	100	40	40	80		

Calculate the total busy time of loaders, the scale, average loader and scale utilization.
Assume 5 trucks are at the loader and one is at the scale, at time "0". Stopping event time TE = 64min.

UNIT-IV

7.	a)	List and explain different queuing notations.	CO2	7 Marks
	b)	A production process manufactures computer chips on the average at a 2% non conforming. Every day, a random sample of size 50 is taken from the process. If the sample contains more than two non conforming chips, the process will be stopped. Compute the probability that the process is stopped by the sampling scheme.	CO3	7 Marks
		(OR)		

8.	a)	Compare different techniques used for generating random numbers with examples.	CO4	8 Marks
	b)	What are Pseudo random numbers? What are the problems that occur while generating Pseudo random number?	CO1	6 Marks

UNIT-V

9.	a)	With a neat diagram, explain the concept of model building, verification and validation.	CO6	7 Marks
	b)	Describe the three step approach formulated by Naylor and Finger in the validation process.	CO6	7 Marks

(OR)

10.	a)	Explain the replication method for steady state simulations.	CO6	7 Marks
	b)	Differentiate between terminating and steady state simulations by giving one example each.	CO6	7 Marks

SYSTEMS ENGINEERING
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Illustrate the functioning of system Engineer career development Model.	CO1	7 Marks
	b)	Explain various system engineering domain and fields.	CO1	7 Marks
		(OR)		
2.	a)	Discuss about career opportunities and growth in System Engineer profession.	CO3	7 Marks
	b)	Discuss about various system engineering approaches.	CO1	7 Marks

UNIT-II

3.	a)	Explain about functional elements of system building blocks.	CO2	7 Marks
	b)	Illustrate the life cycle model of DoD.	CO3	7 Marks
		(OR)		
4.	a)	Explain the automobile system boundaries by showing context diagram.	CO2	7 Marks
	b)	Discuss on role of testing throughout system development.	CO2	7 Marks

UNIT-III

5.	a)	Analyze and explain projected system needs by showing flow diagram.	CO3	7 Marks
	b)	Explain about requirements analysis in the concept definition phase.	CO3	7 Marks
		(OR)		
6.	a)	What is feasibility? Explain Visualization of Subsystem Implementation.	CO3	7 Marks
	b)	Design and explain functional block diagram of a standard coffeemaker using IDEF method.	CO3	7 Marks

UNIT-IV

7.	a)	How do analyze and evaluate test results and user interfaces? Discuss.	CO4	7 Marks
	b)	Write a short note on: i) Modular Configuration. ii) User Interface Design.	CO4	7 Marks
		(OR)		
8.	a)	Discuss about prototype development as a risk mitigation technique.	CO5	7 Marks
	b)	Explain systems engineering method in engineering design.	CO4	7 Marks

UNIT-V

9.	a)	Describe the application of concurrent engineering in successive phases of system development.	CO6	10 Marks
	b)	Explain about operational factors in system development.	CO5	4 Marks
		(OR)		
10.	a)	Illustrate the Problems in the Transition Process.	CO5	10 Marks
	b)	Write a short note on: i) WBS. ii) SEMP.	CO6	4 Marks

DATA ANALYTICS
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the data processing chain with neat sketch.	CO1	7 Marks
	b)	Explain various applications of data analytics.	CO1	7 Marks
		(OR)		
2.	a)	"Data almost certainly needs to be cleansed and transformed before it can be used for data mining". Justify.	CO1	7 Marks
	b)	How would you judge the quality of data visualizations?	CO1	7 Marks

UNIT-II

3.	a)	What is a decision tree? Why decision trees are the most popular classification technique?	CO2	7 Marks
	b)	Compare and contrast decision trees with regression models.	CO2	7 Marks
		(OR)		
4.	a)	Explain the steps required to build an ANN.	CO2	7 Marks
	b)	Explain the key elements that differed in the construction of Decision Tree algorithms.	CO2	7 Marks

UNIT-III

5.	a)	Explain Apriori algorithm for association rule mining.	CO3	7 Marks
	b)	Discuss advantages and disadvantages of K-Means algorithm.	CO3	7 Marks
		(OR)		
6.	a)	Define Baye's theorem. Explain Naïve Baye's model for classification.	CO3	7 Marks
	b)	Discuss briefly text classification.	CO3	7 Marks

UNIT-IV

7.	a)	Explain in detail about Big Data Landscape.	CO4	7 Marks
	b)	Explain briefly about descriptive statistics.	CO4	7 Marks
		(OR)		
8.	a)	Discuss the use of normal distribution with respect to data analysis.	CO4	7 Marks
	b)	Explain page rank algorithm.	CO4	7 Marks

UNIT-V

9.	a)	Discuss Hadoop distributed file system.	CO5	7 Marks
	b)	How does Map Reduce work? Explain with an example.	CO5	7 Marks
		(OR)		
10.		Discuss the following in MongoDB Query language. i) MapReduce functions. ii) Cursors. iii) Import and Export.	CO6	14 Marks

INTERNET OF THINGS

[Computer Science and Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the IoT protocols in Application layer? Discuss in detail.	CO1	7 Marks
	b)	Explain about logical design of IOT device.	CO1	7 Marks
		(OR)		
2.	a)	Describe about Communication models in IOT.	CO2	7 Marks
	b)	With neat diagrams, explain about IoT Levels and Deployment Templates in detail.	CO2	7 Marks

UNIT-II

3.		Explain in detail about various Domain Specific IoT applications.	CO4	14 Marks
		(OR)		
4.	a)	Explain Arduino interfacing with an example.	CO3	7 Marks
	b)	Describe various Linux commands to implement on Raspberry Pi.	CO3	7 Marks

UNIT-III

5.	a)	Define Electronics, Sensors and Actuators used for IOT applications.	CO2	7 Marks
	b)	Write a program to detect an object using IR sensor.	CO2	7 Marks
		(OR)		
6.	a)	Write short notes on: i) Internet Communications. ii) MAC Addresses.	CO3	7 Marks
	b)	Explain the role of UDP and TCP in IOT.	CO3	7 Marks

UNIT-IV

7.		Explain the Seven steps of Design Methodology for IOT System Design.	CO4	14 Marks
		(OR)		
8.	a)	Discuss about Home Automation in detail.	CO4	7 Marks
	b)	What are the various service types? Explain.	CO4	7 Marks

UNIT-V

9.	a)	Describe about data Analytics for IOT in detail.	CO5	7 Marks
	b)	Explain about Hadoop ecosystem in detail.	CO5	7 Marks
		(OR)		
10.	a)	Briefly explain about Hadoop Map Reduce for batch data analysis.	CO5	7 Marks
	b)	Describe about Apache Oozie in detail	CO6	7 Marks

MANAGEMENT SCIENCE
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Identify different functions of management and explain each one of them with examples.	CO1	14 Marks

(OR)

2.	a)	What are the advantages of Centralization and Decentralization? Explain.	CO3	6 Marks
	b)	Write the organization structure of your college. What type of structure is that?	CO3	8 Marks

UNIT-II

3.	a)	Explain the basic steps of Method study.	CO1	7 Marks
	b)	Explain briefly the basic principles involved in preparing the layout of any industrial plant indicating the important techniques available for the purpose.	CO2	7 Marks

(OR)

4.	a)	List and explain the steps involved in work-measurement.	CO1	7 Marks
	b)	Enumerate the factors affecting quality and explain how to overcome them.	CO1	7 Marks

UNIT-III

5.	a)	Write the differences between on-job training and off-job training.	CO1	6 Marks
	b)	What is performance appraisal? List the objectives and steps involved in performance appraisal.	CO1	8 Marks

(OR)

6.	a)	Explain the methods of merit rating with examples.	CO1	8 Marks
	b)	Enumerate the assumptions of McGregor's theory of 'X' and 'Y'.	CO1	6 Marks

UNIT-IV

7. A small project is composed of 8 activities whose time estimates are listed in the table below. CO4 14 Marks

Activity	Predecessor	Estimated duration(Weeks)		
		Optimistic	Most likely	Pessimistic
A	-	1	1	7
B		1	4	7
C		2	2	8
D	A	1	1	1
E	B	2	5	14
F	C	2	5	8
G	D,E	3	6	15
H	F,G	1	2	3

i) Draw the project network and determine the expected project completion time.
ii) What duration will have 95% confidence of project completion?

(OR)

8.	a)	Explain the term 'Entrepreneur'. State the characteristics of an entrepreneur.	CO5	6 Marks
	b)	Differentiate between entrepreneur and manager.	CO5	8 Marks

UNIT-V

9.	a)	What is meant by Business Process Outsourcing? Also state its need.	CO6	7 Marks
	b)	Explain the concept of Just-In-Time and state its advantages.	CO6	7 Marks
		(OR)		
10.	a)	Explain the concept of six sigma.	CO6	7 Marks
	b)	Discuss in detail the role of BPO in the area of manufacturing.	CO6	7 Marks

PERSONALITY DEVELOPMENT

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Describe in your own words how the unrealistic and vague goals affect your life.	CO1	14 Marks
		(OR)		
2.	a)	Explain why rewards for success or accomplishment are better ways to provide reinforcement than punishment for failure.	CO4	7 Marks
	b)	Explain the objectives of your short term goals with a few examples.	CO4	7 Marks

UNIT-II

3.		Developing positive attitudes and eliminating negative ones is the best kind of reforming you can do – Differentiate.	CO2	14 Marks
		(OR)		
4.	a)	List out three steps in the process of attitude improvement.	CO1	7 Marks
	b)	List out the a few negative consequences for those who have negative attitudes.	CO1	7 Marks

UNIT-III

5.		Apply a few strategies to improve efficient work habits.	CO3	14 Marks
		(OR)		
6.	a)	Stress in your private life influences your work and vice versa. Describe.	CO1	7 Marks
	b)	Mention few ways to develop your thinking skills.	CO1	7 Marks

UNIT-IV

7.		Differentiate between the Laissez-Faire Leader and the Democratic Leadership styles.	CO2	14 Marks
		(OR)		
8.	a)	It is important to find out and apply the preferred communication style of your supervisor. Infer the idea	CO4	7 Marks
	b)	"Your supervisor should be aware of all the problems". Predict the statement	CO4	7 Marks

UNIT-V

9.		Your short and medium range goals will include efforts to secure raises and promotions. Illustrate	CO3	14 Marks
		(OR)		
10.	a)	Up gradation of skills for the requirement of a job is compulsory". Evaluate.	CO5	7 Marks
	b)	"A performance Appraisal is an official evaluation of your work" Justify.	CO5	7 Marks

IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

REFRIGERATION AND AIR CONDITIONING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	"The COP of an air refrigeration cycle is very low, but still a refrigeration system is most common in the Air craft", discuss the statement.	CO1	6 Marks
	b)	A Bell-Coleman refrigeration cycle works between 1 bar and 6 bar. The adiabatic efficiency of compression is 90% and expansion is 95%. Find the COP of the system and its tonnage when the air flow rate is 2 kg/sec. The ambient temperature is 25ºC and refrigerator temperature is -5ºC.	CO3	8 Marks
		(OR)		
2.	a)	Derive an expression for the COP of Bell- Coleman cycle.	CO1	6 Marks
	b)	The capacity of a refrigerator is 200 TR when working between - 8ºC and 26ºC. Determine the mass of ice produced per day from water at 26ºC. Also find the power required to drive the unit. Assume that the cycle operates on reversed Carnot cycle and latent heat of ice is 335 kJ/kg	CO2	8 Marks

UNIT-II

3.	a)	How does the increase in condenser temperature affect COP? Also explain the influence of evaporator temperature on COP. Which of the two temperatures have more influence on COP?	CO1	6 Marks
	b)	A vapour compression machine is used to maintain a temperature of -23ºC in a refrigerated space. The ambient temperature is 37ºC. The compressor takes in dry saturated vapour of F-12. A minimum 10ºC temperature difference is required at the evaporator as well as at condenser. There is no sub cooling of the liquid If the refrigerant flow rate is 1 kg/min, Find: i) Tonnage of refrigeration. ii) Power requirement. iii) Ratio of COP of this cycle to COP of Carnot cycle.	CO4	8 Marks
		(OR)		
4.	a)	What are essential properties of a good refrigerant?	CO1	4 Marks
	b)	A four cylinder, single acting R-12 compressor 30 cm x 40 cm runs at 960 r.p.m. The compressor clearance factor is 0.03 and the law of compression $PV^{1.1} = C$. The operating pressures for the vapour compression refrigeration system are: 8.47 bar (35ºC) and 1.004 bar (-30º). The refrigerant temperatures are: entering the compressor -20ºC, leaving the compressor 50ºC; entering the condenser 45ºC, leaving the condenser 25ºC, entering the expansion valve 30º and leaving the evaporator dry saturated. Assuming that heat removed in the compressor is 25 kJ/sec. calculate: i) The refrigerating capacity. ii) The compressor power. iii) COP. iv) Mass of condensing cooling water assuming the rise in temperature to be 10ºC. v) Also tabulate energy balance for 1 kg of refrigerant.	CO4	10 Marks

UNIT-III

5.	a)	Discuss the advantages of vapour absorption refrigeration system over vapour compression refrigeration system.	CO1	7 Marks
	b)	In a vapour absorption refrigeration system, heating, cooling and refrigeration takes place at the temperatures of 100ºC, 20ºC and -5ºC respectively. Find the maximum C.O.P of the system.	CO3	7 Marks

(OR)

6.	a)	What is thermo electric refrigeration system? List out the merits and demerits of thermo-electric refrigeration system over other refrigeration system. What are the fields of its applications?	CO2	7 Marks
	b)	Determine the COP of a vapour absorption refrigeration system when the temperature of generator is 120ºC, the temperature of the condenser is 30ºC and the temperature of the evaporator is -20º C. What would be its COP if it were a Carnot.	CO2	7 Marks

UNIT-IV

7.		The following data apply to an air conditioning system: Room sensible heat =41868kJ/hr ; room latent heat=41868 kJ/hr; inside design condition= 25º, 50**%** RH, outside design condition=35°C,DBT, 27**.**8 WBT. Return air from the room is mixed with the outside air before entering the cooling coil in the ratio of 4**:**1. Return air from the room is mixed with the cooling air, i.e. after the cooling coil in the ratio of 1**:**4. Cooling coil by pass factor is 0**.**1. The air may be reheated if necessary before supplying to the conditioned space. Assume ADP as 10ºC and determine, i) Supply air conditions into the room. ii) Refrigeration load due to the reheat. iii) Total refrigeration capacity. iv) The quantity of fresh air supplied.	CO5	14 Marks

(OR)

8.	a)	Explain in brief, an adiabatic saturation process. Represent the same on a psychrometric chart.	CO1	6 Marks
	b)	Ten grams of moisture per kg of dry air is removed from atmospheric air when it is passed through an air conditioning system and its temperature becomes 20ºC. The atmospheric conditions are 40ºC DBT and 60**%** RH. Find the following for the conditioned air: i) Relative humidity. ii) Wet-bulb temperature. iii) Dew point temperature. iv) Enthalpy change for the air. Assume standard atmospheric pressure.	CO6	8 Marks

UNIT-V

9.	a)	Discuss the filters used in air conditioning systems.	CO1	7 Marks
	b)	Explain the use of heat pump for heating and cooling cycle with a neat diagram.	CO1	7 Marks

(OR)

10.	a)	Define human comfort and explain the factors which affect human comfort.	CO1	7 Marks
	b)	Discuss various types of duct systems and their applications.	CO1	7 Marks

IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

COMPUTER NETWORKS
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Compare Optical Fibers and Copper Cable Guided Transmission Mediums.	CO2	7 Marks
	b)	With a neat diagram, explain ISO - OSI reference model.	CO1	7 Marks
		(OR)		
2.	a)	What are the reasons for using layered protocols? Explain in detail.	CO1	7 Marks
	b)	List the requirements in building a computer network.	CO1	7 Marks

UNIT-II

3.	a)	Suppose we want to transmit the "message 1011 0010 0111 and protect it from errors using the CRC polynomial $x^4 + x^2 + 1$. Use polynomial long division to determine the message that should be transmitted. Suppose the leftmost bit of the message is inverted due to noise on the transmission link. What is the result of the 'receiver's CRC calculation? How does the receiver know that an error has occurred?	CO4	7 Marks
	b)	Explain the algorithm used for reliable transmission and flow control.	CO1	7 Marks
		(OR)		
4.	a)	Describe random access protocols with their merits and demerits.	CO1	7 Marks
	b)	Compare Fast Ethernet and Gigabit Ethernet Technologies.	CO2	7 Marks

UNIT-III

5.	a)	Draw and explain about Header format of Internet Protocol version 4.	CO1	7 Marks
	b)	A network on the Internet has a subnet mask of 255.255.240.0. What is the maximum number of nodes it can handle?	CO3	7 Marks
		(OR)		
6.	a)	What is meant by Anycast Routing? Explain with an example.	CO1	6 Marks
	b)	Recall various Network Layer design issues.	CO1	8 Marks

UNIT-IV

7.	a)	Compare TCP congestion control mechanisms.	CO2	8 Marks
	b)	What is the total size of the minimum TCP MTU, including TCP and IP overhead but not including data link layer overhead?	CO2	6 Marks
		(OR)		
8.	a)	A client uses UDP to send data to server. The data length is 16 bytes. Calculate the efficiency of this transmission at the UDP level (ration of useful bytes to total bytes).	CO4	6 Marks
	b)	Briefly explain the following Timers in TCP. i) Retransmission Time Out. ii) Persistence Timer	CO1	8 Marks

UNIT-V

9.	a)	Describe the Distribution of Domain Name System(DNS) Name Space.	CO1	6 Marks
	b)	Consider DNS servers.	CO2	8 Marks
		i) Compare two approaches, obtaining a name from a file in a remote machine and from a DNS server of the local ISP.		
		ii) Describe the relationship between a domain name taken from a DNS server and an IP address subnet.		

(OR)

10.	a)	Summarize the principles of application layer protocols.	CO2	6 Marks
	b)	Explain in detail about Simple Mail Transfer Protocol.	CO1	8 Marks

CODE No.: 16BT51203 SVEC-16

WEB TECHNOLOGIES
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Name different types of lists supported by HTML. Distinguish between HTML and HTML5.	CO1 CO2	7 Marks
	b)	Explain the following HTML tags with suitable example. i) <pre> ii) <canvas> iii) <img> iv)	CO1	7 Marks
		(OR)		
2.	a)	Explain various form elements of HTML with suitable example.	CO1	7 Marks
	b)	Explain the following HTML tags with suitable example. i) <font> ii) <meta> iii) <p> iv) <video>	CO1	7 Marks

UNIT-II

3.	a)	Classify CSS selectors and explain.	CO2	7 Marks
	b)	Design a web page that display credit card type and then validate the entered card number according to the card type.	CO6	7 Marks
		(OR)		
4.	a)	Explain the following pre-defined objects of JavaScript. i) Window. ii) Document.	CO1	7 Marks
	b)	Develop a web page to convert Indian rupees to Foreign currency. Read the Indian rupees through input dialog and select foreign currency to which Indian rupees are converted using drop down menu.	CO6	7 Marks

UNIT-III

5.		Develop a mobile optimized website for displaying the images using responsive classes.	CO5	14 Marks
		(OR)		
6.		Develop Contact Us Web Page using the grid system in bootstrap.	CO5	14 Marks

UNIT-IV

7.	a)	Build a PHP Page that reads User Name and Favorite Color from the html form and then display user name in green color and sets user favorite color as a background color to the web page.	CO4	8 Marks
	b)	Demonstrate the implementation of Object Cloning in PHP.	CO1	6 Marks
		(OR)		
8.	a)	Develop a PHP code to implement constructor.	CO3	8 Marks
	b)	Demonstrate OOP principles with suitable example using PHP.	CO1	6 Marks

UNIT-V

9.	a)	Define a prepared statement. Explain in detail with the suitable program.	CO3	7 Marks
	b)	Create a web page to perform form data validation in PHP.	CO4	7 Marks
		(OR)		
10.	a)	List the different authentication methodologies used in PHP.	CO1	7 Marks
	b)	Design a web page to store the contact us form data in the database using PHP. (Note: contact us page contains the following fields Name, Email, subject, message and submit button).	CO3	7 Marks

COMPILER DESIGN
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Compare Recursive interpreters and Iterative interpreters.	CO1	7 Marks
	b)	Write the specification of YACC parser generator and explain with example.	CO5	7 Marks

(OR)

2.	a)	Explain Input buffering with example.	CO1	7 Marks
	b)	Give the Specification of Tokens.	CO1	7 Marks

UNIT-II

3.		Form ACTION/GOTO table for the following grammar S → L=R |R L → *R |id R → L Justify whether the grammar is LR(0) or not.	CO3	14 Marks

(OR)

4.	a)	Define Ambiguous grammar. Eliminate ambiguity for the grammar E→E+E/E-E/(E)/id.	CO3	7 Marks
	b)	Give the limitations of Recursive descent parser.	CO1	7 Marks

UNIT-III

5.	a)	List out some typical semantic errors. Explain how they can be rectified.	CO1	7 Marks
	b)	Define static checking. Give some examples of static checks.	CO1	7 Marks

(OR)

6.	a)	Write a syntax directed translation scheme for desk calculator grammar L→En E→E+T E→T T→T*F T→F F→ (E) F→digit.	CO4	8 Marks
	b)	Write Type Expression for the type an array of pointers to real, where the array index ranges from 1 to 100.	CO1	6 Marks

UNIT-IV

7.	a)	Compare various forms of three address code.	CO1	7 Marks
	b)	Convert the following arithmetic expression into syntax tree and three address code $b^* - (a + b)$.	CO4	7 Marks

(OR)

8.	a)	Explain the usage of search tree in implementing symbol table.	CO1	7 Marks
	b)	Differentiate between formal parameters and actual parameters. Explain about activation of procedure/function.	CO6	7 Marks

UNIT-V

9.	a)	Discuss various object code forms.	CO1	7 Marks
	b)	Design an algorithm for code generation from there address code.	CO3	7 Marks

(OR)

10.	a)	With an example, explain peephole optimization.	CO2	7 Marks
	b)	Explain code generation algorithm with the function GETREG.	CO1	7 Marks

RURAL TECHNOLOGY

[Electrical and Electronics Engineering, Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss briefly about impacts occurred while transferring the technology.	CO1	7 Marks
	b)	Explain the role of technology in poverty eradication in rural development.	CO1	7 Marks

(OR)

2.	a)	Thandrapadu is one of the backward village in Kurnool District with lack of infrastructure facilities. Choose the technologies that can improve the rural infrastructure.	CO4	7 Marks
	b)	List out and explain the different ways how you will eradicate poverty.	CO1	7 Marks

UNIT-II

3.	a)	Kumar is a young doctorate in Mechanical engineering from NIT Trichy and carried out his research in renewable energy sources. He wants to implement his ideas in rural areas. How can he help rural areas in using solar energy?	CO4	7 Marks
	b)	Ramesh who supplies solar cooker from Bangalore and want to sell in the village. What is the principle behind the working of solar cooker?	CO2	7 Marks

(OR)

4.	a)	The increase of wood waste and animal waste is more in the village Ramapuram which is near to the forest area. Show how the waste can be used by the rural people with the technology for cooking?	CO4	7 Marks
	b)	Explain briefly about procedure involved in concentration solar power and photovoltaic cells for generation of electricity.	CO2	7 Marks

UNIT-III

5.	a)	Define tissue culture. Explain briefly how the production of one of the ornamental plant orchids can be increased with the plant tissue culture.	CO4	7 Marks
	b)	Explain the role of food and agro based technologies in rural development.	CO4	7 Marks

(OR)

6.		Discuss how food and agro based technologies gives employment and profits to community with government partnership.	CO1	14 Marks

UNIT-IV

7.	a)	Raghunath is an agricultural scientist wants to give awareness to the rural people about the usage of organic fertilizers in the crop filed. Suggest the importance and uses of bio fertilizers.	CO6	7 Marks
	b)	Pandurangapuram which is one of the villages in the drought prone area of the Rayalaseema area. Show how rain water technology is useful for the village.	CO4	7 Marks

(OR)

8.	a)	Write the importance of medical and aromatic plants and explain their need in community development.	CO5	7 Marks
	b)	Give solution how dry land can be converted to farming land keeping in view of bio-fertilizers.	CO2	7 Marks

UNIT-V

9.	a)	What is meant by CSR? How development can be achieved with the involvement of private sector participation in the rural area?	CO3	7 Marks
	b)	Write a short note on Sansaad Aadarsh Gram Yojana.	CO1	7 Marks

(OR)

10.		What are the various ICT applications? How it is applicable to rural India?	CO2	14 Marks

SOFTWARE TESTING
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define early testing. List the benefits of early testing.	CO1	7 Marks
	b)	What is the psychology behind testing by an independent team?	CO1	7 Marks
		(OR)		
2.	a)	Compare manual testing and automated testing.	CO2	8 Marks
	b)	Define test strategy matrix. Explain.	CO1	6 Marks

UNIT-II

3.	a)	What is loop testing? Explain various loops.	CO1	8 Marks
	b)	Explain data flow testing in detail.	CO1	6 Marks
		(OR)		
4.	a)	Differentiate statement coverage and condition coverage.	CO2	8 Marks
	b)	Explain multiple condition coverage.	CO1	6 Marks

UNIT-III

5.	a)	List the steps involved in deriving test cases using cause effect graphing based testing.	CO2	7 Marks
	b)	Derive the test cases for the following scenario. "A program has been designed to determine the nature of roots of a quadratic equation. The quadratic equation takes three input values from the range [0, 100]."	CO3	7 Marks
		(OR)		
6.	a)	Design a finite state machine which accepts "aabb" character sequence in a given text.	CO3	7 Marks
	b)	Write an algorithm that simulates the behavior of finite state machine.	CO1	7 Marks

UNIT-IV

7.		Test the Auto Teller Machine software by developing the following. i) Unit test plan. ii) Integration test plan. iii) System test plan.	CO6	14 Marks
		(OR)		
8.		Consider a project with the following components: EI(Simple)=30, EO(average)=20, EQ(average)=35, ILF(complex)=8, ELF(complex)=05. In addition, the system requires significant end-user efficiency, moderate distributed data processing, critical data communications, and other GSCs are incidental. Compute the function points for this system using FPA.	CO4	14 Marks

UNIT-V

9.	a)	Explain the need for automated testing tools.	CO1	7 Marks
	b)	Analyze the steps involved in selecting software testing tools.	CO2	7 Marks
		(OR)		
10.		Evaluate the role software size metrics on software quality.	CO5	14 Marks

UNIT-I

1.	a)	Explain Software Testing Model with neat diagram.	CO1	8 Marks
	b)	Explain Software testing as process. Justify?	CO1	6 Marks
		(OR)		
2.	a)	Define STLC and explain each step in detail.	CO1	8 Marks
	b)	Compare Positive and Negative testing.	CO2	6 Marks

UNIT-II

3.	a)	Distinguish between decision node and junction node.	CO2	7 Marks
	b)	Design Test cases for Statement coverage and Branch coverage. Explain with an appropriate example.	CO3	7 Marks
		(OR)		
4.	a)	Explain data flow testing in detail.	CO1	6 Marks
	b)	Write a program to display the prime numbers up to a given number. Draw the control flow graph and calculate the cyclomatic complexity number for the given program.	CO4	8 Marks

UNIT-III

5.	a)	List and explain the elements of state testing.	CO1	7 Marks
	b)	Identify the possible states, inputs of a software process and draw its corresponding state table.	CO2	7 Marks
		(OR)		
6.	a)	Describe the need of state table. Explain the process of converting state table into test cases.	CO3	7 Marks
	b)	"Error Guessing is an ad hoc approach for testing." Comment on this statement.	CO1	7 Marks

UNIT-IV

7.	a)	Discuss the key components of test management.	CO1	7 Marks
	b)	Analyze the role testing group activities for conducting software testing effectively.	CO2	7 Marks
		(OR)		
8.	a)	List the differences between size oriented metrics and function point analysis metrics.	CO2	7 Marks
	b)	Explain the process of calculating function points of real time software.	CO4	7 Marks

UNIT-V

9.	a)	Identify the different parameters required for evaluating regression test selection techniques.	CO2	7 Marks
	b)	T contains 90 tests of which 20 are modification-revealing for P and P' and M selects 12 of these 20 tests, then calculate the inclusiveness of M relative to P, P' and T.	CO4	7 Marks
		(OR)		
10.	a)	Apply the regression testing techniques on measuring software quality.	CO5	7 Marks
	b)	Use web application testing tool to insert standard checkpoints for flight application.	CO6	7 Marks

ESTIMATION AND QUANTITY SURVEYING

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Estimate the detailed quantity for the following items of two roomed building from the given plan and cross section as shown in Fig.1, by using long wall and short wall method**.** CO4 14 Marks

   i) Earth work excavation.
   ii) Brick work in CM (1:4) for substructure up to plinth level.
   iii) R.C.C. slab with (1:1.5:3)
   iv) Inside Plastering in cm (1:5) with 12 mm thick.

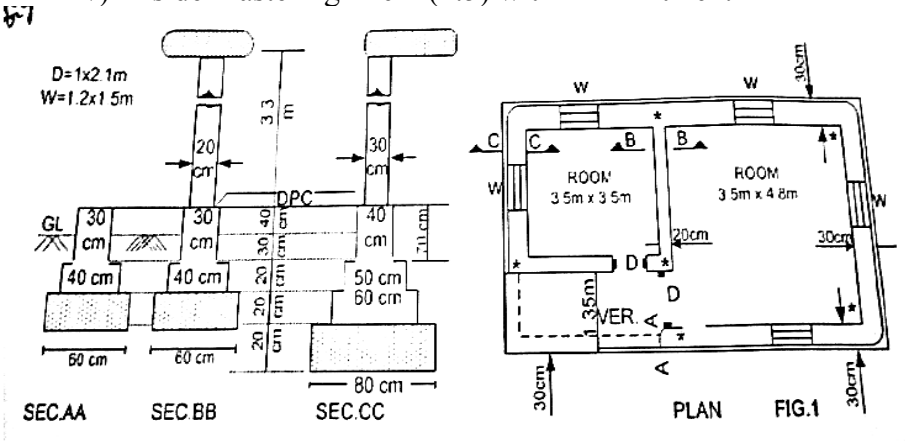

Fig. 1

(OR)

2. Estimate the quantities of the building items of a hexagonal room from the given plan and section as shown in Fig.2, by using center line method. CO4 14 Marks

   i) Earthwork excavation for foundation.
   ii) I-Class brick work for super structure.
   iii) Plastering in CM (1:5), 20 mm thick for inside walls.

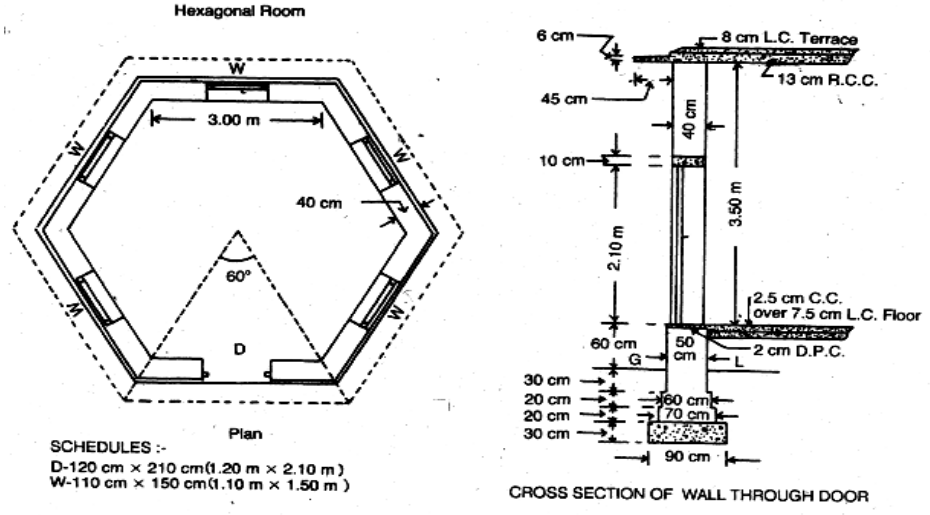

Fig. 2

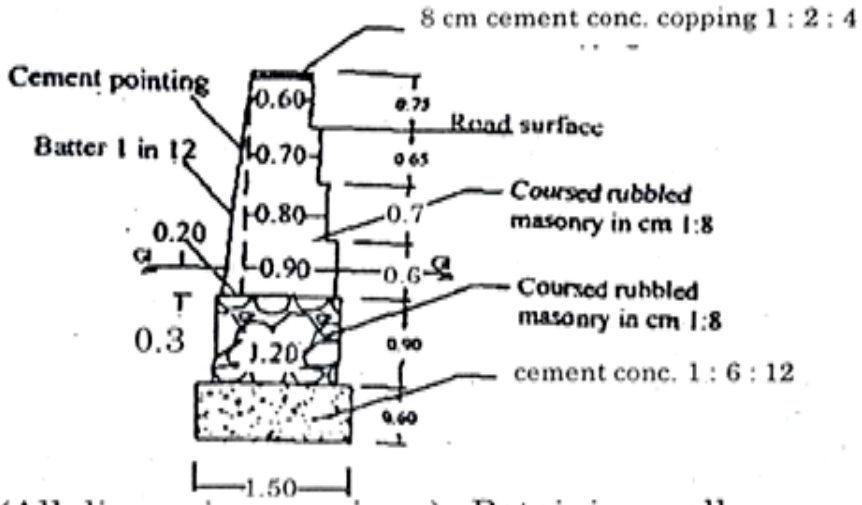
UNIT-II

3. a) Estimate the quantity of sanitary line using NP_2 RCC Hume pipe line for 1 km with a trench size of 75 cm breadth and 1.50 m depth and alround sand filling with 40 cm thick including refilling the excavated earth etc. complete. CO2 7 Marks

b) Estimate the quantities of the retaining wall shown in figure below. CO2 7 Marks



(All dimensions are in m) Retaining wall.

(OR)

4. a) What are the different methods for computation of earth work excavation in road embankments? CO1 6 Marks

b) Prepare a detailed estimate for construction of a new state highway for 1km length. The formation width of the road is 10m, average height of the bank is 1m and side sloes are 2:1. The metal width is 3.7 meters with bottom layer PCC 1:4:8 with 150mm thick and top layers CC 1:1.5:3 with 300mm thick. CO2 8 Marks

UNIT-III

5. a) Write the types of specification. Give their advantages and disadvantages. CO1 7 Marks

b) Describe the general specification for first class buildings. CO3 7 Marks

(OR)

6. Evaluate the cost of the following items of work as per SSR. CO4 14 Marks

i) Brick masonry in CM (1:6) for superstructure.
ii) Plastering in CM (1:4), 12 mm thickness.
iii) White washing with 3 coats including primary coat for walls.

UNIT-IV

7. a) Describe the legal requirements of a contract. CO3 7 Marks

b) What is negotiated contract? Describe briefly labour contract. CO1 7 Marks

(OR)

8. a) Define arbitration. What are the requirements of arbitration? CO1 7 Marks

b) Discuss the types of termination of contract. CO1 7 Marks

UNIT-V

9.	a)	List the different methods of depreciation.	CO1	6 Marks
	b)	Calculate the annual rent of a building with the following data. Cost of land = Rs.20,000/- Cost of building = Rs.80,000/- Estimate life = 80years Return expected = 5% on land 6% on building Annual repairs are expected to be 0.7% of the cost construction and other out goings will be 25% of the gross rent.	CO2	8 Marks

(OR)

10.	a)	State the following terms : i) Scrap valve. ii) Salvage valve. iii) Book valve. iv) Market valve.	CO1	6 Marks
	b)	An old building has been purchased by a person at a cost of Rs.30,000/- excluding the cost of the land. Evaluate the amount of annual sinking fund at 4**%** interest assuming the future life of the building as 20 years and scarp value of the building as 10% of the cost of purchase.	CO6	8 Marks

GEOSPATIAL TECHNOLOGY
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define: i) tilt. ii) focal length. iii) isocentre.	CO1	6 Marks
	b)	Define aerial photogrammentry and its types.	CO1	8 Marks
		(OR)		
2.	a)	Define Mosaic and its types.	CO2	7 Marks
	b)	Define stereoscopy and its determination.	CO2	7 Marks

UNIT-II

3.		What are the various elements of Remote Sensing? Analyze the Electromagnetic spectrum in brief.	CO3	14 Marks
		(OR)		
4.	a)	Compare the spectral reflectance characteristics of water and vegetation.	CO3	7 Marks
	b)	Define Resolution. Classify the resolutions of the sensors.	CO3	7 Marks

UNIT-III

5.		Analyze the fundamental operations of GIS in detail.	CO2	14 Marks
		(OR)		
6.		Distinguish between Raster GIS and vector GIS.	CO2	14 Marks

UNIT-IV

7.		Evaluate various surface analysis tools and explain the slope analysis in GIS.	CO6	14 Marks
		(OR)		
8.		Classify the segments of Global Positioning System (GPS).	CO4	14 Marks

UNIT-V

9.		Demonstrate the process of Land use and Land cover mapping with help of RS and GIS.	CO5	14 Marks
		(OR)		
10.		Demonstrate the role of RS and GIS and give suitable recommendation for sustainable watershed management.	CO7	14 Marks

RAILWAY, AIRPORT AND HARBOUR ENGINEERING

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is a sleeper? List the functions, types of sleepers and compare one another.	CO1	7 Marks
	b)	What are the requirements of an ideal rail joint? Also explain the various rail joints used in railways with neat sketches.	CO1	7 Marks
		(OR)		
2.	a)	Compare the widening of gauges on curves with formula and coning of wheels with neat sketches.	CO2	7 Marks
	b)	If the wheel base of a vehicle moving on a B.G track is 6m, the diameter of wheel is 1.5m and depth of flange below the top of rail is 3.17 cm. Determine the extra width required to be provided on a gauge, if the radius of the curve is 160 m.	CO6	7 Marks

UNIT-II

3.	a)	Describe in detail about plate laying techniques.	CO5	7 Marks
	b)	Discuss in detail about the modern methods of maintenance of railway tracks.	CO4	7 Marks
		(OR)		
4.	a)	Summarize how poor soil is being stabilized and explain the methods in detail.	CO1	7 Marks
	b)	Discuss the materials required for track laying and list the factors considered in the construction of railway track.	CO1	7 Marks

UNIT-III

5.	a)	List the factors to be considered for the selection of site for a commercial airport.	CO1	7 Marks
	b)	What are the basic patterns of runway configurations? Discuss each pattern.	CO1	7 Marks
		(OR)		
6.	a)	Explain the importance of airport planning.	CO1	7 Marks
	b)	What are the characteristics of a good airport layout?	CO1	7 Marks

UNIT-IV

7.	a)	What are the items to be considered in the geometric design of runway and explain it in detail?	CO3	7 Marks
	b)	Write the construction procedure of the windrose diagram.	CO5	7 Marks
		(OR)		
8.	a)	Write in detail the various design elements to be considered in taxiway laying as per IS standards.	CO8	7 Marks
	b)	The length of a runway at mean sea level, standard temperature and zero gradients is 1600m. The site has an elevation of 320m, with a reference temperature of 33.6ºC. The runway has to be constructed with an effective gradient of 0.25%. Calculate the actual length of the runway at site.	CO3	7 Marks

UNIT-V

9.	a)	Write in detail about Inland water transports and coastal protection works.	CO5	7 Marks
	b)	Discuss the factors to be considered while selecting a suitable site for the construction of a port.	CO1	7 Marks

(OR)

10.	a)	Discuss in detail about the environmental concern required for port operation.	CO7	7 Marks
	b)	What are the components of a harbour? Draw neat sketches of the layout of an artificial harbour and road stead.	CO1	7 Marks

IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

ADVANCED FOUNDATION ENGINEERING

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

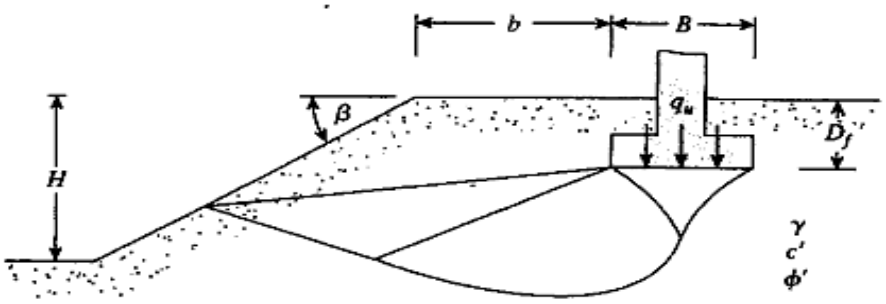
Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write a short note on determination of bearing pressure using Pressure meter and Dilatometer.	CO1	6 Marks
	b)	Calculate the net allowable bearing pressure and ultimate load of rectangular footing 2 m x 4 m in plan, founded at a depth of 1.8 m below ground surface. The load on footing acts at an angle of 15° to the vertical and is eccentric in the direction of width and length by 20 cm and 30 cm respectively. The saturated unit weight of the soil is 18 kN/m^3. Natural water table is at a depth of 2 m below ground level. The unit cohesion of soil is 30 kN/m^2 and soil friction angle is 27°.	CO2	8 Marks

OR)

2.	a)	Where do you provide a combined footing? Discuss the procedure for the design of rectangular combined footing.	CO1	6 Marks
	b)	The figure shows a shallow foundation in clay. The following data are given: B=1.2 m; D_f=1.2 m; b=0.8 m; H=6.3 m; slope angle=30^0, unit weight of soil=17.5 kN/m^3, φ=0 and c=50 kN/m^2. Determine the gross allowable bearing capacity with a factor of safety 4. N_c=6.3.	CO6	8 Marks



UNIT-II

3.	a)	Describe briefly Reese and Matlocks theory of analysis and design of laterally loaded piles.	CO1	6 Marks
	b)	A concrete pile of 13 m length and 405 mm x 405 mm in cross section is embedded in saturated clay (c_u=85 kN/m^2, γ = 18 kN/m^3). Determine the allowable load that the pile can carry (F.S = 4). Use the α method for determining the skin resistance (α = 0.6).	CO6	8 Marks

(OR)

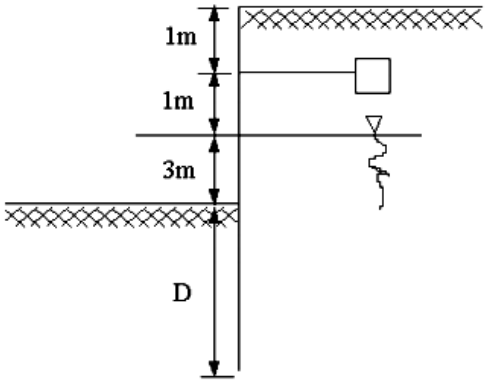
4.	a)	Discuss the evaluation of lateral resistance of rigid and flexible piles.	CO1	6 Marks
	b)	A friction pile group is carrying a load of 3000 kN including the weight of the pile cap at a site where the soil is uniform clay to a depth of 20 m, underlain by rock. The clay may be assumed to be of normal sensitivity and normally loaded, with liquid limit 60%. Number of piles =16, length of pile = 11 m, diameter of pile = 0.5, spacing of piles = 1.5 m centre to centre, unit weight = 16 kN/m^3, initial void ratio = 1.0. Compute the settlement of the group.	CO2	8 Marks

UNIT-III

5.	a)	Write about the cantilever sheet piling in granular soils.	CO1	6 Marks
	b)	A cantilever sheet pile is to be constructed to retain sandy soil to a depth of 6 m. The dry unit weight of sand is 16 kN/m^3 and the saturated unit weight is 20 kN/m^3. The angle of shearing resistance of sand is 32^0. The water level is 3 m above the dredge line. Design the depth of embedment of the sheet pile.	CO3	8 Marks

(OR)

6.	a)	Sketch a typical section of a braced cut and show the various components.	CO8	6 Marks
	b)	Design an anchored bulkhead for its depth and determine the force in the tie rod of the anchored bulkhead shown in figure. The backfill and the soil below the dredge line is sand, having the following properties: G=2.6, e=1.0 and ϕ=30^0. Use the free earth support method.	CO3	8 Marks



UNIT-IV

7.	a)	How to classify an expansive soil based on its liquid limit, plasticity index, shrinkage limit and percentage of clay fraction?	CO1	7 Marks
	b)	How lime column technique minimizes the swelling and shrinkage characteristics of expansive soils?	CO5	7 Marks

(OR)

8.	a)	Describe the method of replacement of the expansive soil with a good quality soil. How would you solve the problem of constructing a footing using this method?	CO4	7 Marks
	b)	Determine the capacity of 5.0m long single under-reamed pile of stem diameter 40 cm. The stratum is a deep deposit of medium dense sand having γ = 18 kN/m^3 and ϕ = 30^0.	CO2	7 Marks

UNIT-V

9.	a)	What are the different types of marine structures? Explain types and choice of breakwaters in brief.	CO1	6 Marks
	b)	Write a brief note on the design of Rubble Mound Breakwaters as per IS code.	CO7	8 Marks

(OR)

10.		Write short notes on the following: i) Breakwaters. ii) Wharves. iii) Jetties. iv) Ship Impact.	CO1	14 Marks

CODE No.: 16BT70119 SVEC-16

Roll No. | | | | | | | | | | |

BRIDGE ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

(Use of codes IRC:6-2014, IRC:21-2000, IS 456:2000, IRC:83-(Part-I)-1999, IRC:83-(Part-II)-1987 and Pigeaud's curves are permitted in the examination hall)

UNIT-I

1.	a)	What are the different types of live loads considered in the design of RCC bridges? Explain them.	CO1	8 Marks
	b)	Explain the gauges which are used in railways.	CO1	6 Marks

(OR)

2.	a)	Discuss about general design requirements of bridges.	CO8	7 Marks
	b)	Mention the importance of investigation of site in bridge design.	CO1	7 Marks

UNIT-II

3. Design the RC box culvert bridge, situated in the state highway with following data: CO3 14 Marks

Width of the bridge	:	12 m
Wearing course	:	56 mm thick
Condition of exposure:		Moderate
Depth of foundation	:	1.35 m
Clear span	:	5 m
Height of the vent	:	3 m
Load case	:	AA tracked vehicle

M25 grade concrete and HYSD bars.

(OR)

4. Design a reinforced concrete slab bridge using the following data: CO3 14 Marks

Clear width of road way	=	7.8m
Clear span	=	11m
Live load	=	IRC class AA.

Use M-25 grade concrete and Fe 415 steel.

UNIT-III

5. Design the interior slab panel of a reinforced concrete T-beam bridge using the following data by Pigeauds method. CO5 14 Marks

Clear width of road way	=	8m
Effective span	=	16m
Live load	=	class AA.

Use M-20 grade of concrete and Fe 415 steel.

(OR)

6. Design the intermediate longitudinal girder of the bridge by Courbon's method for the maximum loading of class AA tracked vehicle. An RCC bridge consists of 3 longitudinal girders of span 15 m each with 4 cross beams at appropriate places. Assume the other preliminary dimensions of this two lane bridge as per the IRC specifications, moderate exposure and cement concrete wearing coat. CO5 14 Marks

UNIT-IV

7.	a)	Explain the forces acting on bridge bearings.	CO2	5 Marks
	b)	Design a steel rocker bearing for transmitting a vertical reaction of 1100kN and a horizontal reaction of 150kN at the support of a bridge girder, assuming the following permissible stresses according to IRC. Permissible compressive stress in concrete bed block = 5 N/mm^2 Permissible bending stress in steel plate = 165 N/mm^2 Permissible bearing stress in steel plate = 190 N/mm^2 Permissible shear stress in steel = 110 N/mm^2 Sketch the typical details of the rocker bearing.	CO3	9 Marks

(OR)

8.		Design an elastomeric pad bearing to support a tee beam girder of a major bridge using the fallowing data: Maximum dead load reaction/bearing = 340 kN Maximum load reaction/ bearing = 550 kN Longitudinal force due to friction for each bearing = 35 kN Effective span of the girder = 23 m Estimated rotation at bearing of the girder due to dead and live loads = 0.003 radians. M20 grade concrete is used. Total estimated shear strain due to creep, shrinkage and temperature = 5 x 10^{-4} units. Draw the details of the bearing.	CO3	14 Marks

UNIT-V

9.	a)	List out the various forces acting on piers.	CO1	7 Marks
	b)	Specify the design principles of abutment as per code.	CO8	7 Marks

(OR)

10.		Write short note on: i) Bed block. ii) Wing walls and approach slab. iii) Bridge foundations.	CO1	14 Marks

CODE No.: 16BT70120 SVEC-16

Roll No. | | | | | | | | | | |

GROUND IMPROVEMENT TECHNIQUES
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the factors to be considered in the selection of best technique for the ground improvement?	CO1	6 Marks
	b)	Explain the suitability of ground improvement technique for different types of soils.	CO5	8 Marks
		(OR)		
2.	a)	List out the methods of ground improvement.	CO1	7 Marks
	b)	How the performance of black cotton soil can be improved. Discuss.	CO2	7 Marks

UNIT-II

3.	a)	What are dewatering methods available for the fine grained soils? Explain any one.	CO1	7 Marks
	b)	Explain the vacuum method of dewatering, in detail. Is this method environmental friendly. Discuss.	CO7	7 Marks
		(OR)		
4.	a)	Discuss the uses of single stage well point installation.	CO1	7 Marks
	b)	Explain in detail about electro–osmosis dewatering system.	CO5	7 Marks

UNIT-III

5.	a)	What is the principle of soil densification? List out the factors that affect compaction and discuss in brief.	CO1	7 Marks
	b)	List out the various in–situ densification methods in granular soils. Describe briefly vibro–compaction methods.	CO5	7 Marks
		(OR)		
6.	a)	What are the benefits of preloading a saturated clay deposit? Infer how the stone columns are useful for improving the properties of cohesive soils.	CO4	7 Marks
	b)	Explain the impact at ground surface and impact at depth methods of densifying granular soils, in brief.	CO5	7 Marks

UNIT-IV

7.	a)	What are the various soil stabilization techniques? Write their suitability with respect to the soil type.	CO1	7 Marks
	b)	Write short notes on: i) Pre-grout investigation. ii) Post grout test. iii) Grout holes pattern. iv) Selection of grout characteristics.	CO1	7 Marks
		(OR)		
8.	a)	Describe in detail how chemicals are used in stabilizing the soil with the help of an example.	CO1	7 Marks
	b)	Write a note on suspension and solution grouting techniques and their effectiveness in improving the in-situ soil conditions.	CO5	7 Marks

UNIT-V

9.	a)	What is soil reinforcement? List various materials to be used as soil reinforcement. Discuss the internal stability aspects of reinforced earth walls.	CO6	7 Marks
	b)	Provide one application each of geomembrane and geogrid types of reinforcements.	CO1	7 Marks

(OR)

10.	a)	Explain the factors governing the design of reinforced soil walls. Write the construction sequence of a reinforced earth wall with vertical faces.	CO1	5 Marks
	b)	Design a 7m high geogrid-reinforced wall where the reinforcement spacing must be at 1.0m spacings, since the wall facing is of the articulated precast concrete type of this same dimension. The coverage ratio is 0.8 (i.e., geogrids do not cover the entire ground surface at each lift: they are slightly separated). The length-to-height ratio or the reinforced soil wall should not be less than 0.7 (i.e., L ~ 4.9m). Additional details of the problem including soil and geogrid data are shown in the diagram below.	CO3	9 Marks

POWER SYSTEM OPERATION AND CONTROL

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. A thermal power plant has three units with the following fuel cost characteristics: CO4 14 Marks

$F_1(P_1) = 570 + 7.5P_1 + 0.0017P_1^2$ Rs/Hr $600MW \le P_1 \le 150MW$

$F_2(P_2) = 380 + 7.8P_2 + 0.002P_2^2$ Rs/Hr $500MW \le P_1 \le 125MW$

$F_3(P_3) = 200 + 7.9P_3 + 0.005P_3^2$ Rs/Hr $600MW \le P_1 \le 150MW$

Obtain the economic operation schedule for these units for a total load demand of 750MW.

i) without considering generator limits.
ii) considering generator limits.
iii) total cost of operation for the above two cases and hence comment on the results.

(OR)

2. a) List the various performance indicators to quantify the accuracy of the forecasting modal. CO1 7 Marks

b) The load curve of an utility observed over a period of time is as follows: CO5 7 Marks

Year	2011	2012	2013	2014	2015	2016	2017	2018	2019
Load (MW)	425	450	466	478	410	398	375	352	362

Estimate the load for the year 2020 using the moving average of order 4 and determine various errors to quantify the forecast accuracy.

UNIT-II

3. a) What are the important methods of hydro-thermal coordination? CO1 2 Marks

b) Derive the condition for economic generation of steam and hydro plants for short term scheduling. State the assumptions made. CO6 12 Marks

(OR)

4. Describe the hydro-thermal economic load scheduling. Derive the necessary equations. CO2 14 Marks

UNIT-III

5. a) What do you mean by unit commitment? Discuss various constraints related to unit commitment problem. CO2 7 Marks

b) Does Unit Commitment guarantee economic power of power generation? Justify your answer. CO2 7 Marks

(OR)

6. Discuss in detail, the priority list method for the solution of unit commitment problem with an example. CO2 14 Marks

UNIT-IV

7. a) Describe the fundamental characteristics of an excitation system. CO1 7 Marks

b) Draw and explain the block diagram representation of IEEE Type-1 model. CO2 7 Marks

(OR)

8.	a)	Design a static var compensator for a low voltage distribution system with the following specifications. System voltage = 400V Frequency, f = 50Hz Coil inductance L = 5.37mh The inductor saturates at 950 A and settles of 1.8mH at 1800A. Compensation is required over a range of -80KVAR to +30KVAR per phase.	CO3	7 Marks
	b)	Brief the merits of uncompensated transmission lines over compensated transmission lines.	CO2	7 Marks

UNIT-V

9.		For a single area system, show that the static error in frequency can be reduced to zero with integral control.	CO2	14 Marks

(OR)

10.		Explain the functioning of speed governing system and obtain its necessary mathematical modeling with neat diagram.	CO1	14 Marks

SWITCHGEAR AND PROTECTION
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	With a neat sketch, enumerate the difference between definite time and inverse characteristic of relays.	CO1	7 Marks
	b)	Explain the principle of impedance type distance relay and its characteristics on V-I and R-X planes.	CO1	7 Marks
		(OR)		
2.	a)	Write short notes on: i) Reactance relay. ii) Mho relay. iii) Directional impedance relay.	CO1	6 Marks
	b)	Explain the directional impedance relay and its characteristic on R-X plane.	CO2	8 Marks

UNIT-II

3.	a)	Compare and analyze the properties of the SF_6 gas with other insulating mediums used for arc quenching in the circuit breakers.	CO2	7 Marks
	b)	Discuss the principle of operation of air-blast circuit breaker.	CO1	7 Marks
		(OR)		
4.	a)	Define and explain the following terms concerned to the protective device fuse. i) Fusing current. ii) Cut off current. iii) Operating time. iv) Breaking capacity.	CO1	6 Marks
	b)	What are the advantages and disadvantages of using air as the arc quenching medium?	CO1	8 Marks

UNIT-III

5.	a)	List the various abnormal conditions that occur in a generator and also mention the protective schemes available for the protection of generator.	CO1	6 Marks
	b)	Design suitable CTs on the HV side for a three-phase, 11 kV/ 132 kV, delta-star connected power transformer protected by differential protection. The CT's on the LV side have a current ratio of 500/5.	CO3	8 Marks
		(OR)		
6.		An alternator rated at 11 kV protected by the balanced circulating current system has its neutral grounded through a resistance of 12Ω. The protective relay is set to operates when these is an out of balance current of 1.8 A in the pilot wires, which are connected to the secondary of 1000/5 ratio current transformers. Determine: i) The percentage of the winding which remains unprotected. ii) The minimum value of the earthing resistance required to protect 80% of the winding.	CO4	14 Marks

UNIT-IV

7.	a)	Explain the principle of distance relaying applied to protection of radial transmission line.	CO1	7 Marks
	b)	Distinguish between reactance, impedance and mho relays as regards their applications to distance protection.	CO2	7 Marks

(OR)

8.	a)	Discuss various methods of protection of a transmission line and enumerate the advantages and disadvantages of each method.	CO2	7 Marks
	b)	What is a surge absorber? Write a short note on Ferranti surge absorber.	CO1	7 Marks

UNIT-V

9.	a)	A 132 kV, 3-phase, 50 Hz transmission line 200 km long consists of three conductors of effective diameter 20mm arranged in a vertical plane with 4m spacing and regularly transposed. Find the inductance and kVA rating of the arc suppression coil in the system.	CO5	7 Marks
	b)	What are the various adverse effects of not following the proper earthing techniques in designing of generators and transformers?	CO6	7 Marks

(OR)

10.	a)	Write a short notes on: i) Reactance grounding. ii) Arc suppression coil grounding.	CO1	6 Marks
	b)	A 50 Hz overhead line has line to earth capacitance of 1.2 μF. It is desired to use earth fault neutralizer. Determine the reactance to neutralize the capacitance of : i) 100% of the length of the line. ii) 90% of the length of the line. iii) 80% of the length of the line.	CO4	8 Marks

FLEXIBLE AC TRANSMISSION SYSTEMS

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the need of reactive power control in electrical transmission.	CO1	7 Marks
	b)	Explain the concept of power flow in a simple two machine system. Determine the active and reactive power flows in the system.	CO2	7 Marks
		(OR)		
2.	a)	Enumerate the relative importance of controllable parameters.	CO1	8 Marks
	b)	Give the advantages of FACTS controllers	CO2	6 Marks

UNIT-II

3.	a)	Mention the significance and control of reactive power in transmission lines.	CO1	6 Marks
	b)	Distinguish the line and load compensators and mention their applicability.	CO1	8 Marks
		(OR)		
4.	a)	Enumerate the types of reactive power compensators and explain any one type of compensator briefly.	CO1	6 Marks
	b)	Derive the necessary equations of a shunt compensator connected at the end of the transmission line.	CO2	8 Marks

UNIT-III

5.	a)	The voltage magnitudes at the buses are reducing with the enhancement of the load. If the load is still increased, the system may collapse. Show with an appropriate compensation, the voltage profile should be maintained with the increase in the load.	CO4	6 Marks
	b)	Draw the control scheme for STATCOM and explain.	CO2	8 Marks
		(OR)		
6.	a)	Explain the working of STATCOM with a neat sketch. In what way it differs from SVC?	CO1	6 Marks
	b)	Compare various types of shunt compensators.	CO2	8 Marks

UNIT-IV

7.	a)	Describe the steps involved in modelling of TCSC.	CO1	7 Marks
	b)	Compare various types of static series compensators.	CO2	7 Marks
		(OR)		
8.	a)	Explain the V-I capability characteristics of single module TCSC.	CO1	6 Marks
	b)	For a two bus system, bus-1 is generator and bus-2 is load bus. The power in the transmission line between bus-1 and bus-2 is 40 MW. The respective transmission line capacity is 50 MW. If there is a sudden increase in the load up to 20 MW at bus-2, what happens to the transmission line? Design a suitable compensator for rectifying the above situation.	CO3	8 Marks

UNIT-V

9.	a)	A FACTS device having a combination of two or more series compensators connected in the power system can be used to analyze the power flow in the transmission line. Explain in detail the operation of those types of controllers.	CO5	7 Marks
	b)	Derive the expression for real and reactive power between two nodes of UPFC	CO2	7 Marks

(OR)

10.	a)	Write the objectives of Voltage and Phase Angle Regulators. Explain the power flow control by Phase Angle Regulators.	CO1	7 Marks
	b)	Explain the power transfer capability of UPFC and compare its capabilities with other FACTS controllers.	CO2	7 Marks

POWER QUALITY

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is power quality and explain various power quality issues in detail?	CO1	7 Marks
	b)	Discuss the responsibilities of suppliers and end users of electric power.	CO1	7 Marks

(OR)

2.	a)	Explain the various types of power quality disturbances and their impact on power systems.	CO1	7 Marks
	b)	Mention major reasons for the increased concern in power quality.	CO2	7 Marks

UNIT-II

3.	a)	Define waveform distortion. Explain the wave form distortion categories.	CO1	7 Marks
	b)	With neat schematic, explain in detail about short duration variations.	CO1	7 Marks

(OR)

4.		Investigate the role of UPS system in providing solution for power quality problems and improvement of power quality.	CO4	14 Marks

UNIT-III

5.	a)	Explain briefly about harmonic distortion and waveform distortion.	CO1	7 Marks
	b)	Brief out the effect of harmonic distortion on capacitors and transformers.	CO1	7 Marks

(OR)

6.		Explain a Passive filter design criteria and practical considerations used for design.	CO3	14 Marks

UNIT-IV

7.	a)	Explain the significance of Power quality monitoring. What are the important power quality monitoring standards?	CO1	10 Marks
	b)	What are the advanced measuring devices for power quality monitoring?	CO1	4 Marks

(OR)

8.	a)	Illustrate the power quality benchmarking process.	CO1	7 Marks
	b)	Identify a suitable power quality monitoring and measuring device to measure flicker and explain with functional blocks.	CO5	7 Marks

UNIT-V

9.		Explain in detail about the distributed generation and its impacts on the network.	CO1	14 Marks

(OR)

10.		Briefly discuss the power quality issues related to DG integration in distribution networks.	CO6	14 Marks

SOFT COMPUTING TECHNIQUES

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Compare ANN with BNN.	CO1	7 Marks
	b)	Explain various architectures of ANN.	CO1	7 Marks
		OR)		
2.	a)	What is Linear separability? Single layer perceptron cannot solve XOR problem. Explain.	CO2	6 Marks
	b)	Discuss various learning strategies in detail.	CO1	8 Marks

UNIT-II

3.	a)	Discuss the limitations of Back propagation neural networks.	CO1	5 Marks
	b)	Explain the application of ANN in Electrical load forecasting in detail.	CO6	9 Marks
		(OR)		
4.	a)	Explain the architecture and training algorithm of back propagation neural network.	CO1	8 Marks
	b)	Discuss the Kohonen self-organizing map in brief.	CO1	6 Marks

UNIT-III

5.	a)	Contrast crisp and fuzzy sets.	CO2	6 Marks
	b)	For the following fuzzy relation find the max-min and max-product compositions. $\widetilde{R}1 = \begin{bmatrix} 0.5 & 0.4 \\ 0.7 & 0.3 \end{bmatrix}$ $\widetilde{R}2 = \begin{bmatrix} 0.6 & 0.2 & 0.4 \\ 0.2 & 0.1 & 0.5 \end{bmatrix}$	CO4	8 Marks
		(OR)		
6.	a)	Two Fuzzy sets **Ã** and **Ñ** are defined on X as follows.	CO4	9 Marks

	X1	X2	X3	X4	X5
Ã	0.9	0.2	0.3	0.1	0.8
Ñ	0.6	0.8	0.6	0.9	0.5

Find the following **α** cut sets

i) $(\tilde{A} \cap \tilde{N})_{0.2}$ ii) $(\tilde{A} \cup \tilde{N})_{0.5}$ iii) $(\tilde{A} \cap \tilde{A})_{0.8}$

	b)	What is the role of membership function in fuzzy logic? List out various methods of membership value assignment.	CO1	5 Marks

UNIT-IV

7.	a)	What is Defuzzification? Explain any one defuzzification method in detail.	CO1	7 Marks
	b)	Design the rule base for Speed control of DC motor using fuzzy logic.	CO3	7 Marks
		(OR)		
8.	a)	Discuss Centroid method of defuzzification in detail.	CO1	5 Marks
	b)	Explain the application of Fuzzy logic in speed control of DC motors.	CO6	9 Marks

UNIT-V

9.	a)	List and explain the advantages and limitations of Genetic algorithms.	CO1	7 Marks
	b)	Comprehend the encoding process of genetic algorithms.	CO1	7 Marks
		(OR)		
10.	a)	Apply Genetic algorithms for optimal allocation of capacitors in distribution system. Explain in detail.	CO5	9 Marks
	b)	Elucidate the mutation process in detail.	CO1	5 Marks

FINITE ELEMENT METHOD
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

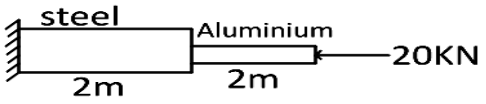
UNIT-I

1. a) Explain natural coordinate system. Derive expression for relation between natural and Cartesian coordinate systems. CO1 7 Marks

   b) Explain the significance of node numbering and element numbering during the discretization Process. CO1 7 Marks

(OR)

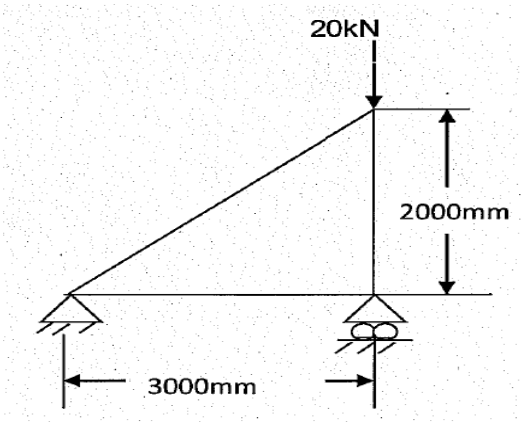
2. For the bar assemblages shown in figure, determine the nodal displacements, element stresses and support reactions. CO1 14 Marks



$E_{st}=200Gpa$
$A_{st}=4*10^{-4}m^2$
$E_{al}=70Gpa$
$A_{al}=2*10^{-4}m^2$

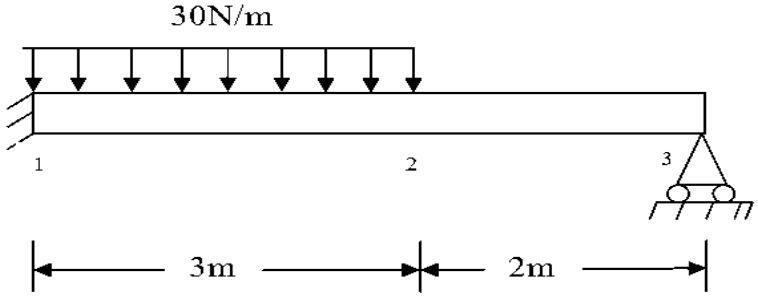
UNIT-II

3. Consider the plane truss shown in figure. Determine the nodal displacements and support reactions. Take E= 2 x 10^5N/mm^2. A=1500 mm^2. CO2 14 Marks



(OR)

4. For the loaded beam shown in figure, determine the slope and deflection at node 2 using finite element concept. Take EI=900 Nm^2. CO2 14 Marks

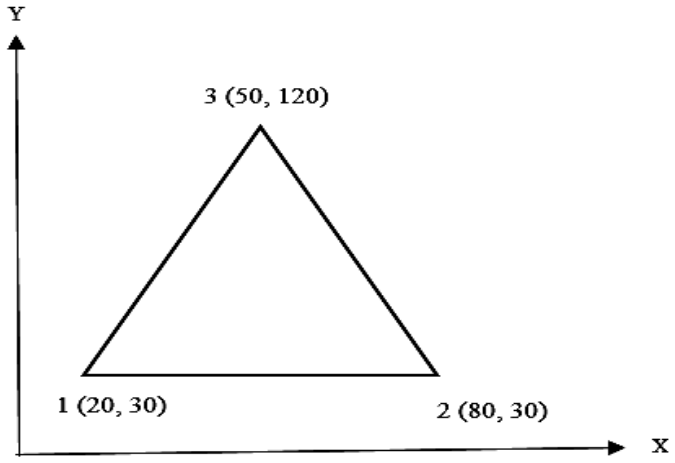


UNIT-III

5. A long cylinder of inside diameter 80 mm and outside diameter 120 mm fits in a hole over its full length. The cylinder is then subjected to an internal pressure of 2 MPa. Using 2 elements on the 10mm length, find the displacements at the inner radius. E = 200 GPa and μ = 0.3. CO3 14 Marks

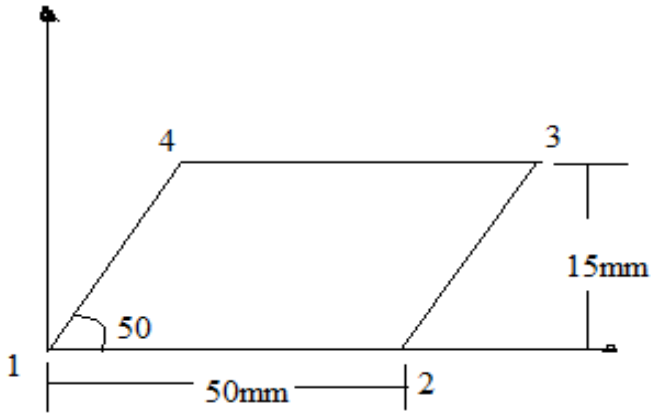
(OR)

6. Determine the stiffness matrix for the Constant Strain Triangle (CST) element shown in figure. The co-ordinates are given in mm. Assume plane stress conditions. Take Young's modulus 210 GPa, Poisson's ratio 0.25 and thickness 10mm. CO3 14 Marks



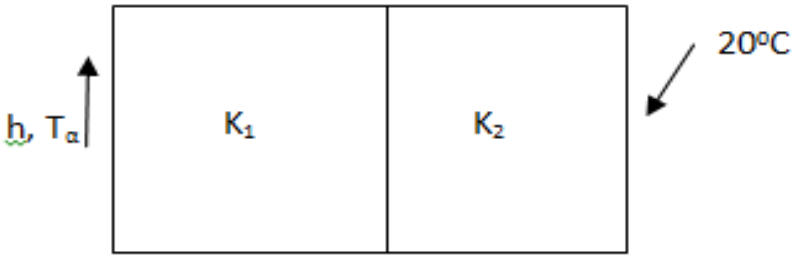
UNIT-IV

7. Consider a quadrilateral element as shown in fig the local coordinates are ξ =0.5, η = 0.5. Evaluate Jacobin matrix and strain- Displacement matrix. CO1 14 Marks



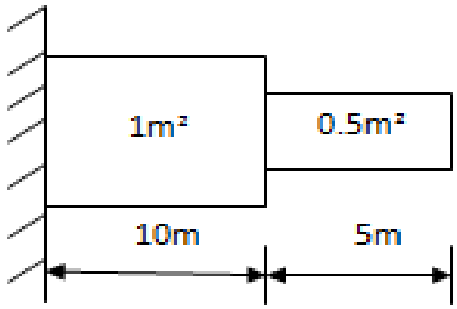
(OR)

8. Determine the temperature distribution through the composite wall shown in figure when convective heat loss occurs on the left surface. Assume unit area. Thickness t_1 = 4cm, t_2 = 2cm, K_1 = 0.5W/cm K, K_2 = 0.05W/cm K, Tα = -5^{0}C, h = 0.1 W/cm^2 K. CO4 14 Marks



UNIT-V

9. Determine the Eigen values and Eigen Vectors for the stepped bar as shown in figure. CO5 14 Marks



$\rho = 7850\ Kg/m^3$

$E = 30 \times 10^6\ N/m^2$

(OR)

10. Evaluate the lowest Eigen value and the corresponding Eigen modes for the beam shown in figure. E=200 GPa and ρ = 7840kg/m^3, I=2000 mm^4, A=240 mm^2, L=300mm. CO6 14 Marks

OPERATIONS RESEARCH
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Old hens can be bought for Rs. 20 each but young one costs Rs. 50 each. The old hens lay three eggs per week and young ones five eggs per week, each egg worth Rs. 3. It costs Rs. 10 per week to feed each hen. If I have only Rs. 800 to spend for purchasing hens, how many of each kind should I buy assuming that I cannot house more than 20 hens? Formulate the problem as LPP and solve using graphical method. CO1 14 Marks

(OR)

2. Solve the following problem using Big-M Method CO2 14 Marks

Maximize $\mathbf{Z = 2X_1 + 4X_2}$,

Subject to the constraints

$$\mathbf{2X_1 + X_2 \leq 18}$$
$$\mathbf{3X_1 + 2X_2 \geq 30}$$
$$\mathbf{X_1 + 2X_2 = 26}$$
$$\mathbf{X_1, X_2 \geq 0.}$$

UNIT-II

3. a) Outline the steps in Hungarian method. CO4 6 Marks

   b) Consider the problem in which two factories supply three stores with a commodity. The number of supply units available at sources 1 and 2 is 200 and 300; those demanded at stores 1, 2 and 3 are 150, 200 and 50 respectively. Units may be transshipped among the factories and the stores before reaching their final destination. Find the optimal shipping schedule based on the unit costs (Rs.) given below: CO4 8 Marks

	F1	**F2**	**S1**	**S2**	**S3**
F1	0	5	7	4	9
F2	5	0	6	2	3
S1	7	2	0	5	1
S2	2	5	1	0	4
S3	8	7	5	6	0

(OR)

4. Find the optimal solution to the following transportation problem CO3 14 Marks

		Destination				
		P	Q	R	S	Supply
Origin	A	21	16	25	13	11
	B	17	18	14	23	13
	C	32	17	18	41	19
	Demand	6	10	12	15	43

UNIT-III

5. a) What do you understand by zero - sum and non zero – sum game? What do you mean by strategy, dominance and saddle point? CO6 7 Marks

b) Solve the following game using graphical approach. CO6 7 Marks

A's Strategy	B's Strategy			
	8	5	-7	9
	-6	6	4	-2

(OR)

6. The probability distribution of the failure time of certain time of electric bulb is given below CO6 14 Marks

Week	1	2	3	4	5	6	7	8
Probability of failure	0.05	0.13	0.25	0.43	0.68	0.88	0.96	1.0

The cost of individual replacement is Rs. 4 per bulb. The cost of group replacement is Rs 1 per bulb. if there are 1000 bulbs in use find the optimal replacement policy under:

i) Individual replacement.

ii) Group replacement.

UNIT-IV

7. The following table gives the data for the activities CO5 14 Marks

Job(i-j)	1-2	1-3	2-4	2-6	3-4	3-5	4-5	5-6
Opt. time (days)	1	5	3	1	8	2	5	2
Most likely time(days)	4	10	3	4	15	4	5	5
Pessimistic time (days)	7	17	3	7	26	8	5	8

i) Draw the network and find the expected project completion time.

ii) What is the probability that it would take 5 days more than the expected duration?

iii) Find the project completion time which will have 95% confidence.

(OR)

8. For the following data, draw the network diagram, and then crash the activities to find the time cost trade-off points that company should want to consider. Start with the plan that has the longest duration. CO5 14 Marks

Activity	Preceding Activity	Time (weeks)		Cost (Rs.)	
		Normal	Crash	Normal	Crash
A	-	2	1	20000	20700
B	-	3	1	29000	33000
C	A	2	1	25000	26100
D	B	4	3	47000	47750
E	C	4	2	55000	57000
F	C	3	2	29000	29500
G	D, E	5	3	79000	80800
H	F,G	2	1	15000	17900

UNIT-V

9. a) What are the basic elements of a waiting line model? CO3 4 Marks

b) An oil company is constructing a service station on a high way. Traffic analysis indicated that customers' arrivals over most of the day would approximate a poisson distribution with a mean of 40 automobiles per hour, with that service time distribution approximating the negative exponential. If 5 pumps are installed. CO3 10 Marks

i) What is the probability that an arrival would have to wait in line?

ii) Find out the average waiting time, average time spent in the system and the average number of automobiles in the system.

(OR)

10. A dentist schedules all her patients for 30 minutes appointments. Some of the patients take more or less than 30 minutes depending on the type of dental work to be done. The following summary shows the various categories of work, their probabilities and time needed to complete the work. CO5 14 Marks

Category	Time required (Minutes)	Probability of category
Filling	45	0.4
Crown	60	0.15
Cleaning	15	0.15
Extraction	45	0.1
Checkup	15	0.2

Simulate the dentist's clinic for four hours and determine the average waiting time for the patients as well as the idleness of the doctor. Assume that all the patients show up at the clinic at exactly their scheduled arrival times, starting at 8 A.M. Use the following random numbers for handling the above problem: 40, 82, 11, 34, 25, 66, 17, 79.

CRYOGENICS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is the necessity of low temperature?	CO1	6 Marks
	b)	Explain the limitations of Vapour compression refrigeration system for low temperature applications	CO2	8 Marks
		(OR)		
2.		Discuss how a cascade system can be used to produce liquid Nitrogen.	CO2	14 Marks

UNIT-II

3.	a)	Outline thermal properties of material at cryogenic temperatures.	CO1	6 Marks
	b)	Explain super fluidity with the help of neat diagrams.	CO3	8 Marks
		(OR)		
4.	a)	Describe different molecular forms of hydrogen.	CO1	4 Marks
	b)	Discuss the properties of helium isotopes at cryogenics range.	CO3	10 Marks

UNIT-III

5.		Explain the different methods of liquefaction of air. Discuss about Claude system in detail.	CO2	14 Marks
		(OR)		
6.		Illustrate the working of a system used for the production of dry- ice. "The production of dry-ice is more difficult in hot summer compared with winter". Discuss in detail.	CO4	14 Marks

UNIT-IV

7.	a)	Write briefly on production of low temperatures.	CO1	7 Marks
	b)	Explain with proper reasoning and graph, the effect of low temperature on two mechanical and two thermal properties of engineering materials.	CO4	7 Marks
		(OR)		
8.		Write a note on low temperature properties of Engineering materials.	CO4	14 Marks

UNIT-V

9.	a)	Explain about Dewar vessels.	CO5	7 Marks
	b)	Discuss the hazards in cryogenic engineering.	CO5	7 Marks
		(OR)		
10.		List the different insulations used in cryogenic equipment and explain any two types of insulations.	CO5	14 Marks

INDUSTRIAL ROBOTICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Give the RIA definition of a Robot. Explain the important components of a Robot.	CO1	7 Marks
	b)	Distinguish electrical and hydraulic drive systems.	CO2	7 Marks
		(OR)		
2.	a)	Classify end effectors. Explain any one type of gripper in detail.	CO1	7 Marks
	b)	List out the type of grippers. Discuss about magnetic grippers.	CO1	7 Marks

UNIT-II

3.		Discuss the working principle of Servo motors. List out its advantages and disadvantages.	CO2	14 Marks
		(OR)		
4.		Point out any two methods of mechanical transmission system with their limitations.	CO2	14 Marks

UNIT-III

5.		The Coordinates of the point P on the body given by $\{1, 2, 3\}^T$. The point moved by 7 units along X axis, then rotation of 30^0 about Z axis followed by rotation of 45^0 about Y axis. Determine the new coordinates of the point P with respect to the fixed frame.	CO3	14 Marks
		(OR)		
6.		Derive Forward Kinematics solution for a 3R manipulator.	CO3	14 Marks

UNIT-IV

7.		Define trajectory planning. Write about various methods of trajectory planning.	CO1	14 Marks
		(OR)		
8.	a)	Derive the necessity of failsafe hazard sensor systems in the robots.	CO2	7 Marks
	b)	Demonstrate any two position sensors with a neat sketch.	CO5	7 Marks

UNIT-V

9.		Explain the features of AL and AML languages.	CO1	14 Marks
		(OR)		
10.		Report the applications of Modern Robots in the society. Also enumerate the challenges faced in the development.	CO6	14 Marks

PRODUCTION AND OPERATIONS MANAGEMENT
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Enumerate operations Management with a block diagram	CO2	7 Marks
	b)	Write a brief note on historical development of Operations Management.	CO2	7 Marks
		(OR)		
2.	a)	Explain in brief the factors affecting Productivity.	CO3	7 Marks
	b)	Give a brief note on the significance of production systems decisions.	CO5	7 Marks

UNIT-II

3.	From the choice of simple moving average, weighted moving average, exponential smoothing and linear regression analysis, which forecasting technique would you consider the most accurate? Why?	CO3	14 Marks
	(OR)		
4.	A manufacturer of tricycles for children in the age group of two to four years commissioned a market research firm to understand the factors that influenced the demand for its product. After some detailed studies, the market research firm concluded that the demand was a simple linear function of the number of newly married couples in the city. Based on this assumption, build a causal model for forecasting the demand for the product using the data given in table collected for a residential area in a city. Also estimate the demand for tricycles if the number of new marriages is 150 and 250.	CO3	14 Marks

X	New marriages	201	236	211	198	225	240	218	226
Y	Demand for tricycles	175	194	180	165	190	172	182	170

UNIT-III

5.	Write a brief note on Chase, Level and mixed strategies for Aggregate Production Planning.	CO1	14 Marks
	(OR)		
6.	"Mixed strategies are always superior to pure strategies in an aggregate production planning exercise". Comment on this statement."	CO1	14 Marks

UNIT-IV

7.	List out the functions of CRP using block diagram and explain the function with an example.	CO1	14 Marks
	(OR)		
8.	Give the difference between MRP and MRP II and explain MRP – II with Block diagram.	CO1	14 Marks

UNIT-V

9. Explain Johnson's algorithm in Flow shop scheduling. There are 5 jobs each of which must go through 2 machines A and B in order immediately processing Times are given below. CO6 14 Marks

	J1	**J2**	**J3**	**J4**	**J5**
Time for A	5	1	9	3	10
Time for B	2	6	7	8	4

Determine the sequence for 5 jobs that will minimize, the elapsed time calculates the total idle time for machines in this Period.

(OR)

10. Consider the following flow shop scheduling problem where there are 5 jobs and 3 machines. CO6 14 Marks

Solve the following using Palmer's heuristic and CDS heuristic Technique. Find the make span of this scheduling process and also goodness of this problem with respect to Heuristic solution.

	A	**B**	**C**
J1	18	12	16
J2	10	11	14
J3	20	15	13
J4	15	19	19
J5	16	16	15

POWER PLANT ENGINEERING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Draw a neat diagram of the cyclone burner and explain its outstanding features.	CO1	7 Marks
	b)	What are the feeding systems of pulverized coal into the furnace? What are the two design conditions to be satisfied to burn pulverized coal successfully?	CO3	7 Marks
		(OR)		
2.		Describe the components and working of electrostatic precipitator dust collection in a steam power plant.	CO2	14 Marks

UNIT-II

3.	a)	Draw a neat diagram of a cooling system used for the diesel power plant.	CO1	7 Marks
	b)	What are the various factors to be considered while selecting the site for diesel engine power plant?	CO3	7 Marks
		(OR)		
4.		Identify essential components of a simple open cycle gas turbine plant. How inter cooling and regeneration help in improving the thermal efficiency of the plant?	CO4	14 Marks

UNIT-III

5.	a)	Draw the line diagram and explain the working of the pressurized water reactor.	CO1	7 Marks
	b)	Explain with neat sketch the working of gas cooled type reactor.	CO1	7 Marks
		(OR)		
6.		What is the Hydrological cycle? Discuss its significance in locating the site and design of hydroelectric power plants.	CO4	14 Marks

UNIT-IV

7.	a)	Explain the working principle of thermoelectric conversion system.	CO2	7 Marks
	b)	Describe with necessary diagrams, the principle of working of a geothermal power plant.	CO2	7 Marks
		(OR)		
8.		Classify biogas plants and explain anyone type of biogas plant with neat sketch.	CO2	14 Marks

UNIT-V

9.	a)	The yearly duration curve of a certain plant can be considered as a straight line from 150MW to 40MW. The power is supplied with one generating unit of 100MW and two units of 40MW each. Calculate installed capacity, load factor, Plant factor, utilization factor and Maximum demand.	CO6	7 Marks
	b)	Draw the load curve for the power requirement in India and discuss the methods to accomplish the part load conditions.	CO6	7 Marks

(OR)

10.	a)	Identify the impact on the environment and human health for the effluents released from the thermal power plants.	CO5	7 Marks
	b)	Discuss the harmful effects of CO_2, CO, compounds of sulphur and oxides of Nitrogen.	CO5	7 Marks

CELLULAR AND MOBILE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	List the characteristics used to specify the uniqueness of Mobile radio environment and brief about the model of transmission medium.	CO1	7 Marks
	b)	Using the concept of Frequency Reuse channels, derive the relation for Frequency Reuse distance 'D' as a function of reuse pattern and cell size.	CO2	7 Marks

(OR)

2.	a)	Illustrate various criteria used to specify the performance of a cellular system.	CO1	7 Marks
	b)	Define Co-channel Interference and derive the relation for Co-channel Interference factor in a cell with its k^{th} Co-channel Interfering cell.	CO2	7 Marks

UNIT-II

3.	a)	Classify and describe about various adjacent channel Interference mechanisms.	CO1	7 Marks
	b)	What is Diversity receiver? Illustrate how diversity receiver can be used to improve performance of the system even in low transmitted power levels.	CO6	7 Marks

(OR)

4.	a)	Summarize about Umbrella pattern effect and List the benefits of Umbrella pattern.	CO1	7 Marks
	b)	Illustrate how cell site location, decrease in power and Antenna height effect coverage and interference problems.	CO4	7 Marks

UNIT-III

5.	a)	Define Ground Incident angle and Ground elevation angle.	CO1	6 Marks
	b)	In a mobile radio environment, if average cell site antenna height is 50m, Mobile antenna height is 3m and Path length is 5km, Find; i) Incident angle. ii) Elevation angle.	CO3	8 Marks

(OR)

6.	a)	Give reason behind using 1-mi intercept in finding path-loss curves.	CO6	6 Marks
	b)	In a mobile radio environment, if average cell site antenna height is 50m, Mobile antenna height is 3m and Path length is 5km and Height of mountain on which base station is erected H=100m. Compare i) Ground Incident angle. ii) Reflection Point obtained from accurate and approximate methods.	CO3	8 Marks

UNIT-IV

7.	a)	Analyze how adjacent channel and Co-channel interference can be controlled using Underlay-overlay arrangement.	CO4	7 Marks
	b)	Differentiate Soft handoff and Hard handoff. Conclude the usage of Soft handoffs in CDMA systems.	CO5	7 Marks

(OR)

8.	a)	Outline various methods used to solve the problem of channel assignment to travelling mobile units.	CO4	7 Marks
	b)	Identify the handoff algorithm which is more appropriate during unavailability of free channels when crossing a cell boundary.	CO5	7 Marks

UNIT-V

9.	a)	Draw OSI model of GSM architecture and explain.	CO1	7 Marks
	b)	Differentiate physical layer of WCDMA-FDD and WCDMA-TDD standards.	CO6	7 Marks

(OR)

10.	a)	Differentiate three standard 3G systems. Also mention the features of 3G standard systems.	CO6	7 Marks
	b)	Define Authentication and explain about Authentication of MS data bursts.	CO1	7 Marks

CODE No.: 16BT70402 SVEC-16

IV B.Tech I Semester (SVEC-16) Supplementary Examinations August – 2021

EMBEDDED SYSTEMS

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss memory classification in a typical embedded system.	CO3	7 Marks
	b)	Review various functional blocks in MSP430.	CO1	7 Marks
		(OR)		
2.	a)	Generalize the characteristics of a typical Embedded system.	CO1	7 Marks
	b)	Interpret with an example embedded system where MSP430X can fit.	CO3	7 Marks

UNIT-II

3.	a)	Discuss MSP430 instructions which can be used to control program flow.	CO5	7 Marks
	b)	Explore conditions of MSP430 after reset.	CO2	7 Marks
		(OR)		
4.	a)	Discuss various shift and rotate instructions possible in assembly programming.	CO5	7 Marks
	b)	Give out example instructions for binary arithmetic instructions with two operands.	CO2	7 Marks

UNIT-III

5.	a)	Interrupts are like functions that are called by hardware rather than software – support the statement with suitable reasoning.	CO6	7 Marks
	b)	Paraphrase the importance of interrupts and issues associated while describing Interrupt service routines.	CO5	7 Marks
		(OR)		
6.	a)	Demonstrate passing parameters and returning results using subroutines with suitable example.	CO6	7 Marks
	b)	Distinguish the similarities and dissimilarities with reference to ISR (Interrupt Service Routine) to a subroutine.	CO5	7 Marks

UNIT-IV

7.	a)	Discuss various modes of operation of USCI-A.	CO1	7 Marks
	b)	Compose configuring Real Time Clock and associate control register to handle interrupt from basic timer 1.	CO3	7 Marks
		(OR)		
8.	a)	Paraphrase the Architecture and operation of ADC10 in MSP430.	CO1	7 Marks
	b)	Develop mechanism to measure charging and discharging times of RC circuit using comparator_A and timer 2.	CO3	7 Marks

UNIT-V

9.	a)	Explore architectural models suitable for synthesis of co-design models.	CO2	7 Marks
	b)	List various technical communication models suitable for IOT implementation.	CO4	7 Marks
		(OR)		
10.	a)	Define Model. List the qualities a good model should process.	CO1	7 Marks
	b)	IPV6 has made the ground ready for IOT to take on – discuss the issue with an eye on IPV4 limitations.	CO4	7 Marks

MICROWAVE ENGINEERING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Using principle of faraday rotation, explain the action of Circulator.	CO5	7 Marks
	b)	An isolator has an insertion loss of 0.5dB and an isolation of 30dB. Determine the scattering matrix of the isolator if the isolated ports are perfectly matched to the junction.	CO4	7 Marks
		(OR)		
2.	a)	Using principle of faraday rotation, Explain the working of ferrite isolator.	CO5	7 Marks
	b)	A signal of power 32mw is fed into one of the collinear ports of a lossless H-plane Tee. Determine the powers in the remaining ports when other ports are terminated by means of matched loads.	CO4	7 Marks

UNIT-II

3.	a)	Derive the expressions for output power and efficiency of a two-cavity Klystron Amplifier.	CO2	7 Marks
	b)	Justify the role of Magnetron in microwave communication system.	CO6	7 Marks
		(OR)		
4.	a)	What is a slow wave structure? Explain different types of slow wave structures used in microwave tubes.	CO1	7 Marks
	b)	Identify a microwave device which has a theoretical efficiency of 27.78% in amplification process. Explain the same.	CO6	7 Marks

UNIT-III

5.	a)	Develop a Gunn diode using N-type GaAs Specimen and explain its operation.	CO3	7 Marks
	b)	Draw the characteristics of TRAPATT diode and show how its exhibits negative resistance.	CO2	7 Marks
		(OR)		
6.	a)	Compare working principle of Avalanche and Transferred electron devices.	CO2	7 Marks
	b)	Develop the construction of IMPATT diode and explain its operation.	CO3	7 Marks

UNIT-IV

7.	a)	Draw the block diagram of microwave bench set up and explain each block in detail.	CO1	7 Marks
	b)	In a microwave power measurement set up, the microwave pulse had an average power of 250W and a duration of 5μ Sec. If the time interval between pulses are measured as 2m/sec, determine the value of the peak power.	CO4	7 Marks
		(OR)		
8.	a)	Draw the bench setup for measuring low VSWR and explain its operation.	CO1	7 Marks
	b)	Build a bench setup for measuring Attenuation using RF substitution method.	CO3	7 Marks

UNIT-V

9.	a)	Explain the terms : i) Ray path. ii) Critical frequency. iii) Lowest usable frequency.	CO1	8 Marks
	b)	Calculate the skip distance for flat earth with MUF of 10 MHz if the wave is reflected from a height of 300km where the maximum value of 'n' is 0.9.	CO4	6 Marks
		(OR)		
10.	a)	Describe any two types of fading normally encountered in radio wave propagation.	CO1	8 Marks
	b)	Derive the relation between Maximum Usable Frequency and skip distance assuming the earth is flat.	CO2	6 Marks

CODE No.: 16BT70407 SVEC-16

Roll No. | | | | | | | | | | |

WIRELESS COMMUNICATION AND NETWORKS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain in detail about Frequency Division Multiple Access with neat block diagram.	CO1	7 Marks
	b)	If a normal GSM time slot consists of six training bits, 8.25 guard bits, 26 training bits and two traffic bursts of 58 bits of data, find the frame efficiency.	CO4	7 Marks
		(OR)		
2.	a)	Justify how the common channel signaling is advantageous over conventional signaling in enhancing bandwidth.	CO4	8 Marks
	b)	List the services offered by the SS7 network.	CO1	6 Marks

UNIT-II

3.	a)	Discuss about WML scripts.	CO1	7 Marks
	b)	Analyze the protocols used for registration in mobile IP.	CO2	7 Marks
		(OR)		
4.	a)	Explain the steps involved in operation of mobile IP.	CO1	6 Marks
	b)	Demonstrate data transfer process in wireless network. i) From a mobile node to a fixed node vice-versa. ii) From a mobile node at foreign location to other mobile node at foreign location.	CO2	8 Marks

UNIT-III

5.	a)	Draw the protocol architecture of IEEE 802 and extend it to different protocols.	CO6	7 Marks
	b)	Write a short note on Microwave LANS.	CO1	7 Marks
		(OR)		
6.	a)	Discuss about the protocols used in WLAN.	CO1	6 Marks
	b)	Draw the configuration of IEEE 802.11. Explain.	CO6	8 Marks

UNIT-IV

7.	a)	Develop a Wireless Local Loop network to provide data and voice services to its users.	CO3	8 Marks
	b)	Write the functions of Link manager specification Layer in Bluetooth.	CO1	6 Marks
		(OR)		
8.	a)	Draw the packet formats of LLCAP protocol of Bluetooth.	CO1	7 Marks
	b)	Develop an algorithm to build a sync word in Bluetooth.	CO3	7 Marks

UNIT-V

9.	a)	Draw and explain the general structure of an ATM switch.	CO1	7 Marks
	b)	Identify appropriate functionalities of Wireless ATM and write its Services.	CO5	7 Marks
		(OR)		
10.	a)	Explain about forward channel and reverse channel in CDPD physical layer.	CO1	7 Marks
	b)	Apply overlay technology to a wireless network and illustrate the operation of GPRS.	CO5	7 Marks

LOW POWER CMOS VLSI DESIGN

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Organize the different sources of power dissipation in digital CMOS circuit.	CO1	7 Marks
	b)	Illustrate the constraints on Vt reduction which is used to minimize dynamic power dissipation.	CO6	7 Marks
		(OR)		
2.	a)	Write an explanatory notes on physics of power dissipation in MOSFET Devices.	CO1	7 Marks
	b)	Appraise the technology and device innovations for novel high speed low power VLSI devices.	CO6	7 Marks

UNIT-II

3.	a)	Evaluate the modeling and analysis of a transistor using SPICE.	CO2	7 Marks
	b)	From experience, the standard deviation of the power samples measured from a circuit has been observed to have ±10% fluctuation from the mean. How many samples are required so that we are 95% confidence that the error of sample mean is within ±10%?	CO4	7 Marks
		(OR)		
4.	a)	Illustrate the advantages and disadvantages of SPICE power analysis.	CO2	7 Marks
	b)	From experience, the standard deviation of the power samples measured from a circuit has been observed to have ±20% fluctuation from the mean. How many samples are required so that we are 99% confidence that the error of sample mean is within ±5%?	CO4	7 Marks

UNIT-III

5.	a)	Design and explain pre computation logic with an example.	CO3	7 Marks
	b)	Justify, in detail about Adjustable Device threshold Voltage with its applications.	CO6	7 Marks
		(OR)		
6.	a)	Design a differential latch for high speed low power application and discuss its functionality.	CO3	7 Marks
	b)	Discuss Bus invert encoding to achieve low power with relevant equations.	CO2	7 Marks

UNIT-IV

7.	a)	Write the limitations of low swing bus technique.	CO5	7 Marks
	b)	Discuss the methods to improve speed in memory.	CO4	7 Marks
		(OR)		
8.	a)	Develop Low Power Techniques for SRAM.	CO5	7 Marks
	b)	How to limit bit line swing in SRAM explain with neat sketch.	CO4	7 Marks

UNIT-V

9.	a)	Explain the basic principles to update the filter order length in digital filters.	CO1	7 Marks
	b)	Categorize the Power dissipation of uniprocessing and parallel processing systems.	CO2	7 Marks
		(OR)		
10.	a)	Explain the Switching Activity Reduction with examples.	CO1	7 Marks
	b)	Compose the method of Charge sharing for half swing with its neat sketches	CO4	7 Marks

SPEECH PROCESSING

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) A commonly used approximation to glottal pulse is $g(n) = \begin{cases} na^n & n \geq 0 \\ 0 & otherwise \end{cases}$ CO2 7 Marks

   i) Find the Z transform of $g(n)$ and sketch its fourier transform.

   b) With a Schematic diagram of the vocal apparatus, explain the mechanism of speech production. CO1 7 Marks

(OR)

2. a) What are the types of phonemes in American English? Explain about anyone with an example. CO1 8 Marks

   b) Show how 'a' should be chosen so that CO2 6 Marks

   $20 \log|G(ej0)| - 20 \log|G(ej\pi)| = 60dB$

UNIT-II

3. a) State and prove the following properties of short time auto correlation function, CO4 8 Marks

   i) $R_n(k) = R_n(-k)$ ii) $R_n(k) \leq R_n(0)$.

   b) Define short time average magnitude difference function and contrast with autocorrelation function. CO1 6 Marks

(OR)

4. a) How pitch, energy and average magnitude function of a speech signal are extracted? Bring out the features of these parameters that will help us to build an automatic speech recognition system. CO2 7 Marks

   b) What is autocorrelation and state some of the properties. CO1 7 Marks

UNIT-III

5. a) Consider all pole model for the combined vocal tract, glottal pulse and radiation system of the form $H(Z) = \frac{G}{1 - \sum_{K=1}^{P} A_K Z^{-K}}$. CO4 7 Marks

   Obtain The Recursion Relation Between The Complex Cepstrum Of $H(n)$ and $\{\alpha_K\}$.

   b) Discuss the properties of complex cepstrum. CO2 7 Marks

(OR)

6. a) Estimate magnitude and phase spectrum of homomorphic filter for a voiced speech signal. CO2 7 Marks

   b) Demonstrate practical implementation of system for obtaining complex cepstrum. CO4 7 Marks

UNIT-IV

7.	a)	Explain in detail how to solve LPC equations using Cholesky decomposition method.	CO3	7 Marks
	b)	Explain how to tract the formants using LPC.	CO5	7 Marks

(OR)

8.	a)	Discuss the Durbin's recursive method and Cholesky decomposition method used for estimating and obtaining LPC of a speech signal.	CO3	8 Marks
	b)	Determine speech segment and the limits on the prediction error summation using covariance method.	CO5	6 Marks

UNIT-V

9.	a)	Derive the decision rule which minimizes the probability of error for identifying the speaker	CO6	8 Marks
	b)	Compare and contrast between Speaker Verification vs. recognition.	CO2	6 Marks

(OR)

10.	a)	Draw the block diagram of a speaker identification system and Explain its features.	CO1	8 Marks
	b)	Discuss briefly about basic pattern recognition approaches in the speech recognition system.	CO1	6 Marks

BIG DATA ANALYTICS

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the kinds of Data Elements in Big data? Explain with the suitable examples for each.	CO1	7 Marks
	b)	What is Standardizing data? List the different procedures of Standardization.	CO1	7 Marks
		(OR)		
2.	a)	What is Missing Values? Explain the popular schemes deal with the Missing Values.	CO1	7 Marks
	b)	Define Big data and Explain the 4 V's Big Data characteristics in brief.	CO1	7 Marks

UNIT-II

3.	a)	Interpret the Hadoop Framework and explain the basic building blocks of Hadoop with suitable architecture diagram.	CO3	7 Marks
	b)	Sketch and discuss about Master/Slave method in HDFS architecture.	CO3	7 Marks
		(OR)		
4.	a)	Describe about the Hadoop Ecosystem and explain the various components of Hadoop Ecosystem.	CO2	10 Marks
	b)	What is replication factor in HDFS define about the default value.	CO1	4 Marks

UNIT-III

5.	a)	Demonstrate the working of Job Tracker and Task Tracker in the Classic Mapreduce 1.	CO3	7 Marks
	b)	Interpret the basic anatomy of Map Reduce and demonstrate about the YARN architecture Map reduces.	CO3	7 Marks
		(OR)		
6.	a)	Differentiate the Map-Reduce Implementation between the Word counts, Write Types of keys and Values mapper, Reducer, Combiner with examples.	CO4	7 Marks
	b)	Define the following Scheduler: i) FIFO Scheduler ii) Capacity Scheduler.	CO1	7 Marks

UNIT-IV

7.	a)	Appraise any Four HiveQL DDL command with its syntax and explain with examples.	CO5	7 Marks
	b)	Select and explain the proper steps of the working principle of Hive architecture along with the suitable diagram.	CO5	7 Marks
		(OR)		
8.	a)	Describe the components of Pig Execution Environment.	CO2	7 Marks
	b)	Discuss about the various data types supported by Pig in its data model with an example.	CO2	7 Marks

UNIT-V

9.	a)	Design Hadoop data flow architecture at Rackspace.	CO6	7 Marks
	b)	Investigate the case studies of Mahout and Sqoop in detail.	CO6	7 Marks
		(OR)		
10.	a)	Sketch and explain the Data warehousing architecture at Facebook.	CO6	7 Marks
	b)	Investigate the case studies of Crunch and Spark in detail.	CO6	7 Marks

[Computer Science and Engineering, Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	List and explain the set of principles guided the design of Xerox STAR.	CO3	7 Marks
	b)	Explain the characteristics of a web interface in detail.	CO2	7 Marks
		(OR)		
2.	a)	Differentiate the characteristics of internet and intranet with brief explanation.	CO2	7 Marks
	b)	Briefly explain the concept of direct manipulation.	CO1	7 Marks

UNIT-II

3.	a)	How to determine the requirements of a user?	CO2	10 Marks
	b)	Define Business.	CO1	4 Marks
		(OR)		
4.	a)	Explain how to conduct a Face-to-Face interview for requirement analysis.	CO4	7 Marks
	b)	Describe the process of understanding the User's mental model.	CO2	7 Marks

UNIT-III

5.	a)	Classify various types of statistical graphics.	CO1	6 Marks
	b)	Explain any four qualities which provide visually pleasing composition.	CO1	8 Marks
		(OR)		
6.	a)	What is a Screen? What is the purpose of a screen?	CO1	4 Marks
	b)	Elaborate the steps for organizing and ordering of screen elements.	CO2	10 Marks

UNIT-IV

7.	a)	Explain the procedure for choosing colors in screen design.	CO2	7 Marks
	b)	Predict what are the possible problems with color.	CO5	7 Marks
		(OR)		
8.	a)	Define an icon. Describe different kinds of icons in detail.	CO1	6 Marks
	b)	Articulate the good icon design guide lines in detail.	CO3	8 Marks

UNIT-V

9.	a)	How speech-based interface design helps the disabled people? Explain	CO6	7 Marks
	b)	Explain the Indirect pointing devices and drivers.	CO2	7 Marks
		(OR)		
10.	a)	Explain the criterion for finding the right interface building tools.	CO5	7 Marks
	b)	Explain the features interface building tools.	CO2	7 Marks

ANALYTICAL INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Classify the electrodes used in liquid and gas analyzers and explain their working in detail.	CO1	7 Marks
	b)	Brief the effect of temperature on conductivity measurement.	CO1	7 Marks
		(OR)		
2.	a)	"Sodium analyzer places a vital role in treatment of boiler feed water" justify.	CO2	7 Marks
	b)	Write a short note on silica analyzer.	CO1	7 Marks

UNIT-II

3.	a)	Explain how beer Lambert's law is implemented analysis of chemical solution by using spectrometers.	CO5	10 Marks
	b)	Explain the light sources used in spectrometers.	CO1	4 Marks
		(OR)		
4.	a)	Differentiate single and double beam colorimeters.	CO2	7 Marks
	b)	Recall the working of FT IR spectrometers.	CO1	7 Marks

UNIT-III

5.	a)	Elaborate the appropriate spectroscopic technique which is used to analyze chemical solution by using atomic emission as the key factor.	CO4	7 Marks
	b)	Describe the different types of burners used in flame photometers.	CO1	7 Marks
		(OR)		
6.	a)	Compare magnetic deflection and time of flight mass spectrometer.	CO2	7 Marks
	b)	Select an appropriate spectroscopic technique to analyze given chemical sample by using magnetic resonance phenomenon.	CO4	7 Marks

UNIT-IV

7.	a)	Explain how gaschromatography provides valid solution by analyzing the given sample.	CO3	7 Marks
	b)	List the columns used in liquid chromatography and explain its importance in the analysis of chemical solution.	CO1	7 Marks
		(OR)		
8.	a)	With neat sketch, explain fluorescence detector in detail.	CO1	7 Marks
	b)	Classify gaschromatography and explain the importance of oven thermostats in gaschromatography.	CO1	7 Marks

UNIT-V

9.	a)	With a neat sketch, explain the working of NO_X monitor.	CO1	7 Marks
	b)	Justify the role environment pollution monitoring device in the day to day life in the society.	CO6	7 Marks
		(OR)		
10.	a)	Explain the necessity of X- ray detectors in day today life.	CO6	7 Marks
	b)	With a neat sketch, explain the working of Turbidity and Nephelometer.	CO1	7 Marks

BIOMEDICAL SIGNAL PROCESSING
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		What is the need of Biomedical signal processing and explain the process with a neat block diagram and explain each block in detail?	CO1	14 Marks
		(OR)		
2.		Sketch the diagram of Computer Aided Diagnosis based upon the biomedical signal analysis.	CO1	14 Marks

UNIT-II

3.		What are the potential sources of instrumentation and physiological artifacts in recording the Biomedical signal? Propose non-electronic methods to prevent or suppress the latter type of artifacts.	CO2	14 Marks
		(OR)		
4.		Explain about the following. i) Time and frequency domain filtering. ii) Homomorphism filtering.	CO2	14 Marks

UNIT-III

5.	a)	Design an adaptive filter using LMS algorithm.	CO3	7 Marks
	b)	Write the differences between static filter and adaptive filter and explain the principle of an adaptive filter.	CO3	7 Marks
		(OR)		
6.		Explain the significance in Phase Sensitive detector in biomedical signal processing and explain its operation with neat sketch.	CO3	14 Marks

UNIT-IV

7.		Write short notes on: i) Detection of Dicrotic notch. ii) Correlation Analysis of EEG channels.	CO4	14 Marks
		(OR)		
8.		Describe the turning point algorithms for ECG data compression in terms of data reduction with suitable figures and its disadvantages.	CO5	14 Marks

UNIT-V

9.		Explain the following terms. i) Direct FFT. ii) Window functions.	CO6	14 Marks
		(OR)		
10.		Write a note on spectral estimation in biomedical signals. Explain the types of power spectrum estimation.	CO6	14 Marks

INDUSTRIAL AUTOMATION
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	With reference to the PLC discrete input modules, what types of field input devices are suitable for use with them?	CO2	7 Marks
	b)	Compare the functions of the CPU and memory sections of a PLC processor.	CO2	7 Marks

(OR)

2.	a)	There are three machines, each with its own start-stop buttons. Only one may run at a time. Construct a circuit with appropriate interlocking.	CO3	7 Marks
	b)	Asses FAIL-SAFE circuits in PLC. Which PLC may be appropriate? Provide justifications for your choice.	CO5	7 Marks

UNIT-II

3.		Explain about PLC counter and timer operation in a single application.	CO1	14 Marks

(OR)

4.		Select a Suitable PLC for develop a sequencer control system to operate a basic robot.	CO5	14 Marks

UNIT-III

5.		Explain how Token ring and Token Bus Communication Topology for transmit data in Distributed Control Systems.	CO1	14 Marks

(OR)

6.	a)	Illustrate about DCS Integration with PLCs and Computers with an example.	CO1	7 Marks
	b)	Describe in detail about DCS supervisory computer tasks.	CO1	7 Marks

UNIT-IV

7.	a)	Describe about how MTU message calls for Analog Output of particular register.	CO1	7 Marks
	b)	Describe about SCADA Analog Output Card with neat diagram.	CO1	7 Marks

(OR)

8.		Inexpensive memory has led more and more information to be stored in the MTU. What technology may turn that trend around? Why?	CO2	14 Marks

UNIT-V

9.	a)	Illustrate about how HART protocol utilizes the OSI reference model.	CO1	7 Marks
	b)	Explain about basic requirements of field bus standard for Local Area Network of industrial automation field.	CO1	7 Marks

(OR)

10.		Describe in detail about field bus. i) interoperability. ii) interchangeability.	CO1	14 Marks

POWER PLANT INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the wind power generation with the help of block diagram in detail.	CO1	7 Marks
	b)	Explain the difference between conventional and non conventional sources.	CO2	7 Marks
		(OR)		
2.	a)	With neat sketch, describe the process of electric power generation using solar energy.	CO1	7 Marks
	b)	Emphasize the objectives of instrumentation and control in power generation.	CO2	7 Marks

UNIT-II

3.	a)	Illustrate the schematic diagram and explain the operations of pressurized water nuclear reactor boiling water reactor.	CO1	9 Marks
	b)	Justify how the differential pressure method is used for drum level measurement	CO2	5 Marks
		(OR)		
4.	a)	Design a measurement system setup to measure steam pressure and steam temperature.	CO3	7 Marks
	b)	Select a suitable circuit to measure flue gas presents in boiler and explain its working principle.	CO5	7 Marks

UNIT-III

5.	a)	Describe Cascade steam temperature control with neat sketch,	CO1	6 Marks
	b)	Name and explain the different methods used for controlling superheated steam temperature.	CO1	8 Marks
		(OR)		
6.	a)	Explain an engineering solution to control the combustion for solid fuel fired boiler.	CO4	7 Marks
	b)	Design a controller to control Fire side steam temperature and Steam pressure.	CO3	7 Marks

UNIT-IV

7.	a)	With neat block diagram, explain the principle parts of steam turbine.	CO1	7 Marks
	b)	Design a system to measure mechanical parameters in the measurement of turbine in power plants.	CO3	7 Marks
		(OR)		
8.	a)	Illustrate the schematic diagram of turbo alternator cooling system and describe briefly .	CO1	7 Marks
	b)	Emphasize the safety measures in controlling the turbine control system.	CO6	7 Marks

UNIT-V

9.	a)	Specify the importance of electrical safety and maintenance of measuring instruments in power plants.	CO6	7 Marks
	b)	Write short notes on explosion hazards and intrinsic safety	CO1	7 Marks
		(OR)		
10.		Discuss in detail about interlocks for boiler operation.	CO1	14 Marks

BIG DATA TECHNOLOGIES
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	Define Big Data. Illustrate major dimensions of Big Data.	CO1	7 Marks
	b)	Explain Hadoop distributed file system with suitable example.	CO1	7 Marks
		(OR)		
2.	a)	What is Hadoop? Categorize the components of Hadoop Ecosystem.	CO1 CO2	7 Marks
	b)	Illustrate Various Big Data Sources.	CO	7 Marks
		UNIT-II		
3.		Describe HDFS Architecture with Examples.	CO2	14 Marks
		(OR)		
4.	a)	List and explain HDFS features.	CO2	7 Marks
	b)	Explain Hadoop Input / Output procedures.	CO1	7 Marks
		UNIT-III		
5.	a)	Categorize MapReduce Library Classes.	CO2	8 Marks
	b)	Explain various tools supported by Hadoop Framework.	CO6	6 Marks
		(OR)		
6.		Explain how to create Name node and Data node of Hadoop Cluster in Hadoop Framework.	CO4	14 Marks
		UNIT-IV		
7.	a)	Distinguish between HIVE and Traditional Databases.	CO2	7 Marks
	b)	Compare and contrast HBase with RDBMS.	CO2	7 Marks
		(OR)		
8.		Elaborate installation and services of Hive.	CO5 CO6	14 Marks
		UNIT-V		
9.		Outline features and services of SQOOP in detail.	CO2 CO5	14 Marks
		(OR)		
10.	a)	Elaborate procedure to creating Facebook Database in Hive environment.	CO5 CO5	7 Marks
	b)	Explain Pig and Wukong to explore Billion-edge Network Graphs.	CO1 CO5	7 Marks

MOBILE APPLICATION DEVELOPMENT
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the mobile web presence briefly.	CO1	7 Marks
	b)	Explain the reasons to create a mobile application.	CO1	7 Marks
		(OR)		
2.	a)	Compare any two mobile OSs and explain the behavior of mobile user web browsing.	CO1	7 Marks
	b)	What is Android and explain its features.	CO1	7 Marks

UNIT-II

3.	a)	Sketch the life cycle of an Activity and discuss its events.	CO1	7 Marks
	b)	Develop an android program to illustrate the usage of all events of an activity.	CO3	7 Marks
		(OR)		
4.		Create an Android application to add action items to the action bar.	CO4	14 Marks

UNIT-III

5.	a)	Create an Android application to display the long list of items which are stored in an xml file using ListView.	CO4	7 Marks
	b)	List and explain the different views for displaying images.	CO1	7 Marks
		(OR)		
6.	a)	Develop an Android program to perform image transition using ImageSwitcher View.	CO3	9 Marks
	b)	Distinguish different ways to save and load of User Preferences.	CO2	5 Marks

UNIT-IV

7.	a)	Create an Android application to send SMS message using Intent class.	CO6	7 Marks
	b)	Develop an Android program to zoom in or zoom out of the Google Map.	CO3	7 Marks
		(OR)		
8.	a)	Discuss the procedure to prevent the standard messaging application from receiving a SMS message.	CO1	7 Marks
	b)	Create an Android application to send an e-mail.	CO6	7 Marks

UNIT-V

9.	a)	Discuss the tools required to develop the applications for an Ios.	CO5	7 Marks
	b)	Define Service and discuss the functionality a Service with a suitable example.	CO1	7 Marks
		(OR)		
10.	a)	Outline the anatomy of an iOS app.	CO1	7 Marks
	b)	Develop an Android program to start a counter from zero and stop the counter using Runnable, Thread and AsyncTask.	CO3	7 Marks

INFORMATION RETRIEVAL SYSTEMS
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Distinguish the following: i) IRS and DBMS. ii) IRS and Digital Libraries. iii) IRS and Data Warehouses.	CO2	7 Marks
	b)	Define Term Masking. Explain the fixed and variable term masking approaches with a suitable example.	CO1	7 Marks
		(OR)		
2.		List the various search capabilities to map the user's information needed and the items in the IRS.	CO1	14 Marks

UNIT-II

3.	a)	Explain about item receipt.	CO1	5 Marks
	b)	Model the stemming process using Dictionary look-up stemmer.	CO3	9 Marks
		(OR)		
4.		Explain the following. i) Entity Processing. ii) Categorization.	CO1	14 Marks

UNIT-III

5.	a)	Explain the use of Hidden Markov Model in information search.	CO4	7 Marks
	b)	Explain the functionality of Cliques clustering technique with an algorithm.	CO2	7 Marks
		(OR)		
6.		List various automatic term clustering techniques with an example.	CO2	14 Marks

UNIT-IV

7.		Demonstrate human perception and presentation.	CO1	14 Marks
		(OR)		
8.	a)	List the aspects of Visualization process.	CO1	5 Marks
	b)	Summarize multimedia presentation	CO1	9 Marks

UNIT-V

9.		Use the Boyer-Moore algorithm to search for the term ***FANCY*** in the string ***FANCIFUL FANNY FRUIT FILLED MY FANCY.***	CO5	14 Marks
		(OR)		
10.		Trade off the use of hardware versus software text search algorithms citing advantages and disadvantages of each in comparison to the other.	CO2	14 Marks

MOBILE COMPUTING

[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the limitations of Mobile computing.	CO1	7 Marks
	b)	What are the various constraints of mobile computing?	CO1	7 Marks
		(OR)		
2.	a)	Explain security services offered by GSM with relevant Algorithms.	CO1	7 Marks
	b)	List the features of WiMAX.	CO5	7 Marks

UNIT-II

3.	a)	Differentiate Packet reservation multiple access with Demand assigned multiple access methods.	CO2	7 Marks
	b)	Assume senders A and B, want to send data. CDMA assigns the following key sequences: key AK = 010011, key BK = 110101. Sender A want to send the bit AD=1, sender B sends BD=0. A noise is added to the transmitted signal (-2,0,0,-2,+2,0). Apply CDMA concept to transfer data by assuming binary 0 as -1 and binary 1 as+1.	CO3	7 Marks
		(OR)		
4.	a)	What is a MAC layer of Bluetooth? Explain in detail.	CO1	7 Marks
	b)	Demonstrate Protocol Architecture and bridging of IEEE 802.11 WLAN.	CO4	7 Marks

UNIT-III

5.	a)	Explain the working of Mobile IP with the help of neat diagram.	CO4	7 Marks
	b)	Elaborate the creation Mobile IP along with basic requirements.	CO4	7 Marks
		(OR)		
6.	a)	Examine the reason why congestion occurs in network. Analyze how does TCP detect and handle congestion.	CO2	7 Marks
	b)	Modify Normal TCP to M-TCP for working Efficiently in wireless mobile networks.	CO5	7 Marks

UNIT-IV

7.	a)	What are the hoarding techniques and explain in detail.	CO1	6 Marks
	b)	Explain the concepts of Cache Invalidation mechanisms and what is importance of data cache maintenance and web cache maintenance?	CO1	8 Marks
		(OR)		
8.	a)	What is meant by balanced Push-Pull mechanism? In detail explain about IPP.	CO1	7 Marks
	b)	The push based broadcast is not suitable for large data size. Justify.	CO4	4 Marks
	c)	Which type of indexing is suitable for broad casting data through wireless Channel, why?	CO2	3 Marks

UNIT-V

9.	a)	How does dynamic source routing handle routing? What is the motivation behind dynamic source routing compared to other routing algorithms in fixed networks?	CO1	7 Marks
	b)	What are the security threats to a MANET? Why a MANET faces grater security threats than a fixed infrastructure networks?	CO1	7 Marks

(OR)

10.	a)	Name mechanisms to improve web access for handheld devices. What is their common problem and what led finally to the development of WAP?	CO1	7 Marks
	b)	Explain briefly about the Wireless Datagram Protocol (WDP) of transport layer.	CO1	7 Marks

CRYPTOGRAPHY AND NETWORK SECURITY
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	"Exact realization of a symmetric Block cipher depends on the choice of certain parameters and design features" What are they? Explain.	CO2	7 Marks
	b)	Compute the cipher text for the message "**cryptography and network security**" using transposition technique with the key 4 3 1 2 5 6.	CO4	7 Marks
		(OR)		
2.	a)	Explain active and passive network security threats.	CO1	7 Marks
	b)	Define Caesar cipher. Discuss the characteristics of it that help the cryptanalyst using Brute-force attack.	CO2	7 Marks

UNIT-II

3.	a)	State the purpose of the S-boxes in DES.	CO1	7 Marks
	b)	Distinguish between a block cipher and a stream cipher.	CO2	7 Marks
		(OR)		
4.	a)	Write the difference between diffusion and confusion.	CO2	7 Marks
	b)	List and explain the approaches to attack the RSA algorithm.	CO2	7 Marks

UNIT-III

5.	a)	Compare and contrast the positive and negative aspects of ITA 2000.	CO6	7 Marks
	b)	Explain the Digital Signature Standard in detail.	CO6	7 Marks
		(OR)		
6.	a)	Differentiate a message authentication code and a one-way hash function	CO2	7 Marks
	b)	List the problems that can be addressed by Kerberos.	CO1	7 Marks

UNIT-IV

7.	a)	Explain IP Security scenario along with benefits.	CO1	7 Marks
	b)	Explain OAKLEY key determination protocol.	CO1	7 Marks
		(OR)		
8.	a)	Make use of SSL protocol to solve web security issues.	CO3	7 Marks
	b)	Explain about SSL handshake protocol.	CO1	7 Marks

UNIT-V

9.	a)	Discuss various methods of phishing.	CO1	7 Marks
	b)	Differentiate software and hardware key loggers.	CO2	7 Marks
		(OR)		
10.		With a neat diagram, analyze how virus spread through: i) The internet. ii) A stand alone computer. iii) Local networks.	CO2	14 Marks

SYSTEM MODELING AND SIMULATION

[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Name several entities, attributes, activities, events and state variables for the following systems. CO1 9 Marks
   i) A cafeteria. ii) A grocery store. iii) A hospital emergency room.
   b) What are the events and activities associated with the use of your check book? CO1 5 Marks

(OR)

2. Consider the following continuously operating job shop. Inter-arrival times of jobs are distributed as follows: CO2 14 Marks

Time Between Arrivals (Hours)	Probability
0	0.23
1	0.37
2	0.28
3	0.12

Processing times for jobs are normally distributed, with mean 50 minutes and standard deviation 8 minutes. Construct a simulation table and perform a simulation for 10 new customers. Assume that, when the simulation begins, there is one job being processed (scheduled to be completed in 25 minutes) and there is one job with a 50-minute processing time in the queue.

i) What was the average time in the queue for the 10 new jobs?
ii) What was the average processing time of the 10 new jobs?
iii) What was the maximum time in the system for the 10 new jobs?

UNIT-II

3. a) Write a R program to find sum, mean and product of a vector. CO3 7 Marks
   b) Write a R program to find factorial of a given number. CO3 7 Marks

(OR)

4. a) Design a simple calculator using R program. CO3 7 Marks
   b) Write a R program to check whether a given number is prime or not. CO3 7 Marks

UNIT-III

5. a) List and explain terminology and concepts of statistical models in simulation. CO1 9 Marks
   b) A production process manufactures alternators for outboard engines used in recreational boating. On the average, 1**%** of the alternators will not perform up to the required standards when tested at the engine assembly plant. When a large shipment of alternators is received at the plant, 100 are tested, and, if more than two are nonconforming, the shipment is returned to the alternator manufacturer. What is the probability of returning a shipment? CO3 5 Marks

(OR)

6.	a)	Describe useful statistical models and its situations that arise to conduct simulation.	CO1	9 Marks
	b)	An industrial chemical that will retard the spread of fire in paint has been developed. The local sales representative has estimated, from past experience that 48**%** of the sales calls will result in an order. i) What is the probability that the first order will come on the fourth sales call of the day? ii) If eight sales calls are made in a day, what is the probability of receiving exactly six orders? iii) If four sales calls are made before lunch, what is the probability that one or fewer results in an order?	CO4	5 Marks

UNIT-IV

7.		Explain the characteristics of queuing systems.	CO1	14 Marks

(OR)

8.	a)	Describe important considerations of generating random numbers.	CO1	9 Marks
	b)	Generate random numbers on the interval [0, 1] with 2-digit accuracy.	CO4	5 Marks

UNIT-V

9.		Synthesize a suitable method for collecting data from stale data and time varying data.	CO5	14 Marks

(OR)

10.	a)	Explain the methods for selecting families of input distributions when data available is independent and identically distributed.	CO1	11 Marks
	b)	Design probability density functions of the Erlang distribution where $\theta = 2$ and $k = 1, 2, 4,$ and 8.	CO6	3 Marks

SYSTEMS ENGINEERING
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Compare and contrast between systems engineering and traditional engineering disciplines.	CO1	7 Marks
	b)	Write a paragraph explaining what is meant by the statement "Systems engineering is focused on the system as a whole." State what characteristics of a system are thought as this statement implies and how they are applied to systems engineering.	CO1	7 Marks
		(OR)		
2.	a)	Discuss systems engineering in the perspective of project management.	CO1	7 Marks
	b)	What is meant by the term "modularity?" What characteristics does a modular system possess? Give a specific example of a modular system and identify the modules.	CO1	7 Marks

UNIT-II

3.		Discuss about the Model of a Complex System.	CO2	14 Marks
		(OR)		
4.		Give three key activities of a systems engineer that require technical knowledge down to the component level. Under what circumstances should the systems engineer need to probe into the subcomponent level for a particular system component?	CO2	14 Marks

UNIT-III

5.	a)	Illustrate the process of eliciting the needs and requirement analysis in System Engineering.	CO3	6 Marks
	b)	Describe the general type of the organizational structure.	CO2	8 Marks
		(OR)		
6.	a)	Illustrate how needs of systems engineering are validated.	CO3	6 Marks
	b)	Discuss the advantages of using the system design team approach for a large development project.	CO3	8 Marks

UNIT-IV

7.	a)	Illustrate the types of software systems with respect to systems engineering while in a systems development cycle.	CO1	9 Marks
	b)	List the characteristics of a set of well-stated operational requirements, that is, the qualities that you would look for in analyzing their adequacy. For each, state what could be the result if a requirement did not have these characteristics?	CO4	5 Marks
		(OR)		

8.	a)	What are the measures taken to reduce the program risks during systems development cycle? Illustrate.	CO2	9 Marks
	b)	Describe and define the principal outputs (products) of the needs analysis phase. List and define the primary systems engineering activities that contribute to these products.	CO4	5 Marks

UNIT-V

9.		What specific activities in the advanced development phase sometimes cause it to be referred to as a "risk reduction" phase? Give an example of each activity considering a real or hypothetical system.	CO1	14 Marks

(OR)

10.		Graphical user interface software is generally difficult to design and test. Explain why this is true, giving at least three situations to illustrate your points. What types of development tests would you propose for each situation?	CO1	14 Marks

CODE No.: 16BT71505 SVEC-16

NETWORK PROGRAMMING

[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe the limitations that affect the size of IP datagrams.	CO1	7 Marks
	b)	Distinguish between User Datagram Protocol and Transmission Control Protocol.	CO2	7 Marks
		OR)		
2.	a)	Explain about Byte ordering Functions.	CO1	7 Marks
	b)	Describe about listen and accept functions.	CO1	7 Marks

UNIT-II

3.	a)	Apply str_echo and str_cli functions for string operations.	CO3	7 Marks
	b)	Describe about signal handling on a POSIX-complaint system.	CO1	7 Marks
		(OR)		
4.	a)	List out various I/O models that are available in UNIX.	CO1	7 Marks
	b)	Explain the need for getsockopt and setsockopt functions.	CO1	7 Marks

UNIT-III

5.	a)	Implement UDP Echo Server.	CO4	7 Marks
	b)	Explain about outgoing interface with UDP.	CO1	7 Marks
		(OR)		
6.	a)	Discuss about gethost byname function.	CO1	7 Marks
	b)	Explain about Domain Name System.	CO1	7 Marks

UNIT-IV

7.	a)	Explain source code portability.	CO4	7 Marks
	b)	Discuss about IPV4 client-IPV6 server.	CO1	7 Marks
		(OR)		
8.	a)	Describe about Namespaces for IPC.	CO1	7 Marks
	b)	Write about the usage of uname function.	CO5	7 Marks

UNIT-V

9.	a)	Explain about Interprocess communication.	CO1	7 Marks
	b)	Apply Message queues for process communication.	CO6	7 Marks
		(OR)		
10.	a)	Explain about RPC Transparency issues.	CO1	7 Marks
	b)	Write about Implementation of rlogin for remote access.	CO1	7 Marks

INTERNET OF THINGS

[Computer Science and Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain Internet of Things (IoT) with example.	CO1	9 Marks
	b)	With neat sketch, describe the structure of IOT device.	CO2	5 Marks
		(OR)		
2.	a)	Discuss about Web socket communication in IOT.	CO1	6 Marks
	b)	Explain the physical design of IOT.	CO2	8 Marks

UNIT-II

3.	a)	Explain Arduino. What are the things need to be considered for developing an application on Arduino?	CO2	7 Marks
	b)	Describe Raspberry pi interfaces.	CO3	7 Marks
		(OR)		
4.	a)	Describe the IOT applications for Smart Cities.	CO6	7 Marks
	b)	Discuss about the building blocks of an IOT Device.	CO3	7 Marks

UNIT-III

5.	a)	Explain the types of sensor devices with example.	CO2	7 Marks
	b)	Describe internet communications in IOT.	CO1	7 Marks
		(OR)		
6.		List and explain Application layer protocols.	CO3	14 Marks

UNIT-IV

7.	a)	Discuss about Requirement specifications in IOT.	CO4	9 Marks
	b)	Explain the operational view specifications in IOT.	CO1	5 Marks
		(OR)		
8.	a)	Differentiate between Device and component integration.	CO4	7 Marks
	b)	Describe process specifications in IOT.	CO4	7 Marks

UNIT-V

9.		Explain the Hadoop Ecosystem with neat sketch.	CO5	14 Marks
		(OR)		
10.	a)	Discuss about Hadoop Map reduce for batch data analysis.	CO5	7 Marks
	b)	Describe YARN Components in detail.	CO6	7 Marks

GERMAN LANGUAGE

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Schreiben sie die Sätze und die Fragen in der richtigen form. CO1 14 Marks
   1. In Berlin / wohnen / ich/.
   2. Sie / heißen / wie/?
   3. Sein / wer / du ? ?
   4. Ich / aus Moskau / kommen /
   5. Heißen / er / Peter /
   6. Kommen / woher / du/
   7. Sein / mein Name / Nina/
   8. Du / wohnen / wo/?
   9. Heißen / ich / Nina.
   10. Ihr / wie / ist / Name?
   11. Ich / in Spanien / wohnen
   12. Kommen / woher / sie/?
   13. Ich / sein / Rahul
   14. Ich / Deutsch / Sprechen/

OR)

2. a) **Ergäzen Sie : (ich, Sie, du, er, sie)** CO1 7 Marks
   1. Paul kommt aus Österreich _____ Wohnt in Innsbruck.
   2. Wie heißt _____? Maria. Und du?
   3. Das ist Claudia. _____ kommt aus Deutschland.
   4. Wo wohnen _____? In Berlin. Und Sie?
   5. Hallo, _____ bin Luisa.
   6. Mein Name ist Tina. Wie heißen _____?
   7. Hallo, ich bin Maria. Entschuldigung, wie heißt _____?

   b) **Ergäzen Sie die verben in der richtigen form.** CO1 7 Marks
   1. Mein Name ist Beate Müller. Und wie _____ Sie? (heiße)
   2. Ich _____ (heißen) Emma Reiter.
   3. Ich _____ (sein) in Berlin. Und du?
   4. Wo _____ du? (wohne)In Salzburg.
   5. Woher _____ Sie (Komme) ? Aus England?
   6. Nein, ich _____ aus Australien. (Kommen)
   7. Das ist Paolo. Er _____ (Kommen) aus Italien

UNIT-II

3. **Lieber Kommilitone!** CO2 14 Marks

Sie suchen ein Zimmer, wir haben eins! Wir sind drei Studenten und haben zusammen eine Wohnung. Die Wohnung liegt zentral (Náhe U-Bahn). Das Haus ist alt und hat keinen Lift. Wir haben auch kein Telefon. Aber die Wohnung ist sehr groß: sie hat 5 Zimmer, Küche, Bad, W.C. und einen Balkon. Jeder zahlt 150 Mark Miete, zusammen 600 Mark monatlich. Die Nebenkosten (Strom, Gas, Heizung usw.) teilen wir.
Kommen Sie oder schreiben Sie bald!

Mit freunlichen Grüßen

Bitte antworten Sie

1. Was sucht der Student?
2. Was haben die drei Studenten?
3. Wo liegt die Wohnng?
4. Hat das Haus einen Lift?
5. Hat das Haus ein Telefon?
6. Wie viele Zimmer hat die Wohnung?
7. Wie hoch ist die Miete?

(OR)

4. a) **Wie viel ist das? Mathematick.** CO2 7 Marks

1. Zehn + neun + drei = ...
2. fünf + sechsundzwanzig – vier =.....
3. Sechzehn + elf – fuenf =.....
4. Neunundzwanzig = achtundachtzig =.....
5. Siebzehn + vierunfuenzig + zwanzig = ...
6. Sechsundzwanzig + Siebzehn- neun= .....
7. Achtundneunzig+ fünfzehn + zwei = ...

b) **1. Der Teekocher. Was machen Sie? Srgänzen Sie das passende verb.** CO2 4 Marks

Einschalten / stellen / warten / einfüllen

Wasser in die Kanne einfüllen Tee in den Teefilter .....1..... Teefilter in die Kanne .....2..... und den Teekocher .....3..... Ein paar Minuten.....4..... und dann den Tee genießen.

2. **Ergänzen Sie die Modalverben** (müssen / können oder wollen) CO2 3 Marks

1. Ich..... heute ins Kino gehen. Kommst du mit?
2. Mama, ich habe Hunger. Ich ..... einkaufen. Dann koche ich etwas.
3. Das machst du super, Du ..... schon gut schwimmen.

5. **Schreiben Sie die Sätze.** CO3 14 Marks

1. Will/ machen / Johanna / heute Sport
2. Muss / fahren / Sie / morgen / nach Berlin.
3. Muss / bleiben / Ihre Familie / in München
4. Kann / treffen / Johanna / abends / Freunde
5. Wollen / gehen / Ihre Kinder ins Kino
6. Will / gehen / Ich / heute ins Kino
7. Muss / arbeiten / fast / jeden Tag

(OR)

6. a) **Schreiben Sie die richtige Form an**. CO2 7 Marks

1. Das ist Mara. *Ihr / Ihre / Sein/* Seine Kinder gehen zur Schule.
2. *Ihr / Ihre / Sein/*Tochter Lena spielt Saxophon.
3. *Ihr / Ihre / Sein/*Sohn Florian hat einen Computer.
4. Florian sagt: *Mein / Meine / Sein / Seine* Computer ist toll
5. Lenga sagt: *Du und Dein / deine / sein / seine* Computerspiele. Du machst nichts anderes“.
6. Mara sagt: „ *Euer / Eure / Unser / Unsere* Familie hat eine Homepage“
7. *Euer / Eure / Unser / Unsere*Hund Otto ist auch dabei!

b) **Wo ist der Schlüssel? Ergänzen Sie die Präpositionen.** CO2 7 Marks

An / auf/ hinter/ im / neben / uber / unter / vor zwischen

UNIT-IV

7. **Schreiben Sie kurze text uber sich vorstellen. Wo passen die Wörter und Redemittel?** CO4 14 Marks

Ich wohne jetzt in / Ich arbeite als / Mein name ist / Ich heiße / Mein Heimatland ist / Ich bin / (Jahre alt) / Ich komme aus / Ich spreche / Ich bin…von Beruf. Mein Hobbys sind…

1. Name: ……
2. Alter:……..
3. Land:…….
4. Wohnort:……
5. Beruf:…….
6. Sprachen:……
7. Hobbys:……..

(OR)

8. a) Wie heißt das Gegenteil? Notieren Sie das passende Wort. CO4 7 Marks
   1. Die Wohnung ist nicht teuer, sie ist .....
   2. Das zimmer ist nicht klein, es ist .....
   3. Im Garten ist es nicht leise, es ist .....
   4. Die Küche ist nicht dunkel, sie ist .....
   5. Das Haus liegt nicht weit weg, es liegt .....
   6. Feuer ist heiß und das Wasser ist .....
   7. Die Braut ist sehr glücklich aber der Bräutigam.....

   b) **Lesen Sie die Sätze 1-5 und die E-mail von Ute. Richtig oder falsch.** CO5 7 Marks

An: jana@kmail.de
Von: ute@kmail.de
Hallo Jana,
vielen Dank für deine E-mail. Das Foto ist sehr schön. Jule und Jonas sind so groß! Ich habe kein Foto, aber am Sonntag ist Familienfest, da macht mein Mann Paul sicher Fotos! Oma Gerda, seine Mutter, hat Geburtstag – sie wird 75 Jahre alt. Da kommt die ganze Familie: Pauls Eltern, klar, und alle kinder: die drei Söhne sind da, Martin, Peter und Paul, und natürlich auch Elisabeth, die Tochter. Paul freut sich total, endlich mal wieder seine Schwester zu treffen! Auch meine Eltern und meine Geshwister Felix und Julia kommen, aber mein Opa kommt leider nicht. Er ist schon 95 Jahre alt. Du, ich möchte dich gerne besuchen-nach dem Familienfest, ok?
Alles Liebe, Ute

1. Das Foto ist sehr schön.
2. Die Kinder von Jana sind Gorß
3. Das Failienfest ist am Wochenede.
4. Die Mutter von Paul hat Geburtstag.
5. Elisabeth hat einen Sohn.
6. Der Opa von Jana ist sehr alt.
7. Ute will Jana morgen besuchen.

UNIT-V

9. **Übersetzt Sie den Text** (translate the text in English) CO6 14 Marks

Wir fruehstuecken zusammen Mein Mann und ich essen Brot mit Kaese oder Wurst, Anna isst Muesli mit Milch. Mittags essen Anna und ich warm. Oft essen wir Nudeln oder eine Suppe. Nikolaj isst in der Arbeit nur ein Brotchen. Abends um sieben essen wir dann alle zusammen: Fish oder Fleisch. mit Gemuese und Reis oder Kartoffeln. Wir trinken gern Saft und Wasser.

(OR)

10. a) **Wann haben die Personen Geburtstag? Schreiben Sie die Daten.** CO6 7 Marks

Geburtstagskalender		
1.	04.01.	Angelik
2.	09.02.	Anton
3.	12.03.	Marcel
4.	07.04.	Ines
5.	20.05.	Oleg
6.	01.06.	Mirka
7.	03.07.	Igor

b) **1**. **Lessen Sie die Anzeige und notieren Sie.** CO5 4 Marks

Kerferloher Straße, Nähe U-Bahn – Zentral und ruhig! 3 zimmer – Wohnung im 4.Stock, ca. 90m^2, Wohnzimmer und Küche ist nicht dunkel, mit Balkon, Bad/WC, Ab 01.06.frei. Miete 850€ inklusive . Hausverwaltung Ohms 089-424242

a. Wie viele Zimmer?
b. Wie groß?
c. Preis?
d. Kontakt?

2. **Ergänzen Sie die Wörter.** CO5 3 Marks

Hier arbeiten 300 Menschen – für 100000 Passagiere. Täglich fahren 500.....1..... nach Hamburg, München und in andere .....2..... Es gibt 30.....3..... und Restaurants.

IV B.Tech I Semester (SVEC16) Supplementary Examinations June – 2022

PERSONALITY DEVELOPMENT

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Give examples of try-out experiences that might be of interest to you.	CO1	14 Marks
		(OR)		
2.	a)	Describe the reaction of the people who have low self esteem.	CO1	7 Marks
	b)	Describe how a failure can pave the way to success.	CO1	7 Marks

UNIT-II

3.		Evaluate different types of attitudes and how they influence others.	CO5	14 Marks
		(OR)		
4.	a)	To develop positive attitude one needs to take care mentally, physically and emotionally – Interpret.	CO2	7 Marks
	b)	Categorize a few steps to improve your attitudes.	CO2	7 Marks

UNIT-III

5.		Self-motivation is a drive within you to get things done. Illustrate the idea with suitable examples.	CO3	14 Marks
		(OR)		
6.	a)	Anna is a receptionist at a busy production plant. The plant manager has given strict orders that his home phone number not be given to anyone under any circumstances. One day, when the plant manager is at home with the flu, a production supervisor calls in a panic. "I need him to make a decision, "the supervisor tells Anna. "I can't take responsibility for it and I need that decision now! Otherwise the whole production run could be ruined. What are Anna's options? Which one do you think would be best in this situation? Analyze the above situation and write in your own words	CO2	7 Marks
	b)	Analyze the causes and effects of stress.	CO2	7 Marks

UNIT-IV

7.		"It is important to do some preparation before you request for a raise of salary." Discuss.	CO3	14 Marks
		(OR)		
8.	a)	"It is hard for some people to accept a compliment". Infer the statement.	CO4	7 Marks
	b)	"Handling undeserved criticism takes a lot of practice". Develop the idea.	CO4	7 Marks

UNIT-V

9.		"Rules for employees are a little different in every organization". Discuss.	CO4	14 Marks
		(OR)		
10.	a)	You need to assess yourself before accepting a new job. Support the statement.	CO5	7 Marks
	b)	Evaluate your performance appraisal in the work place.	CO5	7 Marks

CODE No.: 16BT51501 SVEC-16

COMPILER DESIGN

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Give the reasons for separating lexical analysis from syntax analysis. Write Specification of LEX program.	CO5	6 Marks
	b)	Explain with one example how identifiers and keywords are recognized by lexical analyzer.	CO1	8 Marks
		(OR)		
2.	a)	Write about machine independent phases of a Compiler Structure.	CO1	7 Marks
	b)	Describe about Interpreters.	CO1	7 Marks

UNIT-II

3.	a)	Write Recursive Descent Parser for the Grammar `S=>cAd,A->ab/a`.	CO3	7 Marks
	b)	Construct Predictive parsing table for the Grammar `S->a/#/(T),T->T,S/S`.	CO3	7 Marks
		(OR)		
4.		Consider the the following grammer i) `S->AS/b` ii) `A->SA/a` Construct SLR Parsing Table. Show the actions of parser for the string "`abab`".	CO3	14 Marks

UNIT-III

5.	a)	Write short notes on i) type conversion ii) type coercion.	CO1	6 Marks
	b)	Define Structural Equivalence of Type Expressions? Write a function which will test the structural equivalence of two type expressions.	CO1	8 Marks
		(OR)		

6.		Discuss briefly about type conversions. What is Coercions? the grammar for expressions is given below. Write the semantics rules for Coercions from integer to real.
		`E->num`
		`E->num.num`
		`E->id`
		`E->E1 op E2.`
			CO4	14 Marks

UNIT-IV

7.	a)	What are the advantages and disadvantages of heap storage allocation strategy?	CO1	7 Marks
	b)	Discuss briefly about overloading of functions and operators with suitable example.	CO1	7 Marks
		(OR)		
8.	a)	Explain the parameter passing mechanisms	CO1	7 Marks
	b)	Explain about Activation Record. With example explain how runtime memory is allocated for objects.	CO6	7 Marks

UNIT-V

9.		Explain briefly about loop optimization techniques.	CO2	14 Marks
		(OR)		
10.	a)	Write short notes on : i) Redundant sub expression elimination ii) Induction variable elements.	CO1	7 Marks
	b)	Explain data flow diagram with an example.	CO1	7 Marks

DISASTER MITIGATION AND MANAGEMENT

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Classify disasters on basis of their origin and explain the same.	CO2	7 Marks
	b)	Write a short note on Socio-economic vulnerability.	CO1	7 Marks
		OR)		
2.	a)	Discuss the impact of disasters on life and environment.	CO2	7 Marks
	b)	Explain how the public awareness is helpful in risk reduction.	CO4	7 Marks

UNIT-II

3.	a)	Write a short note on earthquakes. What are its causes?	CO2	7 Marks
	b)	Summarize the general planning and design aspects for earthquake resistant design with neat sketches based on the historical data.	CO6	7 Marks
		(OR)		
4.	a)	Give adverse effects of tsunami. Also Summarize the general planning and design aspects tsunami resistant design based on the historical data.	CO6	7 Marks
	b)	Distinguish between active control and passive control systems. Draw the block diagram of both the systems.	CO5	7 Marks

UNIT-III

5.	a)	Write a brief note on floods as a serious environmental hazard.	CO2	7 Marks
	b)	Suggest the mitigation measures for reducing impact over economic conditions of the society due to cyclones in India.	CO8	7 Marks
		(OR)		
6.	a)	Explain the necessary steps to be taken to avoid dangerous epidemics after a flood disaster.	CO4	7 Marks
	b)	Write a short note on the drought control measures adopted across the globe.	CO7	7 Marks

UNIT-IV

7.	a)	Write a short note on man-made landslides.	CO2	7 Marks
	b)	Suggest the mitigation measures for reducing impact due to landslides.	CO4	7 Marks
		(OR)		
8.	a)	Explain briefly different causes for landslides.	CO2	7 Marks
	b)	Discuss the types of landslides.	CO2	7 Marks

UNIT-V

9.		Assume that you are a nodal officer nominated from ministry. Design a disaster mitigation strategy against Tsunami in a particular locality.	CO3	14 Marks
		(OR)		
10.		Assume that you are a nodal officer nominated from ministry. Design a disaster mitigation strategy against Earthquake in a particular locality.	CO3	14 Marks

SOFTWARE PROJECT MANAGEMENT
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		What are the ways of generating better returns in software engineering process?	CO1	14 Marks
		(OR)		
2.	a)	Explain about Boehm five staffing principles.	CO1	7 Marks
	b)	Discuss about how reducing software size.	CO3	7 Marks

UNIT-II

3.		List out and explain the principles of modern software management.	CO2	14 Marks
		(OR)		
4.		How do you evaluate the completion of each of the four phases in software life cycle?	CO3	14 Marks

UNIT-III

5.		Differentiate the workflows present in the life cycle software development with an example.	CO4	14 Marks
		(OR)		
6.		Design and develop process view in software Architecture. Explain with an example.	CO3	14 Marks

UNIT-IV

7.		Compare and contrast the different roles present in the software project management. Explain any five roles with examples.	CO4	14 Marks
		(OR)		
8.		What are the sources of change? Why should change be made in a controlled way?	CO3	14 Marks

UNIT-V

9.		List all quality indicators and management indicators. Explain their role in project control.	CO5	14 Marks
		(OR)		
10.		What are roles of Project manager in the Agile management?	CO6	14 Marks

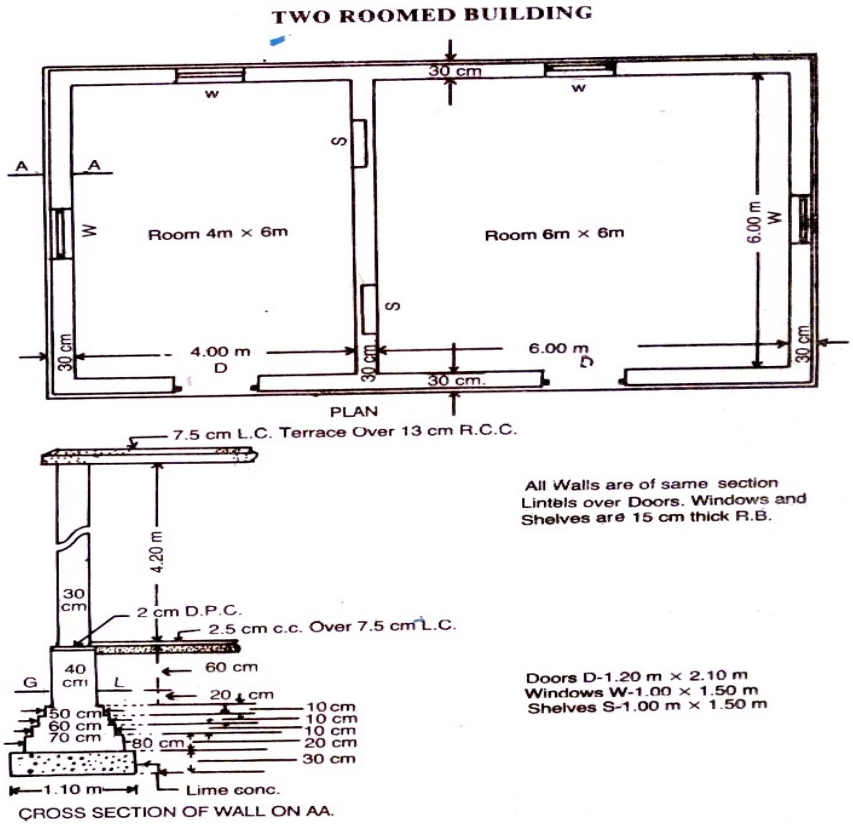
ESTIMATION AND QUANTITY SURVEYING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Estimate the required quantities of the following from the given figure by using individual wall method. CO4 14 Marks
   i) Earth work excavation in foundation.
   ii) Doors and windows in super structure.
   iii) Brick work up to plinth level.



(OR)

2. a) Differentiate between detailed estimate and Abstract estimate CO2 8 Marks
   b) Write a short note on degree of accuracy CO1 3 Marks
   c) Write the conditions where no deductions applied CO1 3 Marks

UNIT-II

3. Prepare a detailed estimate for supplying and laying 150mm dia. glazed stone ware pipe for 100m length jointing with 1:1 cement mortar including trenching upto a depth 0f 75 cm. Estimate should be prepared to include all materials. CO2 14 Marks

(OR)

4. Reduced level of ground along the Centre line if proposed roads from chainage 10 to chainage 20 are given below. The formation level at the 10^{th} chainage in 108m and the road is in downward gradient of 1 in 150 up to the chainage 14 and then the gradient changes to 1 in 100 downward. Formation width of the road is 10 meter and side slopes of banking are 2:1. Length of the chain is 30m. CO3 14 Marks

Calculate the cost of turfing the side slopes at a rate of Rs. 60 per sq.m and the area of side slopes by (i) Trapezoidal formula (ii) Prismoidal formula

Chainage	R.L of ground	R.L of Formation
10	105.00	108.00
11	105.60	Downward gradient 1 in 100
12	105.44	
13	105.90	
14	105.42	
15	104.30	Down gradient 1 in 100
16	105.00	
17	104.10	
18	104.62	
19	104.00	
20	103.30	

UNIT-III

5.	a)	Discuss briefly about detailed specifications of R.C.C works	CO4	8 Marks
	b)	Differentiate between general specifications and detailed specifications	CO3	6 Marks

(OR)

6.	a)	Perform the rate analysis for cement concrete work in substructure with the proportion of the cement concrete of M15 Grade, take 10cu.m	CO6	5 Marks
	b)	Calculate the Quantity of material for R.C.C. (1:2:4) for $20m^3$ of work (Slab)	CO6	5 Marks
	c)	Calculate the Quantity of material for P.C.C. (1:3:6) for $15m^3$ of work	CO5	4 Marks

UNIT-IV

7.	a)	Write a short notes about earnest money, security deposit and M-Book.	CO1	9 Marks
	b)	What is tender notice? Explain about the particulars that must be given in the tender notice.	CO1	5 Marks

(OR)

8.	a)	Discuss about the essentials requirements of contract.	CO6	5 Marks
	b)	Differentiate between open tender and limited tender.	CO1	5 Marks
	c)	What are the important legal implications of a contract?	CO5	4 Marks

UNIT-V

9.	a)	Explain about Obsolescence and Book Value	CO1	4 Marks
	b)	A 3 storey R.C.C framed structure standing on a plot of land 800 sq.m. plinth area of each storey 400 sq.m, Future life of building 70 years. The building fetching a gross rent of Rs.1500/- month. Work out capitalized value of the property on the bank of 6%. Net Yield for sinking fund 3% interest assumed. Cost of the land taken as Rs 40/sq. m. Data may be assumed suitably. Data may be as follows:	CO7	10 Marks

i. Repairs at 1/12 of gross income.
ii. Municipal tax at 20% gross rent
iii. Property tax at 5% gross rent
iv. Insurance premium @ 0.5% of gross rent
v. Management charges @ 6%of gross rent
vi. Other miscellaneous charges at 2% of gross rent.

Plinth area is at a rate of Rs. 150 per square meter.

(OR)

10.	a)	Write about Market value, Annuity, Net income	CO8	4 Marks
	b)	Calculate the standard rent of a government residential building newly constructed from the following data:	CO3	10 Marks

i. Cost of land - Rs. 20,000.
ii. Cost of construction of the building - Rs. 80,000.
iii. Cost of roads within the compound, and fencing - Rs 4000.
iv. Cost of sanitary and water supply - 12% of the cost of building.
v. Cost of electrical installation including fans - 8% of the cost of

building

vi. Municipal house tax - Rs. 400 per annum.
vii. Water tax - Rs. 250 per annum.
viii. Property tax - Rs140 per annum

GEOSPATIAL TECHNOLOGIES
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain effective information about the flight planning.	CO1	8 Marks
	b)	Define: i) Nadir point; ii) Line of Flight; iii) Perspective centre.	CO1	6 Marks
		(OR)		
2.	a)	Explain Mosaic and also explain advantages and disadvantages of Mosaic.	CO1	7 Marks
	b)	Calculate the scale of photographs; its flying height is 2100m, elevation of terrain 500m and focal length152.5mm.	CO2	7 Marks

UNIT-II

3.		What are the basic processes and elements involved in electromagnetic remote sensing of earth resources? Explain them.	CO2	14 Marks
		(OR)		
4.	a)	Explain the following : i) Temporal resolution ii) Spatial resolution iii) Spectral resolution.	CO3	7 Marks
	b)	Explain the basics of visual interpretation of imageries.	CO3	7 Marks

UNIT-III

5.		Analyze the fundamental operations of GIS in detail.	CO2	14 Marks
		(OR)		
6.		What is a projection system? Explain the Polyconical Projection System.	CO4	14 Marks

UNIT-IV

7.		Explain about data manipulation and analysis in GIS.	CO6	14 Marks
		(OR)		
8.		Explain about the segments of GPS.	CO4	14 Marks

UNIT-V

9.		Discuss about Flood and drought impact assessment and monitoring.	CO5	14 Marks
		(OR)		
10.		Explain the Inland water quality survey and management by using GIS.	CO7	14 Marks

RAILWAY, AIRPORT AND HARBOUR ENGINEERING

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain what is meant by track alignment. What are the basic requirements of good alignment? Discuss in detail, the factors which control the alignment of a railway track.	CO1	7 Marks
	b)	Derive an expression for super elevation in railways.	CO2	7 Marks
		(OR)		
2.	a)	Illustrate with a neat sketch, the turnout, points and crossings and explain their working principles.	CO1	7 Marks
	b)	A branch line of eight degree curve diverges in opposite direction from broad gauge main line with five degree curve. The speed on the branch line is 30 km/hr. Calculate the super elevation and permissible speed on the main line.	CO6	7 Marks

UNIT-II

3.	a)	Classify the stages in construction of railway track and explain in detail.	CO1	7 Marks
	b)	Explain in detail about the passenger amenities to be provided in railway station	CO1	7 Marks
		(OR)		
4.	a)	Classify the advantages and disadvantages of conventional maintenance and modern maintenance techniques.	CO5	7 Marks
	b)	List out the type of railway stations and explain each one in detail.	CO1	7 Marks

UNIT-III

5.	a)	Explain the merits and demerits of air transport.	CO1	7 Marks
	b)	Explain the night time aids provided at the airport.	CO1	7 Marks
		(OR)		
6.	a)	What are the different systems of aircraft parking? Explain the suitability of each system.	CO1	7 Marks
	b)	Draw an airport layout and explain its components.	CO1	7 Marks

UNIT-IV

7.	a)	The length of runway under standard conditions is 1620m. The airport site has an elevation of 270 m; its reference temperature is 32.90°c. If the runway is to be constructed with an effective gradient of 0.20%. Determine the corrected runway length.	CO3	7 Marks
	b)	Write a short notes on: i) Airport drainage. ii) Factors considered in taxiway design.	CO1	7 Marks
		(OR)		
8.	a)	Explain the role of wind rose diagrams in the orientation of runways.	CO1	7 Marks
	b)	Discuss in detail about: i) Various design factors to be considered in determining the thickness of pavement. ii) Special consideration for pavement design.	CO3	7 Marks

UNIT-V

9.	a)	Describe any four factors of site investigation for location of harbours and the significance of each one of them.	CO4	7 Marks
	b)	Explain any six factors, for which a harbour engineer must have consideration, while planning and designing a harbour.	CO8	7 Marks
		(OR)		
10.	a)	Illustrate with neat sketches any four types of coastal protection works.	CO1	7 Marks
	b)	Discuss in detail about the environmental concern required for port operation.	CO7	7 Marks

ENVIRONMENTAL IMPACT ASSESSMENT AND MANAGEMENT
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the basic concepts of EIA? Describe.	CO1	7 Marks
	b)	How an Initial environmental examination helps for a full scale EIA?	CO2	7 Marks
		(OR)		
2.	a)	Analyse the EIA process providing solutions for environmental problems.	CO3	7 Marks
	b)	Describe about the factors affecting EIA.	CO2	7 Marks

UNIT-II

3.	a)	Explain the criteria followed in selecting EIA methodology.	CO1	7 Marks
	b)	Describe the matrix method of EIA.	CO1	7 Marks
		(OR)		
4.		Analyse the Checklist and Overlay methods of EIA.	CO2	14 Marks

UNIT-III

5.	a)	Discuss the mitigation measures of soil impacts from an angle of sustainable development.	CO6	7 Marks
	b)	Explain any one developmental activity which cause significant impact on surface water resources and suggest appropriate mitigation measures.	CO2	7 Marks
		(OR)		
6.		Explain methodology for the assessment of impacts on health and safety due to adverse changes in soil environment.	CO5	14 Marks

UNIT-IV

7.	a)	Differentiate between deforestation and forest degradation.	CO2	7 Marks
	b)	Explain the impact of development Activities on Vegetation and wildlife.	CO1	7 Marks
		(OR)		
8.	a)	How can you predict the impacts of the project activity on health and safety of people? Discuss.	CO5	7 Marks
	b)	How do you identify various potential environmental problems resulting from an Engineering project? Explain briefly.	CO3	7 Marks

UNIT-V

9.	a)	Discuss about Environmental Protection Act, 1986.	CO7	7 Marks
	b)	Discuss the need for public awareness on environment impact assessment.	CO2	7 Marks
		(OR)		
10.		What is meant by Environmental Audit? What are the different objectives of it? Explain.	CO8	14 Marks

HIGHWAY CONSTRUCTION AND MAINTENANCE
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	List different methods of roads construction. Discuss their advantages and limitations.	CO1	7 Marks
	b)	Discuss about the procedure and materials used in the construction of subgrade.	CO1	7 Marks
		(OR)		
2.	a)	What are the problems in the construction of high embankments over weak foundation soils?	CO1	7 Marks
	b)	With the aid of neat sketches, show the different types of joints and their positions.	CO1	7 Marks

UNIT-II

3.	a)	Compare flat wheeled rollers & sheep foot rollers.	CO2	7 Marks
	b)	What are the factors affecting properties of soil- bitumen?	CO1	7 Marks
		(OR)		
4.	a)	Compare between soil cement stabilization and soil lime stabilization.	CO2	7 Marks
	b)	Explain the mechanics of soil stabilization.	CO1	7 Marks

UNIT-III

5.	a)	The maximum quantity of water expected in one of the open longitudinal drains on clayey soil is 1.2m^3/sec. Design the cross section and longitudinal slope of trapezoidal drain assuming the bottom width of the trapezoidal section to be 0.8m and cross slope to be 1.0 vertical to 1.5 horizontal. The allowable velocity of flow in the drain is 0.9m/sec and Manning's roughness coefficient is 0.02.	CO3	7 Marks
	b)	Estimate the design quantity of flow on a road side drain for 25 years period of occurance of storm from the following data: Width of drainage area along bare soil with cross slope of 1.0% upto the side drain=300m; length of longitudinal side drain = 650m; allowable velocity of flow = 0.5m/sec; weighted average value of run off coefficient 0.3.	CO2	7 Marks
		(OR)		
6.	a)	Explain how the surface water is collected and disposed off in: i) Rural roads. ii) Urban roads.	CO1	7 Marks
	b)	Give the solution how to control soil erosion on earth slopes.	CO4	7 Marks

UNIT-IV

7.		Mention different tools used in Highway construction.	CO5	14 Marks
		(OR)		
8.		Draw layout of hot mix bitumen plants and name various units required for it.	CO1	14 Marks

UNIT-V

9.	a)	Write an explanatory note on cross drainage and drainage structures.	CO1	7 Marks
	b)	Write the objectives of environmental impact studies.	CO1	7 Marks
		(OR)		
10.	a)	List the different flexible pavement failures and explain briefly.	CO1	7 Marks
	b)	Explain the principle behind Benkelman beam test and state its uses.	CO2	7 Marks

CODE No.: 16BT70120 SVEC-16

Roll No. | | | | | | | | | | |

GROUND IMPROVEMENT TECHNIQUES
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the role of ground improvement on foundations.	CO1	7 Marks
	b)	Report the selection criterion for ground improvement based on soil conditions.	CO2	7 Marks
		(OR)		
2.	a)	Classify ground modification techniques.	CO2	7 Marks
	b)	Explain emerging trends in ground improvement.	CO1	7 Marks

UNIT-II

3.	a)	Write short notes on the following with reference to dewatering: i) Horizontal wells. ii) Foundation drains. iii) Blanket drains.	CO1	7 Marks
	b)	Explain how electro-osmosis technique is effective for dewatering in cohesive soils.	CO5	7 Marks
		(OR)		
4.	a)	List out the various dewatering systems used in different soils. Discuss the effect of each system on environment. When are deep wells used for dewatering?	CO7	7 Marks
	b)	Why dewatering is required in soil? Explain with neat sketches dewatering using sumps and interceptor ditches.	CO2	7 Marks

UNIT-III

5.	a)	Explain the method of construction of stone columns by vibro-displacement method. What are the safety precautions to be taken during installation of stone columns?	CO6	7 Marks
	b)	Compare the relative merits of various methods of in-situ treatment of cohesive and cohesionless soils.	CO2	7 Marks
		(OR)		
6.	a)	What are the properties of compacted soil and highlight the benefits of compacted soil in connected with the geotechnical engineering?	CO2	7 Marks
	b)	Soils from the following locations in Tirupati have the following properties. Identify the problems associated with these soils and suggest suitable ground improvement methods and justify. Site at Daminedu Village: Liquid Limit = 85%, Plastic Limit = 41%, Shrinkage Limit = 18 %, Free Swell Index = 140%. Government has planned to build LIG Multistoried Apartments. Site at Tiruchanoor Village: SPT N increases from 4 at 1.5 m depth to 20 at 15 m depth. The site is located on the banks of river Swarnamukhi. Government has planned to build Multistoried Hostel Buildings.	CO4	7 Marks

UNIT-IV

7.	a)	What are the various admixtures used in stabilization of soil? Describe in detail the engineering benefits of lime modification of soils.	CO1	7 Marks
	b)	List the different types of grouts. What are the factors that influence the grout requirement? Write the safety precautions to be taken during grouting.	CO6	7 Marks

(OR)

8.	a)	Define free swell index. What are the foundation techniques that are adopted in sites with expansive soils?	CO1	7 Marks
	b)	Distinguish cement stabilization and bituminous stabilization along with their merits and demerits.	CO5	7 Marks

UNIT-V

9.	a)	Provide one application each of geomembrane and geogrid types of reinforcements.	CO1	7 Marks
	b)	Write a note on various functions and properties of geosynthetics.	CO1	7 Marks

(OR)

10.	a)	Explain the soil reinforcement interaction with neat sketches.	CO2	5 Marks
	b)	Design the reinforcement for internal stability of a 6m high reinforced earth wall. The metallic reinforcing strips are 120mm wide having tensile strength of 18kN. The horizontal spacing of strips is fixed as 1m. Find the vertical spacing and effective length of strips. Draw the final diagram. Given the back fill soil has 18kN/m^3 unit weight, friction angle =45^0, the friction angle between soil and reinforcement is 20^0.	CO3	9 Marks

POWER SYSTEM OPERATION AND CONTROL
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. There are three thermal generating units which can be committed to take the system load. The fuel cost data and generation operating unit data are given below: CO4 14 Marks

$F_1 = 392.7 + 5.544\ P_1 + 0.001093\ P_1^2$;
$F_2 = 217 + 5.495\ P_2 + 0.001358\ P_2^2$;
$F_3 = 65.5 + 6.695\ P_3 + 0.004049\ P_3^2$;
P_1, P_2, P_3 in MW,

Generation limits: $150 \leq P_1 \leq 600$ MW: $100 \leq P_2 \leq 400$ MW; $50 \leq P_3 \leq 200$ MW. There are no other constraints on system operation. Obtain an optimum economic load dispatch for the load level of 900 MW.

(OR)

2. a) Give iteration algorithm for solving economic scheduling problem, without transmission loss. CO1 9 Marks
   b) Explain economic dispatch of thermal plants coordinating the system transmission line losses. CO1 5 Marks

UNIT-II

3. a) What are the important methods of hydro-thermal coordination? CO1 2 Marks
   b) Derive the condition for economic generation of steam and hydro plants for short term scheduling. State the assumptions made. CO6 12 Marks

(OR)

4. a) Discuss the advantages of operation of power plants with hydro thermal combinations. CO1 4 Marks
   b) In a two plant operation system, the hydro plant is operate for 8 hrs. during each day and the steam plant is operate all over the day. The characteristics of the steam and hydro plants are CO4 10 Marks
   $C_s = 20 + 30P_s + 0.04P_s^2$ Rs/h and $W_H = 7.5P_H + 0.0012P_H^2$ m^3/sec
   When both plants are running, power flow from steam plant to load is 190 MW and the total quantity of water is used for hydro plant operation during 8 hrs is 220×10^6 m^3. Determine generation of hydro plant and cost of water used. Neglect transmission losses.

UNIT-III

5. a) What do you mean by unit commitment? Discuss various constraints related to unit commitment problem. CO2 7 Marks
   b) Does unit commitment guarantee economic power of power generation? Justify your answer. CO2 7 Marks

(OR)

6. a) Explain briefly the constraints on unit commitment problem. What is spinning reserve and does this reserve help in operating a power system efficiently? CO2 8 Marks
   b) Explain with a neat flowchart the procedure for finding the solution for unit commitment problems using forward DP method. CO1 6 Marks

UNIT-IV

7.	a)	Describe the fundamental characteristics of an excitation system.	CO1	5 Marks
	b)	Draw and explain the block diagram representation of IEEE Type-1 model.	CO2	9 Marks
		(OR)		
8.	a)	Explain clearly what you mean by compensation of line and discuss briefly different methods of compensation.	CO1	5 Marks
	b)	With a neat sketch, explain how a STATCOM works.	CO5	9 Marks

UNIT-V

9.	a)	How is speed governor mechanism modeled? Explain its operations with the speed characteristics.	CO3	9 Marks
	b)	Explain briefly the control area concept and control area error.	CO1	5 Marks
		(OR)		
10.	a)	Draw the schematic diagram of a load frequency control loop (LFC) and explain the operation.	CO1	6 Marks
	b)	Draw and analysis the basic P-f and Q-V control loops.	CO2	8 Marks

CODE No.: 16BT70202 SVEC-16

SWITCHGEAR AND PROTECTION
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain about the working of an Induction type directional over current relay with a neat sketch.	CO1	7 Marks
	b)	Derive the expression for universal torque equation and obtain the characteristics of a directional relay from the torque equation.	CO2	7 Marks
		(OR)		
2.	a)	Discuss how an amplitude comparator can be converted into a phase comparator and vice versa.	CO1	6 Marks
	b)	Explain the operation of a Static inverse time over current relay with the help of a block diagram.	CO1	8 Marks

UNIT-II

3.	a)	What is the phenomenon of current chopping in a circuit breakers and justify how current chopping can be minimized using resistance switching?	CO2	8 Marks
	b)	Determine the radius of the wire that will blow off at a current of 1A, if the fuse wire of circular cross- section having a radius of 0.8 mm blows off at a current of 8 A.	CO4	6 Marks
		(OR)		
4.	a)	Describe briefly the operation of an oil circuit breaker and explain how the oil helps in arc extinction.	CO1	6 Marks
	b)	Explain with a neat sketch about the elementary principle of arc interruptions.	CO1	8 Marks

UNIT-III

5.	a)	Explain briefly about the restricted earth fault protection scheme used for the protection of a transformer.	CO5	6 Marks
	b)	Evaluate the CT ratio on 11000 Volts side of a 3Φ transformer having 220/11000 line volts, connected in Y/Δ. The protective transformers on 220 Volts side have a current ratio of 600/5 Amps.	CO4	8 Marks
		(OR)		
6.	a)	A three-phase, 11 kV/ 132 kV, delta-star connected power transformer is protected by differential protection. The CT's on the LV side have a current ratio of 500/5 A. Design a suitable CT's on the HV side and how it should be connected for proper protection?	CO3	6 Marks
	b)	Explain how the inclusion of a resistance in the neutral earthing circuit of an alternator affects the performance of the differential protection of the three phase stator.	CO2	8 Marks

UNIT-IV

7.	a)	Explain the various surge absorbers used for over voltage protection.	CO1	7 Marks
	b)	What is Insulation coordination and justify how it is used for the protection against over voltages?	CO2	7 Marks
		(OR)		

8.	a)	Explain in detail basic impulse insulation level (BIIL).	CO1	7 Marks
	b)	Write a short notes on the following. i) Lightening phenomenon. ii) Metal oxide surge arrester.	CO1	7 Marks

UNIT-V

9.	a)	A 50 Hz, 3-phase overhead line has phase to ground shunt capacitance of 0.08 μF. Determine the inductance required in neutral to ground circuit to eliminate an arcing-ground at: i) The other end of the line. ii) At 70 % length of line from the neutral earthing end.	CO4	7 Marks
	b)	Evaluate the Ohmic value of impedance to be connected in the neutral to ground circuit of a 2000 kVA transformer with earth fault relay set to 40 % with respect to 400 V side.	CO4	7 Marks

(OR)

10.	a)	What are the dangerous effects of improper earthing in domestic and industrial buildings to a humans?	CO6	8 Marks
	b)	A 230 kV, 3-phase, 50 Hz, 200 km transmission line has a capacitance to earth of 0.02 μF/km per phase. Design the parameters and kVA rating of the Peterson coil used for earthing the above system.	CO3	6 Marks

POWER SYSTEM AUTOMATION
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		With neat diagram, explain various operating states of a power system.	CO1	14 Marks
		(OR)		
2.	a)	Discuss briefly about Investment factor in power system.	CO1	7 Marks
	b)	With neat sketch, describe the organization and operation activities in power system control.	CO1	7 Marks

UNIT-II

3.	a)	With neat block diagram, discuss SCADA in detail.	CO1	7 Marks
	b)	Illustrate about Human Machine Interface (HMI) in power system.	CO2	7 Marks
		(OR)		
4.	a)	Write brief description about the SCADA communication systems.	CO2	7 Marks
	b)	List various types of SCADA systems used in industry.	CO6	7 Marks

UNIT-III

5.		Draw the substation automation architecture and explain each block.	CO1	14 Marks
		(OR)		
6.	a)	Describe various equipments in conventional substation.	CO1	7 Marks
	b)	Explain the benefits of an automated substation as against a conventional substation.	CO2 CO4	7 Marks

UNIT-IV

7.	a)	List the merits and demerits of Distribution Automation.	CO1	7 Marks
	b)	Discuss briefly about the subsystems in distribution control center.	CO1	7 Marks
		(OR)		
8.		Explain in detail about the Distribution Automation architecture.	CO1	14 Marks

UNIT-V

9.	a)	What is deregulation? Discuss in detail about the need for deregulation in modern power systems.	CO1	7 Marks
	b)	List various the advantages of deregulation in power systems.	CO1	7 Marks
		(OR)		
10.		Explain in detail about the various restructuring models.	CO2	14 Marks

AUTOMOBILE ENGINEERING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Classify automobiles bases on various considerations.	CO1	7 Marks
	b)	Discuss the relative merits and demerits of Front engine rear wheel drive.	CO1	7 Marks
		(OR)		
2.	a)	Explain the working of A.C. Mechanical pump with the help of a neat sketch.	CO2	7 Marks
	b)	Enumerate the requirements of fuel supply system for CI engines.	CO2	7 Marks

UNIT-II

3.	a)	Explain the air cooling system with a neat sketch. Discuss its advantages and limitations also.	CO3	7 Marks
	b)	List out the functions of Ignition system and components of battery ignition system.	CO3	7 Marks
		(OR)		
4.		Explain the working of battery ignition system with the help of a neat diagram. Discuss its relative merits over electronic ignition system.	CO3	14 Marks

UNIT-III

5.		List out the pollutants from SI engines and CI engines separately and discuss the sources for them from SI and CI engines working point of view. Explain the working of catalytic converted used for SI engines with the help of a neat sketch.	CO5	14 Marks
		(OR)		
6.		Discuss the suitability, relative merits and demerits of using the following alternative fuels for automobiles. i) Hydrogen. ii) Alcohols. iii) CNG.	CO5	14 Marks

UNIT-IV

7.	a)	Explain the working of centrifugal clutch with a neat diagram. What are the differences between semi centrifugal and centrifugal clutch?	CO3	7 Marks
	b)	What are the functions of Transmission system? Discuss the necessity for Transmission.	CO3	7 Marks
		(OR)		
8.	a)	Enumerate the requirements and functions of steering system. Sketch any two types of stub axles.	CO3	7 Marks
	b)	Explain the conditions of Understeering and Oversteering with neat sketches and how to avoid them.	CO3	7 Marks

UNIT-V

9.	a)	What are the objectives of Suspension? Discuss the basic considerations while designing suspension.	CO3	7 Marks
	b)	What are the requirements of braking system? Construct a diagram of simple mechanical brake system.	CO3	7 Marks
		(OR)		
10.		Explain the working of Hydraulic brake system with the help of neat sketch discuss its advantages and disadvantages.	CO3	14 Marks

FINITE ELEMENT METHOD
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Write three dimensional basic equations of elasticity and reduce the stress strain relation matrix for 2-D and 1-D finite elements. CO1 7 Marks

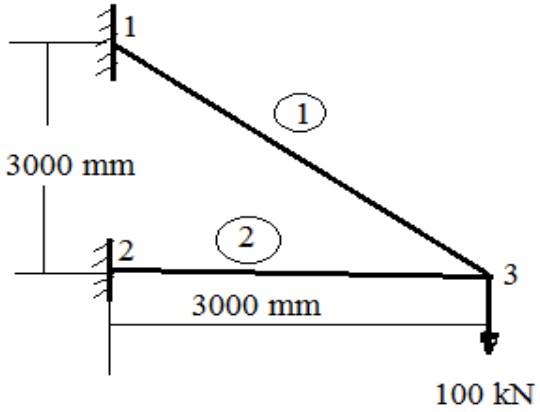
   b) If a displacement field is described as follows, $u = (-X^2 + 3Y^2 + 7XY)\ 10^{-4}$ and $v = (2X + 4Y - 2Y^2)\ 10^{-4}$, determine the three planar stresses and strains at the point X= 0, Y= 1. Assume E = 2 **x** 10^5 N/mm². Poisson's ratio is 0.3. CO1 7 Marks

(OR)

2. Using two finite elements, find the stress distribution in uniformly tapering bar of circular cross sectional area 3 cm² and 2 cm² at their ends, length 100 mm, subjected to an axial tensile load of 50 N at smaller end and fixed at larger end. Take the value of Young's modulus 2 x 10^5 N/mm². CO1 14 Marks

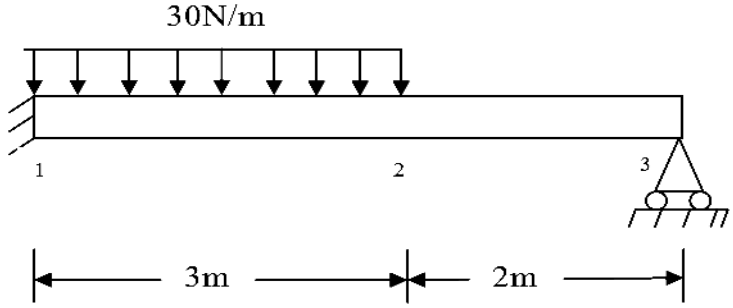
UNIT-II

3. For the two-bar truss shown in figure, determine the displacements and stress. A_1=500mm², A_2=1200mm², E=2 x 10^5 N/mm². CO2 14 Marks



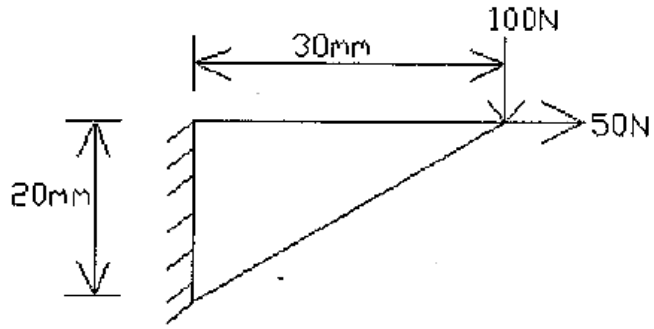
(OR)

4. For the loaded beam shown in figure, determine the slope and deflection at node 2 using finite element concept. Take EI=900 Nm². CO2 14 Marks



UNIT-III

5. For a triangular plate shown in figure, determine the deflection at the point of load using one triangular element. Thickness is 10 mm, $E = 70 \times 10^3$ MPa, $\mu = 0.3$. CO3 14 Marks



(OR)

6. A long cylinder of inside diameter 80 mm and outside diameter 120 mm fits in a hole over its full length. The cylinder is then subjected to an internal pressure of 2 MPa. Using 2 elements on the 10mm length, find the displacements at the inner radius. E = 200 GPa and $\mu = 0.3$. CO3 14 Marks

UNIT-IV

7. For the isoparametric quadrilateral element, determine the local coordinates (ξ, η) of the point P which has Cartesian coordinates (7, 4). Nodal coordinates in Cartesian system are 1(3,1), 2(6,1), 3(8,6) and 4(2,5). CO1 14 Marks

(OR)

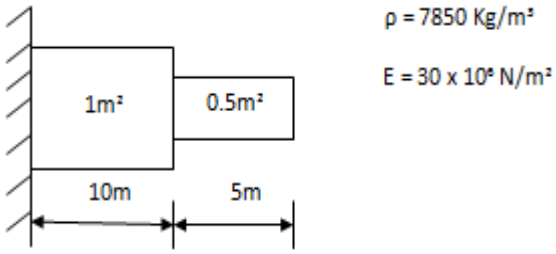
8. A wall of 0.6m thickness having thermal conductivity of 1.2 W/mK the wall is to be insulated with a material of thickness 0.06 m having an average thermal conductivity of 0.3 W/mK. The inner surface temperature is 1000ºC and outside of the insulation is exposed to atmospheric air at 30ºC with heat transfer coefficient of 35 W/m^2K. Calculate the nodal temperatures using FEM. CO4 14 Marks

UNIT-V

9. Derive mass matrices for 1D Bar Element and Truss Element. CO5 14 Marks

(OR)

10. Determine the Eigen values and Eigen Vectors for the stepped bar as shown in figure. CO6 14 Marks



CODE No.: 16BT70303 SVEC-16

Roll No.

OPERATIONS RESEARCH
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. A company produces two types of leather belts types A and B. Belt A is of a superior quality and belt B is of a lower quality. Profits on the two types of belts are 40 and 30 paise per belt respectively. Each belt of type A requires twice as much time as required by a belt of type B. if all the belts were of type B the company could produce 1000 belts per day. The supply of leather however is sufficient only for 800 belts per day. Belt A requires a fancy buckle and only 400 fancy buckles are available per day. For belt of type B only 700 buckles are available per day. Formulate LP model and solve the problem. CO1 14 Marks

(OR)

2. Solve the following LPP by using Two-Phase Method CO2 14 Marks

Minimize $Z = 4x_1 + x_2$

Subjected to the constraints

$3x_1 + x_2 = 3$

$4x_1 + 3x_2 \geq 6$

$x_1 + 2x_2 \leq 4$

$x_1, x_2 \geq 0$

UNIT-II

3. Find the optimal solution for the following transportation problem. CO3 14 Marks

Manufacturing plants	D_1	D_2	D_3	D_4	Capacity
A	6	5	4	1	70
B	3	8	2	6	60
C	4	4	2	1	90
Demand	40	30	80	70	

(OR)

4. Solve the assignment problem represented by the matrix. CO4 14 Marks

	1	**2**	**3**	**4**	**5**	**6**
A	9	22	58	11	19	27
B	43	78	72	50	63	48
C	41	28	91	37	45	33
D	74	42	27	49	39	32
E	36	11	57	22	25	18
F	3	56	53	31	17	28

UNIT-III

5. The initial cost of a machine is Rs. 6100 and resale value drops as the time passes. Cost data are given in the following table: CO6 14 Marks

Year	1	2	3	4	5	6	7	8
Maintenance	100	250	400	600	900	1200	1600	2000
Resale Value	800	700	600	500	400	300	200	100

When should the machine be replaced?

(OR)

6. a) What do you understand by zero - sum and non zero – sum game? What do you mean by strategy, dominance and saddle point? CO6 6 Marks

b) Solve the following 3 x 3 game. Find the value of game and strategy of player A and B. CO6 8 Marks

		Player B		
Player A		B1	B2	B3
	A1	1	7	2
	A2	0	2	7
	A3	5	1	6

UNIT-IV

7. a) Distinguish between CPM and PERT. CO5 4 Marks

b) Consider a project consisting of nine jobs with the following precedence relation and average time estimates. CO5 10 Marks

i) Draw a Network.
ii) Find the critical path.
iii) Find total float, free float and independent float.

Job	A	B	C	D	E	F	G	H	I
Predecessor	-	-	A,B	A,B	B	D,E	C,F	D,E	G,H
Time (Days)	30	20	10	20	15	12	35	20	30

(OR)

8. The following table gives the information relating to a project. By using the given data calculate the optimum duration of the project and corresponding cost. Where indirect cost is estimated as Rs.2000 per day. CO5 14 Marks

Activity	Normal		Crash	
	Time(Days)	Cost(Rs.)	Time(Days)	Cost(Rs.)
1-2	4	1000	3	2000
1-3	2	1500	1	3500
2-4	2	500	1	900
2-5	5	1000	3	4000
3-4	3	1000	1	2000
4-5	2	800	1	1000

UNIT-V

9. a) Discuss the elements of structure of queuing system. CO3 4 Marks

b) In a store with one server, 9 customers arrive on an average of 5 minutes. Service is done for 10 customers in 5 minutes find CO3 10 Marks

i) The avg. no of customers in the system
ii) The avg. queue length
iii) The avg. time a customer spends in the store.
iv) The avg. time a customer waits before being served.

(OR)

10. a) What is simulation? Describe the advantages in solving the problems. CO5 4 Marks

b) A company observes from past experience that the demand for a special product has the following probability distribution, CO5 10 Marks

Daily demand	5	10	15	20	25	30
Probability	0.01	0.20	0.15	0.50	0.12	0.02

Simulate the demand for next 10 days. Also find the average demand.

CRYOGENICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is the necessity of low temperature?	CO1	6 Marks
	b)	Write the Limitations of Vapour compression refrigeration system for low temperature applications.	CO1	8 Marks
		(OR)		
2.		What is multistage refrigeration system and explain the cascade refrigeration system with a neat sketch.	CO2	14 Marks

UNIT-II

3.	a)	Discuss the properties of helium isotopes at cryogenics range.	CO3	4 Marks
	b)	What are the properties of liquid neon?	CO3	10 Marks
		(OR)		
4.	a)	Discuss low temperature properties of engineering materials. i) Mechanical properties. ii) Thermal properties. iii) Electrical properties.	CO3	6 Marks
	b)	Explain the properties of liquid methane.	CO3	8 Marks

UNIT-III

5.	a)	Define Liquefication process and explain the importance of liquefication process.	CO4	7 Marks
	b)	What is Joule's Thompson coefficient (μ) and prove that for the production of cooling effect by throttling, the value of a μ must be positive.	CO4	7 Marks
		(OR)		
6.		Explain the method used in Liquefication of Helium with neat sketches.	CO4	14 Marks

UNIT-IV

7.	a)	Discuss the effects of cryogenics on low temperature of metals.	CO4	7 Marks
	b)	Explain how cryogenics is used in cryosurgery.	CO1	7 Marks
		(OR)		
8.		Explain the application of cryogenics in detail.	CO4	14 Marks

UNIT-V

9.	a)	Explain briefly fibrous materials multi layer super insulation.	CO5	7 Marks
	b)	Write briefly on composite insulation.	CO5	7 Marks
		(OR)		
10.		Discuss the advantages and disadvantages of insulations, used in cryogenic systems.	CO5	14 Marks

INDUSTRIAL ROBOTICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Classify Robots based on the workspace geometry.	CO1	7 Marks
	b)	Distinguish pneumatic and hydraulic drive systems.	CO2	7 Marks
		(OR)		
2.	a)	Characterize the mechanical type of grippers.	CO1	7 Marks
	b)	Design a gripper and analyse the forces that act on a gripper.	CO3	7 Marks

UNIT-II

3.		Point out any two methods of Rotary to linear motion conversion systems.	CO2	14 Marks
		(OR)		
4.	a)	Discuss the working principle of Stepper motors.	CO2	7 Marks
	b)	List out the advantages and disadvantages of servo motors.	CO1	7 Marks

UNIT-III

5.		Formulate Forward and reverse Kinematics equations for a 2 link system.	CO3	14 Marks
		(OR)		
6.		The Coordinates of the point P on the body given by $\{2, -1, 5\}^T$. The point moved by 5 units along Z axis, then rotation of 45^0 about X axis followed by rotation of 30^0 about Y axis. Determine the new coordinates of the point P with respect to the fixed frame.	CO3	14 Marks

UNIT-IV

7.		Investigate the principles used in any two proximity sensors. Also list out the applications.	CO4	14 Marks
		(OR)		
8.	a)	Explain the obstacle avoidance methods used in Robotics.	CO2	7 Marks
	b)	Demonstrate any two position sensors with a neat sketch.	CO4	7 Marks

UNIT-V

9.	a)	Discuss the characteristics of a Robot Programming language.	CO2	7 Marks
	b)	Outline the teach pendant method of programming a Robot.	CO2	7 Marks
		(OR)		
10.		Interpret the safety considerations and challenges faced in designing a Robot.	CO6	14 Marks

CODE No.: 16BT70311 SVEC-16

Roll No. | | | | | | | | | | |

IV B.Tech I Semester (SVEC-16) Supplementary Examinations, June - 2022

PRODUCTION AND OPERATIONS MANAGEMENT
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define Operations Management with due consideration to Production as one of the important entity.	CO2	7 Marks
	b)	Discuss the historical development of operations Management.	CO2	7 Marks
		(OR)		
2.	a)	Define Productivity. Discuss the factors that promote productivity.	CO3	7 Marks
	b)	Give a brief note on the significance of production systems decisions with suitable examples.	CO4	7 Marks

UNIT-II

3.		You are required by an emerging company to forecast demand for their FMCG product. Explain how you would forecast demand with suitable assumptions.	CO5	14 Marks
		(OR)		
4.		List qualitative and quantitative methods of forecasting? Discuss about any one method in detail.	CO3	14 Marks

UNIT-III

5.		Discuss the strategies for Production Planning. Give an account to criterion for selection of the strategy.	CO1	14 Marks
		(OR)		
6.		Explain with a suitable case-study 'why Mixed strategies are always superior to pure strategies in an aggregate production planning'.	CO6	14 Marks

UNIT-IV

7.		Discuss Enterprise Resource Planning (ERP) with a suitable example.	CO4	14 Marks
		(OR)		
8.		Discuss about MRP in detail by giving an account to inputs and outputs of MRP.	CO1	14 Marks

UNIT-V

9.		There are 5 jobs each of which must go through 2 machines A and B in order immediately processing Times are given below.	CO4	14 Marks

	JOB1	JOB2	JOB3	JOB4	JOB5
Time for A	6	2	10	4	12
Time for B	3	7	8	9	3

Determine the sequence for 5 jobs that will minimize, the elapsed time calculates the total idle time for machines in this Period.

(OR)

10.		What is job shop scheduling? Discuss the Johnsons algorithm for solving scheduling problems in operations management.	CO4	14 Marks

CODE No.: 16BT70312 SVEC-16

Roll No. | | | | | | | | | | |

IV B.Tech I Semester (SVEC16) Supplementary Examinations June – 2022

POWER PLANT ENGINEERING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Discuss the various operations involved in coal handling plant.	CO1	14 Marks
		(OR)		
2.		Explain the construction and working of Steam power plant with a layout.	CO1	14 Marks

UNIT-II

3.	a)	Mention the advantages and disadvantages of a diesel power plant over a gas turbine power plant.	CO1	7 Marks
	b)	Sketch the schematic arrangement of an open cycle gas turbine plant and its performance.	CO4	7 Marks
		(OR)		
4.		Draw a neat layout of a diesel power plant and label all the components.	CO4	14 Marks

UNIT-III

5.	a)	Enlist the advantages and disadvantages of the hydroelectric power plant and discuss the layout of the plant.	CO2	7 Marks
	b)	Give an example for a low head turbine, a medium head turbine and a high head turbine.	CO1	7 Marks
		(OR)		
6.	a)	How nuclear reactors are classified?	CO1	7 Marks
	b)	Explain the working and characteristic features of a homogeneous reactor.	CO2	7 Marks

UNIT-IV

7.	a)	Draw the layout of MHD open cycle generator and explain its function of components.	CO2	7 Marks
	b)	Identify the important criteria while selecting the geothermal energy for a particular region.	CO3	7 Marks
		(OR)		
8.	a)	Explain the working principle of OTEC.	CO2	7 Marks
	b)	What are the different types of ocean thermal energy conversion system?	CO1	7 Marks

UNIT-V

9.	a)	Elaborate the fixed cost and operating cost of a power station.	CO6	7 Marks
	b)	What do you understand by nuclear pollution, give the bad effects of nuclear pollution?	CO5	7 Marks
		(OR)		
10.		A central power station has annual factors as follows. Load factor = 60%, Capacity factor = 40%, Use factor = 45%, Power station has a maximum demand of 15,000kW. Determine the annual energy production, reserve capacity over and above peak load and hours per year not in service.	CO6	14 Marks

IV B.Tech I Semester (SVEC-16) Supplementary Examinations June - 2022

CELLULAR AND MOBILE COMMUNICATIONS
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Using the concept of frequency reuse channels, derive the relation for frequency reuse distance 'D' as a function of reuse pattern and cell size.	CO2	7 Marks
	b)	Illustrate various criteria used to specify the performance of a cellular system.	CO1	7 Marks
		(OR)		
2.	a)	List the characteristics used to specify the uniqueness of mobile radio environment and brief about the model of transmission medium.	CO1	7 Marks
	b)	Explain how to improve system capacity and co-channel interference.	CO2	7 Marks

UNIT-II

3.	a)	Define diversity and explain the polarization diversity and time diversity.	CO6	7 Marks
	b)	Explain the design procedure of Omni-directional antenna system.	CO3	7 Marks
		(OR)		
4.	a)	What are different types of non co-channel interference explain.	CO2	7 Marks
	b)	Explain the design procedure of directional antenna system.	CO3	7 Marks

UNIT-III

5.	a)	What is foliage loss? Explain propagation over water (or) flat open area.	CO1	7 Marks
	b)	What are the characteristics of point to point prediction model?	CO3	7 Marks
		(OR)		
6.	a)	Analyze cell site antenna height.	CO6	7 Marks
	b)	Explain the procedure of mobile to mobile propagation.	CO1	7 Marks

UNIT-IV

7.	a)	What is handoff and dropped calls explain different types of hand off?	CO1	7 Marks
	b)	Identify the handoff algorithm which is more appropriate during unavailability of free channels when crossing a cell boundary.	CO5	7 Marks
		(OR)		
8.	a)	How traffic and channel assignment takes place explain?	CO4	7 Marks
	b)	What is frequency management explain fixed channel assignment?	CO4	7 Marks

UNIT-V

9.	a)	What are the main standards of 2G wireless technology and explain them?	CO1	7 Marks
	b)	Explain the GSM short message services architecture and write the advantages of GSM over CDMA.	CO6	7 Marks
		(OR)		
10.	a)	Differentiate physical layer of WCDMA-FDD and WCDMA-TDD standards.	CO6	7 Marks
	b)	Explain the frame structure of GSM system.	CO1	7 Marks

CODE No.: 16BT70402 SVEC-16

EMBEDDED SYSTEMS

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Contrast RISC to CISC architectural features.	CO2	5 Marks
	b)	Discuss the role language plays in programming microcontrollers using suitable example.	CO5	9 Marks
		(OR)		
2.	a)	Classify embedded systems based on the word length of the microcontrollers embedded in them with an example for each category.	CO5	9 Marks
	b)	Classify SSI, MSI & LSI based microcontrollers.	CO2	5 Marks

UNIT-II

3.	a)	Discuss usage of movement instruction in MSP430 assembly programming.	CO3	9 Marks
	b)	Explain MSP430 Reset circuit in detail.	CO1	5 Marks
		(OR)		
4.	a)	Present the block diagram of clock module in MSP430F and summarize its usage.	CO3	9 Marks
	b)	Discuss MSP430 Arithmetic and Logical instructions.	CO1	5 Marks

UNIT-III

5.	a)	Develop Embed-c code for MSP430 to light LEDS with a constant pattern.	CO4	7 Marks
	b)	Paraphrase the importance of infinite loop usage in embedded programming.	CO6	7 Marks
		(OR)		
6.	a)	Explore the reason for keeping Interrupt Service Routines shorter.	CO6	7 Marks
	b)	Develop program for MSP430 to read input from a push button switch and switch on Led when the push button switch was pressed.	CO4	7 Marks

UNIT-IV

7.	a)	Present the block diagram of basic Timer 1 and discuss about associated counters and their configuration using BTCTL register.	CO1	7 Marks
	b)	Reproduce the block diagram of comparator A and list the bits that control its operation.	CO1	7 Marks
		(OR)		
8.	a)	Review the block diagram of Timer_A in MSP430 microcontroller.	CO1	7 Marks
	b)	Explore MSP430 Timers and importance of resolution of a timer.	CO1	7 Marks

UNIT-V

9.	a)	Distinguish FSM to CFSM models for co-design.	CO3	7 Marks
	b)	Discuss Key characteristics of various frameworks recommended by Internet Architecture Board under RFC7452.	CO4	7 Marks
		(OR)		
10.	a)	Illustrate VLIW architecture choice for co-design implementation.	CO3	7 Marks
	b)	Summarize various IOT communication models using suitable examples.	CO4	7 Marks

CODE No.: 16BT70403 SVEC-16

MICROWAVE ENGINEERING

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Differentiate the E plane and H plane Tee. How they are used to combine or divide the microwave power?	CO2	7 Marks
	b)	Suggest a microwave device that can be used to measure unknown impedance. Derive its S-Matrix.	CO6	7 Marks
		(OR)		
2.	a)	Suggest a microwave device that can act as Duplexer.	CO6	7 Marks
	b)	Derive the S - matrix of an ideal E - plane Tee.	CO2	7 Marks

UNIT-II

3.	a)	Using velocity and current modulation explain the operation of a two-cavity Klystron Amplifier.	CO5	7 Marks
	b)	What is strapping in magnetron. How is the same effect obtained without strapping?	CO1	7 Marks
		(OR)		
4.	a)	Explain the operation of a reflex klystron using neat sketches of construction details and an Applegate diagram.	CO1	7 Marks
	b)	Using cross field effect, explain the operation of cylindrical travelling wave magnetron.	CO5	7 Marks

UNIT-III

5.	a)	A typical Si BARITT diode has the following specifications. Relative dielectric constant= 12.5 Donor concentration= $3.2 \times 10^{22}/m^3$ Length= 8 μm Calculate: i) critical voltage. ii) break down voltage. iii) break down electric field.	CO4	7 Marks
	b)	Use RWH theory and show how negative resistance is exhibited in solid state devices.	CO5	7 Marks
		(OR)		
6.	a)	Explain the modes of operation for Gunn diode.	CO1	7 Marks
	b)	A typical Gunn diode has the following specifications Operating frequency: 10 GHz Device length: 75 μm Voltage pulse amplified: 25 V Determine the threshold electric field.	CO4	7 Marks

UNIT-IV

7.	a)	Develop a bench setup for measuring Q factor of a cavity resonator.	CO3	7 Marks
	b)	Explain transmission method for measuring Q of a cavity resonator.	CO1	7 Marks
		(OR)		
8.	a)	Determine the attenuation for the given attenuator, if the power meter reads 10mW with attenuator and 26mW after removing it.	CO4	7 Marks
	b)	Develop the procedure for measuring high VSWR using slotted line section.	CO3	7 Marks

UNIT-V

9.	a)	Explain scattering phenomena.	CO1	7 Marks
	b)	Examine the effect of earth's magnetic field and curvature on the radio wave propagation.	CO2	7 Marks

(OR)

10.	a)	List out the modes of wave propagation for radio waves.	CO1	5 Marks
	b)	Determine the expression for reflection coefficients for horizontal polarization and for vertical polarization in ground wave propagation.	CO2	9 Marks

SATELLITE COMMUNICATIONS
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain with the aid of diagrams, the launching procedure for geo-stationary satellites using launching vehicles.	CO1	7 Marks
	b)	Discuss the allocations of frequencies for Satellite Communications in the present era for various applications.	CO6	7 Marks
		(OR)		
2.	a)	Derive the expressions for Look angles for a geo-stationary satellite.	CO2	7 Marks
	b)	Discuss the orbital effects in communication system performance.	CO1	7 Marks

UNIT-II

3.	a)	Explain various techniques to derive necessary power during eclipse for a satellite system.	CO5	6 Marks
	b)	Design a satellite system for an EIRP of 100 dBW, a carrier frequency of 10 GHz and the distance between earth station and satellite of 36000Km. Calculate the CNR in 10MHz bandwidth if the ground station G/T is 20 dB/K.	CO3	8 Marks
		(OR)		
4.	a)	Calculate the gain and EIRP of a 3m paraboloidal antenna operating at a frequency of 6GHz. Assume an aperture efficiency of 0.6 and transmit power of 10 Watts	CO5	6 Marks
	b)	Draw the uplink and down link model for designing a satellite system for a specified C/N ratio and explain the procedure.	CO4	8 Marks

UNIT-III

5.	a)	Illustrate how unique word correlator is designed and used as a time marker for earth station transmission in TDMA	CO2	7 Marks
	b)	Describe TDMA frame structure with a neat block diagram	CO2	7 Marks
		(OR)		
6.	a)	Discuss Code Division Multiple Access Technique and what are the advantages of CDMA	CO5	8 Marks
	b)	Explain the advantages of TDMA technique giving an example	CO2	6 Marks

UNIT-IV

7.	a)	What are Non-geo stationary satellites, give some applications.	CO1	6 Marks
	b)	List the various operational NGSO constellation designs for various applications.	CO3	8 Marks
		(OR)		
8.	a)	Elaborate on various operational NGSO Constellation designs used in present era.	CO3	8 Marks
	b)	Discuss about Orbcomn satellites and its applications.	CO1	6 Marks

UNIT-V

9.	a)	Explain the GPS receiver design and operation using a block diagram.	CO4	7 Marks
	b)	What are the applications of Global Positioning navigation system? Explain giving examples the standard frequencies used for GPS.	CO6	7 Marks

(OR)

10.	a)	Identify the major sources of error in a GPS Receiver that calculates its position accurately.	CO4	7 Marks
	b)	Discuss about GPS signal levels and their timing accuracy with reference to the arrival of the code sequence at the receiver.	CO6	7 Marks

WIRELESS COMMUNICATION AND NETWORKS
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write short notes on: i) ARDIS. ii) RMD.	CO1	7 Marks
	b)	By applying Time Division Multiple Access technique, Illustrate 10 user network with the help of block diagram.	CO5	7 Marks
		(OR)		
2.	a)	Develop the architecture of a merged wired and wireless network and explain the routing process.	CO3	8 Marks
	b)	By applying Code Division Multiple Access technique, Illustrate 6 user network with the help of block diagram.	CO5	6 Marks

UNIT-II

3.	a)	List the features of wireless markup language.	CO1	7 Marks
	b)	Illustrate the evolution of Wireless Application Environment.	CO4	7 Marks
		(OR)		
4.	a)	Recall about wireless Application Protocol.	CO1	7 Marks
	b)	Illustrate how a mobile gets Co-located address in absence of foreign agent in a network.	CO4	7 Marks

UNIT-III

5.	a)	List the services of Wireless LANs.	CO1	7 Marks
	b)	Develop the layered protocol stack of WLAN and explain each protocol in detail.	CO3	7 Marks
		(OR)		
6.	a)	Design a WiMAX network and outline its routing process.	CO3	7 Marks
	b)	Analyze the functions of wireless LAN protocols.	CO2	7 Marks

UNIT-IV

7.	a)	Draw the Bluetooth architecture and explain the working of each layer.	CO1	7 Marks
	b)	Classify LLC and Adaptation protocol channels used in Bluetooth.	CO2	7 Marks
		(OR)		
8.	a)	Design a piconet with 8 users connected to form a Bluetooth network.	CO3	7 Marks
	b)	Compare Piconet and Scattering Network.	CO2	7 Marks

UNIT-V

9.	a)	Explain about forward channel and reverse channel in CDPD physical layer.	CO1	7 Marks
	b)	List the specifications of Data oriented CDPD network.	CO6	7 Marks
		(OR)		
10.	a)	Describe about short message servicing.	CO1	7 Marks
	b)	Discuss about HIPERLAN standards used in wireless networks.	CO6	7 Marks

LOW POWER CMOS VLSI DESIGN
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Briefly outline the need of low power VLSI chips in developing real electronics.	CO6	7 Marks
	b)	Construct the equivalent circuit for charging and discharging of CMOS inverter with its necessary equations and explain.	CO3	7 Marks
		(OR)		
2.	a)	Organize, how scaling is affected by technology?	CO6	7 Marks
	b)	Design a pseudo nMOS NOR gate and explain.	CO3	7 Marks

UNIT-II

3.	a)	Interpret the Data Correlation Analysis in evaluating the performance of DSP systems	CO5	7 Marks
	b)	Define Simulation and Analyze the importance of Simulation at various levels of abstraction with an example.	CO2	7 Marks
		(OR)		
4.	a)	Discuss in detail about Monto Carlo Simulation techniques.	CO5	7 Marks
	b)	Clearly explain the Dynamic events and static states of a 2-input CMOS NOR gate. Also discuss any two different implementations of NOR gate result in different dynamic energy dissipation events.	CO2	7 Marks

UNIT-III

5.	a)	Discuss the switching activity reduction techniques in CMOS digital Systems.	CO5	7 Marks
	b)	Explain local restructuring rules of transformation with relevant illustrations.	CO1	7 Marks
		(OR)		
6.	a)	Design a Flip-flop with Self gating technique also compare the performance of self gating and regular flip-flop.	CO5	7 Marks
	b)	Explain hardware architecture of State Machine Encoding with transition analysis.	CO1	7 Marks

UNIT-IV

7.	a)	Appraise two level clock tree using chip and package co design. Originate its use with respect to two level clock distributions.	CO1	7 Marks
	b)	Illustrate power reduction for clock signals by voltage swing reduction technique.	CO5	7 Marks
		(OR)		
8.	a)	What is Delay Balancing? Explain in detail about delay balancing with an example.	CO1	7 Marks
	b)	Classify different power reduction techniques in clock network.	CO5	7 Marks

UNIT-V

9.	a)	Estimate power dissipation in uniprocessing and parallel processing systems.	CO3	9 Marks
	b)	Compose the method of Charge sharing for half swing with its neat sketches.	CO4	5 Marks
		(OR)		
10.	a)	Design the flow graph transformation techniques used for the special purpose digital processing systems.	CO3	11 Marks
	b)	Discuss in detail control data flow and hardware architecture. Explain the flow graph transformation with operator reduction method.	CO4	3 Marks

RF ENGINEERING

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain briefly the importance of radio frequency design with the block diagram of a generic RF system.	CO6	6 Marks
	b)	Describe briefly how passive components are realized on printed circuit boards at RF.	CO2	8 Marks
		OR)		
2.	a)	Label the various reasons for using RF/Microwaves.	CO6	4 Marks
	b)	Calculate the skin depth for copper and aluminum at 0.86 and 1.2 GHz. Also find the resistance of an 8 CM wire with diameter of 1.5 mm. $\sigma_{cu} = 6.516 \times 10^6$ (s/m), $\sigma_{AL} = 40 \times 10^6$ (s/m).	CO2	10 Marks

UNIT-II

3.	a)	With the help of suitable derivation, explain power considerations for a transmission line.	CO2	8 Marks
	b)	Draw the lumped element circuit model for a transmission line. Derive the expression for voltage and current travelling waves.	CO5	6 Marks
		(OR)		
4.	a)	How input Impedance Z_{in} is determined from load Z_L using smith chart?	CO5	6 Marks
	b)	Explain how value and locations of Z_{max} and Z_{min} are determined from known load Z_L using smith chart.	CO2	8 Marks

UNIT-III

5.	a)	Draw the lumped element circuit model for a transmission line. Derive the expression for voltage and current travelling waves.	CO3	7 Marks
	b)	Describe shortly about Butterworth Filter.	CO1	7 Marks
		(OR)		
6.	a)	Explain the equivalent circuit of a transmission line.	CO3	7 Marks
	b)	Describe how a tunable RF active filter can be realized.	CO1	7 Marks

UNIT-IV

7.	a)	Evaluate stability at design frequency (RF).	CO4	7 Marks
	b)	Write a short note on low noise, linear RF BJT operation based on its structure.	CO1	7 Marks
		(OR)		
8.		Write short notes on: i) Low noise amplifiers. ii) VGA amplifiers.	CO1	14 Marks

UNIT-V

9.	a)	Describe mixer with neat block diagram.	CO4	7 Marks
	b)	Derive an expression for an open loop Q.	CO2	7 Marks
		(OR)		
10.	a)	What is Voltage Controlled Oscillator?	CO1	7 Marks
	b)	Describe in detail noise in PLL.	CO4	7 Marks

SPEECH PROCESSING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	With suitable electrical representation, explain the various modules of a speech production system.	CO4	7 Marks
	b)	How to select a window width for processing speech signal.	CO2	7 Marks

(OR)

2.	a)	Show that $1 - az^{-1} = \frac{1}{\sum_{n=0}^{\infty} a^n z^{-1}}$ *if* $\|a\| < 1$.	CO2	8 Marks
	b)	What is digital excitation model and how it helps in generating an excitation signal for voiced speech.	CO4	6 Marks

UNIT-II

3.	a)	How zero crossing rate is used to discriminate speech and silence?	CO5	7 Marks
	b)	Explain the operation of simple pitch period estimators, with related block diagram and waveforms.	CO1	7 Marks

(OR)

4.	a)	Make use of zero crossing rate method to classify the speech signals into voiced, unvoiced signals. Mention its limitations.	CO5	7 Marks
	b)	What are the factors which have to be considered in automatic recognition of isolation during speech vs silence discrimination? Elaborate with two examples.	CO1	7 Marks

UNIT-III

5.	a)	Explain implementation of homomorphic systems in convolution and de-convolution operation of speech signal.	CO1	7 Marks
	b)	Describe the steps involved in defining a HMM model for isolated words.	CO1	7 Marks

(OR)

6.	a)	Define short time fourier transform and list out some of the its properties.	CO1	7 Marks
	b)	if the sequences $x(n)$ and $w(n)$ have the normal fourier transforms $X(e^{jw})$ and $w(e^{jw})$ the prove that short time fourier transform $X_n(e^{jw})$ is smoothed spectral estimate of fourier transforms $X(e^{jw})$.	CO3	7 Marks

UNIT-IV

7.	a)	Derive the solution for the auto correlation equations using Durbin's Recursive equation.	CO3	10 Marks
	b)	Compare the differences between the methods of solution of the LPC analysis equations.	CO2	4 Marks

(OR)

8.	a)	Discuss about tracking of formant using LPC.	CO4	7 Marks
	b)	Write a short note on solution of LPC equations.	CO1	7 Marks

UNIT-V

9.	a)	Develop continuous digit recognition system for societal needs.	CO6	8 Marks
	b)	Why is speaker identification more difficult than speaker verification?	CO2	6 Marks
		(OR)		
10.	a)	Compare quantitative and computational efficiency of speaker and speech recognition.	CO2	8 Marks
	b)	Recommend various effective measures of the features for speaker recognition.	CO6	6 Marks

MOBILE APPLICATION DEVELOPMENT
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Illustrate the circumstances that encourages the developer to develop a mobile web app.	CO1	9 Marks
	b)	Explain the effective usage of Mobile screen real estate.	CO1	5 Marks
		(OR)		
2.	a)	Classify the different ways of marketing a Mobile application.	CO2	9 Marks
	b)	Explain the benefits of a mobile application.	CO1	5 Marks

UNIT-II

3.	a)	Explain the procedure to linking two activities with Intents with a suitable example.	CO1	7 Marks
	b)	Illustrate how to detect the orientation changes and control the orientation of the activity.	CO1	7 Marks
		(OR)		
4.	a)	Develop an android program which returns result such as addition of two numbers from one activity screen that reads the two numbers to another activity screen.	CO3	9 Marks
	b)	Illustrate the steps to preserve the state information when changes made in screen orientation.	CO1	5 Marks

UNIT-III

5.	a)	Explain the procedure to handle the events generated by basic views.	CO1	7 Marks
	b)	Create an Android program to embed web content such as "Vidyanikethan.edu" in an Activity using WebView.	CO4	7 Marks
		(OR)		
6.	a)	Explain the procedure to display options Menu.	CO1	7 Marks
	b)	Develop an Android program to save user data to mobile internal storage.	CO3	7 Marks

UNIT-IV

7.		Develop an Android program to receive SMS message and display the messages using TextView.	CO6	14 Marks
		(OR)		
8.		Develop an Android program to download an image to mobile from server through internet.	CO6	14 Marks

UNIT-V

9.	a)	Discuss the procedure to create a hello world app in iOS.	CO5	7 Marks
	b)	Develop an Android application to perform repeated tasks in a Service using Timer class.	CO3	7 Marks
		(OR)		
10.	a)	Describe the components of a xCode IDE with a neat sketch	CO1	7 Marks
	b)	Create an Android application to auto stop a service using IntentService.	CO4	7 Marks

CRYPTOGRAPHY AND NETWORK SECURITY

[Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss the general model that reflects a concern for protecting an information system from unwanted access.	CO1	7 Marks
	b)	Compute the cipher text for the message "meet me after the party" with a rail fence of depth 2.	CO4	7 Marks
		(OR)		
2.	a)	Why are confidentiality, authentication and integrity important principles of security? Explain.	CO1	7 Marks
	b)	Write a short note on various types of cryptanalytic attacks.	CO1	7 Marks

UNIT-II

3.	a)	Explain public key cryptography and its characteristics.	CO1	7 Marks
	b)	Explain the technique that uses a hash function without Encryption for message authentication with a neat diagram.	CO4	7 Marks
		(OR)		
4.	a)	Differentiate between conventional and public key encryption techniques.	CO2	7 Marks
	b)	Construct RSA algorithm and find the value of cipher text for any plain text.	CO4	7 Marks

UNIT-III

5.	a)	Explain message authentication using one-way hash function.	CO1	7 Marks
	b)	Discuss the procedure for authentication using Kerberos version 5.	CO5	7 Marks
		(OR)		
6.	a)	Discuss the data protection by applying the new clause 43A under the amended IT act	CO6	7 Marks
	b)	In a public-key system using RSA, you intercept the cipher text $C = 10$ sent to a user whose public key is $e = 5$, $n = 35$.What is the plaintext M?	CO4	7 Marks

UNIT-IV

7.	a)	Explain about PGP key management in E-mail protection.	CO5	7 Marks
	b)	List differences between transport mode and tunnel mode encryption.	CO2	7 Marks
		(OR)		
8.	a)	Justify the need of compression after generating signatures and before message encryption in PGP	CO5	7 Marks
	b)	Differentiate SSL and TLS.	CO2	7 Marks

UNIT-V

9.	a)	With neat diagrams, explain the differences between application-level gateway and circuit -level gateway.	CO2	7 Marks
	b)	List how social engineering tactics are applied in revealing confidential information.	CO3	7 Marks
		(OR)		
10.	a)	"*One way to secure against Trojan horse attacks is the use of a secure, trusted OS"*. Justify.	CO5	7 Marks
	b)	Identify the key areas where ID theft can happen.	CO3	7 Marks

SYSTEM MODELING AND SIMULATION
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe and discuss the different areas of simulation applications.	CO2	7 Marks
	b)	Explain in detail Steps in a simulation Study with neat sketch using one example.	CO1	7 Marks

(OR)

2.	a)	Write and discuss the Event scheduling/Time Advance Algorithm**.**	CO2	7 Marks
	b)	How to handling the list of events and entities using Array List and Dynamic List.	CO1	7 Marks

UNIT-II

3.	a)	Briefly discuss the different R Language Loop Statements with suitable examples.	CO3	7 Marks
	b)	Write R Program to Read the number and to determine the given number is Strong or not.	CO3	7 Marks

(OR)

4.	a)	How to use correlation and covariance Statistic tests explain with suitable example?	CO3	7 Marks
	b)	What is a Function? How to pass the function arguments in R explain with an example?	CO3	7 Marks

UNIT-III

5.	a)	Define and explain the following with suitable examples: Discrete Random Variables.	CO1	7 Marks
	b)	Continuous Random Variables.	CO1	7 Marks

(OR)

6.	a)	A recent survey indicated that 82% of single women aged 25 years old will be married in their lifetime. Using the binomial distribution, find the probability that two or three women in a sample of twenty will never be married**.**	CO4	7 Marks
	b)	Explain in detail binomial discrete distribution model.	CO1	7 Marks

UNIT-IV

7.	a)	Explain simple Queuing model with neat sketch and also describe the characteristics of the Queuing model.	CO1	7 Marks
	b)	What are the different measured are used in Long Run Queuing performance.	CO2	7 Marks

(OR)

8.	a)	Describe and discuss the different properties used to Random number generation.	CO1	7 Marks
	b)	Use the linear congruential method to generate a sequence of three two-digit random integers and corresponding random numbers. Let $\mathbf{X_0=27, a=8, c=47,}$ and $\mathbf{m=100}$.	CO4	7 Marks

UNIT-V

9.		Briefly discuss different Multivariate and time series input models with suitable examples.	CO1	14 Marks

(OR)

10.	a)	Explain different steps used for Model building verification and validation.	CO1	7 Marks
	b)	The number of patrons staying at a small hotel on 20 successive nights was observed to be 20, 14, 21, 19, 14, 18, 21, 25, 27, 26, 22, 18, 13, 18, 18, 18, 25, 23, 20, 21. Fit both an AR(1) and an EAR(1) model to these data. Decide which model provides a better fit by looking at a histogram of the data.	CO6	7 Marks

SYSTEMS ENGINEERING
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Draw a context diagram for a standard washing machine. Make sure to identify all of the external entities and label all of the interactions.	CO1	7 Marks
	b)	Write about extensive prototyping. When is it required?	CO1	7 Marks
		(OR)		
2.	a)	What is a "best system"? Discuss about performance and cost quarters of a best system.	CO2	7 Marks
	b)	What system functional elements? Write about the functional building blocks of a system.	CO5	7 Marks

UNIT-II

3.		Narrate the development of a systems engineering through the system life cycle.	CO3	14 Marks
		(OR)		
4.		Narrate how principal stages are associated with the system life cycle.	CO2	14 Marks

UNIT-III

5.		How is performance requirements formulated during concept exploration? Discuss.	CO1	14 Marks
		(OR)		
6.		How are requirement elicited during operational requirement analysis? Discuss.	CO1	14 Marks

UNIT-IV

7.	a)	What is use interface evaluation? How are user interfaces evaluated? Discuss phases.	CO1	10 Marks
	b)	Write about development Testing.	CO4	4 Marks
		(OR)		
8.	a)	Discuss how the test results are analyzed and evaluated.	CO1	10 Marks
	b)	What is a test failure? How is it mitigated?	CO4	4 Marks

UNIT-V

9.		Spot the place for production phase in system life cycle. Illustrate diagrammatically how the production phase overlaps with the system design phase.	CO5	14 Marks
		(OR)		
10.	a)	Narrate the salience of the problems that rise during transition process of an engineered system.	CO1	8 Marks
	b)	What are the advantages of configuration management? Why is it required for a engineered system?	CO6	6 Marks

DATA ANALYTICS
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Briefly explain the essence of data analytics in real time.	CO1	7 Marks
	b)	Write a short note on the outputs of data mining.	CO1	7 Marks
		(OR)		
2.	a)	Analyze the considerations in understanding the data presented.	CO2	6 Marks
	b)	Draw the block diagram of data processing chain and explain it.	CO3	8 Marks

UNIT-II

3.	a)	What are the major criteria on which decision tree algorithms differ from each other?	CO2	7 Marks
	b)	Compare the major decision tree construction algorithms.	CO4	7 Marks
		(OR)		
4.		Create a decision tree for the following data set. The objective is to find the class category (loan approved or not).	CO4	14 Marks

Age	Job	House	Credit	Loan approved
Young	False	No	Fair	No
Young	False	No	Good	No
Young	True	No	Good	Yes
Young	True	Yes	Fair	Yes
Young	False	No	Fair	No
Middle	False	No	Fair	No
Middle	False	No	Good	No
Middle	True	Yes	Good	Yes
Middle	False	Yes	Excellent	Yes
Middle	False	Yes	Excellent	Yes
Old	False	Yes	Excellent	Yes
Old	False	Yes	Good	Yes
Old	True	No	Good	Yes
Old	True	No	Excellent	Yes
Old	False	No	Fair	No

UNIT-III

5.	a)	Define bayes Theorem. Explain naïve bayes model for classification.	CO4	7 Marks
	b)	Describe the process of clustering technique with suitable example.	CO1	7 Marks
		(OR)		
6.	a)	With an example explain naïve bayes model.	CO3	7 Marks
	b)	Demonstrate how association rules are created with suitable example.	CO4	7 Marks

UNIT-IV

7.	a)	Discuss the implications of Big Data on recent technologies.	CO1	7 Marks
	b)	Explain in detail the qualities of good data for decision making.	CO1	7 Marks
		(OR)		

8.		List the commands in DDL and DML. Write the DDL and DML queries for a library database.	CO4	14 Marks

UNIT-V

9.	a)	Discuss the need of Map-Reduce in Hadoop.	CO5	7 Marks
	b)	Define MongoDB. What is the need for MongoDB?	CO1	7 Marks

(OR)

10.		Discuss the following in MongoDB Query Language with relevant examples: i) Arrays. ii) Aggregate Functions. iii) MapReduce Functions.	CO6	14 Marks

INTERNET OF THINGS

[Computer Science and Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain layered architecture of IoT.	CO1	7 Marks
	b)	With a neat sketch, describe about logical design of IOT.	CO1	7 Marks
		(OR)		
2.	a)	Explain about communication models in IOT.	CO1	7 Marks
	b)	Discuss about enabling technologies in IOT.	CO2	7 Marks

UNIT-II

3.	a)	Give the difference between Arduino Due and Raspberry Pi Model B.	CO3	7 Marks
	b)	Describe the IOT applications for Smart Environments.	CO1	7 Marks
		(OR)		
4.	a)	Explain IOT devices with examples.	CO4	7 Marks
	b)	Describe Raspberry pi interfaces.	CO3	7 Marks

UNIT-III

5.	a)	Explain the types of sensor devices with example.	CO1	7 Marks
	b)	Discuss about MAC Addresses in Internet of Things.	CO3	7 Marks
		(OR)		
6.		List and explain Application layer protocols.	CO3	14 Marks

UNIT-IV

7.	a)	Differentiate service and level specification in IOT.	CO2	7 Marks
	b)	Explain functional view specifications in IOT.	CO3	7 Marks
		(OR)		
8.		List and explain the step wise design methodology for Smart City case study.	CO4	14 Marks

UNIT-V

9.	a)	Discuss about Fair schedulers.	CO2	7 Marks
	b)	Explain YARN Components in detail.	CO6	7 Marks
		(OR)		
10.		Describe MapReduce job execution workflow in Hadoop.	CO5	14 Marks

MIXED SIGNAL DESIGN

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the concept of switched capacitor square wave modulator.	CO1	7 Marks
	b)	Explain the concept of Bi-quad filters.	CO1	7 Marks
		(OR)		
2	a)	Discuss the non-ideal effects in switched capacitor.	CO1	7 Marks
	b)	Explain the operation of first order switched capacitor integrator.	CO1	7 Marks

UNIT-II

3	a)	Explain Dynamics of Simple Linear model type1 PLL.	CO1	7 Marks
	b)	Analyse the response of PLL Locked condition for small Transients using necessary Timing diagrams.	CO2	7 Marks
		(OR)		
4	a)	Discuss the Topology of PLL with necessary schematics.	CO2	7 Marks
	b)	Justify how XOR Gate as Phase detector.	CO2	7 Marks

UNIT-III

5	a)	Explain about the quantization noise modeling using stochastic approach.	CO2	7 Marks
	b)	What sampling-time uncertainty can be tolerated for a 16-bit A/D converter operating on an input signal from 0-20 KHz?	CO3	7 Marks
		(OR)		
6		List and explain performance limitations of data converters.	CO2	14 Marks

UNIT-IV

7	a)	Explain the speed estimation for charge redistribution using necessary schematics.	CO3	7 Marks
	b)	Explain the speed estimation for charge redistribution with the help of flow graph explain algorithmic converter.	CO3	7 Marks
		(OR)		
8	a)	Discuss 3-bit flash A/D converter with the help of schematic.	CO4	7 Marks
	b)	Discuss the limitation persisting in the design of flash A/D converter.	CO4	7 Marks

UNIT-V

9	a)	Explain First order A/D converter realization for switched capacitor.	CO4	7 Marks
	b)	Elaborate the error feedback structure for $\Delta\Sigma$ modulator.	CO4	7 Marks
		(OR)		
10	a)	Justify how quantization noise power is independent of sampling frequency.	CO4	7 Marks
	b)	Summarise oversampling advantages in code converter.	CO4	7 Marks

CODE No.:14BT5HS02 SVEC-14

MANAGEMENT SCIENCE

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	What is management? Explain the functions of management in detail.	CO1	7 Marks
	b)	Discuss the principles of scientific management.	CO1	7 Marks
		(OR)		
2	a)	Explain the steps in corporate planning process.	CO1	7 Marks
	b)	What is social responsibility? Explain the areas of social responsibility of business.	CO5	7 Marks

UNIT-II

3	a)	What are the steps in quality control programme?	CO1	7 Marks
	b)	What is material management? Discuss the objectives of material management.	CO2	7 Marks
		(OR)		
4	a)	Define Plant Layout. Compare process and product layouts.	CO1	7 Marks
	b)	What are the types of inventory? Explain their importance.	CO1	7 Marks

UNIT-III

5	a)	Write about role of HR manager in an organization.	CO1	7 Marks
	b)	What is job evaluation? Explain it briefly.	CO1	7 Marks
		(OR)		
6	a)	Describe the importance of Human Resource Management (HRM).	CO1	7 Marks
	b)	Explain about McGregor's theory X and theory Y.	CO1	7 Marks

UNIT-IV

7	a)	Define Entrepreneur. How they are helpful to the society?	CO4	7 Marks
	b)	Explain the role of Entrepreneurship in economic development.	CO4	7 Marks
		(OR)		
8		The data given below is about a project and its activities:	CO2	14 Marks

S. No.	1	2	3	4	5	6	7	8	9
Activity	1-2	1-3	2-4	3-4	4-6	5-6	3-5	5-7	6-7
Expected Time	6	8	7	12	3	5	7	11	10

i) Draw the project network.
ii) Mark the critical path.
iii) Find total project duration.

UNIT-V

9	a)	Discuss in detail about Total Quality Management (TQM).	CO3	7 Marks
	b)	What is Enterprise Resource Planning (ERP)? Explain it briefly.	CO5	7 Marks
		(OR)		
10	a)	Write short notes on Business Process Outsourcing (BPO).	CO3	7 Marks
	b)	Explain the role of IT in managerial decision making.	CO5	7 Marks

PRESTRESSED CONCRETE

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	Explain various losses of prestress in pre-tensioning and post-tensioning.	CO1	14 Marks

(OR)

2	Explain about materials used for prestressed concrete.	CO1	14 Marks

UNIT-II

3	A concrete beam of cross section 250 x 500mm spanning over 8m .The beam is prestressed by a straight cable with an eccentricity of 100mm from soffit and 5 number of 7mm diameter wires subjected to a stress of 1250N/mm^2. The live load on the beam is 2 KN/m. Draw the stress distribution diagram at the central section for following. i) prestress + selfweigth ii) prestress + selfweigth + live load Take the density of concrete as 24 KN/m^3	CO2	14 Marks

(OR)

4	A simply supported prestressed concrete beam spanning over 10m is of rectangular cross section 500mm wide by 750mm deep the beam is prestressed by a parabolic cable having an eccentricity of 200mm at the centre of the span and zero at end supports. The effective force in the cable is 1600kN. If the beam supports a total uniformly distributed load of 40kN/m including selfweight,		
	i) evaluate the extreme fibre stresses at the mid span section.	CO2	7 Marks
	ii) calculate the force required in the cable having the same eccentricity to balance a total load of 50kN/m on the beam.	CO2	7 Marks

UNIT-III

5	A double T section having a flange 1200mm wide and 150mm thick is prestressed by 4700mm^2 of high tensile steel located at an effective depth of 1600mm. The ribs have a thickness of 150mm each. If the cube strength of concrete is 40N/mm^2 and tensile strength of steel is 1600N/mm^2, determine the flexural strength of the double T girder using IS 1343 provisions.	CO3	14 Marks

(OR)

6	The support section of a prestressed concrete beam, 100mm wide and 300mm deep is required to support an ultimate shear force of 80KN. The compressive prestresss at the centrodial axis is 5N/mm^2. The characteristic cube strength of concrete is 40N/mm^2. The cover to the tension reinforcement is 50mm. If the characteristic tensile strength of steel in 220N/mm^2, design shear reinforcement at the section.	CO2	14 Marks

UNIT-IV

7	Explain Guyon's method to calculate bursting tension in case of evenly distributed forces and in case of forces not evenly distributed.	CO1	14 Marks

(OR)

8	Write a note on anchorage zone reinforcement with neat figures.	CO1	14 Marks

UNIT-V

9	Determine the short term deflection and maximum deflection arising in pre–stressed concrete beam for the following data. span = 15m, Cross section area = 300 x 600mm Area of steel = 600mm^2 Stress = 100Mpa Density of concrete = 24kN/m^3. Elastic modulus of composite = 42 Gpa.	CO2	14 Marks
	(OR)		
10	Explain short term deflections of uncracked members.	CO1	14 Marks

CODE No.:14BT80102 SVEC-14

SREE VIDYANIKETHAN ENGINEERING COLLEGE

(An Autonomous Institution, Affiliated to JNTUA, Anantapur)

ESTIMATION, COSTING AND VALUATION

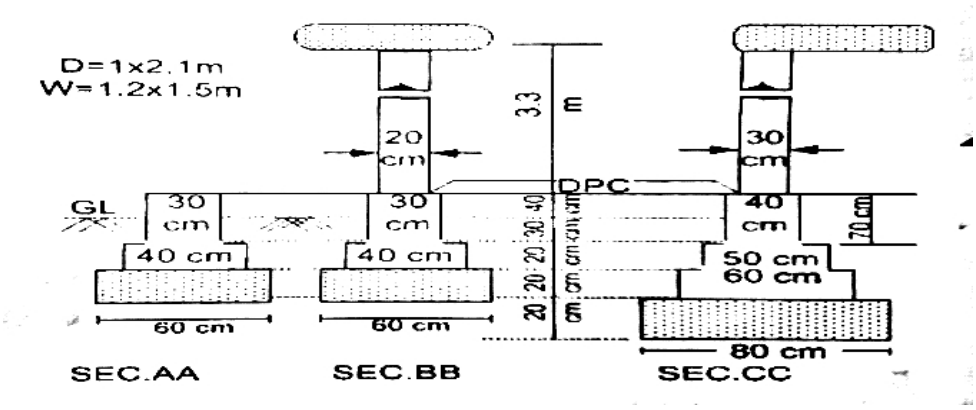
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the arch masonry calculations for various types of arches.	CO1	7 Marks
	b)	Explain the methods of estimating.	CO1	7 Marks
		(OR)		
2	a)	Define Estimating and list out the methods of estimating.	CO1	4 Marks
	b)	Estimate the quantities of the building from the given plan and section as shown in figure. i) Stone masonry for substructure. ii) Outside plastering in CM (1: 5) with 20 mm thickness.	CO2	10 Marks



UNIT-II

3	a)	How can the number of main bars and distribution bars in slabs be found out? Mention the formula.	CO2	3 Marks
	b)	Prepare a detailed estimate for supplying and laying 175mm dia glazed stone ware pipe for 100m length joining with 1:1.5 cement mortar including trenching up to a depth of 85cm. Estimate should be prepared to include all materials. (take length of pipe is 60cm)	CO2	11 Marks
		(OR)		
4		Prepare a detailed estimate for supplying, laying and jointing 200mm diameter glazed stone ware pipe line jointing with 1:2 cement mortar. Measurement of trench is 120m x 0.6m x 0.6m.	CO1	14 Marks

UNIT-III

5		Write the detailed specifications for the following items. i) Mosaic flooring. ii) Plastering. iii) RCC work in detail.	CO1	14 Marks
		(OR)		
6	a)	What is the purpose and method of writing specification? Describe briefly general and detailed specification.	CO1	7 Marks
	b)	Write detail specification of RCC (1:2:4) for beam concrete and painting for walls.	CO1	7 Marks

UNIT-IV

7	a)	Prepare a contract document for giving a building on lease.	CO3	10 Marks
	b)	Discuss in brief about different contracts.	CO1	4 Marks
		(OR)		
8	a)	Prepare a tender schedule for a school building to be executed on behalf of Department of Higher Education.	CO3	7 Marks
	b)	Write note on Arbitration and legal requirements.	CO3	7 Marks

UNIT-V

9	a)	What do you mean by valuation and explain various purposes of valuation.	CO1	10 Marks
	b)	Explain capitalized value with example.	CO4	4 Marks
		(OR)		
10	a)	What is Obsolescence?	CO1	2 Marks
	b)	Explain the methods of calculating the depreciation.	CO1	12 Marks

SREE VIDYANIKETHAN ENGINEERING COLLEGE

HVDC AND FACTS
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Discuss the technical advantages of DC over AC transmission.	CO1	7 Marks
	b)	What are the types of HVDC links? Explain.	CO1	7 Marks
		(OR)		
2	a)	With neat sketches, explain the different kinds of DC links available.	CO1	7 Marks
	b)	Explain the effect of overlap angle on the performance of converter circuit. Explain the combined characteristics of rectifier and inverter.	CO1	7 Marks

UNIT-II

3	a)	Explain the process of starting and stopping of a DC link in HVDC system.	CO1	7 Marks
	b)	Explain in detail the convertor control characteristics of HVDC systems.	CO2	7 Marks
		(OR)		
4	a)	Explain the hierarchical control structure of a DC link with the help of a block diagram.	CO2	7 Marks
	b)	Discuss the current and extinction angle control.	CO4	7 Marks

UNIT-III

5	a)	What are the causes of reactive power deficit in power systems? Explain.	CO1	7 Marks
	b)	Explain the power flow in AC transmission with meshed connections.	CO1	7 Marks
		(OR)		
6		Explain the basic types of FACTS controllers and their relative importance.	CO2, CO3	14 Marks

UNIT-IV

7		Explain the methods of controllable VAR generation.	CO3	14 Marks
		(OR)		
8	a)	Explain the control scheme of STATCOM.	CO2	7 Marks
	b)	Explain the operation of TCSC.	CO2	7 Marks

UNIT-V

9	a)	Differentiate between UPFC and IPFC.	CO2	7 Marks
	b)	Explain how UPFC is different from VSC.	CO2	7 Marks
		(OR)		
10	a)	Explain basic operating principle and control structure of a UPFC.	CO1	7 Marks
	b)	Explain the role of IPFC in real and reactive power flow control.	CO2	7 Marks

IV B.Tech II Semester (SVEC14) Supplementary Examinations March – 2021

MECHATRONICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Identify and explain the areas where Mechatronics system can be used.	CO1	7 Marks
	b)	Explain the advantages and disadvantages of the Mechatronics system.	CO1	7 Marks
		(OR)		
2	a)	Differentiate between the traditional and Mechatronic design with an example.	CO1	7 Marks
	b)	Explain any two types of Mechatronic system applications.	CO1	7 Marks

UNIT-II

3	a)	Distinguish between Hydraulics and Pneumatics systems.	CO1	4 Marks
	b)	What is Electro-mechanical transient performance? Derive mathematical solution for linear torque-speed characteristic.	CO2	10 Marks
		(OR)		
4		Write about:		
		i) Piezoelectric actuators.	CO3	5 Marks
		ii) DC servo motor.	CO3	5 Marks
		iii) Stepper Motors.	CO3	4 Marks

UNIT-III

5		Write about the following filters and draw the characteristics along with their working i) Band filters. ii) Band stop.	CO3	14 Marks
		(OR)		
6		Write about the following filters and draw the characteristics along with the working i) Low pass filters. ii) High pass filters. iii) Notch filter.	CO3	14 Marks

UNIT-IV

7	a)	Explain the working principle of DC convertor with a neat sketch. And discuss the-application.	CO3	9 Marks
	b)	Recognize the factors needed for selection of a micro controller.	CO3	5 Marks
		(OR)		
8	a)	List any two applications with examples how microcontrollers are used.	CO3	7 Marks
	b)	Identify the factors needed to selecting a microcontroller.	CO1	7 Marks

UNIT-V

9	a)	Develop the following ladder diagrams i) Timer. ii) Internal relay. iii) Counter.	CO4	9 Marks
	b)	Explain the working principle of Proportional controller, P; with a neat sketch.	CO4	5 Marks
		(OR)		
10	a)	Discuss the selection criteria of PLC.	CO4	6 Marks
	b)	Explain the basic structure of PLC with a neat sketch.	CO4	8 Marks

CODE No.:14BT80401 SVEC-14

IV B.Tech II Semester (SVEC14) Supplementary Examinations March – 2021

CELLULAR AND MOBILE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the performance criteria of a cellular system.	CO1	7 Marks
	b)	List the Analog and Digital cellular systems.	CO1	7 Marks
		(OR)		
2	a)	Explain the concept of frequency reuse channels.	CO2	7 Marks
	b)	Explain the consideration of components of cellular systems.	CO1	7 Marks

UNIT-II

3	a)	Explain the method for finding the antenna height gain.	CO2	7 Marks
	b)	What are the effects of cell site antennas?	CO2	7 Marks
		(OR)		
4	a)	Derive the transfer function of propagation channel.	CO2	7 Marks
	b)	What are the characteristics of antenna structures?	CO2	7 Marks

UNIT-III

5	a)	How interference is avoided in numbering and grouping the channels?	CO1	7 Marks
	b)	Compare the performance of Omni cell and sectorized cells.	CO2	7 Marks
		(OR)		
6	a)	Why handoffs are necessary and describe its types?	CO2	7 Marks
	b)	What is a dropped call and how are these evaluated?	CO2	7 Marks

UNIT-IV

7	a)	Explain the effect of large PAPR on the features of OFDM system.	CO1	7 Marks
	b)	Explain two coding techniques used in cellular systems.	CO1	7 Marks
		(OR)		
8	a)	Explain about QPSK modulation technique along with constellation diagram. Why OQPSK is preferred over QPSK?	CO1	7 Marks
	b)	What are the advantages of Orthogonal Frequency Division Multiplexing for digital transmissions over channel subject to fading?	CO2	7 Marks

UNIT-V

9	a)	Sketch forward control channel block diagrams for IS-95.	CO1	7 Marks
	b)	Compare TDMA and CDMA schemes, identifying the advantages of each scheme over the other.	CO1	7 Marks
		(OR)		
10	a)	Illustrate the distinction between hard and soft handoff. Why does soft handoff provide a performance improvement in CDMA systems?	CO1	7 Marks
	b)	Provide a diagram showing how a call is set up in IS-136. Explain.	CO2	7 Marks

IV B.Tech II Semester (SVEC14) Supplementary Examinations March - 2021

SATELLITE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Draw the geometry of geostationary link showing elevation azimuth and range and also derive the expression for elevation and azimuth angle.	CO1	7 Marks
	b)	A geostationary satellite moving in an equational circular orbit is at a height of a 5786 km from the earth surface. If the earth radius is taken as 6378 km. Determine the theoretical maximum coverage angle and maximum slant range.	CO2	7 Marks
		(OR)		
2	a)	What are the Kepler's three laws of planetary motion? Give the mathematical formulation of Kepler's third law of planetary motion.	CO1	7 Marks
	b)	A low earth orbit satellite is in a circular polar orbit with an altitude **h**, of 1000km. A transmitter on the satellite has a frequency of 2.65GHz. Find i) The velocity of the satellite in orbit. ii) The component of velocity toward an observer at an earth station as the satellite appears over the horizon, for an observer who is in the plane of the satellite orbit. iii) Hence, find the Doppler shift of the received signal at the earth station. Use a mean earth radius value, r_e, of 6378 km.	CO4	7 Marks

UNIT-II

3	a)	A satellite is in an elliptical orbit with a perigee of 1000 km and an apogee of 4000 km. Find the period of the orbit and eccentricity of the orbit, assuming the mean earth radius as 6378.14 km.	CO4	7 Marks
	b)	Discuss about various satellite services.	CO1	7 Marks
		(OR)		
4	a)	In a satellite link, the propagation loss is 200 dB. Margins and losses account for another 3 dB. The receiver [G/T] is 11dB and the [EIRP] is 45dB W. Calculate the received [C/N] for a system band width of 36MHz.	CO3	6 Marks
	b)	Explain in brief telemetry, tracking and command of the satellite system.	CO1	8 Marks

UNIT-III

5	a)	Explain in detail about TDMA Frame Structure.	CO1	7 Marks
	b)	Describe FDMA structure with a neat block diagram and explain advantages of FDMA over TDMA.	CO4	7 Marks
		(OR)		
6	a)	With the help of a neat diagram, explain Frequency Hop Spread Spectrum.	CO1	7 Marks
	b)	Design Cassegrain antenna to transmit 5KW power at 6 GHz with gain of 84dB. Choose the diameter as 10m and calculate the efficiency.	CO2	7 Marks

UNIT-IV

7	a)	Analyze and discuss the Delay and Throughput considerations in a satellite system.	CO2	7 Marks

	b)	Summarize the advantages and disadvantages of low and medium earth orbits.	CO1	7 Marks
		(OR)		
8	a)	Compare geostationary and geosynchronous satellites.	CO1	7 Marks
	b)	An earth station antenna has a diameter of 30m, has an overall efficiency of 68% and is used to receive a signal at 4150 MHz Calculate gain of the antenna.	CO3	7 Marks

UNIT-V

9	a)	Explain GPS Position location Principles and their operation in satellite navigation.	CO1	7 Marks
	b)	Describe the process of GPS receiver operation.	CO1	7 Marks
		(OR)		
10	a)	Discuss about the following: i) GPS Navigation Message ii) GPS Signal Levels	CO1	7 Marks
	b)	Explain GPS Receivers and Codes with suitable sketches.	CO4	7 Marks

CODE No.:14BT80502 SVEC-14

BIG DATA

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Identify the requirements for analytical model.	CO1	7 Marks
	b)	Define Missing Values also identify the schemes to deal with missing values.	CO1	7 Marks
		(OR)		
2	a)	Define Big Data and Explain its characteristics briefly.	CO1	7 Marks
	b)	Write basic nomenclature for Big Data Analytics.	CO1	7 Marks

UNIT-II

3	a)	Explain Hadoop Ecosystem.	CO2	7 Marks
	b)	Explain Building blocks of Hadoop.	CO2	7 Marks
		(OR)		
4		What are the components of the Hadoop ecosystem in the market and list out their applications?	CO1	14 Marks

UNIT-III

5		Illustrate Anatomy of Map Reduce with a neat sketch.	CO1	14 Marks
		(OR)		
6	a)	Explain failures in Map Reduce.	CO1	7 Marks
	b)	Differentiate Map reduce 1.0 and 2.0.	CO1	7 Marks

UNIT-IV

7	a)	Illustrate with an example different clauses supported by HiveQL.	CO1	7 Marks
	b)	Identify the importance of aggregate functions of HiveQL.	CO2	7 Marks
		(OR)		
8	a)	Define an expression and explain different expressions supported by Pig.	CO1	7 Marks
	b)	Identify the importance of Data Processing Operators of Pig.	CO2	7 Marks

UNIT-V

9	a)	Explain Hadoop usage at Last.fm.	CO1	7 Marks
	b)	Explain Data Architecture at Facebook.	CO1	7 Marks
		(OR)		
10		Explain Nutch Search Engine with its data structures and Architecture.	CO1	14 Marks

CODE No.:14BT81202 SVEC-14

CRYPTOGRAPHY AND NETWORK SECURITY

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Distinguish between passive attacks an active attacks.	CO1	7 Marks
	b)	Discuss about various security services.	CO1	7 Marks
		(OR)		
2	a)	Illustrate with an example on each of the Caesar Cipher and Playfair Cipher.	CO1	8 Marks
	b)	Briefly explain transposition technique.	CO2	6 Marks

UNIT-II

3	a)	List out various requirements to be necessary for Pubic-key Cryptography.	CO1	5 Marks
	b)	Discuss about DES Algorithm.	CO1	9 Marks
		(OR)		
4		Discuss Diffie-Hellman key exchange and using that with a common prime q=11and a primitive root n = 2. i) Show that 2 is a primitive root of 11. ii) If user A has public key $Y_A = 9$, what is A's private key X_A? iii) If user B has public key $Y_A = 3$, what is the shared secret key K, shared with A?	CO2	14 Marks

UNIT-III

5	a)	Elaborate various Message Authentication functions.	CO1	8 Marks
	b)	Discuss about X.509 Authentication Service.	CO1	6 Marks
		(OR)		
6	a)	Discuss about Secure Hash Algorithm.	CO1	7 Marks
	b)	What is a Digital Signature Standard? Explain its algorithm.	CO1	7 Marks

UNIT-IV

7	a)	Sketch the general format of a PGP Message.	CO1	6 Marks
	b)	Describe the classes of security for public-key certificates provided by VeriSign.	CO2	8 Marks
		(OR)		
8	a)	Briefly discuss about the format of an Encapsulating Security Payload packet.	CO1	7 Marks
	b)	Discuss about features and components of Secure Electronics Transaction.	CO2	7 Marks

UNIT-V

9	a)	What are typical phases of operations of a virus or worm? Explain.	CO2	7 Marks
	b)	What is the role of encryption in the operation of a virus? Explain.	CO2	7 Marks
		(OR)		
10	a)	Illustrate Transport and Tunnel modes for IPv4 and IPv6 packets of ESP with neat diagrams.	CO1	7 Marks
	b)	What is the difference between statistical anomaly detection and rule-based intrusion detection?	CO2	7 Marks

INFORMATION RETRIEVAL SYTEMS

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define an Information Retrieval System. Describe the functional overview of Information Retrieval Systems.	CO1	9 Marks
	b)	Show the variations in Precision and Recall with a graph while retrieving relevant and non-relevant items.	CO2	5 Marks
		(OR)		
2	a)	Describe the types of data structures used in Information Retrieval System and explain Inverted File data structure.	CO1	7 Marks
	b)	What is a Latent Semantic Indexing (LSI)? How to perform Single Value Decomposition using matrix.	CO1	7 Marks

UNIT-II

3	a)	Compare advantages and disadvantages of porter Stemming algorithm, Dictionary Stemming algorithm and Success Variety stemming algorithm.	CO2	7 Marks
	b)	What is Indexing? Explain Manual Indexing process.	CO1	7 Marks
		(OR)		
4	a)	Write short notes on: i) Categorization. ii) CitationMetadata.	CO1	7 Marks
	b)	Briefly discuss the automatic Indexing of multimedia items.	CO1	7 Marks

UNIT-III

5	a)	Distinguish term clustering and item clustering. Explain with suitable examples	CO1	7 Marks
	b)	What is the need of Thesaurus in a document and how it can be generated?	CO2	7 Marks
		(OR)		
6	a)	Why is relevance feedback required in User Search Techniques? Explain.	CO1	8 Marks
	b)	Describe briefly why Search Statements and Binding are required.	CO2	6 Marks

UNIT-IV

7	a)	What is information visualization? Discuss the different areas of information visualization and presentation.	CO1	7 Marks
	b)	Explain in detail aspects of the visualization process.	CO1	7 Marks
		(OR)		
8	a)	Explain multimedia item presentation.	CO1	7 Marks
	b)	Briefly discuss any two presentations of hits.	CO1	7 Marks

UNIT-V

9	a)	Discuss about Hardware Text Search system with a block diagram.	CO1	7 Marks
	b)	Sketch and discuss the GOOGLE Scalable Multiprocessor Architecture.	CO1	7 Marks
		(OR)		
10		Explain Information System and Measures Used in System Evaluations.	CO1	14 Marks

PRODUCTION & OPERATIONS MANAGEMENT

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Write in brief notes on evolution and scope of operation management.	CO2	7 Marks
	b)	Explain how System and transformation play a key role in operations management.	CO2	7 Marks

(OR)

2	a)	Explain how managerial factors and quality of life factors affect the productivity.	CO3	7 Marks
	b)	What are production system decisions and why do we put such emphasis on these things?	CO3	7 Marks

UNIT-II

3	a)	Explain various types of forecasting with respect to time horizon.	CO2	7 Marks
	b)	What is forecast error and how to reduce the error in forecast?	CO2	7 Marks

(OR)

4	a)	Discuss any two forecasting methods with their limitations.	CO2	7 Marks
	b)	Estimate the future demand through simple regression method for 2020, 2022, 2024 and 2026 for the following details.	CO3	7 Marks

Time(Year)	2010	2012	2014	2016	2018
Demand	5.0	5.6	6.7	5.8	6.9

UNIT-III

5		Explain in detail about level, chase and mixed strategies used for aggregate production planning along with their limitations.	CO5	14 Marks

(OR)

6	a)	What is Master production scheduling? List out the inputs and outputs of MPS.	CO1	7 Marks
	b)	Write a short note on aggregate capacity planning and its need.	CO1	7 Marks

UNIT-IV

7		Differentiate between ERP, MRP and MRP-II and explain with examples	CO4	14 Marks

(OR)

8		Write a short notes on pull method of material flow, small lot sizes, uniform work station loads and line flows.	CO5	14 Marks

UNIT-V

9	a)	What is flow shop scheduling and give the algorithm for Johnson's rule for n job and 2 machines.	CO4	7 Marks
	b)	Discuss the heuristic procedure for job shop scheduling.	CO4	7 Marks

(OR)

10	a)	Explain the role of information technology in Supply Chain Management.	CO4	7 Marks
	b)	Discuss about the components and structure of Supply Chain Management.	CO4	7 Marks

ADVANCED CASTING TECHNOLOGY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the recent trends in quality specifications required for foundry Industry.	CO1	7 Marks
	b)	Describe the pattern allowances in detail.	CO2	7 Marks
		(OR)		
2	a)	Discuss the properties and applications of Zn-Alloys.	CO1	7 Marks
	b)	Explain the design principles of dies in centrifugal casting.	CO2	7 Marks

UNIT-II

3	a)	Describe the types and uses of filters.	CO2	7 Marks
	b)	Explain the solidification of eutectic alloys.	CO1	7 Marks
		(OR)		
4	a)	Discuss Computer aided design of Risers.	CO2	7 Marks
	b)	What is directional solidification? Explain its significance and factors affecting them.	CO2	7 Marks

UNIT-III

5	a)	Discuss all the formulas used to calculate the gating system dimensions.	CO2	7 Marks
	b)	What is meant by skin dried mouds? Explain its applications.	CO4	7 Marks
		(OR)		
6	a)	Explain about vacuum degassing methods.	CO3	7 Marks
	b)	Explain any two sand testing methods.	CO4	7 Marks

UNIT-IV

7	a)	Explain the advantages and applications of Resin bonded sands.	CO3	7 Marks
	b)	Explain ceramic molding.	CO3	7 Marks
		(OR)		
8	a)	Explain vacuum molding.	CO3	7 Marks
	b)	Discuss about Monorail and Auto pour systems.	CO1	7 Marks

UNIT-V

9		Describe the investment casting process, its merits and applications.	CO3	14 Marks
		(OR)		
10	a)	Illustrate the die casting process with applications.	CO3	7 Marks
	b)	Describe the defects in centrifugal casting.	CO3	7 Marks

MIXED SIGNAL DESIGN

[Electronics And Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	What is meant by bi-quad filter and derive the transfer function equation for low Q bi-quad filters?	CO1	7 Marks
	b)	For the above circuit if clock frequency is 100 kHz, find the capacitor value that will emulate 1M ohm resistor.	CO3	7 Marks
		(OR)		
2	a)	Explain about different building blocks in switched capacitor circuits.	CO1	7 Marks
	b)	Explain about non ideal effects in switched capacitor circuits.	CO1	7 Marks

UNIT-II

3	a)	Justify how a Master-Slave D-Flipflop can be operated as a Phase/ Frequency Detector.	CO1	7 Marks
	b)	Discuss the Lock Acquisition Problems in PLL's.	CO1	7 Marks
		(OR)		
4	a)	Explain Jitter in PLL, using timing diagrams how they can be reduced.	CO2	7 Marks
	b)	Explain the concept of simple Charge-pump PLL.	CO2	7 Marks

UNIT-III

5	a)	Using stochastic approach, evaluate the average value of quantization fault and hence deduce the signal to noise ratio for an ADC.	CO2	7 Marks
	b)	Illustrate Thermometer-code converters.	CO1	7 Marks
		(OR)		
6	a)	Summarize Noise quantization in data concepts with necessary schematic.	CO3	7 Marks
	b)	Discuss charge-redistribution in thermometer based D/A converter.	CO3	7 Marks

UNIT-IV

7	a)	Sketch the Flow Graph for the Successive-Approximation approach and Explain the Convertion Process.	CO3	7 Marks
	b)	Explain the operation of Integrating Converters for three different input voltages.	CO3	7 Marks
		(OR)		
8	a)	Explain the operation of the successive approximation approach with a flow graph.	CO1	7 Marks
	b)	Mention all kinds of medium speed and high speed ADC and explain the operation of a 4-bit interpolating A/D converter.	CO3	7 Marks

UNIT-V

9	a)	Discuss about noise shaped delta sigma modulators.	CO1	7 Marks
	b)	Contrast Decimating and interpolating filters.	CO2	7 Marks
		(OR)		
10	a)	List and explain different architectures for higher order modulators.	CO2	7 Marks
	b)	Classify and compare delta sigma modulators with multibit quantizes.	CO2	7 Marks

CRYPTOGRAPHY AND NETWORK SECURITY

[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	List and explain specific and pervasive security mechanisms.	CO1	7 Marks
	b)	What is the difference between active and passive security attacks?	CO1	7 Marks
		(OR)		
2	a)	Encrypt the message "Must see you over cardigan west" using Playfair and Hill ciphers.	CO1	7 Marks
	b)	With an example explain the cryptanalysis of Playfair and Hill ciphers.	CO2	7 Marks

UNIT-II

3	a)	Demonstrate the following operations of AES algorithm with suitable examples: i) Add Round Key. ii) Byte Substitution. iii) Mix Columns.	CO1	7 Marks
	b)	Summarize avalanche effect on DES.	CO1	7 Marks
		(OR)		
4	a)	In a public-key system using RSA, you intercept the ciphertext $C = 10$ sent to a user whose public key is $e = 5$, $n = 35$.What is the plaintext M?	CO2	7 Marks
	b)	Man-in-the-middle attack on the Diffie-Hellman key exchange protocol in which the adversary generates two public-private key pairs for the attack. Could the same attack be accomplished with one pair? Justify.	CO1	7 Marks

UNIT-III

5	a)	Illustrate CMAC with neat diagram.	CO1	7 Marks
	b)	Illustrate Signing and verifying functions of Digital Signature DSS algorithm with neat diagrams.	CO1	7 Marks
		(OR)		
6	a)	Analyze Collision-Resistant Attack on Hash Function.	CO1	7 Marks
	b)	Outline Simple Authentication Dialogue of Kerberos Version 4.	CO1	7 Marks

UNIT-IV

7	a)	Differentiate SSL and SET protocols.	CO2	8 Marks
	b)	Discuss the various web security requirements.	CO1	6 Marks
		(OR)		
8	a)	Describe the SSL Specific protocol - Handshake action in detail.	CO1	7 Marks
	b)	Discuss the Principles of Remote User Authentication.	CO1	7 Marks

UNIT-V

9		Explain firewall design principles, characteristics and types of firewalls.	CO1	14 Marks
		(OR)		
10	a)	Explain about the routing applications of IPSec.	CO1	6 Marks
	b)	List and explain the services of PGP.	CO1	8 Marks

PROGRAMMING IN C

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write about the structure of C program with suitable example.	6 Marks
	b)	Sketch the block diagram to create and run the C program in Turbo C.	6 Marks
		(OR)	
2.	a)	Label any two major components of a computer system.	6 Marks
	b)	Identify the steps in creating and running a C program.	6 Marks

UNIT-II

3.	a)	What is two-dimensional array? How they are stored in memory?	6 Marks
	b)	Explain Memory Allocation Functions with suitable example.	6 Marks
		(OR)	
4.	a)	Write a C Program to swap two elements without using third variable.	6 Marks
	b)	Differentiate "if" statement and "if - else" statement with an example program.	6 Marks

UNIT-III

5.	a)	State which value is automatically assigned to those array elements that are not explicitly initialized with an example.	5 Marks
	b)	State various types of functions used in C.	7 Marks
		(OR)	
6.	a)	Formulate n^{th} Fibonacci number generation using recursion.	6 Marks
	b)	Define function and explain about system defined functions with suitable example.	6 Marks

UNIT-IV

7.	a)	Argue about Enumerated types in C with an example for creating Colors type.	3 Marks
	b)	Explain about nested structure with an example.	4 Marks
	c)	Differentiate structures and Unions in C.	5 Marks
		(OR)	
8.		How to declare structure and its variables? Specify accessing operators for structures.	12 Marks

UNIT-V

9.	a)	Relate conditional Preprocess directives with suitable example.	7 Marks
	b)	Specify various access modes for text files.	5 Marks
		(OR)	
10.		Write a C program to demonstrate sequential file access.	12 Marks

COMPUTER ORGANIZATION

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Draw and explain the block diagram of a digital computer.	6 Marks	L2	CO1	PO1 PO3
	b)	Give a brief note on the following: i) Computer Organization. ii) Computer Design. iii) Computer Architecture.	6 Marks	L1	CO2	PO1 PO2
		(OR)				
2.		Construct Binary Counter with Parallel Load and explain.	12 Marks	L3	CO2	PO1 PO2 PO3
		UNIT-II				
3.		Discuss in detail the fixed-point representation with a suitable example.	12 Marks	L1	CO1	PO1 PO2
		(OR)				
4.		Relate different codes of digital computers with examples.	12 Marks	L1	CO1	PO1 PO2
		UNIT-III				
5.		Explain the computer hardware configuration of micro-programmed control unit with a diagram.	12 Marks	L2	CO1	PO1 PO2 PO3
		(OR)				
6.	a)	Define the fields that we can found in the instruction format. Explain different instruction formats in detail.	6 Marks	L1	CO1	PO1 PO2
	b)	Illustrate the importance of interrupt in the execution of a program.	6 Marks	L2	CO2	PO1 PO2 PO5
		UNIT-IV				
7.		Design the flowchart for interrupt cycle and explain.	12 Marks	L3	CO2	PO1 PO2 PO3
		(OR)				
8.	a)	Classify memory reference instructions.	6 Marks	L4	CO1	PO1 PO2
	b)	Explain briefly about the design of basic computer.	6 Marks	L2	CO2	PO2 PO3
		UNIT-V				
9.		Evaluate Input-Output-Processor (IOP) organization.	12 Marks	L4	CO2	PO1 PO2 PO5
		(OR)				
10.		Define cache memory. Explain different mapping procedures in the organization of cache memory with suitable example.	12 Marks	L2	CO2	PO1 PO2 PO3 PO5

OPERATING SYSTEMS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.		Determine the problems in design and implementation of Operating Systems.	12 Marks	L2	CO1	PO1 PO2
		(OR)				
2.		What is context switching? Categorize types of schedulers in Process Management. Explicate in detail about representation of process scheduling using Queuing diagram.	12 Marks	L1	CO2	PO1
		UNIT-II				
3.	a)	Identify various thread issues in multithreaded programming.	6 Marks	L1	CO1	PO1 PO4
	b)	Specify the role of the dispatcher. Describe Multiple-Processor Scheduling and its approaches.	6 Marks	L1	CO2	PO1 PO4
		(OR)				
4.		Distinguish between multilevel Queue and multilevel feedback queue scheduling algorithms.	12 Marks	L3	CO2	PO2 PO4
		UNIT-III				
5.	a)	Identify the requirements to be satisfied for a solution to the critical section problem.	6 Marks	L1	CO3	PO1 PO2
	b)	What are the methods for handling deadlocks?	6 Marks	L2	CO2	PO1 PO3
		(OR)				
6.	a)	How to handle dining philosophers problem using synchronization tool?	6 Marks	L3	CO3	PO2 PO4
	b)	Illustrate Banker's algorithm to avoid deadlock.	6 Marks	L2	CO2	PO1 PO2
		UNIT-IV				
7.		Elucidate Hierarchical paging and Inverted page Tables for structuring the page table.	12 Marks	L2	CO4	PO1
		(OR)				
8.		Calculate number of page faults for the following page reference String using optimal replacement algorithm with three frames allocated in memory: 7,0,1,2,0,3,0,4,2,3,0,3,2,1,2,0,1,7,0,1	12 Marks	L3	CO4	PO1 PO2 PO5
		UNIT-V				
9.	a)	What are the principles of protection?	5 Marks	L2	CO5	PO1 PO2
	b)	Elucidate the following methods for implementing the access matrix: i) Global Table. ii) Access Lists for objects.	7 Marks	L3	CO5	PO1 PO3
		(OR)				
10.		Elucidate in detail about Revocation of Access Rights and Domain structure.	12 Marks	L1	CO5	PO1

M.C.A. I Semester (SVEC-20) Regular Examinations August – 2021

COMPUTER ORIENTED STATISTICAL TECHNIQUES

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Calculate Mean and Median from the following data: 6 Marks L4 CO1 PO2

Class Interval	20-30	30-40	40-50	50-60	60-70
Frequency	3	5	20	10	5

b) Find the Geometric Mean from the following data: 6 Marks L3 CO1 PO2

Class Interval	4-8	8-12	12-16	16-20	20-24
Frequency	2	4	8	5	3

(OR)

2. a) Find the Karl Pearson's co-efficient of skewness to the following data: 6 Marks L3 CO1 PO2

Class Interval	**0-2**	**2-4**	**4-6**	**6-8**	**8-10**	**10-12**	**12-14**
Frequency	**6**	**8**	**17**	**21**	**15**	**11**	**2**

b) Derive Central Moments in terms of Non-central Moments. 6 Marks L2 CO1 PO1

UNIT-II

3. Illustrate the operations of lists in R with example for each. 12 Marks L3 CO3 PO1

(OR)

4. Discuss in detail about matrices in R. 12 Marks L1 CO3 PO1

UNIT-III

5. a) Show that Binomial distribution tends to Poisson distribution as a limiting case. 6 Marks L3 CO2 PO2

b) Fit a Poisson distribution to the following data: 6 Marks L4 CO3 PO4

x	0	1	2	3	4
f	109	65	22	3	1

Also test the adequacy of model using R.

(OR)

6. a) One fifth percent of the blades produced by a blade manufacturing factory turnout to be defective. The blades are supplied in packets of 10. Use Poisson distribution to calculate the approximate number of packets containing; 6 Marks L3 CO2 PO2
   i) No defective blade.
   ii) One defective blade in a consignment of 10000.

b) The weekly wages of 1000 workers are normally distributed around a mean of Rs.70 and Standard Deviation of Rs.5. Estimate the number of workers whose weekly wages will be: 6 Marks L4 CO3 PO4
   i) between Rs. 70 and Rs.72.
   ii) between Rs. 69 and Rs.72 using R.

UNIT-IV

7. Find the rank correlation for the following data using R and comment on the result. — 12 Marks — L4 — CO3 — PO2

X	65	63	67	64	68	62	70	66	68	67	69	71
Y	68	66	68	65	69	66	68	65	71	67	68	70

(OR)

8. Compute the coefficient of correlation and the two lines of regression for the following data. — 12 Marks — L4 — CO4 — PO3

Price X:	14	16	17	18	19	20	21	22	23
Demand Y:	84	78	70	75	66	67	62	58	60

UNIT-V

9. a) A random sample of size 25 from a normal population has the mean $\overline{X}$ = 47.5 and the standard deviation S = 8.4. Does this information tend to support or refute the claim that the mean of the population is $\mu = 42.5$? — 6 Marks — L3 — CO2 — PO2

   b) A study shows that 16 out of 200 tractors produced one assembly line required extensive adjustments before they could be shopped, while the same was true for 14 of 400 tractors produced on another assembly line. At the 0.01 level of significance, does this support the claim that the second production line does superior work? — 6 Marks — L3 — CO2 — PO4

(OR)

10. a) Pumpkins were grown under two experimental conditions. Two random samples of 11 and 9 pumpkins. Show the sample standard deviations of their weights as 0.8 and 0.5 respectively. Assuming that the weight distributions are normal, test hypothesis that the true variances are equal. — 6 Marks — L3 — CO2 — PO2

    b) From the following data, find whether there is any significant liking in the habit of taking soft drinks among the categories of employees. — 6 Marks — L3 — CO2 — PO4

Soft Drinks	Clerks	Teachers	Officers
Pepsi	10	25	65
Thumsup	15	30	65
Fanta	50	60	30

COMPUTER NETWORKS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain the role and importance of electromagnetic spectrum in data communication. Draw the electromagnetic spectrum.	6 Marks	L2	CO1	PO1
	b)	What is a primitive? List the service primitives for implementing a connection-oriented service.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Why parity checks and check sum are used? Explain parity checks and check summing methods with an example..	6 Marks	L2	CO1	PO1
	b)	Compare Optical Fibers and Copper Cable Guided Transmission Media.	6 Marks	L4	CO1	PO2
		UNIT-II				
3.	a)	Differentiate classical ALOHA and slotted ALOHA.	6 Marks	L4	CO3	PO2
	b)	Illustrate the Sliding window protocol using *Go-Back N* and *Selective Repeat* techniques.	6 Marks	L3	CO2	PO2
		(OR)				
4.	a)	Suppose we want to transmit the "message 1011 0010 0111 and protect it from errors using the cyclic redundancy check (CRC) polynomial $x^4 + x^2 + 1$. Use polynomial long division to determine the message that should be transmitted. Suppose the leftmost bit of the message is inverted due to noise on the transmission link. What is the result of the 'receiver's CRC calculation? How does the receiver know that an error has occurred?	6 Marks	L4	CO2	PO3
	b)	What is channel allocation problem? Explain types of channel allocation.	6 Marks	L1	CO2	PO1
		UNIT-III				
5.	a)	Apply least-cost-path routing algorithm to find a shortest path between source and destination with an example.	6 Marks	L3	CO3	PO3
	b)	Sketch the IPV4 packet format and explain the importance of IP protocol in the internet.	6 Marks	L2	CO3	PO2
		(OR)				
6.	a)	Sketch the IPV4 packet format and explain the importance of IP protocol in the internet.	7 Marks	L4	CO3	PO3
	b)	What are the techniques to be followed to achieve good quality of service?	5 Marks	L2	CO3	PO1
		UNIT-IV				
7.		Differentiate the TCP header and the UDP header formats. Identify the fields in the TCP header that are not part of the UDP header. Give the reasons for each missing field.	12 Marks	L2	CO3	PO2
		(OR)				

8.	a)	Although TCP provides a reliable service and UDP does not, many applications fit better in the communication system by using UDP. Investigate the reasons behind UDP supporting for many applications.	6 Marks	L3	CO4	PO4
	b)	Define the term Silly Window Syndrome. Examine the factors that cause silly window syndrome problem and how it can be avoided.	6 Marks	L2	CO4	PO4

UNIT-V

9.		Analyze the addressing system used by SMTP. Explain the Simple Mail Transfer Protocol (SMTP) protocol.	12 Marks	L2	CO4	PO2

(OR)

10.	a)	Discuss the need for name resolution. Illustrate the domain name hierarchy and the steps in resolution.	6 Marks	L2	CO4	PO3
	b)	Define MIME. Tabulate the MIME header and explain the content types.	6 Marks	L2	CO4	PO2

DATABASE MANAGEMENT SYSTEMS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Outline the architecture of Database Management System and explain its components.	8 Marks	L2	CO2	PO2
	b)	List and identify the advantages of using database systems.	4 Marks	L1	CO1	PO1
		(OR)				
2.		Explain the classification of Database Management System.	12 Marks	L2	CO2	PO2
		UNIT-II				
3.	a)	Mention different attribute data types used in Structured Query Language (SQL).	4 Marks	L1	CO3	PO3
	b)	Create a table in SQL by specifying attribute constraints and attribute defaults.	8 Marks	L3	CO3	PO3
		(OR)				
4.		Translate any Entity Relationship diagram into a collection of tables with associated constraints to a relational database schema.	12 Marks	L2	CO3	PO3
		UNIT-III				
5.		With relevant example, analyze various types of normal forms used in relational database.	12 Marks	L3	CO2	PO2
		(OR)				
6.		Write SQL query language for the following commands: i) Insert command. ii) Delete command. iii) Update command.	12 Marks	L3	CO4	PO4
		UNIT-IV				
7.		Describe the following concepts: i) Serializability. ii) Two-phase locking protocol.	12 Marks	L3	CO5	PO5
		(OR)				
8.	a)	What is a precedence graph or serializability graph? How is it related to conflict serializability?	6 Marks	L3	CO5	PO5
	b)	Discuss the relative merits of lock upgrades and lock downgrades.	6 Marks	L3	CO5	PO5
		UNIT-V				
9.		List out the characteristics of a B+ tree and explain a dynamic index structure B+ tree.	12 Marks	L3	CO2	PO2
		(OR)				
10.		Describe the Indexed Sequential Access Method (ISAM) index structure with a neat sketch and explain with a suitable example.	12 Marks	L3	CO2	PO2

CODE No.: 20MC10103 SVEC-20

DATA STRUCTURES AND ALGORITHMS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain best case, average case and worst case in analysis of algorithms.	6 Marks	L2	CO1	PO1
	b)	Differentiate the following: i) Big-Oh and Omega notation. ii) Linear and non-linear data structures.	6 Marks	L4	CO1	PO2
		(OR)				
2.		What do you mean by Searching? Explain Sequential search and Binary search with help of example.	12 Marks	L2	CO2	PO1
		UNIT-II				
3.		Explain the operations of doubly linked lists with example.	12 Marks	L2	CO3	PO1
		(OR)				
4.		What is a circular linked list? Design an algorithm to perform the following operations on Circular linked list: i) insert an element. ii) delete an element from a circular linked list.	12 Marks	L2	CO3	PO3
		UNIT-III				
5.		Explain linked list implementation of stacks with example.	12 Marks	L2	CO4	PO1
		(OR)				
6.		How stack operations are implemented using an array with suitable example?	12 Marks	L3	CO4	PO2
		UNIT-IV				
7.		Define the following terms with example with respect to Binary tree: i) Strictly Binary Tree. ii) Completely Binary Tree. iii) Binary Search Tree.	12 Marks	L2	CO5	PO1
		(OR)				
8.		Write the steps to construct a binary tree for the given Inorder and Postorder traversals: Inorder : 9,3,15,20,7 Postorder : 9,15,7,20,3	12 Marks	L6	CO5	PO5
		UNIT-V				
9.	a)	What is Hashing? Explain different Hash functions used in the construction of Hash tables.	6 Marks	L3	CO6	PO5
	b)	Explain in detail M-way search trees.	6 Marks	L2	CO5	PO1
		(OR)				
10.		Discuss following with reference to graphs with an example: i) Directed graph. ii) Undirected graph. iii) Degree of vertex. iv) Acyclic Graph.	12 Marks	L2	CO5	PO1

PYTHON PROGRAMMING

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.		Describe the features, characteristics and applications of Python.	12 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Write short note on computational problem solving.	6 Marks	L2	CO1	PO1
	b)	Analyze the relationship between computers and algorithms.	6 Marks	L4	CO1	PO1
		UNIT-II				
3.	a)	How to perform iterations over list? Explain with an example.	6 Marks	L3	CO1	PO1
	b)	Explain solution control statement in python with example.	6 Marks	L2	CO1	PO1
		(OR)				
4.		Explain dictionary data type in python. Write a program to display the average temperature of any day of a week.	12 Marks	L3	CO3	PO3
		UNIT-III				
5.	a)	List and explain string methods in python with example.	6 Marks	L1	CO3	PO1
	b)	Explain the use of join and split method with examples. Describe why strings are immutable.	6 Marks	L2	CO3	PO3
		(OR)				
6.	a)	Describe function in python. Explain value returning and non value returning functions with examples.	6 Marks	L2	CO4	PO1
	b)	Differentiate between mutable *vs* immutable arguments with sample code.	6 Marks	L4	CO2	PO2
		UNIT-IV				
7.	a)	Explain the fundamental features of Object Oriented Programming.	6 Marks	L2	CO3	PO1
	b)	What is polymorphism? Illustrate manipulation of geometric shapes in python using polymorphism.	6 Marks	L3	CO3	PO3
		(OR)				
8.		Demonstrate the use of inheritance and polymorphism in python with an example program.	12 Marks	L3	CO4	PO1
		UNIT-V				
9.	a)	Discuss in brief about configuration of widgets.	6 Marks	L2	CO1	PO1
	b)	Write a short note on making widgets.	6 Marks	L2	CO5	PO3
		(OR)				
10.	a)	Choose the concepts of tkinter to implement Graphical user Interfaces using a python program.	6 Marks	L3	CO5	PO3
	b)	Describe the structure of tkinter.	6 Marks	L1	CO5	PO3

OBJECT ORIENTED ANALYSIS AND DESIGN

[MASTER OF COMPUTER APPLICATIONS]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1.	a)	What are the application areas of UML? Give any five.	CO4	5 Marks
	b)	Explain the scenario of modeling mechanisms of different levels of abstraction.	CO2	7 Marks
		(OR)		
2.		Draw software architecture with explanation. Represent 4+1 view model of systems architecture.	CO3	12 Marks
		UNIT-II		
3.	a)	Enumerate the steps to model webs of relationships.	CO2	8 Marks
	b)	Contrast simple aggregation with composite aggregation. What is association class?	CO4	4 Marks
		(OR)		
4.	a)	List and explain the uses of class diagram.	CO2	6 Marks
	b)	Adapt the steps to reverse engineer a class diagram.	CO2	6 Marks
		UNIT-III		
5.		Design use case diagram that depict the context of a credit card validation system. Explain briefly.	CO5	12 Marks
		(OR)		
6.		Explain the following with regard to interaction diagrams. i) Object life line. ii) <<create>> and <<destroy>> messages. iii) Focus of control. iv) Dewey decimal numbering. v) Nesting of tours of control. vi) Semantic equivalence.	CO1	12 Marks
		UNIT-IV		
7.	a)	Differentiate between a Process and a Thread.	CO2	3 Marks
	b)	Identify standard stereotypes that can be applied to active class.	CO1	3 Marks
	c)	Model the behavior of an ATM machine with the help of a state chart diagram.	CO4	6 Marks
		(OR)		
8.		Infer the states that are associated with Borrowing a book from a library system. Draw the state chart diagram that explains various states of a book during the processing.	CO5	12 Marks
		UNIT-V		
9.		Demonstrate various objects participating in the library information system. Explain the object diagram that is associated with various interactions with a neat diagram.	CO5	12 Marks
		(OR)		
10.		Adapt common modeling techniques to implement deployment.	CO3	12 Marks

OBJECT ORIENTED ANALYSIS AND DESIGN

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Define a Model. What is the importance of modeling?	6 Marks	L1	CO1	PO1
	b)	Explain the role of object-oriented modeling in design.	6 Marks	L1	CO1	PO2
		(OR)				
2.		Enumerate the steps for the following: i) Modeling different views of a system. ii) Modeling different levels of abstraction.	12 Marks	L2	CO1	PO3
		UNIT-II				
3.	a)	List the steps to model simple collaborations.	6 Marks	L2	CO1	PO3
	b)	What do you mean by the term Classifier? Identify all the types of classifiers that UML provides in modeling.	6 Marks	L3	CO2	PO2
		(OR)				
4.	a)	What is an Association class? Compare simple aggregation with composite aggregation.	4 Marks	L2	CO2	PO4
	b)	Design a class diagram rendering an ATM system using the following: i) Notes. ii) Stereotypes. iii) Other Adornments. iv) Tagged Values.	8 Marks	L4	CO4	PO5
		UNIT-III				
5.	a)	Draw a Use case diagram for the scenario of cellular network that place a phone call correctly and also schedule the receiving and conference calls.	6 Marks	L4	CO3	PO4
	b)	Explain the steps to model the context of a system.	6 Marks	L2	CO2	PO3
		(OR)				
6.		Explain the following with respect to interaction diagrams: i) Object lifeline ii) <<create>> and <<destroy>> messages. iii) Focus of control. iv) Dewey decimal numbering. v) Nesting of tours of control. vi) Semantic equivalence.	12 Marks	L2	CO3	PO2
		UNIT-IV				
7.		Infer the states that are associated with "*borrowing a book"* from a Library Management System. Draw the state chart diagram and explain various states of a book during the transaction.	12 Marks	L2	CO3	PO5
		(OR)				
8.		Compare the following: i) Event and Signal. ii) Sequential substates and Concurrent substates.	12 Marks	L4	CO3	PO4
		UNIT-V				
9.	a)	Explain the deployment diagram for modeling an embedded system.	6 Marks	L2	CO3	PO3
	b)	Design a model to represent "*issuing a book*" operation using UML collaboration diagram with appropriate notations.	6 Marks	L2	CO3	PO3
		(OR)				
10.	a)	Enumerate the steps in Modeling Adaptable Systems.	6 Marks	L2	CO3	PO3
	b)	Illustrate the process of forward and reverse engineering the artifact diagrams.	6 Marks	L3	CO3	PO3

LINUX PROGRAMMING

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Mention the significance of the following commands. i) ls – ld. ii) ls – l.	6 Marks	L2	CO1	PO1
	b)	How the *'sed'* can be implemented to filter the patterns for a text file?	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	List and explain disk and backup utilities available in Linux.	8 Marks	L2	CO1	PO1
	b)	How to use system commands in awk?	4 Marks	L4	CO1	PO2
		UNIT-II				
3.	a)	Perform Arithmetic operations in a shell script (small calculator) that adds, subtracts, multiplies and divides the given two integers. There are two division options: one returns the quotient and the other returns reminder. The script requires 3 arguments: The operation to be used and two integer numbers. The options are add (-a), subtract (-s), multiply (-m), quotient (-c) and reminder (-r).	6 Marks	L4	CO3	PO2
	b)	What are shell meta characters? How shell meta characters can behave in shell?	6 Marks	L3	CO3	PO2
		(OR)				
4.	a)	Discuss the control structures in shell script with examples.	6 Marks	L4	CO3	PO1 PO3
	b)	Provide the syntax for *'case'* in shell. Develop a shell script to implement simple calculator.	6 Marks	L3	CO3	PO3
		UNIT-III				
5.	a)	Describe file APIs. Implement a C program on file APIs.	6 Marks	L3	CO4	PO3
	b)	Implement any three Text processing utilities in Linux with suitable examples.	6 Marks	L2	CO4	PO2
		(OR)				
6.	a)	What is the difference between home directory and working directory and explain with an example?	6 Marks	L4	CO4	PO3
	b)	Elaborate the File attributes in Linux.	6 Marks	L1	CO4	PO1
		UNIT-IV				
7.	a)	Generate C program to create a child process and allow the parent to display "Hello" and the child to display "Welcome" on the screen.	6 Marks	L3	CO4	PO3
	b)	Illustrate is detail about ***sigsetjump()*** and ***siglongjump()*** API's.	6 Marks	L2	CO4	PO3
		(OR)				
8.	a)	Codify the syntax and explain each of the given functions with a suitable example. i) fork( ). ii) exec( ).	6 Marks	L3	CO4	PO4
	b)	Provide the syntax for the following with suitable example. i) kill. ii) alarm interval timers.	6 Marks	L3	CO4	PO4

UNIT-V

9.		How socket system calls can be adopted for connectionless protocol?	12 Marks	L4	CO2	PO2

(OR)

10.	a)	Apply the stream socket in a Client/Server program.	6 Marks	L3	CO2	PO3
	b)	Write syntax with a suitable example for the following socket API's. i) socket(). ii) bind(). iii) listen(). iv) connect(). v) accept().	6 Marks	L3	CO5	PO2

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.		Discuss structure of HTML program with suitable example.	12 Marks	L2	CO2	PO2
		(OR)				
2.	a)	Explain the Image and Paragraph tags of HTML with suitable examples.	6 Marks	L1	CO1	PO1
	b)	Describe the event handling mechanism in AJAX.	6 Marks	L3	CO3	PO3
		UNIT-II				
3.		Justify a "*Valid*" XML document is "*Well Formed*", as well as it conforms to the rules of a Document Type Definition (DTD).	12 Marks	L5	CO5	PO5
		(OR)				
4.	a)	Write difference between Document Object Model (DOM) and Simple API for XML (SAX).	6 Marks	L2	CO2	PO2
	b)	What is eXtensible Stylesheet Language Transformations (XSLT)? Explain with example.	6 Marks	L1	CO1	PO1
		UNIT-III				
5.		Define Servlet. Discuss Life cycle methods of Servlet.	12 Marks	L1	CO1	PO1
		(OR)				
6.		Define JDBC. Discuss JDBC drivers with suitable diagram.	12 Marks	L1	CO1	PO1
		UNIT-IV				
7.		Write a JSP program that using any one of implicit object.	12 Marks	L4	CO4	PO4
		(OR)				
8.		Sketch the life cycle of JSP with necessary steps and suitable example.	12 Marks	L3	CO3	PO3
		UNIT-V				
9.	a)	Develop a PHP that uses user defined function to print multiplication table of given number.	6 Marks	L3	CO3	PO3
	b)	Elucidate arrays in PHP.	6 Marks	L1	CO1	PO1
		(OR)				
10.		Implement files in PHP to read and write the contents of the file.	12 Marks	L5	CO6	PO5

BLOCKCHAIN TECHNOLOGIES

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.		Design the network view of a blockchain and explain the components in it.	12 Marks	L3	CO1	PO1 PO3
		(OR)				
2.		What are the elements needed to achieve full ecosystem decentralization?	12 Marks	L2	CO1	PO1 PO2
		UNIT-II				
3.		Define a transaction in blockchain. Discuss the life cycle of a transaction.	12 Marks	L1	CO2	PO2 PO3
		(OR)				
4.		Classify the theoretical foundations which had give scope for altcoins.	12 Marks	L2	CO2	PO2 PO5
		UNIT-III				
5.	a)	Discuss the importance of the smart contracts and build the templates of smart contracts.	6 Marks	L2	CO2	PO3 PO5
	b)	Describe the importance of Oracles in smart contract ecosystem.	6 Marks	L2	CO5	PO5
		(OR)				
6.		Demonstrate the working environment of Block Apps platform.	12 Marks	L3	CO4	PO3 PO4 PO5
		UNIT-IV				
7.		Illustrate the importance of Ethereum blockchain.	12 Marks	L2	CO2	PO1 PO2
		(OR)				
8.	a)	Express the key functions of miner in Ethereum blockchain.	6 Marks	L2	CO2	PO2 PO5
	b)	Identify the components of Messages in Ethereum environment.	6 Marks	L2	CO5	PO5 PO6
		UNIT-V				
9.		Write a short notes on the following: i) Block Size Increase. ii) Block Interval Reduction. iii) State Channels.	12 Marks	L2	CO3	PO2 PO3
		(OR)				
10.		Recognize how the blockchain has changed the business environment.	12 Marks	L2	CO3	PO2

CODE No.: 19MC40108 SVEC-19

INFORMATION RETRIEVAL SYSTEMS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	How information retrieval system is related to database management system?	6 Marks	L4	CO3	PO2 PO5
	b)	Discuss about digital libraries and data warehouses.	6 Marks	L2	CO1	PO2 PO3
		(OR)				
2.		What are miscellaneous capabilities in Information Retrieval Systems? Describe vocabulary browse and canned query.	12 Marks	L2	CO1	PO2 PO5
		UNIT-II				
3.		Illustrate the objectives of cataloging and indexing.	12 Marks	L4	CO1	PO2 PO5
		(OR)				
4.		Discuss about N-grams and Practical Algorithm To retrieve Information (PAT) data structures with example.	12 Marks	L2	CO1	PO2 PO5
		UNIT-III				
5.	a)	Differentiate statistical indexing and concept indexing.	6 Marks	L4	CO3	PO2
	b)	Explain hypertext linkages with suitable example.	6 Marks	L2	CO3	PO1
		(OR)				
6.		How manual clustering and automatic term clustering can be performed with suitable example?	12 Marks	L3	CO2	PO2 PO3
		UNIT-IV				
7.		List out user search techniques. Explain any two search techniques with suitable example.	12 Marks	L3	CO3	PO5
		(OR)				
8.		Discuss various information visualization technologies.	12 Marks	L2	CO2	PO1 PO2
		UNIT-V				
9.		Identify the importance of hardware usage in Text search system. Explain in detail Hardware text search system.	12 Marks	L2	CO2	PO1 PO5
		(OR)				
10.		Implement Knuth-Pratt-Morris algorithm with suitable example.	12 Marks	L3	CO2	PO3 PO5

CODE No.: 16MC50106 SVEC-16

INFORMATION SECURITY
[Master of Computer Applications]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1	a)	Analyze the problems associated with the One-Time pad.	CO2	4 Marks
	b)	What is a Transposition Cipher? Demonstrate Rail Fence cipher technique with an example.	CO3	8 Marks
		(OR)		
2	a)	What are the essential ingredients and the two basic functions used in encryption algorithms of a symmetric cipher?	CO2	6 Marks
	b)	On what dimensions do the cryptographic systems are characterized? Explain different types of cryptanalysis attacks.	CO2	6 Marks
		UNIT-II		
3	a)	Draw the Stream cipher structure and list the important design considerations for a stream cipher.	CO2	6 Marks
	b)	Explain the RC4 stream cipher technique used for encryption and decryption.	CO1	6 Marks
		(OR)		
4	a)	Write Diffie-Hellman Key exchange algorithm and explain with an example.	CO5	8 Marks
	b)	Analyze the possible approaches in attacking the RSA algorithm.	CO3	4 Marks
		UNIT-III		
5	a)	Discuss various authentication procedures supported in X.509.	CO1	7 Marks
	b)	Identify the Hash Function requirements.	CO2	5 Marks
		(OR)		
6		Overview Kerberos and analyze the Kerberos version 4 simple authentication dialogue and more secure authentication dialogue.	CO2	12 Marks
		UNIT-IV		
7		Illustrate the operational description and implementation of PGP.	CO4	12 Marks
		(OR)		
8	a)	Discuss about the S/MIME content types.	CO1	6 Marks
	b)	Why is the segmentation and reassembly function in PGP needed?	CO3	6 Marks
		UNIT-V		
9	a)	Brief about the Password Management.	CO1	6 Marks
	b)	What are typical phases of operation of a virus or worm?	CO2	6 Marks
		(OR)		
10		What is a Firewall? Classify the types of firewalls and list the capabilities and limitations of firewall.	CO2	12 Marks

CLOUD COMPUTING

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

	UNIT-I				
1.	Explain various Cloud Computing roles and boundaries.	12 Marks	L1	CO1	PO1 PO2
	(OR)				
2.	Differentiate the following: i) Horizontal Scaling and Vertical Scaling. ii) Private and Public Clouds.	12 Marks	L2	CO1	PO1 PO2
	UNIT-II				
3.	Describe the following: i) Web Services. ii) Rest Services.	12 Marks	L1	CO3	PO2 PO5
	(OR)				
4.	Demonstrate the working model of Redundant Storage Architecture in Cloud Computing.	12 Marks	L3	CO4	PO2 PO3
	UNIT-III				
5.	How can the provisioning of IT resources be automated and made available to cloud consumer's on-demand?	12 Marks	L3	CO4	PO2 PO4
	(OR)				
6.	How can a virtual server maintain its network connection when it is migrated to a new physical host?	12 Marks	L3	CO2	PO3 PO4
	UNIT-IV				
7.	Discuss the fundamental concepts of cloud security.	12 Marks	L2	CO5	PO1 PO2
	(OR)				
8.	Write a short notes on the following: i) Identity and Access Management. ii) Cloud-Based Security Groups.	12 Marks	L1	CO5	PO1 PO2
	UNIT-V				
9.	Distinguish between Infrastructure as a Service and Platform as a Service with suitable example.	12 Marks	L2	CO3	PO1 PO2
	(OR)				
10.	Define Software as a Service (SaaS). List characteristics of SaaS for salesforce.com	12 Marks	L1	CO3	PO1 PO2

DATA ANALYTICS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain Big Data Characteristics with examples.	6 Marks	L1	CO1	PO1
	b)	Compare Business Intelligence with Data Science.	6 Marks	L2	CO1	PO2
		(OR)				
2.		Sketch Data Analytics Architecture with explanation.	12 Marks	L2	CO1	PO3
		UNIT-II				
3.		How to Analyze the data using Hadoop and Unix Tools?	12 Marks	L2	CO2	PO2 PO5
		(OR)				
4.		Discuss in detail about: :i) Scaling out. ii) Combiner function.	12 Marks	L1	CO1	PO1
		UNIT-III				
5.		Illustrate the steps to configure the development environment in Hadoop.	12 Marks	L2	CO3	PO5
		(OR)				
6.		Develop unit test code to test map and reduce functions.	12 Marks	L3	CO4	PO3
		UNIT-IV				
7.		Elaborate on the Hive QL Indexes.	12 Marks	L2	CO2	PO1
		(OR)				
8.		List and explain DML operations using HIVE QL Views.	12 Marks	L3	CO2	PO4
		UNIT-V				
9.	a)	Demonstrate vector operations with examples.	6 Marks	L3	CO5	PO3
	b)	Explain the use of ***all*** and ***any*** with example.	6 Marks	L4	CO5	PO5
		(OR)				
10.		Write a R program to implement matrix operations.	12 Marks	L3	CO5	PO3

MOBILE APPLICATION DEVELOPMENT

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	What is Microwave technology? Explain.	6 Marks	L1	CO1	PO1 PO2
	b)	Write about Radio Data Networks.	6 Marks	L1	CO1	PO1 PO2
		(OR)				
2.	a)	Draw the neat diagram for J2ME architecture.	6 Marks	L1	CO1	PO1 PO2
	b)	Distinguish the J2ME features from standard Java.	6 Marks	L1	CO1	PO1 PO2
		UNIT-II				
3.		Illuminate Screen class and Alert class with examples.	12 Marks	L2	CO5	PO2 PO4
		(OR)				
4.		Define Display class and Command class. Explain with examples.	12 Marks	L2	CO5	PO2 PO4
		UNIT-III				
5.		Write about the following with respect to record management system of J2ME. Storing, Writing, Reading and Sorting of records.	12 Marks	L2	CO3	PO3 PO5
		(OR)				
6.		With suitable example, describe Canvas class.	12 Marks	L1	CO2	PO2 PO3
		UNIT-IV				
7.		Discuss Database schema with suitable examples.	12 Marks	L2	CO3	PO3 PO5
		(OR)				
8.	a)	List the Data types used in JDBC.	6 Marks	L2	CO4	PO3 PO4
	b)	Write about Exceptions.	6 Marks	L2	CO4	PO3 PO4
		UNIT-V				
9.		Write about the following with respect to tables in J2ME. Inserting data, Selecting data and Updating data.	12 Marks	L2	CO5	PO2 PO3
		(OR)				
10.		What is Connection? Explain Connections and Streams.	12 Marks	L4	CO4	PO2 PO3

.NET TECHNOLOGIES

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

	UNIT-I				
1.	Sketch .Net framework architecture with neat diagram and also discuss IL, CLR, CTS and CLS.	12 Marks	L2	CO2	PO1 PO2
	(OR)				
2.	Write a console application to Perform Celsius to Fahrenheit Conversion and Fahrenheit to Celsius conversion.	12 Marks	L4	CO5	PO2 PO4
	UNIT-II				
3.	Define Inheritance and explain it in brief with suitable example.	12 Marks	L3	CO2	PO2 PO3
	(OR)				
4.	Implement a C# program to generate divide by zero exception and also handle this exception.	12 Marks	L4	CO5	PO2 PO4
	UNIT-III				
5.	Can you explain Constructor and Function Overloading with example?	12 Marks	L3	CO1 CO5	PO1 PO2
	(OR)				
6.	Explain Explicit Interface Implementation with suitable example.	12 Marks	L2	CO1 CO5	PO2 PO5
	UNIT-IV				
7.	Draw and explain ADO.NET architecture in detail.	12 Marks	L2	CO2	PO2 PO3
	(OR)				
8.	Explain usage of following ADO.NET objects with their methods. i) SqlDataAdapter. ii) SqlCommand object. iii) Dataset.	12 Marks	L1	CO2	PO1 PO2 PO3
	UNIT-V				
9.	Explain the concept of master pages in ASP.NET with example.	12 Marks	L3	CO4	PO2 PO4
	(OR)				
10.	Explain various Validation controls for ASP.NET with example.	12 Marks	L3	CO4	PO2 PO4

INTERNET OF THINGS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Identify various architectural constraints of REST-based communication APIs.	6 Marks	L2	CO1	PO1
	b)	How do data collection and analysis approaches differ in M2M and IoT?	6 Marks	L3	CO1	PO2
		(OR)				
2.	a)	Examine, how Software Defined Networking (SDN) can be used for various levels of IoT.	6 Marks	L3	CO1	PO3
	b)	Describe the functional blocks of an IoT system.	6 Marks	L1	CO1	PO2
		UNIT-II				
3.	a)	Develop a python pseudo code for switching LED on/off from Raspberry Pi console and also for blinking LED.	6 Marks	L2	CO4	PO5
	b)	Explain the Seven Layered architecture of IoT with a neat sketch.	6 Marks	L2	CO1	PO2
		(OR)				
4.	a)	What choice would you have made to improve the health and fitness monitoring? Discuss about the wearable electronics.	6 Marks	L3	CO2	PO2
	b)	Design the process of interfacing a Light Sensor (LDR) with Raspberry Pi with suitable pseudocode.	6 Marks	L2	CO4	PO5
		UNIT-III				
5.	a)	How would you address the limitations of the existing network management protocols and discuss the overview of the operator requirements?	7 Marks	L4	CO2	PO4
	b)	Draw and analyze the layered architecture of NETCONF protocol.	5 Marks	L3	CO1	PO2
		(OR)				
6.	a)	How sensor data is stored and interpreted that could be used for processing?	4 Marks	L2	CO2	PO3
	b)	Can you elaborate the overview of Internet Communications?	8 Marks	L1	CO2	PO2
		UNIT-IV				
7.		Describe the following for weather monitoring IoT system: i) Domain model. ii) Information model. iii) Deployment design	12 Marks	L2	CO3	PO2
		(OR)				
8.	a)	Distinguish between REST-based and WebSocket-based implementation of weather monitoring system.	6 Marks	L2	CO5	PO2
	b)	How would you implement WAMP publisher and subscriber using AutoBahn framework?	6 Marks	L2	CO4	PO2

UNIT-V

9.	a)	Examine the security challenges associated with Medical IoT devices.	6 Marks	L2	CO4	PO4 PO10
	b)	Write short notes on the following: i) Remote vehicle access. ii) Targeting cameras in IoT ecosystem.	6 Marks	L1	CO4	PO1
		(OR)				
10.	a)	Discuss the MapReduce job execution workflow with a neat sketch.	5 Marks	L2	CO3	PO2
	b)	How analytics can be performed on the data? Draw and explain the deployment design of forest fire detection system and perform data analysis for forest fire detection.	7 Marks	L4	CO3	PO4

ADVANCED ALGORITHMS

[Computer Science]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What are the advantages of algorithms compared to flow charts? Discuss.	6 Marks	L2	CO1	PO1
	b)	In an algorithm that tests a given integer whether prime or not, discuss the complexity of algorithm, when iteration construct is used.	6 Marks	L3	CO1	PO2
		(OR)				
2.	a)	Maximize total profit of only one job, which can be scheduled at any time: Input : Five Jobs with following deadlines and profits	6 Marks	L2	CO1	PO1

JobID	*Deadline*	*Profit*
a	2	100
b	1	19
c	2	27
d	1	25
e	3	15

	b)	Define 0/1 Knapsack problem. How the do the control abstract of divide and conquer will apply to the solution of 0/1 Knapsack Problem? Discuss.	6 Marks	L3	CO1	PO2

UNIT-II

3.	a)	Discuss how the problem solving methodology "Dynamic Programming" be selected for solving a problem. State the requirement criteria.	6 Marks	L2	CO1 CO2	PO1
	b)	Discuss how the Traveling Salesperson problem be solved using Dynamic Programming.	6 Marks	L3	CO2	PO1
		(OR)				
4.	a)	Discuss how backtracking manifests as a 'dynamic programming problem solving methodology' in the case of ***n***-queen problem.	6 Marks	L2	CO1 CO2	PO2
	b)	Given a set of non-negative integers, and a value sum, determine if there is a subset of the given set with sum equal to given sum. set[] = {3, 34, 4, 12, 5, 2}, sum = 9.	6 Marks	L3	CO2	PO2

UNIT-III

5.	a)	State the difference between NP, NP complete and NP-hard problem.	6 Marks	L2	CO1 CO2	PO1
	b)	Define polynomial reducible. Write about undecidable problem.	6 Marks	L3	CO1 CO2	PO2

(OR)

6.	a)	Define set cover. How a set cover contributes to greedy method of programming methodology?	6 Marks	L2	CO1 CO2	PO1
	b)	'A set cover problem can overcome in approximation', discuss the problem is NP-complete.	6 Marks	L2	CO1	PO1

UNIT-IV

7.	a)	Define maximum flow in the directed capacitated network. Write about flow rules.	6 Marks	L2	CO1	PO1
	b)	Discuss how to obtain residual network in the application of Ford-Fulkerson algorithm.	6 Marks	L4	CO2	PO1

(OR)

8.	a)	"For any integer a and any positive integer n, there exist unique integers q and r such that $0 \leq r < n$ and $a = qn + r$". Discuss the properties of the said division theorem.	6 Marks	L2	CO1 CO2	PO1
	b)	Discuss the worst-case runtime of Euclid algorithm for determining **gcd** of three integers a, b, c.	6 Marks	L4	CO2	PO1

UNIT-V

9.	a)	What is dictionary? Discuss the role of dictionary in string-pattern matching.	6 Marks	L2	CO1	PO1
	b)	Write about the runs of the naïve pattern-matching algorithm for the following: Search string : ababbaabaaab Pattern string : abaa	6 Marks	L2	CO2	PO1

(OR)

10.	a)	Discuss how tries contribute in string-pattern matching algorithms.	6 Marks	L2	CO1	PO1
	b)	Write about randomized algorithms. How do they contribute to obtain the optimal solutions when compared with traditional problem solving methodologies?	6 Marks	L2	CO1	PO1

CODE No.: 19MT10502 SVEC-19

ADVANCED DATA STRUCTURES

[Computer Science]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Define stack and write functions to implement Push and Pop operations on stack using arrays with stack full and stack empty conditions.	6 Marks	L2	CO1	PO1
	b)	Write the functions to perform insertion and deletion in a circular queue and illustrate with a sample input and output.	6 Marks	L3	CO1	PO1
		(OR)				
2.	a)	Explain the algorithm to evaluate postfix expression using stack with an illustration.	6 Marks	L3	CO1	PO1
	b)	What is the advantage of doubly linked list over singly linked list? Illustrate with an example.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	Discuss in detail about the use of maps in STL.	6 Marks	L2	CO2	PO1
	b)	List and explain the properties of B-tree.	6 Marks	L2	CO1	PO1
		(OR)				
4.	a)	Write a short note on different tree traversal techniques.	6 Marks	L2	CO1	PO1
	b)	Explain the bottom-up insertion procedure in the Red-Black trees with an example.	6 Marks	L2	CO1	PO1
		UNIT-III				
5.	a)	Discuss in detail about the probabilistic analysis of skip lists.	6 Marks	L2	CO2	PO1
	b)	With an example illustrate the Depth First Search traversal technique in graphs.	6 Marks	L2	CO1	PO2
		(OR)				
6.	a)	Write a short note on deterministic skip lists and its advantages.	6 Marks	L2	CO2	PO1
	b)	Give an outline on the representation of a graph and list its application.	6 Marks	L2	CO1	PO1
		UNIT-IV				
7.	a)	Prove that the amortized time of FIB-HEAP-EXTRACT-MIN and FIB-HEAP-DELETE is O(log n).	6 Marks	L4	CO1	PO2
	b)	Analyze in detail about the applications of Priority Queues.	6 Marks	L3	CO1	PO2
		(OR)				
8.	a)	Illustrate the separate chaining method of handling collision with an example.	6 Marks	L2	CO1	PO2
	b)	Write a short note on Hash function and Hash tables.	6 Marks	L2	CO1	PO1
		UNIT-V				
9.	a)	Analyze the performance of range-searching query in a quad tree.	6 Marks	L4	CO1	PO2
	b)	Write a short note on two different kinds of k-d trees, region-based k-d trees and point-based k-d trees.	6 Marks	L2	CO2	PO1
		(OR)				
10.	a)	Write an algorithm for two-dimensional range searching in range trees.	6 Marks	L3	CO1	PO1
	b)	With a neat sketch explain the two dimensional range searching in range trees.	6 Marks	L2	CO1	PO1

MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE

[Computer Science, Computer Networks and Information Security]

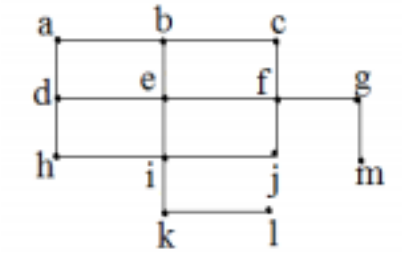
Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Construct a truth table to show that $(p \wedge q) \rightarrow p$ is a tautology.	6 Marks	L3	CO1	PO1
	b)	Show that $\forall x(P(x) \wedge Q(x)) \equiv \forall x P(x) \wedge \forall x Q(x)$.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Obtain principle disjunctive normal form of the following: $p \rightarrow \{(p \rightarrow q) \wedge \neg (\neg q \vee \neg q)\}$.	6 Marks	L2	CO1	PO1
	b)	Show that $R \rightarrow (S \rightarrow Q)$, $\sim P \vee R$ and $S \Rightarrow P \rightarrow Q$.	6 Marks	L3	CO1	PO1
		UNIT-II				
3.	a)	Let X = {1,2,3,4,5,6} and R be a relation defined as $(x, y) \in R$ if and only if $x - y$ is divisible by 3. Find elements of relation of R.	6 Marks	L3	CO1	PO1
	b)	Let B={a,b,c} and A=P(B) be the power set of B. Draw the Hasse diagram for $\subseteq$ and poset A.	6 Marks	L2	CO1	PO1
		(OR)				
4.	a)	If A, B and C are any three sets then prove that i) $A \cup (B - A) = A \cup B$. ii) $A - (B \cup C) = (A - B) \cap (A - C)$.	6 Marks	L3	CO1	PO1
	b)	Show that the function F from $<N, +>$ to $<N, *>$ defined by $f(x) = 2X$ for all x belong to N is a homomorphism.	6 Marks	L2	CO1	PO1
		UNIT-III				
5.	a)	There are 35 students and 4 teachers in a college. In how many ways every student shakes hand with other students and all the teachers.	6 Marks	L2	CO1	PO1
	b)	How many different five digit numbers can be formed from the digits 0,1,2,3 and 4?	6 Marks	L2	CO1	PO1
		(OR)				
6.	a)	Prove that the order of $\boldsymbol{a}^{-1}$ is same as the order of $\boldsymbol{a}$.	6 Marks	L3	CO2	PO1
	b)	In how many ways can you select at least one king, if you choose five cards from a Deck of 52 cards?	6 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Solve the Recurrence Relation. $a^2_{n+2} - 5a^2_{n+1} + 6a^2_n = 0$, $n \geq 0$, $a_0 = a_1 = 1$	6 Marks	L2	CO2	PO2
	b)	Solve the Recurrence Relation $U_n + 5U_{n-1} + 5U_{n-2} = 0$, $n \geq 0$, where the initial conditions are $U_0=0$ and $U_1=2\sqrt{5}$.	6 Marks	L2	CO2	PO2
		(OR)				
8.	a)	Solve $\sqrt{a_n} - \sqrt{a_{n-1}} - 2\sqrt{a_{n-2}} = 0$ where $a_0 = a_1 = 1$.	6 Marks	L2	CO2	PO1
	b)	Find the Sequence generated by the function $(3 + X)^3$.	6 Marks	L2	CO2	PO1

UNIT-V

9.	a)	Give an example graph which is Hamiltonian but not Eulerian.	6 Marks	L2	CO2	PO1
	b)	Using depth first search method, determine the spanning tree **T** for the following graph with the vertex ***e*** as the root of **T**.	6 Marks	L4	CO2	PO2



(OR)

10.	a)	Let G be the non directed graph of order 9 such that each vertex has degree 5 or 6. Prove that atleast 5 vertices have degree 6 or atleast 6 vertices have degree 5.	6 Marks	L2	CO2	PO2
	b)	Determine the number of edges in: i) K_n ii) $K_{m,n}$ iii) P_n.	6 Marks	L2	CO2	PO1

M.Tech I Semester (SVEC-19) Regular/Supplementary Examinations, August 2021

RESEARCH METHODOLOGY AND IPR

[Computer Science, V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Discuss in detail various types of research designs. Which factors influence the choice of research design?	12 Marks	L3	CO1	PO1
		(OR)				
2.		Discuss the difference between probability and non- probability sampling techniques. Discuss in detail various types of probability sampling techniques.	12 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Enumerate different types of errors that may occur while formulating the hypothesis. Justify with an example.	6 Marks	L2	CO1	PO1
	b)	Most graduate schools of business require applicants for admission to take the Graduate Management Admission Council's GMAT examination. Scores on the GMAT are roughly normally distributed with a mean of 527 and a standard deviation of 112. What is the probability of an individual scoring above 500 on the GMAT?	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Justify how *chi-square* test can be used for quantifying the Goodness of Fit and enlist the procedural steps involved in testing.	6 Marks	L4	CO1	PO3
	b)	The table given below shows the data obtained during an epidemic of cholera:	6 Marks	L3	CO1	PO2

	Attacked	**Not attacked**	**Total**
Inoculated	31	469	500
Not inoculated	185	1315	1500
Total	**216**	**1784**	**2000**

Test the effectiveness of Inoculation in preventing cholera using chi-square test.

UNIT-III

5.	a)	Is it necessary to practice ethics in research. If yes, justify your answer with the ethics that should be followed while leading a research.	6 Marks	L4	CO2	PO6
	b)	Explain the significance of a research report and narrate the various steps involved in writing such a report.	6 Marks	L2	CO2	PO5

(OR)

6.	a)	Write a brief note on the '*task of interpretation'* in the context of research methodology.	6 Marks	L3	CO2	PO5
	b)	Mention the different types of reports, particularly pointing out the difference between a technical report and a popular report.	6 Marks	L3	CO2	PO5
		UNIT-IV				
7.	a)	Explain the process involved in trademark selection and evaluation.	6 Marks	L2	CO3	PO1
	b)	Describe the process involved for trademark registration.	6 Marks	L2	CO3	PO1
		(OR)				
8.		Discuss the importance of intellectual property rights.	12 Marks	L2	CO3	PO6
		UNIT-V				
9.		What is copyright? Why should copyright be protected? What are the classes of works for which copyright protection is available in India?	12 Marks	L2	CO3	PO6
		(OR)				
10		Explain copy right registration processes.	12 Marks	L2	CO3	PO6

.

ANALOG CMOS VLSI DESIGN

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Find the voltage gain of the circuit shown below.	5 Marks	L2	CO1	PO1

	b)	Explain about cascode stage amplifier with resistive load.	7 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Illustrate how a MOS transistor can act like current source.	5 Marks	L2	CO1	PO1
	b)	Develop the large signal model for CG Configuration with necessary equations.	7 Marks	L3	CO1	PO2

UNIT-II

3.	a)	Compare allowable voltages in a cascode with resistive load.	6 Marks	L2	CO1	PO1
	b)	Demonstrate the shielding property of cascode stage amplifier.	6 Marks	L2	CO1	PO1
		(OR)				
4.	a)	Explain the effect of Noise in source follower.	5 Marks	L2	CO1	PO1
	b)	Develop a differential pair with current source as a load and show the frequency response.	7 Marks	L3	CO1	PO2

UNIT-III

5.	a)	Classify the different types of Feedback topology and explain any one of them.	7 Marks	L2	CO2	PO1
	b)	Illustrate Noise in Op Amps.	5 Marks	L2	CO2	PO1
		(OR)				
6.	a)	Develop the expression for power-supply rejection ratio of Two-stage op-amps.	7 Marks	L3	CO2	PO2
	b)	Define the following: i) Gain Boosting. ii) Input range limitations.	5 Marks	L1	CO2	PO1

UNIT-IV

7.	a)	Model a two stage op amp to explain the trade off involved in selecting the input stage as p-channel or n-channel.	7 Marks	L3	CO3	PO3
	b)	Demonstrate PTAT Current generation.	5 Marks	L2	CO3	PO1
		(OR)				
8.	a)	Define the following: i) Supply-Independent Biasing ii) Phase Margin.	6 Marks	L1	CO3	PO1
	b)	Classify the temperature independent references.	6 Marks	L2	CO3	PO1

UNIT-V

9.	a)	Explain Charge Injection Cancellation and precision consideration in Sampling Switches.	7 Marks	L2	CO4	PO1
	b)	Show the equivalent circuit of non inverting amplifier during precision consideration in switched capacitor.	5 Marks	L2	CO4	PO1
		(OR)				
10.	a)	Explain the basic PLL technology.	5 Marks	L2	CO4	PO1
	b)	Explain switched capacitor circuit and its principle.	7 Marks	L2	CO4	PO1

CODE No.: 19MT15702 SVEC-19

DEVICE MODELING

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Write in detail about potential balance and charge balance of two terminal MOS structure.	6 Marks	L1	CO1	PO1
	b)	Categorize the different Regions of inversions in MOS structure.	6 Marks	L4	CO1	PO1
		(OR)				
2.	a)	Explain in detail about pinch-off voltage and body effect.	6 Marks	L2	CO1	PO1
	b)	Show the CV characteristics of a MOS structure.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	Compare complete and simplified charge sheet models with necessary equations.	6 Marks	L2	CO1	PO1
	b)	Illustrate the general charge sheet models.	6 Marks	L2	CO1	PO1
		(OR)				
4.	a)	Show the necessary diagrams of IDS-VDS characteristics in weak inversion with VGS as a parameter and explain the comparison to weak and strong inversion equations.	6 Marks	L1	CO1	PO1
	b)	Compare and contrast the regions of operation of a transistor.	6 Marks	L2	CO1	PO1
		UNIT-III				
5.	a)	Show the structure of LOCUS isolated MOSFET and explain.	8 Marks	L1	CO2	PO1
	b)	Explain: i) Break down in MOS. ii) Effective threshold voltage.	4 Marks	L2	CO2	PO1
		(OR)				
6.	a)	Define Carrier velocity Saturation. Analyze its importance in small dimensions with necessary equations.	8 Marks	L2	CO2	PO1
	b)	Briefly explain short channel effects.	4 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Discuss in detail about terminal currents and charges in Quasi static operation under DC excitation.	6 Marks	L3	CO3	PO1
	b)	Explain the evaluation of charges in strong inversion for non-saturation with necessary expressions.	6 Marks	L2	CO3	PO1
		(OR)				
8.	a)	Explain the evaluation of charges in weak inversion of a MOS transistor with necessary expressions.	6 Marks	L2	CO3	PO1
	b)	What is Non quasi-static analysis? How is it different from Quasi-static analysis?	6 Marks	L1	CO3	PO1
		UNIT-V				
9.	a)	Compare the gate capacitances and junction capacitance with neat structures.	5 Marks	L2	CO3	PO1
	b)	Develop a low frequency small signal model for the intrinsic part of MOS Device and Explain.	7 Marks	L3	CO3	PO2
		(OR)				
10.		Develop small signal model of a MOS transistor including extrinsic capacitance and resistance.	12 Marks	L4	CO3	PO2

DIGITAL CMOS VLSI DESIGN

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Interpret the dynamic behaviour of CMOS inverter by computing the capacitances and propagation delay.	7 Marks	L2	CO1	PO1
	b)	Survey the leakage issues in dynamic CMOS circuits.	5 Marks	L4	CO1	PO1
		(OR)				
2.	a)	Let Z = (ABCDE + FGH)'. Develop a BiCMOS and Domino CMOS implementation of the Boolean function Z.	6 Marks	L4	CO1	PO2
	b)	Conclude the various dynamic CMOS designs.	6 Marks	L4	CO1	PO2
		UNIT-II				
3.	a)	Identify and summarize logic styles for pipelined structures.	6 Marks	L3	CO2	PO1
	b)	Recall the design and functionality of Bi-stable and Non Bi-stable elements.	6 Marks	L1	CO2	PO1
		(OR)				
4.	a)	Illustrate the functionality of dynamic sequential circuits.	6 Marks	L1	CO2	PO1
	b)	Develop and explain a circuit to overcome threshold voltage drops in dynamic circuits.	6 Marks	L3	CO2	PO1
		UNIT-III				
5.	a)	Apply the design considerations of a 4-bit SRAM and develop its CMOS logic diagram.	5 Marks	L3	CO3	PO2
	b)	List various types of memory classifications and explain in brief.	7 Marks	L1	CO3	PO1
		(OR)				
6.	a)	Illustrate the method of logical effort for transistor sizing.	5 Marks	L1	CO3	PO1
	b)	Model a 3T DRAM cell and explain its operation in detail.	7 Marks	L3	CO3	PO2
		UNIT-IV				
7.	a)	Explain the importance of multiplier with pipelined algorithm for future implementations.	5 Marks	L2	CO3	PO1
	b)	Show the general arrangement of 4 bit arithmetic processor.	7 Marks	L1	CO3	PO1
		(OR)				
8.	a)	Illustrate the various considerations to implement ALU functions with an adder.	6 Marks	L1	CO3	PO1
	b)	Develop a 4x4 Barrel shifter and list some of its applications.	6 Marks	L3	CO3	PO2
		UNIT-V				
9.	a)	Recall the behavioral synthesis design flow for a CMOS System.	5 Marks	L1	CO4	PO1
	b)	Identify the significance of Design Economics for future implementations in digital design.	7 Marks	L3	CO4	PO1
		(OR)				
10.	a)	What are the elements for cost to produce an integrated circuit?	6 Marks	L1	CO4	PO1
	b)	Outline the details present in Data Sheets that contribute future enhancement of digital circuits.	6 Marks	L2	CO4	PO1

IC FABRICATION

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Describe in detail evaluation of epitaxial thickness and doping.	6 Marks	L2	CO1	PO1
	b)	Compare the merits and demerits of MBE (Molecular Beam Epitaxy).	6 Marks	L4	CO1	PO1
		(OR)				
2.	a)	Define oxidation.	3 Marks	L1	CO1	PO1
	b)	Explain and justify the oxidation induced defects.	4 Marks	L2	CO1	PO1
	c)	List the rules to maintain clean room and its safety.	5 Marks	L1	CO1	PO1
		UNIT-II				
3.	a)	Explain how Electron Lithography Technique is used in IC fabrication.	6 Marks	L2	CO2	PO3
	b)	Examine the reactive plasma etching techniques. Apply any one technique for IC fabrication.	6 Marks	L4	CO1	PO3
		(OR)				
4.	a)	Identify the techniques for Reactive Plasma Etching.	6 Marks	L2	CO1	PO3
	b)	Explain the process of : i) X-ray Lithography. ii) Anisotropy etch mechanism.	6 Marks	L2	CO1	PO1
		UNIT-III				
5.	a)	Briefly discuss about Fick's one dimensional diffusion theory.	6 Marks	L2	CO1	PO1
	b)	Give a brief account on doping, oxidation and properties of polysilicon.	6 Marks	L2	CO1	PO1
		(OR)				
6.	a)	Evaluate the Low Pressure CVD (LPCVD) and explain how uniform deposition can be achieved in LPCVD.	8 Marks	L5	CO1	PO1
	b)	Analyze the VLSI shallow junctions using ion implantation.	4 Marks	L4	CO1	PO1
		UNIT-IV				
7.	a)	Discuss the problems associated with Al-Cu interconnect.	6 Marks	L2	CO2	PO3
	b)	Identify the different metallization problems in processing and predict methods to eradicate or minimize the related issues.	6 Marks	L2	CO2	PO1
		(OR)				
8.	a)	Identify the problems encountered in metallization and suggest the methods to overcome them.	8 Marks	L2	CO2	PO3
	b)	Calculate the RC time constant for a 1 cm long doped polysilicon interconnection runner on 1 μm thick SiO_2. The polysilicon has a resistance of 5000Ω and a resistivity ρ of 1000$\mu\Omega$/cm.	4 Marks	L5	CO2	PO1
		UNIT-V				
9.	a)	Memorize the concept of "*beam specimen interactions that the analytical beams with materials*".	6 Marks	L1	CO3	PO1
	b)	Classify VLSI assembly technologies for multidisciplinary applications.	6 Marks	L2	CO3	PO1
		(OR)				
10.		With flow diagram, explain the generic assembly sequence for plastic and ceramic packages.	12 Marks	L2	CO3	PO3

FPGA ARCHITECTURES

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Recognize the importance of FPGA and its applications.	7 Marks	L1	CO1	PO1
	b)	Implement a combinational circuit using any one of the programmable logic devices.	5 Marks	L4	CO1	PO2
		(OR)				
2.		Summarize the complex programmable logic devices and discuss.	12 Marks	L4	CO1	PO1

UNIT-II

3.	a)	Draw and explain Configurable Logic Block of Xilinx XC 3000 FPGA.	6 Marks	L2	CO2	PO1
	b)	Write short notes on I/O block of Xilinx XC 3000 FPGA.	6 Marks	L2	CO2	PO1
		(OR)				
4.		Explain library based technology mapping with suitable examples.	12 Marks	L2	CO2	PO1

UNIT-III

5.		Illustrate the One-hot design method with an example.	12 Marks	L2	CO3	PO3
		(OR)				
6.	a)	Design the state transition diagram from the following and explain.	6 Marks	L3	CO3	PO2

Present State	Next State for Input 0	Next State for Input 1
Q_0	Q_1, Q_2	Q_1
Q_1	Q_2	Q_3
Q_2	Q_1	Q_3
Q_3	Q_2	Q_2

	b)	Discuss in detail about state diagram symbols and components.	6 Marks	L4	CO3	PO1

UNIT-IV

7.		Design a data path bus using One-hot method.	12 Marks	L3	CO4	PO2
		(OR)				
8.		Explain how ASMs are used in the design of One-hot state machine.	12 Marks	L4	CO4	PO3

UNIT-V

9.		Develop the Simulating Internal Buses in General-Purpose EPLDs.	12 Marks	L3	CO5	PO2
		(OR)				
10.	a)	List the features of Micro Channel bus master interface.	6 Marks	L1	CO5	PO1
	b)	Write short notes on Two Source Bus Configurations.	6 Marks	L1	CO5	PO1

CLOUD COMPUTING

[Computer Science]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain the virtualization process involved in Amazon Web Services.	6 Marks	L2	CO2	PO1
	b)	Compare Grid computing and Cloud computing.	6 Marks	L2	CO2	PO1
		(OR)				
2.	a)	Examine how VMware turned as a pioneer in the commercial market of virtualization as a service provider.	6 Marks	L4	CO1	PO2
	b)	Compare Type-I and Type-II Hypervisors.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	Explain the risks and challenges of using cloud environment.	6 Marks	L2	CO1	PO1
	b)	Distinguish public cloud and private cloud model used for deployment.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Examine the need for combining Infrastructure as a Service, Platform as a Service and Software as a Service.	6 Marks	L4	CO2	PO2
	b)	Explain the threat agents that can be considered while building cloud environment.	6 Marks	L2	CO2	PO1
		UNIT-III				
5.	a)	Explain the basic services provided in cloud environment.	6 Marks	L2	CO2	PO1
	b)	Model user authentication in Identity as a Service. Discuss with an example.	6 Marks	L3	CO2	PO2
		(OR)				
6.	a)	Outline the characteristics of Platform as a Service in cloud.	6 Marks	L2	CO2	PO1
	b)	Distinguish the characteristics of Platform as a Service and Software as a Service models with respect to specific cloud service providers.	6 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Identify a suitable reference model for workflow management system.	6 Marks	L3	CO2	PO2
	b)	Explain the characteristics of Message Passing Interface.	6 Marks	L2	CO2	PO1
		(OR)				
8.	a)	Explain the additional properties of application model with respect to embarrassingly parallel application.	6 Marks	L2	CO2	PO1
	b)	Summarize the achievement of using throughput computing to create a cloud environment.	6 Marks	L2	CO2	PO1
		UNIT-V				
9.	a)	Explain the types of services provided by Microsoft Azure.	6 Marks	L2	CO2	PO1
	b)	Outline the architecture for SQL Azure.	6 Marks	L2	CO2	PO1
		(OR)				
10.	a)	Explain the storage service provided through Amazon S3.	6 Marks	L2	CO2	PO1
	b)	Identify the energy management aspects used to build cloud environment in GoogleApp engine.	6 Marks	L3	CO2	PO2

WIRELESS SENSOR NETWORKS

[Computer Science]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	What is a wireless sensor network? What are the characteristic requirements of wireless sensor network?	6 Marks	L2	CO1	PO2
	b)	List different sensor classifications in wireless sensor network.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	What is the difference between passive and active sensors and list a few examples for each category.	6 Marks	L2	CO1	PO1
	b)	Write history of wireless sensor networks.	6 Marks	L2	CO1	PO2
		UNIT-II				
3.	a)	Differentiate between contention based protocols and schedule based protocol.	6 Marks	L2	CO2	PO1
	b)	Explain about Routing-Enhanced MAC Protocol.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Discuss about Traffic-Adaptive Medium Access contention free protocol.	6 Marks	L2	CO2	PO1
	b)	Compare IEEE 802.11 with IEEE 802.15.4 wireless MAC protocol.	6 Marks	L3	CO2	PO2
		UNIT-III				
5.	a)	List different routing metrics used in wireless sensor network and explain.	6 Marks	L2	CO2	PO1
	b)	Explain about various clustering mechanisms in wireless sensor network.	6 Marks	L2	CO2	PO2
		(OR)				
6.		Explain about Sensor Protocols for Information via Negotiation (SPIN) protocol. And also explain different models in SPIN.	12 Marks	L2	CO2	PO2
		UNIT-IV				
7.		Explain different types of security attacks in wireless sensor network.	12 Marks	L2	CO1	PO1
		(OR)				
8.	a)	Discuss various security protocols for wireless sensor network.	6 Marks	L2	CO2	PO2
	b)	Explain Localized Encryption and Authentication Protocol for security in wireless sensor networks.	6 Marks	L2	CO2	PO2
		UNIT-V				
9.	a)	Explain real life deployment related to wireless sensor networks in detail.	6 Marks	L2	CO1	PO1
	b)	What are underwater sensor nodes? Specify the functionality of these nodes.	6 Marks	L3	CO1	PO1
		(OR)				
10.		Discuss the design analysis of transition from wireless sensor network to IoT.	12 Marks	L2	CO2	PO2

RESEARCH METHODOLOGY AND IPR

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain the different steps involved in a research process.	6 Marks	L2	CO1	PO1
	b)	Explain the need and functions of review of literature.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Discuss the various characteristics of a good research.	6 Marks	L2	CO1	PO1
	b)	Enumerate the main objectives of research and explain them in detail.	6 Marks	L1	CO1	PO1
		UNIT-II				
3.		Distinguish between: i) Parametric and Non-Parametric tests. ii) Analysis of variance and covariance.	12 Marks	L2	CO1	PO1
		(OR)				
4.	a)	What is Chi-square test? Explain its significance in statistical analysis.	6 Marks	L3	CO2	PO1
	b)	The average number of acres burned by forest and range fires in a large New Mexico county is 4,300 acres per year, with a standard deviation of 750 acres. The distribution of the number of acres burned is normal. What is the probability that between 2,500 and 4,200 acres will be burned in any given year?	6 Marks	L3	CO1	PO2
		UNIT-III				
5.	a)	"It is only through interpretation the researcher can expose the relations and processes that underlie his findings". Explain with an example.	6 Marks	L2	CO2	PO1
	b)	What do you mean by ethics in research and elaborate what are the ethics that should be followed while leading a research?	6 Marks	L3	CO2	PO6
		(OR)				
6.	a)	Explain various techniques of interpretation of research results.	6 Marks	L3	CO2	PO5
	b)	Explain various steps involved in writing a research report.	6 Marks	L2	CO2	PO5
		UNIT-IV				
7.	a)	Explain the different types of intellectual property rights.	6 Marks	L1	CO3	PO1
	b)	Distinguish between innovation and invention.	6 Marks	L2	CO3	PO2
		(OR)				
8.		What is meant by intellectual property? Why does intellectual property need to be promoted and protected?	12 Marks	L3	CO3	PO1
		UNIT-V				
9.		What is copyright? Why should copyright be protected? What are the classes of works for which copyright protection is available in India?	12 Marks	L2	CO3	PO1
		(OR)				
10		Illustrate the application's process and registration of copyright.	12 Marks	L3	CO3	PO1

ANALOG CMOS VLSI DESIGN

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Identify whether Channel Length Modulation exists in triode region or not. Explain briefly.	6 Marks	L3	CO1	PO1
	b)	What is the gain of the Cascode amplifier with g_m = 0.5mA/V and r_{ds} = 100KΩ.? Comment on the value of the gain obtained.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Analyze the effect of Body Biasing in MOSFETs using necessary equations.	5 Marks	L4	CO1	PO1
	b)	Construct the Cascode current mirror and show that it has high input impedance.	7 Marks	L3	CO1	PO2
		UNIT-II				
3.	a)	Develop the frequency response of a common source stage with Resistive Load with necessary equivalent circuits and hence calculate gain of the circuit.	8 Marks	L3	CO1	PO2
	b)	Explain the effect of high-frequency supply noise in differential pairs.	4 Marks	L2	CO1	PO1
		(OR)				
4.	a)	Analyze the Statistical Characteristics of Noise.	5 Marks	L4	CO1	PO1
	b)	Develop high-frequency model of a cascode stage. List the advantages of cascade stage.	7 Marks	L3	CO1	PO2
		UNIT-III				
5.	a)	Explain how to improve the output impedance by feedback.	5 Marks	L2	CO2	PO1
	b)	Develop the expression of loop gain and output resistance of current-voltage feedback amplifier.	7 Marks	L3	CO2	PO2
		(OR)				
6.	a)	Identify the necessary technique that ensures zero input-offset voltage for a two stage OP-AMP.	6 Marks	L3	CO2	PO1
	b)	Demonstrate the Effect of Feedback on Noise.	6 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Explain the concepts of gain and phase margins with respect to stability.	4 Marks	L2	CO3	PO1
	b)	Model a two stage op-amp to explain the trade off involved in selecting the input stage as p-channel or n-channel.	8 Marks	L3	CO3	PO3
		(OR)				
8.	a)	Demonstrate bipolar band gap references circuit and explain it.	5 Marks	L2	CO3	PO1
	b)	Apply any one appropriate technique for eliminating or moving the effect of right half plane zero in two stage CMOS op amps.	7 Marks	L3	CO3	PO3
		UNIT-V				
9.	a)	Demonstrate a switched capacitor low-pass filter and explain.	6 Marks	L2	CO4	PO1
	b)	Define Oscillator. Explain about the Ring Oscillator with an example.	6 Marks	L1	CO4	PO1

(OR)

10.	a)	Explain the basic PLL Technology.	6 Marks	L2	CO4	PO1
	b)	Recall the applications of Non-Linear analog Circuits. Explain any one of them.	6 Marks	L1	CO4	PO1

DEVICE MODELING
[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	What is Body effect and Body bias? Explain in detail about Body effect with necessary equations.	6 Marks	L1	CO1	PO1
	b)	Illustrate the Effects of Gate-substrate voltage on surface condition.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Show a 3 terminal MOS structure of n+ region of open circuited, short circuited and with biased voltage and explain.	6 Marks	L2	CO1	PO1
	b)	Define Pinch off voltage. Explain in detail Body effect with necessary equations.	6 Marks	L1	CO1	PO1
		UNIT-II				
3.		Show the necessary diagrams of IDS-VDS Characteristics in weak inversion with VGS as a parameter and explain the comparison to weak and strong inversion equations.	12 Marks	L2	CO1	PO1
		(OR)				
4.		Compare and constrast the regions of operation of a transistor.	12 Marks	L2	CO1	PO1
		UNIT-III				
5.	a)	Briefly explain charges and threshold voltages in enhancement nMOS transistor with the help of necessary equations.	8 Marks	L1	CO2	PO1
	b)	Explain hot carrier effects in the channel of nMOS transistor.	4 Marks	L2	CO2	PO1
		(OR)				
6.		Compare the modes of operation of NMOS depletion-mode transistor and explain.	12 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Identify the limitations of Quasi static Model.	6 Marks	L3	CO3	PO1
	b)	Explain the evaluation of charges in strong Inversion for saturation with necessary expressions.	6 Marks	L2	CO3	PO1
		(OR)				
8.		Construct a MOS device structure with charges and currents under DC excitation and varying terminal voltages and explain.	12 Marks	L3	CO3	PO2
		UNIT-V				
9.	a)	Develop a small signal model for the channel path of a MOS transistor in DC Operation.	8 Marks	L3	CO3	PO2
	b)	Analyze the two path view of MOS transistor in DC operation.	4 Marks	L2	CO3	PO1
		(OR)				
10.		Explain in detail about Y parameter model of MOS Device.	12 Marks	L2	CO3	PO1

DIGITAL CMOS VLSI DESIGN
[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Inspect the Robustness of CMOS Inverter in static behaviour.	6 Marks	L4	CO1	PO1
	b)	Explain static properties of complementary CMOS Gates.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	How do you realize Pseudo NMOS logic circuit Compare its advantage and disadvantages with respect to standard static CMOS circuit.	5 Marks	L1	CO1	PO1
	b)	Develop graphical representation of CMOS logic gate with suitable example.	7 Marks	L4	CO1	PO2
		UNIT-II				
3.	a)	Explain the operation of two phase pipelined circuit using dynamic registers.	6 Marks	L1	CO2	PO1
	b)	Compare Clock Skew and Jitter. Identify and outline the sources of clock skew and jitter.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Analyze the characteristics of advanced interconnect techniques.	5 Marks	L4	CO2	PO1
	b)	Classify and summarize interconnects.	7 Marks	L2	CO2	PO1
		UNIT-III				
5.	a)	Explain write and hold operations in a DRAM technique.	5 Marks	L1	CO3	PO1
	b)	Write short notes on Leakage current in DRAM with suitable diagram.	7 Marks	L1	CO3	PO1
		(OR)				
6.	a)	Explain basic memory architecture with neat sketch.	5 Marks	L1	CO3	PO1
	b)	Model 1 bit basic RAM binary cell and explain its read and write operation.	7 Marks	L3	CO3	PO2
		UNIT-IV				
7.	a)	Construct 7 inputs Wallace tree architecture.	5 Marks	L3	CO3	PO2
	b)	Explain booth multiplier with appropriate example.	7 Marks	L2	CO3	PO1
		(OR)				
8.	a)	How to implement arithmetic and logic operation with a standard adder? Explain with the help of logic expression.	6 Marks	L2	CO3	PO1
	b)	Make use of Baugh Worley method to perform 2‘s complement multiplication with an example.	6 Marks	L3	CO3	PO1
		UNIT-V				
9.	a)	Develop flow chart for gate array design flow.	5 Marks	L3	CO4	PO1
	b)	Summarize the method used to assess Design Economics.	7 Marks	L2	CO4	PO1
		(OR)				
10.	a)	Develop flow charts for current and ideal design approaches.	6 Marks	L3	CO4	PO1
	b)	List and assess the structured design strategies.	6 Marks	L1	CO4	PO1

IC FABRICATION

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Describe the aspects of silicon vapor epitaxy process chemistry.	6 Marks	L2	CO1	PO1
	b)	Compare the merits and demerits of MBE (Molecular Beam Epitaxy).	6 Marks	L4	CO1	PO1
		(OR)				
2.	a)	Define silicon shaping.	3 Marks	L1	CO1	PO1
	b)	Explain the Czochralski crystal growing technique through flow diagram.	4 Marks	L2	CO1	PO1
	c)	List the rules to maintain clean room and its safety.	5 Marks	L1	CO1	PO1
		UNIT-II				
3.	a)	Explain, how optical Lithography technique is used in IC fabrication.	6 Marks	L2	CO1	PO3
	b)	Explain X-ray Lithography.	6 Marks	L2	CO1	PO1
		(OR)				
4.	a)	Identify the techniques for Reactive plasma etching.	6 Marks	L2	CO1	PO3
	b)	Examine the development in optical lithography and the new trends in the design. List the corresponding merits and demerits.	6 Marks	L4	CO1	PO1
		UNIT-III				
5.	a)	Briefly discuss the equipment used in ion implantation.	6 Marks	L2	CO1	PO1
	b)	Explain the Fick's one dimensional equation and its solutions to communicate with IC fabrication engineering community.	6 Marks	L2	CO1	PO1
		(OR)				
6.	a)	Evaluate the Low Pressure CVD and explain how uniform deposition can be achieved in LPCVD.	8 Marks	L5	CO1	PO1
	b)	Analyze the VLSI shallow junctions using Ion implantation.	4 Marks	L4	CO1	PO1
		UNIT-IV				
7.	a)	Discuss the principles of patterning and sputtering.	6 Marks	L2	CO2	PO3
	b)	Identify the issues related with physical vapour deposition.	6 Marks	L2	CO2	PO1
		(OR)				
8.	a)	Identify the metallization choices and assess the related problems in detail.	6 Marks	L2	CO2	PO3
	b)	Calculate the RC time constant for a 1 cm long doped polysilicon interconnection runner on 1 um thick Sio2. The polysilicon has a resistance of 5000A and a resistivity ρ of 1000$\mu\Omega$cm.	6 Marks	L5	CO2	PO1
		UNIT-V				
9.	a)	Memorize Package Fabrication Technology.	6 Marks	L1	CO3	PO3
	b)	Classify VLSI assembly technologies for Multidisciplinary applications.	6 Marks	L2	CO3	PO1
		(OR)				
10.		Explain packages types and packing desired conditions used for VLSI devices.	12 Marks	L2	CO3	PO3

FPGA ARCHITECTURES

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Design the given function using PLA and PAL. $F(A, B, C) = \sum m(1, 3, 7) + d(2, 4)$.	5 Marks	L3	CO1	PO2
	b)	Interpret the organizations of FPGAs and explain.	7 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Draw the Routing architecture of FPGA and explain.	6 Marks	L2	CO1	PO1
	b)	Draw the block diagram of FPGA Design flow and explain each block.	6 Marks	L2	CO1	PO1

UNIT-II

3.		Draw the Programmable logic block architecture and I/O block of Xilinx XC2000FPGA and explain.	12 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Describe the Lookup Table Technology Mapping in mis-pga.	6 Marks	L3	CO2	PO1
	b)	Draw the block diagram of logic synthesis and explain each block.	6 Marks	L2	CO2	PO1

UNIT-III

5.		Explain about Derivations of State Machine Charts.	12 Marks	L2	CO3	PO1
		(OR)				
6.	a)	Develop the state transition table from the Figure 1 and explain.	6 Marks	L3	CO3	PO2

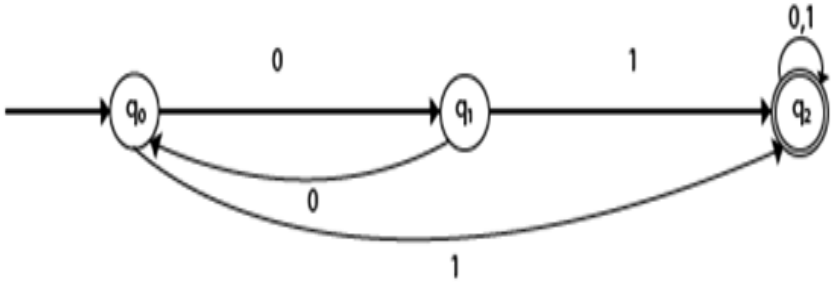

Figure 1

	b)	Design the state transition diagram from the Figure 2 and explain.	6 Marks	L4	CO3	PO2

Present State	Next State for Input 0	Next State for Input 1
Q_0	Q_0	Q_1
Q_1	Q_1, Q_2	Q_2
Q_2	Q_1	Q_3
Q_3	Q_2	Q_2

Figure 2

UNIT-IV

7.		Discuss about Application of the One-Hot Method to a Serial 2's Complementer.	12 Marks	L2	CO2	PO1
		(OR)				
8.		Draw the Model used for architectures centered around a non registered PLD showing block symbols representing input and output conditioning circuits for the model and explain.	12 Marks	L4	CO2	PO1

UNIT-V

9.		Explain in detail about Controlling Complex CCD Imaging Systems with the EPS464 EPLD.	12 Marks	L3	CO2	PO1
		(OR)				
10.	a)	List out different design applications.	6 Marks	L1	CO1	PO1
	b)	Develop the SR latch implemented with expanders.	6 Marks	L3	CO2	PO3

CODE No.: 19MT25704 SVEC-19

MEMORY TECHNOLOGIES

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Summarize schematic cross section of a GaAs SRAM memory cell.	9 Marks	L2	CO1	PO1
	b)	Criticize what are the necessary steps to add to obtain high performance CMOS from Core CMOS process.	3 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Demonstrate Three Transistor DRAM cell with neat sketch.	6 Marks	L3	CO1	PO1
	b)	Construct a simple Trench cell structure of DRAM.	6 Marks	L3	CO1	PO1

UNIT-II

3.	a)	Write short notes on CMOS PROMs.	6 Marks	L1	CO1	PO1
	b)	Explain FLOTAX technology with neat sketch.	6 Marks	L2	CO1	PO1
		(OR)				
4.	a)	Appraise the main requirements for the design of address detection circuitry.	4 Marks	L3	CO1	PO1
	b)	Classify the Flash memory architecture explain any one of the architecture with neat diagram.	8 Marks	L2	CO1	PO1

UNIT-III

5.	a)	Examine the traditional approach to memory selection and hardness assurance program for space application.	8 Marks	L3	CO2	PO3
	b)	Categorize the different reliability simulators.	4 Marks	L2	CO2	PO1
		(OR)				
6.	a)	Calculate Gamma distribution and Weibull distribution in the reliability modeling.	7 Marks	L3	CO2	PO3
	b)	Identify the various radiation hardening process issues on MOS devices.	5 Marks	L1	CO2	PO3

UNIT-IV

7.	a)	Construct the FRAM cell structure with neat sketch and explain its operation.	6 Marks	L4	CO3	PO2
	b)	Identify the importance of memory cards used in the high density memory packaging technologies.	6 Marks	L1	CO3	PO1
		(OR)				
8.	a)	Illustrate the VLSI chip on silicon technology used in 2D hybrid memory.	6 Marks	L3	CO3	PO3
	b)	Build single electron memory cell with neat sketch.	6 Marks	L4	CO3	PO2

UNIT-V

9.	a)	Model memory cell transistor layout for double buffered memory testing technique.	7 Marks	L3	CO4	PO3
	b)	Summarize the general testing requirement for the application specific memory.	5 Marks	L2	CO4	PO1
		(OR)				
10.	a)	Discuss the commonly used error detection and correction codes used in the memory chip and cards.	8 Marks	L2	CO4	PO3
	b)	Identify the functional faults usually occur in nonvolatile memory modeling.	4 Marks	L1	CO4	PO1

Adjustments:

1. Closing stock on 31st March,2002 was Rs. 35,000.
2. Depreciate Plant & Machinery, Tools and Furniture by 10% and Land and Buildings by 5%.
3. Provide Rs. 1,500 for wages.
4. advertisements prepaid Rs.500.
5. Provide 5% on debtors against bad debts and 2 % against discount on creditors.

M.B.A. DEGREE EXAMINATION, MAY/JUNE - 2022
FIRST SEMESTER
PAPER - 104 : ACCOUNTING FOR MANAGERS

(Revised Regulations w.e.f. 2021-2022)

(Common Paper to University & Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A
(Descriptive/Numerical type questions)

Answer any **FIVE** Questions. Each question carries **10** marks. **(5×10=50)**

1. What are the Accounting Concepts and Conventions? Name them and explain any two accounting concepts in detail.

2. The following is the Trial Balance as on 31-12-2021. Prepare Trading and Profit and Loss Account and Balance Sheet.

Debit Balances:	**Rs.**
Stock (1-1-2021)	14,000
Purchases	1,26,000
Production wages	50,500
Salaries	16,000
Carriage Inward	9,100
Rent and Rates	5,200
Insurance	1,320
Machinery	52,000
Building	67,000
Sundry Debtors	44,000
Furniture	3,350
General expenses	2,600
Cash in hand	1,930
Bad debts	1,020
Bank	6,580
Credit Balances:	
Sales	2,20,000
Capital	1,45,600
Sundry Creditors	20,000
Secured Loans	15,000

Adjustments to be made:

a) Stock on 31-12-2021 Rs.20,000

b) Depreciate machinery at 10% p.a.

c) Make provision @ 5% for bad and doubtful debts.

d) Provide discount on debtors @ 2.5%.

e) Insurance prepaid Rs. 120

3. Discuss the nature and causes of Depreciation.

4. On 1.1.2001, X Ltd., purchased a machinery for Rs. 58,000 and spent Rs. 2,000 on its erection. On 1.7.2001 an additional machinery costing Rs.20,000 was purchased on 1.7.2003. The machine purchased on 1.1.2001 was sold for Rs. 28,600 and on the same date, a new machine was purchased at a cost of Rs 40,000.
Show the machinery Accounting for the first four calendar years according to written down value method of depreciation taking the rate @10% p.a.

5. State the essentials of a good budgetary control system.

6. For production of 10,000 electrical irons, the budget expenses are:

	Rs.		Rs.
Raw material	60	Selling expenses(10% fixed)	15
Direct labour	25	Direct variable expenses	10
Variable overheads	20	Administrative expenses (Rs. 1,00,000)	10
Fixed overheads (Rs.1,00,000)	10	Distribution expenses(20% fixed)	10
			160

Prepare a budget for production of a (a) 8,000 units and
(b) 6000 units.
Assume that administrative expenses are rigid for all levels of production.

7. Explain the process of creating a company in Tally ERP 9.

8. Explain the Role of Computers in Accounting Information Systems.

9. What is inflation accounting? Explain the advantages and disadvantages of inflation accounting.

10. What is Human Resource Accounting? Explain the advantages and limitations of Human Resource Accounting.

PART - B
(Case Analysis)

(20)

11. Read the case given below and answer the questions given at the end:
Prepare Trading and Profit and Loss Account for the year ended 3st March, 2002 and Balance Sheet as at that date from the following trial Balance of M/s Raj & Co.,

Dr. Balances	Rs.	Cr. Balances	Rs.
Drawings	45,000	Capital	1,60,000
Goodwill	80,000	Bills Payables	33,800
Land & Buildings	60,000	Creditors	70,000
Plant & Machinery	40,000	Purchase Returns	2,650
Loose Tools	3,000	Sales	4,18,000
Bills Receivables	3,000		
Stock 1.April,2001	40,000		
Purchases	2,51,000		
Wages	20,000		
Carriage Outwards	500		
Carriage Inwards	1,000		
Coal	5,800		
Salaries	35,000		
Rent, Rates & Taxes	2,800		
Discount	1,500		
Cash at Bank	25,000		
Cash in Hand	400		
Sundry Debtors	45,000		
Repairs	1,800		
Printing & Stationary	500		
Bad Debts	1,200		
Advertisements	3,500		
Sales Returns	2,000		
Furniture	11,200		
General Expenses	5,250		
	6,84,450		**6,84,450**

Net Profit – 73530

292430

[Total No. of Pages : 3 4-75-101R

M.B.A. DEGREE EXAMINATION, MAY/JUNE - 2022
FIRST SEMESTER
PAPER - 101 : MANAGEMENT AND ORGANISATIONAL BEHAVIOUR
(Revised Regulations w.e.f. 2021-2022)
(Common Paper to University & Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A
(Descriptive/Numerical type questions)

Answer any **FIVE** questions. Each question carries **10** marks. **(5×10=50)**

1. "There can be no control without a plan and plans cannot be successfully implemented in the absence of controls." Discuss with examples.

2. Briefly discuss techniques used in different steps involved in decision-making. Describe how to overcome barriers to effective decision-making, citing examples.

3. Do you think that "people behave on the basis of their perception of reality"? Discuss and explain the process of perception. Also describe the factors influencing perception.

4. What do you mean by personality? Critically examine various theories of personality.

5. Critically examine 'ERG theory' and 'McClelland's theory' of motivation, How are these theories applicable to work motivation?

6. Do you think that individuals and different groups in the organisations use variety of power tactics to obtain power? Discuss and explain the sources of power in an organisation.

7. Describe and discuss the dimensions and determinants of organisational culture.

8. Briefly discuss the Antecedents of Organizational Change and the various strategies to cope with change by citing examples.

9. What is Organisational Stress? Explain how stress leads to burnout with examples.

10. What is an Organisation Development Intervention? Explain its purpose. Briefly discuss advantages and disadvantages of any two types of interventions. Give examples.

PART-B

(Case Analysis)

(20)

11. Read the case given below and answer the questions given at the end:

Robert, one of the field sales managers of Major Tools Ltd., had been promoted to his first headquarters assignment as an assistant product manager for a group of products with which he was relatively unfamiliar. Shortly after he had taken over this new assignment. One of the company's Vice Presidents, Smith called for a meeting of product managers and other staff to plan marketing strategies. Robert's superior (the product manager) was unable to attend, So the director of marketing, Reynolds, invited Robert to the meeting to help and orient him to his new job.

Because of the large gathering, Reynolds was rather brief in introducing Robert to Smith. After the meeting began, Smith — a crusty veteran with a reputation for bluntness — began asking a series of probing questions, which most of the product managers were unable to answer in detail. Suddenly, he turned to Robert and questioned him quite closely about his group of products. Somewhat confused, Robert confessed that he really did not know the answers.

It was immediately apparent to Reynolds that Smith had forgotten or had failed to understand that Robert was new to the job and was attending the meeting more for his own orientation than to contribute to it. He was about to offer a discreet explanation when Smith, visibly annoyed with what he took to be Robert's lack of preparation, snapped, "Gentlemen, you have just seen an example of sloppy staff work, and there is no excuse for it."

Reynolds had to make a quick decision. He could interrupt Smith and point out that he had judged Robert unfairly, but that might embarrass both his superior and his subordinate. Alternatively, he could wait until after the meeting and offer an explanation in private. As Smith quickly became engrossed in another conversation, Reynolds followed the second approach. Glancing at Robert, Reynolds noted that his expression was one of mixed anger and dismay. After catching his eye, Reynolds winked at Robert as a discreet reassurance that he understood and that the damage could be repaired. After an hour, Smith, evidently dissatisfied with what he termed the 'inadequate planning' of the marketing department in general, abruptly declared the meeting over. As he did so, he turned to Reynolds and asked him to remain behind for a moment. To Reynolds' surprise, Smith immediately raised the question of Robert himself. In fact, it turned out to have been his main reason for asking Reynolds to remain behind. "Look," he said, "I want you to tell me frankly, do you think I' was too rough with that kid?" Relieved, Reynolds said "Yes, you were. I was going to speak to you about it."

Smith explained to Reynolds. That Robert was new to his job had not registered in his mind adequately when they had been introduced, and that it was only sometime after his own outburst that the nagging thought began to occur to him that what he had done was inappropriate and unfair. "How well do you know him?" he asked. "Do you think I hurt him?"

For a moment Reynolds took the measure of his superior. Then he replied evenly, "I do not know him very well yet, but yes, I think you hurt him."

"Damn, that is unforgivable," said Smith. He then telephoned his secretary to call Robert and ask him to report to his office immediately. A few moments later, Robert returned, looking perplexed and uneasy. As he entered, Smith came out from behind his desk and met him in the middle of the office. Standing face to face with Robert, who was 20 years and four organization levels his junior, he said, "Look. I have done something stupid and I want to apologize. I had no right to treat you like that. 1 should have remembered that you were new to your job but I did not. I am sorry.",

Robert was somewhat flustered. He muttered his thanks for the apology. "As long as you are here, young man," Smith continued, "I want to make a few things clear to you in the presence of your boss's boss. Your job is to make sure that people like me do not make stupid decisions. Obviously, we think you are qualified for your job or we would not have brought you in here. But it takes time to learn any job. Three months from now I will expect you to know the answers to any questions about products. Until then," he said, thrusting out his hand for the younger man to shake, "You have my complete confidence. And thank you for letting me correct a mistake."

Questions

(a) Discuss the impact of Smith's outburst on the organizational members.

(b) What do you think the apology meant to Robert?

(c) What is the most important aspect of the relations between management levels in this company

---

PAPER - 105 : QUANTITATIVE ANALYSIS FOR MANAGEMENT DECISIONS
(Revised Regulations w.e.f. 2021-2022)
(Common Paper to University & Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A
(Descriptive/Numerical type questions)

Answer any **FIVE** Questions. Each question carries **10** marks. (5×10=50)

1. Discuss the significance and scope of quantitative techniques for managers in business and industry.

2. Given the function

$$f(x)=\begin{cases}15 & x<-4\\ 6-2x & x\geq -4\end{cases}$$

Evaluate the following limits, if they exist

1. $\lim_{x\to +7} f(x)$ 2. $\lim_{x\to -7} f(x)$

3. A slider in a machine moves along a fixed straight rod. Its distance X cm along the rod is given below for various values of the time t seconds. Find the velocity of the slider and its acceleration when t=0.3 seconds.

T	0	0.1	0.2	0.3	0.4	0.5	0.6
x	30.13	31.62	32.87	33.64	33.95	33.81	33.24

4. What is minimax-maximin principle? Explain in detail?

5. Find the sum of geometric series 2+6+18+54+..... Where there are 6 terms in the series.

6. Define arithmetic progression? Explain the sum of arithmetic series.

7. Using row operations, workout the rank of the matrix

$$A=\begin{bmatrix}1 & 1 & 0 & -1\\ 0 & 2 & -2 & 1\\ 3 & 2 & 0 & -4\\ 1 & -2 & a & 0\end{bmatrix}$$

Where 'a' is the real parameter. (Keep in mind that the rank of A depends on the value of 'a' so a case distinction is required.

8. Solve the linear system

$3x + 2y - z = 10$

$5x - y - 4z = 17$

$X + 5y + \alpha z = \beta$

Where α, β are arbitrary real parameters using row reduction on the augmented matrix.

9. Use Dominance property to solve the following game

	B1	B2	B3	B4	B5
Al	4	4	2	-4	-6
A2	8	6	8	-4	0
A3	10	2	4	0	12

10. Consider the game of matching coins. Two players A and B put down a coin. If coins match i.e., both are head or both are tails, A gets rewarded by 1 otherwise B. however matching on heads gives a double premium. Obtain the best strategies for both players and the value of the game.

PART - B
(Case Analysis)

(20)

11. Read the case given below and answer the questions given at the end :

Solve the problem by using dominance property

	B1	B2	B3
A1	30	40	-80
A2	0	15	-20
A3	90	20	50

[Total No. of Pages : 2 4-75-106R

M.B.A. DEGREE EXAMINATION, MAY/JUNE - 2022
FIRST SEMESTER
PAPER - 106 : BUSINESS STATISTICS
(Revised Regulations w.e.f. 2021-2022)
(Common Paper to University & Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

(Descriptive/Numerical type questions)

Answer any **FIVE** questions. Each question carries **10** marks. **(5×10=50)**

1. Find out the Geometric Mean from the following data

Yield of Wheat (mounds)	7.5-10.5	10.5-13.5	13.5-16.5	16.5-19.5	19.5-22.5	22.5-25.5	25.5-28.5
No. of farms	5	9	19	23	7	4	1

2. Calculate Mean deviation for mean and median for the following data

Sales ('000)	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80
No. of days	5	6	8	15	17	7	9	3

3. Calculate Karl Pearson Correlation Coefficient for the following data.

X	4	7	11	14	19	15
Y	18	16	17	19	19	21

4. Define Regression? Explain various properties of Multiple Regression?

5. Explain various types of index numbers?

6. For the following data prove that the Fisher's index satisfies both the Time Reversal Test and Factor Reversal Test and calculate its value.

Commodity	Base Year		Current Year	
	Price	Quantity	Price	Quantity
A	6	50	10	56
B	2	100	2	120
C	4	60	6	60
D	10	30	12	24

7. State and prove the addition theorem of probability for 'n' events

8. A card is drawn from a well-shuffled pack of playing cards. What is the probability that it is either a spade or a king?

9. Define Hypothesis? Explain its testing procedure?

10. The following data from a study in which random samples of the employees of three government agencies were asked questions about their pension plan.

	Agency I	Agency II	Agency III
For the pension Plan	67	84	109
Against the pension plan	33	66	41

Use the 0.01 level of significance to test the null hypothesis that the actual proportions of employees favoring the pension plan are the same.

PART-B
(Case Analysis)

(20)

11. Read the case given below and answer the questions given at the end

Prepare the analysis of variance for the following data relating to per acre production data of wheat

Type of land	Type of seeds		
	A	B	C
W	6	5	5
X	7	5	4
Y	3	3	3
Z	8	7	4

M.B.A. DEGREE EXAMINATION, MAY/JUNE - 2022
FIRST SEMESTER
PAPER - 107 : MODELLING WITH EXCEL (ON LINE)
(Revised Regulations w.e.f. 2021-2022)
(Common Paper to University & Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

(Descriptive/Numerical type questions)

Answer any **FIVE** Questions. Each question carries 10 marks. **(5×10=50)**

1. Define Modelling? Explain various types of business models.
2. What are various rules for model design in modelling?
3. Briefly discuss about pivot table with suitable examples?
4. Explain the process of creating dynamic charts using excel?
5. Define capital budgeting? Explain its methods.
6. Explain in detail about various financial analysis techniques.
7. Explain various metrics of computing marketing in detail.
8. What are the various strategies of revenue management?
9. Briefly explain various steps in lot sizing methods.
10. Define project management? Explain its purpose and importance.

PART - B

(Case Analysis)

(20)

11. Read the case given below and answer the questions given at the end :

In June 1993, Kombs Engineering had grown to a company with $25 million in sales. The business base consisted of two contracts with the U.S. Department of Energy (DOE), one for $15 million and one for $8 million. The remaining $2 million consisted of a variety of smaller jobs for $15,000 to $50,000 each. The larger contract with DOE was a five-year contract for $15 million per year. The contract was awarded in 1988 and was up for renewal in 1993. DOE had made it clear that, although they were very pleased with the technical performance of Kombs, the follow-on contract must go through competitive bidding by law. Marketing intelligence indicated that DOE intended to spend $10 million per year for five years on the follow-on contract with a tentative award date of October 1993. On June 21, 1993. the solicitation for proposal was received at Kombs. The technical requirements of the proposal request were not considered to be a problem for Kombs. There was no question in anyone's mind that on technical merit alone, Kombs would win the contract. The more serious problem was that DOE required a separate section in the proposal on how Kombs would manage the $10 million/year project as well as a complete description of how the project management system at Kombs functioned. When Kombs won the original bid in 1988, there was no project management requirement. All projects at Kombs were accomplished through the traditional organizational structure. Line managers acted as project leaders.

In July 1993, Kombs hired a consultant to train the entire organization in project management. The consultant also worked closely with the proposal team in responding to the DOE project management requirements. The proposal was submitted to DOE during the second week of August. In September 1993, DOE provided Kombs with a list of questions concerning its proposal. More than 95 percent of the questions involved project management. Kombs responded to all questions. In October 1993, Kombs received notification that it would not be granted the contract. During a post-award conference, DOE stated that they had no "faith" in the Kombs project management system. Kombs Engineering is no longer in business.

Questions:

1. What was the reason for the loss of the contract?
2. Could it have been averted?
3. Does it seem realistic that proposal evaluation committees could consider project management expertise to be as important as technical ability?

[Total No. of Pages : 2 4-75-102R

M.B.A. DEGREE EXAMINATION, MAY/JUNE - 2022
FIRST SEMESTER
PAPER - 102 : MANAGERIAL COMMUNICATION

(Revised Regulations w.e.f. 2021-2022)

(Common Paper to University & Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

(Descriptive/Numerical type questions)

Answer any **FIVE** Questions. Each question carries **10** marks. **(5×10=50)**

1. Communication is two-way process. Discuss.
2. State the barriers of communication and methods of overcoming them.
3. Mention any three (unexpected) situations that may arise in public speaking and state how you would handle them.
4. Distinguish clearly between:
   a. Kinesics and proxemics; and
   b. Speaking extemporaneously and speaking impromptu.
5. What are the various steps that involve in writing a Business Letters? Discuss
6. Prepare a Memo Report for circulating to all employees of your organization announcing a change in the working hours and explaining the reasons for the change.
7. Describe the ways of improving listening as a skill. Also list the benefits that would accrue to you if you improve your listening skill.
8. What is the importance of non-verbal communication techniques? .Justify your answer with examples.
9. Discuss communication etiquette to be followed in an organization with employees from Asia and USA.
10. Explain various technology based communication tools?

PART - B

(Case Analysis)

(20)

11. Read the case given below and answer the questions given at the end:

Assume that you are the Secretary of your college Students' Union. You are expected to plan the various extra —curricular activities of' students.

Questions:

a. Now prepare Notice and Agenda.

b. Write the Minutes of the above meeting.

M.B.A. DEGREE EXAMINATION, MAY/JUNE - 2022
FIRST SEMESTER
PAPER - 103 : MANAGERIAL ECONOMICS
(Revised Regulations w.e.f. 2021-2022)
(Common Paper to University & Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A
(Descriptive/Numerical type questions)

Answer any **FIVE** Questions. Each question carries **10** marks. **(5×10=50)**

1. What is the fundamental nature of Managerial Economics? Discuss.
2. Distinguish between profit maximization and value maximization giving examples.
3. The demand function is written as Q_d= F (Po, Pc, Ps, Yd, T, A, CR, R, E, N, 0) Describe each of this variables separately giving examples.
4. Explain the concept of price elasticity of demand and the relationship between price elasticity, total revenue and marginal revenue.
5. Explain why the average cost curve is U-shaped. The long run average cost curve is always an envelope of short run average cost curves. Discuss.
6. Explain the concept of break-even analysis with the help of examples. What strategic decisions can a manager take based on break-even analysis?
7. What is oligopoly? Differentiate oligopoly from Monopoly.
8. What is the difference between perfect competition and monopoly? Explain the price determination with diagram under perfect competition.
9. What is Gross domestic product (GDP) and Net national product'? Discuss why study of GDP is helpful in making investment decisions for a profit-aiming firm?
10. One of the most significant business and economic trends of the late twentieth century is the rise of 'global' or 'stateless' Corporation. Critically comment on the statement taking examples from the real world firms.

PART - B

(Case Analysis)

(20)

11. Read the case given below and answer the questions given at the end:

You are given to understand that the existing firm in a market derives 80% of its revenues from 20% of its customers. Your boss wants you to develop a strategy to enter this market to compete with the existing firm (incumbent). Your answer should focus on:

a) How you would target existing customers?

b) How you would seek to attract new customers?

c) It is possible that the incumbent will also change his strategy following your decision to enter. How according to you will the incumbent react?

d) What will be your counter strategy to combat the incumbent?

MASTER OF COMPUTER APPLICATIONS DEGREE EXAMINATION, JUNE - 2022

FIRST SEMESTER

Paper - MCA 103 : COMPUTER ORGANIZATION

(Under C.B.C.S Revised Regulations w.e.f. 2020-2021)

(Common Paper to University and all Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

(Compulsory)

Answer any **FIVE** of the following Questions. Each Question carries 2 marks. **(5×2=10)**

1. a) Explain the basic operational concepts of Computer with a neat diagram.
   b) What are the types of Flip-Flops?
   c) Define Register Indirect Addressing Mode? Give an Example.
   d) List out Main Memory operations in computer organization.
   e) Explain the functions of typical input-output interface.
   f) What is the use of Priority Interrupt.
   g) Explain the Address Translation in Virtual Memory.
   h) What is Cache Memory? Mention its advantages.
   i) Describe Multiple Bus Organization.
   j) What are the different forms of parallelism?

PART - B

Answer any **ONE** full question from each Unit. Each Question carries **12 marks.** **(5×12=60)**

UNIT - I

2. i) Explain Decoders and Encoders with circuit diagram.
   ii) Define PLD. Describe in detail about its types.

(OR)

3. i) Explain the interconnection structure for multiprocessor systems.

ii) Write short notes on various types of Registers.

UNIT - II

4. i) What is an Addressing Mode? Explain any three Addressing Modes with example.

ii) How computer instructions are classified? List and Explain about them with examples.

(OR)

5. i) List out Data Transfer Instructions with examples.

ii) Explain internal organization of memory chips.

UNIT - III

6. i) Explain the working principle of DMA with a neat diagram.

ii) Discuss about memory mapped I/O.

(OR)

7. i) Define an interrupt and also describe various types of interrupts.

ii) Differentiate between Synchronous and Asynchronous modes of data transfer?

UNIT - IV

8. i) Design Carry Look Ahead Adder and explain its function.

ii) Derive and explain an algorithm for adding and subtracting 2 floating point binary numbers.

(OR)

9. i) Explain in detail about Cache mapping techniques.

ii) Explain Addition and Subtraction in Signed Magnitude Data?

UNIT - V

10. i) List and explain the steps involved in the execution of a complete instruction.

ii) Write short notes on Instruction Hazards?

(OR)

11. i) Describe the basic organization of Micro Programmed control unit.

ii) Explain the bus organization of a data path with a neat diagram.

MASTER OF COMPUTER APPLICATIONS DEGREE EXAMINATION, JUNE - 2022

FIRST SEMESTER

Paper - MCA 104 : OPERATING SYSTEMS

(Under C.B.C.S Revised Regulations w.e.f. 2020-2021)

(Common Paper to University and all Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

(Compulsory)

Answer any **FIVE** of the following Questions. Each Question carries 2 marks. **(5×2=10)**

1. a) Describe Storage Hierarchy.

b) Write a short note on Threading Issues.

c) What are the Characteristics of a Deadlock? Explain.

d) Define Semaphores and Monitors.

e) Differentiate between File and Directory.

f) Define Virtual Memory. Why is its need?

g) Differentiate between Scan and C-Scan algorithms.

h) Explain Disk structure in brief.

i) Differentiate between Worms and Viruses.

j) Write a brief note on the Components of a Linux System.

PART - B

Answer any **ONE** full question from each Unit. Each Question carries **12 marks.** **(5×12=60)**

UNIT - I

2. i) Explain different categories of system Programs.

ii) Describe about System Design and Implementation.

(OR)

3. Write a detailed note on Communication in Client Server System.

UNIT - II

4. How to avoid Deadlocks? Write and explain Banker's Algorithm.

(OR)

5. What is meant by Co-operating Processes? Briefly explain the algorithms of Two Process Solutions to Critical Section problem.

UNIT - III

6. i) Compare and contrast Paging and Segmentation.

   ii) Write a note on File Sharing Protection.

(OR)

7. Elaborate on Allocation Methods of Disk space.

UNIT - IV

8. Write a detailed note on Transforming I/O request to Hardware Operations with necessary figure of life cycle of an I/O request.

(OR)

9. Describe in detail about RAID structure.

UNIT - V

10. i) Explain how to verify User Authentication.

    ii) What are Security System Facilities? Explain.

(OR)

11. Explain in detail about Linux System Design Principles and Kernel Modules.

MASTER OF COMPUTER APPLICATIONS DEGREE EXAMINATION, JUNE - 2022

FIRST SEMESTER

Paper - MCA 102 : OBJECT ORIENTED PROGRAMMING WITH JAVA

(Under C.B.C.S Revised Regulations w.e.f. 2020-2021)

(Common Paper to University and all Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

Answer any **FIVE** of the following Questions. Each Question carries 2 marks. (5×2=10)

1. a) Write about Object Oriented Programming Concepts.

   b) Explain about Constructors with an example.

   c) Write about try and catch blocks in detail with an example.

   d) Illustrate the process of creating a thread.

   e) Write a program to accept number from user and convert into binary by using wrapper class.

   f) Discuss about Character stream.

   g) Write about Applet Life Cycle.

   h) How do applets differ from application programs explain with example?

   i) Discuss about Internet Address.

   j) Write about the performance of JDBC.

PART - B

Answer any **ONE** full question from each Unit. Each Question carries **12 marks.** (5×12=60)

UNIT - I

2. i) What is a Constructor? Write about different types of Constructors? Explain how to invoke a constructor in a program?

   ii) Why do we need Nested classes in java programming? Explain the types of non-static nested classes with an example Program.

(OR)

3. i) Write different types of inheritances in Java and give an example for each.

ii) What is method overriding? Illustrate the concepts of method overriding with an example. Is constructor overriding is possible in Java?

UNIT - II

4. i) What is an Interface? Give the general form of an Interface and also discuss the implementation details of Interfaces.

ii) How to handle multiple catch blocks for a nested try block? Explain with an example.

(OR)

5. i) Write a program to explain thread priorities usage.

ii) Explain the synchronization of multiple threads in Java with an example.

UNIT - III

6. i) Write about Character class in detail with an example.

ii) Give the difference between Array and Vector and explain about.

(OR)

7. i) Explain about String Tokenizer with an example.

ii) Distinguish between Byte Stream and Character Stream.

UNIT - IV

8. i) What is the role of event listeners in event handling ? List the Java event listeners.

ii) Write an applet to display the mouse cursor position in that applet window.

(OR)

9. i) Discuss various AWT containers with examples.

ii) Explain about the adapter class with an example.

UNIT - V

10. i) Write about Factory Method in detail.

ii) With an example program briefly explain about Socket in detail.

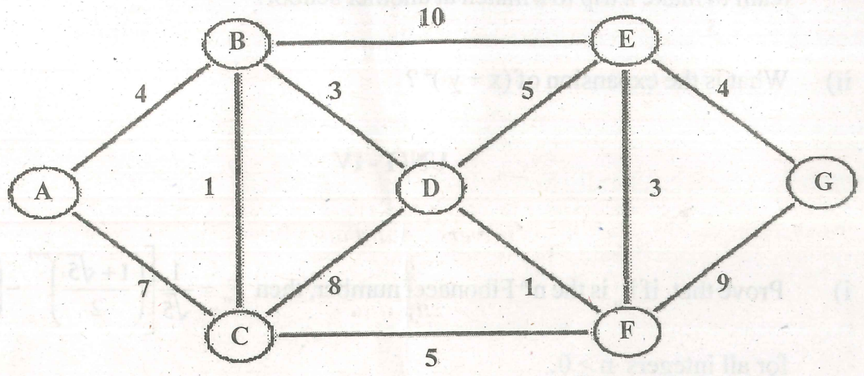
(OR)

11. i) Describe different types of JDBC drivers.

ii) Explain about the procedure of preparing SQL statements in detail.

---

ii) Use Dijkstra's algorithm to find the length of a shortest path between the vertices A and G in the weighted graph shown below:



(OR)

11. i) Show that K_n has a Hamilton circuit whenever $n \geq 3$.

ii) Write about Graph Coloring and show how can the final exams at a university be scheduled so that no student has two exams at the same time?

1121165

[Total No. of Pages : 4 12-00-1-01R

MASTER OF COMPUTER APPLICATIONS DEGREE EXAMINATION, JUNE - 2022

FIRST SEMESTER

Paper - MCA 101 : DISCRETE MATHEMATICAL STRUCTURES

(Under C.B.C.S Revised Regulations w.e.f. 2020-2021)

(Common Paper to University and all Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

(Compulsory)

Answer any **FIVE** of the following Questions. Each Question carries **2** marks. **(5×2=10)**

1. a) Show that $\neg(p \vee q)$ *and* $\neg p \wedge \neg q$ are logically equivalent.

b) Let Q(x) be the statement "x < 2." What is the truth value of the quantification $\forall x Q(x)$, where the domain consists of all real numbers?

c) Give a recursive definition of a^n, where a is a nonzero real number and n is a nonnegative integer.

d) Write about Well-Formed formulae in Propositional Logic.

e) How many permutations of the letters ABCDEFGH contain the string ABC?

f) How many poker hands of five cards can be dealt from a standard deck of 52 cards? Also, how many ways are there to select 47 cards from a standard deck of 52 cards?

g) What is the solution of the recurrence relation $a_n = 6a_{n-1}$-l-$9a_{n-2}$ With $a_0 = 1$ and $a_1 = 6$?

h) Define linear nonhomogeneous recurrence relation of degree k with constant coefficients.

i) Write about Dirac's Theorem with proof.

j) Give the difference between Euler path and circuit.

PART - B

Answer any **ONE** full question from each Unit. Each Question carries **12 marks.**

(5×12=60)

UNIT - I

2. i) Obtain principal conjunctive normal form (PCNF) for the formula $(\sim p \rightarrow r) \wedge (q \leftrightarrow p)$

   ii) Show that the following is inconsistent $P \rightarrow Q, R \rightarrow S, P \vee R, \sim (Q \vee S)$.

(OR)

3. i) Using indirect proof. Derive $P \rightarrow \sim S$ from $P \rightarrow Q \vee R$, $Q \rightarrow \sim P, S \rightarrow \sim R, P$.

   ii) Show that $R \rightarrow (S \rightarrow Q)$, $\sim P \vee R$ and $S \Rightarrow P \rightarrow Q$

UNIT - II

4. i) What is mathematical induction? Use mathematical induction to prove that 1.1! + 2.2!+...+n.n!= (n+1)!-1, wherever n is a positive integer.

   ii) Write about Recursively Defined Function in detail and Give a recursive definition of $\sum_{K=0}^{n} a_K$

(OR)

5. i) Using structural induction, Show that whenever $n \geq 3, f_n > a^{n-2}$, Where $a = (1+\sqrt{5})/2$.

   ii) Give a recursive algorithm for computing a^n, where a is a nonzero real number and n is a nonnegative

UNIT - III

6. i) Write about Pigeonhole Principle in detail? Prove that if N objects are placed into K boxes, then there is at least one box containing at least $\left\lceil \frac{N}{K} \right\rceil$ objects.?

   ii) Define Permutation and show in how many ways are there to select a first-prize winner, a second-prize winner, and a third-prize winner from 100 different people who have entered a contest?

(OR)

7. i) Let n and r be nonnegative integers with $r \leq n$. Then prove that C (n, r) = C (n,n - r) and show that in how many ways are there to select five players from a 10-member tennis team to make a trip to a match at another school?

   ii) What is the expansion of $(x + y)^4$?

UNIT - IV

8. i) Prove that, if F_n is the n^{th} Fibonacci number, then $F_n = \frac{1}{\sqrt{5}}\left[\left(\frac{1+\sqrt{5}}{2}\right)^{n+1} - \left(\frac{1+\sqrt{5}}{2}\right)^{n+1}\right]$ for all integers $n \geq 0$.

   ii) Solve the recurrence relation $a_n - a_{n-1} - 12a_{n-2} = 0, a_0 = 0, a_1 = 1$.

(OR)

9. i) Discuss about Principle of Inclusion - Exclusion and show that how many positive integers are not exceeding 1000 are divisible by 7 or 11?

   ii) Solve the recurrence relation $a_k = 3a_{k-1}$ for k = 1,2,3,... and initial condition $a_0 = 2$.

UNIT - V

10. i) Show that the graphs G = (V, E) and H = (W, F) shown in below figure are isomorphic.

MASTER OF COMPUTER APPLICATIONS DEGREE EXAMINATION, JUNE - 2022

FIRST SEMESTER

Paper - MCA 105A : ACCOUNTING AND FINANCIAL MANAGEMENT

(Under C.B.C.S Revised Regulations w.e.f. 2020-2021)

(Common Paper to University and all Affiliated Colleges)

Time : 3 Hours **Max. Marks : 70**

PART - A

(Compulsory)

Answer any **FIVE** of the following Questions. Each Question carries **2** marks. **(5×2=10)**

1. a) Define Accounting.

b) Dual aspect concept.

c) What is costing?

d) Marginal cost.

e) Current Liabilities

f) Liquid ratios

g) Variable working capital

h) Adequacy of working capital

i) Budgeting

j) Zero based budgeting

PART - B

Answer any **ONE** full question from each Unit. Each Question carries **12 marks.** **(5×12=60)**

UNIT - I

2. i) What is the scope of accounting?

ii) What are the errors disclosed by Trial Balance? Explain.

(OR)

3. i) What is the importance of accounting?

ii) What are the errors not disclosed by Trial Balance ? Explain.

UNIT - II

4. i) Define Cost Accounting and discuss the nature and scope of cost accounting.

ii) Classify costs with examples.

(OR)

5. i) Explain the uses of break-even analysis in profit planning.

ii) Explain the functions of cost accounting.

UNIT - III

6. i) State the limitations of ratio analysis.

ii) Comment on the liquidity of the following companies.

	Company A	Company B
	Rs.	Rs.
Cash	180	140
Debtors	1,420	3,200
Stock	1,800	5,400
Bills payable	270	1,000
Creditors	500	4,000
Accrued expenses	150	125
Tax Payable	750	1,000

(OR)

7. i) What are inter-statement ratios?

ii) Calculate current assets of company from the following:

a) Stock turnover: 5 times

b) Stock at the end : Rs 5,000 more than stock in the beginning.

c) Sales (all credit) Rs. 2,00,000

d) Gross profit ratio: 20%

e) Current liabilities Rs. 60,000

f) Quick ratio 0.75

UNIT - IV

8. i) What are the different methods of valuation of materials?

ii) Discuss the risk - return trade off in current assets financing.

(OR)

9. i) What factors should the finance manager take into consideration while estimating working capital needs of the firm?

ii) What is meant by FIFO, LIFO method?

UNIT - V

10. i) Distinguish between forecast and budget.

ii) What are budget committees?

(OR)

11. i) What are the objectives of budgetary control?

ii) What do you consider to be the purposes and special features of a flexible budget?

ENGINEERING CHEMISTRY

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Discuss briefly about boiler troubles and methods to be adapted for their treatment.	14 Marks
		(OR)	
2		Explain the Ion-Exchange process for softening of water with the reactions involved and mention the advantages, disadvantages of this process.	14 Marks

UNIT-II

3	a)	Define composite material? Classify composite materials based on dispersed phase.	7 Marks
	b)	Distinguish between fibre and particle-reinforced composites.	7 Marks
		(OR)	
4		What are biodegradable polymers? Explain the classification of Biodegradable polymers. Give the potential applications of biodegradable polymers.	14 Marks

UNIT-III

5		Write the applications of nanomaterials in science and technology.	14 Marks
		(OR)	
6		Explain in detail about the classification of nanomaterials	14 Marks

UNIT-IV

7		Describe the construction and working of Lithium- ion battery with the reactions occurring during charging and discharging. Mention the applications of Li-ion batteries.	14 Marks
		(OR)	
8		Discuss the construction and working principle of Ni-Cd battery. List out the applications of Ni-Cd batteries	14 Marks

UNIT-V

9		Define lubrication. Explain mechanism of fluid and boundary lubrication	14 Marks
		(OR)	
10		What is lubrication? Write an explanatory note on solid lubricants and greases.	14 Marks

Roll No. | | | | | | | | | | |

SREE VIDYANIKETHAN ENGINEERING COLLEGE

I B.Tech II Semester (SVEC-16) Supplementary Examinations, December – 2022

TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 Develop the Fourier series for $f(x) = x - x^3$ in $-3 < x < 3$. 14 Marks

(OR)

2 Test the function $f(x) = \begin{cases} 1+\frac{2x}{\pi} & -\pi < x < 0 \\ 1-\frac{2x}{\pi}; & 0 < x < \pi \end{cases}$ for even and odd. 14 Marks

Also find its half range Fourier cosine series.

UNIT-II

3 Apply Parseval's identity in Fourier transforms evaluate $\int_0^\infty \frac{dx}{(4+x^2)(9+x^2)}$. 14 Marks

(OR)

4 Find the Fourier sine transform of $e^{-|x|}$ hence evaluate $\int_0^\infty \frac{x \sin mx}{a^2 + x^2} dx$. 14 Marks

UNIT-III

5 Solve $y'' + 9y = \cos 2t$, $y(0) = 1$, $y(\pi/2) = -1$ by Laplace technique. 14 Marks

(OR)

6 Solve $y'' - 5y' + 4y = e^{2t}$, $y(0) = 1$, $y'(0) = 0$, using Laplace transform method. 14 Marks

UNIT-IV

7 Using Z–transform, Solve $u_{n+2} - 2u_{n+1} + u_n = 3_{n+5}$. 14 Marks

(OR)

8 Solve the equation $y_{n+2} + 6y_{n+1} + 9y_n = 2^n$ with $y_0 = y_1 = 0$, Using Z-transform. Solve the equation $y_{n+2} + 6y_{n+1} + 9y_n = 2^n$ with $y_0 = y_1 = 0$, Using Z–transform? 14 Marks

UNIT-V

9 Obtain the solution of the equation $\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2}$ with boundary condition $u(x,0) = 3\sin n\pi x$, $u(0,t), u(l,t) = 0$ where $0 < x < l$. 14 Marks

(OR)

10 A string is stretched and fastened to two points l apart. Motion is started by displacing the string in the form $y = a \sin \frac{\pi x}{l}$ from which it is released at a time t=0. Show that the displacement of any point at a distance x from one end at time t is given by $y(x,t) = a \sin\left(\frac{\pi x}{l}\right)\cos\left(\frac{\pi ct}{l}\right)$. 14 Marks

ENGINEERING MECHANICS

[Civil Engineering and Mechanical Engineering]

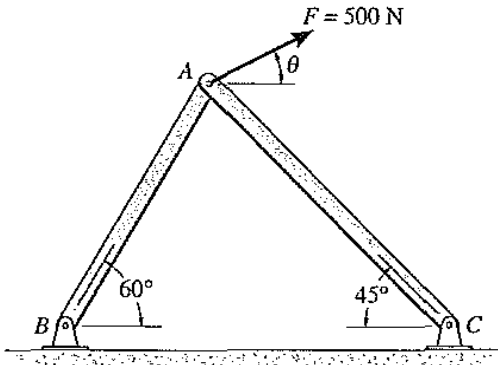
Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Discuss the following terms with suitable examples: 7 Marks
i) Coplanar forces ii) Concurrent forces
iii) Parallel forces iv) Non parallel forces

b) The 500N force acting on the frame is to be resolved into two components acting along the axis of the struts AB and AC as shown in Fig. If the component of force along AC is required to be 300 N, directed from A to C, determine the magnitude of force acting along AB and the angle q of the 500 N forces. 7 Marks



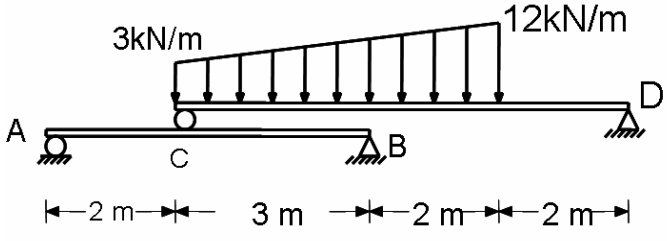
(OR)

2 a) Explain how the Parallelogram law can be used to obtain the resultant of more than two concurrent forces. 7 Marks

b) What is a resultant force? What is meant by composition of forces, component of a force and resolution of a force? Can a force be resolved into non-perpendicular components? If so, how? 7 Marks

UNIT-II

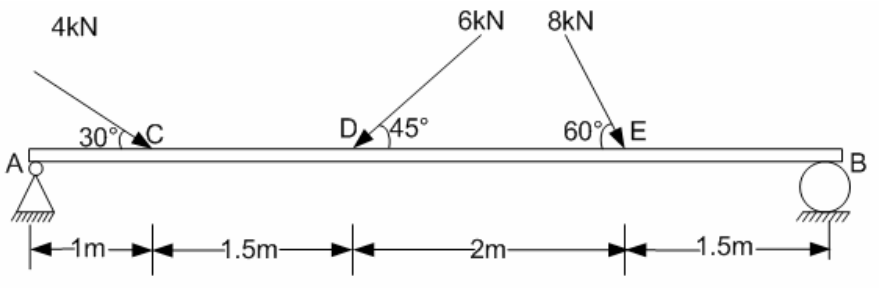
3 Calculate reactions at A, B, C and D as shown in the given figure. 14 Marks



(OR)

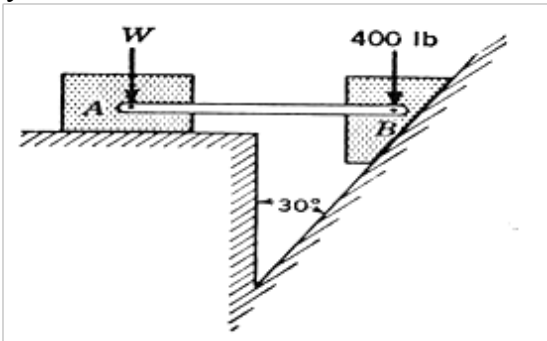
4 a) State and prove Varignon's principle. 7 Marks

b) A beam AB of span 6m is hinged at A and supported on rollers at end B and carries load as shown in Fig. Determine the reactions at A and B. 7 Marks



UNIT-III

5 Two blocks, connected by a horizontal link AB are supported on two rough planes as shown in figure. The coefficient for friction of block A on the horizontal plane is μ = 0.4. The angle of friction for block B on the inclined plane is μ =0.15. What is the smallest weight W of block A for which equilibrium of the system can exist? 14 Marks



(OR)

6 A uniform ladder of length 5m and weight 250N rests on a horizontal ground and leans against a rough vertical wall. The coefficient of static friction between ladder and the floor is 0.3 and between the ladder and vertical wall is 0.2. When a weight of 900 N is placed on the ladder at a distance of 2 m from the top of the ladder, the ladder is at the point of sliding. Determine: 14 Marks

i) The angle made by the ladder with the horizontal.

ii) Reactions at the foot and top of the ladder.

UNIT-IV

7 Find the area moment of inertia about the centroidal axes of the plane area shown in fig. Also find the section modulus. 14 Marks

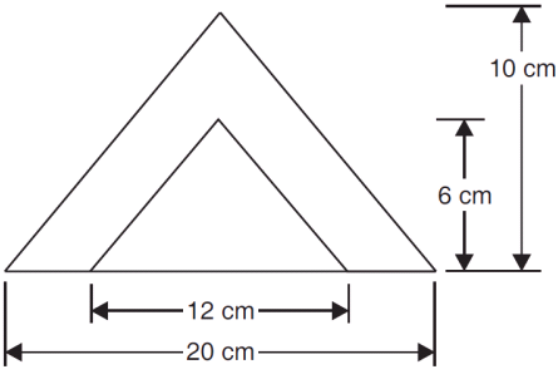


Fig.7

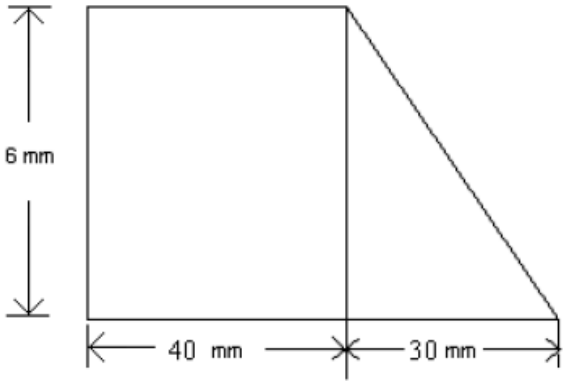
(OR)

8 Find the centroid of the plane area shown in figure 14 Marks



UNIT-V

9 a) A stone dropped into well is heard to strike the water in 3.5 sec. Find the depth of the well assuming the velocity of the sound is 335 m/sec. 7 Marks

b) Maximum range of a field gun is 2000 m. If a target at a distance of 1200 m is to be hit, what should be the angle of projection? 7 Marks

(OR)

10 a) A motor cycle starts from rest and speeds to 15 m/s with a constant acceleration of 1.5 m/s^2 runs at this speed for some time and finally comes to rest with a deceleration of 2 m/s^2. If total distance travelled is 400 m, determine total time required. 7 Marks

b) The motion of the particle is defined by the relation $x = 6t^4 + 8t^3 - 14t^2-10t + 16$, where x and t are expressed in meters and records, respectively. Determine the position, the velocity, and the acceleration as the particle when t = 3s. 7 Marks

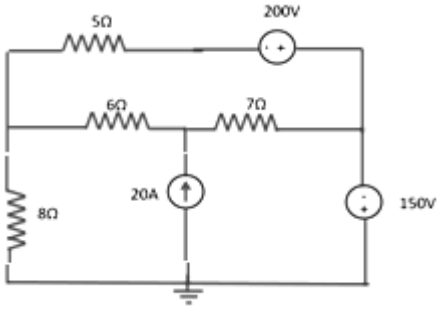
BASIC ELECTRICAL AND ELECTRONICS ENGINEERING
[Civil Engineering, Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

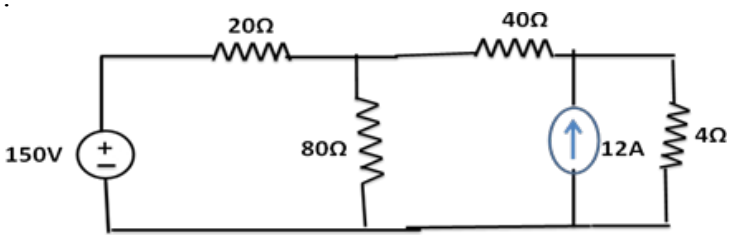
Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 a) Compute the voltage across the 7 Ω resistor, using mesh analysis. 7 Marks

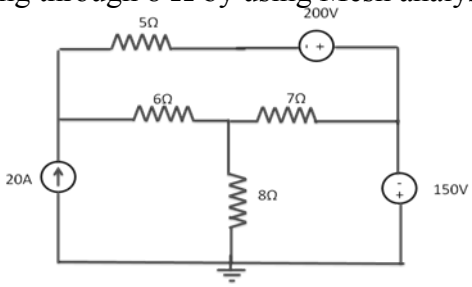


b) Use Nodal analysis to determine the current through 40 Ω resistor in the circuit given below. 7 Marks

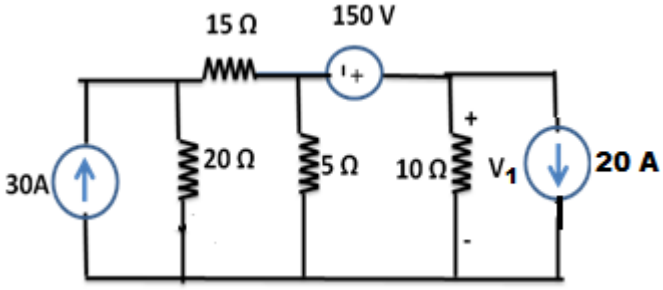


(OR)

2 a) Find the current flowing through 8 Ω by using Mesh analysis. 7 Marks



b) Compute the voltage across 10 Ω resistor V_1, using nodal analysis. 7 Marks



UNIT-II

3 A 64 mH inductor with a 700 Ω winding resistance is connected in series with a 3.3 kΩ resistor. A 10 V RMS, 5 kHz supply is applied to the circuit. Calculate the RMS value of circuit current and voltage across resistor and inductor. 14 Marks

(OR)

4	a)	A series RC circuit with R = 120 Ωand C = 3.3 μF is connected to a 12 V RMS, 1 kHz supply. Determine the circuit current, the resistor voltage, the capacitor voltage and the phase angle of the current with respect to the supply voltage. Represent the phasor diagram and impedance triangle for the circuit.	7 Marks
	b)	A coil have inductance 32 mH and resistance of 600 Ω is connected in series with 2.4 kΩ resistor. The series combination circuit was excited by 30 V RMS, 1 kHz supply. Compute the current delivered by source and voltage across resistor in coil. Also compute the power drawn from source.	7 Marks

UNIT-III

5	a)	Build a diagram of DC Machine and label the component parts. State the functions of each part.	7 Marks
	b)	The armature of 6 – pole DC generator has a wave winding containing 664 conductors. Compute the generator EMF when flux per pole is 0.06 webers and the speed is 250 rpm. At what speed must be run to generate EMF of 250 V, if the flux per pole is reduced to 0.058 webers.	7 Marks
		(OR)	
6	a)	Explain the construction and working principle of DC Generator.	7 Marks
	b)	An 8 pole DC generator has flux of 40 mWb per pole and winding is connected in lap winding with 960 conductors. Calculate the generated EMF on open circuit when it runs at 400 rpm. If the armature is wave wound at what speed must the machine be driven to generate the same voltage.	7 Marks

UNIT-IV

7	a)	What are the different types of temperature measurements? Explain.	8 Marks
	b)	State the need for transducer, explain.	6 Marks
		(OR)	
8	a)	State the difference between active and passive transducers.	7 Marks
	b)	How does thermo couple works, state the applications of thermo couples in industry.	7 Marks

UNIT-V

9	a)	Explain the operation of single phase half wave diode rectifier with neat waveforms.	6 Marks
	b)	Single phase half-wave diode rectifier is connected to 220 V, 50 Hz supply to feed 5 Ω pure resistors. Draw load voltage and current and diode voltage drop waveforms along with supply voltage. Then, calculate i) The rectification efficiency. ii) Ripple factor of load voltage and iii) Peak Inverse Voltage (PIV) of the diode.	8 Marks
		(OR)	
10	a)	Define current gains α and β. How are they related?	6 Marks
	b)	Draw I - V characteristics (Collector characteristics) for a transistor and discuss the salient features.	8 Marks

ELECTRONIC DEVICES AND CIRCUITS

[Electrical and Electronics Engineering, Electronics and Communication Engineering and Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 a) Draw and explain the V-I characteristics of Zener diode. 7 Marks

b) A voltage of 500 cos ωt is applied to half wave rectifier with load resistance of 5kΩ. Define and derive the values of maximum DC voltage component, R.M.S. current, Ripple Factor, Transformer Utilization Factor, PIV and Rectifier Efficiency of the rectifier. 7 Marks

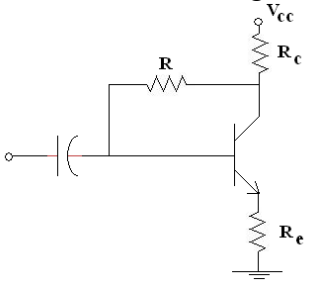
(OR)

2 a) Distinguish between avalanche and Zener mechanisms. 7 Marks

b) Derive an expression for transition capacitance. 7 Marks

UNIT-II

3 a) In the circuit shown, V_{cc} = 24V, R_c = 10K and R_e = 270Ω. If a silicon transistor is used with β = 45 and if V_{CE} = 5V, find R. Neglect reverse saturation current. 6 Marks



b) Explain the output characteristics of a transistor in CB configuration. 8 Marks

(OR)

4 a) Explain CE configuration with the help of input and output characteristics. 8 Marks

b) Explain Collector –to-base bias method and derive the expression for the stability factor. 6 Marks

UNIT-III

5 a) Derive the expressions for voltage gain, current gain, input impedance output impedance of CE amplifier, using exact and approximate model. 9 Marks

b) Draw the h-parameter model of CE configuration. 5 Marks

(OR)

6 a) Why hybrid parameters are called so? Draw the hybrid model of transistor indicating all the parameters. 5 Marks

b) A CE amplifier is driven by a voltage source of internal resistance R_s=1000 Ω and the load impedance of R_L = 1200Ω. The h–parameters are h_{ie} = 1.2 kΩ, h_{re}=2 × 10^{-4}, h_{fe} = 60 and h_{oe} = 25 μA/v. Compute the current gain, input resistance, voltage gain and output resistance using exact analysis. 9 Marks

UNIT-IV

7	a)	Explain how an FET is used as a voltage variable resistor.	6 Marks
	b)	Explain the operation of MOSFET in enhancement mode.	8 Marks
		(OR)	
8	a)	Why we call FET as A voltage controlled device?	6 Marks
	b)	What are the values of I_D and g_m for V_{GS} = -1.5V if I_{DSS} and V_P are given as 8.4mA and -3V respectively.	8 Marks

UNIT-V

9	Draw the electrical equivalent circuit of UJT and explain its operation with emitter characteristics.	14 Marks
	(OR)	
10	Explain the characteristics of tunnel diode with the help of energy band diagram.	14 Marks

BASIC ELECTRONIC DEVICES AND CIRCUITS

[Computer Science and Engineering, Information Technology and Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 Derive the following terms for Half wave rectifier 14 Marks
i) DC Ammeter ii) DC Voltmeter
iii) Wattmeter iv) Regulation.

(OR)

2 a) Derive the Ripple factor for Half wave rectifier and full wave rectifier. 8 Marks
b) Derive the L Section filter in full wave rectifier. 6 Marks

UNIT-II

3 a) Draw a self bias circuit. Explain why such a circuit is an improvement on the fixed bias circuit as for as stability concerned. 10 Marks
b) A BJT has base current of 200 uA and emitter current of 20 mA Determine the collector current and beta. 4 Marks

(OR)

4 a) Why is the need of stabilizing an operating point? How is it done? 10 Marks
b) A BJT has base current of 400 uA and emitter current of 50 mA Determine the collector current and beta. 4 Marks

UNIT-III

5 a) Draw the small signal model of JFET. 10 Marks
b) A FET amplifier in the common source configuration uses a load resistance of 250 K ohms and the transconductance is 0.5 mA/V. What is the voltage gain of the amplifier given drain resistance is 200 K Ohms. 4 Marks

(OR)

6 a) Explain the enhancement MOSFET with neat sketches. 10 Marks
b) What are the two types of MOSFET How do they differ in their structure? 4 Marks

UNIT-IV

7 a) Draw the circuit of Colpitts oscillator and explain its working. Derive the expression for frequency of oscillation. 10 Marks
b) In colpitts oscillator C_1=0.16 uF, L =15.8 mH and its frequency of oscillation is 10 K Hz, Calculate the value of capacitor C_2. 4 Marks

(OR)

8 a) Draw the circuit of RC phase shift oscillator and explain its working. Derive the expression for frequency of oscillation. 10 Marks
b) In a RC phase shift oscillator, if its frequency of operation is 955 Hz and R1=R2= R3 =680 K ohms, find the value of capacitor. 4 Marks

UNIT-V

9 a) Explain the difference between UJT and a Conventional BJT. 7 Marks
b) Explain the VI characteristics of UJT. 7 Marks

(OR)

10 Explain the principle of operation and characteristics of Varactor diode. 14 Marks

FOUNDATIONS OF DATA STRUCTURES

[Electrical and Electronics Engineering, Electronics and Communication Engineering and Electronics and Instrumentation Engineering]

Max. Marks: 70

Time: 3 hours

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1	a)	Illustrate a non recursive, in-place version of the quick-sort algorithm. The algorithm should still be based on the same divide-and-conquer approach, but use an explicit stack to process sub problems.	7 Marks
	b)	What is divide and conquer strategy? State three steps of Merge sort.	7 Marks
		(OR)	
2		Explain the divide and conquer methodology. Suggest a pseudo code for merge sort and analyze its complexities. Trace algorithm on the data <8, 4, 1, 6, 7, 2, 3, 9>.	14 Marks

UNIT-II

3	a)	Find infix and postfix expressions for the following prefix expression and explain the steps in detail. *-AB+*CD/EF.	7 Marks
	b)	Explain the implementation of circular queue using array. How an "empty queue" is distinguished from a "full queue"? Write necessary functions to perform all valid operations on circular queue.	7 Marks
		(OR)	
4	a)	Enumerate and describe briefly the various applications of Stacks and Queues.	5 Marks
	b)	Explain the terms infix expression, prefix expression, and postfix expression. Convert the following infix expression to their postfix equivalents: 14 / 7 * 3 - 4 + 9 / 2.	5 Marks

UNIT-III

5	a)	Write routines to implement the operations INSERT, DELETE, and SEARCH for circular linked lists.	7 Marks
	b)	Write the insert ( ) and find ( ) routines for Single Linked List.	7 Marks
		(OR)	
6	a)	Write the delete () routines for Single Linked List and Circular Linked List.	7 Marks
	b)	Form a linked list to store student's details. Give the advantages and uses of a circular linked list.	7 Marks

UNIT-IV

7		Show the result of inserting <3, 1, 4, 6, 9, 2, 5, 7> into an initially empty binary search tree. Show the result of deleting the root. Explain the different tree traversals for the resultant tree by giving algorithms and running times.	14 Marks
		(OR)	
8	a)	Insert into an empty AVL tree with keys 30, 40, 24, 58, 48, 26, 11, 13. Draw the tree after each insertion.	7 Marks
	b)	Insert the keys 90, 20, 70, 11, 16, 15, 1 into the empty Binary Search Tree in this order. Draw the tree once after the keys 11 is inserted, then again after 1 is inserted.	7 Marks

UNIT-V

9	a)	Given an adjacency-list representation of a directed graph, how long does it take to compute the out-degree of every vertex? How long does it take to compute the in-degrees?	7 Marks
	b)	What is the significance of Hashing over linear and binary search?	7 Marks

(OR)

10	a)	Give adjacency list and adjacency matrix representations for a full binary search tree formed by inserting the elements <3, 1, 5, 2, 0, 4, 6>. Can a tree can be Graph?	7 Marks
	b)	Write a program to find the topological order of a digraph G represented as adjacency lists. If a stack is used instead of a queue, does a different ordering result? Illustrate with an example.	7 Marks

OBJECT ORIENTED PROGRAMMING THROUGH C++

[Computer Science and Engineering, Information Technology and Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Discuss the idea of message passing with objects.	14 Marks
		(OR)	
2		Explain the features of reference variables.	14 Marks

UNIT-II

3	a)	What is an inline function? What are the advantages of having a function inline?	8 Marks
	b)	Write a C++ program to find cube of a number using inline function.	6 Marks
		(OR)	
4		Write a function using reference variables as arguments to swap the values of a pair of integers.	14 Marks

UNIT-III

5		Define sorting. Implement Bubble sort algorithm using arrays.	14 Marks
		(OR)	
6	a)	Define Pointer. How is the Reference operator helpful in a program?	7 Marks
	b)	Explain the purpose of Dereference operator with a suitable example?	7 Marks

UNIT-IV

7	a)	What is function overriding? Explain with an example?	5 Marks
	b)	What is operator overloading? Write a C++ program to compare two values representing distance in feet and inches, using overloading operator >.	9 Marks
		(OR)	
8		Write a C++ program to add and multiply two complex numbers. Initialize the variables through writing constructor. Implement add and multiply operations using overloaded + and * operators.	14 Marks

UNIT-V

9		What are the steps involved in using a file in a C++ program.	14 Marks
		(OR)	
10		Explain about container classes in C++, with a suitable example.	14 Marks

DIGITAL LOGIC DESIGN

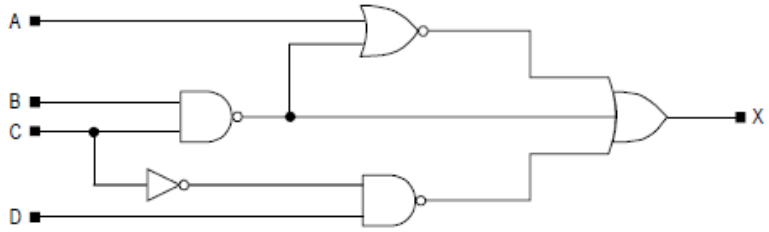
[Computer Science and Engineering, Information Technology and Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 a) Write the logic expression and simplify it as much as possible and draw a logic diagram that implements the simplified expression. 8 Marks



b) Represent the given decimal number 8620 in BCD code, Excess-3 code and as a binary number. 6 Marks

(OR)

2 a) Verify that the following operations are commutative and associative 6 Marks
i) AND ii) EX-OR

b) Most calculators use BCD to store the decimal values as they are entered into the keyboard and to drive the digit displays. 8 Marks
i) If a calculator is designed to handle 8 – digit decimal numbers, how many bits does this require?
ii) What bits are stored when the number 375 is entered into the calculator?

UNIT-II

3 a) Draw a logic diagram using only two-input NAND gates to implement the following expression: 7 Marks
$F = (AB + A'B)(CD' + C'D)$

b) Implement the following Boolean function F together with the don't care conditions d using no more than two NOR gates. Assume that both the normal and complement inputs are available. 7 Marks
$F(A,B,C,D) = \Sigma m(0,1,2,9,11)$
$d(A, B, C, D) = \Sigma(8,10,14,15)$

(OR)

4 a) Realize EX-NOR using minimum number of NOR gates. 7 Marks

b) Draw a NAND logic diagram that implements the complement of the following function: $F(A, B, C, D) = \Sigma(0,1,2,3,4,8,9,12)$. 7 Marks

UNIT-III

5 a) Implement the following function with 8×1 multiplexer 6 Marks
$F(A, B, C, D) = \Sigma m\ (0, 1, 3, 4, 8, 9, 15)$

b) Design a combinational circuit, that multiplies an input decimal digit represented in BCD by 5. The output is to be represented in BCD. Show that the outputs can be obtained from the input lines without using any logic gates. 8 Marks

(OR)

6	a)	A combinational circuit is specified by the following three Boolean functions: $F_1 = \Sigma m(0, 3, 4)$; $F_2 = \Sigma m(1, 2, 7)$; $F_3 = \Pi M(0, 1, 2, 4)$ Implement the circuit with a decoder and external OR gates.	8 Marks
	b)	Draw the circuit of 1×4 demultiplexer using NAND gates.	6 Marks

UNIT-IV

7	a)	Design a mod-8 ripple counter using positive edge triggered JK flip-flops.	7 Marks
	b)	Illustrate the operation of 3 bit Ring counter and plot the output waveforms.	7 Marks
		(OR)	
8	a)	Design a Mod 5 synchronous counter using JK flip-flops.	8 Marks
	b)	The contents of a serial-in/serial-out shift register are DCBA = 0101, where A is the least significant digit of the register. A serial input 10011 is moved into the shift register, from left to right, most significant bit first, by five successive clock pulses. Draw time diagrams showing how the outputs of the four flip-flops vary with time during the period of the five clock pulses.	6 Marks

UNIT-V

9		Design an Excess-3 to BCD code converter using PLA.	14 Marks
		(OR)	
10	a)	Realize the following functions using PROM of size 8×3. $F_1 = \Sigma m(0, 4, 7)$; $F_2 = \Sigma m(1, 3, 6)$; $F_3 = \Sigma m(1, 2, 4, 6)$	8 Marks
	b)	Explain ROM organization.	6 Marks

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		What is a living organism? What are the differences between prokaryotes and eukaryotes?	12 Marks	L1	CO1	PO1
		(OR)				
2.	a)	How living organisms obtain energy from their carbon sources? Classify them.	6 Marks	L2	CO1	PO1
	b)	Explain the cellular basis of life.	6 Marks	L2	CO1	PO1

UNIT-II

3.		What is bio-molecule? Enlist the classification of carbohydrates, proteins and Nucleic acids.	12 Marks	L1	CO1	PO1
		(OR)				
4.	a)	Define Enzyme. Summarize the industrial applications of bacterial enzymes.	8 Marks	L1	CO1	PO5
	b)	What are nucleic acids in biology?	4 Marks	L2	CO1	PO1

UNIT-III

5.		Explain about Mendelian Laws of inheritance. What is genetic code and how is it read?	12 Marks	L2	CO2	PO1
		(OR)				
6.		What are Replication, Transcription and Translation? Explain with diagrams.	12 Marks	L2	CO2	PO1

UNIT-IV

7.		What is the role of Recombinant DNA technology in transgenic microbes and plants? Explain with examples.	12 Marks	L2	CO3	PO6
		(OR)				
8.	a)	What is Biosensor and Biochip? How does it work?	6 Marks	L3	CO3	PO1
	b)	What are the advantages of recombinant vaccines and how they are made?	6 Marks	L4	CO3	PO6

UNIT-V

9.	a)	What is the purpose of a microarray? Give an example of a real world application of microarray analysis?	6 Marks	L1	CO3	PO1
	b)	How do neurons know which neurotransmitter to release? Explain.	6 Marks	L2	CO1	PO1
		(OR)				
10.		How would you describe the human digestive system? Give a detailed diagram.	12 Marks	L1	CO1	PO1

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	What are Newton's rings? Describe and explain the formation of Newton's rings. Derive the expression for the wavelength of monochromatic light.	10 Marks	L2	CO1	PO1
	b)	A soap film of refractive index 1.33 and thickness 5000 Å is exposed to white light. What wavelength in the visible region is reflected?	2 Marks	L1	CO1	PO2
		(OR)				
2.	a)	Describe the construction and working of Nicol's prism.	7 Marks	L2	CO1	PO1
	b)	Explain the theory of plane transmission grating.	5 Marks	L2	CO1	PO1
		UNIT-II				
3.		Write Maxwell equations. Discuss the equation of electromagnetic wave in dielectric medium and hence evaluate the velocity of light in free space.	12 Marks	L2	CO2	PO1 PO2
		(OR)				
4.	a)	Define the acceptance angle and numerical aperture. Derive an expression for the numerical aperture of an optical fiber.	9 Marks	L3	CO2	PO2
	b)	Calculate the angle of acceptance of given optical fiber, if the refractive indices of the core and the cladding are 1.563 and 1.498 respectively.	3 Marks	L3	CO2	PO2
		UNIT-III				
5.	a)	Derive an expression for the electron concentration in an intrinsic semiconductor.	9 Marks	L3	CO3	PO1 PO2
	b)	Find the diffusion coefficient of electron in silicon at 300K, if μ_e is 0.19 $m^2/V\text{-}s$.	3 Marks	L1	CO3	PO2
		(OR)				
6.	a)	State and explain the Hall effect. Obtain an expression for the Hall coefficient of a given semiconductor specimen.	9 Marks	L2	CO3	PO1
	b)	The Hall coefficient of a specimen is 3.66×10^{-4} m^3C^{-1}. Its resistivity is 8.93×10^{-3} Ω-m, find carrier density.	3 Marks	L1	CO3	PO2
		UNIT-IV				
7.	a)	Describe the frequency dependence of polarization.	7 Marks	L2	CO4	PO1
	b)	What is piezoelectricity? List its applications.	5 Marks	L1	CO4	PO1
		(OR)				
8.	a)	Summarize the ferromagnetic hysteresis loop.	6 Marks	L2	CO4	PO1
	b)	Distinguish soft and hard magnetic material. Explain their properties.	6 Marks	L4	CO4	PO1
		UNIT-V				
9.	a)	Illustrate the AC and DC Josephson effect.	6 Marks	L2	CO5	PO1
	b)	Describe the BCS theory of Super conductivity.	6 Marks	L2	CO5	PO1
		(OR)				
10.	a)	List out applications of nanomaterial's.	4 Marks	L1	CO5	PO1
	b)	Explain the synthesis of nanomaterial's using PLD method.	8 Marks	L2	CO5	PO1

TRANSFORMATION TECHNIQUES AND LINEAR ALGEBRA

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Express $f(x)$ as a Fourier series in (-2,2) — 6 Marks — L3 — CO1 — PO1

If $f(x) = \begin{cases} 2, & if \ -2 < x < 0 \\ 0, & if \ \ 0 < x < 2 \end{cases}$

b) Establish Fourier sine transform for the function $\frac{e^{-ax}}{x}$. — 6 Marks — L1 — CO1 — PO2

(OR)

2. a) Using Fourier integral, Show that — 4 Marks — L3 — CO1 — PO2

$$e^{-ax} - e^{-bx} = \frac{2(b^2 - a^2)}{\pi} \int_0^\infty \frac{\lambda \sin \lambda x}{(\lambda^2 + a^2)(\lambda^2 + b^2)} d\lambda .$$

b) Show that the Fourier cosine transform of — 8 Marks — L1 — CO1 — PO1

$$f(x) = \begin{cases} x, & for \ 0 < x < 1 \\ 2 - x, & for \ 1 < x < 2 \\ 0, & for \ x > 2 \end{cases} \quad is \ \frac{2}{p^2} \cos p (1 - \cos p).$$

UNIT-II

3. a) Determine $L\left\{\frac{1 - \cos at}{t}\right\}$. — 6 Marks — L3 — CO1 — PO1

b) Find the Laplace transform of $e^{-3t} \int_0^t \frac{\sin t}{t} dt$. — 6 Marks — L1 — CO1 — PO2

(OR)

4. a) Find the Laplace transform of the square wave function defined by — 6 Marks — L1 — CO1 — PO1

$$f(t) = \begin{cases} 1, & if \ 0 < t < a \\ 1, & if \ \frac{a}{2} < t < a \end{cases} \text{ with period } a .$$

b) Using Laplace transform, Show that $\int_0^\infty t^2 e^{-4t} \sin 2t \, dt = \frac{11}{500}$. — 6 Marks — L3 — CO1 — PO2

UNIT-III

5.	a)	Find the inverse Laplace transform of $\log\left(\frac{1+s}{s^2}\right)$.	6 Marks	L1	CO1	PO1
	b)	Apply convolution theorem to evaluate $L^{-1}\left[\frac{s}{(s^2+1)^2}\right]$.	6 Marks	L3	CO1	PO2
		(OR)				
6.		Using Laplace transform, solve the differential equation $(D^2 + n^2)\,y = a \sin(nt + 2)$, *given that* $y(0) = 0,\ y'(0) = 0$.	12 Marks	L3	CO1	PO2

UNIT-IV

7.		Determine the Eigen values and corresponding Eigen vectors of the matrix $A = \begin{bmatrix} 2 & 2 & 0 \\ 2 & 5 & 0 \\ 0 & 0 & 3 \end{bmatrix}$.	12 Marks	L3	CO2	PO1
		(OR)				
8.	a)	Find the rank of matrix $A = \begin{bmatrix} 8 & 1 & 3 & 6 \\ 0 & 3 & 2 & 2 \\ -8 & -1 & -3 & 4 \end{bmatrix}$ by reducing it to echelon form.	6 Marks	L1	CO2	PO1
	b)	Find the orthogonal transformation which transforms the quadratic form $2x^2 + 2y^2 + 2z^2 - 2xy - 2yz - 2zx$ to the canonical form**.**	6 Marks	L1	CO2	PO2

UNIT-V

9.	a)	Examine whether the set of vectors $\begin{bmatrix} 1 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ 1 \end{bmatrix}$ *and* $\begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix}$ is linearly independent or not.	6 Marks	L4	CO2	PO2
	b)	Show that the transformation $T: R^2 \to R^3$ defined by $T\begin{bmatrix} x \\ y \end{bmatrix} = \begin{bmatrix} x \\ 2x - y \\ 3x + 4y \end{bmatrix}$ is linear.	6 Marks	L2	CO2	PO1
		(OR)				
10.	a)	Show that the vectors $\begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}, \begin{bmatrix} -1 \\ 0 \\ 1 \end{bmatrix}$ *and* $\begin{bmatrix} 4 \\ 9 \\ 7 \end{bmatrix}$ form a basis of $R^3(R)$.	6 Marks	L2	CO2	PO1
	b)	Show that the linear transformation $T: R^2 \to P_1$ defined by $T\begin{bmatrix} a \\ b \end{bmatrix} = a + (a + b)x$ is one-to-one and onto, where P_1 is a vector space of all linear polynomial over real field.	6 Marks	L2	CO2	PO2

PROGRAMMING FOR PROBLEM SOLVING

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe the efficiency of algorithms with suitable examples.	6 Marks	L2	CO1	PO1
	b)	List and explain about the data types in Python.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Write a short notes on : i) Implicit line joining ii) Explicit line joining	6 Marks	L1	CO1	PO1
	b)	Define variable. Explain identifier rules.	6 Marks	L1	CO1	PO1

UNIT-II

3.	a)	Write a python script to find whether the given number is perfect number or deficient number or abundant number.	6 Marks	L3	CO1	PO2
	b)	Display the following pattern using Python script. 11111 1111 111 11 1	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Write a python script to print list of prime numbers within a range.	6 Marks	L3	CO1	PO2
	b)	Specify the usage of pass, break and continue statements.	6 Marks	L2	CO1	PO1

UNIT-III

5.	a)	Compose a Python script to perform matrix multiplication.	6 Marks	L3	CO1	PO2
	b)	Write a Python script to count the number of vowels, consonants and so on Expected Output: Enter a line of string: adfslkj34 34lkj34334lk Vowels: 1 Consonants: 11 Digits: 9 White spaces: 1	6 Marks	L3	CO1	PO3
		(OR)				
6.	a)	Write a python script to search a key element in the given list of elements.	6 Marks	L3	CO1	PO2
	b)	Illustrate any four set operation functions with an example program.	6 Marks	L2	CO1	PO1

UNIT-IV

7.	a)	Discuss in detail about return statement in python with an example.	6 Marks	L2	CO2	PO1
	b)	Develop a python script to copy data from one file to another file.	6 Marks	L3	CO2	PO2
		(OR)				
8.	a)	Differentiate global keyword and globals() function with an example.	6 Marks	L2	CO2	PO1
	b)	List and explain any four built-in functions in numpy.	6 Marks	L1	CO2	PO1

UNIT-V

9.	a)	Discuss in detail about how to read data from CSV files.	6 Marks	L3	CO2	PO2
	b)	List the steps to create data frame from dictionary with an example.	6 Marks	L3	CO2	PO2
		(OR)				
10.	a)	Consider data frame contains student marks information. Write a Python script to display student details whose marks <60.	6 Marks	L3	CO2	PO3
	b)	Write a Python script to print information and frequency counts of a data set.	6 Marks	L3	CO2	PO2

CIVIL ENGINEERING MATERIALS AND CONCRETE TECHNOLOGY

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Briefly explain the geological classification of rocks.	6 Marks	L2	CO1	PO1
	b)	Mention the factors to be considered while deciding a quarry site.	6 Marks	L1	CO1	PO1 PO8
		(OR)				
2.	a)	Illustrate the various methods used in manufacturing of bricks.	6 Marks	L2	CO1	PO1
	b)	Discuss briefly about the types of tiles.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	List and explain the various methods of seasoning of timber.	6 Marks	L2	CO1	PO1 PO2 PO5
	b)	Discuss the various materials used in low cost housing.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
4.	a)	Enumerate the precautionary measures to reduce various defects in timber.	6 Marks	L4	CO1	PO1 PO2
	b)	Write advantages and disadvantages, if waste is used as alternative building material.	6 Marks	L2	CO1	PO1 PO2 PO4
		UNIT-III				
5.	a)	Mention different types of tests on cement. Explain how to conduct normal consistency test on cement.	6 Marks	L3	CO1	PO1 PO2
	b)	List out various types chemical admixtures. How these admixtures are supporting to the environment.	6 Marks	L4	CO1	PO1
		(OR)				
6.	a)	Briefly describe the following tests on aggregates: i) Crushing test ii) Impact test	6 Marks	L4	CO1	PO1
	b)	Write about plasticizers and super plasticizers.	6 Marks	L3	CO1	PO1
		UNIT-IV				
7.	a)	Explain how the measurement of workability of fresh concrete is carried out in laboratory.	6 Marks	L4	CO1	PO1 PO2
	b)	Distinguish Segregation and Bleeding in concrete in detail.	6 Marks	L2	CO1	PO1
		(OR)				
8.	a)	Why compaction is required to concrete? Explain compaction methods by vibration.	6 Marks	L4	CO1	PO1 PO2
	b)	Explain how you estimate the quality of concrete by using ultrasonic pulse velocity test.	6 Marks	L4	CO1	PO1 PO2

UNIT-V

9.	a)	Explain the various factors affecting creep of concrete.	6 Marks	L2	CO1	PO1 PO2
	b)	Explain the determination of the modulus of elasticity of concrete experimentally.	6 Marks	L4	CO1	PO1 PO2 PO4
		(OR)				
10.		Design a M30 concrete mix using IS method of mix design for the following data: i) Maximum size of aggregate: 20 mm (Angular) ii) Workability: 125 mm slump. iii) Quality control: good iv) Type of exposure - Mild (R.C.C) v) Specific Gravity: a) Cement:3.15 b) Sand:2.63 c) CA: 2.66 vi) Water absorption: a) CA - 0.5% b) FA - 1.0% vii) Free surface moisture: a)CA - Nil b) FA - 2.2% viii) Sand confirms to Zone III grading Assume any other data required suitably.	12 Marks	L6	CO2	PO1 PO2 PO3 PO8

ENGINEERING MECHANICS

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Two forces of magnitude P and Q act at a point. Their resultant is inclined to first, at an angle α and has magnitude R. If the magnitude of the first force is increased by R, determine the angle made by the new resultant with the first force.	6 Marks	L4	CO1	PO1 PO2
	b)	Two forces of magnitude (P+Q) and (P-Q) acting at a point include an angle 2θ. Show that, if their resultant makes an angle α with the bisector of the angle between them, then P tan α = Q tan θ.	6 Marks	L4	CO1	PO1 PO2

(OR)

2.	a)	Define: i) Moment of a force and ii) Couple.	6 Marks	L4	CO1	PO1 PO2
	b)	Determine and locate the resultant R of the forces and one couple acting on the beam as shown in Fig.1.	6 Marks	L4	CO1	PO1 PO2

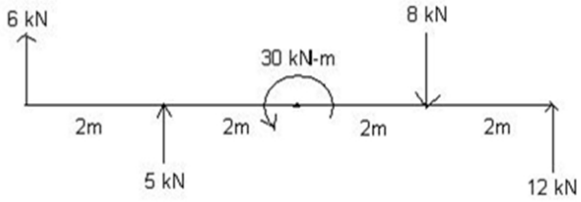

Fig.1

UNIT-II

3.	a)	What is friction? Explain how friction is both desirable and undesirable in engineering applications also state the laws of static and dynamic friction.	6 Marks	L4	CO1	PO1 PO2
	b)	A body of weight 50N is placed on a rough horizontal plane. To just move the body on the horizontal plane, a push of 15N inclined at 30° to the horizontal plane is required. Find the coefficient of friction.	6 Marks	L4	CO1	PO1 PO2

(OR)

4.	a)	What is friction? Explain how friction is both desirable and undesirable in engineering applications also state the laws of static and dynamic friction.	6 Marks	L4	CO1	PO1 PO2

	b)	A body of weight 50N is placed on a rough horizontal plane. To just move the body on the horizontal plane, a push of 15N inclined at 30° to the horizontal plane is required. Find the coefficient of friction.	6 Marks	L4	CO1	PO1 PO2

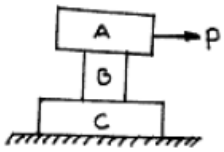

Fig.2

UNIT-III

5.		Find the moment of inertia of the plane area shown in Fig.3. about X and Y axes through its centroid.	12 Marks	L4	CO1	PO1 PO2

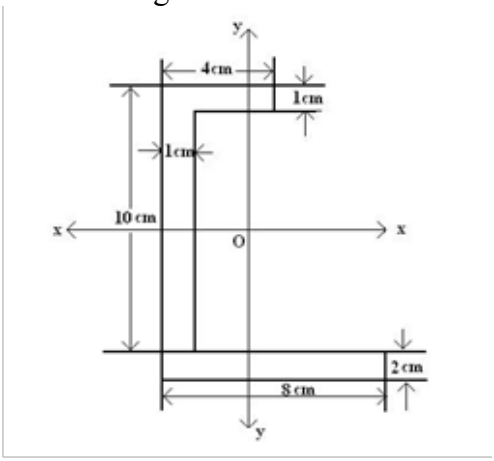

Fig.3

(OR)

6.	a)	State and prove theorems of Pappus–Guldinus.	6 Marks	L4	CO1	PO1 PO2
	b)	Find the centroid of the inverted T section shown in below Fig.4.	6 Marks	L4	CO1	PO1 PO2

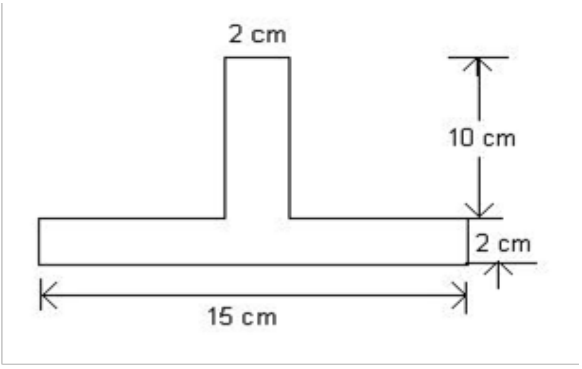

Fig.4

UNIT-IV

7.		A compound bar consist of a central steel strip 25 mm wide and 6.4 mm thick placed between two strips of brass each 25 mm wide and 't' mm thick. The strips are firmly fixed together to form a compound bar of rectangular section 20 mm wide and (2t + 6.4) mm thick. Determine i) The thickness of the brass strips which will make the apparent modulus of elasticity of compound bar $1.57x10^5$ N/mm^2 and ii) the maximum axial pull the bar can then carry if the stress is not to exceed 157 N/mm^2, in either the brass or steel. Take the values of E for steel and brass as $2.07x10^5$ N/mm^2 and $1.14x10^5$ N/mm^2 respectively.	12 Marks	L4	CO1	PO1 PO2
		(OR)				
8.	a)	Derive the expression for the extension of a bar due to its self-weight.	6 Marks	L4	CO1	PO1 PO2
	b)	A rod of steel is 20 m long at a temperature of 20°C. Find the free expansion of the rod when the temperature rises to 65°C. Find the temperature stress produced i) When the expansion of the rod is prevented ii) When the rod is permitted to expand by 5.8 mm. Take $\alpha = 12x10^{-6}$ per°C and E=$2x10^5$ N/mm^2	6 Marks	L4	CO1	PO1 PO2

UNIT-V

9.	a)	A cylindrical water tank of height 25 m, inside diameter 2.2 m, having vertical axis is open at the top. The tank is made up of steel having yield stress of 210 MN/m^2. Determine the thickness of shell used when the tank is full of water.	6 Marks	L6	CO2	PO1 PO2 PO3
	b)	A cylindrical air drum is 2.25 m in diameter with plates 1.2 cm thick. The efficiencies of the longitudinal and circumferential joints are respectively 75 % and 40 %. If the tensile stress in the plating is to be limited to 120 MN/m^2, find the maximum safe air pressure.	6 Marks	L4	CO1	PO1 PO2
		(OR)				
10.		Mention the assumptions in Lame's theory. Derive Lame's equation for radial and circumferential stress of thick cylinder.	12 Marks	L4	CO1	PO1 PO2

ELECTRIC CIRCUITS

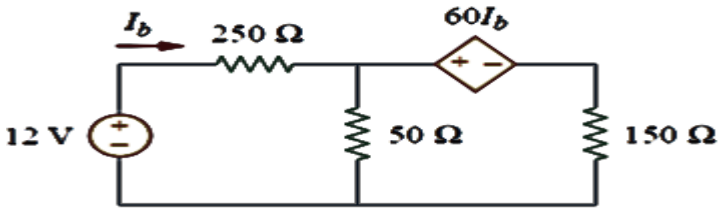
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Determine I_b of the circuit shown in figure using mesh analysis. 6 Marks L4 CO1 PO2



b) Obtain I_0 of the circuit shown in figure. 6 Marks L4 CO1 PO2

(OR)

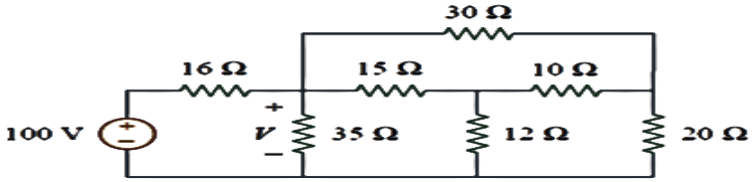
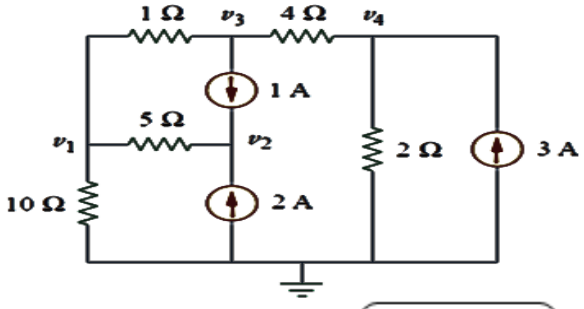
2. a) Find the V of the circuit shown in figure. 6 Marks L3 CO1 PO2



b) Determine the nodal voltages of the circuit shown in figure. 6 Marks L3 CO1 PO2



UNIT-II

3. Find total impedance and total power supplied by the source of the circuit shown in figure. 12 Marks L4 CO1 PO2

(OR)

4.	a)	Obtain the line currents in the three-phase circuit shown in figure.	6 Marks	L3	CO1	PO2

	b)	In two wattmeter method the reactive power input is 15 kVAR and P.f. is 0.8 lag. Calculate the total input power of three phase balanced load and each wattmeter reading.	6 Marks	L3	CO1	PO2

UNIT-III

5.	a)	Use Norton's theorem to find V_0 in the circuit shown in figure.	6 Marks	L3	CO1	PO5

	b)	State and explain Maximum power transfer theorem and derive the necessary conditions for maximum power transfer for AC excitations.	6 Marks	L2	CO1	PO1

(OR)

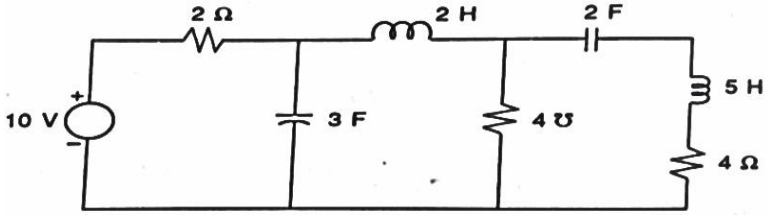
6.	a)	Find current *i* of the circuit shown in figure using superposition theorem.	6 Marks	L3	CO1	PO5

	b)	Construct the dual circuit of the network shown in figure. Mention the procedural steps.	6 Marks	L3	CO1	PO5



UNIT-IV

7.	a)	Two coils connected in series-aiding fashion have a total inductance of 250 mH. When connected in a series-opposing configuration, the coils have a total inductance of 150 mH. If the inductance of one coil is three times the other, find self inductances and mutual inductance. What is the coupling coefficient?	6 Marks	L2	CO1	PO1

	b)	Determine the mesh currents of the circuit shown in figure.	6 Marks	L4	CO1	PO2

(OR)

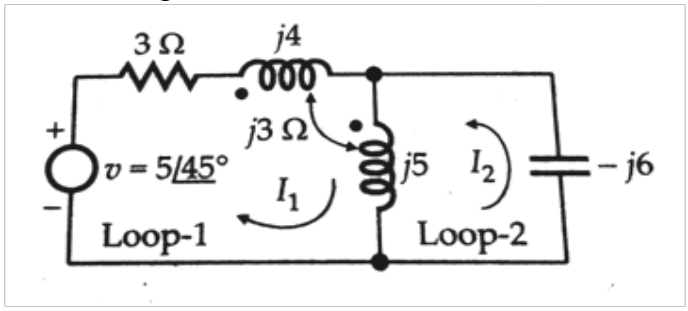
8.	a)	Obtain v_0 of the circuit shown in figure.	6 Marks	L4	CO1	PO2

	b)	Find the voltage drop across the capacitor and resistor in the circuit shown in figure.	6 Marks	L4	CO1	PO2



UNIT-V

9.	a)	Define characteristic impedance and derive the characteristic impedance for a *T* and π networks. Also explain the nature of characteristic impedance in pass band and stop bands.	6 Marks	L2	CO1	PO1
	b)	Design a constant- *k* high pass filter to have a cut-off frequency of 2 kHz and a design impedance of 100 Ohms.	6 Marks	L4	CO2	PO3

(OR)

10	a)	Derive the expression for design impedance of a constant-*k* filters	6 Marks	L3	CO1	PO1
.	b)	Design a constant-*k* low pass filter having cut off frequency of 2.5 kHz and design resistance of R_0= 700 Ohms. Also find the frequency at which the filter produces an attenuation of 19.1 dB.	6 Marks	L4	CO2	PO3

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	State Kirchhoff's voltage and current laws.	4 Marks	L1	CO1	PO1
	b)	In the circuit shown in figure, write three node equations for nodes A, B, and C, with node D as the reference, and find the node voltages.	8 Marks	L4	CO1	PO2

(OR)

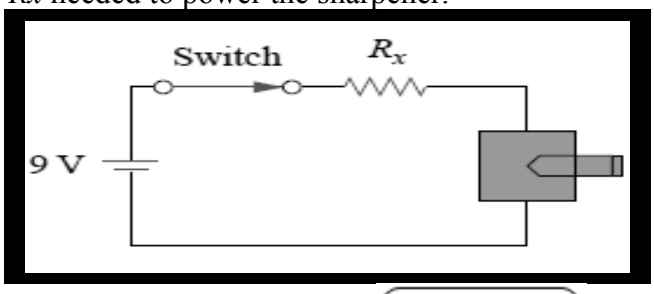
2.	a)	Solve for V_1 and V_2 using nodal method. Let V = 100V.	6 Marks	L4	CO1	PO2

	b)	An electric pencil sharpener rated 240 mW, 6 V is connected to a 9-V battery as shown in figure, design the series dropping resistor *Rx* needed to power the sharpener.	6 Marks	L3	CO2	PO3



UNIT-II

3.	a)	Explain the concept of active, reactive and apparent power and draw the power triangle.	4 Marks	L1	CO1	PO1
	b)	In a TV transmitter, a series circuit has an impedance of 3 k *Ohms* and a total current of 50 mA. If the voltage across the resistor is 80 V, what is the power factor of the circuit?	8 Marks	L3	CO2	PO6

(OR)

4.	a)	Bring out the differences between series and parallel resonance?	4 Marks	L2	CO1	PO1
	b)	A series RLC circuit has R=20 ohm, L=0.005H and C = 0.2 x 10^{-6} F. It is fed from a 100V variable frequency source. Find i) frequency at which current is maximum ii) impedance at this frequency and iii) voltage across inductance at this frequency.	8 Marks	L4	CO1	PO2

UNIT-III

5.	a)	State and explain the Norton's theorem.	4 Marks	L1	CO1	PO1
	b)	In the network shown in figure, find the value of Z_L so that the power transfer from the source is maximum. Also find P_{max}.	8 Marks	L4	CO1	PO2

(OR)

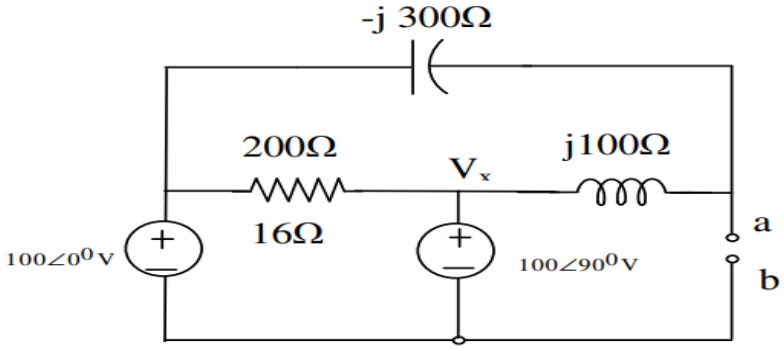
6.	a)	State and explain Maximum power transfer theorem and derive the necessary conditions for maximum power transfer for AC excitations.	6 Marks	L2	CO1	PO2
	b)	Find the Thevenin equivalent circuit for the circuit shown below Figure.	6 Marks	L3	CO1	PO5



UNIT-IV

7.	a)	Explain the steady state and transient behavior of an inductor.	4 Marks	L1	CO1	PO1
	b)	The switch in the circuit shown in figure has been closed for a long time. The switch opens at t = 0, find $v_0(t)$ and $i_0(t)$ for t>0.	8 Marks	L4	CO2	PO2

(OR)

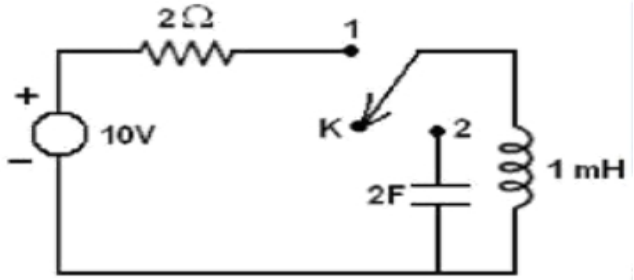
8.	a)	Derive the transient response of series R-L-C circuit, with DC excitation using Laplace transform obtain the response for an under damped case.	4 Marks	L3	CO1	PO5
	b)	For the circuit given in figure steady state conditions are reached for the switch K in position '1'. At t = 0, the switch is changed to position 2. Use the time domain method to determine the current through the inductor for all t>0.	8 Marks	L4	CO1	PO2



UNIT-V

9.	a)	Y-parameters for a two port network are given as Y_{11}=0.75, Y_{12}=Y_{21}=-0.25, Y_{22}=0.8. Determine the hybrid parameters.	6 Marks	L2	CO1	PO2
	b)	Find the y- Parameters for the circuit shown in the figure.	6 Marks	L4	CO2	PO4

(OR)

10.	a)	Y-parameters for a two port network are given as Y_{11}=0.75, Y_{12}=Y_{21}=-0.25, Y_{22}=0.8. Design an equivalent π-network.	6 Marks	L3	CO2	PO3
	b)	Determin the impedance parameters for the network shown in figure. Invistigate whether the netwok is symmetrical and reciprocal.	6 Marks	L4	CO1	PO2

BASIC ENGINEERING MECHANICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	An Electric light fixture weighing 15N hangs from a point C, by two strings AC and BC. AC is inclined at 600 to the horizontal and BC at 450 to the vertical as shown in fig. Determine the forces in the strings AC and BC. 	12 Marks	L2	CO1	PO1 PO2
	(OR)				
2.	Two cylindrical identical rollers A and B, each of weight W = 500 N are supported by an inclined plane and vertical wall and makes an angle of 300 with the horizontal as shown in Figure. Assuming all surfaces to be smooth, determine the reactions at A, B and C. 	12 Marks	L2	CO1	PO1 PO2

UNIT-II

3.	Determine and locate the resultant R of the forces and one couple acting on the beam as shown in figure. 	12 Marks	L2	CO1	PO1 PO2
	(OR)				
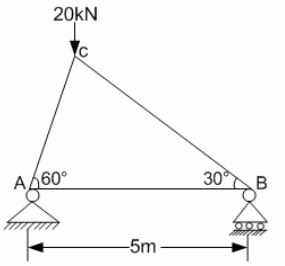
4.	The truss ABC shown in Fig. has a span of 5 m. It is carrying a load of 20 kN at its apex. Find the forces in the members AB, BC and AC, using method of joints. End A is hinged and B is supported on rollers.	12 Marks	L2	CO1	PO1 PO2



UNIT-III

5.		Find the least horizontal force 'P' to start motion of any part of the system of three blocks resting upon one another as shown in the below figure. The weights of the blocks are A = 3000N, B = 1000N, C =2000N. Between A and B μ= 0.3, between B and C, μ = 0.2 and between C and the ground μ = 0.1.	12 Marks	L2	CO1	PO1 PO2

(OR)

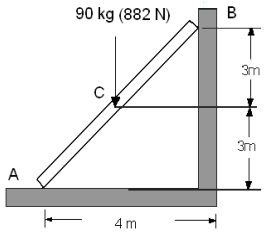
6.		A person of mass 90 kg is standing on a ladder at point C, shown in Fig.4. The ladder rests on a rough horizontal floor at A and against a smooth vertical wall at B. If the ladder is just on the point of slipping find the coefficient of friction between the ladder and the floor. Neglect the weight of the ladder. Also find the reactions at A and B.	12 Marks	L2	CO1	PO1 PO2



UNIT-IV

7.		Find the moment of inertia of the plane area shown in figure 7 about X and Y axes through its centroid.	12 Marks	L3	CO2	PO1 PO2

(OR)

8.	a)	State and prove parallel axis theorem for area moment of inertia.	6 Marks	L2	CO2	PO1
	b)	Find the area moment of inertia of the semicircle about centroidal axes.	6 Marks	L2	CO2	PO1

UNIT-V

9.	a)	An aeroplane has a mass of 25000kg and its engines develop a total thrust of 40KN along the run way. The force of air resistance to motion of aeroplane is given by R=2.25V2where 'V' is m/s and R is in Newton. Determine the length of runway required if the plane takes off and becomes airborne at a speed of 240 km/hr.	6 Marks	L2	CO3	PO1 PO2
	b)	Distinguish between rectilinear motion and curvilinear motion.	6 Marks	L2	CO3	PO1

(OR)

10.	a)	Find amplitude and time period of a particle moving with simple harmonic motion, which has a velocity of 9 m/s and 4 m/s at the distance of 2 m and 3 m respectively from the centre.	6 Marks	L2	CO4	PO1 PO2
	b)	Derive the equation for velocity and acceleration of a particle moving with simple harmonic motion.	6 Marks	L2	CO4	PO1

MATERIAL SCIENCE AND ENGINEERING

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Calculate the atomic packing factor of BCC and FCC structure.	6 Marks	L3	CO1	PO3
	b)	Explain the types of crystal defects with neat sketches.	6 Marks	L2	CO1	PO2
		(OR)				
2.		Derive the expression for the Gibb's Phase rule and recall the Hume Rothery rule.	12 Marks	L3	CO1	PO4
		UNIT-II				
3.	a)	Write short notes on vacuum and plasma hardening.	6 Marks	L1	CO1	PO2
	b)	Explain the concept of time temperature transformation with a neat sketch.	6 Marks	L2	CO1	PO2 PO7
		(OR)				
4.		Define carburizing and describe the types of carburizing in detail.	12 Marks	L1	CO1	PO1
		UNIT-III				
5.	a)	Classify the types of carbon steels with their specific features and applications.	6 Marks	L2	CO2	PO1
	b)	Write a short note on Malleable and Nodular cast iron.	6 Marks	L1	CO2	PO2
		(OR)				
6.		Recall the designations of steels and mention the types, composition, properties and applications of tool steels.	12 Marks	L1	CO2	PO4
		UNIT-IV				
7.	a)	Interpret the composition, features and applications of Titanium and Cobalt materials.	6 Marks	L2	CO2	PO3
	b)	List the properties and applications of Nickel.	6 Marks	L1	CO2	PO1
		(OR)				
8.		What is magnesium? Explain the types, properties and uses of magnesium alloys in detail.	12 Marks	L1	CO2	PO2
		UNIT-V				
9.	a)	Write a brief note on properties and applications of ceramics.	6 Marks	L1	CO2	PO1
	b)	Discuss on the particle reinforced composites, and fiber reinforced composites.	6 Marks	L2	CO2	PO2 PO7
		(OR)				
10.		Tell about hybrid composites and explain the processing of structural composites with neat diagrams.	12 Marks	L1	CO2	PO2 PO7

DIGITAL LOGIC DESIGN

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Obtain the truth table of the following functions: i) $(xy + z)(y + xz)$ ii) $Y'z + wxy' + wxz' + w'x'z$	6 Marks	L2	CO1	PO1
	b)	Perform the Subtraction on the following binary numbers using 2's complement. i) 11001 - 10111 ii) 11101 - 01100	6 Marks	L3	CO1	PO1
		(OR)				
2.	a)	Convert the Decimal Number $(2680)_{10}$ in to the following bases. i) Hexa-decimal ii) Octal iii) Binary	6 Marks	L3	CO1	PO1
	b)	Express the following numbers into decimal $(10110.0101)_2$, $(16.5)_{16}$ and $(26.24)_8$	6 Marks	L3	CO1	PO1

UNIT-II

3.	a)	Express the Boolean function $F = xy + x'z$ in a product-of-max terms form.	6 Marks	L4	CO1	PO2
	b)	Draw a logic diagram using only two-input NOR gates to implement the following function. $F(A, B, C, D) = (A \oplus B)' (C \oplus D)$	6 Marks	L4	CO1	PO3
		(OR)				
4.	a)	Simply the following Boolean Expression using three-variable k-maps. $xy + x'y'z' + x'yz'$	6 Marks	L4	CO1	PO2
	b)	Simplify the following Boolean function F, together with the don't-care conditions d, and then express the simplified function in sum-of-minterms form. $F(x, y, z) = \Sigma(0,1, 4, 5, 6)$ $d(x, y, z) = \Sigma(2, 3, 7)$	6 Marks	L4	CO1	PO2

UNIT-III

5.	a)	Implement the following Boolean function with a 16 X 1 multiplexer. $F(A, B, C, D) = \Sigma m(0, 3, 5, 6, 8, 9, 14, 15)$	6 Marks	L4	CO2	PO5
	b)	Design a 4-bit priority encoder.	6 Marks	L4	CO2	PO3
		(OR)				
6.		Design a combinational circuit with three inputs and one output. The output is 1 when the binary value of the inputs is less than 3. The output is 0 otherwise.	12 Marks	L4	CO2	PO4

UNIT-IV

7.	a)	What is a shift register? Explain about the following modes of operations in a four bit shift register: i) shift right ii) shift left iii) bidirectional	6 Marks	L2	CO2	PO1
	b)	Design a clocked D flip-flop with AND and NOR gates. Draw the logic diagram and explain.	6 Marks	L4	CO2	PO4
		(OR)				
8.	a)	What is the difference between a Ripple Counter and a Synchronous Counter? Explain.	6 Marks	L4	CO2	PO2
	b)	Explain about analysis of clocked sequential circuits in detail.	6 Marks	L2	CO2	PO1

UNIT-V

9.	a)	Compare the features of PROM, PLA and PAL.	6 Marks	L4	CO2	PO2
	b)	Draw logic diagram and explain the Internal logic of a 32 X 8 ROM.	6 Marks	L2	CO2	PO1
		(OR)				
10.		Consider the following Boolean functions, given in sum-of-minterms form: $w(A, B, C, D) = \Sigma(2, 12, 13)$ $x(A, B, C, D)=\Sigma(7,8,9, 10, 11, 12, 13, 14, 15)$ $y(A, B, C, D)=\Sigma(0,2,3,4,5, 6, 7, 8, 10, 11, 15)$ $z(A, B, C, D) = \Sigma(1, 2, 8, 12, 13)$ Design a combinational circuit to implement the Boolean functions using a PAL.	12 Marks	L4	CO2	PO4

OBJECT ORIENTED PROGRAMMING THROUGH JAVA

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain the steps involved in creating and executing a java program.	6 Marks	L2	CO1	PO2
	b)	Write about Naming Conventions in Java.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Give the usage of new keyword in Java.	6 Marks	L2	CO1	PO1
	b)	Explain different Java Components.	6 Marks	L2	CO1	PO2
		UNIT-II				
3.	a)	Explain about Java Control Statements with examples.	6 Marks	L2	CO1	PO2
	b)	Develop a program to generate a random number between 0 and 100.	6 Marks	L3	CO1	PO3
		(OR)				
4.	a)	Write a Program to count tokens- number of words and characters in a string using StringTokenizer class.	6 Marks	L2	CO1	PO2
	b)	Write about Scanner class in Java.	6 Marks	L1	CO1	PO1
		UNIT-III				
5.	a)	Describe Dynamic Method dispatch and the use of final keyword in Java with relevant example.	6 Marks	L2	CO2	PO2
	b)	Develop an Interest Interface which contains Simple Interest and Comp Interest methods and static final field of 25%. Write a class to implement those methods.	6 Marks	L3	CO2	PO3
		(OR)				
6.	a)	Explain method overriding with an example.	6 Marks	L2	CO2	PO2
	b)	Illustrate how an interface can be implemented and extended.	6 Marks	L3	CO2	PO3
		UNIT-IV				
7.	a)	Give and explain any two classes/interfaces of Collection Framework.	6 Marks	L2	CO2	PO1
	b)	Write a Java program that creates three threads. First thread displays - Good Morning for every one second, the second thread displays - Hello for every two seconds and the third thread displays - Welcome for every three seconds.	6 Marks	L3	CO2	PO4
		(OR)				
8.	a)	Explain the process of creating a custom exception.	6 Marks	L2	CO2	PO2
	b)	Write a Java program to change the priority of a thread.	6 Marks	L1	CO2	PO1
		UNIT-V				
9.	a)	Describe the AWT event hierarchy and explain event handling with examples.	6 Marks	L2	CO3	PO1
	b)	Explain about MVC architecture in Swings.	6 Marks	L2	CO3	PO2
		(OR)				
10.		Develop a java program that handles all mouse and key events and shows the event name at the center of the window when mouse event is fired (Use Adapter classes).	12 Marks	L3	CO3	PO5

CONCRETE TECHNOLOGY

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		What are the main compounds in Portland cement and explain their properties.	CO1	14 Marks
		(OR)		
2		Mention the different tests to be conducted on aggregate and explain about impact and crushing tests.	CO4	14 Marks

UNIT-II

3		Explain the relation between compression strength and Tensile strength of concrete.	CO2	14 Marks
		(OR)		
4		Explain the Vee-bee method of determining workability with neat sketches.	CO4	14 Marks

UNIT-III

5		Explain the procedure for UPV and Rebound hammer test.	CO5	14 Marks
		(OR)		
6		Draw the typical stress-strain curve of concrete and explain the various modulus of elasticity.	CO2	14 Marks

UNIT-IV

7	a)	Explain what mix design and how mix design will help to improve the quality of concrete.	CO7	7 Marks
	b)	Explain common terminology used in statistical evaluation of concrete.	CO2	7 Marks
		(OR)		
8		Design mix proportions with the following data using IS code method. Characteristic compressive strength of concrete 30 Mpa. 20mm Maximum size of round aggregate. Moderate degree of workability. Specific gravity of cement 3.15 specific gravity of coarse and fine aggregates 2.65. Zone III sand. Good quality control.	CO3	14 Marks

UNIT-V

9		Why Special concretes are required. Give the names of special concretes and explain any two concretes in detail.	CO6	14 Marks
		(OR)		
10		Write short notes on i) Polymer concrete ii) Ready mix concrete iii) Cold weather concreting.	CO1	14 Marks

ENGINEERING GEOLOGY
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Demonstrate the relevance of geology in civil engineering.	CO1	14 Marks
		(OR)		
2		Discuss the role of mechanical weathering and chemical weathering.	CO1	14 Marks

UNIT-II

3		Analyze the advantages of study of physical properties in identification of mineral over other properties. Justify the statement with proper reasons.	CO2	14 Marks
		(OR)		
4		List the textures and structures of igneous rocks.	CO2	14 Marks

UNIT-III

5	a)	What is a fold? List various types of folds with neat sketches.	CO2	9 Marks
	b)	A coal bed dips 20^0 along S40^0W and 30^0 along S40^0E. Find out the strike direction and dip direction and inclination of the tunnel to be made for the excavation of coal.	CO1	5 Marks
		(OR)		
6		Classify different geophysical investigations. Explain suitable geophysical methods for the civil engineering projects.	CO3	14 Marks

UNIT-IV

7		Define the cone of depression? Discuss the significance of radius of influence with neat sketch for a sustainable exploitation of groundwater	CO6	14 Marks
		(OR)		
8		Classify the landslides based on the types of materials such as rocks, soils and debris .List different methods to prevent them.	CO4	14 Marks

UNIT-V

9		Analyze the main causative factors of dam failures. Give one case history of dam failure due to geological considerations with a brief geological report	CO7	14 Marks
		(OR)		
10		What are the causes and effects of tunneling on the ground?	CO5	14 Marks

STRUCTURAL ANALYSIS-I

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	An element has a tensile stress of 600 N/mm^2 and compressive stress of 400 N/mm^2 acting on two mutually perpendicular planes and two equal shear stress of 100 N/mm^2. Determine the principal stress and maximum shear stress.	CO2	7 Marks
	b)	An element has a tensile stress of 500 N/mm^2 and compressive stress of 300 N/mm^2 acting on two mutually perpendicular planes and two equal shear stress of 200 N/mm^2. Determine the principal stress and maximum shear stress using Mohr's Circle method.	CO2	7 Marks
		(OR)		
2	a)	Derive the expression for stresses in an inclined plane due to pure shearing.	CO1	7 Marks
	b)	At a point in a bracket the stresses on two mutually perpendicular planes are 40 N/mm^2 and 10 N/mm^2 both being tensile. The shear stress across these planes is 8 N/mm^2. Using graphical method, find the magnitude and direction of the resultant stress on a plane making an angle 40° with the plane of maximum stress. Also determine the normal and tangential stresses on the plane.	CO2	7 Marks

UNIT-II

3	a)	Derive the expression for slope and deflection of a simply supported beam of span 'l' carrying a point load at mid-span.	CO1	7 Marks
	b)	Find slope and deflection at the free end of a cantilever beam shown in fig. Moment of inertia of AC is twice the moment of inertia of BC. Use moment area method.	CO2	7 Marks
		(OR)		
4	a)	A simply supported beam of span 'l' carries a point load 'W' at a distance 'a' from the left end. Determine the deflection under the load and slope at the left end using appropriate method.	CO4	7 Marks
	b)	Determine the slope and deflection at the free end of a cantilever beam of length 'l' subjected to a uniformly varying load of 'w/m' at the fixed end and 'zero' at the free end.	CO4	7 Marks

UNIT-III

5		Define slenderness ratio. Derive the Euler's formula when both ends of the column are fixed.	CO1	14 Marks
		(OR)		
6		From the following data, determine thickness of cast-iron column: Length of column = 6 meters External diameter = 200 mm Load = 500 kN Factor of safety = 6 Assume fixed ends and ultimate compressive stress and constant for hinged ends as 570 MN/m^2 and 1/1600 respectively.	CO5	14 Marks

UNIT-IV

7	A fixed beam of 5 m span carries a point load of 150 kN at 3 m from the left end. If the right end sinks by 10.5 mm, find the fixing moments as well as reactions at the supports. Take E = 2×10^8 kN/m^2 and I = 10000 cm^4.	CO2	14 Marks

(OR)

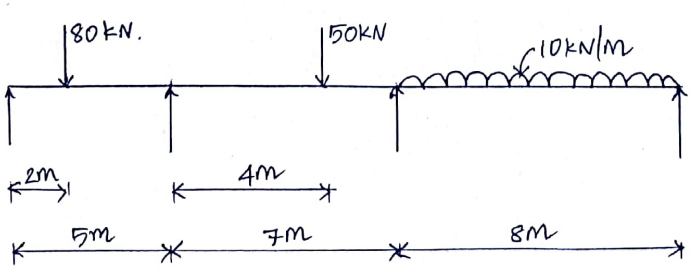
8	For the continuous loaded beam ABCD shown in the figure, find: i) Moments at the supports ii) Reactions at the supports Draw the B.M. and S.F. diagrams also.	CO6	14 Marks



UNIT-V

9	In a steel member at a point the major principal stress is 180 MN/m^2 and the minor principal stress is compressive. If the tensile yield point of the steel is 225 MN/m^2, find the value of the major principal stress at which yielding will commence, according to each of the following criteria of failure i) Maximum Shearing Stress ii) Maximum Total Strain Energy iii) Maximum Shear Strain Energy Take Poisson's ratio=0.26.	CO3	14 Marks

(OR)

10	Derive the expression for shear center of unequal I section.	CO1	14 Marks

❀ ❀ ❀

DESIGN OF MACHINE ELEMENTS - I

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	What are the steps to be followed while designing a machine element?	CO1	7 Marks
	b)	Define the following properties of a material: i) Ductility ii) Toughness iii) Hardness and iv) Creep.	CO1	7 Marks
		(OR)		
2	a)	Analyze the significance of Factor Safety in Design	CO1	4 Marks
	b)	Determine the maximum thickness of the steel sheet into which holes of 20mm size can be punched. The ultimate tensile strength of the sheet material is 250 MPa. The allowable compressive stress during the punching operation in the hardened end of the punch is limited to 400 MPa.	CO2	10 Marks

UNIT-II

3	a)	What is meant by endurance strength of a material? How do the size and Surface condition of a component and type of load and effect such strength?	CO1	4 Marks
	b)	A circular bar of 500mm length is supported freely at its two ends. It is acted upon by a central concentrated cyclic load having a minimum value of 20kN and maximum value of 50kN. Determine the dia. of bar by taking a factor of safety of 1.5, size effect of 0.85, surface finish factor of 0.9. The material properties of bar are given by ultimate strength of 650 MPa, yield strength of 500 MPa and endurance strength of 350 MPa.	CO4	10 Marks
		(OR)		
4	a)	Formulate Soderberg's equation and state its application to different types of loading.	CO2	6 Marks
	b)	A 50mm diameter shaft is made from carbon steel having ultimate tensile strength of 630 MPa. It is subjected to a torque which fluctuates between 2000 N-m to 800 N-m. Using Soderberg method, calculate the factor of safety. Assume suitable values for any other data needed.	CO3	8 Marks

UNIT-III

5		A steam engine of effective diameter 300 mm is subjected to a stem pressure of 1.5 N/mm2. The cylinder head is connected by 8 bolts having yield point 330 MPa and endurance limit at 240 MPa. The bolts are tightened with an initial preload of 1.5 times the steam load. A soft copper gasket is used to make the joint leak-proof. Assuming a factor of safety 2, find the size of bolt required. The stiffness factor for copper gasket may be taken as 0.5.	CO5	14 Marks
		(OR)		
6		A plate 130 mm wide and 15 mm thick is to be welded to another plate by means of double parallel fillets. The plates are subjected to a static load of 90 KN. Find the length of weld if the permissible shear stress in the does not exceed 57 MPa.	CO4	14 Marks

UNIT-IV

7	A shaft supported at the ends in ball bearings carries a straight tooth spur gear at its mid span and is to transmit 7.5 kW at 300 r.p.m. The pitch circle diameter of the gear is 150 mm. The distances between the centre line of bearings and gear are 100 mm each. If the shaft is made of steel and the allowable shear stress is 45 MPa determine the diameter of the shaft. Show in a sketch how the gear will be mounted on the shaft; also indicate the ends where the bearings will be mounted?. The pressure angle of the gear may be taken as 20^0.	CO3	14 Marks

(OR)

8	Design a cast iron protective type flange coupling to transmit 15kW at 900 rpm. From an electric motor to a compressor. The service factor may be as 1.35. The following permissible stresses may be used: Shear stress for shaft, bolt and key material = 40 MPa Crushing stress for bolt and key = 80 MPa Shear stress for cast iron = 8 MPa Draw a neat sketch of the coupling.	CO3	14 Marks

UNIT-V

9	Design a cutter joint to connect two mild steel rods for a pull of 30 kN. The maximum permissible stresses are 55 MPa in tension: 40 MPa in shear and 70 MPa in crushing. Draw a neat sketch of the joint designed.	CO4	14 Marks

(OR)

10	Design a knuckle joint for a tie rod of a circular section to sustain a maximum pull of 70kN. The ultimate strength of the material of the rod against tearing is 420 MPa. The ultimate tensile and shearing strength of the pin material are 510 MPa and 396 MPa respectively. Determine the tie rod section and pin section. Take factor of safety = 6.	CO6	14 Marks

DYNAMICS OF MACHINERY
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	A dry single plate clutch is to be designed for an automotive vehicle whose engine is rated to give 100 kW at 2400 r.p.m. and maximum torque 500 N-m. The outer radius of friction plate is 25% more than the inner radius. The intensity of pressure between the plate is not to exceed 0.07 N/mm^2. The coefficient of friction may be assumed equal to 0.3. The helical springs required by this clutch to provide axial force necessary to engage the clutch are eight. If each spring has stiffness equal to 40 N /mm, determine the initial compression in the springs and dimensions of the friction plate	CO2	14 Marks
	(OR)		
2	Describe with the help of a neat sketch the principles of operation of an internal expanding shoe. Derive the expression for the braking torque.	CO1	14 Marks

UNIT-II

3	A ship propelled by a turbine rotor which has a mass of 5 tonnes and a speed of 2100 r.p.m. The rotor has a radius of gyration of 0.5 m and rotates in a clockwise direction when viewed from the stern. Find the gyroscopic effects in the following conditions: i) The ship sails at a speed of 30 km/h and steers to the left in a curve having 60 m radius. ii) The ship pitches 6 degree above and 6 degree below the horizontal position. The bow is descending with its maximum velocity. The motion due to pitching is simple harmonic and the periodic time is 20 seconds. The ship rolls and at a certain instant it has an angular velocity of 0.03 rad/s clockwise when viewed from stern. Determine also the maximum angular acceleration during pitching. Explain how the direction of motion due to gyroscopic effect is determined in each case.	CO2	14 Marks
	(OR)		
4	The turning moment curve for an engine is represented by the equation, $T = (20\,000 + 9500 \sin 2\theta - 5700 \cos 2\theta)$ N-m, where θ is the angle moved by the crank from inner dead centre. If the resisting torque is constant, find: i) Power developed by the engine ; ii) Moment of inertia of flywheel in kg-m^2, if the total fluctuation of speed is not exceed 1% of mean speed which is 180 r.p.m; and Angular acceleration of the flywheel when the crank has turned through 45° from inner dead centre.	CO3	14 Marks

UNIT-III

5		Explain the terms and derive expressions for 'effort' and 'power' of a Porter governor	CO1	14 Marks

(OR)

6		In a spring-controlled governor of the Hartung type, the length of the ball and sleeve arms are 80 mm and 120 mm respectively. The total travel of the sleeve is 25 mm. In the mid position, each spring is compressed by 50 mm and the radius of rotation of the mass centres is 140 mm. Each ball has a mass of 4 kg and the spring has a stiffness of 10 kN/m of compression. The equivalent mass of the governor gear at the sleeve is 16 kg. Neglecting the moment due to the revolving masses when the arms are inclined, determine the ratio of the range of speed to the mean speed of the governor. Find, also, the speed in the mid-position	CO2	14 Marks

UNIT-IV

7	a)	Write the importance of balancing.	CO1	4 Marks
	b)	A shaft carries four masses in parallel planes A, B, C and D in this order along its length. The masses at B and C are 18 kg and 12.5 kg respectively, and each has an eccentricity of 60 mm. The masses at A and D have an eccentricity of 80 mm. The angle between the masses at B and C is 100° and that between the masses at B and A is 190°, both being measured in the same direction. The axial distance between the planes A and B is 100 mm and that between B and C is 200 mm. If the shaft is in complete dynamic balance, determine : i) The magnitude of the masses at A and D ; ii) The distance between planes A and D ; and iii) The angular position of the mass at D.	CO4	10 Marks

(OR)

8	a)	Explain the terms Variation of Tractive Force, Swaying Couple, Hammer Blow.	CO1	4 Marks
	b)	The following data refer to two cylinder locomotive with cranks at 90°: Reciprocating mass per cylinder = 300 kg; Crank radius = 0.3 m; Driving wheel diameter = 1.8 m; Distance between cylinder centre lines = 0.65 m; Distance between the driving wheel central planes = 1.55 m. Determine : i) The fraction of the reciprocating masses to be balanced, if the hammer blow is not to exceed 46 kN at 96.5 kmph. ii) The variation in tractive effort ; and iii) The maximum swaying couple.	CO4	10 Marks

UNIT-V

9	a)	What are the causes and effects of vibrations?	CO1	4 Marks
	b)	Establish an expression for the natural frequency of free transverse vibrations for a simply supported beam carrying a number of point loads, by Dunkerley's method.	CO5	10 Marks

(OR)

10	a)	Explain about the Magnification Factor in forced vibration.	CO1	4 Marks
	b)	With neat sketch explain the Free Torsional Vibrations of a Three Rotor System, and deduce the equation for Torsionally Equivalent Shaft.	CO1	10 Marks

FLUID MECHANICS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define viscosity and write down the units. And write down different types of fluids.	CO1	7 Marks
	b)	A plate 0.025 mm distance from a fixed plate, moves at 60 cm/sec and requires a force of 2 N per unit area i.e., 2 N/m^2 to maintain this speed. Determine the fluid viscosity between the plates.	CO2	7 Marks
		(OR)		
2		At the right limb of a simple differential manometer containing the mercury is open to the atmosphere while the left limb is connected to a pipe in which a fluid of specific gravity 0.9 is flowing. The centre of the pipe is 12cm below the level of mercury in the right limb. Find the pressure of fluid in the pipe if the difference of mercury level in the two limbs is 20 cm.	CO2	14 Marks

UNIT-II

3		A 30 cm diameter pipe, conveying water, branches into two pipes of diameters 20cm and 15cm respectively .if the average velocity in the pipe 30cm diameter is 2.5 m/sec, find the discharge in these pipe. Also determine the velocity in 15 cm pipe if the average velocity in 20 cm diameter pipe is 2m/sec.	CO4	14 Marks
		(OR)		
4		What is venturimeter? Derive an expression for the discharge through venturimeter.	CO1	14 Marks

UNIT-III

5	a)	Outline the minor energy losses in pipes.	CO1	7 Marks
	b)	The difference in water surface levels in two tanks, which are connected by three pipes in series of lengths 300 m, 170 m and 210 m and of diameters 300 mm, 200 mm and 400 mm respectively, is 12 m. determine the rate of flow of water if co-efficient of friction are 0.005, 0.0052 and 0.0048 respectively, considering: i) Minor losses also ii) Neglecting minor losses	CO5	7 Marks
		(OR)		
6		Derive an expression for the force exerted by a jet of water on stationary flat vertical and inclined plates.	CO3	14 Marks

UNIT-IV

7	a)	Explain factors to be consider for selection of a turbine at a particular place.	CO1	7 Marks
	b)	Differentiate between impulse and reaction turbine.	CO1	7 Marks
		(OR)		
8		Define the specific speed of a turbine? Derive an expression for the specific speed. What is the significance of the specific speed?	CO1	14 Marks

UNIT-V

9	a)	Describe manometric efficiency, mechanical efficiency and overall efficiency of centrifugal pump.	CO1	7 Marks
	b)	Find reasons for negative slip in a reciprocating pump? Explain with neat sketches the functions of air vessels in a reciprocating pump	CO1	7 Marks

(OR)

10		A double acting reciprocating pump, running at 50 r.p.m. is discharging 900 litres of water per minute. The pump has stroke of 400 mm. The diameter of piston is 250 mm. The delivery and suction head are 25 m and 4 m respectively. Find the slip of the pump and power required to drive the pump.	CO6	14 Marks

MACHINE TOOLS AND MODERN MACHINING PROCESSES

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1	a)	List the various types of chips formed during machining. Under what conditions those chips will be formed.	CO6	7 Marks
	b)	A carbide tool with mild steel work piece was found to give a life of 2 hours while cutting at 0.5 mpm. Compute the tool life if the same tool is used at a speed of 25% higher than the previous one. Also determine the value of cutting speed if the tool is required to have tool life of 3 hours. Assume Taylor's exponent n=0.27.	CO4	7 Marks
		(OR)		
2	a)	Define cutting speed, feed, depth of cut and explain the principle angles of ORS.	CO6	7 Marks
	b)	Analyze the reasons for tool failure. Explain in detail.	CO2	7 Marks
		UNIT-II		
3	a)	Classify different types of lathes. Explain any one in detail.	CO2	7 Marks
	b)	Explain the taper turning attachment with a neat sketch.	CO1	7 Marks
		(OR)		
4	a)	Differentiate between turret and Capstan lathes.	CO1	7 Marks
	b)	Explain about Multi spindle automatic lathes.	CO1	7 Marks
		UNIT-III		
5	a)	Explain with a neat sketch the working of quick return mechanism used in a shaping machine	CO1	7 Marks
	b)	Differentiate between shaper and planer.	CO2	7 Marks
		(OR)		
6	a)	Explain the construction of a Radial drilling machine with a neat sketch.	CO1	7 Marks
	b)	Discuss Jig boring machine.	CO1	7 Marks
		UNIT-IV		
7	a)	Mention the various types of bonds used in the making of grinding wheel. Discuss them in brief.	CO2	7 Marks
	b)	Write a short note on loading and glazing of a grinding wheel.	CO3	7 Marks
		(OR)		
8	a)	Define indexing. Describe direct indexing with an example.	CO4	7 Marks
	b)	Illustrate the design principle of Jigs and fixtures.	CO3	7 Marks
		UNIT-V		
9	a)	Classify the modern machining processes and their applications.	CO5	7 Marks
	b)	List the advantages of modern machining processes.	CO5	7 Marks
		(OR)		
10	a)	Explain about the Electro~discharge machining.	CO5	7 Marks
	b)	List the advantages, limitations and applications of EDM.	CO2	7 Marks

THERMAL ENGINEERING - I

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain working of four stroke diesel engine with the help of neat sketches.	CO1	7 Marks
	b)	Draw port timing diagram for two stroke petrol engine.	CO1	7 Marks
		(OR)		
2	a)	What is the difference between air-standard cycle and fuel-air cycle analysis? Explain the significance of the fuel-air cycle.	CO1	7 Marks
	b)	Explain with the help of a p-V diagram the loss due to variation of specific heats in an Otto cycle.	CO1	7 Marks

UNIT-II

3	a)	Explain various stages of combustion in CI engine on P-θ diagram.	CO2	7 Marks
	b)	Explain the factors that affect normal combustion.	CO2	7 Marks
		(OR)		
4	a)	Explain the factors affecting flame propagation.	CO1	6 Marks
	b)	What is meant by abnormal combustion? Explain the phenomena of detonation in CI engines.	CO4	8 Marks

UNIT-III

5	a)	What is a dynamometer? List out the different types of dynamometer.	CO1	4 Marks
	b)	A two stroke diesel engine was motored when the meter reading was 1.5 kW, Then the test on the engine was carried out for one hour and the following observations were recorded: Brake torque = 120 Nm, Speed=600 rpm, Fuel used 2.5 kg, Calorific value of fuel = 40.3 MJ/kg, Cooling water used = 818 kg, Rise in temperature of cooling water = 10 ^{0}C, Exhaust gas temperature = 345 ^{0}C, Room temperature = 25 ^{0}C, A/F=32:1. Determine i) BP, ii) IP, iii) Mechanical efficiency, iv) Draw heat balance sheet on minute basis and also in percentage.	CO3	10 Marks
		(OR)		
6	a)	Describe how an Indicated power of each cylinder of a multi-cylinder engine is measured?	CO1	7 Marks
	b)	Explain the procedure for preparing heat balance sheet.	CO3	7 Marks

UNIT-IV

7	a)	Define ultimate analysis and proximate analysis of coal. Explain how sampling of coal is done in a boiler trial.	CO1	4 Marks
	b)	The volumetric composition of a coal gas is given as H_2 = 25%, CO = 7%, CH_4 = 48%, C_2H_4 = 11%, CO_2 = 4% and N_2 = 3%. If 50% excess air is supplied, find the percentage composition by volume of the products assuming H_2O produced is perfect gas.	CO5	10 Marks
		(OR)		
8	a)	What is the significance of Adiabatic flame temperature?	CO1	4 Marks
	b)	Describe the working of the apparatus that is commonly used for the analysis of dry exhaust gases. Discuss about the probable sources of error in such an analysis.	CO1	10 Marks

UNIT-V

9	a)	What are the advantages of multi-stage compression over a single stage compression for the same pressure ratio? Why intercooling is necessary in multi-stage compression?	CO2	7 Marks
	b)	Compare rotary and reciprocating compressors.	CO1	7 Marks
		(OR)		
10	a)	Define volumetric efficiency of a compressor and explain why it is less than unity.	CO1	4 Marks
	b)	A single-stage double-acting air compressor delivers 15 m^3/min of air measured at 1.013 bar and temperature 27 ^{0}C and delivers at 7 bar. The conditions at the end of the suction stroke are pressure 0.98 bar and temperature 40 ^{0}C. The clearance volume is 4% of the swept volume and the stroke/bore ratio is 1.3/1, compressor runs at 300 rpm. Calculate the volumetric efficiency, cylinder dimensions, indicated power and isothermal efficiency of this compressor. Take the index of compression and expansion as 1.3.	CO2	10 Marks

ANALOG COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the operation of coherent detection of DSB-SC modulating wave and show that the overall output $V_0(t) = 1/2\ A_c Cos Øm(t)$.	CO5	6 Marks
	b)	Briefly explain the Quadrature Null Effect in DSB-SC coherent detection. Suggest an appropriate method to offset this problem.	CO1	8 Marks

(OR)

2	a)	With a neat diagram, explain how SSB wave is generated using phase discriminator method with only USB and rejecting the LSB.	CO1	10 Marks
	b)	Derive and show that the noise equivalent band width for RC low pass filter is 1/4RC.	CO5	4 Marks

UNIT-II

3	a)	With the help of circuit diagram, explain demodulation of FM wave using balanced frequency discriminator.	CO1	8 Marks
	b)	Determine the modulation index and bandwidth for FM and PM signals for a modulating signal 5 cos 30000 π t angle modulates a carrier A cos2π fct. Assume $K_f=K_p$ =15KHz/volt.	CO3	6 Marks

(OR)

4	a)	Explain with relevant mathematical expressions for the demodulation of an FM signal using PLL.	CO1	8 Marks
	b)	An FM signal is given by s(t) = 2cos20000πt+cos2000πt+3cos40000πt. Determine the bandwidth and β assuming K_f=104Hz/Volts.	CO3	6 Marks

UNIT-III

5	a)	Derive the expression for SNR in a PM system for tone modulation.	CO2	8 Marks
	b)	A phase modulation (PM) system, with the modulated wave defined by S (t) =AcCos [2πfct + kpm(t)] where kp is a constant and m(t) is the message signal. The additive noise n(t) at the phase detector input is $n(t)= n_I(t)\cos(2\pi fc\ t)-n_Q(t)\ \sin\ 2\pi fct$ Assuming that the carrier-to-noise ratio at the detector input is high compared with unity, determine. i) The output signal-to-noise ratio. ii) The figure of merit of the system.	CO4	6 Marks

(OR)

6	a)	Derive the expression of SNR and figure of merit for SSB-SC.	CO2	8 Marks
	b)	If each stage has a gain of 10dB and noise figure of 10dB. Determine the overall noise figure of a two stage cascaded amplifier.	CO4	6 Marks

UNIT-IV

7	a)	What do you mean by automatic gain control (AGC)? What are merits of delayed AGC over simple AGC?	CO2	7 Marks
	b)	The antenna current of transmitter is 11.5 Amp when it is modulated to a depth 45% by audio sine wave. Determine unmodulated (carrier) current.	CO6	7 Marks

(OR)

8	a)	What is image frequency rejection ratio and what is its importance?	CO1	7 Marks
	b)	In a broadcast super heterodyne receiver tuning at 1200 kHz having no RF amplifier, the loaded Q of the antenna coupling circuit is 100, By Considering standard IF frequency determine the Image frequency and its rejection ratio.	CO6	7 Marks

UNIT-V

9	a)	Write short notes on the following: i) Single polarity PAM; ii) Double polarity PAM.	CO1	6 Marks
	b)	With a neat block diagram, explain the working of TDM technique.	CO1	8 Marks

(OR)

10	a)	Explain the concept of multiplexing in communication.	CO1	6 Marks
	b)	Differentiate between FDM and TDM. Explain which of the two is superior and why.	CO2	8 Marks

ELECTROMAGNETIC THEORY AND TRANSMISION LINES
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Obtain the expressions for the far field and the potential due to a small electric dipole oriented along z-axis. Find the potential at (0,1,3) due to the small electric dipole placed at (0,0,0).	CO4	7 Marks
	b)	State Biot-savart's Law. Formulate an expression for Straight Filamentary Conductor of finite length.	CO1	7 Marks

(OR)

2	a)	Calculate induced electric field intensity for $r < 2$ and $r > 2$, if the magnetic flux density B=20 *sin* wt, *for* $r < 2$ and $B = 0$ *for* $r>2$.	CO4	7 Marks
	b)	Write the word statements for Maxwell's two equations for magnetostatic fields and explain their significance.	CO1	7 Marks

UNIT-II

3	a)	Explain the concept of Transformer and Motional EMFs. Formulate the related expressions.	CO1	8 Marks
	b)	Derive the electrostatic Boundary Conditions for i) Dielectric – Dielectric Boundary ii) Conductor – Dielectric Boundary iii) Conductor – Free Space Boundary	CO5	6 Marks

(OR)

4	a)	Outline the Final statements of Maxwell's Equations for Time Varying Fields. Represent the Final forms of Maxwell's Equations in Point and Integral forms.	CO1	7 Marks
	b)	Show that the Continuity equation for time varying fields is different from that of static fields.	CO6	7 Marks

UNIT-III

5	a)	Illustrate the reflection by a perfect conductor at oblique incidence for parallel polarization. Formulate the expressions for fields, reflection and transmission coefficients.	CO2	7 Marks
	b)	Define a uniform Plane wave and obtain the general solution of the uniform plane wave.	CO5	7 Marks

(OR)

6	a)	Derive the expressions for attenuation constant (α), phase constant (β), phase velocity (v_p) and intrinsic impedance (η).	CO2	7 Marks
	b)	Find all relations between E and H in a uniform Plane wave. Also Estimate the Value of intrinsic impedance of free space.	CO5	7 Marks

UNIT-IV

7	a)	Derive the characteristic impedance in terms of line constants.	CO2	8 Marks
	b)	A lossless transmission line of length 100m has an inductance of 28 μ H and capacitance of 20 nF. Find out i) Propagation velocity ii) Phase constant at an operating frequency of 100 KHz iii) Characteristic impedance of the line.	CO6	6 Marks

(OR)

8	a)	Derive the expressions for phase velocity and group velocity and relate them.	CO2	6 Marks
	b)	List and explain the various parameters that are assessed from transmission line equations.	CO1	8 Marks

UNIT-V

9	a)	Develop a step wise procedure to design single stub matching using smith chart.	CO6	7 Marks
	b)	Design a single stub match for a load of 150+j225 ohms for a 75 ohms line at 500 MHz using smith chart.	CO3	7 Marks

(OR)

10	a)	List the applications of smith chart. Also suggest a procedure to match a single stub to transmission line using smith chart.	CO6	7 Marks
	b)	Design a single stub (Short circuited shunt stub) matching network for a transmission line terminated with ZR=200-J400 ohms to obtain matching for maximum length of the transmission line. The characteristic impedance of the line is Zo=50 ohms.	CO4	7 Marks

LINEAR IC APPLICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	List and explain the function of all the basic building blocks of an op-amp.	CO1	7 Marks
	b)	Define common mode rejection ratio. Explain its significance.	CO1	7 Marks
		(OR)		
2	a)	Explain the terms i) slew rates; ii) CMRR; iii) PSRR; iv) Drift.	CO1	8 Marks
	b)	Explain clearly about the stability of op-amp, with the help of open loop gain vs frequency curve.	CO1	6 Marks

UNIT-II

3	a)	Draw and explain the circuit of V/I converter if the load is i) Floating; ii) Grounded.	CO3	7 Marks
	b)	Explain clearly the requirements of a practical differentiator with the help of its frequency response.	CO3	7 Marks
		(OR)		
4	a)	What is a precision diode? Draw and briefly explain the operation of a circuit that detects the peak value of any given signal.	CO4	7 Marks
	b)	Explain the operation of an Astable multivibrator using op-amp and also derive for its frequency of output.	CO3	7 Marks

UNIT-III

5	a)	Explain the necessity and operation of all the parts of a series op-amp regulator.	CO1	6 Marks
	b)	Derive the transfer function for a general second order active filter using op-amp. Show its frequency response for different damping constants.	CO2	8 Marks
		(OR)		
6	a)	Design a band pass filter so that f_o=2KHz, Q=20 and A_o=10 with C=1μF.	CO3	7 Marks
	b)	Explain how current limiting and current fold back characteristics are obtained in IC 723 regulator.	CO3	7 Marks

UNIT-IV

7	a)	Explain how a 555 timer in its Astable mode can be connected as a pulse position modulator?	CO1	7 Marks
	b)	Draw the circuit of PLL AM detector and explain its operation.	CO1	7 Marks
		(OR)		
8	a)	What is capture range? Derive the expression for lock range in a PLL.	CO1	7 Marks
	b)	Draw the circuit of a Schmitt trigger using 555 timer and explain its operation.	CO1	7 Marks

UNIT-V

9	a)	Explain about the successive approximate conversion in an ADC. Why it is advantages over the other methods of ADCs.	CO1	8 Marks
	b)	Explain about: i) Resolution; ii) Linearity; iii) Monotonicity.	CO1	6 Marks
		(OR)		
10	a)	Which type of ADC is fastest? Explain clearly why?	CO1	7 Marks
	b)	Explain clearly the D/A conversion in a 3-bit R-2R ladder circuit.	CO1	7 Marks

PROBABILITY AND STOCHASTIC PROCESS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Discuss about Bernoulli's Trails. Obtain the expression for Binomial Probability.	CO1	6 Marks
	b)	In the experiment of throwing two fair dice, let *A* be the event that the first die is odd, B be the Event that the second die is odd, and C be the event that the sum is odd. Show that events *A,* B, and C are pair wise independent, but *A, B,* and C are not independent.	CO1	8 Marks

(OR)

2		Consider the binary communication channel shown in Fig. The channel input symbol X may assume the state 0or the state 1, and, similarly, the channel output symbol Y may assume either the state 0or the state 1. Because of the channel noise, an input 0may convert to an output 1 and vice versa: i) Find Output Probabilities at 0 and 1 ii) If a 0 was observed at the output, what is the probability that a 0 was the Input state? iii) If a 1 was observed at the output, what is the probability that a 1 was the input state? iv) Calculate the probability of error.	CO4	14 Marks

UNIT-II

3	a)	State and prove the properties of the probability density function.	CO2	6 Marks
	b)	A random variable X has the following probability distribution.	CO3	8 Marks

x:	0	1	2	3	4	5	6	7
p(x):	0	K	2K	2K	3K	K2	2K2	7K2+K

Calculate

i) The value of k ii) $P(X>4.5)$ iii) $P(X\leq 4.5)$
iv) $P(X=4.5)$ v) $P(1.5<X<4.5/X>2)$

(OR)

4	a)	State and prove properties of characteristic function of a random variable *X*.	CO2	7 Marks
	b)	Find the moment generating function of binomial distribution. Obtain the expression for variance and mean.	CO3	7 Marks

UNIT-III

5	a)	State Central Limit theorem.	CO1	6 Marks
	b)	Consider an experiment of drawing randomly three balls from an urn containing two red, three white, and four blue balls. Let (X, Y) be a bivariate random variable where X and Y denote, respectively, the number of red and white balls chosen. i) Find the range of (X, Y). ii) Find the joint pmf's of (X, Y). iii) Find the marginal pmf's of X and Y.	CO3	8 Marks

(OR)

6	a)	Discuss about Joint Density Function and mention its properties.	CO1	6 Marks
	b)	The joint pdf of a bivariate r.v. (X, Y) is given by; $F_{XY}(x,y) = \begin{cases} k(x+y) & 0<x<2 \quad 0<y<2 \\ 0 & Otherwise \end{cases}$ Where k is a constant. i) Find the value of k. ii) Find the marginal pdf's of X and Y. iii) Are X and Y independent? iv) Find P(X+Y≤1)	CO3	8 Marks

UNIT-IV

7	a)	Define a K^{th}-order stationary random process. When it will become a SSS Process.	CO1	7 Marks
	b)	A random process is defined by Y(t)= X(t) cos($\omega_o t+\theta$) where X(t) is WSS random process that amplitude modulates a carrier of constant angular frequency ω_o with a random phase θ independent of X(t) and uniformly distributed on(-∏,∏). Is Y(t) a WSS random process.	CO4	7 Marks

(OR)

8	a)	State and prove the properties of autocorrelation function.	CO1	7 Marks
	b)	Model a random telegraph signal process $Y(t) = \lambda X(t)$ is a Wide Sense Stationary Process Where λ is a random variable which is $X(t)$ independent of and assumes values -1 and +1 with equal probability and $R_{x_1,x_2}(t_1,t_2) = e^{-2\lambda\|t_1-t_2\|}$.	CO4	7 Marks

UNIT-V

9	a)	What type of noise associated with respect to presence of signal and explain it briefly.	CO3	7 Marks
	b)	For a nonlinear amplifier with two input frequencies 3KHz, and 8KHz, determine: i) First 3 harmonics present in the output for each input frequency. ii) Cross-Product frequencies produced for values of m and n of 1 and 2 respectively.	CO3	7 Marks

(OR)

10	a)	For a non-ideal amplifier having following parameters, Input Signal Power=2×10^{-10}W, Input Noise Power=2×10^{-18} W, Power gain=60dB, Internal Noise =6×10^{-12} W Determine: i) Input S/N Ratio(dB) ii) Output S/N Ratio(dB) iii) Noise Factor iv) Noise Figure	CO3	7 Marks
	b)	Determine : i) 2^{nd}, 3^{rd} and 12^{th} harmonics for a 1KHz periodic wave. ii) Percent 2^{nd} order , 3^{rd} order and total harmonic distortion for a fundamental frequency with an amplitude of 8 V_{rms}, a 2^{nd} harmonic amplitude of 0.2Vrms and 3^{rd} harmonic amplitude of 0.1 V_{rms}	CO3	7 Marks

PULSE AND DIGITAL CIRCUITS

[ELECTRONICS AND COMMUNICATION ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Prove that an RC circuit behaves as a good integrator if RC>>15T. Where T is the period of an input '$E_m \sin\omega t$'.	CO2	6 Marks
	b)	A symmetrical square wave peak-to-peak amplitude 10V and frequency 10KHz is applied to a High pass RC circuit. Sketch the input and output waveforms to scale and derive the necessary output voltage expressions.	CO4	8 Marks

(OR)

2.	a)	Explain application of attenuator as a CRO Probe.	CO1	7 Marks
	b)	Analyze the response of low pass RC circuit for a square input for different time constants.	CO2	7 Marks

UNIT-II

3.	a)	Explain in detail about practical clamping circuit with aid of neat sketches.	CO1	7 Marks
	b)	Design a series clipper circuit that produces a following waveform. Assuming that input applied voltage is 50V (P-P), V_R=-10V and assume Diode is Ideal.	CO3	7 Marks

(OR)

4.	a)	In a clamping circuit, for symmetrical square wave Asses the parameters of ratio of area in forward direction to area in reverse direction in terms of forward resistance $R_f$to reverse resistance R_r .	CO6	8 Marks
	b)	Explain the operation of a biased negative clamper with neat sketch.	CO1	6 Marks

UNIT-III

5.	a)	Explain the working of a fixed-bias binary with the help of neat circuit diagrams.	CO1	6 Marks
	b)	Design a collector coupled one-shot multivibrator using n-p-n silicon transistors, Neglect I_{CBO} and the junction voltages. Assume $h_{FE(min)}$ = 20, V_{BE} = -1V for the transistor in cut-off and $I_B = 1.5I_{B(min)}$ for the transistor in saturation. Vcc = 12V, I_C(sat) = 2mA, T = 2msec, and $R_1 = R_2$. Find R_C, R, V_{BB}, R_1 and C.	CO3	8 Marks

(OR)

6.	a)	Design a collector-coupled monostable multivibrator with a gate width of 5ms using n-p-n silicon transistors.	CO3	8 Marks
	b)	With the help of neat diagrams discuss the different methods of triggering a binary.	CO1	6 Marks

UNIT-IV

7.	a)	Explain the basic principles of Miller and bootstrap time - base generators.	CO1	7 Marks
	b)	Write important applications of time-base circuits. With reference to time base circuits define the following terms: i) Fly back time; ii) Transmission error.	CO2	7 Marks

(OR)

8.	a)	Design a transistor bootstrap ramp generator to provide an output amplitude of 12V over a time period of 2 ms. The input signal is negative going pulse with an amplitude of 5V, a pulse width of 2 ms and the time interval between pulses is 0.5 ms. The load resistance is 2 kΩ and the ramp is to be linear within 1%. The supply is 15V.Take $h_{FE(min)}$= 80. Assume the necessary data.	CO3	6 Marks
	b)	Apply an appropriate sweep circuit to obtain the gain value 1.	CO5	8 Marks

UNIT-V

9.	a)	Draw and explain the operation of 4 diode sampling gate.	CO1	7 Marks
	b)	Draw and explain the operation of TTL NAND gate circuit and explain the importance of Totempole output.	CO6	7 Marks

(OR)

10.	a)	Draw and explain the operation of Bidirectional sampling gate.	CO1	7 Marks
	b)	Draw and explain the operation of ECL NOR/OR circuit.	CO1	7 Marks

DATABASE MANAGEMENT SYSTEMS

[Common to Computer Science and Engineering, Computer Science and Systems Engineering, Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1	a)	Discuss the features of ER-models?	CO2	7 Marks
	b)	Define Data Abstraction and discuss levels of Abstraction.	CO1	7 Marks
		(OR)		
2	a)	What are the various types of attributes? Explain each with an example.	CO5	7 Marks
	b)	List the different types of database users? Write in detail about their roles.	CO1	7 Marks
		UNIT-II		
3	a)	Illustrate different set operations in relational algebra with examples.	CO5	7 Marks
	b)	Explain in detail how to query relational data.	CO5	7 Marks
		(OR)		
4	a)	Explain about any four relational algebra operations with examples.	CO5	7 Marks
	b)	Differentiate DRC and TRC.	CO2	7 Marks
		UNIT-III		
5	a)	Define trigger and explain its three parts? Differentiate row level and statement level triggers.	CO2	7 Marks
	b)	Discuss about Complex Integrity Constraints in SQL.	CO1	7 Marks
		(OR)		
6	a)	Discuss about Join dependencies and Fifth normal form.	CO1	7 Marks
	b)	What is the form of basic SQL query? Explain.	CO1	7 Marks
		UNIT-IV		
7	a)	Illustrate concurrent execution of transaction with examples?	CO5	7 Marks
	b)	Discuss Serializability in detail.	CO1	7 Marks
		(OR)		
8	a)	Explain the concept of shadow paging with a suitable example.	CO2	7 Marks
	b)	Describe the various transaction states in detail.	CO1	7 Marks
		UNIT-V		
9	a)	Explain in detail about ISAM?	CO1	7 Marks
	b)	Explain B+ trees? Discuss about the Dynamic Index Structure?	CO3	7 Marks
		(OR)		
10	a)	Describe the Intuitions for tree Indexes in detail.	CO1	7 Marks
	b)	Discuss in detail about RAID.	CO1	7 Marks

DESIGN AND ANALYSIS OF ALGORITHMS

[Common to Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Briefly describe the asymptotic notation of algorithms.	CO1	7 Marks
	b)	Design an algorithm for finding the number of binary digits for a positive decimal integer.	CO3	7 Marks
		(OR)		
2	a)	Consider two functions $f(n) = 3n^2+5$ and $g(n)=n^2$. Prove with graphical representation that asymptotic upper bound of f(n) is g(n).	CO2	7 Marks
	b)	Distinguish between Big Oh and Big Omega notation.	CO2	7 Marks

UNIT-II

3	a)	Explain weighted UNION rule with an example.	CO1	7 Marks
	b)	Outline an algorithm for weighted union rule and calculate its time complexity.	CO2	7 Marks
		(OR)		
4	a)	Explain BFS algorithm with an example.	CO1	7 Marks
	b)	Differentiate BFS and DFS.	CO2	7 Marks

UNIT-III

5	a)	Explain the control abstraction for Divide and conquer.	CO1	7 Marks
	b)	Explain binary search algorithm and find its time complexity.	CO4	7 Marks
		(OR)		
6	a)	Determine the shortest path from V0 to V3 of the following electrical network graph, using greedy method. Identify the optimal solution. Does greedy method gives an optimal solution?	CO1	10 Marks

	b)	Prove that the edge with the smallest weight will be part of every minimum spanning tree.	CO4	4 Marks

UNIT-IV

7	a)	State sum of subset problem. How to solve this problem using backtracking, explain it with suitable example?	CO1, CO4	7 Marks
	b)	Illustrate a recursive backtracking algorithm to solve sum of subset problem.	CO3	7 Marks
		(OR)		
8	a)	Draw the state space tree for m coloring when n=3 and m=3.	CO2	7 Marks
	b)	Solve the 8-queens problem using backtracking.	CO5	7 Marks

UNIT-V

9	a)	State 15-puzzle problem. Solve 15-puzzle problem using state space tree	CO1, CO4	9 Marks
	b)	Outline the control abstraction for LC search.	CO1	5 Marks
		(OR)		
10	a)	Explain about Nondeterministic and Deterministic algorithms.	CO1	7 Marks
	b)	Explain in detail about NP-hard and NP-Complete problems.	CO1	7 Marks

CODE No.: 16BT41202 SVEC-16

JAVA PROGRAMMING

[Common to Computer Science and Engineering; Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the steps involved in creating and executing a java program.	CO1	7 Marks
	b)	Design a program to implement Money class. This class should have fields for initializing a rupee and paisa value. The paisa value will be in the range from 0 – 99 with the paisa being the same sign as that of rupees. The class should have all reasonable constructors, addition and substraction methods, and a **main()** method that provides a thorough test of all the methods in the class.	CO6	7 Marks
		(OR)		
2	a)	Java compiled and interpreted. Justify.	CO4	5 Marks
	b)	Create a class Rectangle. The class has two attributes, length and width, each of which defaults to 0. It has methods that calculate the perimeter and area of the rectangle. It has set and get methods for both length and width. The set methods should verify that length and width are floating – point numbers larger than 0.0 and less than 20.0.	CO3	9 Marks

UNIT-II

3	a)	Explain final keyword with all its usages. Support explanation with a program.	CO1	7 Marks
	b)	Explain the various forms of implementing interfaces.	CO1	7 Marks
		(OR)		
4	a)	What are Nested Interfaces? Explain with a suitable example.	CO1	7 Marks
	b)	Create a class within the package "AmountInWords" to convert the amount into words. (Consider the amount to be nor more than 100000.)	CO3	7 Marks

UNIT-III

5	a)	Explain the steps in creating a thread using Runnable interface.	CO1	6 Marks
	b)	Design a java program that demonstrates how a high-priority thread using sleep makes way for the lower-priority threads to execute.	CO3	8 Marks
		(OR)		
6	a)	What is a try-with-resources block and how it is used?	CO1	4 Marks
	b)	Consider a Student examination database system that prints the marksheet of students. Input the following from the command line: i) Student's name ii) Marks in six subjects These marks should be between 0 to 100. If the marks are not in the specified range, raise a RangeException, else find the total marks and print the percentage of the student.	CO6	10 Marks

UNIT-IV

7	a)	Design a program that shows a screen sot with an applet running inside the applet viewer. The applet should display your name.	CO5	6 Marks
	b)	Explain the difference between with a suitable example: i) Vector and ArrayList. ii) Enumeration and Iterator.	CO1	8 Marks
		(OR)		

8	a)	Explain the use of overriding the following methods for an applet. init() start() stop() destroy() paint()	CO1	6 Marks
	b)	Create a collection class named Queue to implement the FIFO order of queues.	CO3	8 Marks

UNIT-V

9	a)	How is the concept of inner classes used for event handling?	CO2	7 Marks
	b)	What is the difference between doGet () and doPost () or GET and POST?	CO1	7 Marks

(OR)

10	a)	What do you mean by HTTP servlet request and response? What is the procedure for initializing a servlet?	CO1	7 Marks
	b)	What is the advantage of having anonymous classes while handling events in Java?	CO1	7 Marks

SOFTWARE ENGINEERING

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	How RAD Model solves inherent problems that result in software project? Explain with an application.	CO1	7 Marks
	b)	What is prototype? Explain the process of prototype development with diagram. Mention benefits of using prototype.	CO1	7 Marks
		(OR)		
2	a)	What is Agility in context of software engineering? Explain extreme programming (XP) with suitable diagram.	CO1	7 Marks
	b)	Explain briefly about Unified process model.	CO1	7 Marks

UNIT-II

3		Explain briefly requirements engineering process.	CO2	14 Marks
		(OR)		
4		Draw use case and dataflow diagrams for a restaurant system the activities of the restaurant system are listed below. Receive the customer food orders, produce the customer ordered foods, serve the customer with their ordered foods, collect payment from customers, store customer payment details, order raw materials for food products, pay for raw materials and pay for labor.	CO3	14 Marks

UNIT-III

5	a)	What are the design principles of a good software design? Explain them.	CO3	7 Marks
	b)	Explain with the help of suitable diagram architecture trade off analysis method.	CO4	7 Marks
		(OR)		
6	a)	Explain briefly software architecture style and architecture pattern.	CO3	7 Marks
	b)	Describe the golden rules for interface design?	CO3	7 Marks

UNIT-IV

7	a)	What is cyclomatic complexity? Explain with an example how to construct a flow graph for a program (Fibonacci series) and compute cyclomatic complexity.	CO5	7 Marks
	b)	What are the various testing strategies to software testing? Discuss them briefly?	CO5	7 Marks
		(OR)		
8	a)	What is black box testing? Is it necessary to perform this? Explain various test activities.	CO5	7 Marks
	b)	What is white box testing? Is it necessary to perform this? Explain various test activities.	CO5	7 Marks

UNIT-V

9	a)	Describe the Mc Call's quality factors and ISO 9126 quality factors.	CO6	7 Marks
	b)	Discuss Reactive and proactive risk strategies.	CO6	7 Marks
		(OR)		
10	a)	Explain RMMM& RMMM plan.	CO6	7 Marks
	b)	Discuss about SQA.	CO6	7 Marks

THEORY OF COMPUTATION

[Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Construct a DFA equivalent to the NFA. CO3 10 Marks
M=({p,q,r},{0,1},δ,p,{q,s}) Where δ is defined in the following table:

	0	1
p	{q,s}	{q}
q	{r}	{q,r}
r	{s}	{p}
s	-	{p}

b) Tabulate the differences between Moore and Mealy machines. CO2 4 Marks

(OR)

2 a) Convert the following ε-NFA to DFA CO5 10 Marks

states	ε	a	b	C
p	Φ	{p}	{q}	{r}
q	{p}	{q}	{r}	Φ
*r	{q}	{r}	Φ	{p}

b) List and explain briefly about the components of Finite automaton model. CO1 4 Marks

UNIT-II

3 a) Construct a NFA equivalent to the regular expression (10+11)*00. CO5 10 Marks

b) Prove that the language $L=\{a^m b^n | m=n\}$ is not regular. CO5 4 Marks

(OR)

4 a) List the applications of regular expressions and write the regular expression for following sets: CO3 7 Marks

i) The set of all strings over {0,1} having at most one pair of 0's or at most of one pair of 1's.

ii) The set of all strings over {a,b} in which there are at least two occurrences of b between any two occurrences of a.

b) State and explain pumping lemma for regular languages. List the applications of pumping lemma. CO1 7 Marks

UNIT-III

5 a) Obtain a CFG to generate the set of all strings over alphabet {a,b} with exactly twice as many a's as b's. CO3 7 Marks

b) Show that the grammar is ambiguous. CO1 7 Marks
S→aSbS|bSaS|Є

(OR)

6	a)	Remove useless symbols and use less productions from the given grammar S → aAa A → Sb|bcc|DaA C → abb|DD E → ac D → aDA	CO2, CO5	8 Marks
	b)	Explain pumping lemma for context free languages.	CO1	6 Marks
		UNIT-IV		
7	a)	Define pushdown automata and explain its model with a neat diagram.	CO3	6 Marks
	b)	Construct PDA generating all odd palindromes over string {a, b, c}.	CO3	8 Marks
		(OR)		
8	a)	Construct PDA for the following grammar S → aABB|aAA A → aBB|a B → A.	CO2, CO3	10 Marks
	b)	Write short notes on Deterministic Pushdown Automata.	CO1	4 Marks
		UNIT-V		
9		Define Turing machine and give an example. Also explain different types of TM's.	CO1	14 Marks
		(OR)		
10	a)	Differentiate multi tape and multi stack Turing machines.	CO2	7 Marks
	b)	Design a Turing machine that computes a function f(x, y) = x + y.	CO4	7 Marks

CODE No.: 19BT40103 SVEC-19

II B.Tech II Semester (SVEC-19) Supplementary Examinations, December – 2022

HYDRAULIC ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is the 'no slip condition' at the boundary? Explain boundary layer concept with a neat sketch.	6 Marks	L2	CO1	PO1 PO10
	b)	An aeroplane weighing 39.24 kN is flying in a horizontal direction at 360 km/h. The plane spans 15 m and has a wing surface area of 35 sq.m. If drag coefficient is 0.03 and density of air is 1.22 kg/m^3, determine coefficient of lift, power required to drive the plane and theoretical value of the boundary layer circulation.	6 Marks	L4	CO1	PO1 PO2 PO4 PO5
		(OR)				
2.	a)	Define momentum thickness and energy thickness and explain the characteristics of boundary layer with a neat sketch.	6 Marks	L2	CO1	PO1 PO10
	b)	Discuss different types of boundary layer thickness. The velocity distribution in the boundary layer is given by $u/U = y/\delta$, where u is the velocity at a distance y from the plate and $u = U$ at $y = \delta$, δ being boundary layer thickness. Find the displacement, momentum and energy thickness.	6 Marks	L4	CO1	PO1 PO2 PO4 PO10

UNIT-II

3.	a)	Classify the types of flow in channels and explain in detail.	6 Marks	L4	CO2	PO1 PO2 PO10
	b)	How the flows are classified under specific energy concept and find the discharge through a rectangular channel of width 2 m, having a bed slope of 4 in 8000? The depth of flow is 1.5 m. Use Chezy's formula, Take C = 76.	6 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
		(OR)				
4.	a)	Determine the most economical section of rectangular channel carrying water at the rate of 0.6 cumecs. The bed slope of the channel is 1 in 2000. Assume Chezy's constant C=50.	6 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
	b)	Find the rate of flow and conveyance for a rectangular channel 7.5 m wide for uniform flow at a depth of 2.25 m. The channel is having bed slope as 1 in 1000. Take Chezy's constant C = 55.	6 Marks	L6	CO2	PO1 PO2 PO3

		Also state whether the flow is tranquil or rapid.				PO4 PO5 PO6 PO7 PO10
		UNIT-III				
5.	a)	Derive an expression for force exerted by the jet on the stationary plate: i) When flat plate is held normal to the jet; ii) When flat plate is held inclined to the jet; iii) When plate is curved.	6 Marks	L4	CO3	PO1 PO2 PO4 PO10
	b)	A jet of water strikes with a velocity of 35 m/s a flat plate inclined at 30° with the axis of the jet. If the cross-sectional area of the jet is 25 cm^2, determine: i) The force exerted by the jet on the plate. ii) The components of the force in the direction normal to the jet. iii) The ratio in which the discharge gets divided after striking the plate.	6 Marks	L4	CO3	PO1 PO2 PO4 PO6 PO10
		(OR)				
6.	a)	Derive an expression for impact of jet on a fixed curved plate. A jet of water 5 cm in diameter and moving with a velocity of 15 m/s impinges on a series of vanes moving with a velocity of 5 m/s. Determine force on the plates, work done per second and efficiency of the jet.	6 Marks	L4	CO3	PO1 PO2 PO4 PO6 PO10
	b)	A jet of water, 60 mm in diameter, strikes a curved vane at its centre with a velocity of 18 m/s. The curved vane is moving with a velocity of 6 m/s in the direction of the jet. The jet is deflected through an angle of 165°. Assuming the plate to be smooth, find: i) Thrust on the plate in the direction of jet, ii) Power of the jet, and. iii) Efficiency of the jet.	6 Marks	L4	CO3	PO1 PO2 PO4 PO6 PO10
		UNIT-IV				
7.	a)	A Pelton wheel is to be designed for the following specifications: Power (brake or shaft) = 9560 kW Head =350 meters Speed = 750 r.p.m. Overall efficiency = 85% Jet diameter = not to exceed $1/6^{th}$ of the wheel diameter Determine the following: i) The wheel diameter, ii) Diameter of the jet, and iii) The number of jets required. Take C_v = 0·985, Speed ratio = 0.45.	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
	b)	i) Classify the turbines based on a) Action of water on turbine blades. b) Head on turbine. c) Direction of flow through turbine runner. d) Specific speed. e) Disposition of turbines shaft. ii) Distinguish between impulse turbine and reaction turbine	6 Marks	L4	CO4	PO1 PO2 PO10

(OR)

8.	a)	The water available for a Pelton wheel is 4 m^3/s and the total head from the reservoir to the nozzle is 250 m. The turbine has two runners with two jets per runner. All the four jets have the same diameters. The pipe is 3 km long. The efficiency of transmission through the pipeline and the nozzle is 91% and efficiency of each runner is 90%. The velocity co-efficient of each nozzle is 0·975 and co-efficient of friction '4f' for the pipe is 0·0045. Determine: i) The power developed by the turbine, ii) The diameter of the jet, and iii) The diameter of the pipeline.	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
	b)	A kaplan turbine is to be designed to develop 9100 kW. The net available head is 5.6 m. The speed ratio is 2.09 and the flow ratio is 0.68. The overall efficiency is 86% and the diameter of the boss is one-third the diameter of the runner. Examine i) Diameter of the runner ii) Speed iii) Specific speed of the turbine	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10

UNIT-V

9.	a)	Mention the main parts of centrifugal pump. A centrifugal pump having outer diameter equal to two times the inner diameter and running at 1000 rpm works against a total head of 40 m. The velocity of flow through the impeller is constant and equal to 2.5 m/s. The vanes are set back at an angle of 40 degrees at outlet. If the outer diameter of the impeller is 500 mm and width at outlet is 50 mm. Calculate the following: i) Vane angle at inlet. ii) Work done by impeller on water per second. iii) Manometric efficiency.	6 Marks	L6	CO5	PO1 PO2 PO3 PO4 PO6 PO10
	b)	What do you mean by multistage pump and when two geometrically similar pumps are running at the same speed of 1000 rpm. One pump has an impeller diameter of 300 mm and lifts water at the rate of 0.02 cumec against a head of 15 m. Determine the head and impeller diameter of the other pump to deliver half the discharge.	6 Marks	L6	CO5	PO1 PO2 PO3 PO4 PO5 PO6 PO10

(OR)

10.	a)	The impeller of a centrifugal pump is 1.45 m diameter and discharges 2 cumec against a head of 6.5 m. The vane angle at the outlet is 145 degrees to the direction of motion. Speed of impeller is 200 rpm. The radial velocity of flow at outlet is 3.6 m/s. Find the manometric efficiency and minimum speed to start the pump. Assume suitable data required.	6 Marks	L4	CO5	PO1 PO2 PO4 PO6 PO10
	b)	Write the components of reciprocating pump with a neat sketch and explain concept of pumps in parallel and series.	6 Marks	L2	CO5	PO1 PO10

STRUCTURAL ANALYSIS

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	A beam AB of length 'l' is supported at the ends carries a point load 'W' at a distance 'a' from the left end and 'b' from the right end. Determine the deflection under the load.	6 Marks	L4	CO1	PO1 PO2 PO10
	b)	A cantilever beam of span 4 m carries a point load 'w' at its free end. The moment of inertia of the section is 8500 cm^4. If the deflection at the free end is not to exceed 0.75 cm, what must be the value of W? Take E = 210 GN/m^2.	6 Marks	L4	CO1	PO1 PO2 PO4 PO10
		(OR)				
2.		A steel girder of uniform section, 14 m long is simply supported at its ends. It carries concentrated loads of 90 kN and 60 kN at two points 3 meters and 4.5 meters from the two ends respectively. Calculate: i) The deflection of the girder at the two points under the loads. ii) The maximum deflection.	12 Marks	L4	CO1	PO1 PO2 PO4 PO10

UNIT-II

3.	a)	Derive the expression for strain energy due to bending moment.	6 Marks	L4	CO1	PO1 PO2 PO10
	b)	Determine the deflection under 60 kN load in the beam shown in Fig.1.	6 Marks	L4	CO1	PO1 PO2 PO4 PO10

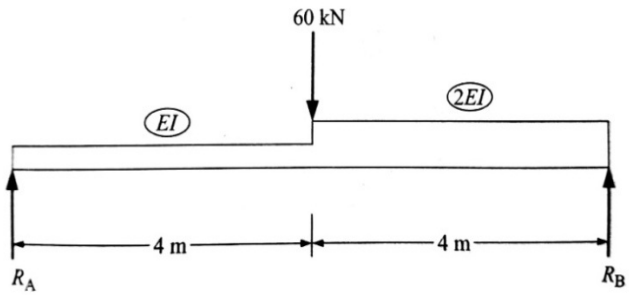

Fig.1

(OR)

4.		Analyze a fixed beam AB of span 'l' carrying a point load W at the mid-span. Draw the shear force and bending moment diagrams.	12 Marks	L4	CO2	PO1 PO2 PO10

UNIT-III

5.	A continuous beam of uniform cross – section is loaded as shown in the Fig.2. Find the following: i) Moments at the supports. ii) Reactions at the supports. iii) Points of contra flexure.	12 Marks	L4	CO3	PO1 PO2 PO4 PO10

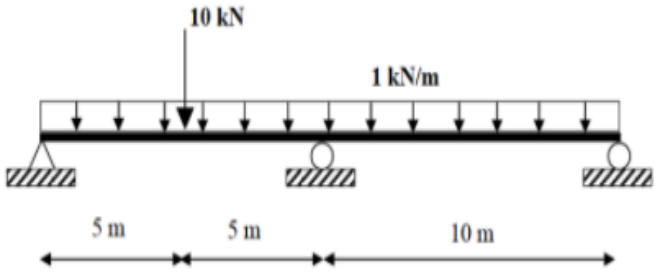

Fig.2

(OR)

6.	Analyze the two-span continuous beam shown in Fig.3 by slope deflection method and draw the bending moment and shear force diagrams. Assume EI is constant throughout.	12 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO10

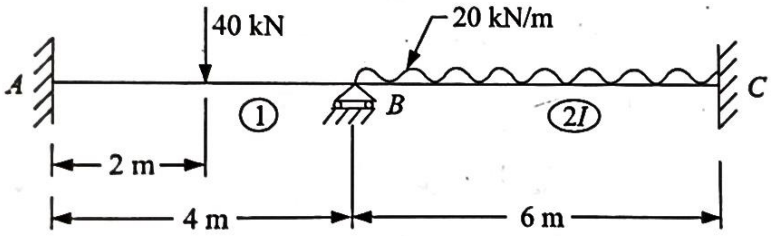

Fig.3

UNIT-IV

7.	Analyse the continuous beam shown in Fig.4 by moment distribution method and draw the bending moment and shear force diagram.	12 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO10

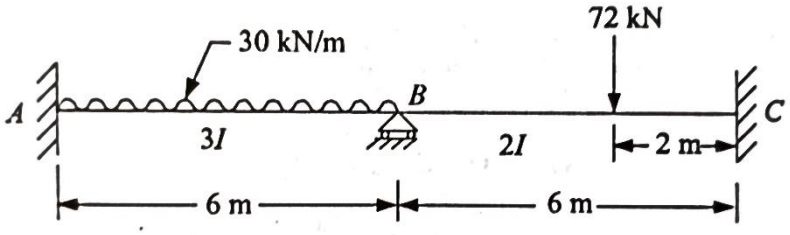

Fig.4

(OR)

8.	Analyze the continuous beam shown in Fig.5 by Kani's method.	12 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO10

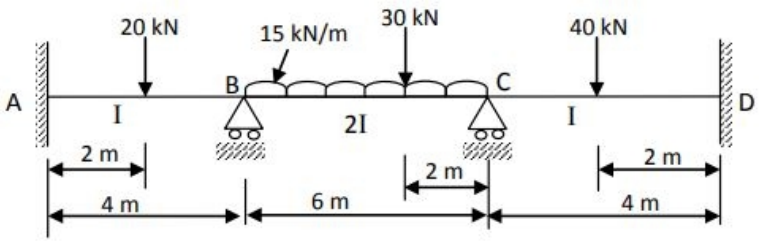

Fig.5

UNIT-V

9.	a)	A single point load of 80 kN crosses a girder of 12 m span. Using influence lines, find the maximum positive and negative shear forces at a point 4 m from the left end.	6 Marks	L4	CO4	PO1 PO2 PO4 PO10
	b)	A uniformly distributed load of 500 kN/m longer than the span, rolls over a beam of span 25 m. Using influence lines determine the maximum bending moment at a section 10 m from the left end.	6 Marks	L4	CO4	PO1 PO2 PO4 PO10
		(OR)				
10.		A T-section consists of a flange 150x10mm and a web of 140x10mm. The section modulus of the T-section is 54600mm^3 This section is used as a simply supported beam of 4m span and carries a UDL of 25kN/m on the whole span. Determine the shape factor of the beam and also calculate the collapse load for the beam. Assume yield stress as 250 Mpa.	12 Marks	L4	CO5	PO1 PO2 PO4 PO6 PO10

DIGITAL ELECTRONICS

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the properties of EX-OR gate.	4 Marks	L1	CO1	PO1
	b)	Prove the following using Boolean algebra. i) y'z' + w'x'z' + w'xyz' + wyz' = z' ii) ABC + A'B'C + A'BC +ABC' + A'B'C' = A'B' + B(A + C).	8 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Simplify the Boolean function using K-map in SOP and POS forms F=∑m(0,1,2,4,7,8,12,14,15,16,17,18,20,24,28,30,31)	6 Marks	L2	CO1	PO5
	b)	Implement the following logical expression using AND-OR-INVERTER gates and also using only NOR gates for a digital data processing application. F= A + BC'(D' + BE').	6 Marks	L3	CO1	PO5

UNIT-II

3.	a)	Illustrate three bit magnitude comparator with an example.	6 Marks	L2	CO2	PO2
	b)	Construct a 16×1 multiplexer with two 8×1 and one 2×1 multiplexers using block diagram representation.	6 Marks	L3	CO2	PO4
		(OR)				
4.	a)	Demonstrate a Half adder. Design a full adder circuit optimally using two half adder circuits.	6 Marks	L3	CO2	PO3
	b)	Implement the Boolean function F(A,B,C,D)=∑m(0,1,3,4,8,9,15) using 4:1 Mux.	6 Marks	L3	CO2	PO5

UNIT-III

5.	a)	Describe race-around problem in JK Flip-flop. Explain how it is eliminated in Master slave JK Flip –Flop.	6 Marks	L2	CO3	PO2
	b)	Design Mod-10 Counter using T Flip-Flops.	6 Marks	L3	CO3	PO3
		(OR)				
6.	a)	Illustrate and explain a 3-bit Johnson counter.	6 Marks	L2	CO3	PO1
	b)	Design a 3-bit synchronous UP/DOWN counter using D-flip-flops	6 Marks	L3	CO3	PO3

UNIT-IV

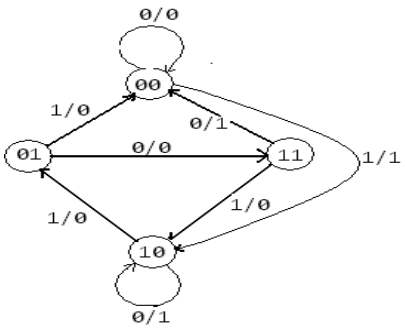
7.	a)	A sequential circuit has one input and one output. The state diagram is shown in below figure. Design the sequential circuit with (i)SR Flip-Flop (ii) D Flip-Flop	8 Marks	L2	CO4	PO5



b)	Realize a Logic function using F (A, B, C) = Σ_m (2,4,5,6) using Hazard Free logic gate network.	4 Marks	L2	CO4	PO5

(OR)

8.	Explain the procedure of state minimization for state table given below using the merger graph.	12 Marks	L2	CO4	PO5

Present state	Next state, Z			
	I_1	I_2	I_3	I_4
A	-	C,1	E,1	B,1
B	E,0	-	-	-
C	F,0	F,1	-	-
D	-	-	B,1	-
E	-	F,0	A,0	B,1
F	C,0	-	B,0	C,1

UNIT-V

9.	Tabulate the PLA programming table for the four Boolean functions listed below. Minimize the number of product terms. A(x, y, z) = Σ(1,2,4,6) B(x, y, z) = Σ(0,1,6,7) C(x, y, z) = Σ(2,6) D(x, y, z) = Σ(1,2,35,7)	12 Marks	L2	CO5	PO2

(OR)

10.	Show the step-by-step multiplication process using Booth algorithm for +15 and -13 which are binary. Assume 5-bit registers that hold signed numbers. The multiplicand is +15 and the multiplier is -13.	12 Marks	L3	CO5	PO2

DYNAMICS OF MACHINERY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		A dry single plate clutch is to be designed for an automotive vehicle whose engine is rated to give 100 kW at 2400 r.p.m. and maximum torque 500 N-m. The outer radius of friction plate is 25% more than the inner radius. The intensity of pressure between the plate is not to exceed 0.07 N/mm^2. The coefficient of friction may be assumed equal to 0.3. The helical springs required by this clutch to provide axial force necessary to engage the clutch are eight. If each spring has stiffness equal to 40 N /mm, determine the initial compression in the springs and dimensions of the friction plate.	12 Marks	L3	CO1	PO1 PO2 PO3
		(OR)				
2.	a)	List various types of brakes and what is the self locking of brake?	4 Marks	L1	CO1	PO1
	b)	Write a short note on absorption brake dynamometers with neat sketches.	8 Marks	L2	CO1	PO1 PO2

UNIT-II

3.		A ship propelled by a turbine rotor which has a mass of 5 tonnes and a speed of 2100 r.p.m. The rotor has a radius of gyration of 0.5 m and rotates in a clockwise direction when viewed from the stern. Find the gyroscopic effects in the following conditions: 1. The ship sails at a speed of 30 km/h and steers to the left in a curve having 60 m radius. 2. The ship pitches 6 degree above and 6 degree below the horizontal position. The bow is descending with its maximum velocity. The motion due to pitching is simple harmonic and the periodic time is 20 seconds. 3. The ship rolls and at a certain instant it has an angular velocity of 0.03 rad/s clockwise when viewed from stern. Determine also the maximum angular acceleration during pitching. Explain how the direction of motion due to gyroscopic effect is determined in each case.	12 Marks	L3	CO2	PO1 PO2 PO3 PO4
		(OR)				
4.		The turning moment curve for an engine is represented by the equation, T = (20 000 + 9500 sin 2θ – 5700 cos 2θ) N-m, where θ is the angle moved by the crank from inner dead centre. If the resisting torque is constant, find: 1. Power developed by the engine ; 2. Moment of inertia of flywheel in kg-m2 , if the total fluctuation of speed is not exceed 1% of mean speed which is 180 r.p.m; and 3. Angular acceleration of the flywheel when the crank has turned through 45° from inner dead centre.	12 Marks	L3	CO3	PO1 PO2 PO3

UNIT-III

5.		In a spring loaded governor of the Hartnell type, the mass of each ball is 1kg, length of vertical arm of the bell crank lever is 100 mm and that of the horizontal arm is 50 mm. The distance of fulcrum of each bell crank lever is 80 mm from the axis of rotation of the governor. The extreme radii of rotation of the balls are 75 mm and 112.5mm. The maximum equilibrium speed is 5 per cent greater than the minimum equilibrium speed which is 360 r.p.m. Find, neglecting obliquity of arms, initial compression of the spring and equilibrium speed corresponding to the radius of rotation of 100 mm.	12 Marks	L3	CO4	PO1 PO2 PO3 PO4

(OR)

6.		The upper arms of a Porter governor has lengths 350 mm and are pivoted on the axis of rotation. The lower arms has lengths 300 mm and are attached to the sleeve at a distance of 40 mm from the axis. Each ball has a mass of 4 kg and mass on the sleeve is 45 kg. Determine the equilibrium speed for a radius of rotation of 200 mm and find also the effort and power of the governor for 1 per cent speed change.	12 Marks	L2	CO4	PO1 PO2 PO3 PO4

UNIT-IV

7.	a)	Write the importance of balancing?	4 Marks	L1	CO5	PO1
	b)	A shaft carries four masses in parallel planes A, B, C and D in this order along its length. The masses at B and C are 18 kg and 12.5 kg respectively, and each has an eccentricity of 60 mm. The masses at A and D have an eccentricity of 80 mm. The angle between the masses at B and C is 100° and that between the masses at B and A is 190°, both being measured in the same direction. The axial distance between the planes A and B is 100 mm and that between B and C is 200 mm. If the shaft is in complete dynamic balance, Determine : i) The magnitude of the masses at A and D ; ii) the distance between planes A and D ; and iii) the angular position of the mass at D.	8 Marks	L3	CO5	PO1 PO2 PO3 PO6

(OR)

8.	a)	Explain the terms Variation of Tractive Force, Swaying Couple, Hammer Blow.	4 Marks	L2	CO5	PO1 PO2
	b)	The following data refer to two cylinder locomotive with cranks at 90°: Reciprocating mass per cylinder = 300 kg ; Crank radius = 0.3 m ; Driving wheel diameter = 1.8 m ; Distance between cylinder centre lines = 0.65 m ; Distance between the driving wheel central planes = 1.55 m. Determine : i) The fraction of the reciprocating masses to be balanced, if the hammer blow is not to exceed N at 96.5 km. p.h. ; ii) The variation in tractive effort; and iii) The maximum swaying couple.	8 Marks	L3	CO5	PO1 PO2 PO3

UNIT-V

9.	a)	What are the causes and effects of vibrations?	4 Marks	L2	CO6	PO1
	b)	Establish an expression for the natural frequency of free transverse vibrations for a simply supported beam carrying a number of point loads, by Dunkerley's method.	8 Marks	L2	CO6	PO1 PO2 PO3
		(OR)				
10.	a)	Explain about the Magnification Factor in forced vibration.	4 Marks	L2	CO6	PO1 PO2
	b)	With neat sketch explain the Free Torsional Vibrations of a Three Rotor System, and deduce the equation for Torsionally Equivalent Shaft.	8 Marks	L2	CO6	PO1 PO2

ENGINEERING METROLOGY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Differentiate between line standards and end standards.	6 Marks	L 2	CO1	PO1 PO2
	b)	Distinguish between Hole basis system and Shaft basis system	6 Marks	L1	CO1	PO1 PO2
		(OR)				
2.		Compare and contrast between Interchangeability and Selective assembly with illustrative examples.	12 Marks	L 2	CO1	PO1 PO2
		UNIT-II				
3.		With the help of neat sketches, explain how a sine bar is used to determine the taper angle of an inclined surface? Name the various factors affecting the accuracy of the sine bar.	12 Marks	L 2	CO2	PO1 PO2
		(OR)				
4.	a)	Sketch and explain the working principle of sigma comparator.	6 Marks	L2	CO2	PO1
	b)	Write a short notes on angle gauges.	6 Marks	L2	CO2	PO1
		UNIT-III				
5.		The heights of peaks and valleys of 20 successive points on a surface are 80,60, 88, 66, 78, 62, 80, 62, 81, 63, 83, 62, 80, 60, 80, 60, 81, 59, 82, 62 microns respectively, measured over a length 20 mm, Determine CLA and RMS values of roughness surface.	12 Marks	L3	CO3	PO1 PO2 PO3
		(OR)				
6.		What is the principle of an Optical flat? Explain the procedure of performing flatness test using optical flat.	12 Marks	L2	CO3	PO2
		UNIT-IV				
7.		Explain the two wire method for finding effective diameter of screw threads and derive for best wire size.	12 Marks	L2	CO4	PO1
		(OR)				
8.		Sketch and explain the important parameters involved in gear measurement. Explain the working principle of any one gear measuring instrument.	12 Marks	L3	CO4	PO1 PO2
		UNIT-V				
9.		Define Strain Rosette .Sketch and explain the various types of strain gauges for different applications.	12 Marks	L1	CO5	PO1 PO2
		(OR)				
10.	a)	Explain working principle of Radiation Pyrometer.	6 Marks	L2	CO5	PO1
	b)	Explain with a neat sketch the working principle of dead weight pressure gauge.	6 Marks	L2	CO5	PO1

FLUID MECHANICS AND HYDRAULIC MACHINERY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define viscosity and write down the units. And write down different types of fluids.	6 Marks	L1	CO1	PO1
	b)	A plate 0.025 mm distance from a fixed plate, moves at 60 cm/sec and requires a force of 2 N per unit area i.e., 2 N/m^2 to maintain this speed. Determine the fluid viscosity between the plates.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.		At the right limb of a simple differential manometer containing the mercury is open to the atmosphere while the left limb is connected to a pipe in which a fluid of specific gravity 0.9 is flowing. The centre of the pipe is 12cm below the level of mercury in the right limb. Find the pressure of fluid in the pipe if the difference of mercury level in the two limbs is 20 cm.	12 Marks	L3	CO1	PO1 PO2

UNIT-II

3.		Define the equation of continuity. Obtain an expression for continuity equation for three dimensional flows in Cartesian coordinates.	12 Marks	L2	CO2	PO1
		(OR)				
4.		Derive an expression for the discharge through venturimeter.	12 Marks	L3	CO2	PO1

UNIT-III

5.		Define boundary layer and explain the fundamental causes of its existence.	12 Marks	L2	CO3	PO1
		(OR)				
6.	a)	Outline the minor energy losses in pipes.	6 Marks	L1	CO3	PO1
	b)	The difference in water surface levels in two tanks, which are connected by three pipes in series of lengths 300 m, 170 m and 210 m and of diameters 300 mm, 200 mm and 400 mm respectively, is 12 m. determine the rate of flow of water if co-efficient of friction are 0.005, 0.0052 and 0.0048 respectively, considering: i) Minor losses also ii) Neglecting minor losses	6 Marks	L3	CO3	PO1 PO2 PO3

UNIT-IV

7.		Derive an expression for the force exerted by a jet of water on stationary flat vertical and inclined plates.	12 Marks	L3	CO4	PO1 PO2
		(OR)				

8.		Define the specific speed of a turbine? Derive an expression for the specific speed. What is the significance of the specific speed?	12 Marks	L3	CO4	PO1 PO2 PO3

UNIT-V

9.	a)	What do you mean by manometric efficiency, mechanical efficiency and overall efficiency of centrifugal pump?	6 Marks	L1	CO5	PO1
	b)	What is negative slip in a reciprocating pump? Explain with neat sketches the functions of air vessels in a reciprocating pump.	6 Marks	L2	CO5	PO1
		(OR)				
10.		A double acting reciprocating pump, running at 50 r.p.m. is discharging 900 litres of water per minute. The pump has stroke of 400 mm. The diameter of piston is 250 mm. The delivery and suction head are 25 m and 4 m respectively. Find the slip of the pump and power required to drive the pump.	12 Marks	L2	CO5	PO1 PO2 PO3

METAL CUTTING AND MACHINE TOOLS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Discuss the principle and requirement of machining.	6 Marks	L2	CO1	PO1
	b)	Explain the geometry of twist drill and milling cutter.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.		Analyze the nomenclature of ORS and NRS system with diagram.	12 Marks	L2	CO1	PO1 PO2
		UNIT-II				
3.	a)	Write short notes on shear strain and cutting forces with diagram.	6 Marks	L1	CO2	PO1 PO7
	b)	Define chips and recall the types of chips.	6 Marks	L1	CO2	PO1 PO7
		(OR)				
4.		Derive the expression for the various cutting forces using Merchant's circle diagram.	12 Marks	L3	CO2	PO1 PO2 PO3 PO7
		UNIT-III				
5.	a)	Differentiate work and tool holding devices in lathe.	6 Marks	L2	CO3	PO1 PO2 PO3
	b)	Write short notes on single-spindle and multi-spindle automatic lathes.	6 Marks	L1	CO3	PO1 PO2
		(OR)				
6.		Draw and explain the various operations performed on Lathe with neat diagrams.	12 Marks	L2	CO3	PO1 PO7
		UNIT-IV				
7.	a)	Compare slotting and drilling machines.	6 Marks	L2	CO4	PO1 PO7
	b)	List the specifications and types of drilling machine.	6 Marks	L1	CO4	PO1 PO7
		(OR)				
8.		What is boring? Explain the working principle of jig boring machine with neat diagram.	12 Marks	L2	CO4	PO1 PO2 PO7
		UNIT-V				
9.	a)	Write a brief note on grinding, lapping and honing in grinding machine.	6 Marks	L1	CO5	PO1 PO2 PO7
	b)	Discuss on working principle and operations in grinding machine with neat diagram.	6 Marks	L2	CO5	PO1
		(OR)				
10		Define milling and explain the methods of indexing used in	12 Marks	L2	CO6	PO1

. milling machine. PO7

THERMAL ENGINEERING-I

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain the time loss factor, heat loss factor and exhaust blow down losses.	6 Marks	L2	CO1	PO1
	b)	Explain the stages of combustion in SI engine with neat sketch.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.	a)	Compare the relative advantages and disadvantages of four stroke and two stroke engines.	6 Marks	L2	CO1	PO1 PO2
	b)	List the important internal combustion engine parts and explain in detail.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	List out the Methods of obtaining Friction Power and explain any one of them in detail.	6 Marks	L2	CO1	PO1
	b)	In a laboratory experiment, the following observations were noted during the test of a four-stroke diesel engine. Area of the indicator diagram = 420mm Length of the indicator diagram = 62mm^2 Spring number = 1.1bar/min Diameter of the piston = 100mm Length of stroke = 150mm Engine speed = 450rpm Determine: i) Indicated mean effective pressure. ii) Indicated power.	6 Marks	L3	CO1	PO1 PO2 PO3
		(OR)				
4.	a)	The cubic capacity of 4 stroke over square SI Engine is 245cc. The over square ratio is 1.1. The clearance volume is 27.2cc. calculate the bore, stroke and compression ratio of the engine.	6 Marks	L3	CO1	PO1 PO2 PO3
	b)	Explain the significance of the following tests: i) Motoring test. ii) Morse test. iii) Retardation test.	6 Marks	L2	CO1	PO1
		UNIT-III				
5.		In a constant pressure open cycle gas turbine air enters at 1 bar and 20^{0}C and leaves the compressor at 5 bar. Using the following data: temperature of the gases entering the turbine = 680^{0}C, pressure loss in the combustion chamber = 0.1 bar, $\eta_{compressor}$ = 85%, $\eta_{turbine}$ = 80%, $\eta_{combustion}$ = 85%, γ =1.4, C_p=1.024kJ/kg K for air and gas. Find: i) the quality of air circulation if the plant develops 1065kW ii) Heat supplied per kg of circulation iii) Thermal efficiency of the cycle. Mass of fuel may be neglected.	12 Marks	L3	CO2	PO1 PO2 PO3
		(OR)				

6.	a)	Distinguish between rocket propulsion Engine and turbojet Engines.	6 Marks	L4	CO2	PO1
	b)	Explain the working of turbo jet engine with a neat sketch.	6 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Derive an expression for the work done by single stage single acting reciprocating air compressor.	6 Marks	L3	CO3	PO1 PO2
	b)	A three stage single acting reciprocating air compressor delivers 2.5 m^3 of free air per minute from 1 bar to 72 bar. Calculate the power required to operate compressor if n = 1.3. The mean piston speed is 140 m/min. Find the piston area, neglecting the clearance volume.	6 Marks	L3	CO3	PO1 PO2 PO3
		(OR)				
8.	a)	Explain the working principle of roots blower with a neat sketch.	6 Marks	L3	CO3	PO1
	b)	Classify air compressors and explain two stage reciprocating air compressor.	6 Marks	L2	CO3	PO1
		UNIT-V				
9.	a)	In a Rankine cycle the steam at inlet to the turbine is saturated at a pressure of 20 bar and exhaust pressure is 0.04 bar. Determine: i) Pump work. ii) Turbine Power. iii) Rankine efficiency. Assume the flow rate of steam as 10 kg/sec.	6 Marks	L3	CO4	PO1 PO2 PO3
	b)	Explain the working of binary vapor power cycle with suitable diagram.	6 Marks	L2	CO4	PO1
		(OR)				
10.	a)	Compare the efficiency of the Modified Rankine cycle with respect to Rankine cycle. Also obtain the expression for efficiency of Modified Rankine cycle.	6 Marks	L4	CO4	PO1 PO2
	b)	A basic steam power plant works on ideal Rankine cycle between 30 bar and 0.04 bar. The initial condition of steam being 0.8 dry and flow rate 10 kg/s determine: i) Work required for pumping ii) work done by the turbine iii) cycle efficiency.	6 Marks	L3	CO4	PO1 PO2 PO3

ANALOG COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	With a neat block diagram, explain the working of FDM technique.	6 Marks	L2	CO1	PO2
	b)	Discuss the appropriate amplitude modulation technique which requires modulated band width equal to the twice of message signal band width and more power consumption.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Draw the circuit of a balanced modulator. Give the mathematical analysis to explain how and why only the carrier is suppressed in a balanced modulator.	6 Marks	L2	CO1	PO2
	b)	With neat block diagram, explain the generation of SSB wave by phase discrimination method.	6 Marks	L3	CO1	PO2
		UNIT-II				
3.	a)	Derive the expression for NBFM if message is m(t) and carrier is $A_c Cos\omega_c t$. Draw the corresponding phasor diagram of NBFM and compare it with AM wave.	6 Marks	L1	CO1	PO2
	b)	An FM wave is defined by s(t)=10 cos(2+sin (6Πt). Find the instantaneous frequency of s(t).	6 Marks	L2	CO1	PO4
		(OR)				
4.	a)	Explain FM generation using direct method.	6 Marks	L4	CO1	PO1
	b)	An FM wave is defined by s(t)=10 cos (2 +sin (6πt)). Find the instantaneous frequency S(t).	6 Marks	L2	CO1	PO2
		UNIT-III				
5.	a)	Prove that narrow band FM offers no improvement in SNR over AM.	6 Marks	L4	CO2	PO2
	b)	An AM receiver operates with a tone modulation, and the modulation index ma=0.6. The message signal is 60 Sin (5000Πt). Calculate the output SNR relative to the baseband performance.	6 Marks	L4	CO2	PO2
		(OR)				
6.	a)	Discuss the role of pre-emphasis and de-emphasis in the improvement of noise immunity in FM.	6 Marks	L4	CO2	PO2
	b)	Prove that the figure of merit of AM system for single stone modulation with 100% modulation is 1/3.	6 Marks	L1	CO2	PO1
		UNIT-IV				
7.	a)	In a superhetrodyne receiver with no RF section, the 'Q' of the antenna coupling circuit is found to be 110. Calculate the image frequency and its rejection ratio at 1100 kHz.	6 Marks	L1	CO3	PO3
	b)	An FM radio link has a frequency deviation of 25 kHz. The	6 Marks	L1	CO3	PO4

		modulating frequency is 5 kHz. Calculate the bandwidth needed for the link. What will be the bandwidth if the deviation is reduced to 10 kHz?				
		(OR)				
8.	a)	Compare low level modulation and high level modulation of radio transmitters.	6 Marks	L4	CO3	PO2
	b)	For an FM modulator with a modulating signal m(t)= Vm sin300wt, the carrier Signal Vc(t)=8 sin(6.5×106)t and the modulator index β = 2. Find out the significant side frequencies and their amplitudes.	6 Marks	L1	CO3	PO3
		UNIT-V				
9.	a)	Discuss the performance analysis of pulse modulation schemes.	6 Marks	L1	CO4	PO1
	b)	Draw the wave forms of pulse modulations and explain briefly.	6 Marks	L3	CO4	PO2
		(OR)				
10.	a)	Explain how a PPM signal can be generated from a PWM signal?	6 Marks	L1	CO4	PO1
	b)	Define and distinguish between PTM and PAM schemes. Sketch and explain their waveform for a single tone sinusoidal input signal.	6 Marks	L2	CO4	PO1

ELECTRONIC CIRCUIT ANALYSIS AND DESIGN

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Design Two stage RC coupled amplifier to meet the following specifications Av = 400, S=3, Vcc=12V, Ic=1mA, f_L =50Hz and Rs =500Ω. Assume data wherever necessary.	12 Marks	L6	CO1	PO3
		(OR)				
2.	a)	Recall the circuit diagram of a two-stage RC coupled amplifier and draw its frequency response.	6 Marks	L1	CO1	PO6
	b)	Explain the following terms with respect to the frequency response of an amplifier: i) Mid frequency region ii) Cutoff frequency iii) Band width	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Explain briefly about the small signal equivalent circuit of an emitter follower at high frequency.	6 Marks	L2	CO2	PO1
	b)	Define f_β and f_T. Develop the relation between f_β and f_T.	6 Marks	L1	CO2	PO1
		(OR)				
4.	a)	Construct an expressions for hybrid-π resistances r_{ce} and $r_{bb'}$ of a transistor.	6 Marks	L3	CO2	PO2
	b)	A transistor amplifier in CE configuration is operated at High frequency with the following specifications fT= 6 M Hz; gm = 0.04; hfe = 50; rbb'= 100 ohm ; Rs= 500 ohm; Cb'c = 120pf; RL = 100ohm. Estimate the Voltage gain, upper 3dB frequency and gain bandwidth product.	6 Marks	L5	CO2	PO2

UNIT-III

5.	a)	State the necessity of feedback in amplifiers and explain the effect of feedback on: i) Distortion ii) Noise iii) Bandwidth iv) Gain	8 Marks	L2	CO3	PO1
	b)	The gain (A_f) of an amplifier with feedback is to be nominally 20, and a variation of 5% is permissible. If the magnitude of the return ratio (Aβ) must be at least 1000(so that Aβ >>1), then determine the minimum valve of the open loop gain (A) and the maximum permissible variation in it.	4 Marks	L4	CO3	PO2
		(OR)				

6.	a)	Formulate current series feedback amplifier input and output resistance with and without feedback.	6 Marks	L2	CO3	PO2
	b)	An amplifier has voltage gain of 10,000 with ground plate supply of 150V and voltage gain of 8000 at reduced rate supply of 130V. On application of negative feedback the voltage gain at normal plate supply is reduced by a factor of 80. Calculate the i) Voltage gain of the amplifier with feedback for two valves of plate supply voltage. ii) Percentage reduction in voltage gain with reduction in plate supply voltage for both conditions, with and without feedback.	6 Marks	L3	CO3	PO2

UNIT-IV

7.	a)	Explain principle and operation of the Wien Bridge Oscillator and derive expression for frequency of oscillation.	8 Marks	L2	CO3	PO1
	b)	Compare RC and LC oscillators.	4 Marks	L5	CO3	PO2
		(OR)				
8.	a)	State the Barkhausen's criterion for oscillations.	5 Marks	L1	CO3	PO1
	b)	A Hartley oscillator is designed with L1= 20 μH; L2= 2 mH. Determine range of capacitances if frequency is varied between 950 KHz and 2050 kHz.	7 Marks	L3	CO3	PO2

UNIT-V

9.	a)	Explain in detail about the operation of class S power amplifier.	6 Marks	L3	CO5	PO1
	b)	Write the advantages and disadvantages of Transformer coupled Class-A amplifier.	6 Marks	L2	CO5	PO2
		(OR)				
10.	a)	Derive the equation for 3-dB bandwidth of Single tuned amplifier.	6 Marks	L3	CO5	PO2
	b)	A tuned circuit has resonance frequency of 800 KHz and a band width of 10 KHz. What is the value of its Q-factor?	6 Marks	L1	CO5	PO4

LINEAR AND DIGITAL IC APPLICATIONS

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Design a square waveform generator of frequency 100Hz and duty cycle of 70% using a 555 timer.	6 Marks	L3	CO1	PO3
	b)	Design a 555 timer based square wave generator to produce a symmetrical square wave of 2 kHz, if V_{cc}=12V, draw the voltage across timing capacitor and output.	6 Marks	L3	CO1	PO6
		(OR)				
2.	a)	Prove that an Op amp can be used to find the log of a given analog signal.	6 Marks	L2	CO1	PO2
	b)	Draw the block diagram of IC566 VCO and explain its operation.	6 Marks	L1	CO1	PO1

UNIT-II

3.	a)	Explain in brief the principle of operation of Flash type ADC.	6 Marks	L1	CO3	PO1
	b)	Explain the operation of a Dual-slope ADC and analyze it with flash type ADC.	6 Marks	L1	CO3	PO2
		(OR)				
4.	a)	Explain in brief the principle of operation of successive Approximation ADC.	6 Marks	L1	CO3	PO1
	b)	Design a second order Butterworth high pass filter with cut off frequency of 3 KHz.	6 Marks	L3	CO2	PO8

UNIT-III

5.	a)	What are the basic components of a module? Which components are mandatory in Verilog HDL?	6 Marks	L3	CO4	PO1
	b)	Write 4-to-1 multiplexer using case statement in dataflow modeling.	6 Marks	L3	CO5	PO1
		(OR)				
6.	a)	Illustrate the salient features of data flow design elements.	6 Marks	L1	CO4	PO2
	b)	Explain the sequential and parallel blocks in Verilog HDL with an example.	6 Marks	L1	CO4	PO1

UNIT-IV

7.	a)	Illustrate a 4 to 16 decoder using two 74*138 decoders and write the Verilog HDL code for it.	6 Marks	L3	CO5	PO2
	b)	Explain the importance of IC 74X181 in recent developments of processors.	6 Marks	L1	CO5	PO1
		(OR)				
8.	a)	Sketch the diagram and functional table of a 4-bit comparator and briefly explain about it. Write a Verilog HDL code for it in any modeling.	6 Marks	L2	CO5	PO2
	b)	Write a Verilog code for full adder using two half adders and an OR Gate.	6 Marks	L2	CO5	PO1

UNIT-V

9.	a)	Draw the logic diagram of 74×163 binary counter and explain its operation.	6 Marks	L1	CO5	PO1
	b)	Implement a modulo-11 counter using 74×163 binary counters.	6Marks	L3	CO5	PO4
		(OR)				
10.	a)	Sketch the symbol, functional table & write Verilog HDL source code of 74X194 IC.	6 Marks	L2	CO5	PO6
	b)	Design a 3-bit LFSR counter using 74x194.List out the sequence assuming that the initial state 111.	6 Marks	L3	CO5	PO3

PROBABILITY AND STOCHASTIC PROCESSES

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	State and Prove Bayes theorem.	6 Marks	L2	CO1	PO1
	b)	In the experiment of throwing two fair dice, let ***A*** be the event that the first die is odd, B be the Event that the second die is odd, and C be the event that the sum is odd. Show that events ***A,*** B, and C are pair wise independent, but ***A, B,*** and C are not independent.	6 Marks	L2	CO1	PO4
		(OR)				
2.	a)	Given that P(A), P(B) = 0.8 and P(A ∩ B) = 0.75 Find: $i)\ P(A \cup B)$ $ii)\ P(A \cap B^c)$ $iii)\ P(A^c \cap B^c)$.	6 Marks	L2	CO1	PO4
	b)	Define Joint Probability and Conditional Probability	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Let X be a Random Variable with P.D.F a given by $f_x(x) = \begin{cases} 2x & 0 < x < 1 \\ 0 & otherwise \end{cases}$ Find the P.D.F of a random variable Y, if Y=2X+1.	6 Marks	L2	CO2	PO4
	b)	State and prove chebchev's inequality.	6 Marks	L3	CO2	PO2
		(OR)				
4.	a)	Define the following: i) Expected value of a function of a random variable. ii) Moments about the origin. iii) Central moments.	6 Marks	L3	CO2	PO1
	b)	State and prove properties of characteristic function of a random variable X.	6 Marks	L3	CO2	PO2

UNIT-III

5.	a)	The joint cdf of a bivariate random variable. (X, Y) is given by $F(x,y)$ $= \begin{cases} \left(1 - e^{-ax}\right)\left(1 - e^{-by}\right) & X \geq 0, Y \geq 0,\ a > 0, b > 0 \\ 0 & otherwise \end{cases}$ i) Find the marginal CDF's of X and Y. ii) Show that X and Y are independent.	6 Marks	L2	CO2	PO4
	b)	The random variable X and Y have the joint characteristic function. $\phi(w_1, w_2) = \exp(-2W_1^2 - 9W_2^2$. Show that X and Y are both are zero means and that they are uncorrelated.	6Marks	L2	CO2	PO4
		(OR)				
6.	a)	Discuss the Properties of Gaussian Random Variable.	6 Marks	L3	CO2	PO1
	b)	Explain the Linear Transformation of Gaussian Random Variables.	6 Marks	L3	CO2	PO1

UNIT-IV

7.	a)	Given a random process by X(t) = AC0S (πt), where A is Gaussian random variable with zero mean and variance $\sigma \frac{2}{x}$. i) Find the density function of X (0). ii) Is X(t) stationary in any sense.	6 Marks	L3	CO3	PO4
	b)	Distinguish between. i) Deterministic and non-deterministic process. ii) Stationary and non-stationary random process.	6 Marks	L2	CO3	PO2
		(OR)				
8.	a)	Derive the autocorrelation output of LTI system.	6 Marks	L2	CO3	PO2
	b)	Derive the relationship between cross correlation function and cross power spectrum.	6 Marks	L2	CO3	PO2

UNIT-V

9.	a)	Mention the differences between correlated and uncorrelated noise.	6 Marks	L3	CO4	PO1
	b)	Define thermal noise and explain its relationship to the bandwidth and temperature.	6 Marks	L3	CO4	PO1
		(OR)				
10.	a)	Explain the importance of Friss's Formula with the help of example.	6 Marks	L3	CO4	PO1
	b)	Discuss the following terms: i) Noise factor. ii) Noise Figure equivalent noise temperature.	6 Marks	L3	CO4	PO2

ANALOG ELECTRONICS
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Apply Bootstrapping Method for a Darlington amplifier to increase input impedance.	6 Marks	L2	CO1	PO6
	b)	Analyze a single stage common emitter amplifier with its equivalent circuit using approximation model.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Analyze the CE short circuit current gain as function of frequency also plots its frequency response.	6 Marks	L1	CO1	PO1
	b)	With the Help of Circuit diagram and its ac equivalent Circuit develop expression for the overall input impedance of the Darlington amplifier.	6 Marks	L2	CO1	PO2
		UNIT-II				
3.	a)	Use a Trans-resistance amplifier and prove its input and output impedances are very low compared to CE amplifier.	6 Marks	L2	CO2	PO5
	b)	Explain the method of analysis of feedback amplifier.	6 Marks	L1	CO2	PO1
		(OR)				
4.	a)	Calculate the gain, input impedance and output impedance of voltage series feedback amplifier having gain A = -300, Rin = 1.5 k-ohms and Rout = 50 k-ohms, β= 0.05.	6 Marks	L3	CO2	PO4
	b)	List the general characteristics of negative feedback amplifiers and explain.	6 Marks	L2	CO2	PO2
		UNIT-III				
5.	a)	Explain principle and operation of the RC phaseshift Oscillator using FET and derive expression for frequency of oscillation.	8 Marks	L1	CO2	PO1
	b)	State and explain the Barkhausen's criterion for Oscillations.	4 Marks	L1	CO2	PO1
		(OR)				
6.	a)	For the following parameters calculate the series resonant frequency and Q - factor of the crystal. L = 0.5H, C1 = 0.06pF, Ch = 2.0pF and R = 5KΩ.	6 Marks	L3	CO2	PO4
	b)	Draw the circuit diagram of Hartley oscillator with BJT, explain its operation and derive an expression for frequency of oscillations.	6 Marks	L2	CO2	PO2
		UNIT-IV				
7.	a)	Explain second harmonic distortion in power amplifiers.	6 Marks	L1	CO3	PO1
	b)	Compare push-pull and complementary class B power amplifier.	6 Marks	L3	CO3	PO2
		(OR)				
8.	a)	Design a class B power amplifier to obtain the maximum conversion efficiency is 78.5%.	6 Marks	L4	CO3	PO3
	b)	Select a power amplifier to get power efficiency 50% and explain briefly.	6 Marks	L1	CO3	PO5

UNIT-V

9.	a)	Analyze the first order low pass filter and derive an equation for its gain and also draw its frequency response curve.	6 Marks	L1	CO4	PO2
	b)	Design a high pass filter with a cut-off frequency of 10KHz with a pass band gain of 1.5.	6 Marks	L4	CO4	PO3
		(OR)				
10.	a)	Design monostable multivibrator circuit using 555 timer and describe in detail about its operation.	6 Marks	L4	CO4	PO3
	b)	Explain the applications of astable multivibrator using 555 timer.	6 Marks	L3	CO4	PO1

DATABASE MANAGEMENT SYSTEMS

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Define Data Abstraction and discuss levels of Abstraction.	6 Marks	L1	CO1	PO1
	b)	Discuss about the Concept Design with the ER Model.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Explain different types of database users and write the functions of DBA.	6 Marks	L2	CO1	PO1
	b)	Explain basic notations of ER diagram.	6 Marks	L1	CO1	PO1
		UNIT-II				
3.	a)	Analyze and find whether View exists if the table is dropped from the database.	6 Marks	L4	CO2	PO3
	b)	Illustrate different set operations in Relational algebra with an example.	6 Marks	L3	CO2	PO3
		(OR)				
4.	a)	Discuss about Complex integrity constraints in SQL.	6 Marks	L2	CO2	PO2
	b)	Explain Relational algebra. i) Write a relational expression to find the names of sailors who have reserved boat 103. ii) Write a relational expression to find the names of sailors who have not reserved a red boat.	6 Marks	L2	CO2	PO2
		UNIT-III				
5.		Define trigger and explain its three parts. Differentiate row level and statement level triggers.	12 Marks	L2	CO3	PO2
		(OR)				
6.	a)	Define a nested query. i) Write a nested query to find the names of sailors who have reserved both a red and green boat. ii) Write a nested query to find the names of sailors who have reserved all boats.	6 Marks	L2	CO3	PO2
	b)	Illustrate PL/SQL control structure with examples.	6 Marks	L2	CO3	PO2
		UNIT-IV				
7.		Compare and contrast BCNF with 3NF.	12 Marks	L4	CO4	PO3
		(OR)				
8.	a)	Illustrate multi-valued dependencies and Fourth normal form with example.	6 Marks	L3	CO4	PO3
	b)	Discuss serializability in detail.	6 Marks	L2	CO4	PO2
		UNIT-V				
9.	a)	Discuss in detail Multiple Granularity.	6 Marks	L2	CO5	PO2
	b)	Demonstrate searching a given element in B+ trees. Explain with example.	6 Marks	L2	CO5	PO2
		(OR)				
10.	a)	Describe Validation-based locking protocols.	6 Marks	L2	CO5	PO2
	b)	Illustrate insertion of an element in B+ trees with example.	6 Marks	L3	CO5	PO3

INDUSTRIAL INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is the need for viscosity measurement in industries? List some applications, safety issues that may arise due to improper selection of sensor in an industrial environment. Suggest one method of viscosity measurement and explain it.	6 Marks	L3	CO1	PO4
	b)	Describe the construction and working principle Searle's rotating cylinder.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	List the types of humidity. Explain the construction and working principle of Psychrometer with a neat sketch.	6 Marks	L2	CO1	PO1
	b)	Define specific viscosity. Explain the construction and working principle of friction tube viscometer.	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Identify an appropriate sensing mechanism for measurement low pressure. Justify your sensor selection and explain how this works with a neat sketch.	6 Marks	L3	CO1	PO4
	b)	What is Absolute pressure? With a neat sketch explain Thermal conductivity Gage.	6 Marks	L1	CO1	PO1
		(OR)				
4.	a)	Differentiate the working principle of McLeod Gage and Ionization gage.	6 Marks	L3	CO1	PO2
	b)	Analyze different types of pressure and give 3 different units of the quantity they measure.	6 Marks	L2	CO2	PO2

UNIT-III

5.	a)	Select a suitable level measurement device for to measure the level of high conductive liquid with suitable explanation.	6 Marks	L1	CO2	PO4
	b)	Measurement of Level could be done based on differential pressure. Explain the construction, working principle of level measurement based on differential pressure.	6 Marks	L1	CO2	PO1
		(OR)				
6.	a)	Design a level sensing mechanism to measure level of a tank with the following requirements using resistive technique. Resolution of 1 cm. Range of 10 cm. Diameter of the tank is 10 cm with clean liquid. Draw a suitable diagram to represent the design and signal conditioning circuit for given specifications.	6 Marks	L3	CO2	PO4
	b)	Compare and differentiate the operation of various electric types of level measurement techniques.	6 Marks	L3	CO2	PO2

UNIT-IV

7.	a)	Select a suitable flow measuring device which is vertically installed and explain its working principle of hot wire anemometer with suitable diagram.	6 Marks	L2	CO2	PO4
	b)	Give the types of Flow. Sketch the construction and elaborate the working principle of Liquid bridge mass flow meter.	6 Marks	L1	CO2	PO1
		(OR)				
8.	a)	List different Flow sensing mechanisms. Present an analysis of different mechanisms, their merits and demerits.	6 Marks	L2	CO2	PO4
	b)	Show how a Hotwire anemometer and EM flow meter could be used for measurement of flow rate using a neat sketch and appropriate representation.	6 Marks	L2	CO2	PO4

UNIT-V

9.	a)	List different proximity sensor types and compare their merits and demerits.	6 Marks	L3	CO4	PO3
	b)	Design a voltage to current converter to convert 0-5 V to 4 to 20mA.	6 Marks	L3	CO3	PO3
		(OR)				
10.	a)	How is a charge amplifier different from electrometer amplifier? Explain the working of charge amplifier with a neat sketch.	6 Marks	L1	CO3	PO1
	b)	Elaborate the safety measure to avoid hazardous conditions in industries.	6 Marks	L3	CO4	PO6

CONTROL SYSTEMS
[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Derive an expression for the transfer function of an Armature controlled DC motor.	6 Marks	L3	CO1	PO1
	b)	Obtain transfer function for the given system using block diagram reduction techniques.	6 Marks	L3	CO1	PO5

(OR)

2.	a)	Define transfer function and enumerate its advantages and disadvantages.	4 Marks	L2	CO1	PO1
	b)	Obtain the relation between the applied voltage and the current in the form of i) Differential equation ii) Transfer function.	8 Marks	L3	CO1	PO2

UNIT-II

3.	a)	Derive the expression for steady state error and obtain its static error constants k_p, k_v and k_a.	6 Marks	L2	CO2	PO1
	b)	For a system whose transfer function is $G(S)=\frac{1}{S(S+1)}$, the input to the system is described by $r(t)=4+6t+2t^2$. Find the generalized error coefficients and steady state error.	6 Marks	L4	CO2	PO2

(OR)

4.	a)	What is an integral controller and justify how does it improves the dynamics of a control system?	4 Marks	L2	CO2	PO7
	b)	Determine the nature of the closed-loop system for a unit-step input from open loop transfer function of unity feedback system given by $G(S)=\frac{8}{S(S+1)}$. Also determine rise time, peak time and peak overshoot.	8 Marks	L2	CO2	PO2

UNIT-III

5.	a)	Draw the Nyquist plot for the system whose open loop transfer function is $G(S)H(S) = \frac{K}{S(S+2)(S+10)}$. Determine the range of 'K' for which closed loop system is stable.	6 Marks	L2	CO3	PO2
	b)	Determine the range of K for which the system represented by the characteristic equation $S^2 + KS + 2K - 1 = 0$ Sis stable.	6 Marks	L2	CO3	PO4

(OR)

6.		Sketch the Bode plots showing the magnitude in dB and phase angle in degrees as a function of log frequency for the transfer function $G(S)H(S) = \frac{KS^2}{(1+0.2S)(1+0.02S)}$. Determine the system gain *K* for the gain cross over frequency to be 5 rad/sec.	12 Marks	L2	CO3	PO4

UNIT-IV

7.		A Unity feedback system has an open loop transfer function $G(S) = \frac{K}{S(1+2S)}$. Design a lag compensator so that the phase margin is 40° and the steady state error for ramp input is less than or equal to 0.2.	12 Marks	L4	CO4	PO3

(OR)

8.		Consider the unity feedback system whose open loop transfer function is $G(s)H(s) = \frac{K}{S(S+3)(S+6)}$. Design a suitable compensator to meet the following specifications i) Velocity error constant, $K_v = 80$ and ii) Phase margin=35^0.	12 Marks	L4	CO4	PO3

UNIT-V

9.		Test the controllability and observability of a system described by $\begin{bmatrix} \dot{X}_1 \\ \dot{X}_2 \\ \dot{X}_3 \end{bmatrix} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ -160 & -56 & -14 \end{bmatrix} \begin{bmatrix} X_1 \\ X_2 \\ X_3 \end{bmatrix} + \begin{bmatrix} 0 \\ 1 \\ -14 \end{bmatrix} u, \quad y = \begin{bmatrix} 1 & 0 & 0 \end{bmatrix} \begin{bmatrix} X_1 \\ X_2 \\ X_3 \end{bmatrix}$	12 Marks	L4	CO5	PO4

(OR)

10.	a)	State the properties of state transition matrix and its significance.	6 Marks	L2	CO5	PO1
	b)	Find the state transitions matrix of the following system $\dot{X} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ -2 & -5 & -4 \end{bmatrix} X.$	6 Marks	L3	CO5	PO2

PRINCIPLES OF COMMUNICATION

[ELECTRONICS AND INSTRUMENTATION ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Find the Fourier transform of unit impulse, unit step and ramp signals. Draw the corresponding Fourier spectrum.	7 Marks
	b)	A signal $m(t)$ is multiplied with $\cos w_0 t$. Determine the Fourier Transform of the resulting signal.	7 Marks
		(OR)	
2	a)	Define the Cross Correlation function. Explain about its properties.	7 Marks
	b)	Explain the necessity of communication. Explain about convolution of signals.	7 Marks

UNIT-II

3	a)	Explain the principle of V.S.B Transmission. What are its advantages over S.S.B?	7 Marks
	b)	The antenna current of an AM transmitter is 9A when only carrier is transmitted but it increases to 10.6A when the carrier is modulated by a single sine wave. Find the percentage of modulation. Determine the antenna current when the percentage of modulation changes to 0.8.	7 Marks
		(OR)	
4	a)	With necessary equations. Explain the generation of N.B.F.M using narrow band P.M generator.	7 Marks
	b)	Explain the comparisons between FM and AM techniques.	7 Marks

UNIT-III

5	a)	The spectral range of a function extends from 10.0 MHz. Find the minimum sampling rate, the maximum sampling time.	9 Marks
	b)	Discuss about the generation of PPM.	5 Marks
		(OR)	
6	a)	Distinguish FDM & TDM. What do you mean by asynchronous multiplexing?	5 Marks
	b)	What is PWM? What other names does it have? With the help of a circuit diagram explain PWM demodulation and explain its operation.	9 Marks

UNIT-IV

7	a)	Draw the block diagram of PCM generator and explain each block.	8 Marks
	b)	Explain the operation of FSK modulator.	6 Marks
		(OR)	
8	a)	Discuss the effect of noise in Delta modulation	8 Marks
	b)	Distinguish among PSK, DPSK and QPSK.	6 Marks

UNIT-V

9	a)	Define mutual information. State and prove the properties of it..	7 Marks
	b)	Explain the concept of Huffman coding technique by taking an example.	7 Marks
		(OR)	
10	a)	Explain the concept of error detection and correction using hamming codes.	7 Marks
	b)	Explain about code tree, trellis and state diagrams for a convolutional encoder.	7 Marks

DISCRETE MATHEMATICAL STRUCTURES

[Computer Science and Engineering (Artificial Intelligence and Machine Learning), Computer Science and Engineering (Data Science), Computer Science and Engineering (Cyber Security)]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Construct the truth table for the compound proposition $(p \rightarrow q) \vee (\neg p \rightarrow q)$.	2 Marks	L3	CO1
	b)	When do you say that two compound propositions are equivalent?	2 Marks	L4	CO1
	c)	Find the recurrence relation for the Fibonacci sequence.	2 Marks	L1	CO2
	d)	Define: i) Reflexive relation ii) Symmetric relation	2 Marks	L2	CO2
	e)	Prove that $1 + 2 + 3 + \cdots + n = n(n+1)/2$ using Mathematical Induction.	2 Marks	L1	CO3
	f)	In how many ways can all the letters in MATHEMATICAL be arranged?	2 Marks	L3	CO3
	g)	Define Generating Function.	2 Marks	L1	CO4
	h)	How many permutations are there in the word MOHAN BABU?	2 Marks	L3	CO4
	i)	How many edges are there in a graph with 10 vertices each of degree 3?	2 Marks	L3	CO5
	j)	Define a graph and give an example.	2 Marks	L1	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Without constructing the truth tables, obtain the principle disjunctive normal form of $(\neg p \rightarrow r) \wedge (q \leftrightarrow r)$.	8 Marks	L2	CO1
	b)	Test the validity of the following argument, If an integer is divisible by 12 then it is divisible by 2.If an integer is divisible by 2, then it is divisible by 3.Therefore the integer divisible by 12 is also divisible by 3.	8 Marks	L3	CO1
		(OR)			
3.	a)	Obtain the PDNF and PCNF of $(P \wedge Q) \vee (\neg P \wedge R)$	8 Marks	L6	CO1
	b)	Write the negation of the statement $(\exists x)(\forall y)P(x, y)$.	8 Marks	L4	CO1

MODULE-II

4.	a)	Determine which elements have complements and which do not have complements if 45 *D* denotes the set of all divisors of 45, under divisibility ordering.	8 Marks	L3	CO2
	b)	Illustrate that (S, /) is a lattice, where S = (1,2,3,6) and / is for divisibility and also prove that this is a distributive lattice.	8 Marks	L1	CO2
		(OR)			
5.	a)	Find the recurrence relation satisfying the equation $yn = A(3)^n + B(-4)^n$.	8 Marks	L4	CO2
	b)	Examine whether given set 'S', where S = {0,1,2,3,4,5} can be semi group under binary operation Θ5.	8 Marks	L5	CO2

MODULE-III

6.	a)	Use mathematical induction to show that $n^2 - 1$ is divisible by 8 whenever n is an odd positive integer.	8 Marks	L3	CO3
	b)	Discuss that monoid homomorphism preserves the property of invertibility with an example.	8 Marks	L1	CO3
		(OR)			
7.	a)	Show that the additive group Z_4 is isomorphic to the multiplicative group of non-zero element of Z_5.	8 Marks	L3	CO3
	b)	State and prove Lagrange's theorem.	8 Marks	L1	CO3

MODULE-IV

8.	a)	Use the method of generating function to solve the recurrence relation $an + an - 14an - 2 + 4n$, $n \geq 2$.	8 Marks	L1	CO4
	b)	Determine the number of positive integers n such that 1<=n<=100 and n is not divisible by 2,3 or 5.	8 Marks	L1	CO4
		(OR)			
9.	a)	Solve the Recurrence Relation $a_n-7a_{n-1}+10a_{n-2}=0$, n>=2 where the initial conditions are $a_0=10$ and $a_1=41$ using generating functions.	8 Marks	L2	CO4
	b)	How many ways can 3 novels and 2 biographies can be arranged in a shell if There are 5 novels and 4 biographies?	8 Marks	L3	CO4

MODULE-V

10.	a)	Prove that the complement of a disconnected graph is connected.	8 Marks	L2	CO5
	b)	Define Spanning Tree. Explain DFS algorithm with an Example.	8 Marks	L1	CO5
		(OR)			
11.	a)	Derive a connected graph has an Euler trail if and only if it has at most two vertices of odd degree.	8 Marks	L3	CO5
	b)	Define MST. Explain Kruskal's Algorithm with an Example.	8 Marks	L2	CO5

CODE No.: 22CE107601 MBU-22

B.Tech I Semester (MBU-22) Regular Examinations December – 2022

ENVIRONMENTAL SCIENCE

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Write about Global warming.	2 Marks	L1	CO1
	b)	Write a note on dams and other effects on forest.	2 Marks	L2	CO1
	c)	List some of the food resources available in the world.	2 Marks	L2	CO2
	d)	List any four characteristics of ecosystem.	2 Marks	L1	CO2
	e)	What are the three types of biodiversity?	2 Marks	L1	CO3
	f)	What is Ecological succession?	2 Marks	L1	CO3
	g)	Explain e–waste management.	2 Marks	L4	CO4
	h)	List any four effects of acid rain.	2 Marks	L2	CO4
	i)	What is zero population growth?	2 Marks	L2	CO5
	j)	Write about Environmental audit.	2 Marks	L1	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	What are the problems caused by deforestation? Suggest a remedial measure.	8 Marks	L2	CO1
	b)	How can you as an individual conserve the different natural resources? Discuss.	8 Marks	L1	CO1
		(OR)			
3.	a)	Write about Role of IT in Environment and human health.	8 Marks	L2	CO1
	b)	How the modern agricultural practices affect our environment? List and suggest some remedies.	8 Marks	L4	CO1

MODULE-II

4.	a)	Briefly describe the structure and functions of ecosystem.	8 Marks	L2	CO2
	b)	Discuss the energy flow in an ecosystem.	8 Marks	L4	CO2
		(OR)			
5.	a)	Define ecosystem. Describe food chain and food web.	8 Marks	L1	CO2
	b)	Explain in detail about waste land reclamation.	8 Marks	L4	CO2

MODULE-III

6.	a)	Define biodiversity. Discuss the factors affecting biodiversity.	8 Marks	L2	CO3
	b)	Explain about Conservation of biodiversity.	8 Marks	L4	CO3
		(OR)			
7.		Write short notes on: i) Classification of bio-geographical regions of India. ii) Concepts and Criteria of biodiversity hot spots.	16 Marks	L2	CO3

MODULE-IV

8.	a)	Explain about Wildlife Protection Act.	8 Marks	L2	CO4
	b)	List the major Pollution control Acts in India.	8 Marks	L1	CO4
		(OR)			
9.	a)	Write short notes on: i) Earthquake ii) Land slides	8 Marks	L2	CO4
	b)	Describe the Sources, Effects and Methods of control of the Water pollution	8 Marks	L4	CO4

MODULE-V

10.	a)	What is sustainable development? Briefly describe the concept and important pillars of sustainable developments.	8 Marks	L2	CO5
	b)	What is age structure of population? Compare few age structures of different countries.	8 Marks	L2	CO5
		(OR)			
11.	a)	Describe the role of ICT on human health and environment.	8 Marks	L4	CO5
	b)	Write briefly about Green Campus and green business.	8 Marks	L2	CO5

CODE No.: 22CE107603 MBU-22

RURAL TECHNOLOGY

[Computer Science and Engineering (Artificial Intelligence and Machine Learning),

Computer Science and Engineering (Data Science),

Computer Science and Engineering (Cyber Security)]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Write full form of NABARD and CAPART.	2 Marks	L1	CO1
	b)	Write the significance of MNREG act 2005	2 Marks	L2	CO1
	c)	Mention any three types of alternative sources of energy.	2 Marks	L1	CO2
	d)	Through which source electrification in rural areas can be done better and at cheaper rates.	2 Marks	L1	CO2
	e)	Mention any four drinking water standards.	2 Marks	L1	CO3
	f)	Give any two social impacts of tissue culture.	2 Marks	L1	CO3
	g)	Distinguish between Pisciculture and Aquaculture.	2 Marks	L2	CO4
	h)	What is rain water harvesting?	2 Marks	L1	CO4
	i)	Mention any four corporate social responsibilities.	2 Marks	L2	CO5
	j)	Write about SAGY.	2 Marks	L1	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	What is the role of CAPART, NABARD, CSIR, and NIF in issues of technology transfer?	8 Marks	L4	CO1
	b)	Analyze the role of science and technology in eradication of poverty in rural areas.	8 Marks	L4	CO1
		(OR)			
3.	a)	Discuss about Rural Business Hubs and NREG act.	8 Marks	L3	CO1
	b)	Write about pre and post independence period technologies.	8 Marks	L2	CO1

MODULE-II

4.	a)	Write about biogas and production of biomass products.	8 Marks	L4	CO2
	b)	List the different forms of non conventional energy. Compare and contrast various methods used for energy generation from biomass.	8 Marks	L4	CO2
		(OR)			
5.	a)	State the working principle of solar energy. What are the various applications of solar energy?	8 Marks	L2	CO2
	b)	What is bio-gas? Discuss how one can process and generate biogas using the locally available raw materials as an alternative for conventional cooking fuel.	8 Marks	L3	CO2

MODULE-III

6.	a)	Explain the role of building and construction technologies in rural development.	8 Marks	L3	CO3
	b)	Discuss cultivation and processing techniques of mushroom cultivation.	8 Marks	L2	CO3
		(OR)			
7.	a)	Explain various construction technologies in rural areas.	8 Marks	L3	CO4
	b)	Discuss foods and agro based technologies which will give employment and profits to community.	8 Marks	L2	CO3

MODULE-IV

8.	a)	Recognize the need for water conservation. Explain about rain water harvesting techniques in detail.	8 Marks	L2	CO4
	b)	What is meant by apiculture? Explain opportunities present in apiculture.	8 Marks	L2	CO4
		(OR)			
9.	a)	Explore the possibilities of improving the sanitation in the rural areas by adopting latest techniques that would have positive effect on the public health and environment.	8 Marks	L2	CO4
	b)	Explain about medical and aromatic plants with their importance.	8 Marks	L4	CO4

MODULE-V

10.	a)	State the role of private sector in provision of employment and education in rural areas.	8 Marks	L4	CO5
	b)	Enlist the program focusing on social and cultural Development in rural areas and explain in detail.	8 Marks	L3	CO5
		(OR)			
11.	a)	Explain in detail the role of information technology and its usage in day to day life in rural community.	8 Marks	L2	CO5
	b)	Explain about Saansad Adarsh Gram Yojana (SAGY).	8 Marks	L4	CO5

CODE No.: 22CS101001 MBU-22

DIGITAL LOGIC DESIGN

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 x 2 = 20 Marks

1.	a)	Convert (1E5.7A)16 into binary and Hexadecimal.	2 Marks	L2	CO1
	b)	Convert (367.52)8 into binary.	2 Marks	L2	CO1
	c)	Simplify the expression F (X,Y,Z) = ∑ (0,2,4,5,6) .	2 Marks	L2	CO2
	d)	Simplify F (A,B,C) = ∏ M (0,2,3,5) using K-Map	2 Marks	L2	CO2
	e)	Implement a Half adder using a decoder and OR gates.	2 Marks	L2	CO2
	f)	Analyze the operation of D flip-flop using NAND gates.	2 Marks	L2	CO3
	g)	Implement encoder circuit.	2 Marks	L2	CO2
	h)	Design 4x1 Multiplexer.	2 Marks	L2	CO3
	i)	Design a 1-bit comparator using a PLA.	2 Marks	L2	CO4
	j)	Realize a full adder circuit using PAL.	2 Marks	L2	CO4

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 x 16 = 80 Marks

MODULE-I

2.	a)	Perform binary subtraction of the following numbers using 1's Complement: i) 11101-10110. ii) 11011 – 10101.	8 Marks	L2	CO1
	b)	Find compliment of the function, F = xy'z' + xyz, using De-Morgan's theorem.	8 Marks	L2	CO1
		(OR)			
3.	a)	Let X = 74581 and Y = 43662. Perform X - Y using 9'S complement and 10'S complement.	8 Marks	L2	CO1
	b)	Minimize the following functions using Boolean algebra. i) y'z' + w'x'z' + w'xyz' + wyz' ii) ABC + A'B'C + A'BC +ABC' + A'B'C'	8 Marks	L2	CO1

MODULE-II

4.	a)	Derive the truth table and logics diagram for the fallowing Boolean expression $F = X'Y'Z + X'YZ' + XY'Z' + XYZ$.	8 Marks	L2	CO2
	b)	Design a Half adder and Full adder using appropriate logic gates.	8 Marks	L2	CO2
		(OR)			
5.	a)	Simplify the following function and implement with logic gates F=Σm(0,1,3,4,5,7,9,11,13,15).	8 Marks	L2	CO2
	b)	Simplify the following function and implement with logic gates F=ΠM(2,4,5,7,9,10,12) using K-Map.	8 Marks	L3	CO2

MODULE-III

6.	a)	Implement the function f (A, B, C) = ∑m (1, 2,3, 4, 5, 6) using an appropriate multiplexer.	8 Marks	L2	CO3
	b)	Illustrate the operation of Binary Adder/Subtractor using 2's Complement.	8 Marks	L2	CO3
		(OR)			
7.	a)	Illustrate the operation of 2 x 4 Decoder using logic gates.	8 Marks	L2	CO3
	b)	Construct a 4-to-16 line decoder with five 2-to-4 line decoders with enable.	8 Marks	L2	CO3

MODULE-IV

8.	a)	The content of a 4-bit register is initially 1110. The register is shifted six times to the right with the serial input being 100011. What is the content of the register after each shift?	10 Marks	L2	CO3
	b)	Design a MOD 6 synchronous up counter using T-flip flops.	6 Marks	L3	CO3
		(OR)			
9.	a)	Illustrate the operation of a 4 bit Serial-in serial-out shift register.	8 Marks	L2	CO3
	b)	Draw and illustrate the operation of a 3-bit ripple UP counter using JK flip-flops.	8 Marks	L2	CO3

MODULE-V

10.	a)	Construct a logic circuit for F=Σm(1,2,3);G=Σm(0,1,3) using a CPLD macrocell.	8 Marks	L2	CO4
	b)	Obtain the realization of 3 bit even parity generator using a PROM.	8 Marks	L2	CO4
		(OR)			
11.	a)	Design a PLA based logic circuit for F =A'B+ABC'+AB+A'C' and G = A'C+ABC+A'B'.	8 Marks	L2	CO4
	b)	Realize the Boolean expressions F1=XY'Z'+X'Y'+Y'Z and F2=XYZ+Y'Z by using Programmable Array Logic.	8 Marks	L2	CO4

CODE No.: 22CS102001 MBU-22

PROGRAMMING FOR PROBLEM SOLVING

[Computer Science and Engineering, Computer Science and Engineering (Artificial Intelligence and Machine Learning), Computer Science and Engineering (Data Science), Computer Science and Engineering (Cyber Security) Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Define tokens. Give example.	2 Marks	L1	CO1
	b)	What is type conversion? Give example.	2 Marks	L1	CO1
	c)	Differentiate goto and continue.	2 Marks	L2	CO1
	d)	List out the characteristics of algorithm.	2 Marks	L1	CO2
	e)	How to define a function?	2 Marks	L1	CO3
	f)	What are the storage classes?	2 Marks	L1	CO3
	g)	How to initialize a pointer?	2 Marks	L1	CO4
	h)	Define array of pointers.	2 Marks	L2	CO4
	i)	How do access the members in structure?	2 Marks	L1	CO5
	j)	What do you mean by files of records?	2 Marks	L3	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.		Explain about different operators available in C with examples.	16 Marks	L1	CO1
		(OR)			
3.		Explain in detail about different unformatted input and output function in C with example.	16 Marks	L2	CO1

MODULE-II

4.	a)	Write a C program to perform swapping without using third variable.	8 Marks	L1	CO1
	b)	Write a C program to check whether the given number is Armstrong number or not.	8 Marks	L1	CO1
		(OR)			
5.	a)	Write an algorithm to find the given year is leap year or not.	8 Marks	L1	CO2
	b)	Draw a flowchart to perform addition of ‘n’ numbers.	8 Marks	L1	CO2

MODULE-III

6.	a)	Write a C program to perform multiplication of two matrices.	8 Marks	L1	CO3
	b)	Explain about string handling functions in C with example.	8 Marks	L1	CO3
		(OR)			
7.	a)	Explain about call by value with an example.	8 Marks	L1	CO3
	b)	Write a C program to find the factorial of a given number using Recursion.	8 Marks	L2	CO3

MODULE-IV

8.	Explain in detail about dereferencing with example.	16 Marks	L3	CO4
	(OR)			
9.	Write a C program to concatenate two strings using pointers.	16 Marks	L2	CO4

MODULE-V

10.	Define a structure called student that would contain name, reg-no and marks of five subjects and percentage. Write a program to read the details of name, reg-no and marks of five subjects for 30 students, calculate the percentage and display the name, reg-no, marks of 30 subjects and percentage of each student.	16 Marks	L3	CO5
	(OR)			
11.	Explain the use of structure within a structure and array of structures using examples.	16 Marks	L1	CO5

CODE No.: 22CS102002 MBU-22

Reg. No. | | | | | | | | | | | | |

PYTHON PROGRAMMING

[Computer Science and Engineering (Artificial Intelligence and Machine Learning),

Computer Science and Engineering (Data Science),

Computer Science and Engineering (Cyber Security)]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 x 2 = 20 Marks

1.	a)	Classify different types of statements in Python.	2 Marks	L4	CO1
	b)	List the types of operators available in Python.	2 Marks	L2	CO1
	c)	Present the flow of execution for a while statement.	2 Marks	L1	CO2
	d)	Write the syntax for creation of Tuple.	2 Marks	L1	CO2
	e)	Examine different Set functions.	2 Marks	L4	CO3
	f)	Define Python List. How Lists differ from Tuples?	2 Marks	L1	CO3
	g)	Describe renaming and deleting a file in Python.	2 Marks	L2	CO4
	h)	What does recursive function imply?	2 Marks	L1	CO4
	i)	Define how the write method works on a file.	2 Marks	L1	CO5
	j)	Difference between built-in exceptions and handling exceptions.	2 Marks	L1	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Using a simple python snippet, analyze different values, types and expression and explain them.	8 Marks	L4	CO1
	b)	Explain in detail about the literals with suitable example.	8 Marks	L1	CO1
		(OR)			
3.	a)	Design a calculator with Python code by defining its algorithm using different notations.	8 Marks	L6	CO1
	b)	List the types of operators in Python and thus explain the different expressions involved in Python.	8 Marks	L3	CO1

MODULE-II

4.	a)	Using the concept of control structure determine the prime numbers in given range using Python.	8 Marks	L3	CO2
	b)	Explain with an example break and continue statements using while loop.	8 Marks	L4	CO2
		(OR)			
5.	a)	Write a Python program to find the sum of N natural numbers.	8 Marks	L1	CO2
	b)	Write a Python program to display the inverted pyramid.	8 Marks	L3	CO2

MODULE-III

6.	a)	Write a Python program to store 'n' numbers in a list and sort the list using selection sort.	8 Marks	L5	CO3
	b)	Write a program to perform the logic of quick sort algorithm.	8 Marks	L1	CO3
		(OR)			
7.	a)	Explain the feature of dictionaries with suitable example.	8 Marks	L1	CO3
	b)	Write Python code to multiply two matrices using nested loops and also perform transpose of the resultant matrix.	8 Marks	L3	CO3

MODULE-IV

8.	a)	Write a function to print the hash of any given file in Python.	8 Marks	L3	CO4
	b)	List and explain the different file modes in Python.	8 Marks	L1	CO4
		(OR)			
9.	a)	Describe the role of Python interpreter in functions. Explain possible ways of assigning a function.	8 Marks	L1	CO4
	b)	Write a function to print the hash of any given file in Python.	8 Marks	L4	CO4

MODULE-V

10.	a)	Demonstrate the use of Exception Handling in Python.	8 Marks	L2	CO5
	b)	How to create, raise and handle user defined exceptions in Python? Illustrate with a Python program.	8 Marks	L2	CO5
		(OR)			
11.	a)	Describe with an example exception with arguments in Python.	8 Marks	L1	CO5
	b)	Write a Python program that uses datetime module within a class, takes a birthday as input and prints the age and the number of days, hours, minutes and second.	8 Marks	L3	CO5

CODE No.: 22EE102401 MBU-22

BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	State the Kirchhoff's laws.	2 Marks	L1	CO1
	b)	Distinguish between potential difference and electromotive force.	2 Marks	L3	CO1
	c)	Describe the purpose of using core in a transformer.	2 Marks	L2	CO2
	d)	Describe the step by step procedure of earthing.	2 Marks	L2	CO2
	e)	State some recommended Illumination levels for Flood lighting.	2 Marks	L2	CO3
	f)	Mention the important factors to be considered while selection of UPS components to a specific load.	2 Marks	L3	CO3
	g)	Describe how Light sensors work.	2 Marks	L2	CO4
	h)	Define transducer and give an example.	2 Marks	L2	CO4
	i)	Explain the working of Zener diode as voltage regulator.	2 Marks	L3	CO5
	j)	Draw the functional block diagram of an operational amplifier.	2 Marks	L2	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

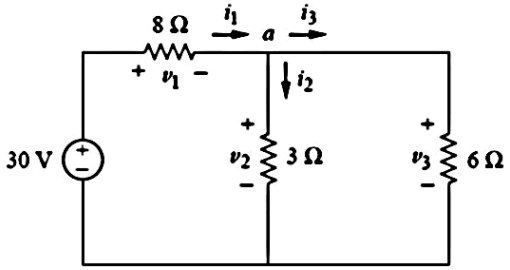
MODULE-I

2.	a)	State Ohms Law and mention any three limitations.	6 Marks	L2	CO1
	b)	The resistance of 6, 3, 9 are connected in parallel across a supply of 100V, find i) Effective resistance of the circuit. ii) total current in the circuit. iii) current through each resistance.	10 Marks	L2	CO1

(OR)

3.	a)	Find the current through the resistance RL (1.5 Ω) of the circuit shown in the figure below using Norton's Theorem.	8 Marks	L2	CO1

	b)	Find current and voltage for the given circuit using KVL.	8 Marks	L2	CO1



MODULE-II

4.	a)	Discuss in brief construction and principle of single phase induction motor. Also explain the losses.	8 Marks	L2	CO2
	b)	Explain the necessity of earthing in an electrical system installation. Also state the points to be earthed in internal / wiring system of a residential building.	8 Marks	L2	CO2

(OR)

5.	a)	Define hysteresis and eddy current losses, mention how they can minimized in transformers.	8 Marks	L2	CO2
	b)	Define relay. Explain the working principle of relay with neat sketch.	8 Marks	L2	CO2

MODULE-III

6.	a)	With neat sketch, explain the working principle of Incandescent lamp. Mention the types, advantage and disadvantages.	8 Marks	L2	CO3
	b)	The front of a building 35 × 18 m is illuminated by 15 lamps; the wattage of each lamp is 80 W. The lamps are arranged so that uniform illumination on the surface is obtained. Assuming a luminous efficiency of 20 lumens/W, the coefficient of utilization is 0.8, the waste light factor is 1.25, DF = 0.9. Determine the illumination on the surface.	8 Marks	L3	CO3

(OR)

7.	a)	Design an Uninterruptible Power Supply (UPS) Circuit for typical home load.	8 Marks	L3	CO3
	b)	List out the types of batteries, and with a neat sketch, Explain the operation of lead acid battery.	8 Marks	L2	CO3

MODULE-IV

8.	a)	With neat diagram explain the working of motion detection sensor and voltage sensor.	8 Marks	L2	CO4
	b)	Describe LVDT. What are the advantages and disadvantages of LVDT?	8 Marks	L3	CO4

(OR)

9.	a)	With a clean sketch, explain operation of a Wireless Bluetooth sensor.	8 Marks	L3	CO4
	b)	Describe the working procedure of a Hall-Effect transducer.	8 Marks	L2	CO4

MODULE-V

10.	a)	Name the device which can be used as regulator, and mention its characteristics.	8 Marks	L3	CO5
	b)	Draw the circuit diagram of non-inverting operational amplifier (OP-AMP) and drive the expression for its closed lop voltage gain.	8 Marks	L2	CO5

(OR)

11.	a)	Explain the working of Zener diode and BJT.	8 Marks	L2	CO5
	b)	Create a three-bit R-2R digital-to-analog conversion using an inverting Op-Amp.	8 Marks	L3	CO5

B.Tech I Semester (MBU-22) Regular Examinations, December – 2022

FUNDAMENTALS OF ELECTRICAL ENGINEERING

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Deduce the relationship between line and phase voltage in a star connected system.	2 Marks	L1	CO1
	b)	A 10A current source has a source resistance of 100Ω. What will be the equivalent voltage source?	2 Marks	L2	CO1
	c)	Define natural and damped frequency.	2 Marks	L1	CO2
	d)	What is the time constant of RC Circuit with R=10KΩ and C=40μF?	2 Marks	L2	CO2
	e)	List the various types of single phase induction motors.	2 Marks	L1	CO3
	f)	How would you reverse the direction of rotation of a capacitor start-induction-run motor?	2 Marks	L2	CO3
	g)	What is a BLDC motor? Mention their advantages.	2 Marks	L1	CO4
	h)	Differentiate between DC motors and BLDC motors.	2 Marks	L2	CO4
	i)	Draw the approximate equivalent circuit of a single-phase transformer.	2 Marks	L1	CO5
	j)	Why the iron losses are neglected in a short circuit test of a single-phase transformer?	2 Marks	L2	CO5

PART - B

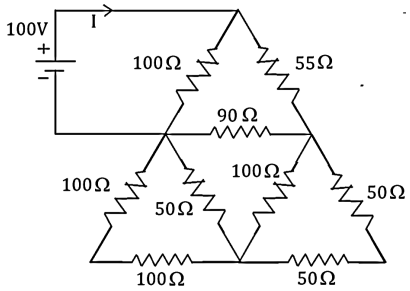
Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Use nodal analysis to compute the voltage v6Ω in the circuit.	8 Marks	L3	CO1

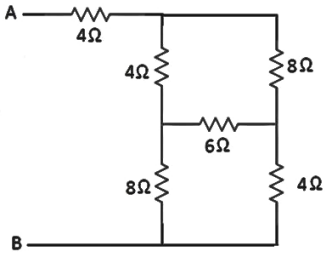
	b)	Determine the total current taken from the source in the figure by Star-Delta Transformation.	8 Marks	L3	CO1



(OR)

3.	a)	Use mesh analysis to compute the current through the $i_{6\Omega}$ resistor.	8 Marks	L3	CO1

	b)	Find the equivalent resistance between A & B in the given network	8 Marks	L3	CO1



MODULE-II

4.	a)	A load absorbs 2.5kW at a power factor of 0.707 lagging from a 230V, 50Hz source. A capacitor is connected in parallel to the load in order to improve the power factor to 0.9 lag. Determine the value of the capacitor.	8 Marks	L3	CO2
	b)	Analyze the response of Parallel R-C circuit when connected to single phase AC supply.	8 Marks	L3	CO2

(OR)

5.	a)	A RLC parallel circuit consists of R=50Ω, L=150mH and C=100μF. The circuit is excited by a current source of $5\angle 00$A, 100Hz. Calculate the voltage and current in the various elements. Determine the apparent, active and reactive power delivered by the source. Draw the phasor diagram.	8 Marks	L3	CO2
	b)	Analyze the response of Parallel RLC circuit when connected to single phase AC supply.	8 Marks	L3	CO2

MODULE-III

6.	a)	How to make Single-Phase Induction Motor Self-Starting? Explain with neat sketches.	8 Marks	L3	CO3
	b)	Describe the principal of operation of Split-Phase Induction Motor with neat sketch.	8 Marks	L3	CO3

(OR)

7.	a)	Write a short note on the principal of operation of Capacitor Start and Capacitor Run Induction Motor with neat sketch.	8 Marks	L3	CO3
	b)	A 200W, 230V, 50Hz capacitor-start motor has the following winding constants. Main winding: R= 4.5Ω; XL=3.7Ω Starting winding: R= 9.5Ω; XL=3.5Ω Find the value of starting capacitance that will result in the maximum starting torque.	8 Marks	L3	CO3

MODULE-IV

8.	a)	Explain Operation of PMBLDC motor in detail with neat sketch.	8 Marks	L3	CO4
	b)	Explain the operation and applications of variable reluctance stepper motor with neat sketches.	8 Marks	L3	CO4

(OR)

9.	a)	Explain the operation and applications of Permanent Magnet stepper motor with neat sketches.	8 Marks	L3	CO4
	b)	Compare between BLDC motors and PMSM.	8 Marks	L3	CO4

MODULE-V

10.	a)	Obtain the equivalent circuit of a 10 KVA, 450/120 V, 50 Hz, 1-phase transformer referred to L.V. side from the following test data : O.C. test (L.V. side) : 120 V, 4.2 A, 80 W. S.C. test (H.V. side) : 9.65 V, 22.2 A, 120 W.	8 Marks	L3	CO5
	b)	A 2200 V/200 V, single-phase transformer takes 1A on the HV side on no-load at a p.f. of 0·385 lagging. If a load of 50 A at a p.f. of 0·8 lagging is taken from the secondary of the transformer, calculate the primary current and its power factor.	8 Marks	L3	CO5

(OR)

11.	a)	A 20 kVA, 2500/250, 50 Hz, 1-phase transformer has the following test results: O.C. test (L.V. side): 250 V, 1.4 A, 105 W S.C. test (H.V. side): 104 V, 8 A, 320 W. Compute the parameters of the approximate equivalent circuit referred to the low voltage side and draw the circuit.	8 Marks	L3	CO5
	b)	Explain S.C. Test performed on single-phase transformer with neat sketches.	8 Marks	L3	CO5

ENGLISH FOR PROFESSIONALS

[Computer Science and Engineering (Artificial Intelligence and Machine Learning), Computer Science and Engineering (Data Science), Computer Science and Engineering (Cyber Security) Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 x 2 = 20 Marks

1.	a)	Complete the statement using suitable question tag. Rashid plays football very well, _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ _ _?	2 Marks	L1	CO2
	b)	Fill in the blank using the correct article. He is ----- MLA of our constituency.	2 Marks	L1	CO2
	c)	Write the meaning of the following idiomatic expression. A little bird told me	2 Marks	L1	CO4
	d)	Write the meaning of the following idiomatic expression. In Black and White	2 Marks	L1	CO4
	e)	Write the meaning of the following idiomatic expression. Apple of somebody's eye	2 Marks	L1	CO4
	f)	Write one-word substitute for the description. One who is capable of using both hands	2 Marks	L1	CO4
	g)	Write one-word substitute for the description. Writing one's own life story	2 Marks	L1	CO4
	h)	Fill in the blank using verbs in the correct tense. When we reached the station, the train -----the platform. (leave)	2 Marks	L1	CO2
	i)	Read the sentence below and make the necessary changes. If you will come to the college, you will meet the principal.	2 Marks	L1	CO2
	j)	Read the sentence below and make the necessary changes. My father is working in the same office from 2020.	2 Marks	L1	CO2

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Write the meaning of the following idiomatic expressions. i) Cut no ice ii) Face the music iii) Not your cup of tea iv) Bell the cat v) Every cloud has a silver lining vi) Act one's age vii) Young at heart viii) As gentle as a lamb.	8 Marks	L1	CO4
	b)	Write a review on a movie you have recently watched	8 Marks	L1	CO5

(OR)

3.	a)	Write an essay on the science behind success of super heroes	8 Marks	L2	CO1
	b)	"Communication is the act of conveying messages." Justify the significance and relevance using verbal and non-verbal communication.	8 Marks	L2	CO1

MODULE-II

4.	a)	Write one-word substitutes for these descriptions. i) One who never believes presence of God ii) An organism living on both land and in water iii) A speech to oneself alone iv) One eats only fruits v) Study of hand writing vi) Loud and confused vii) Examine one's motivates or look inwards viii) Having a hole or empty space inside	8 Marks	L1	CO4
	b)	Write the description of your favorite holiday spot in your own words (200-250 words).	8 Marks	L2	CO5

(OR)

5.	a)	Illustrate Vertical, horizontal and diagonal flow of communication in organizations with examples.	8 Marks	L2	CO1
	b)	Write how H. G. Well describes a Martian in "The Cylinder Opens."	8 Marks	L1	CO1

MODULE-III

6.	a)	Discuss how to do Skimming and Scanning Correctly in Academic Reading?	8 Marks	L2	CO4
	b)	***Fill in the blanks using verbs in the correct tense.*** i) My father _ _ _ _ _ (take) a cup of tea daily in the morning. ii) Miss Latha _ _ _ _ _ (complete) three novels so far. iii) When I reached the stadium, the match _ _ _ _ (started) iv) The college _ _ _ _ _ (reopen) on 10th November. v) While I _ _ _ _ _ (come) to the college, I saw an accident. vi) They _ _ _ _ _ (watch) television since 8o clock. vii) I _ _ _ _ _ (do) my shopping. What shall I do now? viii) The Indian economy _ _ _ _ _ (grow) rapidly.	8 Marks	L1	CO2

(OR)

7.	a)	Communication barriers attempt to impede successful completion of the communication process. Illustrate with examples.	8 Marks	L2	CO1
	b)	According to Raman, why is the sea blue in color?	8 Marks	L2	CO1

MODULE-IV

8.	a)	***Complete the following sentences using an appropriate verb form. Choose your answers from the given options.*** 1) My teacher _ _ _ _ _ a lesson yesterday. i) was taught ii) taught iii) will have taught 2) If you _ _ _ _ _ early, you would have caught the school bus i) left ii) will left iii) had left 3) If you _ _ _ _ _ hard, you can get a good rank in EAMCET. i) work ii) worked iii) will work 4) John _ _ _ _ _ in the hospital for two weeks. i) will be lying ii) had been lying iii) has been lying 5) Last month he _ _ _ _ _ for an interview. i) will appear ii) appeared iii) is appearing	8 Marks	L3	CO2

6) If she had practiced well, she _ _ _ _ _ better performance.
i) can deliver ii) could deliver iii) could have delivered
7) Most probably he _ _ _ _ _ to school next week
i) comes ii) will come iii) will be coming
8) Now he _ _ _ _ asking questions to see if the students have understood the lesson
i) asks ii) is asking iii) will ask

	b)	"We can't imagine the world without communication". Discuss.	8 Marks	L2	CO1

(OR)

9.	a)	Write a description explaining the steps involved in installing MS Office in your laptop.	8 Marks	L1	CO5
	b)	With a fast pace of modern life more and more people are turning towards fast food for their main meals. Do you think the advantages outweigh the disadvantages?	8 Marks	L1	CO1

MODULE-V

10.	a)	***Fill in the blanks in the following sentences by using appropriate modals.*** i) I _ _ _ _ _ swim well when I was young. ii) It _ _ _ _ _ rain tomorrow. iii) This medicine _ _ _ _ _ have cured your illness. iv) _ _ _ _ _ we go for a cup of coffee? v) I _ _ _ _ _ rather request you to check my exercise before giving it to the teacher vi) We _ _ _ _ _ respect elders. vii) I badly _ _ _ _ _ a cup of tea. viii) If you work hard, you _ _ _ _ _ qualify the test.	8 Marks	L1	CO2
	b)	What are the factors that help make Ms. Zhou successful?	8 Marks	L1	CO1

(OR)

11.	a)	You want to organize an event in your college on the occasion of Independence Day. Submit a proposal for this.	8 Marks	L1	CO5
	b)	Imagine that you are planning to sell your laptop online. Write a short description in about 250-300 words.	8 Marks	L1	CO5

CODE No.: 22LG107601 MBU-22

PROFESSIONAL ETHICS AND HUMAN VALUES

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Define the term moral autonomy.	2 Marks	L1	CO1
	b)	List the theories about right action,	2 Marks	L2	CO1
	c)	What is meant by integrity? How is it related to work ethics?	2 Marks	L1	CO2
	d)	What are the limitations of standard experiments?	2 Marks	L1	CO2
	e)	What are the advantages of code of ethics?	2 Marks	L1	CO3
	f)	Define the term discrimination.	2 Marks	L2	CO3
	g)	What are the rights of engineers?	2 Marks	L1	CO4
	h)	What is Whistle-blowing?	2 Marks	L1	CO4
	i)	What is the competence in professional ethics?	2 Marks	L3	CO5
	j)	How to enrich an institution?	2 Marks	L1	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	Enumerate on moral issues and types of inquiry.	16 Marks	L1	CO1
	(OR)			
3.	Discuss any two theories on ethics.	16 Marks	L1	CO1

MODULE-II

4.	Discuss on theories about virtues.	16 Marks	L2	CO2
	(OR)			
5.	Discuss on Religion and divine command ethics.	16 Marks	L2	CO2

MODULE-III

6.	Compare and contrast engineering experiments with standard experiments with suitable examples.	16 Marks	L3	CO3
	(OR)			
7.	Explain the code of ethics to be followed by an engineer.	16 Marks	L1	CO3

MODULE-IV

8.	Discuss on the importance of collective bargaining.	16 Marks	L1	CO4
	(OR)			
9.	Explain professional rights and its role in a business organization.	16 Marks	L2	CO4

MODULE-V

10.	Discuss on constitution and universal order.	16 Marks	L1	CO5
	(OR)			
11.	Appraise the case study on socially and ecologically responsible engineers.	16 Marks	L3	CO5

CODE No.: 22MM101401 MBU-22

MATRIX THEORY AND LINEAR ALGEBRA

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Determine the rank of the matrix, using determents. $A = \begin{bmatrix} -1 & 2 & 0 \\ 3 & 7 & 1 \\ 5 & 9 & 3 \end{bmatrix}$	2 Marks	L1	CO1
	b)	Determine the matrix $A = \begin{bmatrix} 4 & 0 & 0 \\ 0 & -3 & 0 \\ 0 & 0 & -5 \end{bmatrix}$ is an elementary matrix or not.	2 Marks	L1	CO1
	c)	Determine the Eigen Values of the matrix $A = \begin{bmatrix} 2 & 2 \\ 1 & 3 \end{bmatrix}$.	2 Marks	L1	CO2
	d)	Verify $A = \begin{bmatrix} 1 & 4 \\ 2 & 3 \end{bmatrix}$ satisfies Cayley-Hamilton theorem or not.	2 Marks	L1	CO2
	e)	Verify W={(x,2y,3z)/ x, y, z in R}is subspace of $V_3(R)$.	2 Marks	L1	CO3
	f)	Verify (1, 2, 1) and (3, 1, 5) in $R^3$are linear independent or not?	2 Marks	L1	CO3
	g)	Test the function T: $V_2(R) \rightarrow V_2(R)$ defined by T(x, y) = (0,y) is linear transformation or not ?	2 Marks	L1	CO3
	h)	Determine the kernel of the linear transformation T: $R^2 \rightarrow R^2$ defined by T(1, 0)=(1, 1) and T(0,1) = (-1, 2).	2 Marks	L1	CO3
	i)	Determine the distance between vectors (3, 4,-1) and (1, 3, 1) in V_3(R).	2 Marks	L1	CO4
	j)	Determine unit vector corresponding to (2, 1, 2) in V_3 (R) with respect to standard inner product.	2 Marks	L1	CO4

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Determine rank of matrix $A = \begin{bmatrix} 0 & 0 & 1 & 3 \\ 2 & 4 & 0 & -8 \\ 1 & 2 & 1 & -1 \end{bmatrix}$ by reducing to Echelon form.	8 Marks	L1	CO1
	b)	Evaluate the solution of the following system of linear equations **x+y+z = 6, 2x+y-z = 1, -x+2y+2z = 9,** by applying elementary	8 Marks	L3	CO1

transformations.

(OR)

3		Apply factorization method to solve the system of equations $3x+2y+7z=4$, $2x+3y+z=5$ and $3x+4y+z=7$.	16 Marks	L3	CO1

MODULE-II

4.	a)	Determine the Eigen values and Eigen vectors of the matrix $A = \begin{bmatrix} 8 & -6 & 2 \\ -6 & 7 & -4 \\ 2 & -4 & 3 \end{bmatrix}$.	8 Marks	L1	CO2
	b)	Verify $A = \begin{bmatrix} 2 & -1 & 1 \\ -1 & 2 & -1 \\ 1 & -1 & 2 \end{bmatrix}$ satisfies Cayley Hamilton theorem or not ?	8 Marks	L3	CO2

(OR)

5.		Show that the matrix $A = \begin{bmatrix} 3 & 0 & 2 \\ 6 & 4 & 3 \\ -4 & 0 & -3 \end{bmatrix}$ is Diagonize	16 Marks	L3	CO2

MODULE-III

6.	a)	Show that the set $V=\{(a_1, a_2)/a_1, a_2 \text{ in } R\}$ forms a vector space over R w.r.t operations defined by $(a_1,a_2)+(b_1,b_2) = (a_1+b_1, a_2+b_2)$ and $c(a_1,a_2)-(ca_1,ca_2)$where (a_1,a_2) and (b_1,b_2) in V and c in R.	8 Marks	L3	CO3
	b)	Express the vector (1,-2,5) is linear combination of vectors (1, 1, 1), (1,2,3) and (2, -1, 1).	8 Marks	L3	CO3

(OR)

7.	a)	Verify the vectors (1, 2, 1), (2, 1, 0) and (1,-1,2) forms a basis or not for R^3 ?	8 Marks	L3	CO3
	b)	Show that the vectors (1, 3, 2) (1, -7,-8) and (2, 1,-1) of $V_3(R)$ are linear dependent.	8 Marks	L3	CO3

MODULE-IV

8.	a)	Verify T: $V_3(R)$ to $V_2(R)$ defined by $T(x_1, x_2, x_3)=(x_1-x_2, x_1+x_3)$ is linear transformation or not?	8 Marks	L3	CO3
	b)	Determine range, rank and nullity for the linear transformation T: R^3 to R^3 defined by $T(x, y, z)=(x+2y, y-z, x+2z)$.	8 Marks	L3	CO3

(OR)

9.	a)	Let T: R^3 to R^3 be a linear transformation defined by $T(x_1, x_2, x_3)=(3x_1, x_1-x_2, 2x_1+x_2+x_3)$. Verify T is invertible or not If T is Invariable, find inverse of T.	8 Marks	L3	CO3
	b)	If T: $R^3 \rightarrow R^3$, is a linear transformation defined by $T(x_1, x_2, x_3)=(3x_1+x_3, -2x_1+x_2, -x_1+2x_2+4x_3)$. Find matrix of T in the basis$\{(1,0,0), (0,1,0), (0,0,1)\}$.	8 Marks	L3	CO3

MODULE-V

10.		Define Inner product space and If $\alpha=(a_1, a_2)$, $\beta=(b_1,b_2)$ in $V_2(R)$, then show that $<\alpha, \beta> = a_1b_1-a_2b_1-a_1b_2+4a_2b_2$ be an inner product over V_2(R).	16 Marks	L3	CO4

(OR)

11.		Apply the Gram-Schmidt process to the vectors [(2,1,3), (1,2,3). (1,1,1)] to obtain orthonormal basis for $V_3(R)$with standard inner product.	16 Marks	L3	CO4

CODE No.: 22MM101402 MBU-22

MULTIVARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	If $x = r\cos\theta$, $y = r\sin\theta$, $z = z$ *then find* $\frac{\partial(x,y,z)}{\partial(r,\theta,z)}$.	2 Marks	L1	CO1
	b)	Find $\frac{\partial^2 f}{\partial x \partial y}$ *if* $f(x,y) = \tan^{-1}(xy)$.	2 Marks	L1	CO1
	c)	Evaluate $\int_0^1 \int_0^{\sqrt{1+x^2}} \frac{dydx}{1+x^2+y^2}$.	2 Marks	L5	CO2
	d)	Write down the limits for function $f(x.y) = xy$ over the region in the positive quadrant for which $x + y \le 1$.	2 Marks	L1	CO2
	e)	If $\varphi = 3x^2y - y^3z^2$, *find grad* φ *at the point* $(1,-2,-1)$.	2 Marks	L1	CO3
	f)	Verify that the vector $V = 2xyz\,i + (x^2z + 2y)\,j + x^2y\,k$ *is irrotational.*	2 Marks	L1	CO3
	g)	Solve $(D^4 + 2D^2 + 1)y = 0$, *where* $D \equiv \frac{d}{dt}$.	2 Marks	L4	CO4
	h)	State the general form of the Legendre's linear differential equation of third order.	2 Marks	L1	CO4
	i)	Solve $\sqrt{p} + \sqrt{q} = 1$.	2 Marks	L3	CO5
	j)	Form the partial differential equation from $z = ax + by + a^2 + b^2$.	2 Marks	L3	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Given that $u = xy + yz + zx$, $v = x^2 + y^2 + z^2$ and $w = x + y + z$ then determine whether there is a functional relationship between u, v and w and if so, find it.	8 Marks	L2	CO1
	b)	Examine $f(x,y) = x^3 + y^3 - 3xy$ for its maximum and maximum values.	8 Marks	L2	CO1

(OR)

3.	a)	Expand $e^x \cos y$ near the point $\left(1, \frac{\pi}{4}\right)$ by Taylor's theorem.	8 Marks	L2	CO1
	b)	A rectangular box, which is open at the top, has a capacity of 256 cubic feet. Determine the dimensions of the box such that the least material is required for the construction of the box. Use Lagrange's method of multipliers to obtain the solution.	8 Marks	L2	CO1

MODULE-II

4.	a)	Change the order of integration in $I = \int_0^{\infty}\int_x^{\infty} \frac{e^{-y}}{y}\,dx\,dy$ and then evaluate it.	8 Marks	L3	CO2
	b)	Find by double integration the area enclosed by the pair of curves $y^2 = 4ax$ *and* $x^2 = 4ay$.	8 Marks	L2	CO2

(OR)

5.	a)	Evaluate $\int_0^{2\pi}\int_0^{\frac{\pi}{4}}\int_0^{a} r^2 \sin\theta \; dr\, d\theta\, d\phi$.	8 Marks	L5	CO2
	b)	Find the volume bounded by the cylinder $x^2 + y^2 = 4$ *and the planes* $y + z = 3$ *and* $z = 0$.	8 Marks	L2	CO2

MODULE-III

6.	a)	Find the directional derivative of the scalar point $f(x, y, z) = x^2 + xy + z^2$ at the point A (1,-1,-1) in the direction of the line AB, where B has the co-ordinates (3,2.1) .	8 Marks	L2	CO3
	b)	Using Stoke's theorem, evaluate $\int_c \left[(2x - y)\,dx - yz^2\,dy - y^2 z\,dz\right]$ where C is the circle $x^2 + y^2 = 1$ corresponding to the surface of the sphere.	8 Marks	L4	CO3

(OR)

7.	a)	Determine whether the line integral $\int_c \left[\, 2xyz^2\,dx + (x^2z^2 + z\cos yz)\,dy + (2x^2yz + y\cos yz)\,dz \,\right]$ is the independent of the path of integration.	8 Marks	L2	CO3
	b)	Using Green's theorem, evaluate $\int_c \left[(x^2 + xy)\,dx + (x^2 + y^2)\,dy\right]$, where C is the square formed by the lines $x = \pm 1,\ y = \pm 1$.	8 Marks	L4	CO3

MODULE-IV

8.	a)	Solve $(D^2 - 5D + 6)y = e^x \cos 2x,\ where\ D \equiv \frac{d}{dx}$.	8 Marks	L2	CO4
	b)	Apply the method of variation of parameters, solve $\frac{d^2y}{dx^2} - y = \frac{2}{1 + e^x}$.	8 Marks	L4	CO4

(OR)

9.	a)	Solve $x^2 \frac{d^2y}{dx^2} + x\frac{dy}{dx} + y = \sin(\log x^2)$.	8 Marks	L2	CO4
	b)	Solve $(D^2 - 6D + 13)y = 8e^{3x}\sin 4x,\ where\ D \equiv \frac{d}{dx}$.	8 Marks	L4	CO4

MODULE-V

10.	a)	Form the partial differential equation of all planes which are at a constant distance 'a' from the origin.	8 Marks	L3	CO5
	b)	Solve $(x^2 - yz)p + (y^2 - zx)q = (z^2 - xy)$.	8 Marks	L3	CO5

(OR)

11.	a)	Form the partial differential equation by eliminating the arbitrary functions from $z = f(x + at) + g(x - at)$.	8 Marks	L2	CO5
	b)	Apply the method of separation of variables, solve $\frac{\partial^3 z}{\partial x^2 \partial y} = \cos(2x + 3y)$.	8 Marks	L2	CO5

CALCULUS AND TRANSFORMATION TECHNIQUES

[Computer Science and Engineering (Artificial Intelligence and Machine Learning),

Computer Science and Engineering (Data Science),

Computer Science and Engineering (Cyber Security)]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	State Rolle's theorem.	2 Marks	L1	CO1
	b)	State Maclaurin's theorem with Lagrange's form of reminder	2 Marks	L1	CO1
	c)	Find the first and second partial derivatives of $f(x)= ax^2 + 2h\,xy + by^2$.	2 Marks	L1	CO2
	d)	Identify the stationary points of the function $f(x, y)=2-x^2-y^2$.	2 Marks	L1	CO2
	e)	Find the Laplace transform of $e^{2t} + 2\sin 3t$.	2 Marks	L1	CO3
	f)	Obtain the Laplace transform of $t^2 + at + b$	2 Marks	L1	CO3
	g)	Find the inverse Laplace transform of $\frac{1}{s^2 + 16}$	2 Marks	L1	CO4
	h)	Find the inverse Laplace transform of $\frac{1}{(s-1)(s+2)}$	2 Marks	L1	CO4
	i)	Obtain the Fourier coefficient a_0 for the function $f(x) = e^{ax}$ in $(0, 2\pi)$	2 Marks	L1	CO5
	j)	Determine the Fourier cosine transform of $f(x) = e^{-ax}$ for $x \geq 0$.	2 Marks	L1	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Verify Cauchy's mean value theorem for $f(x) = x^2$, $g(x) = x^3$ in [1,2].	8 Marks	L4	CO1
	b)	Obtain Maclaurin's series expansion of the function $f(x) = e^x$.	8 Marks	L4	CO1
		(OR)			
3.	a)	Verify Rolle's theorem for the function $f(x) = (x - a)^m (x - b)^n$ where m and n are positive integers in [a, b].	8 Marks	L4	CO1
	b)	Show that for $0<a<b<1$, $\frac{1}{1+a^2} > \frac{\tan^{-1}b - \tan^{-1}a}{b-a} > \frac{1}{1+b^2}$.	8 Marks	L4	CO1

MODULE-II

4.	a)	If $U=\log(x^2+y^2+z^2)$, then find $\frac{\partial^2 U}{\partial x^2} + \frac{\partial^2 U}{\partial y^2} + \frac{\partial^2 U}{\partial z^2}$.	8 Marks	L4	CO2
	b)	Verify that the functions $u = xy + yz + zx$, $v = x^2 + y^2 + z^2$ and $w = x + y + z$ are functionally dependent? If so find the relation between them.	8 Marks	L5	CO2

(OR)

5.	a)	Find the minimum distance from the origin to the plane $x + 2y + 3z = 14$ using Lagrange's method of multipliers.	10 Marks	L4	CO2
	b)	If u=$\frac{yz}{x}$ v = $\frac{zx}{y}$, w=$\frac{xy}{z}$, then compute $\frac{\partial(u,v,w)}{\partial(x,y,z)}$	6 Marks	L4	CO2

MODULE-III

6.	a)	Find the Laplace transform of $\frac{e^{-at} - e^{-bt}}{t}$	8 Marks	L2	CO3
	b)	Obtain L(t^2e^{-2t}cost)	8 Marks	L4	CO3

(OR)

7.	a)	Using Laplace transform, evaluate $\int_0^\infty \frac{\sin 2t}{t} dt$	8 Marks	L2	CO3
	b)	Find the Laplace transform of the square wave function of period 2a defined as $f(t) = \begin{cases} k & when\ 0 < t < a \\ -k & when\ a < t < 2a \end{cases}$	8 Marks	L4	CO3

MODULE-IV

8.	a)	Find $L^{-1}\left[\frac{s+2}{s^2-2s+5}\right]$	8 Marks	L2	CO4
	b)	Using convolution theorem find $L^{-1}\left[\frac{1}{s(s^2+4)}\right]$	8 Marks	L2	CO4

(OR)

9.	a)	Evaluate $L^{-1}\left[\frac{s^2}{(s+1)(s+2)(s+3)}\right]$	8 Marks	L2	CO4
	b)	Find the inverse Laplace transform of $\log\left(\frac{s+3}{s+4}\right)$	8 Marks	L2	CO4

MODULE-V

10.	a)	Obtain the Fourier series for x^2 in the interval $-\pi < x < \pi$. Hence show that 1- $\frac{1}{2^2} + \frac{1}{3^2} - \frac{1}{4^2} + \frac{1}{5^2} \ldots\ldots = \frac{\pi^2}{12}$	8 Marks	L4	CO5
	b)	Find the Fourier transform of $f(x) = \begin{cases} 1 & \text{for } \lvert x \rvert < a \\ 0 & \text{for } \lvert x \rvert > a \end{cases}$	8 Marks	L2	CO5

(OR)

11.	a)	Find the half-range Sine series for the following function $f(x) = x(\pi - x)$ *for* $0 \le x \le \pi$	8 Marks	L2	CO5
	b)	Find the Fourier sine transform of f(x)= $e^{-\lvert x \rvert}$ and hence deduce $\int_0^\infty \frac{x \sin mx}{1+x^2} dx = \frac{\pi e^{-m}}{2}, m > 0.$	8 Marks	L4	CO5

ENGINEERING PHYSICS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 X 2 = 20 Marks

1.	a)	Define Interference	2 Marks	L1	CO1
	b)	Outline Superposition principle of light.	2 Marks	L2	CO1
	c)	State divergence of electric field	2 Marks	L1	CO2
	d)	Define numerical aperture of an optical fiber	2 Marks	L1	CO2
	e)	State P-type semi conductor.	2 Marks	L1	CO3
	f)	Outline Drift current	2 Marks	L2	CO3
	g)	Define non-polar dielectric material	2 Marks	L1	CO4
	h)	Outline magnetization and magnetic field strength.	2 Marks	L1	CO4
	i)	Outline the role of cooper pairs in superconductivity.	2 Marks	L2	CO5
	j)	State nano materials.	2 Marks	L1	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Explain the theory of Newton's rings with relevant diagram.	12 Marks	L2	CO1
	b)	In a Newton's rings experiment the diameter of the 10^{th} ring changes from 1.52 to 1.10 cm when the liquid is introduced between the lens and plate. Calculate the refractive index of the liquid.	4 Marks	L3	CO1
		(OR)			
3.	a)	Obtain the condition for primary maxima in Fraunhofer diffraction due to single slit and derive an expression for width of the central maxima.	12 Marks	L2	CO1
	b)	Differentiate Interference and diffraction.	4 Marks	L3	CO1

MODULE-II

4.	a)	Explain the physical significance of gradient, divergence and curl.	8 Marks	L2	CO2
	b)	Explain Fiber optic Sensor.	8 Marks	L2	CO2
		(OR)			
5.	a)	Explain step index and graded index fiber with neat illustrations.	10 Marks	L2	CO2
	b)	Discuss construction of an optical fiber.	4 Marks	L2	CO2

MODULE-III

6.	a)	Explain the term Hall effect. Calculate the hall coefficient and carrier concentration.	10 Marks	L3	CO3
	b)	Explain the role of Fermi energy level in p-type semiconductor.	4 Marks	L2	CO3
		(OR)			
7.	a)	Describe the construction and working of Semi conductor diode laser with neat illustrations.	10 Marks	L3	CO3
	b)	Discuss the role of direct band gap semiconductors in obtaining laser.	4 Marks	L2	CO3
		MODULE-IV			
8.	a)	Interpret electronic and ionic polarizations with neat illustrations.	12 Marks	L3	CO4
	b)	Explain orientation polarization with neat diagram.	6 Marks	L2	CO4
		(OR)			
9.	a)	Explain the origin of magnetic moment and obtain the relation for Bohr Magneton.	8 Marks	L2	CO4
	b)	Illustrate B-H curve and write inferences from it.	8 Marks	L3	CO4
		MODULE-V			
10.	a)	Discuss BCS theory of super conductivity.	10 Marks	L2	CO5
	b)	Write short notes on flux quantization.	6 Marks	L1	CO5
		(OR)			
11.	a)	Explain how the electrical, magnetic and mechanical properties of nano materials vary with their size.	10 Marks	L2	CO5
	b)	Discuss the basic principle of nano materials.	6 Marks	L2	CO5

CODE No.: 22MM102453 MBU-22

PHYSICS FOR COMPUTING

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 100**

PART - A

Answer All Questions.
All Questions Carry Equal Marks

10 x 2 = 20 Marks

1.	a)	Define plane polarized light.	2 Marks	L1	CO1
	b)	List out any two differences between CPL and EPL.	2 Marks	L1	CO1
	c)	List out any two de Broglie's hypothesis for matter waves.	2 Marks	L1	CO2
	d)	Compute the wavelength associated with an electron, which has been accelerated from rest on application of a potential of 200V.	2 Marks	L2	CO2
	e)	Formulate the wave function of the particle, which is moving in a 3D potential box.	2 Marks	L3	CO3
	f)	Explain the formation of energy bands using band theory of solids.	2 Marks	L2	CO3
	g)	State drift velocity.	2 Marks	L1	CO4
	h)	Briefly explain the compound semiconductors.	2 Marks	L1	CO4
	i)	State and explain the critical angle.	2 Marks	L1	CO5
	j)	Compute the numerical aperture of an optical fiber refractive indices of the core and the cladding are 1.52 and 1.48 respectively.	2 Marks	L3	CO5

PART - B

Answer One Question from each Module.
All Questions Carry Equal Marks

5 X 16 = 80 Marks

MODULE-I

2.	a)	Why newton's rings are in circular shape? Derive the expression for wavelength of monochromatic source using Newton's rings experiment.	10 Marks	L2	CO1
	b)	List out any four differences between Half wave and Quarter wave plate.	6 Marks	L2	CO1
		(OR)			
3.	a)	Why do soap bubbles appear multicolored when viewed under sun light?	6 Marks	L2	CO1
	b)	Explain the construction and working of Nicol prism and show that it can be act as a polarizer and analyzer.	10 Marks	L2	CO1

MODULE-II

4.	a)	List out de Broglie's hypothesis for matter waves.	6Marks	L1	CO2
	b)	Illustrate Fermi Dirac distribution and effect of temperature.	10 Marks	L2	CO2
		(OR)			
5.	a)	Derive the expression for de Broglie wavelength for electron.	6 Marks	L2	CO2
	b)	Explain the confirmation of dual nature of matter waves using any one experiment.	10Marks	L2	CO2

MODULE-III

6.	a)	State and explain eigen value and eigen function.	6 Marks	L2	CO3
	b)	Show that eigenvalues of an electron are in the ratio of 1 : 4 : 9 : 16 ….. , when the electron moves in a one-dimensional potential box of width 'L' along with its eigen function.	10 Marks	L3	CO3

(OR)

7.	a)	An electron is bound in a one-dimensional box of width 2×10^{-10} m. Find its lowest energy and first excited state energy.	6 Marks	L3	CO3
	b)	Illustrate the Kronig-Penny model and list out the conclusions (P=0, P is moderate and P tends to infinite).	10 Marks	L3	CO3

MODULE-IV

8.	a)	Write any four differences between direct and indirect band gap of semiconductors.	6 Marks	L1	CO4
	b)	Explain the density of charge carriers in p-type and n-type semiconductors and draw the band diagrams of p-type and n-type semiconductors.	10 Marks	L2	CO4

(OR)

9.	a)	Explain the electrical conductivity of intrinsic semiconductors.	6 Marks	L2	CO4
	b)	State Hall effect and derive an expression for the Hall coefficient (R_H) and carrier concentration (n).	10 Marks	L3	CO4

MODULE-V

10.	a)	State and explain the total internal reflection in optical fibers.	6 Marks	L1	CO5
	b)	Explain the construction and working mechanism of a temperature sensor and displacement sensor.	10 Marks	L3	CO5

(OR)

11.	a)	Briefly explain any four applications of optical fibers.	6 Marks	L2	CO5
	b)	Derive the expression for acceptance angle and also explain the how to reduce the intermodal dispersion using graded index optical fibers.	10 Marks	L3	CO5

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Discuss briefly about boiler troubles and methods to be adapted for their treatment.	14 Marks
		(OR)	
2		Explain the Ion-Exchange process for softening of water with the reactions involved and mention the advantages, disadvantages of this process.	14 Marks

UNIT-II

3	a)	Define composite material? Classify composite materials based on dispersed phase.	7 Marks
	b)	Distinguish between fibre and particle-reinforced composites.	7 Marks
		(OR)	
4		What are biodegradable polymers? Explain the classification of Biodegradable polymers. Give the potential applications of biodegradable polymers.	14 Marks

UNIT-III

5		Write the applications of nanomaterials in science and technology.	14 Marks
		(OR)	
6		Explain in detail about the classification of nanomaterials	14 Marks

UNIT-IV

7		Describe the construction and working of Lithium- ion battery with the reactions occurring during charging and discharging. Mention the applications of Li-ion batteries.	14 Marks
		(OR)	
8		Discuss the construction and working principle of Ni-Cd battery. List out the applications of Ni-Cd batteries	14 Marks

UNIT-V

9		Define lubrication. Explain mechanism of fluid and boundary lubrication	14 Marks
		(OR)	
10		What is lubrication? Write an explanatory note on solid lubricants and greases.	14 Marks

Roll No. | | | | | | | | | | |

TRANSFORMATION TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 Develop the Fourier series for $f(x) = x - x^3$ in $-3 < x < 3$. 14 Marks

(OR)

2 Test the function $f(x) = \begin{cases} 1+\frac{2x}{\pi} & -\pi < x < 0 \\ 1-\frac{2x}{\pi}; & 0 < x < \pi \end{cases}$ for even and odd. 14 Marks

Also find its half range Fourier cosine series.

UNIT-II

3 Apply Parseval's identity in Fourier transforms evaluate $\int_0^\infty \frac{dx}{(4+x^2)(9+x^2)}$. 14 Marks

(OR)

4 Find the Fourier sine transform of $e^{-|x|}$ hence evaluate $\int_0^\infty \frac{x \sin mx}{a^2 + x^2} dx$. 14 Marks

UNIT-III

5 Solve $y'' + 9y = \cos 2t$, $y(0) = 1$, $y(\pi/2) = -1$ by Laplace technique. 14 Marks

(OR)

6 Solve $y'' - 5y' + 4y = e^{2t}$, $y(0) = 1$, $y'(0) = 0$, using Laplace transform method. 14 Marks

UNIT-IV

7 Using Z–transform, Solve $u_{n+2} - 2u_{n+1} + u_n = 3_{n+5}$. 14 Marks

(OR)

8 Solve the equation $y_{n+2} + 6y_{n+1} + 9y_n = 2^n$ with $y_0 = y_1 = 0$, Using Z-transform. Solve the equation $y_{n+2} + 6y_{n+1} + 9y_n = 2^n$ with $y_0 = y_1 = 0$, Using Z–transform? 14 Marks

UNIT-V

9 Obtain the solution of the equation $\frac{\partial u}{\partial t} = \frac{\partial^2 u}{\partial x^2}$ with boundary condition $u(x,0) = 3\sin n\pi x$, $u(0,t), u(l,t) = 0$ where $0 < x < l$. 14 Marks

(OR)

10 A string is stretched and fastened to two points l apart. Motion is started by displacing the string in the form $y = a \sin \frac{\pi x}{l}$ from which it is released at a time t=0. Show that the displacement of any point at a distance x from one end at time t is given by $y(x,t) = a \sin\left(\frac{\pi x}{l}\right)\cos\left(\frac{\pi ct}{l}\right)$. 14 Marks

ENGINEERING MECHANICS

[Civil Engineering and Mechanical Engineering]

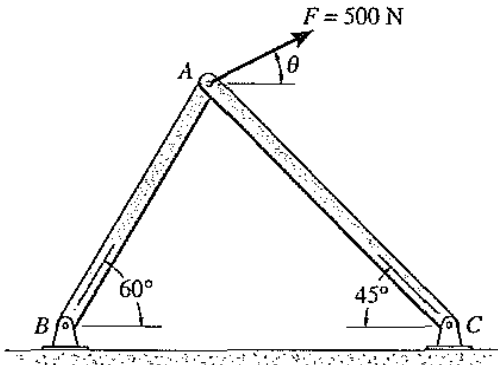
Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Discuss the following terms with suitable examples: 7 Marks
i) Coplanar forces ii) Concurrent forces
iii) Parallel forces iv) Non parallel forces

b) The 500N force acting on the frame is to be resolved into two components acting along the axis of the struts AB and AC as shown in Fig. If the component of force along AC is required to be 300 N, directed from A to C, determine the magnitude of force acting along AB and the angle q of the 500 N forces. 7 Marks



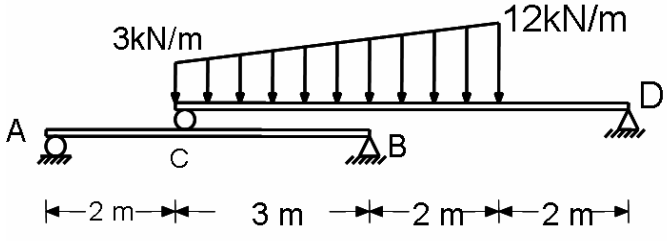
(OR)

2 a) Explain how the Parallelogram law can be used to obtain the resultant of more than two concurrent forces. 7 Marks

b) What is a resultant force? What is meant by composition of forces, component of a force and resolution of a force? Can a force be resolved into non-perpendicular components? If so, how? 7 Marks

UNIT-II

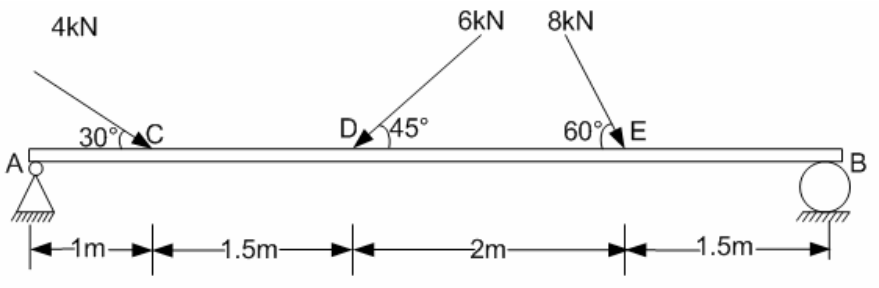
3 Calculate reactions at A, B, C and D as shown in the given figure. 14 Marks



(OR)

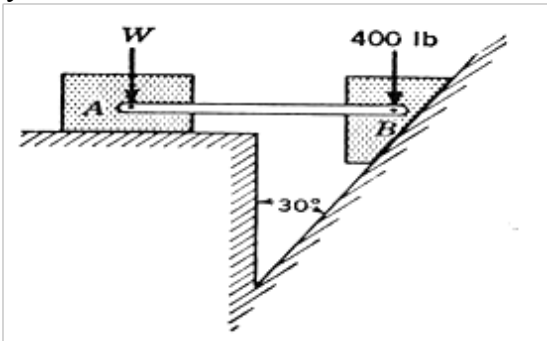
4 a) State and prove Varignon's principle. 7 Marks

b) A beam AB of span 6m is hinged at A and supported on rollers at end B and carries load as shown in Fig. Determine the reactions at A and B. 7 Marks



UNIT-III

5 Two blocks, connected by a horizontal link AB are supported on two rough planes as shown in figure. The coefficient for friction of block A on the horizontal plane is μ = 0.4. The angle of friction for block B on the inclined plane is μ =0.15. What is the smallest weight W of block A for which equilibrium of the system can exist? 14 Marks



(OR)

6 A uniform ladder of length 5m and weight 250N rests on a horizontal ground and leans against a rough vertical wall. The coefficient of static friction between ladder and the floor is 0.3 and between the ladder and vertical wall is 0.2. When a weight of 900 N is placed on the ladder at a distance of 2 m from the top of the ladder, the ladder is at the point of sliding. Determine: 14 Marks

i) The angle made by the ladder with the horizontal.

ii) Reactions at the foot and top of the ladder.

UNIT-IV

7 Find the area moment of inertia about the centroidal axes of the plane area shown in fig. Also find the section modulus. 14 Marks

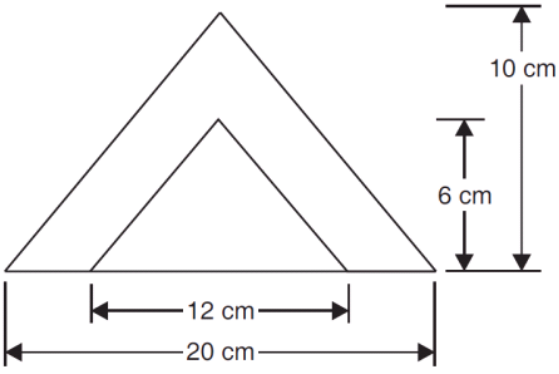


Fig.7

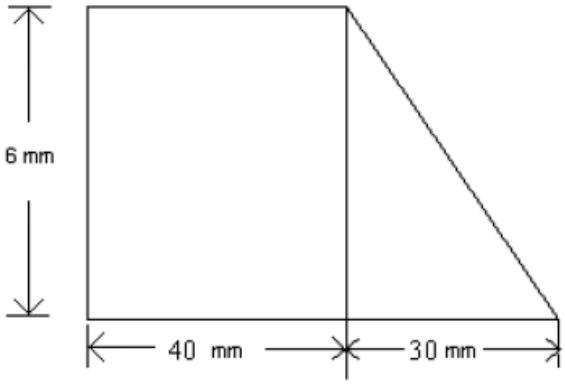
(OR)

8 Find the centroid of the plane area shown in figure 14 Marks



UNIT-V

9 a) A stone dropped into well is heard to strike the water in 3.5 sec. Find the depth of the well assuming the velocity of the sound is 335 m/sec. 7 Marks

b) Maximum range of a field gun is 2000 m. If a target at a distance of 1200 m is to be hit, what should be the angle of projection? 7 Marks

(OR)

10 a) A motor cycle starts from rest and speeds to 15 m/s with a constant acceleration of 1.5 m/s^2 runs at this speed for some time and finally comes to rest with a deceleration of 2 m/s^2. If total distance travelled is 400 m, determine total time required. 7 Marks

b) The motion of the particle is defined by the relation $x = 6t^4 + 8t^3 - 14t^2-10t + 16$, where x and t are expressed in meters and records, respectively. Determine the position, the velocity, and the acceleration as the particle when t = 3s. 7 Marks

❁ ❁ ❁

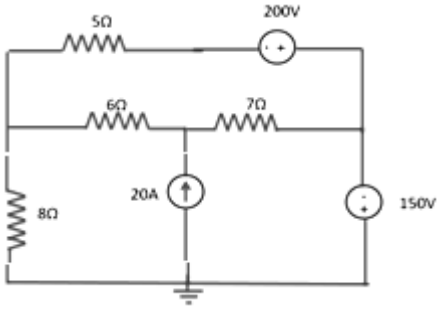
BASIC ELECTRICAL AND ELECTRONICS ENGINEERING
[Civil Engineering, Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

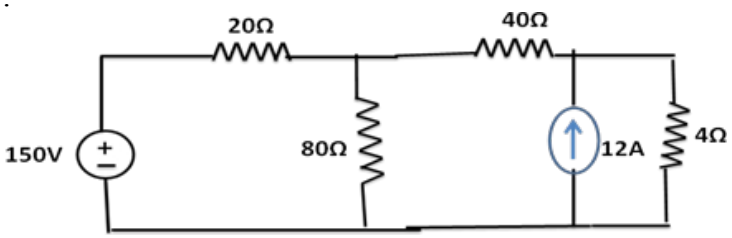
Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 a) Compute the voltage across the 7 Ω resistor, using mesh analysis. 7 Marks

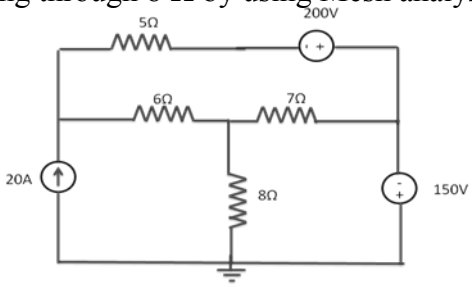


b) Use Nodal analysis to determine the current through 40 Ω resistor in the circuit given below. 7 Marks

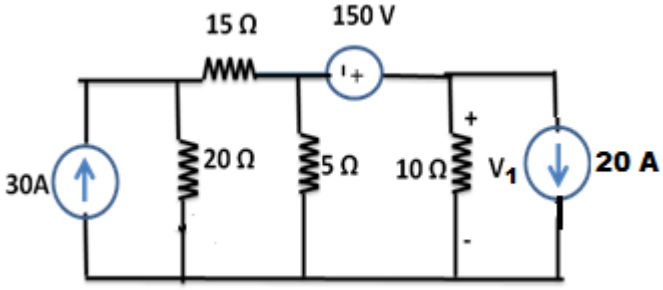


(OR)

2 a) Find the current flowing through 8 Ω by using Mesh analysis. 7 Marks



b) Compute the voltage across 10 Ω resistor V_1, using nodal analysis. 7 Marks



UNIT-II

3 A 64 mH inductor with a 700 Ω winding resistance is connected in series with a 3.3 kΩ resistor. A 10 V RMS, 5 kHz supply is applied to the circuit. Calculate the RMS value of circuit current and voltage across resistor and inductor. 14 Marks

(OR)

4	a)	A series RC circuit with R = 120 Ωand C = 3.3 μF is connected to a 12 V RMS, 1 kHz supply. Determine the circuit current, the resistor voltage, the capacitor voltage and the phase angle of the current with respect to the supply voltage. Represent the phasor diagram and impedance triangle for the circuit.	7 Marks
	b)	A coil have inductance 32 mH and resistance of 600 Ω is connected in series with 2.4 kΩ resistor. The series combination circuit was excited by 30 V RMS, 1 kHz supply. Compute the current delivered by source and voltage across resistor in coil. Also compute the power drawn from source.	7 Marks

UNIT-III

5	a)	Build a diagram of DC Machine and label the component parts. State the functions of each part.	7 Marks
	b)	The armature of 6 – pole DC generator has a wave winding containing 664 conductors. Compute the generator EMF when flux per pole is 0.06 webers and the speed is 250 rpm. At what speed must be run to generate EMF of 250 V, if the flux per pole is reduced to 0.058 webers.	7 Marks
		(OR)	
6	a)	Explain the construction and working principle of DC Generator.	7 Marks
	b)	An 8 pole DC generator has flux of 40 mWb per pole and winding is connected in lap winding with 960 conductors. Calculate the generated EMF on open circuit when it runs at 400 rpm. If the armature is wave wound at what speed must the machine be driven to generate the same voltage.	7 Marks

UNIT-IV

7	a)	What are the different types of temperature measurements? Explain.	8 Marks
	b)	State the need for transducer, explain.	6 Marks
		(OR)	
8	a)	State the difference between active and passive transducers.	7 Marks
	b)	How does thermo couple works, state the applications of thermo couples in industry.	7 Marks

UNIT-V

9	a)	Explain the operation of single phase half wave diode rectifier with neat waveforms.	6 Marks
	b)	Single phase half-wave diode rectifier is connected to 220 V, 50 Hz supply to feed 5 Ω pure resistors. Draw load voltage and current and diode voltage drop waveforms along with supply voltage. Then, calculate i) The rectification efficiency. ii) Ripple factor of load voltage and iii) Peak Inverse Voltage (PIV) of the diode.	8 Marks
		(OR)	
10	a)	Define current gains α and β. How are they related?	6 Marks
	b)	Draw I - V characteristics (Collector characteristics) for a transistor and discuss the salient features.	8 Marks

I B.Tech II Semester (SVEC-16) Supplementary Examinations, December 2022

ELECTRONIC DEVICES AND CIRCUITS

[Electrical and Electronics Engineering, Electronics and Communication Engineering and Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 a) Draw and explain the V-I characteristics of Zener diode. 7 Marks

b) A voltage of 500 cos ωt is applied to half wave rectifier with load resistance of 5kΩ. Define and derive the values of maximum DC voltage component, R.M.S. current, Ripple Factor, Transformer Utilization Factor, PIV and Rectifier Efficiency of the rectifier. 7 Marks

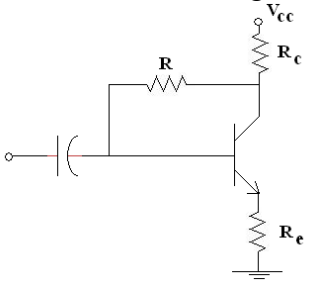
(OR)

2 a) Distinguish between avalanche and Zener mechanisms. 7 Marks

b) Derive an expression for transition capacitance. 7 Marks

UNIT-II

3 a) In the circuit shown, V_{cc} = 24V, R_c = 10K and R_e = 270Ω. If a silicon transistor is used with β = 45 and if V_{CE} = 5V, find R. Neglect reverse saturation current. 6 Marks



b) Explain the output characteristics of a transistor in CB configuration. 8 Marks

(OR)

4 a) Explain CE configuration with the help of input and output characteristics. 8 Marks

b) Explain Collector –to-base bias method and derive the expression for the stability factor. 6 Marks

UNIT-III

5 a) Derive the expressions for voltage gain, current gain, input impedance output impedance of CE amplifier, using exact and approximate model. 9 Marks

b) Draw the h-parameter model of CE configuration. 5 Marks

(OR)

6 a) Why hybrid parameters are called so? Draw the hybrid model of transistor indicating all the parameters. 5 Marks

b) A CE amplifier is driven by a voltage source of internal resistance R_s=1000 Ω and the load impedance of R_L = 1200Ω. The h–parameters are h_{ie} = 1.2 kΩ, h_{re}=2 × 10^{-4}, h_{fe} = 60 and h_{oe} = 25 μA/v. Compute the current gain, input resistance, voltage gain and output resistance using exact analysis. 9 Marks

UNIT-IV

7	a)	Explain how an FET is used as a voltage variable resistor.	6 Marks
	b)	Explain the operation of MOSFET in enhancement mode.	8 Marks
		(OR)	
8	a)	Why we call FET as A voltage controlled device?	6 Marks
	b)	What are the values of I_D and g_m for V_{GS} = -1.5V if I_{DSS} and V_P are given as 8.4mA and -3V respectively.	8 Marks

UNIT-V

9	Draw the electrical equivalent circuit of UJT and explain its operation with emitter characteristics.	14 Marks
	(OR)	
10	Explain the characteristics of tunnel diode with the help of energy band diagram.	14 Marks

CODE No.: 16BT20441 SVEC-16

Roll No. | | | | | | | | | | |

BASIC ELECTRONIC DEVICES AND CIRCUITS

[Computer Science and Engineering, Information Technology and Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 Derive the following terms for Half wave rectifier 14 Marks
i) DC Ammeter ii) DC Voltmeter
iii) Wattmeter iv) Regulation.

(OR)

2 a) Derive the Ripple factor for Half wave rectifier and full wave rectifier. 8 Marks
b) Derive the L Section filter in full wave rectifier. 6 Marks

UNIT-II

3 a) Draw a self bias circuit. Explain why such a circuit is an improvement on the fixed bias circuit as for as stability concerned. 10 Marks
b) A BJT has base current of 200 uA and emitter current of 20 mA Determine the collector current and beta. 4 Marks

(OR)

4 a) Why is the need of stabilizing an operating point? How is it done? 10 Marks
b) A BJT has base current of 400 uA and emitter current of 50 mA Determine the collector current and beta. 4 Marks

UNIT-III

5 a) Draw the small signal model of JFET. 10 Marks
b) A FET amplifier in the common source configuration uses a load resistance of 250 K ohms and the transconductance is 0.5 mA/V. What is the voltage gain of the amplifier given drain resistance is 200 K Ohms. 4 Marks

(OR)

6 a) Explain the enhancement MOSFET with neat sketches. 10 Marks
b) What are the two types of MOSFET How do they differ in their structure? 4 Marks

UNIT-IV

7 a) Draw the circuit of Colpitts oscillator and explain its working. Derive the expression for frequency of oscillation. 10 Marks
b) In colpitts oscillator C_1=0.16 uF, L =15.8 mH and its frequency of oscillation is 10 K Hz, Calculate the value of capacitor C_2. 4 Marks

(OR)

8 a) Draw the circuit of RC phase shift oscillator and explain its working. Derive the expression for frequency of oscillation. 10 Marks
b) In a RC phase shift oscillator, if its frequency of operation is 955 Hz and R1=R2= R3 =680 K ohms, find the value of capacitor. 4 Marks

UNIT-V

9 a) Explain the difference between UJT and a Conventional BJT. 7 Marks
b) Explain the VI characteristics of UJT. 7 Marks

(OR)

10 Explain the principle of operation and characteristics of Varactor diode. 14 Marks

FOUNDATIONS OF DATA STRUCTURES

[Electrical and Electronics Engineering, Electronics and Communication Engineering and Electronics and Instrumentation Engineering]

Max. Marks: 70

Time: 3 hours

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1	a)	Illustrate a non recursive, in-place version of the quick-sort algorithm. The algorithm should still be based on the same divide-and-conquer approach, but use an explicit stack to process sub problems.	7 Marks
	b)	What is divide and conquer strategy? State three steps of Merge sort.	7 Marks
		(OR)	
2		Explain the divide and conquer methodology. Suggest a pseudo code for merge sort and analyze its complexities. Trace algorithm on the data <8, 4, 1, 6, 7, 2, 3, 9>.	14 Marks

UNIT-II

3	a)	Find infix and postfix expressions for the following prefix expression and explain the steps in detail. *-AB+*CD/EF.	7 Marks
	b)	Explain the implementation of circular queue using array. How an "empty queue" is distinguished from a "full queue"? Write necessary functions to perform all valid operations on circular queue.	7 Marks
		(OR)	
4	a)	Enumerate and describe briefly the various applications of Stacks and Queues.	5 Marks
	b)	Explain the terms infix expression, prefix expression, and postfix expression. Convert the following infix expression to their postfix equivalents: 14 / 7 * 3 - 4 + 9 / 2.	5 Marks

UNIT-III

5	a)	Write routines to implement the operations INSERT, DELETE, and SEARCH for circular linked lists.	7 Marks
	b)	Write the insert ( ) and find ( ) routines for Single Linked List.	7 Marks
		(OR)	
6	a)	Write the delete () routines for Single Linked List and Circular Linked List.	7 Marks
	b)	Form a linked list to store student's details. Give the advantages and uses of a circular linked list.	7 Marks

UNIT-IV

7		Show the result of inserting <3, 1, 4, 6, 9, 2, 5, 7> into an initially empty binary search tree. Show the result of deleting the root. Explain the different tree traversals for the resultant tree by giving algorithms and running times.	14 Marks
		(OR)	
8	a)	Insert into an empty AVL tree with keys 30, 40, 24, 58, 48, 26, 11, 13. Draw the tree after each insertion.	7 Marks
	b)	Insert the keys 90, 20, 70, 11, 16, 15, 1 into the empty Binary Search Tree in this order. Draw the tree once after the keys 11 is inserted, then again after 1 is inserted.	7 Marks

UNIT-V

9	a)	Given an adjacency-list representation of a directed graph, how long does it take to compute the out-degree of every vertex? How long does it take to compute the in-degrees?	7 Marks
	b)	What is the significance of Hashing over linear and binary search?	7 Marks

(OR)

10	a)	Give adjacency list and adjacency matrix representations for a full binary search tree formed by inserting the elements <3, 1, 5, 2, 0, 4, 6>. Can a tree can be Graph?	7 Marks
	b)	Write a program to find the topological order of a digraph G represented as adjacency lists. If a stack is used instead of a queue, does a different ordering result? Illustrate with an example.	7 Marks

OBJECT ORIENTED PROGRAMMING THROUGH C++

[Computer Science and Engineering, Information Technology and Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Discuss the idea of message passing with objects.	14 Marks
		(OR)	
2		Explain the features of reference variables.	14 Marks

UNIT-II

3	a)	What is an inline function? What are the advantages of having a function inline?	8 Marks
	b)	Write a C++ program to find cube of a number using inline function.	6 Marks
		(OR)	
4		Write a function using reference variables as arguments to swap the values of a pair of integers.	14 Marks

UNIT-III

5		Define sorting. Implement Bubble sort algorithm using arrays.	14 Marks
		(OR)	
6	a)	Define Pointer. How is the Reference operator helpful in a program?	7 Marks
	b)	Explain the purpose of Dereference operator with a suitable example?	7 Marks

UNIT-IV

7	a)	What is function overriding? Explain with an example?	5 Marks
	b)	What is operator overloading? Write a C++ program to compare two values representing distance in feet and inches, using overloading operator >.	9 Marks
		(OR)	
8		Write a C++ program to add and multiply two complex numbers. Initialize the variables through writing constructor. Implement add and multiply operations using overloaded + and * operators.	14 Marks

UNIT-V

9		What are the steps involved in using a file in a C++ program.	14 Marks
		(OR)	
10		Explain about container classes in C++, with a suitable example.	14 Marks

I B.Tech II Semester (SVEC-16) Supplementary Examinations, December-2022

DIGITAL LOGIC DESIGN

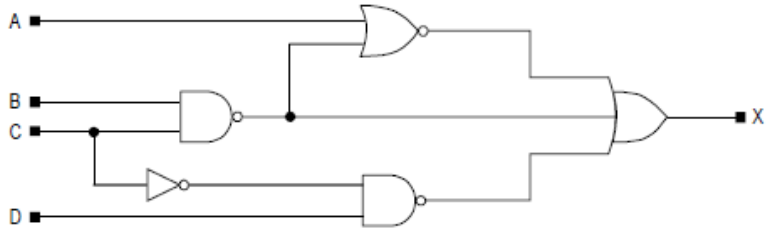
[Computer Science and Engineering, Information Technology and Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks.

UNIT-I

1 a) Write the logic expression and simplify it as much as possible and draw a logic diagram that implements the simplified expression. 8 Marks



b) Represent the given decimal number 8620 in BCD code, Excess-3 code and as a binary number. 6 Marks

(OR)

2 a) Verify that the following operations are commutative and associative 6 Marks
i) AND ii) EX-OR

b) Most calculators use BCD to store the decimal values as they are entered into the keyboard and to drive the digit displays. 8 Marks
i) If a calculator is designed to handle 8 – digit decimal numbers, how many bits does this require?
ii) What bits are stored when the number 375 is entered into the calculator?

UNIT-II

3 a) Draw a logic diagram using only two-input NAND gates to implement the following expression: 7 Marks
$F = (AB + A'B)(CD' + C'D)$

b) Implement the following Boolean function F together with the don't care conditions d using no more than two NOR gates. Assume that both the normal and complement inputs are available. 7 Marks
$F(A,B,C,D) = \Sigma m(0,1,2,9,11)$
$d(A, B, C, D) = \Sigma(8,10,14,15)$

(OR)

4 a) Realize EX-NOR using minimum number of NOR gates. 7 Marks

b) Draw a NAND logic diagram that implements the complement of the following function: $F(A, B, C, D) = \Sigma(0,1,2,3,4,8,9,12)$. 7 Marks

UNIT-III

5 a) Implement the following function with 8×1 multiplexer 6 Marks
$F(A, B, C, D) = \Sigma m\ (0, 1, 3, 4, 8, 9, 15)$

b) Design a combinational circuit, that multiplies an input decimal digit represented in BCD by 5. The output is to be represented in BCD. Show that the outputs can be obtained from the input lines without using any logic gates. 8 Marks

(OR)

6	a)	A combinational circuit is specified by the following three Boolean functions: $F_1 = \Sigma m(0, 3, 4)$; $F_2 = \Sigma m(1, 2, 7)$; $F_3 = \Pi M(0, 1, 2, 4)$ Implement the circuit with a decoder and external OR gates.	8 Marks
	b)	Draw the circuit of 1×4 demultiplexer using NAND gates.	6 Marks

UNIT-IV

7	a)	Design a mod-8 ripple counter using positive edge triggered JK flip-flops.	7 Marks
	b)	Illustrate the operation of 3 bit Ring counter and plot the output waveforms.	7 Marks
		(OR)	
8	a)	Design a Mod 5 synchronous counter using JK flip-flops.	8 Marks
	b)	The contents of a serial-in/serial-out shift register are DCBA = 0101, where A is the least significant digit of the register. A serial input 10011 is moved into the shift register, from left to right, most significant bit first, by five successive clock pulses. Draw time diagrams showing how the outputs of the four flip-flops vary with time during the period of the five clock pulses.	6 Marks

UNIT-V

9		Design an Excess-3 to BCD code converter using PLA.	14 Marks
		(OR)	
10	a)	Realize the following functions using PROM of size 8×3. $F_1 = \Sigma m(0, 4, 7)$; $F_2 = \Sigma m(1, 3, 6)$; $F_3 = \Sigma m(1, 2, 4, 6)$	8 Marks
	b)	Explain ROM organization.	6 Marks

BIOLOGY FOR ENGINEERS

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		What is a living organism? What are the differences between prokaryotes and eukaryotes?	12 Marks	L1	CO1	PO1
		(OR)				
2.	a)	How living organisms obtain energy from their carbon sources? Classify them.	6 Marks	L2	CO1	PO1
	b)	Explain the cellular basis of life.	6 Marks	L2	CO1	PO1

UNIT-II

3.		What is bio-molecule? Enlist the classification of carbohydrates, proteins and Nucleic acids.	12 Marks	L1	CO1	PO1
		(OR)				
4.	a)	Define Enzyme. Summarize the industrial applications of bacterial enzymes.	8 Marks	L1	CO1	PO5
	b)	What are nucleic acids in biology?	4 Marks	L2	CO1	PO1

UNIT-III

5.		Explain about Mendelian Laws of inheritance. What is genetic code and how is it read?	12 Marks	L2	CO2	PO1
		(OR)				
6.		What are Replication, Transcription and Translation? Explain with diagrams.	12 Marks	L2	CO2	PO1

UNIT-IV

7.		What is the role of Recombinant DNA technology in transgenic microbes and plants? Explain with examples.	12 Marks	L2	CO3	PO6
		(OR)				
8.	a)	What is Biosensor and Biochip? How does it work?	6 Marks	L3	CO3	PO1
	b)	What are the advantages of recombinant vaccines and how they are made?	6 Marks	L4	CO3	PO6

UNIT-V

9.	a)	What is the purpose of a microarray? Give an example of a real world application of microarray analysis?	6 Marks	L1	CO3	PO1
	b)	How do neurons know which neurotransmitter to release? Explain.	6 Marks	L2	CO1	PO1
		(OR)				
10.		How would you describe the human digestive system? Give a detailed diagram.	12 Marks	L1	CO1	PO1

ENGINEERING PHYSICS

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	What are Newton's rings? Describe and explain the formation of Newton's rings. Derive the expression for the wavelength of monochromatic light.	10 Marks	L2	CO1	PO1
	b)	A soap film of refractive index 1.33 and thickness 5000 Å is exposed to white light. What wavelength in the visible region is reflected?	2 Marks	L1	CO1	PO2
		(OR)				
2.	a)	Describe the construction and working of Nicol's prism.	7 Marks	L2	CO1	PO1
	b)	Explain the theory of plane transmission grating.	5 Marks	L2	CO1	PO1
		UNIT-II				
3.		Write Maxwell equations. Discuss the equation of electromagnetic wave in dielectric medium and hence evaluate the velocity of light in free space.	12 Marks	L2	CO2	PO1 PO2
		(OR)				
4.	a)	Define the acceptance angle and numerical aperture. Derive an expression for the numerical aperture of an optical fiber.	9 Marks	L3	CO2	PO2
	b)	Calculate the angle of acceptance of given optical fiber, if the refractive indices of the core and the cladding are 1.563 and 1.498 respectively.	3 Marks	L3	CO2	PO2
		UNIT-III				
5.	a)	Derive an expression for the electron concentration in an intrinsic semiconductor.	9 Marks	L3	CO3	PO1 PO2
	b)	Find the diffusion coefficient of electron in silicon at 300K, if μ_e is 0.19 $m^2/V\text{-}s$.	3 Marks	L1	CO3	PO2
		(OR)				
6.	a)	State and explain the Hall effect. Obtain an expression for the Hall coefficient of a given semiconductor specimen.	9 Marks	L2	CO3	PO1
	b)	The Hall coefficient of a specimen is 3.66×10^{-4} m^3C^{-1}. Its resistivity is 8.93×10^{-3} Ω-m, find carrier density.	3 Marks	L1	CO3	PO2
		UNIT-IV				
7.	a)	Describe the frequency dependence of polarization.	7 Marks	L2	CO4	PO1
	b)	What is piezoelectricity? List its applications.	5 Marks	L1	CO4	PO1
		(OR)				
8.	a)	Summarize the ferromagnetic hysteresis loop.	6 Marks	L2	CO4	PO1
	b)	Distinguish soft and hard magnetic material. Explain their properties.	6 Marks	L4	CO4	PO1
		UNIT-V				
9.	a)	Illustrate the AC and DC Josephson effect.	6 Marks	L2	CO5	PO1
	b)	Describe the BCS theory of Super conductivity.	6 Marks	L2	CO5	PO1
		(OR)				
10.	a)	List out applications of nanomaterial's.	4 Marks	L1	CO5	PO1
	b)	Explain the synthesis of nanomaterial's using PLD method.	8 Marks	L2	CO5	PO1

TRANSFORMATION TECHNIQUES AND LINEAR ALGEBRA

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Express $f(x)$ as a Fourier series in (-2,2) — 6 Marks — L3 — CO1 — PO1

If $f(x) = \begin{cases} 2, & if \ -2 < x < 0 \\ 0, & if \ \ 0 < x < 2 \end{cases}$

b) Establish Fourier sine transform for the function $\frac{e^{-ax}}{x}$. — 6 Marks — L1 — CO1 — PO2

(OR)

2. a) Using Fourier integral, Show that — 4 Marks — L3 — CO1 — PO2

$$e^{-ax} - e^{-bx} = \frac{2(b^2 - a^2)}{\pi} \int_0^\infty \frac{\lambda \sin \lambda x}{(\lambda^2 + a^2)(\lambda^2 + b^2)} d\lambda .$$

b) Show that the Fourier cosine transform of — 8 Marks — L1 — CO1 — PO1

$$f(x) = \begin{cases} x, & for \ 0 < x < 1 \\ 2 - x, & for \ 1 < x < 2 \\ 0, & for \ x > 2 \end{cases} \quad is \ \frac{2}{p^2} \cos p (1 - \cos p).$$

UNIT-II

3. a) Determine $L\left\{\frac{1 - \cos at}{t}\right\}$. — 6 Marks — L3 — CO1 — PO1

b) Find the Laplace transform of $e^{-3t} \int_0^t \frac{\sin t}{t} dt$. — 6 Marks — L1 — CO1 — PO2

(OR)

4. a) Find the Laplace transform of the square wave function defined by — 6 Marks — L1 — CO1 — PO1

$$f(t) = \begin{cases} 1, & if \ 0 < t < a \\ 1, & if \ \frac{a}{2} < t < a \end{cases} \text{ with period } a .$$

b) Using Laplace transform, Show that $\int_0^\infty t^2 e^{-4t} \sin 2t \, dt = \frac{11}{500}$. — 6 Marks — L3 — CO1 — PO2

UNIT-III

5.	a)	Find the inverse Laplace transform of $\log\left(\frac{1+s}{s^2}\right)$.	6 Marks	L1	CO1	PO1
	b)	Apply convolution theorem to evaluate $L^{-1}\left[\frac{s}{(s^2+1)^2}\right]$.	6 Marks	L3	CO1	PO2
		(OR)				
6.		Using Laplace transform, solve the differential equation $(D^2 + n^2)\,y = a \sin(nt + 2)$, *given that* $y(0) = 0,\ y'(0) = 0$.	12 Marks	L3	CO1	PO2

UNIT-IV

7.		Determine the Eigen values and corresponding Eigen vectors of the matrix $A = \begin{bmatrix} 2 & 2 & 0 \\ 2 & 5 & 0 \\ 0 & 0 & 3 \end{bmatrix}$.	12 Marks	L3	CO2	PO1
		(OR)				
8.	a)	Find the rank of matrix $A = \begin{bmatrix} 8 & 1 & 3 & 6 \\ 0 & 3 & 2 & 2 \\ -8 & -1 & -3 & 4 \end{bmatrix}$ by reducing it to echelon form.	6 Marks	L1	CO2	PO1
	b)	Find the orthogonal transformation which transforms the quadratic form $2x^2 + 2y^2 + 2z^2 - 2xy - 2yz - 2zx$ to the canonical form**.**	6 Marks	L1	CO2	PO2

UNIT-V

9.	a)	Examine whether the set of vectors $\begin{bmatrix} 1 \\ 1 \\ 0 \end{bmatrix}, \begin{bmatrix} 0 \\ 1 \\ 1 \end{bmatrix}$ *and* $\begin{bmatrix} 1 \\ 0 \\ 1 \end{bmatrix}$ is linearly independent or not.	6 Marks	L4	CO2	PO2
	b)	Show that the transformation $T: R^2 \to R^3$ defined by $T\begin{bmatrix} x \\ y \end{bmatrix} = \begin{bmatrix} x \\ 2x - y \\ 3x + 4y \end{bmatrix}$ is linear.	6 Marks	L2	CO2	PO1
		(OR)				
10.	a)	Show that the vectors $\begin{bmatrix} 1 \\ 2 \\ 3 \end{bmatrix}, \begin{bmatrix} -1 \\ 0 \\ 1 \end{bmatrix}$ *and* $\begin{bmatrix} 4 \\ 9 \\ 7 \end{bmatrix}$ form a basis of $R^3(R)$.	6 Marks	L2	CO2	PO1
	b)	Show that the linear transformation $T: R^2 \to P_1$ defined by $T\begin{bmatrix} a \\ b \end{bmatrix} = a + (a + b)x$ is one-to-one and onto, where P_1 is a vector space of all linear polynomial over real field.	6 Marks	L2	CO2	PO2

PROGRAMMING FOR PROBLEM SOLVING

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe the efficiency of algorithms with suitable examples.	6 Marks	L2	CO1	PO1
	b)	List and explain about the data types in Python.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Write a short notes on : i) Implicit line joining ii) Explicit line joining	6 Marks	L1	CO1	PO1
	b)	Define variable. Explain identifier rules.	6 Marks	L1	CO1	PO1

UNIT-II

3.	a)	Write a python script to find whether the given number is perfect number or deficient number or abundant number.	6 Marks	L3	CO1	PO2
	b)	Display the following pattern using Python script. 11111 1111 111 11 1	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Write a python script to print list of prime numbers within a range.	6 Marks	L3	CO1	PO2
	b)	Specify the usage of pass, break and continue statements.	6 Marks	L2	CO1	PO1

UNIT-III

5.	a)	Compose a Python script to perform matrix multiplication.	6 Marks	L3	CO1	PO2
	b)	Write a Python script to count the number of vowels, consonants and so on Expected Output: Enter a line of string: adfslkj34 34lkj34334lk Vowels: 1 Consonants: 11 Digits: 9 White spaces: 1	6 Marks	L3	CO1	PO3
		(OR)				
6.	a)	Write a python script to search a key element in the given list of elements.	6 Marks	L3	CO1	PO2
	b)	Illustrate any four set operation functions with an example program.	6 Marks	L2	CO1	PO1

UNIT-IV

7.	a)	Discuss in detail about return statement in python with an example.	6 Marks	L2	CO2	PO1
	b)	Develop a python script to copy data from one file to another file.	6 Marks	L3	CO2	PO2
		(OR)				
8.	a)	Differentiate global keyword and globals() function with an example.	6 Marks	L2	CO2	PO1
	b)	List and explain any four built-in functions in numpy.	6 Marks	L1	CO2	PO1

UNIT-V

9.	a)	Discuss in detail about how to read data from CSV files.	6 Marks	L3	CO2	PO2
	b)	List the steps to create data frame from dictionary with an example.	6 Marks	L3	CO2	PO2
		(OR)				
10.	a)	Consider data frame contains student marks information. Write a Python script to display student details whose marks <60.	6 Marks	L3	CO2	PO3
	b)	Write a Python script to print information and frequency counts of a data set.	6 Marks	L3	CO2	PO2

CIVIL ENGINEERING MATERIALS AND CONCRETE TECHNOLOGY

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Briefly explain the geological classification of rocks.	6 Marks	L2	CO1	PO1
	b)	Mention the factors to be considered while deciding a quarry site.	6 Marks	L1	CO1	PO1 PO8
		(OR)				
2.	a)	Illustrate the various methods used in manufacturing of bricks.	6 Marks	L2	CO1	PO1
	b)	Discuss briefly about the types of tiles.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	List and explain the various methods of seasoning of timber.	6 Marks	L2	CO1	PO1 PO2 PO5
	b)	Discuss the various materials used in low cost housing.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
4.	a)	Enumerate the precautionary measures to reduce various defects in timber.	6 Marks	L4	CO1	PO1 PO2
	b)	Write advantages and disadvantages, if waste is used as alternative building material.	6 Marks	L2	CO1	PO1 PO2 PO4
		UNIT-III				
5.	a)	Mention different types of tests on cement. Explain how to conduct normal consistency test on cement.	6 Marks	L3	CO1	PO1 PO2
	b)	List out various types chemical admixtures. How these admixtures are supporting to the environment.	6 Marks	L4	CO1	PO1
		(OR)				
6.	a)	Briefly describe the following tests on aggregates: i) Crushing test ii) Impact test	6 Marks	L4	CO1	PO1
	b)	Write about plasticizers and super plasticizers.	6 Marks	L3	CO1	PO1
		UNIT-IV				
7.	a)	Explain how the measurement of workability of fresh concrete is carried out in laboratory.	6 Marks	L4	CO1	PO1 PO2
	b)	Distinguish Segregation and Bleeding in concrete in detail.	6 Marks	L2	CO1	PO1
		(OR)				
8.	a)	Why compaction is required to concrete? Explain compaction methods by vibration.	6 Marks	L4	CO1	PO1 PO2
	b)	Explain how you estimate the quality of concrete by using ultrasonic pulse velocity test.	6 Marks	L4	CO1	PO1 PO2

UNIT-V

9.	a)	Explain the various factors affecting creep of concrete.	6 Marks	L2	CO1	PO1 PO2
	b)	Explain the determination of the modulus of elasticity of concrete experimentally.	6 Marks	L4	CO1	PO1 PO2 PO4
		(OR)				
10.		Design a M30 concrete mix using IS method of mix design for the following data: i) Maximum size of aggregate: 20 mm (Angular) ii) Workability: 125 mm slump. iii) Quality control: good iv) Type of exposure - Mild (R.C.C) v) Specific Gravity: a) Cement:3.15 b) Sand:2.63 c) CA: 2.66 vi) Water absorption: a) CA - 0.5% b) FA - 1.0% vii) Free surface moisture: a)CA - Nil b) FA - 2.2% viii) Sand confirms to Zone III grading Assume any other data required suitably.	12 Marks	L6	CO2	PO1 PO2 PO3 PO8

ENGINEERING MECHANICS

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Two forces of magnitude P and Q act at a point. Their resultant is inclined to first, at an angle α and has magnitude R. If the magnitude of the first force is increased by R, determine the angle made by the new resultant with the first force.	6 Marks	L4	CO1	PO1 PO2
	b)	Two forces of magnitude (P+Q) and (P-Q) acting at a point include an angle 2θ. Show that, if their resultant makes an angle α with the bisector of the angle between them, then P tan α = Q tan θ.	6 Marks	L4	CO1	PO1 PO2

(OR)

2.	a)	Define: i) Moment of a force and ii) Couple.	6 Marks	L4	CO1	PO1 PO2
	b)	Determine and locate the resultant R of the forces and one couple acting on the beam as shown in Fig.1.	6 Marks	L4	CO1	PO1 PO2

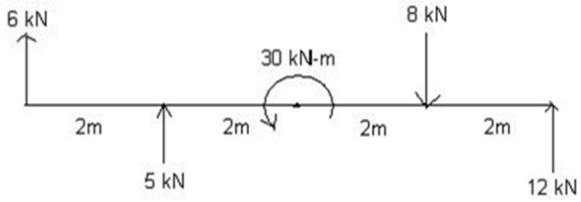

Fig.1

UNIT-II

3.	a)	What is friction? Explain how friction is both desirable and undesirable in engineering applications also state the laws of static and dynamic friction.	6 Marks	L4	CO1	PO1 PO2
	b)	A body of weight 50N is placed on a rough horizontal plane. To just move the body on the horizontal plane, a push of 15N inclined at 30° to the horizontal plane is required. Find the coefficient of friction.	6 Marks	L4	CO1	PO1 PO2

(OR)

4.	a)	What is friction? Explain how friction is both desirable and undesirable in engineering applications also state the laws of static and dynamic friction.	6 Marks	L4	CO1	PO1 PO2

	b)	A body of weight 50N is placed on a rough horizontal plane. To just move the body on the horizontal plane, a push of 15N inclined at 30° to the horizontal plane is required. Find the coefficient of friction.	6 Marks	L4	CO1	PO1 PO2

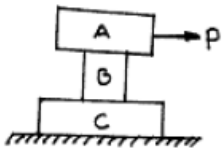

Fig.2

UNIT-III

5.		Find the moment of inertia of the plane area shown in Fig.3. about X and Y axes through its centroid.	12 Marks	L4	CO1	PO1 PO2

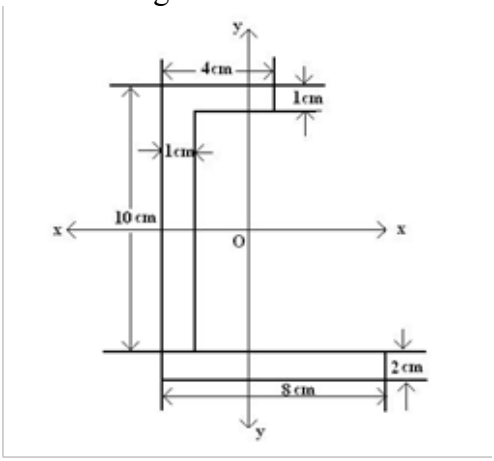

Fig.3

(OR)

6.	a)	State and prove theorems of Pappus–Guldinus.	6 Marks	L4	CO1	PO1 PO2
	b)	Find the centroid of the inverted T section shown in below Fig.4.	6 Marks	L4	CO1	PO1 PO2

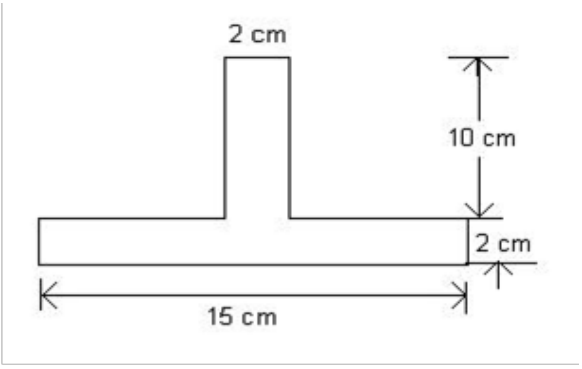

Fig.4

UNIT-IV

7.		A compound bar consist of a central steel strip 25 mm wide and 6.4 mm thick placed between two strips of brass each 25 mm wide and 't' mm thick. The strips are firmly fixed together to form a compound bar of rectangular section 20 mm wide and (2t + 6.4) mm thick. Determine i) The thickness of the brass strips which will make the apparent modulus of elasticity of compound bar $1.57x10^5$ N/mm^2 and ii) the maximum axial pull the bar can then carry if the stress is not to exceed 157 N/mm^2, in either the brass or steel. Take the values of E for steel and brass as $2.07x10^5$ N/mm^2 and $1.14x10^5$ N/mm^2 respectively.	12 Marks	L4	CO1	PO1 PO2
		(OR)				
8.	a)	Derive the expression for the extension of a bar due to its self-weight.	6 Marks	L4	CO1	PO1 PO2
	b)	A rod of steel is 20 m long at a temperature of 20°C. Find the free expansion of the rod when the temperature rises to 65°C. Find the temperature stress produced i) When the expansion of the rod is prevented ii) When the rod is permitted to expand by 5.8 mm. Take $\alpha = 12x10^{-6}$ per°C and E=$2x10^5$ N/mm^2	6 Marks	L4	CO1	PO1 PO2

UNIT-V

9.	a)	A cylindrical water tank of height 25 m, inside diameter 2.2 m, having vertical axis is open at the top. The tank is made up of steel having yield stress of 210 MN/m^2. Determine the thickness of shell used when the tank is full of water.	6 Marks	L6	CO2	PO1 PO2 PO3
	b)	A cylindrical air drum is 2.25 m in diameter with plates 1.2 cm thick. The efficiencies of the longitudinal and circumferential joints are respectively 75 % and 40 %. If the tensile stress in the plating is to be limited to 120 MN/m^2, find the maximum safe air pressure.	6 Marks	L4	CO1	PO1 PO2
		(OR)				
10.		Mention the assumptions in Lame's theory. Derive Lame's equation for radial and circumferential stress of thick cylinder.	12 Marks	L4	CO1	PO1 PO2

ELECTRIC CIRCUITS

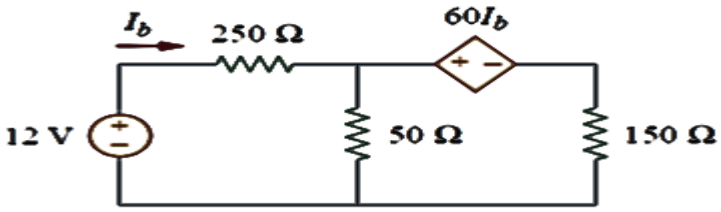
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Determine I_b of the circuit shown in figure using mesh analysis. 6 Marks L4 CO1 PO2



b) Obtain I_0 of the circuit shown in figure. 6 Marks L4 CO1 PO2

(OR)

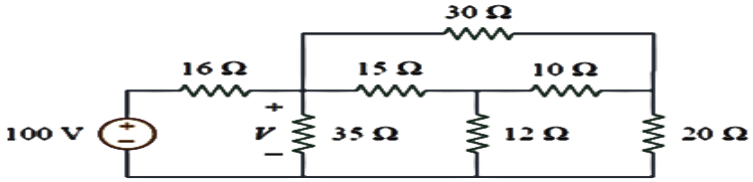
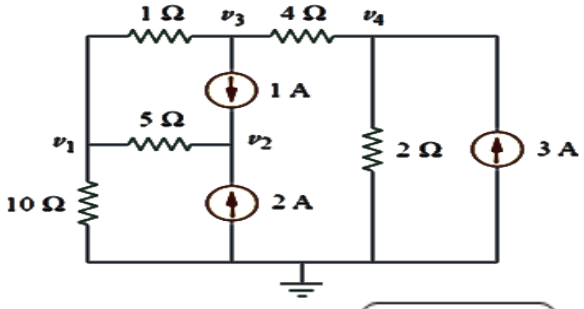
2. a) Find the V of the circuit shown in figure. 6 Marks L3 CO1 PO2



b) Determine the nodal voltages of the circuit shown in figure. 6 Marks L3 CO1 PO2



UNIT-II

3. Find total impedance and total power supplied by the source of the circuit shown in figure. 12 Marks L4 CO1 PO2

(OR)

4.	a)	Obtain the line currents in the three-phase circuit shown in figure.	6 Marks	L3	CO1	PO2

	b)	In two wattmeter method the reactive power input is 15 kVAR and P.f. is 0.8 lag. Calculate the total input power of three phase balanced load and each wattmeter reading.	6 Marks	L3	CO1	PO2

UNIT-III

5.	a)	Use Norton's theorem to find V_0 in the circuit shown in figure.	6 Marks	L3	CO1	PO5

	b)	State and explain Maximum power transfer theorem and derive the necessary conditions for maximum power transfer for AC excitations.	6 Marks	L2	CO1	PO1

(OR)

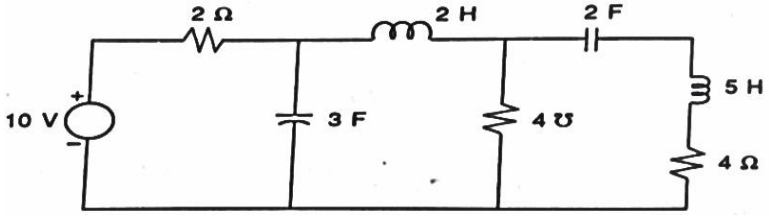
6.	a)	Find current *i* of the circuit shown in figure using superposition theorem.	6 Marks	L3	CO1	PO5

	b)	Construct the dual circuit of the network shown in figure. Mention the procedural steps.	6 Marks	L3	CO1	PO5



UNIT-IV

7.	a)	Two coils connected in series-aiding fashion have a total inductance of 250 mH. When connected in a series-opposing configuration, the coils have a total inductance of 150 mH. If the inductance of one coil is three times the other, find self inductances and mutual inductance. What is the coupling coefficient?	6 Marks	L2	CO1	PO1

	b)	Determine the mesh currents of the circuit shown in figure.	6 Marks	L4	CO1	PO2

(OR)

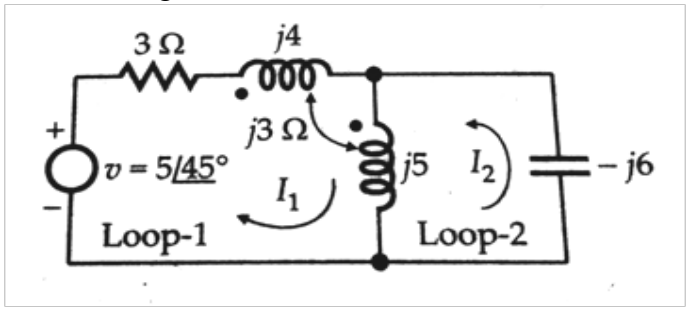
8.	a)	Obtain v_0 of the circuit shown in figure.	6 Marks	L4	CO1	PO2

	b)	Find the voltage drop across the capacitor and resistor in the circuit shown in figure.	6 Marks	L4	CO1	PO2



UNIT-V

9.	a)	Define characteristic impedance and derive the characteristic impedance for a *T* and π networks. Also explain the nature of characteristic impedance in pass band and stop bands.	6 Marks	L2	CO1	PO1
	b)	Design a constant- *k* high pass filter to have a cut-off frequency of 2 kHz and a design impedance of 100 Ohms.	6 Marks	L4	CO2	PO3

(OR)

10	a)	Derive the expression for design impedance of a constant-*k* filters	6 Marks	L3	CO1	PO1
.	b)	Design a constant-*k* low pass filter having cut off frequency of 2.5 kHz and design resistance of R_0= 700 Ohms. Also find the frequency at which the filter produces an attenuation of 19.1 dB.	6 Marks	L4	CO2	PO3

NETWORK ANALYSIS

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	State Kirchhoff's voltage and current laws.	4 Marks	L1	CO1	PO1
	b)	In the circuit shown in figure, write three node equations for nodes A, B, and C, with node D as the reference, and find the node voltages.	8 Marks	L4	CO1	PO2

(OR)

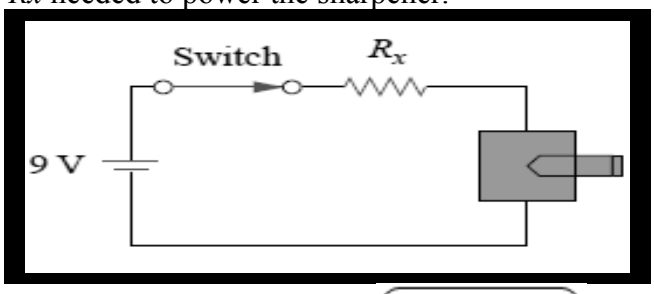
2.	a)	Solve for V_1 and V_2 using nodal method. Let V = 100V.	6 Marks	L4	CO1	PO2

	b)	An electric pencil sharpener rated 240 mW, 6 V is connected to a 9-V battery as shown in figure, design the series dropping resistor *Rx* needed to power the sharpener.	6 Marks	L3	CO2	PO3



UNIT-II

3.	a)	Explain the concept of active, reactive and apparent power and draw the power triangle.	4 Marks	L1	CO1	PO1
	b)	In a TV transmitter, a series circuit has an impedance of 3 k *Ohms* and a total current of 50 mA. If the voltage across the resistor is 80 V, what is the power factor of the circuit?	8 Marks	L3	CO2	PO6

(OR)

4.	a)	Bring out the differences between series and parallel resonance?	4 Marks	L2	CO1	PO1
	b)	A series RLC circuit has R=20 ohm, L=0.005H and C = 0.2 x 10^{-6} F. It is fed from a 100V variable frequency source. Find i) frequency at which current is maximum ii) impedance at this frequency and iii) voltage across inductance at this frequency.	8 Marks	L4	CO1	PO2

UNIT-III

5.	a)	State and explain the Norton's theorem.	4 Marks	L1	CO1	PO1
	b)	In the network shown in figure, find the value of Z_L so that the power transfer from the source is maximum. Also find P_{max}.	8 Marks	L4	CO1	PO2

(OR)

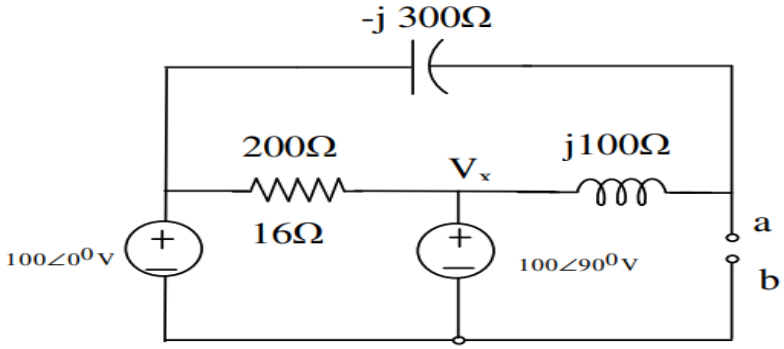
6.	a)	State and explain Maximum power transfer theorem and derive the necessary conditions for maximum power transfer for AC excitations.	6 Marks	L2	CO1	PO2
	b)	Find the Thevenin equivalent circuit for the circuit shown below Figure.	6 Marks	L3	CO1	PO5



UNIT-IV

7.	a)	Explain the steady state and transient behavior of an inductor.	4 Marks	L1	CO1	PO1
	b)	The switch in the circuit shown in figure has been closed for a long time. The switch opens at t = 0, find $v_0(t)$ and $i_0(t)$ for t>0.	8 Marks	L4	CO2	PO2

(OR)

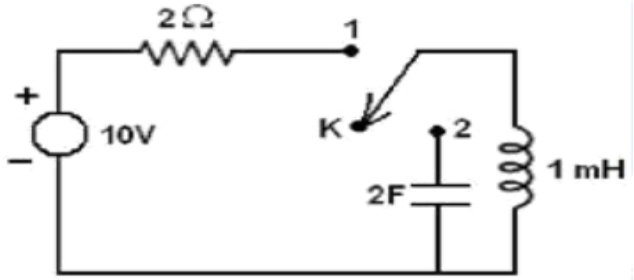
8.	a)	Derive the transient response of series R-L-C circuit, with DC excitation using Laplace transform obtain the response for an under damped case.	4 Marks	L3	CO1	PO5
	b)	For the circuit given in figure steady state conditions are reached for the switch K in position '1'. At t = 0, the switch is changed to position 2. Use the time domain method to determine the current through the inductor for all t>0.	8 Marks	L4	CO1	PO2



UNIT-V

9.	a)	Y-parameters for a two port network are given as Y_{11}=0.75, Y_{12}=Y_{21}=-0.25, Y_{22}=0.8. Determine the hybrid parameters.	6 Marks	L2	CO1	PO2
	b)	Find the y- Parameters for the circuit shown in the figure.	6 Marks	L4	CO2	PO4

(OR)

10.	a)	Y-parameters for a two port network are given as Y_{11}=0.75, Y_{12}=Y_{21}=-0.25, Y_{22}=0.8. Design an equivalent π-network.	6 Marks	L3	CO2	PO3
	b)	Determin the impedance parameters for the network shown in figure. Invistigate whether the netwok is symmetrical and reciprocal.	6 Marks	L4	CO1	PO2

BASIC ENGINEERING MECHANICS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	An Electric light fixture weighing 15N hangs from a point C, by two strings AC and BC. AC is inclined at 600 to the horizontal and BC at 450 to the vertical as shown in fig. Determine the forces in the strings AC and BC. 	12 Marks	L2	CO1	PO1 PO2
	(OR)				
2.	Two cylindrical identical rollers A and B, each of weight W = 500 N are supported by an inclined plane and vertical wall and makes an angle of 300 with the horizontal as shown in Figure. Assuming all surfaces to be smooth, determine the reactions at A, B and C. 	12 Marks	L2	CO1	PO1 PO2

UNIT-II

3.	Determine and locate the resultant R of the forces and one couple acting on the beam as shown in figure. 	12 Marks	L2	CO1	PO1 PO2
	(OR)				
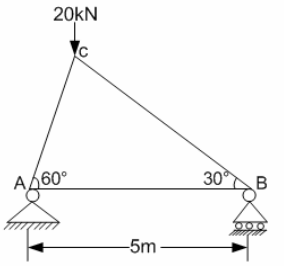
4.	The truss ABC shown in Fig. has a span of 5 m. It is carrying a load of 20 kN at its apex. Find the forces in the members AB, BC and AC, using method of joints. End A is hinged and B is supported on rollers.	12 Marks	L2	CO1	PO1 PO2



UNIT-III

5.		Find the least horizontal force 'P' to start motion of any part of the system of three blocks resting upon one another as shown in the below figure. The weights of the blocks are A = 3000N, B = 1000N, C =2000N. Between A and B μ= 0.3, between B and C, μ = 0.2 and between C and the ground μ = 0.1.	12 Marks	L2	CO1	PO1 PO2

(OR)

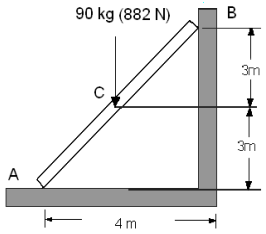
6.		A person of mass 90 kg is standing on a ladder at point C, shown in Fig.4. The ladder rests on a rough horizontal floor at A and against a smooth vertical wall at B. If the ladder is just on the point of slipping find the coefficient of friction between the ladder and the floor. Neglect the weight of the ladder. Also find the reactions at A and B.	12 Marks	L2	CO1	PO1 PO2



UNIT-IV

7.		Find the moment of inertia of the plane area shown in figure 7 about X and Y axes through its centroid.	12 Marks	L3	CO2	PO1 PO2

(OR)

8.	a)	State and prove parallel axis theorem for area moment of inertia.	6 Marks	L2	CO2	PO1
	b)	Find the area moment of inertia of the semicircle about centroidal axes.	6 Marks	L2	CO2	PO1

UNIT-V

9.	a)	An aeroplane has a mass of 25000kg and its engines develop a total thrust of 40KN along the run way. The force of air resistance to motion of aeroplane is given by R=2.25V2where 'V' is m/s and R is in Newton. Determine the length of runway required if the plane takes off and becomes airborne at a speed of 240 km/hr.	6 Marks	L2	CO3	PO1 PO2
	b)	Distinguish between rectilinear motion and curvilinear motion.	6 Marks	L2	CO3	PO1

(OR)

10.	a)	Find amplitude and time period of a particle moving with simple harmonic motion, which has a velocity of 9 m/s and 4 m/s at the distance of 2 m and 3 m respectively from the centre.	6 Marks	L2	CO4	PO1 PO2
	b)	Derive the equation for velocity and acceleration of a particle moving with simple harmonic motion.	6 Marks	L2	CO4	PO1

		UNIT-I				
1.	a)	Calculate the atomic packing factor of BCC and FCC structure.	6 Marks	L3	CO1	PO3
	b)	Explain the types of crystal defects with neat sketches.	6 Marks	L2	CO1	PO2
		(OR)				
2.		Derive the expression for the Gibb's Phase rule and recall the Hume Rothery rule.	12 Marks	L3	CO1	PO4
		UNIT-II				
3.	a)	Write short notes on vacuum and plasma hardening.	6 Marks	L1	CO1	PO2
	b)	Explain the concept of time temperature transformation with a neat sketch.	6 Marks	L2	CO1	PO2 PO7
		(OR)				
4.		Define carburizing and describe the types of carburizing in detail.	12 Marks	L1	CO1	PO1
		UNIT-III				
5.	a)	Classify the types of carbon steels with their specific features and applications.	6 Marks	L2	CO2	PO1
	b)	Write a short note on Malleable and Nodular cast iron.	6 Marks	L1	CO2	PO2
		(OR)				
6.		Recall the designations of steels and mention the types, composition, properties and applications of tool steels.	12 Marks	L1	CO2	PO4
		UNIT-IV				
7.	a)	Interpret the composition, features and applications of Titanium and Cobalt materials.	6 Marks	L2	CO2	PO3
	b)	List the properties and applications of Nickel.	6 Marks	L1	CO2	PO1
		(OR)				
8.		What is magnesium? Explain the types, properties and uses of magnesium alloys in detail.	12 Marks	L1	CO2	PO2
		UNIT-V				
9.	a)	Write a brief note on properties and applications of ceramics.	6 Marks	L1	CO2	PO1
	b)	Discuss on the particle reinforced composites, and fiber reinforced composites.	6 Marks	L2	CO2	PO2 PO7
		(OR)				
10.		Tell about hybrid composites and explain the processing of structural composites with neat diagrams.	12 Marks	L1	CO2	PO2 PO7

DIGITAL LOGIC DESIGN

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Obtain the truth table of the following functions: i) $(xy + z)(y + xz)$ ii) $Y'z + wxy' + wxz' + w'x'z$	6 Marks	L2	CO1	PO1
	b)	Perform the Subtraction on the following binary numbers using 2's complement. i) 11001 - 10111 ii) 11101 - 01100	6 Marks	L3	CO1	PO1
		(OR)				
2.	a)	Convert the Decimal Number $(2680)_{10}$ in to the following bases. i) Hexa-decimal ii) Octal iii) Binary	6 Marks	L3	CO1	PO1
	b)	Express the following numbers into decimal $(10110.0101)_2$, $(16.5)_{16}$ and $(26.24)_8$	6 Marks	L3	CO1	PO1

UNIT-II

3.	a)	Express the Boolean function $F = xy + x'z$ in a product-of-max terms form.	6 Marks	L4	CO1	PO2
	b)	Draw a logic diagram using only two-input NOR gates to implement the following function. $F(A, B, C, D) = (A \oplus B)' (C \oplus D)$	6 Marks	L4	CO1	PO3
		(OR)				
4.	a)	Simply the following Boolean Expression using three-variable k-maps. $xy + x'y'z' + x'yz'$	6 Marks	L4	CO1	PO2
	b)	Simplify the following Boolean function F, together with the don't-care conditions d, and then express the simplified function in sum-of-minterms form. $F(x, y, z) = \Sigma(0,1, 4, 5, 6)$ $d(x, y, z) = \Sigma(2, 3, 7)$	6 Marks	L4	CO1	PO2

UNIT-III

5.	a)	Implement the following Boolean function with a 16 X 1 multiplexer. $F(A, B, C, D) = \Sigma m(0, 3, 5, 6, 8, 9, 14, 15)$	6 Marks	L4	CO2	PO5
	b)	Design a 4-bit priority encoder.	6 Marks	L4	CO2	PO3
		(OR)				
6.		Design a combinational circuit with three inputs and one output. The output is 1 when the binary value of the inputs is less than 3. The output is 0 otherwise.	12 Marks	L4	CO2	PO4

UNIT-IV

7.	a)	What is a shift register? Explain about the following modes of operations in a four bit shift register: i) shift right ii) shift left iii) bidirectional	6 Marks	L2	CO2	PO1
	b)	Design a clocked D flip-flop with AND and NOR gates. Draw the logic diagram and explain.	6 Marks	L4	CO2	PO4
		(OR)				
8.	a)	What is the difference between a Ripple Counter and a Synchronous Counter? Explain.	6 Marks	L4	CO2	PO2
	b)	Explain about analysis of clocked sequential circuits in detail.	6 Marks	L2	CO2	PO1

UNIT-V

9.	a)	Compare the features of PROM, PLA and PAL.	6 Marks	L4	CO2	PO2
	b)	Draw logic diagram and explain the Internal logic of a 32 X 8 ROM.	6 Marks	L2	CO2	PO1
		(OR)				
10.		Consider the following Boolean functions, given in sum-of-minterms form: $w(A, B, C, D) = \Sigma(2, 12, 13)$ $x(A, B, C, D)=\Sigma(7,8,9, 10, 11, 12, 13, 14, 15)$ $y(A, B, C, D)=\Sigma(0,2,3,4,5, 6, 7, 8, 10, 11, 15)$ $z(A, B, C, D) = \Sigma(1, 2, 8, 12, 13)$ Design a combinational circuit to implement the Boolean functions using a PAL.	12 Marks	L4	CO2	PO4

All questions carry equal marks

		UNIT-I				
1.	a)	Explain the steps involved in creating and executing a java program.	6 Marks	L2	CO1	PO2
	b)	Write about Naming Conventions in Java.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Give the usage of new keyword in Java.	6 Marks	L2	CO1	PO1
	b)	Explain different Java Components.	6 Marks	L2	CO1	PO2
		UNIT-II				
3.	a)	Explain about Java Control Statements with examples.	6 Marks	L2	CO1	PO2
	b)	Develop a program to generate a random number between 0 and 100.	6 Marks	L3	CO1	PO3
		(OR)				
4.	a)	Write a Program to count tokens- number of words and characters in a string using StringTokenizer class.	6 Marks	L2	CO1	PO2
	b)	Write about Scanner class in Java.	6 Marks	L1	CO1	PO1
		UNIT-III				
5.	a)	Describe Dynamic Method dispatch and the use of final keyword in Java with relevant example.	6 Marks	L2	CO2	PO2
	b)	Develop an Interest Interface which contains Simple Interest and Comp Interest methods and static final field of 25%. Write a class to implement those methods.	6 Marks	L3	CO2	PO3
		(OR)				
6.	a)	Explain method overriding with an example.	6 Marks	L2	CO2	PO2
	b)	Illustrate how an interface can be implemented and extended.	6 Marks	L3	CO2	PO3
		UNIT-IV				
7.	a)	Give and explain any two classes/interfaces of Collection Framework.	6 Marks	L2	CO2	PO1
	b)	Write a Java program that creates three threads. First thread displays - Good Morning for every one second, the second thread displays - Hello for every two seconds and the third thread displays - Welcome for every three seconds.	6 Marks	L3	CO2	PO4
		(OR)				
8.	a)	Explain the process of creating a custom exception.	6 Marks	L2	CO2	PO2
	b)	Write a Java program to change the priority of a thread.	6 Marks	L1	CO2	PO1
		UNIT-V				
9.	a)	Describe the AWT event hierarchy and explain event handling with examples.	6 Marks	L2	CO3	PO1
	b)	Explain about MVC architecture in Swings.	6 Marks	L2	CO3	PO2
		(OR)				
10.		Develop a java program that handles all mouse and key events and shows the event name at the center of the window when mouse event is fired (Use Adapter classes).	12 Marks	L3	CO3	PO5

ELECTRONIC CIRCUIT ANALYSIS AND DESIGN

[ELECTRONICS AND COMMUNICATION ENGINEERING, ELECTRONICS AND INSTRUMENTATION ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) With the help of circuit diagram and equivalent circuit of a Darlington amplifier generate the expression for the overall input impedance of the pair. 7 Marks

b) Develop a generalized expression for overall current gain (AIS) when two transistor stages with $R_{OUT2} < R_L$, $R_{OUT1} > R_{IN2}$, $R_{IN1} > R_S$ and individual voltage gains are A_{V1}, A_{V2}. 7 Marks

(OR)

2 a) Derive expressions for overall voltage gain and overall current gain of a two-stage RC coupled amplifier**.** 8 Marks

b) List out the special features of Darlington pair and cascode amplifiers. 6 Marks

UNIT-II

3 a) Draw neatly the circuit diagram of a common source JFET amplifier and explain its working. 8 Marks

b) The output of CE amplifier is 180^0 out of phase with the input. Explain the reason. 6 Marks

(OR)

4 a) Draw the circuit diagram of a common gate amplifier. Derive the expression for voltage gain and input resistance. 9 Marks

b) What are half power frequencies? Why it is named so? 5 Marks

UNIT-III

5 a) Explain in detail about the different feedback topologies. 8 Marks

b) A transistor Colpitt's oscillator uses a tank circuit with L = 30 mH, C_1 = 200 PF and C_2 = 200 PF. What is the frequency of oscillators? 6 Marks

(OR)

6 a) Draw the circuit diagram of a current series feedback amplifier and derive expressions for voltage gain with and without feedback. 8 Marks

b) A three section RC phase shift oscillator has, R_C = 2KΩ, R = 10KΩ and C=0.01μF. What is the frequency of oscillation? If the oscillator is to be made variable, using the same values of R, what should be the tuning range of capacitors to obtain a frequency range of 10 KHz to 100 KHz. 6 Marks

UNIT-IV

7 a) A single ended class A power amplifier is coupled to an 8Ω load, using a transformer with a turn ratio of 5:1 with a 50V supply the transistor is biased to have a quiescent collector current of 250mA. When a sinusoidal signal is applied to the base, the collector voltage varies between a maximum of 5V and maximum of 90V. Calculate the efficiency, power output & second - harmonic 7 Marks

distortion of this stage.

b) Discuss how amplification takes place in a power amplifier? 7 Marks

(OR)

8 a) State the merits of using push pull configuration? Describe the operation of class B push pull amplifier and show how even harmonics are eliminated. 7 Marks

b) Design a class B power amplifier to obtain the maximum conversion efficiency is 78.5%. 7 Marks

UNIT-V

9 a) Explain the reasons for oscillations in a tuned amplifier. Briefly explain the method used to stabilize the tuned amplifiers against the oscillations? 7 Marks

b) Explain stagger tuned amplifier. 7 Marks

(OR)

10 a) Explain the operation of a Double tuned amplifier, with necessary analysis. 8 Marks

b) Explain various types of neutralization with neat sketches. 6 Marks

SIGNALS AND SYSTEMS

[ELECTRONICS AND COMMUNICATION ENGINEERING, ELECTRONICS AND INSTRUMENTATION ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit

All questions carry equal marks

UNIT-I

1 a) A discrete-time system s described by the following input-output relation $y(n) = n\,x(n)$ is this system. (i) static or dynamic. (ii) linear or non-linear. 7 Marks

b) A discrete-time LTI system is described by the following difference equation relating its input and output $y(n) - a\,y(n-1) = 2\,x(n)$. Find the unit-sample response and step response of the system. 7 Marks

(OR)

2 a) Define the terms: 7 Marks

i) Impulse response function of an LTI system.

ii) Unit sample response sequence of an LSI system.

b) For what range of values of the parameter α are the systems defined by the following difference equations stable? 7 Marks

$$y(n) - 2ay(n-1) + a^2 y(n-2) = x(n)$$

UNIT-II

3 a) Consider full rectified sine have with peak amplitude '1' and time period is '1' expand this function in terms of exponential Fourier series. Also sketch the spectrum. 7 Marks

b) Derive the relation between Trigonometric and exponential Fourier series coefficients. 7 Marks

(OR)

4 a) State and prove Parseval's power theorem. 7 Marks

b) Find the Fourier transform of f (t) = Cos π t; -½≤t≤½ and f (t) = 0; otherwise. 7 Marks

UNIT-III

5 a) Prove that the correlation and convolution functions are identical for even Signals. 7 Marks

b) Explain detection of periodic signals in the presence of noise by Correlation. 7 Marks

(OR)

6 a) State and prove sampling theorem for band limited signals using analytical approach 8 Marks

b) Determine the Nyquist sampling rate and Nyquist sampling interval for the signals (i) sinc(100nt) (ii) sinc(100nt) + sinc(50nt) 6 Marks

UNIT-IV

7 a) A certain function $f(t)$ is known to have a transform $F(s) = \dfrac{s - 5}{(2s^2 + 6s + 5)}$. Find $f(0+)$ and $f(\infty)$. 7 Marks

b) Find the inverse Laplace Transform of $X(s) = \dfrac{-1000}{s^2 - 100}$; ROC: $-10 < \sigma < 10$. 7 Marks

(OR)

8 a) Find the unilateral Laplace Transform of the signal shown in figure. 7 Marks

b) Find the region of convergence of the Laplace transform of the following function. $\dfrac{1}{1+t^2}u(t)$ 7 Marks

UNIT-V

9 a) State and Prove the convolution theorem of Z transform. 7 Marks

b) Find the Z transform of $x(n) = [a^n \cos w_0 n]u(n)$. 7 Marks

(OR)

10 a) Find the impulse response and frequency response of the following discrete time system. $y(n) - y(n-1) + \dfrac{3}{16}y(n-2) = x(n) - \dfrac{1}{2}x(n-1)$ 7 Marks

b) Using partial fraction expansion method, determine $x(n)$, $n \geq 0$ if its unilateral Z transform $X(z)$ is given by $X(z) = \dfrac{8z^2}{1 - 6z + 8z^2}$. 7 Marks

CONCRETE TECHNOLOGY

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		What are the main compounds in Portland cement and explain their properties.	CO1	14 Marks
		(OR)		
2		Mention the different tests to be conducted on aggregate and explain about impact and crushing tests.	CO4	14 Marks

UNIT-II

3		Explain the relation between compression strength and Tensile strength of concrete.	CO2	14 Marks
		(OR)		
4		Explain the Vee-bee method of determining workability with neat sketches.	CO4	14 Marks

UNIT-III

5		Explain the procedure for UPV and Rebound hammer test.	CO5	14 Marks
		(OR)		
6		Draw the typical stress-strain curve of concrete and explain the various modulus of elasticity.	CO2	14 Marks

UNIT-IV

7	a)	Explain what mix design and how mix design will help to improve the quality of concrete.	CO7	7 Marks
	b)	Explain common terminology used in statistical evaluation of concrete.	CO2	7 Marks
		(OR)		
8		Design mix proportions with the following data using IS code method. Characteristic compressive strength of concrete 30 Mpa. 20mm Maximum size of round aggregate. Moderate degree of workability. Specific gravity of cement 3.15 specific gravity of coarse and fine aggregates 2.65. Zone III sand. Good quality control.	CO3	14 Marks

UNIT-V

9		Why Special concretes are required. Give the names of special concretes and explain any two concretes in detail.	CO6	14 Marks
		(OR)		
10		Write short notes on i) Polymer concrete ii) Ready mix concrete iii) Cold weather concreting.	CO1	14 Marks

ENGINEERING GEOLOGY
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Demonstrate the relevance of geology in civil engineering.	CO1	14 Marks
		(OR)		
2		Discuss the role of mechanical weathering and chemical weathering.	CO1	14 Marks

UNIT-II

3		Analyze the advantages of study of physical properties in identification of mineral over other properties. Justify the statement with proper reasons.	CO2	14 Marks
		(OR)		
4		List the textures and structures of igneous rocks.	CO2	14 Marks

UNIT-III

5	a)	What is a fold? List various types of folds with neat sketches.	CO2	9 Marks
	b)	A coal bed dips 20^0 along S40^0W and 30^0 along S40^0E. Find out the strike direction and dip direction and inclination of the tunnel to be made for the excavation of coal.	CO1	5 Marks
		(OR)		
6		Classify different geophysical investigations. Explain suitable geophysical methods for the civil engineering projects.	CO3	14 Marks

UNIT-IV

7		Define the cone of depression? Discuss the significance of radius of influence with neat sketch for a sustainable exploitation of groundwater	CO6	14 Marks
		(OR)		
8		Classify the landslides based on the types of materials such as rocks, soils and debris .List different methods to prevent them.	CO4	14 Marks

UNIT-V

9		Analyze the main causative factors of dam failures. Give one case history of dam failure due to geological considerations with a brief geological report	CO7	14 Marks
		(OR)		
10		What are the causes and effects of tunneling on the ground?	CO5	14 Marks

STRUCTURAL ANALYSIS-I

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	An element has a tensile stress of 600 N/mm^2 and compressive stress of 400 N/mm^2 acting on two mutually perpendicular planes and two equal shear stress of 100 N/mm^2. Determine the principal stress and maximum shear stress.	CO2	7 Marks
	b)	An element has a tensile stress of 500 N/mm^2 and compressive stress of 300 N/mm^2 acting on two mutually perpendicular planes and two equal shear stress of 200 N/mm^2. Determine the principal stress and maximum shear stress using Mohr's Circle method.	CO2	7 Marks
		(OR)		
2	a)	Derive the expression for stresses in an inclined plane due to pure shearing.	CO1	7 Marks
	b)	At a point in a bracket the stresses on two mutually perpendicular planes are 40 N/mm^2 and 10 N/mm^2 both being tensile. The shear stress across these planes is 8 N/mm^2. Using graphical method, find the magnitude and direction of the resultant stress on a plane making an angle 40° with the plane of maximum stress. Also determine the normal and tangential stresses on the plane.	CO2	7 Marks

UNIT-II

3	a)	Derive the expression for slope and deflection of a simply supported beam of span 'l' carrying a point load at mid-span.	CO1	7 Marks
	b)	Find slope and deflection at the free end of a cantilever beam shown in fig. Moment of inertia of AC is twice the moment of inertia of BC. Use moment area method.	CO2	7 Marks
		(OR)		
4	a)	A simply supported beam of span 'l' carries a point load 'W' at a distance 'a' from the left end. Determine the deflection under the load and slope at the left end using appropriate method.	CO4	7 Marks
	b)	Determine the slope and deflection at the free end of a cantilever beam of length 'l' subjected to a uniformly varying load of 'w/m' at the fixed end and 'zero' at the free end.	CO4	7 Marks

UNIT-III

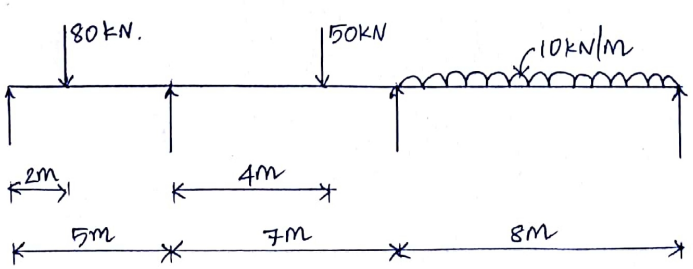
5		Define slenderness ratio. Derive the Euler's formula when both ends of the column are fixed.	CO1	14 Marks
		(OR)		
6		From the following data, determine thickness of cast-iron column: Length of column = 6 meters External diameter = 200 mm Load = 500 kN Factor of safety = 6 Assume fixed ends and ultimate compressive stress and constant for hinged ends as 570 MN/m^2 and 1/1600 respectively.	CO5	14 Marks

UNIT-IV

7	A fixed beam of 5 m span carries a point load of 150 kN at 3 m from the left end. If the right end sinks by 10.5 mm, find the fixing moments as well as reactions at the supports. Take E = 2×10^8 kN/m^2 and I = 10000 cm^4.	CO2	14 Marks

(OR)

8	For the continuous loaded beam ABCD shown in the figure, find: i) Moments at the supports ii) Reactions at the supports Draw the B.M. and S.F. diagrams also.	CO6	14 Marks



UNIT-V

9	In a steel member at a point the major principal stress is 180 MN/m^2 and the minor principal stress is compressive. If the tensile yield point of the steel is 225 MN/m^2, find the value of the major principal stress at which yielding will commence, according to each of the following criteria of failure i) Maximum Shearing Stress ii) Maximum Total Strain Energy iii) Maximum Shear Strain Energy Take Poisson's ratio=0.26.	CO3	14 Marks

(OR)

10	Derive the expression for shear center of unequal I section.	CO1	14 Marks

❀ ❀ ❀

DESIGN OF MACHINE ELEMENTS - I

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	What are the steps to be followed while designing a machine element?	CO1	7 Marks
	b)	Define the following properties of a material: i) Ductility ii) Toughness iii) Hardness and iv) Creep.	CO1	7 Marks
		(OR)		
2	a)	Analyze the significance of Factor Safety in Design	CO1	4 Marks
	b)	Determine the maximum thickness of the steel sheet into which holes of 20mm size can be punched. The ultimate tensile strength of the sheet material is 250 MPa. The allowable compressive stress during the punching operation in the hardened end of the punch is limited to 400 MPa.	CO2	10 Marks

UNIT-II

3	a)	What is meant by endurance strength of a material? How do the size and Surface condition of a component and type of load and effect such strength?	CO1	4 Marks
	b)	A circular bar of 500mm length is supported freely at its two ends. It is acted upon by a central concentrated cyclic load having a minimum value of 20kN and maximum value of 50kN. Determine the dia. of bar by taking a factor of safety of 1.5, size effect of 0.85, surface finish factor of 0.9. The material properties of bar are given by ultimate strength of 650 MPa, yield strength of 500 MPa and endurance strength of 350 MPa.	CO4	10 Marks
		(OR)		
4	a)	Formulate Soderberg's equation and state its application to different types of loading.	CO2	6 Marks
	b)	A 50mm diameter shaft is made from carbon steel having ultimate tensile strength of 630 MPa. It is subjected to a torque which fluctuates between 2000 N-m to 800 N-m. Using Soderberg method, calculate the factor of safety. Assume suitable values for any other data needed.	CO3	8 Marks

UNIT-III

5		A steam engine of effective diameter 300 mm is subjected to a stem pressure of 1.5 N/mm2. The cylinder head is connected by 8 bolts having yield point 330 MPa and endurance limit at 240 MPa. The bolts are tightened with an initial preload of 1.5 times the steam load. A soft copper gasket is used to make the joint leak-proof. Assuming a factor of safety 2, find the size of bolt required. The stiffness factor for copper gasket may be taken as 0.5.	CO5	14 Marks
		(OR)		
6		A plate 130 mm wide and 15 mm thick is to be welded to another plate by means of double parallel fillets. The plates are subjected to a static load of 90 KN. Find the length of weld if the permissible shear stress in the does not exceed 57 MPa.	CO4	14 Marks

UNIT-IV

7	A shaft supported at the ends in ball bearings carries a straight tooth spur gear at its mid span and is to transmit 7.5 kW at 300 r.p.m. The pitch circle diameter of the gear is 150 mm. The distances between the centre line of bearings and gear are 100 mm each. If the shaft is made of steel and the allowable shear stress is 45 MPa determine the diameter of the shaft. Show in a sketch how the gear will be mounted on the shaft; also indicate the ends where the bearings will be mounted?. The pressure angle of the gear may be taken as 20^0.	CO3	14 Marks

(OR)

8	Design a cast iron protective type flange coupling to transmit 15kW at 900 rpm. From an electric motor to a compressor. The service factor may be as 1.35. The following permissible stresses may be used: Shear stress for shaft, bolt and key material = 40 MPa Crushing stress for bolt and key = 80 MPa Shear stress for cast iron = 8 MPa Draw a neat sketch of the coupling.	CO3	14 Marks

UNIT-V

9	Design a cutter joint to connect two mild steel rods for a pull of 30 kN. The maximum permissible stresses are 55 MPa in tension: 40 MPa in shear and 70 MPa in crushing. Draw a neat sketch of the joint designed.	CO4	14 Marks

(OR)

10	Design a knuckle joint for a tie rod of a circular section to sustain a maximum pull of 70kN. The ultimate strength of the material of the rod against tearing is 420 MPa. The ultimate tensile and shearing strength of the pin material are 510 MPa and 396 MPa respectively. Determine the tie rod section and pin section. Take factor of safety = 6.	CO6	14 Marks

DYNAMICS OF MACHINERY
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	A dry single plate clutch is to be designed for an automotive vehicle whose engine is rated to give 100 kW at 2400 r.p.m. and maximum torque 500 N-m. The outer radius of friction plate is 25% more than the inner radius. The intensity of pressure between the plate is not to exceed 0.07 N/mm^2. The coefficient of friction may be assumed equal to 0.3. The helical springs required by this clutch to provide axial force necessary to engage the clutch are eight. If each spring has stiffness equal to 40 N /mm, determine the initial compression in the springs and dimensions of the friction plate	CO2	14 Marks
	(OR)		
2	Describe with the help of a neat sketch the principles of operation of an internal expanding shoe. Derive the expression for the braking torque.	CO1	14 Marks

UNIT-II

3	A ship propelled by a turbine rotor which has a mass of 5 tonnes and a speed of 2100 r.p.m. The rotor has a radius of gyration of 0.5 m and rotates in a clockwise direction when viewed from the stern. Find the gyroscopic effects in the following conditions: i) The ship sails at a speed of 30 km/h and steers to the left in a curve having 60 m radius. ii) The ship pitches 6 degree above and 6 degree below the horizontal position. The bow is descending with its maximum velocity. The motion due to pitching is simple harmonic and the periodic time is 20 seconds. The ship rolls and at a certain instant it has an angular velocity of 0.03 rad/s clockwise when viewed from stern. Determine also the maximum angular acceleration during pitching. Explain how the direction of motion due to gyroscopic effect is determined in each case.	CO2	14 Marks
	(OR)		
4	The turning moment curve for an engine is represented by the equation, $T = (20\,000 + 9500 \sin 2\theta - 5700 \cos 2\theta)$ N-m, where θ is the angle moved by the crank from inner dead centre. If the resisting torque is constant, find: i) Power developed by the engine ; ii) Moment of inertia of flywheel in kg-m^2, if the total fluctuation of speed is not exceed 1% of mean speed which is 180 r.p.m; and Angular acceleration of the flywheel when the crank has turned through 45° from inner dead centre.	CO3	14 Marks

UNIT-III

5		Explain the terms and derive expressions for 'effort' and 'power' of a Porter governor	CO1	14 Marks

(OR)

6		In a spring-controlled governor of the Hartung type, the length of the ball and sleeve arms are 80 mm and 120 mm respectively. The total travel of the sleeve is 25 mm. In the mid position, each spring is compressed by 50 mm and the radius of rotation of the mass centres is 140 mm. Each ball has a mass of 4 kg and the spring has a stiffness of 10 kN/m of compression. The equivalent mass of the governor gear at the sleeve is 16 kg. Neglecting the moment due to the revolving masses when the arms are inclined, determine the ratio of the range of speed to the mean speed of the governor. Find, also, the speed in the mid-position	CO2	14 Marks

UNIT-IV

7	a)	Write the importance of balancing.	CO1	4 Marks
	b)	A shaft carries four masses in parallel planes A, B, C and D in this order along its length. The masses at B and C are 18 kg and 12.5 kg respectively, and each has an eccentricity of 60 mm. The masses at A and D have an eccentricity of 80 mm. The angle between the masses at B and C is 100° and that between the masses at B and A is 190°, both being measured in the same direction. The axial distance between the planes A and B is 100 mm and that between B and C is 200 mm. If the shaft is in complete dynamic balance, determine : i) The magnitude of the masses at A and D ; ii) The distance between planes A and D ; and iii) The angular position of the mass at D.	CO4	10 Marks

(OR)

8	a)	Explain the terms Variation of Tractive Force, Swaying Couple, Hammer Blow.	CO1	4 Marks
	b)	The following data refer to two cylinder locomotive with cranks at 90°: Reciprocating mass per cylinder = 300 kg; Crank radius = 0.3 m; Driving wheel diameter = 1.8 m; Distance between cylinder centre lines = 0.65 m; Distance between the driving wheel central planes = 1.55 m. Determine : i) The fraction of the reciprocating masses to be balanced, if the hammer blow is not to exceed 46 kN at 96.5 kmph. ii) The variation in tractive effort ; and iii) The maximum swaying couple.	CO4	10 Marks

UNIT-V

9	a)	What are the causes and effects of vibrations?	CO1	4 Marks
	b)	Establish an expression for the natural frequency of free transverse vibrations for a simply supported beam carrying a number of point loads, by Dunkerley's method.	CO5	10 Marks

(OR)

10	a)	Explain about the Magnification Factor in forced vibration.	CO1	4 Marks
	b)	With neat sketch explain the Free Torsional Vibrations of a Three Rotor System, and deduce the equation for Torsionally Equivalent Shaft.	CO1	10 Marks

FLUID MECHANICS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define viscosity and write down the units. And write down different types of fluids.	CO1	7 Marks
	b)	A plate 0.025 mm distance from a fixed plate, moves at 60 cm/sec and requires a force of 2 N per unit area i.e., 2 N/m^2 to maintain this speed. Determine the fluid viscosity between the plates.	CO2	7 Marks
		(OR)		
2		At the right limb of a simple differential manometer containing the mercury is open to the atmosphere while the left limb is connected to a pipe in which a fluid of specific gravity 0.9 is flowing. The centre of the pipe is 12cm below the level of mercury in the right limb. Find the pressure of fluid in the pipe if the difference of mercury level in the two limbs is 20 cm.	CO2	14 Marks

UNIT-II

3		A 30 cm diameter pipe, conveying water, branches into two pipes of diameters 20cm and 15cm respectively .if the average velocity in the pipe 30cm diameter is 2.5 m/sec, find the discharge in these pipe. Also determine the velocity in 15 cm pipe if the average velocity in 20 cm diameter pipe is 2m/sec.	CO4	14 Marks
		(OR)		
4		What is venturimeter? Derive an expression for the discharge through venturimeter.	CO1	14 Marks

UNIT-III

5	a)	Outline the minor energy losses in pipes.	CO1	7 Marks
	b)	The difference in water surface levels in two tanks, which are connected by three pipes in series of lengths 300 m, 170 m and 210 m and of diameters 300 mm, 200 mm and 400 mm respectively, is 12 m. determine the rate of flow of water if co-efficient of friction are 0.005, 0.0052 and 0.0048 respectively, considering: i) Minor losses also ii) Neglecting minor losses	CO5	7 Marks
		(OR)		
6		Derive an expression for the force exerted by a jet of water on stationary flat vertical and inclined plates.	CO3	14 Marks

UNIT-IV

7	a)	Explain factors to be consider for selection of a turbine at a particular place.	CO1	7 Marks
	b)	Differentiate between impulse and reaction turbine.	CO1	7 Marks
		(OR)		
8		Define the specific speed of a turbine? Derive an expression for the specific speed. What is the significance of the specific speed?	CO1	14 Marks

UNIT-V

9	a)	Describe manometric efficiency, mechanical efficiency and overall efficiency of centrifugal pump.	CO1	7 Marks
	b)	Find reasons for negative slip in a reciprocating pump? Explain with neat sketches the functions of air vessels in a reciprocating pump	CO1	7 Marks

(OR)

10		A double acting reciprocating pump, running at 50 r.p.m. is discharging 900 litres of water per minute. The pump has stroke of 400 mm. The diameter of piston is 250 mm. The delivery and suction head are 25 m and 4 m respectively. Find the slip of the pump and power required to drive the pump.	CO6	14 Marks

MACHINE TOOLS AND MODERN MACHINING PROCESSES

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1	a)	List the various types of chips formed during machining. Under what conditions those chips will be formed.	CO6	7 Marks
	b)	A carbide tool with mild steel work piece was found to give a life of 2 hours while cutting at 0.5 mpm. Compute the tool life if the same tool is used at a speed of 25% higher than the previous one. Also determine the value of cutting speed if the tool is required to have tool life of 3 hours. Assume Taylor's exponent n=0.27.	CO4	7 Marks
		(OR)		
2	a)	Define cutting speed, feed, depth of cut and explain the principle angles of ORS.	CO6	7 Marks
	b)	Analyze the reasons for tool failure. Explain in detail.	CO2	7 Marks
		UNIT-II		
3	a)	Classify different types of lathes. Explain any one in detail.	CO2	7 Marks
	b)	Explain the taper turning attachment with a neat sketch.	CO1	7 Marks
		(OR)		
4	a)	Differentiate between turret and Capstan lathes.	CO1	7 Marks
	b)	Explain about Multi spindle automatic lathes.	CO1	7 Marks
		UNIT-III		
5	a)	Explain with a neat sketch the working of quick return mechanism used in a shaping machine	CO1	7 Marks
	b)	Differentiate between shaper and planer.	CO2	7 Marks
		(OR)		
6	a)	Explain the construction of a Radial drilling machine with a neat sketch.	CO1	7 Marks
	b)	Discuss Jig boring machine.	CO1	7 Marks
		UNIT-IV		
7	a)	Mention the various types of bonds used in the making of grinding wheel. Discuss them in brief.	CO2	7 Marks
	b)	Write a short note on loading and glazing of a grinding wheel.	CO3	7 Marks
		(OR)		
8	a)	Define indexing. Describe direct indexing with an example.	CO4	7 Marks
	b)	Illustrate the design principle of Jigs and fixtures.	CO3	7 Marks
		UNIT-V		
9	a)	Classify the modern machining processes and their applications.	CO5	7 Marks
	b)	List the advantages of modern machining processes.	CO5	7 Marks
		(OR)		
10	a)	Explain about the Electro~discharge machining.	CO5	7 Marks
	b)	List the advantages, limitations and applications of EDM.	CO2	7 Marks

THERMAL ENGINEERING - I

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain working of four stroke diesel engine with the help of neat sketches.	CO1	7 Marks
	b)	Draw port timing diagram for two stroke petrol engine.	CO1	7 Marks
		(OR)		
2	a)	What is the difference between air-standard cycle and fuel-air cycle analysis? Explain the significance of the fuel-air cycle.	CO1	7 Marks
	b)	Explain with the help of a p-V diagram the loss due to variation of specific heats in an Otto cycle.	CO1	7 Marks

UNIT-II

3	a)	Explain various stages of combustion in CI engine on P-θ diagram.	CO2	7 Marks
	b)	Explain the factors that affect normal combustion.	CO2	7 Marks
		(OR)		
4	a)	Explain the factors affecting flame propagation.	CO1	6 Marks
	b)	What is meant by abnormal combustion? Explain the phenomena of detonation in CI engines.	CO4	8 Marks

UNIT-III

5	a)	What is a dynamometer? List out the different types of dynamometer.	CO1	4 Marks
	b)	A two stroke diesel engine was motored when the meter reading was 1.5 kW, Then the test on the engine was carried out for one hour and the following observations were recorded: Brake torque = 120 Nm, Speed=600 rpm, Fuel used 2.5 kg, Calorific value of fuel = 40.3 MJ/kg, Cooling water used = 818 kg, Rise in temperature of cooling water = 10 ^{0}C, Exhaust gas temperature = 345 ^{0}C, Room temperature = 25 ^{0}C, A/F=32:1. Determine i) BP, ii) IP, iii) Mechanical efficiency, iv) Draw heat balance sheet on minute basis and also in percentage.	CO3	10 Marks
		(OR)		
6	a)	Describe how an Indicated power of each cylinder of a multi-cylinder engine is measured?	CO1	7 Marks
	b)	Explain the procedure for preparing heat balance sheet.	CO3	7 Marks

UNIT-IV

7	a)	Define ultimate analysis and proximate analysis of coal. Explain how sampling of coal is done in a boiler trial.	CO1	4 Marks
	b)	The volumetric composition of a coal gas is given as H_2 = 25%, CO = 7%, CH_4 = 48%, C_2H_4 = 11%, CO_2 = 4% and N_2 = 3%. If 50% excess air is supplied, find the percentage composition by volume of the products assuming H_2O produced is perfect gas.	CO5	10 Marks
		(OR)		
8	a)	What is the significance of Adiabatic flame temperature?	CO1	4 Marks
	b)	Describe the working of the apparatus that is commonly used for the analysis of dry exhaust gases. Discuss about the probable sources of error in such an analysis.	CO1	10 Marks

UNIT-V

9	a)	What are the advantages of multi-stage compression over a single stage compression for the same pressure ratio? Why intercooling is necessary in multi-stage compression?	CO2	7 Marks
	b)	Compare rotary and reciprocating compressors.	CO1	7 Marks
		(OR)		
10	a)	Define volumetric efficiency of a compressor and explain why it is less than unity.	CO1	4 Marks
	b)	A single-stage double-acting air compressor delivers 15 m^3/min of air measured at 1.013 bar and temperature 27 ^{0}C and delivers at 7 bar. The conditions at the end of the suction stroke are pressure 0.98 bar and temperature 40 ^{0}C. The clearance volume is 4% of the swept volume and the stroke/bore ratio is 1.3/1, compressor runs at 300 rpm. Calculate the volumetric efficiency, cylinder dimensions, indicated power and isothermal efficiency of this compressor. Take the index of compression and expansion as 1.3.	CO2	10 Marks

ANALOG COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the operation of coherent detection of DSB-SC modulating wave and show that the overall output $V_0(t) = 1/2\ A_c Cos Øm(t)$.	CO5	6 Marks
	b)	Briefly explain the Quadrature Null Effect in DSB-SC coherent detection. Suggest an appropriate method to offset this problem.	CO1	8 Marks

(OR)

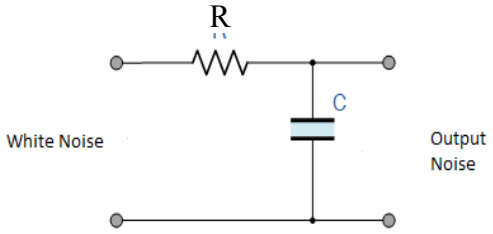
2	a)	With a neat diagram, explain how SSB wave is generated using phase discriminator method with only USB and rejecting the LSB.	CO1	10 Marks
	b)	Derive and show that the noise equivalent band width for RC low pass filter is 1/4RC.	CO5	4 Marks



UNIT-II

3	a)	With the help of circuit diagram, explain demodulation of FM wave using balanced frequency discriminator.	CO1	8 Marks
	b)	Determine the modulation index and bandwidth for FM and PM signals for a modulating signal 5 cos 30000 π t angle modulates a carrier A cos2π fct. Assume $K_f=K_p$ =15KHz/volt.	CO3	6 Marks

(OR)

4	a)	Explain with relevant mathematical expressions for the demodulation of an FM signal using PLL.	CO1	8 Marks
	b)	An FM signal is given by s(t) = 2cos20000πt+cos2000πt+3cos40000πt. Determine the bandwidth and β assuming K_f=104Hz/Volts.	CO3	6 Marks

UNIT-III

5	a)	Derive the expression for SNR in a PM system for tone modulation.	CO2	8 Marks
	b)	A phase modulation (PM) system, with the modulated wave defined by S (t) =AcCos [2πfct + kpm(t)] where kp is a constant and m(t) is the message signal. The additive noise n(t) at the phase detector input is $n(t)= n_I(t)\cos(2\pi fc\ t)-n_Q(t)\ \sin\ 2\pi fct$ Assuming that the carrier-to-noise ratio at the detector input is high compared with unity, determine. i) The output signal-to-noise ratio. ii) The figure of merit of the system.	CO4	6 Marks

(OR)

6	a)	Derive the expression of SNR and figure of merit for SSB-SC.	CO2	8 Marks
	b)	If each stage has a gain of 10dB and noise figure of 10dB. Determine the overall noise figure of a two stage cascaded amplifier.	CO4	6 Marks

UNIT-IV

7	a)	What do you mean by automatic gain control (AGC)? What are merits of delayed AGC over simple AGC?	CO2	7 Marks
	b)	The antenna current of transmitter is 11.5 Amp when it is modulated to a depth 45% by audio sine wave. Determine unmodulated (carrier) current.	CO6	7 Marks

(OR)

8	a)	What is image frequency rejection ratio and what is its importance?	CO1	7 Marks
	b)	In a broadcast super heterodyne receiver tuning at 1200 kHz having no RF amplifier, the loaded Q of the antenna coupling circuit is 100, By Considering standard IF frequency determine the Image frequency and its rejection ratio.	CO6	7 Marks

UNIT-V

9	a)	Write short notes on the following: i) Single polarity PAM; ii) Double polarity PAM.	CO1	6 Marks
	b)	With a neat block diagram, explain the working of TDM technique.	CO1	8 Marks

(OR)

10	a)	Explain the concept of multiplexing in communication.	CO1	6 Marks
	b)	Differentiate between FDM and TDM. Explain which of the two is superior and why.	CO2	8 Marks

ELECTROMAGNETIC THEORY AND TRANSMISION LINES
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Obtain the expressions for the far field and the potential due to a small electric dipole oriented along z-axis. Find the potential at (0,1,3) due to the small electric dipole placed at (0,0,0).	CO4	7 Marks
	b)	State Biot-savart's Law. Formulate an expression for Straight Filamentary Conductor of finite length.	CO1	7 Marks

(OR)

2	a)	Calculate induced electric field intensity for $r < 2$ and $r > 2$, if the magnetic flux density B=20 *sin* wt, *for* $r < 2$ and $B = 0$ *for* $r>2$.	CO4	7 Marks
	b)	Write the word statements for Maxwell's two equations for magnetostatic fields and explain their significance.	CO1	7 Marks

UNIT-II

3	a)	Explain the concept of Transformer and Motional EMFs. Formulate the related expressions.	CO1	8 Marks
	b)	Derive the electrostatic Boundary Conditions for i) Dielectric – Dielectric Boundary ii) Conductor – Dielectric Boundary iii) Conductor – Free Space Boundary	CO5	6 Marks

(OR)

4	a)	Outline the Final statements of Maxwell's Equations for Time Varying Fields. Represent the Final forms of Maxwell's Equations in Point and Integral forms.	CO1	7 Marks
	b)	Show that the Continuity equation for time varying fields is different from that of static fields.	CO6	7 Marks

UNIT-III

5	a)	Illustrate the reflection by a perfect conductor at oblique incidence for parallel polarization. Formulate the expressions for fields, reflection and transmission coefficients.	CO2	7 Marks
	b)	Define a uniform Plane wave and obtain the general solution of the uniform plane wave.	CO5	7 Marks

(OR)

6	a)	Derive the expressions for attenuation constant (α), phase constant (β), phase velocity (v_p) and intrinsic impedance (η).	CO2	7 Marks
	b)	Find all relations between E and H in a uniform Plane wave. Also Estimate the Value of intrinsic impedance of free space.	CO5	7 Marks

UNIT-IV

7	a)	Derive the characteristic impedance in terms of line constants.	CO2	8 Marks
	b)	A lossless transmission line of length 100m has an inductance of 28 μ H and capacitance of 20 nF. Find out i) Propagation velocity ii) Phase constant at an operating frequency of 100 KHz iii) Characteristic impedance of the line.	CO6	6 Marks

(OR)

8	a)	Derive the expressions for phase velocity and group velocity and relate them.	CO2	6 Marks
	b)	List and explain the various parameters that are assessed from transmission line equations.	CO1	8 Marks

UNIT-V

9	a)	Develop a step wise procedure to design single stub matching using smith chart.	CO6	7 Marks
	b)	Design a single stub match for a load of 150+j225 ohms for a 75 ohms line at 500 MHz using smith chart.	CO3	7 Marks

(OR)

10	a)	List the applications of smith chart. Also suggest a procedure to match a single stub to transmission line using smith chart.	CO6	7 Marks
	b)	Design a single stub (Short circuited shunt stub) matching network for a transmission line terminated with ZR=200-J400 ohms to obtain matching for maximum length of the transmission line. The characteristic impedance of the line is Zo=50 ohms.	CO4	7 Marks

LINEAR IC APPLICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	List and explain the function of all the basic building blocks of an op-amp.	CO1	7 Marks
	b)	Define common mode rejection ratio. Explain its significance.	CO1	7 Marks
		(OR)		
2	a)	Explain the terms i) slew rates; ii) CMRR; iii) PSRR; iv) Drift.	CO1	8 Marks
	b)	Explain clearly about the stability of op-amp, with the help of open loop gain vs frequency curve.	CO1	6 Marks

UNIT-II

3	a)	Draw and explain the circuit of V/I converter if the load is i) Floating; ii) Grounded.	CO3	7 Marks
	b)	Explain clearly the requirements of a practical differentiator with the help of its frequency response.	CO3	7 Marks
		(OR)		
4	a)	What is a precision diode? Draw and briefly explain the operation of a circuit that detects the peak value of any given signal.	CO4	7 Marks
	b)	Explain the operation of an Astable multivibrator using op-amp and also derive for its frequency of output.	CO3	7 Marks

UNIT-III

5	a)	Explain the necessity and operation of all the parts of a series op-amp regulator.	CO1	6 Marks
	b)	Derive the transfer function for a general second order active filter using op-amp. Show its frequency response for different damping constants.	CO2	8 Marks
		(OR)		
6	a)	Design a band pass filter so that f_o=2KHz, Q=20 and A_o=10 with C=1μF.	CO3	7 Marks
	b)	Explain how current limiting and current fold back characteristics are obtained in IC 723 regulator.	CO3	7 Marks

UNIT-IV

7	a)	Explain how a 555 timer in its Astable mode can be connected as a pulse position modulator?	CO1	7 Marks
	b)	Draw the circuit of PLL AM detector and explain its operation.	CO1	7 Marks
		(OR)		
8	a)	What is capture range? Derive the expression for lock range in a PLL.	CO1	7 Marks
	b)	Draw the circuit of a Schmitt trigger using 555 timer and explain its operation.	CO1	7 Marks

UNIT-V

9	a)	Explain about the successive approximate conversion in an ADC. Why it is advantages over the other methods of ADCs.	CO1	8 Marks
	b)	Explain about: i) Resolution; ii) Linearity; iii) Monotonicity.	CO1	6 Marks
		(OR)		
10	a)	Which type of ADC is fastest? Explain clearly why?	CO1	7 Marks
	b)	Explain clearly the D/A conversion in a 3-bit R-2R ladder circuit.	CO1	7 Marks

PROBABILITY AND STOCHASTIC PROCESS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Discuss about Bernoulli's Trails. Obtain the expression for Binomial Probability.	CO1	6 Marks
	b)	In the experiment of throwing two fair dice, let *A* be the event that the first die is odd, B be the Event that the second die is odd, and C be the event that the sum is odd. Show that events *A,* B, and C are pair wise independent, but *A, B,* and C are not independent.	CO1	8 Marks

(OR)

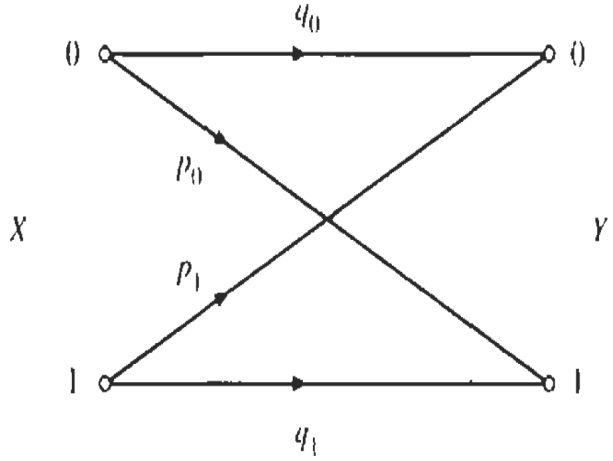
2		Consider the binary communication channel shown in Fig. The channel input symbol X may assume the state 0or the state 1, and, similarly, the channel output symbol Y may assume either the state 0or the state 1. Because of the channel noise, an input 0may convert to an output 1 and vice versa: i) Find Output Probabilities at 0 and 1 ii) If a 0 was observed at the output, what is the probability that a 0 was the Input state? iii) If a 1 was observed at the output, what is the probability that a 1 was the input state? iv) Calculate the probability of error.	CO4	14 Marks



UNIT-II

3	a)	State and prove the properties of the probability density function.	CO2	6 Marks
	b)	A random variable X has the following probability distribution.	CO3	8 Marks

x:	0	1	2	3	4	5	6	7
p(x):	0	K	2K	2K	3K	K2	2K2	7K2+K

Calculate

i) The value of k ii) $P(X>4.5)$ iii) $P(X\leq 4.5)$
iv) $P(X=4.5)$ v) $P(1.5<X<4.5/X>2)$

(OR)

4	a)	State and prove properties of characteristic function of a random variable *X*.	CO2	7 Marks
	b)	Find the moment generating function of binomial distribution. Obtain the expression for variance and mean.	CO3	7 Marks

UNIT-III

5	a)	State Central Limit theorem.	CO1	6 Marks
	b)	Consider an experiment of drawing randomly three balls from an urn containing two red, three white, and four blue balls. Let (X, Y) be a bivariate random variable where X and Y denote, respectively, the number of red and white balls chosen. i) Find the range of (X, Y). ii) Find the joint pmf's of (X, Y). iii) Find the marginal pmf's of X and Y.	CO3	8 Marks

(OR)

6	a)	Discuss about Joint Density Function and mention its properties.	CO1	6 Marks
	b)	The joint pdf of a bivariate r.v. (X, Y) is given by; $F_{XY}(x,y) = \begin{cases} k(x+y) & 0<x<2 \quad 0<y<2 \\ 0 & Otherwise \end{cases}$ Where k is a constant. i) Find the value of k. ii) Find the marginal pdf's of X and Y. iii) Are X and Y independent? iv) Find P(X+Y≤1)	CO3	8 Marks

UNIT-IV

7	a)	Define a K^{th}-order stationary random process. When it will become a SSS Process.	CO1	7 Marks
	b)	A random process is defined by Y(t)= X(t) cos($\omega_o t+\theta$) where X(t) is WSS random process that amplitude modulates a carrier of constant angular frequency ω_o with a random phase θ independent of X(t) and uniformly distributed on(-∏,∏). Is Y(t) a WSS random process.	CO4	7 Marks

(OR)

8	a)	State and prove the properties of autocorrelation function.	CO1	7 Marks
	b)	Model a random telegraph signal process $Y(t) = \lambda X(t)$ is a Wide Sense Stationary Process Where λ is a random variable which is $X(t)$ independent of and assumes values -1 and +1 with equal probability and $R_{x_1,x_2}(t_1,t_2) = e^{-2\lambda\|t_1-t_2\|}$.	CO4	7 Marks

UNIT-V

9	a)	What type of noise associated with respect to presence of signal and explain it briefly.	CO3	7 Marks
	b)	For a nonlinear amplifier with two input frequencies 3KHz, and 8KHz, determine: i) First 3 harmonics present in the output for each input frequency. ii) Cross-Product frequencies produced for values of m and n of 1 and 2 respectively.	CO3	7 Marks

(OR)

10	a)	For a non-ideal amplifier having following parameters, Input Signal Power=2×10^{-10}W, Input Noise Power=2×10^{-18} W, Power gain=60dB, Internal Noise =6×10^{-12} W Determine: i) Input S/N Ratio(dB) ii) Output S/N Ratio(dB) iii) Noise Factor iv) Noise Figure	CO3	7 Marks
	b)	Determine : i) 2^{nd}, 3^{rd} and 12^{th} harmonics for a 1KHz periodic wave. ii) Percent 2^{nd} order , 3^{rd} order and total harmonic distortion for a fundamental frequency with an amplitude of 8 V_{rms}, a 2^{nd} harmonic amplitude of 0.2Vrms and 3^{rd} harmonic amplitude of 0.1 V_{rms}	CO3	7 Marks

PULSE AND DIGITAL CIRCUITS

[ELECTRONICS AND COMMUNICATION ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Prove that an RC circuit behaves as a good integrator if RC>>15T. Where T is the period of an input '$E_m \sin\omega t$'.	CO2	6 Marks
	b)	A symmetrical square wave peak-to-peak amplitude 10V and frequency 10KHz is applied to a High pass RC circuit. Sketch the input and output waveforms to scale and derive the necessary output voltage expressions.	CO4	8 Marks

(OR)

2.	a)	Explain application of attenuator as a CRO Probe.	CO1	7 Marks
	b)	Analyze the response of low pass RC circuit for a square input for different time constants.	CO2	7 Marks

UNIT-II

3.	a)	Explain in detail about practical clamping circuit with aid of neat sketches.	CO1	7 Marks
	b)	Design a series clipper circuit that produces a following waveform. Assuming that input applied voltage is 50V (P-P), V_R=-10V and assume Diode is Ideal.	CO3	7 Marks

(OR)

4.	a)	In a clamping circuit, for symmetrical square wave Asses the parameters of ratio of area in forward direction to area in reverse direction in terms of forward resistance $R_f$to reverse resistance R_r .	CO6	8 Marks
	b)	Explain the operation of a biased negative clamper with neat sketch.	CO1	6 Marks

UNIT-III

5.	a)	Explain the working of a fixed-bias binary with the help of neat circuit diagrams.	CO1	6 Marks
	b)	Design a collector coupled one-shot multivibrator using n-p-n silicon transistors, Neglect I_{CBO} and the junction voltages. Assume $h_{FE(min)}$ = 20, V_{BE} = -1V for the transistor in cut-off and $I_B = 1.5I_{B(min)}$ for the transistor in saturation. Vcc = 12V, I_C(sat) = 2mA, T = 2msec, and $R_1 = R_2$. Find R_C, R, V_{BB}, R_1 and C.	CO3	8 Marks

(OR)

6.	a)	Design a collector-coupled monostable multivibrator with a gate width of 5ms using n-p-n silicon transistors.	CO3	8 Marks
	b)	With the help of neat diagrams discuss the different methods of triggering a binary.	CO1	6 Marks

UNIT-IV

7.	a)	Explain the basic principles of Miller and bootstrap time - base generators.	CO1	7 Marks
	b)	Write important applications of time-base circuits. With reference to time base circuits define the following terms: i) Fly back time; ii) Transmission error.	CO2	7 Marks

(OR)

8.	a)	Design a transistor bootstrap ramp generator to provide an output amplitude of 12V over a time period of 2 ms. The input signal is negative going pulse with an amplitude of 5V, a pulse width of 2 ms and the time interval between pulses is 0.5 ms. The load resistance is 2 kΩ and the ramp is to be linear within 1%. The supply is 15V.Take $h_{FE(min)}$= 80. Assume the necessary data.	CO3	6 Marks
	b)	Apply an appropriate sweep circuit to obtain the gain value 1.	CO5	8 Marks

UNIT-V

9.	a)	Draw and explain the operation of 4 diode sampling gate.	CO1	7 Marks
	b)	Draw and explain the operation of TTL NAND gate circuit and explain the importance of Totempole output.	CO6	7 Marks

(OR)

10.	a)	Draw and explain the operation of Bidirectional sampling gate.	CO1	7 Marks
	b)	Draw and explain the operation of ECL NOR/OR circuit.	CO1	7 Marks

	b)	Define Data Abstraction and discuss levels of Abstraction.	CO1	7 Marks
		(OR)		
2	a)	What are the various types of attributes? Explain each with an example.	CO5	7 Marks
	b)	List the different types of database users? Write in detail about their roles.	CO1	7 Marks
		UNIT-II		
3	a)	Illustrate different set operations in relational algebra with examples.	CO5	7 Marks
	b)	Explain in detail how to query relational data.	CO5	7 Marks
		(OR)		
4	a)	Explain about any four relational algebra operations with examples.	CO5	7 Marks
	b)	Differentiate DRC and TRC.	CO2	7 Marks
		UNIT-III		
5	a)	Define trigger and explain its three parts? Differentiate row level and statement level triggers.	CO2	7 Marks
	b)	Discuss about Complex Integrity Constraints in SQL.	CO1	7 Marks
		(OR)		
6	a)	Discuss about Join dependencies and Fifth normal form.	CO1	7 Marks
	b)	What is the form of basic SQL query? Explain.	CO1	7 Marks
		UNIT-IV		
7	a)	Illustrate concurrent execution of transaction with examples?	CO5	7 Marks
	b)	Discuss Serializability in detail.	CO1	7 Marks
		(OR)		
8	a)	Explain the concept of shadow paging with a suitable example.	CO2	7 Marks
	b)	Describe the various transaction states in detail.	CO1	7 Marks
		UNIT-V		
9	a)	Explain in detail about ISAM?	CO1	7 Marks
	b)	Explain B+ trees? Discuss about the Dynamic Index Structure?	CO3	7 Marks
		(OR)		
10	a)	Describe the Intuitions for tree Indexes in detail.	CO1	7 Marks
	b)	Discuss in detail about RAID.	CO1	7 Marks

DESIGN AND ANALYSIS OF ALGORITHMS

[Common to Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Briefly describe the asymptotic notation of algorithms.	CO1	7 Marks
	b)	Design an algorithm for finding the number of binary digits for a positive decimal integer.	CO3	7 Marks
		(OR)		
2	a)	Consider two functions $f(n) = 3n^2+5$ and $g(n)=n^2$. Prove with graphical representation that asymptotic upper bound of f(n) is g(n).	CO2	7 Marks
	b)	Distinguish between Big Oh and Big Omega notation.	CO2	7 Marks

UNIT-II

3	a)	Explain weighted UNION rule with an example.	CO1	7 Marks
	b)	Outline an algorithm for weighted union rule and calculate its time complexity.	CO2	7 Marks
		(OR)		
4	a)	Explain BFS algorithm with an example.	CO1	7 Marks
	b)	Differentiate BFS and DFS.	CO2	7 Marks

UNIT-III

5	a)	Explain the control abstraction for Divide and conquer.	CO1	7 Marks
	b)	Explain binary search algorithm and find its time complexity.	CO4	7 Marks
		(OR)		
6	a)	Determine the shortest path from V0 to V3 of the following electrical network graph, using greedy method. Identify the optimal solution. Does greedy method gives an optimal solution?	CO1	10 Marks

	b)	Prove that the edge with the smallest weight will be part of every minimum spanning tree.	CO4	4 Marks

UNIT-IV

7	a)	State sum of subset problem. How to solve this problem using backtracking, explain it with suitable example?	CO1, CO4	7 Marks
	b)	Illustrate a recursive backtracking algorithm to solve sum of subset problem.	CO3	7 Marks
		(OR)		
8	a)	Draw the state space tree for m coloring when n=3 and m=3.	CO2	7 Marks
	b)	Solve the 8-queens problem using backtracking.	CO5	7 Marks

UNIT-V

9	a)	State 15-puzzle problem. Solve 15-puzzle problem using state space tree	CO1, CO4	9 Marks
	b)	Outline the control abstraction for LC search.	CO1	5 Marks
		(OR)		
10	a)	Explain about Nondeterministic and Deterministic algorithms.	CO1	7 Marks
	b)	Explain in detail about NP-hard and NP-Complete problems.	CO1	7 Marks

CODE No.: 16BT41202 SVEC-16

JAVA PROGRAMMING

[Common to Computer Science and Engineering; Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the steps involved in creating and executing a java program.	CO1	7 Marks
	b)	Design a program to implement Money class. This class should have fields for initializing a rupee and paisa value. The paisa value will be in the range from 0 – 99 with the paisa being the same sign as that of rupees. The class should have all reasonable constructors, addition and substraction methods, and a **main()** method that provides a thorough test of all the methods in the class.	CO6	7 Marks
		(OR)		
2	a)	Java compiled and interpreted. Justify.	CO4	5 Marks
	b)	Create a class Rectangle. The class has two attributes, length and width, each of which defaults to 0. It has methods that calculate the perimeter and area of the rectangle. It has set and get methods for both length and width. The set methods should verify that length and width are floating – point numbers larger than 0.0 and less than 20.0.	CO3	9 Marks

UNIT-II

3	a)	Explain final keyword with all its usages. Support explanation with a program.	CO1	7 Marks
	b)	Explain the various forms of implementing interfaces.	CO1	7 Marks
		(OR)		
4	a)	What are Nested Interfaces? Explain with a suitable example.	CO1	7 Marks
	b)	Create a class within the package "AmountInWords" to convert the amount into words. (Consider the amount to be nor more than 100000.)	CO3	7 Marks

UNIT-III

5	a)	Explain the steps in creating a thread using Runnable interface.	CO1	6 Marks
	b)	Design a java program that demonstrates how a high-priority thread using sleep makes way for the lower-priority threads to execute.	CO3	8 Marks
		(OR)		
6	a)	What is a try-with-resources block and how it is used?	CO1	4 Marks
	b)	Consider a Student examination database system that prints the marksheet of students. Input the following from the command line: i) Student's name ii) Marks in six subjects These marks should be between 0 to 100. If the marks are not in the specified range, raise a RangeException, else find the total marks and print the percentage of the student.	CO6	10 Marks

UNIT-IV

7	a)	Design a program that shows a screen sot with an applet running inside the applet viewer. The applet should display your name.	CO5	6 Marks
	b)	Explain the difference between with a suitable example: i) Vector and ArrayList. ii) Enumeration and Iterator.	CO1	8 Marks
		(OR)		

8	a)	Explain the use of overriding the following methods for an applet. init() start() stop() destroy() paint()	CO1	6 Marks
	b)	Create a collection class named Queue to implement the FIFO order of queues.	CO3	8 Marks

UNIT-V

9	a)	How is the concept of inner classes used for event handling?	CO2	7 Marks
	b)	What is the difference between doGet () and doPost () or GET and POST?	CO1	7 Marks

(OR)

10	a)	What do you mean by HTTP servlet request and response? What is the procedure for initializing a servlet?	CO1	7 Marks
	b)	What is the advantage of having anonymous classes while handling events in Java?	CO1	7 Marks

SOFTWARE ENGINEERING

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	How RAD Model solves inherent problems that result in software project? Explain with an application.	CO1	7 Marks
	b)	What is prototype? Explain the process of prototype development with diagram. Mention benefits of using prototype.	CO1	7 Marks
		(OR)		
2	a)	What is Agility in context of software engineering? Explain extreme programming (XP) with suitable diagram.	CO1	7 Marks
	b)	Explain briefly about Unified process model.	CO1	7 Marks

UNIT-II

3		Explain briefly requirements engineering process.	CO2	14 Marks
		(OR)		
4		Draw use case and dataflow diagrams for a restaurant system the activities of the restaurant system are listed below. Receive the customer food orders, produce the customer ordered foods, serve the customer with their ordered foods, collect payment from customers, store customer payment details, order raw materials for food products, pay for raw materials and pay for labor.	CO3	14 Marks

UNIT-III

5	a)	What are the design principles of a good software design? Explain them.	CO3	7 Marks
	b)	Explain with the help of suitable diagram architecture trade off analysis method.	CO4	7 Marks
		(OR)		
6	a)	Explain briefly software architecture style and architecture pattern.	CO3	7 Marks
	b)	Describe the golden rules for interface design?	CO3	7 Marks

UNIT-IV

7	a)	What is cyclomatic complexity? Explain with an example how to construct a flow graph for a program (Fibonacci series) and compute cyclomatic complexity.	CO5	7 Marks
	b)	What are the various testing strategies to software testing? Discuss them briefly?	CO5	7 Marks
		(OR)		
8	a)	What is black box testing? Is it necessary to perform this? Explain various test activities.	CO5	7 Marks
	b)	What is white box testing? Is it necessary to perform this? Explain various test activities.	CO5	7 Marks

UNIT-V

9	a)	Describe the Mc Call's quality factors and ISO 9126 quality factors.	CO6	7 Marks
	b)	Discuss Reactive and proactive risk strategies.	CO6	7 Marks
		(OR)		
10	a)	Explain RMMM& RMMM plan.	CO6	7 Marks
	b)	Discuss about SQA.	CO6	7 Marks

THEORY OF COMPUTATION

[Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Construct a DFA equivalent to the NFA. CO3 10 Marks
M=({p,q,r},{0,1},δ,p,{q,s}) Where δ is defined in the following table:

	0	1
p	{q,s}	{q}
q	{r}	{q,r}
r	{s}	{p}
s	-	{p}

b) Tabulate the differences between Moore and Mealy machines. CO2 4 Marks

(OR)

2 a) Convert the following ε-NFA to DFA CO5 10 Marks

states	ε	a	b	C
p	Φ	{p}	{q}	{r}
q	{p}	{q}	{r}	Φ
*r	{q}	{r}	Φ	{p}

b) List and explain briefly about the components of Finite automaton model. CO1 4 Marks

UNIT-II

3 a) Construct a NFA equivalent to the regular expression (10+11)*00. CO5 10 Marks

b) Prove that the language $L=\{a^m b^n | m=n\}$ is not regular. CO5 4 Marks

(OR)

4 a) List the applications of regular expressions and write the regular expression for following sets: CO3 7 Marks

i) The set of all strings over {0,1} having at most one pair of 0's or at most of one pair of 1's.

ii) The set of all strings over {a,b} in which there are at least two occurrences of b between any two occurrences of a.

b) State and explain pumping lemma for regular languages. List the applications of pumping lemma. CO1 7 Marks

UNIT-III

5 a) Obtain a CFG to generate the set of all strings over alphabet {a,b} with exactly twice as many a's as b's. CO3 7 Marks

b) Show that the grammar is ambiguous. CO1 7 Marks
S→aSbS|bSaS|Є

(OR)

6	a)	Remove useless symbols and use less productions from the given grammar S → aAa A → Sb|bcc|DaA C → abb|DD E → ac D → aDA	CO2, CO5	8 Marks
	b)	Explain pumping lemma for context free languages.	CO1	6 Marks
		UNIT-IV		
7	a)	Define pushdown automata and explain its model with a neat diagram.	CO3	6 Marks
	b)	Construct PDA generating all odd palindromes over string {a, b, c}.	CO3	8 Marks
		(OR)		
8	a)	Construct PDA for the following grammar S → aABB|aAA A → aBB|a B → A.	CO2, CO3	10 Marks
	b)	Write short notes on Deterministic Pushdown Automata.	CO1	4 Marks
		UNIT-V		
9		Define Turing machine and give an example. Also explain different types of TM's.	CO1	14 Marks
		(OR)		
10	a)	Differentiate multi tape and multi stack Turing machines.	CO2	7 Marks
	b)	Design a Turing machine that computes a function f(x, y) = x + y.	CO4	7 Marks

II B.Tech II Semester (SVEC-19) Supplementary Examinations, December – 2022

HYDRAULIC ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is the 'no slip condition' at the boundary? Explain boundary layer concept with a neat sketch.	6 Marks	L2	CO1	PO1 PO10
	b)	An aeroplane weighing 39.24 kN is flying in a horizontal direction at 360 km/h. The plane spans 15 m and has a wing surface area of 35 sq.m. If drag coefficient is 0.03 and density of air is 1.22 kg/m^3, determine coefficient of lift, power required to drive the plane and theoretical value of the boundary layer circulation.	6 Marks	L4	CO1	PO1 PO2 PO4 PO5
		(OR)				
2.	a)	Define momentum thickness and energy thickness and explain the characteristics of boundary layer with a neat sketch.	6 Marks	L2	CO1	PO1 PO10
	b)	Discuss different types of boundary layer thickness. The velocity distribution in the boundary layer is given by $u/U = y/\delta$, where u is the velocity at a distance y from the plate and $u = U$ at $y = \delta$, δ being boundary layer thickness. Find the displacement, momentum and energy thickness.	6 Marks	L4	CO1	PO1 PO2 PO4 PO10

UNIT-II

3.	a)	Classify the types of flow in channels and explain in detail.	6 Marks	L4	CO2	PO1 PO2 PO10
	b)	How the flows are classified under specific energy concept and find the discharge through a rectangular channel of width 2 m, having a bed slope of 4 in 8000? The depth of flow is 1.5 m. Use Chezy's formula, Take C = 76.	6 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
		(OR)				
4.	a)	Determine the most economical section of rectangular channel carrying water at the rate of 0.6 cumecs. The bed slope of the channel is 1 in 2000. Assume Chezy's constant C=50.	6 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
	b)	Find the rate of flow and conveyance for a rectangular channel 7.5 m wide for uniform flow at a depth of 2.25 m. The channel is having bed slope as 1 in 1000. Take Chezy's constant C = 55.	6 Marks	L6	CO2	PO1 PO2 PO3

		Also state whether the flow is tranquil or rapid.				PO4 PO5 PO6 PO7 PO10
		UNIT-III				
5.	a)	Derive an expression for force exerted by the jet on the stationary plate: i) When flat plate is held normal to the jet; ii) When flat plate is held inclined to the jet; iii) When plate is curved.	6 Marks	L4	CO3	PO1 PO2 PO4 PO10
	b)	A jet of water strikes with a velocity of 35 m/s a flat plate inclined at 30° with the axis of the jet. If the cross-sectional area of the jet is 25 cm^2, determine: i) The force exerted by the jet on the plate. ii) The components of the force in the direction normal to the jet. iii) The ratio in which the discharge gets divided after striking the plate.	6 Marks	L4	CO3	PO1 PO2 PO4 PO6 PO10
		(OR)				
6.	a)	Derive an expression for impact of jet on a fixed curved plate. A jet of water 5 cm in diameter and moving with a velocity of 15 m/s impinges on a series of vanes moving with a velocity of 5 m/s. Determine force on the plates, work done per second and efficiency of the jet.	6 Marks	L4	CO3	PO1 PO2 PO4 PO6 PO10
	b)	A jet of water, 60 mm in diameter, strikes a curved vane at its centre with a velocity of 18 m/s. The curved vane is moving with a velocity of 6 m/s in the direction of the jet. The jet is deflected through an angle of 165°. Assuming the plate to be smooth, find: i) Thrust on the plate in the direction of jet, ii) Power of the jet, and. iii) Efficiency of the jet.	6 Marks	L4	CO3	PO1 PO2 PO4 PO6 PO10
		UNIT-IV				
7.	a)	A Pelton wheel is to be designed for the following specifications: Power (brake or shaft) = 9560 kW Head =350 meters Speed = 750 r.p.m. Overall efficiency = 85% Jet diameter = not to exceed $1/6^{th}$ of the wheel diameter Determine the following: i) The wheel diameter, ii) Diameter of the jet, and iii) The number of jets required. Take C_v = 0·985, Speed ratio = 0.45.	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
	b)	i) Classify the turbines based on a) Action of water on turbine blades. b) Head on turbine. c) Direction of flow through turbine runner. d) Specific speed. e) Disposition of turbines shaft. ii) Distinguish between impulse turbine and reaction turbine	6 Marks	L4	CO4	PO1 PO2 PO10

(OR)

8.	a)	The water available for a Pelton wheel is 4 m^3/s and the total head from the reservoir to the nozzle is 250 m. The turbine has two runners with two jets per runner. All the four jets have the same diameters. The pipe is 3 km long. The efficiency of transmission through the pipeline and the nozzle is 91% and efficiency of each runner is 90%. The velocity co-efficient of each nozzle is 0·975 and co-efficient of friction '4f' for the pipe is 0·0045. Determine: i) The power developed by the turbine, ii) The diameter of the jet, and iii) The diameter of the pipeline.	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10
	b)	A kaplan turbine is to be designed to develop 9100 kW. The net available head is 5.6 m. The speed ratio is 2.09 and the flow ratio is 0.68. The overall efficiency is 86% and the diameter of the boss is one-third the diameter of the runner. Examine i) Diameter of the runner ii) Speed iii) Specific speed of the turbine	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10

UNIT-V

9.	a)	Mention the main parts of centrifugal pump. A centrifugal pump having outer diameter equal to two times the inner diameter and running at 1000 rpm works against a total head of 40 m. The velocity of flow through the impeller is constant and equal to 2.5 m/s. The vanes are set back at an angle of 40 degrees at outlet. If the outer diameter of the impeller is 500 mm and width at outlet is 50 mm. Calculate the following: i) Vane angle at inlet. ii) Work done by impeller on water per second. iii) Manometric efficiency.	6 Marks	L6	CO5	PO1 PO2 PO3 PO4 PO6 PO10
	b)	What do you mean by multistage pump and when two geometrically similar pumps are running at the same speed of 1000 rpm. One pump has an impeller diameter of 300 mm and lifts water at the rate of 0.02 cumec against a head of 15 m. Determine the head and impeller diameter of the other pump to deliver half the discharge.	6 Marks	L6	CO5	PO1 PO2 PO3 PO4 PO5 PO6 PO10

(OR)

10.	a)	The impeller of a centrifugal pump is 1.45 m diameter and discharges 2 cumec against a head of 6.5 m. The vane angle at the outlet is 145 degrees to the direction of motion. Speed of impeller is 200 rpm. The radial velocity of flow at outlet is 3.6 m/s. Find the manometric efficiency and minimum speed to start the pump. Assume suitable data required.	6 Marks	L4	CO5	PO1 PO2 PO4 PO6 PO10
	b)	Write the components of reciprocating pump with a neat sketch and explain concept of pumps in parallel and series.	6 Marks	L2	CO5	PO1 PO10

CODE No.: 19BT40105 SVEC-19

STRUCTURAL ANALYSIS

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	A beam AB of length 'l' is supported at the ends carries a point load 'W' at a distance 'a' from the left end and 'b' from the right end. Determine the deflection under the load.	6 Marks	L4	CO1	PO1 PO2 PO10
	b)	A cantilever beam of span 4 m carries a point load 'w' at its free end. The moment of inertia of the section is 8500 cm^4. If the deflection at the free end is not to exceed 0.75 cm, what must be the value of W? Take E = 210 GN/m^2.	6 Marks	L4	CO1	PO1 PO2 PO4 PO10
		(OR)				
2.		A steel girder of uniform section, 14 m long is simply supported at its ends. It carries concentrated loads of 90 kN and 60 kN at two points 3 meters and 4.5 meters from the two ends respectively. Calculate: i) The deflection of the girder at the two points under the loads. ii) The maximum deflection.	12 Marks	L4	CO1	PO1 PO2 PO4 PO10

UNIT-II

3.	a)	Derive the expression for strain energy due to bending moment.	6 Marks	L4	CO1	PO1 PO2 PO10
	b)	Determine the deflection under 60 kN load in the beam shown in Fig.1.	6 Marks	L4	CO1	PO1 PO2 PO4 PO10

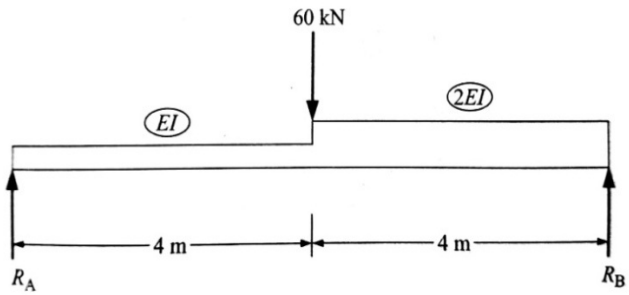

Fig.1

(OR)

4.		Analyze a fixed beam AB of span 'l' carrying a point load W at the mid-span. Draw the shear force and bending moment diagrams.	12 Marks	L4	CO2	PO1 PO2 PO10

UNIT-III

5.	A continuous beam of uniform cross – section is loaded as shown in the Fig.2. Find the following: i) Moments at the supports. ii) Reactions at the supports. iii) Points of contra flexure.	12 Marks	L4	CO3	PO1 PO2 PO4 PO10

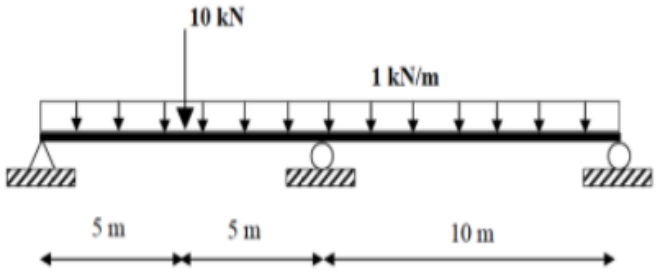

Fig.2

(OR)

6.	Analyze the two-span continuous beam shown in Fig.3 by slope deflection method and draw the bending moment and shear force diagrams. Assume EI is constant throughout.	12 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO10

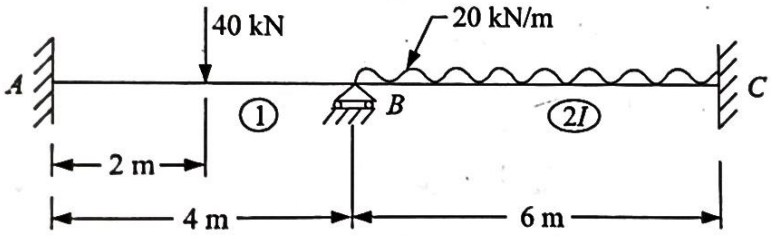

Fig.3

UNIT-IV

7.	Analyse the continuous beam shown in Fig.4 by moment distribution method and draw the bending moment and shear force diagram.	12 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO10

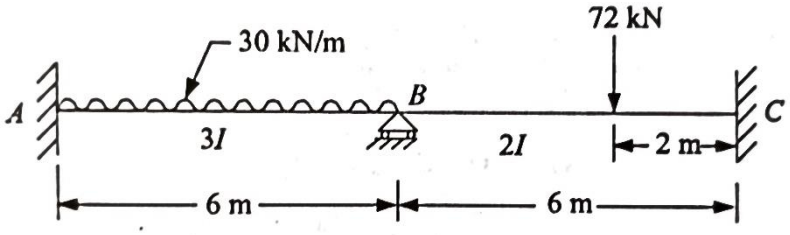

Fig.4

(OR)

8.	Analyze the continuous beam shown in Fig.5 by Kani's method.	12 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO10

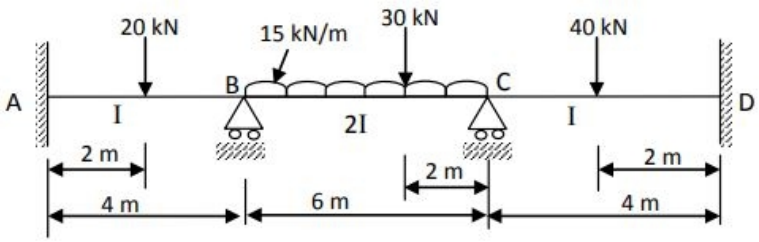

Fig.5

UNIT-V

9.	a)	A single point load of 80 kN crosses a girder of 12 m span. Using influence lines, find the maximum positive and negative shear forces at a point 4 m from the left end.	6 Marks	L4	CO4	PO1 PO2 PO4 PO10
	b)	A uniformly distributed load of 500 kN/m longer than the span, rolls over a beam of span 25 m. Using influence lines determine the maximum bending moment at a section 10 m from the left end.	6 Marks	L4	CO4	PO1 PO2 PO4 PO10
		(OR)				
10.		A T-section consists of a flange 150x10mm and a web of 140x10mm. The section modulus of the T-section is 54600mm^3 This section is used as a simply supported beam of 4m span and carries a UDL of 25kN/m on the whole span. Determine the shape factor of the beam and also calculate the collapse load for the beam. Assume yield stress as 250 Mpa.	12 Marks	L4	CO5	PO1 PO2 PO4 PO6 PO10

CODE No.: 19BT40201 SVEC-19

DIGITAL ELECTRONICS

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Explain the properties of EX-OR gate.	4 Marks	L1	CO1	PO1
	b)	Prove the following using Boolean algebra. i) y'z' + w'x'z' + w'xyz' + wyz' = z' ii) ABC + A'B'C + A'BC +ABC' + A'B'C' = A'B' + B(A + C).	8 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Simplify the Boolean function using K-map in SOP and POS forms F=∑m(0,1,2,4,7,8,12,14,15,16,17,18,20,24,28,30,31)	6 Marks	L2	CO1	PO5
	b)	Implement the following logical expression using AND-OR-INVERTER gates and also using only NOR gates for a digital data processing application. F= A + BC'(D' + BE').	6 Marks	L3	CO1	PO5

UNIT-II

3.	a)	Illustrate three bit magnitude comparator with an example.	6 Marks	L2	CO2	PO2
	b)	Construct a 16×1 multiplexer with two 8×1 and one 2×1 multiplexers using block diagram representation.	6 Marks	L3	CO2	PO4
		(OR)				
4.	a)	Demonstrate a Half adder. Design a full adder circuit optimally using two half adder circuits.	6 Marks	L3	CO2	PO3
	b)	Implement the Boolean function F(A,B,C,D)=∑m(0,1,3,4,8,9,15) using 4:1 Mux.	6 Marks	L3	CO2	PO5

UNIT-III

5.	a)	Describe race-around problem in JK Flip-flop. Explain how it is eliminated in Master slave JK Flip –Flop.	6 Marks	L2	CO3	PO2
	b)	Design Mod-10 Counter using T Flip-Flops.	6 Marks	L3	CO3	PO3
		(OR)				
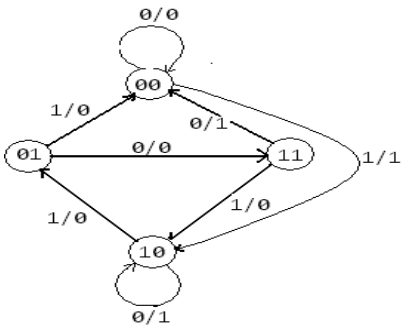
6.	a)	Illustrate and explain a 3-bit Johnson counter.	6 Marks	L2	CO3	PO1
	b)	Design a 3-bit synchronous UP/DOWN counter using D-flip-flops	6 Marks	L3	CO3	PO3

UNIT-IV

7.	a)	A sequential circuit has one input and one output. The state diagram is shown in below figure. Design the sequential circuit with (i)SR Flip-Flop (ii) D Flip-Flop	8 Marks	L2	CO4	PO5



b)	Realize a Logic function using F (A, B, C) = Σ_m (2,4,5,6) using Hazard Free logic gate network.	4 Marks	L2	CO4	PO5

(OR)

8.	Explain the procedure of state minimization for state table given below using the merger graph.	12 Marks	L2	CO4	PO5

Present state	Next state, Z			
	I_1	I_2	I_3	I_4
A	-	C,1	E,1	B,1
B	E,0	-	-	-
C	F,0	F,1	-	-
D	-	-	B,1	-
E	-	F,0	A,0	B,1
F	C,0	-	B,0	C,1

UNIT-V

9.	Tabulate the PLA programming table for the four Boolean functions listed below. Minimize the number of product terms. A(x, y, z) = Σ(1,2,4,6) B(x, y, z) = Σ(0,1,6,7) C(x, y, z) = Σ(2,6) D(x, y, z) = Σ(1,2,35,7)	12 Marks	L2	CO5	PO2

(OR)

10.	Show the step-by-step multiplication process using Booth algorithm for +15 and -13 which are binary. Assume 5-bit registers that hold signed numbers. The multiplicand is +15 and the multiplier is -13.	12 Marks	L3	CO5	PO2

DYNAMICS OF MACHINERY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		A dry single plate clutch is to be designed for an automotive vehicle whose engine is rated to give 100 kW at 2400 r.p.m. and maximum torque 500 N-m. The outer radius of friction plate is 25% more than the inner radius. The intensity of pressure between the plate is not to exceed 0.07 N/mm^2. The coefficient of friction may be assumed equal to 0.3. The helical springs required by this clutch to provide axial force necessary to engage the clutch are eight. If each spring has stiffness equal to 40 N /mm, determine the initial compression in the springs and dimensions of the friction plate.	12 Marks	L3	CO1	PO1 PO2 PO3
		(OR)				
2.	a)	List various types of brakes and what is the self locking of brake?	4 Marks	L1	CO1	PO1
	b)	Write a short note on absorption brake dynamometers with neat sketches.	8 Marks	L2	CO1	PO1 PO2

UNIT-II

3.		A ship propelled by a turbine rotor which has a mass of 5 tonnes and a speed of 2100 r.p.m. The rotor has a radius of gyration of 0.5 m and rotates in a clockwise direction when viewed from the stern. Find the gyroscopic effects in the following conditions: 1. The ship sails at a speed of 30 km/h and steers to the left in a curve having 60 m radius. 2. The ship pitches 6 degree above and 6 degree below the horizontal position. The bow is descending with its maximum velocity. The motion due to pitching is simple harmonic and the periodic time is 20 seconds. 3. The ship rolls and at a certain instant it has an angular velocity of 0.03 rad/s clockwise when viewed from stern. Determine also the maximum angular acceleration during pitching. Explain how the direction of motion due to gyroscopic effect is determined in each case.	12 Marks	L3	CO2	PO1 PO2 PO3 PO4
		(OR)				
4.		The turning moment curve for an engine is represented by the equation, T = (20 000 + 9500 sin 2θ – 5700 cos 2θ) N-m, where θ is the angle moved by the crank from inner dead centre. If the resisting torque is constant, find: 1. Power developed by the engine ; 2. Moment of inertia of flywheel in kg-m2 , if the total fluctuation of speed is not exceed 1% of mean speed which is 180 r.p.m; and 3. Angular acceleration of the flywheel when the crank has turned through 45° from inner dead centre.	12 Marks	L3	CO3	PO1 PO2 PO3

UNIT-III

5.		In a spring loaded governor of the Hartnell type, the mass of each ball is 1kg, length of vertical arm of the bell crank lever is 100 mm and that of the horizontal arm is 50 mm. The distance of fulcrum of each bell crank lever is 80 mm from the axis of rotation of the governor. The extreme radii of rotation of the balls are 75 mm and 112.5mm. The maximum equilibrium speed is 5 per cent greater than the minimum equilibrium speed which is 360 r.p.m. Find, neglecting obliquity of arms, initial compression of the spring and equilibrium speed corresponding to the radius of rotation of 100 mm.	12 Marks	L3	CO4	PO1 PO2 PO3 PO4

(OR)

6.		The upper arms of a Porter governor has lengths 350 mm and are pivoted on the axis of rotation. The lower arms has lengths 300 mm and are attached to the sleeve at a distance of 40 mm from the axis. Each ball has a mass of 4 kg and mass on the sleeve is 45 kg. Determine the equilibrium speed for a radius of rotation of 200 mm and find also the effort and power of the governor for 1 per cent speed change.	12 Marks	L2	CO4	PO1 PO2 PO3 PO4

UNIT-IV

7.	a)	Write the importance of balancing?	4 Marks	L1	CO5	PO1
	b)	A shaft carries four masses in parallel planes A, B, C and D in this order along its length. The masses at B and C are 18 kg and 12.5 kg respectively, and each has an eccentricity of 60 mm. The masses at A and D have an eccentricity of 80 mm. The angle between the masses at B and C is 100° and that between the masses at B and A is 190°, both being measured in the same direction. The axial distance between the planes A and B is 100 mm and that between B and C is 200 mm. If the shaft is in complete dynamic balance, Determine : i) The magnitude of the masses at A and D ; ii) the distance between planes A and D ; and iii) the angular position of the mass at D.	8 Marks	L3	CO5	PO1 PO2 PO3 PO6

(OR)

8.	a)	Explain the terms Variation of Tractive Force, Swaying Couple, Hammer Blow.	4 Marks	L2	CO5	PO1 PO2
	b)	The following data refer to two cylinder locomotive with cranks at 90°: Reciprocating mass per cylinder = 300 kg ; Crank radius = 0.3 m ; Driving wheel diameter = 1.8 m ; Distance between cylinder centre lines = 0.65 m ; Distance between the driving wheel central planes = 1.55 m. Determine : i) The fraction of the reciprocating masses to be balanced, if the hammer blow is not to exceed N at 96.5 km. p.h. ; ii) The variation in tractive effort; and iii) The maximum swaying couple.	8 Marks	L3	CO5	PO1 PO2 PO3

UNIT-V

9.	a)	What are the causes and effects of vibrations?	4 Marks	L2	CO6	PO1
	b)	Establish an expression for the natural frequency of free transverse vibrations for a simply supported beam carrying a number of point loads, by Dunkerley's method.	8 Marks	L2	CO6	PO1 PO2 PO3
		(OR)				
10.	a)	Explain about the Magnification Factor in forced vibration.	4 Marks	L2	CO6	PO1 PO2
	b)	With neat sketch explain the Free Torsional Vibrations of a Three Rotor System, and deduce the equation for Torsionally Equivalent Shaft.	8 Marks	L2	CO6	PO1 PO2

ENGINEERING METROLOGY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Differentiate between line standards and end standards.	6 Marks	L 2	CO1	PO1 PO2
	b)	Distinguish between Hole basis system and Shaft basis system	6 Marks	L1	CO1	PO1 PO2
		(OR)				
2.		Compare and contrast between Interchangeability and Selective assembly with illustrative examples.	12 Marks	L 2	CO1	PO1 PO2
		UNIT-II				
3.		With the help of neat sketches, explain how a sine bar is used to determine the taper angle of an inclined surface? Name the various factors affecting the accuracy of the sine bar.	12 Marks	L 2	CO2	PO1 PO2
		(OR)				
4.	a)	Sketch and explain the working principle of sigma comparator.	6 Marks	L2	CO2	PO1
	b)	Write a short notes on angle gauges.	6 Marks	L2	CO2	PO1
		UNIT-III				
5.		The heights of peaks and valleys of 20 successive points on a surface are 80,60, 88, 66, 78, 62, 80, 62, 81, 63, 83, 62, 80, 60, 80, 60, 81, 59, 82, 62 microns respectively, measured over a length 20 mm, Determine CLA and RMS values of roughness surface.	12 Marks	L3	CO3	PO1 PO2 PO3
		(OR)				
6.		What is the principle of an Optical flat? Explain the procedure of performing flatness test using optical flat.	12 Marks	L2	CO3	PO2
		UNIT-IV				
7.		Explain the two wire method for finding effective diameter of screw threads and derive for best wire size.	12 Marks	L2	CO4	PO1
		(OR)				
8.		Sketch and explain the important parameters involved in gear measurement. Explain the working principle of any one gear measuring instrument.	12 Marks	L3	CO4	PO1 PO2
		UNIT-V				
9.		Define Strain Rosette .Sketch and explain the various types of strain gauges for different applications.	12 Marks	L1	CO5	PO1 PO2
		(OR)				
10.	a)	Explain working principle of Radiation Pyrometer.	6 Marks	L2	CO5	PO1
	b)	Explain with a neat sketch the working principle of dead weight pressure gauge.	6 Marks	L2	CO5	PO1

FLUID MECHANICS AND HYDRAULIC MACHINERY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define viscosity and write down the units. And write down different types of fluids.	6 Marks	L1	CO1	PO1
	b)	A plate 0.025 mm distance from a fixed plate, moves at 60 cm/sec and requires a force of 2 N per unit area i.e., 2 N/m^2 to maintain this speed. Determine the fluid viscosity between the plates.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.		At the right limb of a simple differential manometer containing the mercury is open to the atmosphere while the left limb is connected to a pipe in which a fluid of specific gravity 0.9 is flowing. The centre of the pipe is 12cm below the level of mercury in the right limb. Find the pressure of fluid in the pipe if the difference of mercury level in the two limbs is 20 cm.	12 Marks	L3	CO1	PO1 PO2

UNIT-II

3.		Define the equation of continuity. Obtain an expression for continuity equation for three dimensional flows in Cartesian coordinates.	12 Marks	L2	CO2	PO1
		(OR)				
4.		Derive an expression for the discharge through venturimeter.	12 Marks	L3	CO2	PO1

UNIT-III

5.		Define boundary layer and explain the fundamental causes of its existence.	12 Marks	L2	CO3	PO1
		(OR)				
6.	a)	Outline the minor energy losses in pipes.	6 Marks	L1	CO3	PO1
	b)	The difference in water surface levels in two tanks, which are connected by three pipes in series of lengths 300 m, 170 m and 210 m and of diameters 300 mm, 200 mm and 400 mm respectively, is 12 m. determine the rate of flow of water if co-efficient of friction are 0.005, 0.0052 and 0.0048 respectively, considering: i) Minor losses also ii) Neglecting minor losses	6 Marks	L3	CO3	PO1 PO2 PO3

UNIT-IV

7.		Derive an expression for the force exerted by a jet of water on stationary flat vertical and inclined plates.	12 Marks	L3	CO4	PO1 PO2
		(OR)				

8.		Define the specific speed of a turbine? Derive an expression for the specific speed. What is the significance of the specific speed?	12 Marks	L3	CO4	PO1 PO2 PO3

UNIT-V

9.	a)	What do you mean by manometric efficiency, mechanical efficiency and overall efficiency of centrifugal pump?	6 Marks	L1	CO5	PO1
	b)	What is negative slip in a reciprocating pump? Explain with neat sketches the functions of air vessels in a reciprocating pump.	6 Marks	L2	CO5	PO1
		(OR)				
10.		A double acting reciprocating pump, running at 50 r.p.m. is discharging 900 litres of water per minute. The pump has stroke of 400 mm. The diameter of piston is 250 mm. The delivery and suction head are 25 m and 4 m respectively. Find the slip of the pump and power required to drive the pump.	12 Marks	L2	CO5	PO1 PO2 PO3

METAL CUTTING AND MACHINE TOOLS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Discuss the principle and requirement of machining.	6 Marks	L2	CO1	PO1
	b)	Explain the geometry of twist drill and milling cutter.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.		Analyze the nomenclature of ORS and NRS system with diagram.	12 Marks	L2	CO1	PO1 PO2
		UNIT-II				
3.	a)	Write short notes on shear strain and cutting forces with diagram.	6 Marks	L1	CO2	PO1 PO7
	b)	Define chips and recall the types of chips.	6 Marks	L1	CO2	PO1 PO7
		(OR)				
4.		Derive the expression for the various cutting forces using Merchant's circle diagram.	12 Marks	L3	CO2	PO1 PO2 PO3 PO7
		UNIT-III				
5.	a)	Differentiate work and tool holding devices in lathe.	6 Marks	L2	CO3	PO1 PO2 PO3
	b)	Write short notes on single-spindle and multi-spindle automatic lathes.	6 Marks	L1	CO3	PO1 PO2
		(OR)				
6.		Draw and explain the various operations performed on Lathe with neat diagrams.	12 Marks	L2	CO3	PO1 PO7
		UNIT-IV				
7.	a)	Compare slotting and drilling machines.	6 Marks	L2	CO4	PO1 PO7
	b)	List the specifications and types of drilling machine.	6 Marks	L1	CO4	PO1 PO7
		(OR)				
8.		What is boring? Explain the working principle of jig boring machine with neat diagram.	12 Marks	L2	CO4	PO1 PO2 PO7
		UNIT-V				
9.	a)	Write a brief note on grinding, lapping and honing in grinding machine.	6 Marks	L1	CO5	PO1 PO2 PO7
	b)	Discuss on working principle and operations in grinding machine with neat diagram.	6 Marks	L2	CO5	PO1
		(OR)				
10		Define milling and explain the methods of indexing used in	12 Marks	L2	CO6	PO1

. milling machine. PO7

THERMAL ENGINEERING-I

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain the time loss factor, heat loss factor and exhaust blow down losses.	6 Marks	L2	CO1	PO1
	b)	Explain the stages of combustion in SI engine with neat sketch.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.	a)	Compare the relative advantages and disadvantages of four stroke and two stroke engines.	6 Marks	L2	CO1	PO1 PO2
	b)	List the important internal combustion engine parts and explain in detail.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	List out the Methods of obtaining Friction Power and explain any one of them in detail.	6 Marks	L2	CO1	PO1
	b)	In a laboratory experiment, the following observations were noted during the test of a four-stroke diesel engine. Area of the indicator diagram = 420mm Length of the indicator diagram = 62mm^2 Spring number = 1.1bar/min Diameter of the piston = 100mm Length of stroke = 150mm Engine speed = 450rpm Determine: i) Indicated mean effective pressure. ii) Indicated power.	6 Marks	L3	CO1	PO1 PO2 PO3
		(OR)				
4.	a)	The cubic capacity of 4 stroke over square SI Engine is 245cc. The over square ratio is 1.1. The clearance volume is 27.2cc. calculate the bore, stroke and compression ratio of the engine.	6 Marks	L3	CO1	PO1 PO2 PO3
	b)	Explain the significance of the following tests: i) Motoring test. ii) Morse test. iii) Retardation test.	6 Marks	L2	CO1	PO1
		UNIT-III				
5.		In a constant pressure open cycle gas turbine air enters at 1 bar and 20^{0}C and leaves the compressor at 5 bar. Using the following data: temperature of the gases entering the turbine = 680^{0}C, pressure loss in the combustion chamber = 0.1 bar, $\eta_{compressor}$ = 85%, $\eta_{turbine}$ = 80%, $\eta_{combustion}$ = 85%, γ =1.4, C_p=1.024kJ/kg K for air and gas. Find: i) the quality of air circulation if the plant develops 1065kW ii) Heat supplied per kg of circulation iii) Thermal efficiency of the cycle. Mass of fuel may be neglected.	12 Marks	L3	CO2	PO1 PO2 PO3
		(OR)				

6.	a)	Distinguish between rocket propulsion Engine and turbojet Engines.	6 Marks	L4	CO2	PO1
	b)	Explain the working of turbo jet engine with a neat sketch.	6 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Derive an expression for the work done by single stage single acting reciprocating air compressor.	6 Marks	L3	CO3	PO1 PO2
	b)	A three stage single acting reciprocating air compressor delivers 2.5 m^3 of free air per minute from 1 bar to 72 bar. Calculate the power required to operate compressor if n = 1.3. The mean piston speed is 140 m/min. Find the piston area, neglecting the clearance volume.	6 Marks	L3	CO3	PO1 PO2 PO3
		(OR)				
8.	a)	Explain the working principle of roots blower with a neat sketch.	6 Marks	L3	CO3	PO1
	b)	Classify air compressors and explain two stage reciprocating air compressor.	6 Marks	L2	CO3	PO1
		UNIT-V				
9.	a)	In a Rankine cycle the steam at inlet to the turbine is saturated at a pressure of 20 bar and exhaust pressure is 0.04 bar. Determine: i) Pump work. ii) Turbine Power. iii) Rankine efficiency. Assume the flow rate of steam as 10 kg/sec.	6 Marks	L3	CO4	PO1 PO2 PO3
	b)	Explain the working of binary vapor power cycle with suitable diagram.	6 Marks	L2	CO4	PO1
		(OR)				
10.	a)	Compare the efficiency of the Modified Rankine cycle with respect to Rankine cycle. Also obtain the expression for efficiency of Modified Rankine cycle.	6 Marks	L4	CO4	PO1 PO2
	b)	A basic steam power plant works on ideal Rankine cycle between 30 bar and 0.04 bar. The initial condition of steam being 0.8 dry and flow rate 10 kg/s determine: i) Work required for pumping ii) work done by the turbine iii) cycle efficiency.	6 Marks	L3	CO4	PO1 PO2 PO3

ANALOG COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	With a neat block diagram, explain the working of FDM technique.	6 Marks	L2	CO1	PO2
	b)	Discuss the appropriate amplitude modulation technique which requires modulated band width equal to the twice of message signal band width and more power consumption.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Draw the circuit of a balanced modulator. Give the mathematical analysis to explain how and why only the carrier is suppressed in a balanced modulator.	6 Marks	L2	CO1	PO2
	b)	With neat block diagram, explain the generation of SSB wave by phase discrimination method.	6 Marks	L3	CO1	PO2
		UNIT-II				
3.	a)	Derive the expression for NBFM if message is m(t) and carrier is $A_c Cos\omega_c t$. Draw the corresponding phasor diagram of NBFM and compare it with AM wave.	6 Marks	L1	CO1	PO2
	b)	An FM wave is defined by s(t)=10 cos(2+sin (6Πt). Find the instantaneous frequency of s(t).	6 Marks	L2	CO1	PO4
		(OR)				
4.	a)	Explain FM generation using direct method.	6 Marks	L4	CO1	PO1
	b)	An FM wave is defined by s(t)=10 cos (2 +sin (6πt)). Find the instantaneous frequency S(t).	6 Marks	L2	CO1	PO2
		UNIT-III				
5.	a)	Prove that narrow band FM offers no improvement in SNR over AM.	6 Marks	L4	CO2	PO2
	b)	An AM receiver operates with a tone modulation, and the modulation index ma=0.6. The message signal is 60 Sin (5000Πt). Calculate the output SNR relative to the baseband performance.	6 Marks	L4	CO2	PO2
		(OR)				
6.	a)	Discuss the role of pre-emphasis and de-emphasis in the improvement of noise immunity in FM.	6 Marks	L4	CO2	PO2
	b)	Prove that the figure of merit of AM system for single stone modulation with 100% modulation is 1/3.	6 Marks	L1	CO2	PO1
		UNIT-IV				
7.	a)	In a superhetrodyne receiver with no RF section, the 'Q' of the antenna coupling circuit is found to be 110. Calculate the image frequency and its rejection ratio at 1100 kHz.	6 Marks	L1	CO3	PO3
	b)	An FM radio link has a frequency deviation of 25 kHz. The	6 Marks	L1	CO3	PO4

		modulating frequency is 5 kHz. Calculate the bandwidth needed for the link. What will be the bandwidth if the deviation is reduced to 10 kHz?				
		(OR)				
8.	a)	Compare low level modulation and high level modulation of radio transmitters.	6 Marks	L4	CO3	PO2
	b)	For an FM modulator with a modulating signal m(t)= Vm sin300wt, the carrier Signal Vc(t)=8 sin(6.5×106)t and the modulator index β = 2. Find out the significant side frequencies and their amplitudes.	6 Marks	L1	CO3	PO3
		UNIT-V				
9.	a)	Discuss the performance analysis of pulse modulation schemes.	6 Marks	L1	CO4	PO1
	b)	Draw the wave forms of pulse modulations and explain briefly.	6 Marks	L3	CO4	PO2
		(OR)				
10.	a)	Explain how a PPM signal can be generated from a PWM signal?	6 Marks	L1	CO4	PO1
	b)	Define and distinguish between PTM and PAM schemes. Sketch and explain their waveform for a single tone sinusoidal input signal.	6 Marks	L2	CO4	PO1

ELECTRONIC CIRCUIT ANALYSIS AND DESIGN

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Design Two stage RC coupled amplifier to meet the following specifications Av = 400, S=3, Vcc=12V, Ic=1mA, f_L =50Hz and Rs =500Ω. Assume data wherever necessary.	12 Marks	L6	CO1	PO3
		(OR)				
2.	a)	Recall the circuit diagram of a two-stage RC coupled amplifier and draw its frequency response.	6 Marks	L1	CO1	PO6
	b)	Explain the following terms with respect to the frequency response of an amplifier: i) Mid frequency region ii) Cutoff frequency iii) Band width	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Explain briefly about the small signal equivalent circuit of an emitter follower at high frequency.	6 Marks	L2	CO2	PO1
	b)	Define f_β and f_T. Develop the relation between f_β and f_T.	6 Marks	L1	CO2	PO1
		(OR)				
4.	a)	Construct an expressions for hybrid-π resistances r_{ce} and $r_{bb'}$ of a transistor.	6 Marks	L3	CO2	PO2
	b)	A transistor amplifier in CE configuration is operated at High frequency with the following specifications fT= 6 M Hz; gm = 0.04; hfe = 50; rbb'= 100 ohm ; Rs= 500 ohm; Cb'c = 120pf; RL = 100ohm. Estimate the Voltage gain, upper 3dB frequency and gain bandwidth product.	6 Marks	L5	CO2	PO2

UNIT-III

5.	a)	State the necessity of feedback in amplifiers and explain the effect of feedback on: i) Distortion ii) Noise iii) Bandwidth iv) Gain	8 Marks	L2	CO3	PO1
	b)	The gain (A_f) of an amplifier with feedback is to be nominally 20, and a variation of 5% is permissible. If the magnitude of the return ratio (Aβ) must be at least 1000(so that Aβ >>1), then determine the minimum valve of the open loop gain (A) and the maximum permissible variation in it.	4 Marks	L4	CO3	PO2
		(OR)				

6.	a)	Formulate current series feedback amplifier input and output resistance with and without feedback.	6 Marks	L2	CO3	PO2
	b)	An amplifier has voltage gain of 10,000 with ground plate supply of 150V and voltage gain of 8000 at reduced rate supply of 130V. On application of negative feedback the voltage gain at normal plate supply is reduced by a factor of 80. Calculate the i) Voltage gain of the amplifier with feedback for two valves of plate supply voltage. ii) Percentage reduction in voltage gain with reduction in plate supply voltage for both conditions, with and without feedback.	6 Marks	L3	CO3	PO2

UNIT-IV

7.	a)	Explain principle and operation of the Wien Bridge Oscillator and derive expression for frequency of oscillation.	8 Marks	L2	CO3	PO1
	b)	Compare RC and LC oscillators.	4 Marks	L5	CO3	PO2
		(OR)				
8.	a)	State the Barkhausen's criterion for oscillations.	5 Marks	L1	CO3	PO1
	b)	A Hartley oscillator is designed with L1= 20 μH; L2= 2 mH. Determine range of capacitances if frequency is varied between 950 KHz and 2050 kHz.	7 Marks	L3	CO3	PO2

UNIT-V

9.	a)	Explain in detail about the operation of class S power amplifier.	6 Marks	L3	CO5	PO1
	b)	Write the advantages and disadvantages of Transformer coupled Class-A amplifier.	6 Marks	L2	CO5	PO2
		(OR)				
10.	a)	Derive the equation for 3-dB bandwidth of Single tuned amplifier.	6 Marks	L3	CO5	PO2
	b)	A tuned circuit has resonance frequency of 800 KHz and a band width of 10 KHz. What is the value of its Q-factor?	6 Marks	L1	CO5	PO4

LINEAR AND DIGITAL IC APPLICATIONS

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Design a square waveform generator of frequency 100Hz and duty cycle of 70% using a 555 timer.	6 Marks	L3	CO1	PO3
	b)	Design a 555 timer based square wave generator to produce a symmetrical square wave of 2 kHz, if V_{cc}=12V, draw the voltage across timing capacitor and output.	6 Marks	L3	CO1	PO6
		(OR)				
2.	a)	Prove that an Op amp can be used to find the log of a given analog signal.	6 Marks	L2	CO1	PO2
	b)	Draw the block diagram of IC566 VCO and explain its operation.	6 Marks	L1	CO1	PO1

UNIT-II

3.	a)	Explain in brief the principle of operation of Flash type ADC.	6 Marks	L1	CO3	PO1
	b)	Explain the operation of a Dual-slope ADC and analyze it with flash type ADC.	6 Marks	L1	CO3	PO2
		(OR)				
4.	a)	Explain in brief the principle of operation of successive Approximation ADC.	6 Marks	L1	CO3	PO1
	b)	Design a second order Butterworth high pass filter with cut off frequency of 3 KHz.	6 Marks	L3	CO2	PO8

UNIT-III

5.	a)	What are the basic components of a module? Which components are mandatory in Verilog HDL?	6 Marks	L3	CO4	PO1
	b)	Write 4-to-1 multiplexer using case statement in dataflow modeling.	6 Marks	L3	CO5	PO1
		(OR)				
6.	a)	Illustrate the salient features of data flow design elements.	6 Marks	L1	CO4	PO2
	b)	Explain the sequential and parallel blocks in Verilog HDL with an example.	6 Marks	L1	CO4	PO1

UNIT-IV

7.	a)	Illustrate a 4 to 16 decoder using two 74*138 decoders and write the Verilog HDL code for it.	6 Marks	L3	CO5	PO2
	b)	Explain the importance of IC 74X181 in recent developments of processors.	6 Marks	L1	CO5	PO1
		(OR)				
8.	a)	Sketch the diagram and functional table of a 4-bit comparator and briefly explain about it. Write a Verilog HDL code for it in any modeling.	6 Marks	L2	CO5	PO2
	b)	Write a Verilog code for full adder using two half adders and an OR Gate.	6 Marks	L2	CO5	PO1

UNIT-V

9.	a)	Draw the logic diagram of 74×163 binary counter and explain its operation.	6 Marks	L1	CO5	PO1
	b)	Implement a modulo-11 counter using 74×163 binary counters.	6Marks	L3	CO5	PO4
		(OR)				
10.	a)	Sketch the symbol, functional table & write Verilog HDL source code of 74X194 IC.	6 Marks	L2	CO5	PO6
	b)	Design a 3-bit LFSR counter using 74x194.List out the sequence assuming that the initial state 111.	6 Marks	L3	CO5	PO3

PROBABILITY AND STOCHASTIC PROCESSES

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	State and Prove Bayes theorem.	6 Marks	L2	CO1	PO1
	b)	In the experiment of throwing two fair dice, let ***A*** be the event that the first die is odd, B be the Event that the second die is odd, and C be the event that the sum is odd. Show that events ***A,*** B, and C are pair wise independent, but ***A, B,*** and C are not independent.	6 Marks	L2	CO1	PO4
		(OR)				
2.	a)	Given that P(A), P(B) = 0.8 and P(A ∩ B) = 0.75 Find: $i)\ P(A \cup B)$ $ii)\ P(A \cap B^c)$ $iii)\ P(A^c \cap B^c)$.	6 Marks	L2	CO1	PO4
	b)	Define Joint Probability and Conditional Probability	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Let X be a Random Variable with P.D.F a given by $f_x(x) = \begin{cases} 2x & 0 < x < 1 \\ 0 & otherwise \end{cases}$ Find the P.D.F of a random variable Y, if Y=2X+1.	6 Marks	L2	CO2	PO4
	b)	State and prove chebchev's inequality.	6 Marks	L3	CO2	PO2
		(OR)				
4.	a)	Define the following: i) Expected value of a function of a random variable. ii) Moments about the origin. iii) Central moments.	6 Marks	L3	CO2	PO1
	b)	State and prove properties of characteristic function of a random variable X.	6 Marks	L3	CO2	PO2

UNIT-III

5.	a)	The joint cdf of a bivariate random variable. (X, Y) is given by $F(x,y)$ $= \begin{cases} \left(1 - e^{-ax}\right)\left(1 - e^{-by}\right) & X \geq 0, Y \geq 0,\ a > 0, b > 0 \\ 0 & otherwise \end{cases}$ i) Find the marginal CDF's of X and Y. ii) Show that X and Y are independent.	6 Marks	L2	CO2	PO4
	b)	The random variable X and Y have the joint characteristic function. $\phi(w_1, w_2) = \exp(-2W_1^2 - 9W_2^2$. Show that X and Y are both are zero means and that they are uncorrelated.	6Marks	L2	CO2	PO4
		(OR)				
6.	a)	Discuss the Properties of Gaussian Random Variable.	6 Marks	L3	CO2	PO1
	b)	Explain the Linear Transformation of Gaussian Random Variables.	6 Marks	L3	CO2	PO1

UNIT-IV

7.	a)	Given a random process by X(t) = AC0S (πt), where A is Gaussian random variable with zero mean and variance $\sigma \frac{2}{x}$. i) Find the density function of X (0). ii) Is X(t) stationary in any sense.	6 Marks	L3	CO3	PO4
	b)	Distinguish between. i) Deterministic and non-deterministic process. ii) Stationary and non-stationary random process.	6 Marks	L2	CO3	PO2
		(OR)				
8.	a)	Derive the autocorrelation output of LTI system.	6 Marks	L2	CO3	PO2
	b)	Derive the relationship between cross correlation function and cross power spectrum.	6 Marks	L2	CO3	PO2

UNIT-V

9.	a)	Mention the differences between correlated and uncorrelated noise.	6 Marks	L3	CO4	PO1
	b)	Define thermal noise and explain its relationship to the bandwidth and temperature.	6 Marks	L3	CO4	PO1
		(OR)				
10.	a)	Explain the importance of Friss's Formula with the help of example.	6 Marks	L3	CO4	PO1
	b)	Discuss the following terms: i) Noise factor. ii) Noise Figure equivalent noise temperature.	6 Marks	L3	CO4	PO2

ANALOG ELECTRONICS
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Apply Bootstrapping Method for a Darlington amplifier to increase input impedance.	6 Marks	L2	CO1	PO6
	b)	Analyze a single stage common emitter amplifier with its equivalent circuit using approximation model.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Analyze the CE short circuit current gain as function of frequency also plots its frequency response.	6 Marks	L1	CO1	PO1
	b)	With the Help of Circuit diagram and its ac equivalent Circuit develop expression for the overall input impedance of the Darlington amplifier.	6 Marks	L2	CO1	PO2
		UNIT-II				
3.	a)	Use a Trans-resistance amplifier and prove its input and output impedances are very low compared to CE amplifier.	6 Marks	L2	CO2	PO5
	b)	Explain the method of analysis of feedback amplifier.	6 Marks	L1	CO2	PO1
		(OR)				
4.	a)	Calculate the gain, input impedance and output impedance of voltage series feedback amplifier having gain A = -300, Rin = 1.5 k-ohms and Rout = 50 k-ohms, β= 0.05.	6 Marks	L3	CO2	PO4
	b)	List the general characteristics of negative feedback amplifiers and explain.	6 Marks	L2	CO2	PO2
		UNIT-III				
5.	a)	Explain principle and operation of the RC phaseshift Oscillator using FET and derive expression for frequency of oscillation.	8 Marks	L1	CO2	PO1
	b)	State and explain the Barkhausen's criterion for Oscillations.	4 Marks	L1	CO2	PO1
		(OR)				
6.	a)	For the following parameters calculate the series resonant frequency and Q - factor of the crystal. L = 0.5H, C1 = 0.06pF, Ch = 2.0pF and R = 5KΩ.	6 Marks	L3	CO2	PO4
	b)	Draw the circuit diagram of Hartley oscillator with BJT, explain its operation and derive an expression for frequency of oscillations.	6 Marks	L2	CO2	PO2
		UNIT-IV				
7.	a)	Explain second harmonic distortion in power amplifiers.	6 Marks	L1	CO3	PO1
	b)	Compare push-pull and complementary class B power amplifier.	6 Marks	L3	CO3	PO2
		(OR)				
8.	a)	Design a class B power amplifier to obtain the maximum conversion efficiency is 78.5%.	6 Marks	L4	CO3	PO3
	b)	Select a power amplifier to get power efficiency 50% and explain briefly.	6 Marks	L1	CO3	PO5

UNIT-V

9.	a)	Analyze the first order low pass filter and derive an equation for its gain and also draw its frequency response curve.	6 Marks	L1	CO4	PO2
	b)	Design a high pass filter with a cut-off frequency of 10KHz with a pass band gain of 1.5.	6 Marks	L4	CO4	PO3
		(OR)				
10.	a)	Design monostable multivibrator circuit using 555 timer and describe in detail about its operation.	6 Marks	L4	CO4	PO3
	b)	Explain the applications of astable multivibrator using 555 timer.	6 Marks	L3	CO4	PO1

DATABASE MANAGEMENT SYSTEMS

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Define Data Abstraction and discuss levels of Abstraction.	6 Marks	L1	CO1	PO1
	b)	Discuss about the Concept Design with the ER Model.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Explain different types of database users and write the functions of DBA.	6 Marks	L2	CO1	PO1
	b)	Explain basic notations of ER diagram.	6 Marks	L1	CO1	PO1
		UNIT-II				
3.	a)	Analyze and find whether View exists if the table is dropped from the database.	6 Marks	L4	CO2	PO3
	b)	Illustrate different set operations in Relational algebra with an example.	6 Marks	L3	CO2	PO3
		(OR)				
4.	a)	Discuss about Complex integrity constraints in SQL.	6 Marks	L2	CO2	PO2
	b)	Explain Relational algebra. i) Write a relational expression to find the names of sailors who have reserved boat 103. ii) Write a relational expression to find the names of sailors who have not reserved a red boat.	6 Marks	L2	CO2	PO2
		UNIT-III				
5.		Define trigger and explain its three parts. Differentiate row level and statement level triggers.	12 Marks	L2	CO3	PO2
		(OR)				
6.	a)	Define a nested query. i) Write a nested query to find the names of sailors who have reserved both a red and green boat. ii) Write a nested query to find the names of sailors who have reserved all boats.	6 Marks	L2	CO3	PO2
	b)	Illustrate PL/SQL control structure with examples.	6 Marks	L2	CO3	PO2
		UNIT-IV				
7.		Compare and contrast BCNF with 3NF.	12 Marks	L4	CO4	PO3
		(OR)				
8.	a)	Illustrate multi-valued dependencies and Fourth normal form with example.	6 Marks	L3	CO4	PO3
	b)	Discuss serializability in detail.	6 Marks	L2	CO4	PO2
		UNIT-V				
9.	a)	Discuss in detail Multiple Granularity.	6 Marks	L2	CO5	PO2
	b)	Demonstrate searching a given element in B+ trees. Explain with example.	6 Marks	L2	CO5	PO2
		(OR)				
10.	a)	Describe Validation-based locking protocols.	6 Marks	L2	CO5	PO2
	b)	Illustrate insertion of an element in B+ trees with example.	6 Marks	L3	CO5	PO3

INDUSTRIAL INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is the need for viscosity measurement in industries? List some applications, safety issues that may arise due to improper selection of sensor in an industrial environment. Suggest one method of viscosity measurement and explain it.	6 Marks	L3	CO1	PO4
	b)	Describe the construction and working principle Searle's rotating cylinder.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	List the types of humidity. Explain the construction and working principle of Psychrometer with a neat sketch.	6 Marks	L2	CO1	PO1
	b)	Define specific viscosity. Explain the construction and working principle of friction tube viscometer.	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Identify an appropriate sensing mechanism for measurement low pressure. Justify your sensor selection and explain how this works with a neat sketch.	6 Marks	L3	CO1	PO4
	b)	What is Absolute pressure? With a neat sketch explain Thermal conductivity Gage.	6 Marks	L1	CO1	PO1
		(OR)				
4.	a)	Differentiate the working principle of McLeod Gage and Ionization gage.	6 Marks	L3	CO1	PO2
	b)	Analyze different types of pressure and give 3 different units of the quantity they measure.	6 Marks	L2	CO2	PO2

UNIT-III

5.	a)	Select a suitable level measurement device for to measure the level of high conductive liquid with suitable explanation.	6 Marks	L1	CO2	PO4
	b)	Measurement of Level could be done based on differential pressure. Explain the construction, working principle of level measurement based on differential pressure.	6 Marks	L1	CO2	PO1
		(OR)				
6.	a)	Design a level sensing mechanism to measure level of a tank with the following requirements using resistive technique. Resolution of 1 cm. Range of 10 cm. Diameter of the tank is 10 cm with clean liquid. Draw a suitable diagram to represent the design and signal conditioning circuit for given specifications.	6 Marks	L3	CO2	PO4
	b)	Compare and differentiate the operation of various electric types of level measurement techniques.	6 Marks	L3	CO2	PO2

UNIT-IV

7.	a)	Select a suitable flow measuring device which is vertically installed and explain its working principle of hot wire anemometer with suitable diagram.	6 Marks	L2	CO2	PO4
	b)	Give the types of Flow. Sketch the construction and elaborate the working principle of Liquid bridge mass flow meter.	6 Marks	L1	CO2	PO1
		(OR)				
8.	a)	List different Flow sensing mechanisms. Present an analysis of different mechanisms, their merits and demerits.	6 Marks	L2	CO2	PO4
	b)	Show how a Hotwire anemometer and EM flow meter could be used for measurement of flow rate using a neat sketch and appropriate representation.	6 Marks	L2	CO2	PO4

UNIT-V

9.	a)	List different proximity sensor types and compare their merits and demerits.	6 Marks	L3	CO4	PO3
	b)	Design a voltage to current converter to convert 0-5 V to 4 to 20mA.	6 Marks	L3	CO3	PO3
		(OR)				
10.	a)	How is a charge amplifier different from electrometer amplifier? Explain the working of charge amplifier with a neat sketch.	6 Marks	L1	CO3	PO1
	b)	Elaborate the safety measure to avoid hazardous conditions in industries.	6 Marks	L3	CO4	PO6

CONTROL SYSTEMS
[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Derive an expression for the transfer function of an Armature controlled DC motor.	6 Marks	L3	CO1	PO1
	b)	Obtain transfer function for the given system using block diagram reduction techniques.	6 Marks	L3	CO1	PO5

(OR)

2.	a)	Define transfer function and enumerate its advantages and disadvantages.	4 Marks	L2	CO1	PO1
	b)	Obtain the relation between the applied voltage and the current in the form of i) Differential equation ii) Transfer function.	8 Marks	L3	CO1	PO2

UNIT-II

3.	a)	Derive the expression for steady state error and obtain its static error constants k_p, k_v and k_a.	6 Marks	L2	CO2	PO1
	b)	For a system whose transfer function is $G(S)=\frac{1}{S(S+1)}$, the input to the system is described by $r(t)=4+6t+2t^2$. Find the generalized error coefficients and steady state error.	6 Marks	L4	CO2	PO2

(OR)

4.	a)	What is an integral controller and justify how does it improves the dynamics of a control system?	4 Marks	L2	CO2	PO7
	b)	Determine the nature of the closed-loop system for a unit-step input from open loop transfer function of unity feedback system given by $G(S)=\frac{8}{S(S+1)}$. Also determine rise time, peak time and peak overshoot.	8 Marks	L2	CO2	PO2

UNIT-III

5.	a)	Draw the Nyquist plot for the system whose open loop transfer function is $G(S)H(S) = \frac{K}{S(S+2)(S+10)}$. Determine the range of 'K' for which closed loop system is stable.	6 Marks	L2	CO3	PO2
	b)	Determine the range of K for which the system represented by the characteristic equation $S^2 + KS + 2K - 1 = 0$ Sis stable.	6 Marks	L2	CO3	PO4

(OR)

6.		Sketch the Bode plots showing the magnitude in dB and phase angle in degrees as a function of log frequency for the transfer function $G(S)H(S) = \frac{KS^2}{(1+0.2S)(1+0.02S)}$. Determine the system gain *K* for the gain cross over frequency to be 5 rad/sec.	12 Marks	L2	CO3	PO4

UNIT-IV

7.		A Unity feedback system has an open loop transfer function $G(S) = \frac{K}{S(1+2S)}$. Design a lag compensator so that the phase margin is 40° and the steady state error for ramp input is less than or equal to 0.2.	12 Marks	L4	CO4	PO3

(OR)

8.		Consider the unity feedback system whose open loop transfer function is $G(s)H(s) = \frac{K}{S(S+3)(S+6)}$. Design a suitable compensator to meet the following specifications i) Velocity error constant, $K_v = 80$ and ii) Phase margin=35^0.	12 Marks	L4	CO4	PO3

UNIT-V

9.		Test the controllability and observability of a system described by $\begin{bmatrix} \dot{X}_1 \\ \dot{X}_2 \\ \dot{X}_3 \end{bmatrix} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ -160 & -56 & -14 \end{bmatrix} \begin{bmatrix} X_1 \\ X_2 \\ X_3 \end{bmatrix} + \begin{bmatrix} 0 \\ 1 \\ -14 \end{bmatrix} u, \quad y = \begin{bmatrix} 1 & 0 & 0 \end{bmatrix} \begin{bmatrix} X_1 \\ X_2 \\ X_3 \end{bmatrix}$	12 Marks	L4	CO5	PO4

(OR)

10.	a)	State the properties of state transition matrix and its significance.	6 Marks	L2	CO5	PO1
	b)	Find the state transitions matrix of the following system $\dot{X} = \begin{bmatrix} 0 & 1 & 0 \\ 0 & 0 & 1 \\ -2 & -5 & -4 \end{bmatrix} X.$	6 Marks	L3	CO5	PO2

PRINCIPLES OF COMMUNICATION

[ELECTRONICS AND INSTRUMENTATION ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Find the Fourier transform of unit impulse, unit step and ramp signals. Draw the corresponding Fourier spectrum.	7 Marks
	b)	A signal $m(t)$ is multiplied with $\cos w_0 t$. Determine the Fourier Transform of the resulting signal.	7 Marks
		(OR)	
2	a)	Define the Cross Correlation function. Explain about its properties.	7 Marks
	b)	Explain the necessity of communication. Explain about convolution of signals.	7 Marks

UNIT-II

3	a)	Explain the principle of V.S.B Transmission. What are its advantages over S.S.B?	7 Marks
	b)	The antenna current of an AM transmitter is 9A when only carrier is transmitted but it increases to 10.6A when the carrier is modulated by a single sine wave. Find the percentage of modulation. Determine the antenna current when the percentage of modulation changes to 0.8.	7 Marks
		(OR)	
4	a)	With necessary equations. Explain the generation of N.B.F.M using narrow band P.M generator.	7 Marks
	b)	Explain the comparisons between FM and AM techniques.	7 Marks

UNIT-III

5	a)	The spectral range of a function extends from 10.0 MHz. Find the minimum sampling rate, the maximum sampling time.	9 Marks
	b)	Discuss about the generation of PPM.	5 Marks
		(OR)	
6	a)	Distinguish FDM & TDM. What do you mean by asynchronous multiplexing?	5 Marks
	b)	What is PWM? What other names does it have? With the help of a circuit diagram explain PWM demodulation and explain its operation.	9 Marks

UNIT-IV

7	a)	Draw the block diagram of PCM generator and explain each block.	8 Marks
	b)	Explain the operation of FSK modulator.	6 Marks
		(OR)	
8	a)	Discuss the effect of noise in Delta modulation	8 Marks
	b)	Distinguish among PSK, DPSK and QPSK.	6 Marks

UNIT-V

9	a)	Define mutual information. State and prove the properties of it..	7 Marks
	b)	Explain the concept of Huffman coding technique by taking an example.	7 Marks
		(OR)	
10	a)	Explain the concept of error detection and correction using hamming codes.	7 Marks
	b)	Explain about code tree, trellis and state diagrams for a convolutional encoder.	7 Marks

DATA BASE MANAGEMENT SYSTEMS
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discriminate relationships and relationship sets.	CO2	7 Marks
	b)	Describe in detail about the Database Architecture.	CO1	7 Marks
		(OR)		
2.	a)	Define Database? Write the applications of Database Systems in detail.	CO1	7 Marks
	b)	Illustrate in detail how to translate an ER diagram into a collection of tables with associated constraints.	CO4	7 Marks

UNIT-II

3.	a)	Discuss about relational algebra with suitable example.	CO1	7 Marks
	b)	Describe about the logical database design.	CO1	7 Marks
		(OR)		
4.	a)	Consider the following database. Employee (employee-name, street, city) Works (employee-name, company-name, salary) Company (company-name, city) Manager (employee-name, manager-name) Give an expression in the relational algebra, the tuple relational calculus, and the domain relational calculus, for the following query. Find the names of all employees who work for estate bank	CO4	7 Marks
	b)	Illustrate different set operations in relational algebra with examples.	CO1	7 Marks

UNIT-III

5.	a)	Demonstrate logical connectives of SQL with example.	CO1	7 Marks
	b)	Compare and contrast BCNF with 3NF.	CO2	7 Marks
		(OR)		
6.	a)	Enumerate Multi valued dependencies and Fourth normal form with examples.	CO1	7 Marks
	b)	Explain about the following classes with an example. i) Group by; ii) Order by.	CO5	7 Marks

UNIT-IV

7.	a)	Differentiate two phase locking protocol and strict two phase locking protocol.	CO2	7 Marks
	b)	Describe Timestamp based locking protocol.	CO1	7 Marks
		(OR)		
8.	a)	Write short notes about the following: i) serializable schedule ii) recoverable schedule iii) strict schedule	CO1	7 Marks
	b)	Identify the use of log in transaction roll back and crash recovery.	CO2	7 Marks

UNIT-V

9.	a)	Demonstrate searching a given element in B+ trees? Explain with an example?	CO3	7 Marks
	b)	Write the differences between Primary versus secondary indexes.	CO2	7 Marks
		(OR)		
10.	a)	Apply the concept of B+ tree for implementation of an indexed sequential file.	CO4	7 Marks
	b)	Show the method to reduce access time with primary index by considering example.	CO3	7 Marks

FOUNDATION ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Briefly explain with neat sketch Standard Penetration Test and the corrections to be applied to find 'N' value.	CO1	4 Marks
	b)	Compute the area ratio of a thin walled tube samples having an external diameter of 60 cm and wall thickness of 2.25 mm. Do you recommend the sampler for obtaining un-disturbed soil samples?	CO2	10 Marks
		(OR)		
2.	a)	Discuss various types of soil samplers for obtaining undisturbed samples.	CO1	6 Marks
	b)	What are the methods of soil exploration? Describe briefly Geo-Physical methods of sub-surface exploration.	CO1	8 Marks

UNIT-II

3.		A gravity retaining wall retains 9 m of a backfill, unit weight of soil=19kN/m^3, angle of shearing resistance = 30º with a horizontal surface. Assume the wall interface to be vertical, determine ; (i) the magnitude and point of application of the total active pressure ii) if the water table is at a height of 4 m, and how far do the magnitude and the point of application of active pressure changed. Take submerged unit weight = 10 kN/m^3.	CO2	14 Marks
		(OR)		
4.		Explain in detail the main design considerations for retaining walls and check for stability.	CO1	14 Marks

UNIT-III

5.	a)	Explain the Bishop's method of analysis for stability of slopes.	CO2	6 Marks
	b)	A cutting 8 m deep is to be made in a saturated clay soil with γ = 20 kN/m3, Cu = 20 kN/m2 and φ = 0º. A hard stratum exists at a depth of 12 m below the ground level. Determine the angle of the slope at which failure would occur.	CO2	8 Marks
		(OR)		
6.	a)	Write short notes on: i) Taylor's stability number; ii) Types of slope failure.	CO2	6 Marks
	b)	The average height of a 2.0m wide earth slice is 20m. The properties of soil are: c′=23 kPa, φ'= 30°, γ= 17 kN/m^3. The water table is located at a depth of 4.0m below the surface along the centre line of slice. The bottom of the slice is inclined at 30° to horizontal. Calculate the safety factor against sliding using effective stress analysis.	CO2	8 Marks

UNIT-IV

7.	a)	Derive Terzaghi's bearing capacity equation.	CO2	7 Marks
	b)	A square footing is resting on stiff saturated clay with unconfined compression strength of 200 kN/m². The depth of foundation is 2 m. Determine the size of the footing if the column load is 700 kN. Assume a factor of safety as 2.5. The bulk unit weight of soil is 20kN/m^3. What will be the change in ultimate, net ultimate and safe bearing capacity if the water table is at ground level?	CO2	7 Marks

(OR)

8.	a)	Explain various types of shear failures in soil with neat sketch.	CO1	6 Marks
	b)	A footing 6 m x 4 m in plan, transmits a pressure of 150 kN/m^2 on a cohesive soil having E = 6 x 104 kN/m² andμ = 0.50. Determine the immediate settlement at the centre, assuming it to be (a) flexible footing and (b) a rigid footing.	CO2	8 Marks

UNIT-V

9.	a)	Briefly explain dynamic formulae of load carrying capacity of piles.	CO1	5 Marks
	b)	Determine the group capacity of 15 piles arranged in 3 rows of diameter 300 mm. If the piles are driven 8 m in to clay with cohesion 25 kN/m^2. Take spacing of piles as 0.8 m. (ii) Discuss the method of obtaining ultimate load and also allowable load on a single pile from pile load test.	CO3	9 Marks

(OR)

10.	a)	What are the different shapes of foundation wells and what are their comparative merits and demerits.	CO1	6 Marks
	b)	What are the various components of well foundation and discuss them in detail.	CO1	8 Marks

CODE No.: 16BT60102 SVEC-16

HIGHWAY AND TRAFFIC ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write some brief notes on: i) Central Road Fund ii) Indian Roads Congress iii) Motor vehicle act.	CO1	7 Marks
	b)	Illustrate with neat sketch about the obligatory points controlling highway alignment.	CO8	7 Marks
		(OR)		
2.	a)	A National Highway passing through rolling terrain of heavy rainfall area, R=500m. Assume suitable data and design the length of Transition curve.	CO3	7 Marks
	b)	The speed of overtaking and over taken vehicles are 80 and 50 Kmph respectively on a two way traffic road. If the acceleration of overtaking vehicle is 1.2 m/s^2 calculate SSD, OSD.	CO2	7 Marks

UNIT-II

3.		Explain any four laboratory tests on aggregates and write its inferences.	CO5	14 Marks
		(OR)		
4.	a)	Examine the design consideration for spacing of expansion and contraction joints.	CO1	7 Marks
	b)	Describe in detail about the IRC method of flexible pavement design. Discuss the limitation of this method.	CO6	7 Marks

UNIT-III

5.	a)	Classify the various methods used to measure the skid resistance? Explain it briefly.	CO1	7 Marks
	b)	List out the various road user characteristics with Indian Road Congress (IRC).	CO7	7 Marks
		(OR)		
6.	a)	What are the different types of resistance that is offered by the vehicle when it is in motion? Explain.	CO1	7 Marks
	b)	What are the various vehicle characteristics which affect the road design and traffic performance?	CO2	7 Marks

UNIT-IV

7.	a)	What are the various traffic studies in traffic engineering? Draw its flow chart.	CO8	7 Marks
	b)	Discuss the factors on which PCU values depend?	CO1	7 Marks
		(OR)		
8.	a)	What is the significance of road user characteristics in traffic engineering? Discuss briefly the various factors which affect the road user characteristics and their effects in traffic performance.	CO2	7 Marks
	b)	Discuss the various traffic studies and their importance.	CO1	7 Marks

UNIT-V

9.	a)	What is an intersection? Explain in detail, the two broad classifications of intersections.	CO1	7 Marks
	b)	What are the various aspects investigated during parking studies. what are the uses of these studies	CO4	7 Marks

(OR)

10.		What are the various types of traffic islands used? Explain the uses of each with neat sketches show few typical patterns of channelized intersections. What are the advantages and limitations of channelized intersections.	CO2	14 Marks

STEEL STRUCTURES
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Design a single bolted double cover butt joint to connect boiler plates of thickness 12 mm for maximum efficiency. Use M16 bolts of grade 4.6. Boiler plates are of Fe410 grade. Find the efficiency of the joint.	CO3	14 Marks

(OR)

2.	a)	List some common defects associated with welds.	CO1	3 Marks
	b)	Under what circumstances are slot and Plug welds used	CO1	4 Marks
	c)	Calculate the design strength of welded joint. If the size of weld is 6 mm and its length is 240 mm, the ultimate shear stress in the weld is 410 Mpa. Assume the conditions are made in workshop.	CO3	7 Marks

UNIT-II

3.		A simply supported beam ISMB 400 @ 616 N/m is subjected to a bending moment of 100 kN-m and shear force 80 kN. Check the safety of the beam in shear and deflection.	CO6	14 Marks

(OR)

4.		An ISMB 500 @ 869 N/m carries a UDL over an effective span of 6.5m, if the beam is restrained laterally. What UDL the beam can carry. Fy is 250 Mpa.	CO3	14 Marks

UNIT-III

5.		Determine the design compressive strength of single ISLB 450 @ 653 N/m when it is used as column of effective length 4 m. The yield stress of steel is 300 N/mm^2.	CO2	14 Marks

(OR)

6.		Design a single angle tension member to carry a tensile force of 225 kN. The angle is to be connected to a gusset plate by one of its leg by fillet welds. fy is 250 N/mm^2, fu is 410 N/mm^2.	CO3	14 Marks

UNIT-IV

7.		With the help of IS code, design a battened column with two channels back to back length 10 m to carry an axial factored load of 1400 kN. The column may be assumed to have restrained in position but not in direction at both ends.	CO7	14 Marks

(OR)

8.		Design a laced column with two channels back to back length 12 m to carry an axial factored load of 1600 kN. The column may be assumed to have restrained in position but not in direction at both ends.	CO3	14 Marks

UNIT-V

9.		Determine the design loads on the purlins of an industrial building near Visakhapatnam, given Class of building: General with life 50 years, Terrain: Category 2, Maximum dimension: 40 m Width of building: 15 m Height at eve level : 8 m Topography : θ less than 3 deg.	CO2	14 Marks

(OR)

10.	a)	State the different truss configurations that are often used in practice.	CO1	5 Marks
	b)	List the various steps involved in the design of truss members.	CO6	9 Marks

SOLID WASTE MANAGEMENT
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Describe the methods of sampling and characterization of solid waste.	CO2	7 Marks
	b)	Explain the functional elements of solid waste management with neat sketch.	CO1	7 Marks
		(OR)		
2.	a)	Investigate the various approaches to be followed for effective solid waste management.	CO4	7 Marks
	b)	Write a detailed note on solid waste sources in urban Centers.	CO1	7 Marks

UNIT-II

3.		Explain on-site processing techniques of solid waste in commercial and industrial facilities.	CO5	14 Marks
		(OR)		
4.		Discuss various acts, rules and legislations related to solid waste management in India.	CO8	14 Marks

UNIT-III

5.		Describe in detail the methods of collection system with flow diagram and types of vehicles used in collection system.	CO4	14 Marks
		(OR)		
6.		Discuss the types of transfer stations and the benefits of transfer stations that affect community in terms of economics, time savings and environmental quality.	CO7	14 Marks

UNIT-IV

7.	a)	Explain briefly about various magnetic separators with neat sketches.	CO9	7 Marks
	b)	Write short notes on pyrolysis of solid waste.	CO1	7 Marks
		(OR)		
8.	a)	Discuss the factors to be considered for the design of aerobic composting.	CO3	7 Marks
	b)	Write short notes on Shredding and pulverizing.	CO1	7 Marks

UNIT-V

9.	a)	Explain the adverse effects of a landfill leachate and appropriate control measures.	CO6	7 Marks
	b)	Enumerate step by step procedure involved in site selection for sanitary landfills.	CO1	7 Marks
		(OR)		
10.		Enumerate briefly about Bio-medical waste management.	CO1	14 Marks

RURAL TECHNOLOGY

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	A small voluntary association of poor people gathered and formed a group called self-help group. State the nature and various features of self-help group.	CO1	7 Marks
	b)	Kuntala is a village which is under developed without using any government schemes. Apply some of the schemes to develop the village under rural development.	CO2	7 Marks
		(OR)		
2.	a)	Srinivas was elected as panchayat president of Itepalli. He called all the villagers and explained about the roles and responsibilities of Panchayat raj institutions. What he explained to villagers.	CO1	7 Marks
	b)	Murthy is a young post graduate in Rural Management studied from Delhi University. Later he got appointment in NABARD. One day he visited a small village in Chittoor District. He observed that the village was not developed and he wants to implement the schemes proposed by NABARD and how he can educate the rural people about NABARD.	CO1	7 Marks

UNIT-II

3.	a)	Analyze the process of composting and Vermi-composting.	CO2	7 Marks
	b)	Arjun from a poor village background went to town to study in electrical engineering in a university where he got a free seat. After completing graduation, he wants to develop his village regarding power through non-conventional energy resources. What are the different types of energies he can use? Explain any two in detail.	CO1	7 Marks
		(OR)		
4.		Differentiate between renewable and non-renewable energy resources. Write the working procedure about trough system and power towers in concentrated solar power and photovoltaics to generate electricity.	CO1	14 Marks

UNIT-III

5.	a)	Rayalaseema region is a drought prone area with many dry lands. Due this condition, the rare species will become extinct in future and need to improve the situation. In this regard government decided to setup industry to implement tissue culture in the area. Explain the techniques involved in doing the process.	CO4	7 Marks
	b)	Which crops are called Economic plants? What are the advantages of cultivating of economic plants?	CO1	7 Marks
		(OR)		
6.		What is meant by cottage industry? How employment generation is	CO4	14 Marks

possible with the cottage industry.

UNIT-IV

7.	a)	Educate the rural people about the manufacturing process of bio fertilizers.	CO6	7 Marks
	b)	Nandipalli village people are suffering with quality less water problem. Explain basic water purification methods suitable in rural areas.	CO5	7 Marks
		(OR)		
8.	a)	Raju is living in the coastal area and wish to carryout fish farming both in salt and fresh water. Suggest the existing practices for the fish farming.	CO2	7 Marks
	b)	Chinnakunta village is facing water scarcity problems. How the problem can be solved through different rain water harvesting techniques.	CO1	7 Marks

UNIT-V

9.		List ICT applications in rural areas and explain in detail.	CO2	14 Marks
		(OR)		
10.	a)	Explain the need and necessity of technology in rural development. How it can be achieved with private partnership under SAGY.	CO3	7 Marks
	b)	How do you understand the impact of environmental parameters and pollution on human health?	CO6	7 Marks

CODE No.: 16BT60302 SVEC-16

HEAT TRANSFER
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Derive the general heat conduction equation in spherical coordinates.	CO2	14 Marks

(OR)

2.	a)	Define Critical thickness of insulation. Obtain an expression for critical radius of insulation for a cylindrical shell.	CO1	7 Marks
	b)	The door of a cold storage plant is made from two 6mm thick glass sheets separated by a uniform air gap of 2mm. The temperature of the air inside the roo m is -20^{0}C and the ambient air temperature is 30^{0}C. Assuming the heat transfer coefficient between glass and air to be 23.26 W/m^2 K, determine the rate of heat leaking into the room per unit area of the door. Neglect convection effects in the air gap. K_{glass} = 0.75 W/m K; K_{air} = 0.02 W/m K.	CO5	7 Marks

UNIT-II

3.	a)	Define Efficiency and Effectiveness of Fin.	CO2	2 Marks
	b)	A steel rod (K= 32 W/m^{0}C), 12mm in diameter and 60mm long, with an insulated end, is to be used as a spine. It is exposed to surroundings with a temperature of 60^{0}C and a heat transfer coefficient of 55 W/m^2 ^{0}C. The temperature at the base of fin is 95^{0}C. Determine: i) The heat dissipation ii) The temperature at the edge of the fin iii) The fin efficiency.	CO5	12 Marks

(OR)

4.	a)	What is Lumped Heat analysis? Derive an expression for its temperature distribution.	CO2	7 Marks
	b)	On a hot summer's day a concrete highway may reach a temperature of 55^{0}C. Suppose that a stream of water is directed on the highway so that the surface temperature is suddenly lowered at 35^{0}C. How long it will take to cool the concrete to 45^{0}C at a depth of 5cm from the surface? For concrete, K= 1.279 W/m K, œ=1.77 X 10^{-3}m^2/hr.	CO5	7 Marks

UNIT-III

5.	a)	What is the boundary layer thickness? What do you mean by laminar and turbulent boundary layers? What is laminar sublayer?	CO1	7 Marks
	b)	A horizontal fluorescent tube which is 3.8 cm in diameter and 120 cm long stands in still air at 1 atm. and 20^{o}C. If the surface temperature of the tube is 40^{o}C and radiation is neglected, what percentage of power is being dissipated by convection? Take properties of air as v = 16.19 X 10^{-6} m^2/sec., K air = 0.02652 W/m K, Pr = 0.706, p = 1.02 kg/m^3, Cp = 1.004 kJ/kg K .	CO2	7 Marks

(OR)

6.		A rectangular plate is 120 cm long in the direction of flow and 200 cm wide. The plate is maintained at 80^0C when placed in nitrogen that has a velocity of 2.5 m/s and a temperature of 0^0C. Determine: i) the average friction coefficient, ii) the viscous drag exerted on the plate, iii) the average heat transfer coefficient and iv) the total heat transfer rate from the plate.	CO2	14 Marks

UNIT-IV

7.		Hot gases enter a finned tube heat exchanger at 300 and leave at 100. It is used to heat water at a flow rate of 1 kg/s from 35 to 125^0C. The specific heat of exhaust hot gas is 1000 J/kgK and the overall heat transfer coefficient based on the gas side is U_h = 100 W/m^{2}K. Determine the required gas surface area using the NTU method.	CO5	14 Marks

(OR)

8.		A 4cm outer diameter, 1 m long tube is to be used to condense steam at atmospheric pressure. The water flows inside the tube maintaining the wall surface at 60^0C. Estimate the mass of condensate for the tube in horizontal position.	CO2	14 Marks

UNIT-V

9.	a)	Derive an expression for radiation heat exchange between two large parallel planes.	CO2	7 Marks
	b)	Emissivities of two large parallel plates maintained at 850^0C and 350^0C are 0.35 and 0.55 respectively. Find the percentage reduction in heat transfer when a polished aluminum radiation shield of emissivity 0.05 is placed between them. Also find the temperature of the shield.	CO3	7 Marks

(OR)

10.	a)	What is radiation shape factor and Plank's distribution law.	CO1	6 Marks
	b)	Two parallel plates 0.5 by 1.0 m are spaced 0.5 m apart. One plate is maintained at 1000 ^{0}C and the other at 500 ^{0}C. The emissivities of the plates are 0.2 and 0.5, respectively. The plates are located in a very large room, the walls of which are maintained at 30^0C. The plates exchange heat with each other and with the room, but only the plate surfaces facing each other are to be considered in the analysis. Find the net heat transfer to each plate and to the room.	CO2	8 Marks

GAS TURBINES AND JET PROPULSION
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Point out the applications of Gas turbine power plants.	CO1	4 Marks
	b)	The Pressure ratio of an Open cycle gas turbine power plant is 5.6.Air is taken at 30^0C and 1 bar. The compression is carried out in two stages with perfect intercooling in between. The maximum temperature of the cycle is limited to 700^0C.Assuming the isentropic efficiency of each stage compressor is 85% and Turbine is 95%.Estimate the power developed and efficiency of the power plant, if the air flow is 1.2 kg/sec. Mass of the fuel may be neglected, and may be assumed that Cp=1.02 kJ/kg K and gamma=1.41 & Illustrate its TS Chart and process.	CO2	10 Marks

(OR)

2.	a)	Point out the effect of pressure ratio on the performance of gas turbine?	CO1	4 Marks
	b)	Ina gas turbine plant working on Brayton cycle, the air at inlet is 27°c, 0.1 MPa. The pressure ratio is 6.25 and the maximum temperature is 800°C.The turbine and compressor efficiencies are each 80%. Examine the compressor work, turbine work, heat supplied, cycle efficiency and turbine exhaust temperature. Mass of air may be considered as 1Kg. Draw T-S diagram.	CO2	10 Marks

UNIT-II

3.		Following particulars related to centrifugal compressor Is Inlet diameter of impeller is 61.4 cm and outlet diameter of impeller is 123 cm, Speed is 5000rpm n=1.6, FAD = 1000 m^3/min pressure ratio is 1.33. Assuming that pressure rise takes place in the impeller .Find the angle at which air from impeller enter the casing, breadth of the impeller blade inlet and outlet.	CO2	14 Marks

(OR)

4.		A centrifugal compressor running at 7000 rpm delivers 500 m^3/min of free air. The air is compressed from 1 bar and 20 degrees centigrade. To a pressure ratio of 4 with an isentropic efficiency of 0.85. Blades are radial at outlet of impeller and the flow velocity of 60m/s may be assumed constant. The outer radius of the impeller is twice the inner and slip factor may be assumed as 0.9. Calculate the i) Final temperature of air ii) The theoretical power iii) Inner diameter at inlet and outlet iv) Breadth of the impeller at inlet v) Impeller blade angle at inlet vi) Diffuser blade angle at outlet.	CO2	14 Marks

UNIT-III

5.	a)	What are the reasons for uneven temperature distributions in gas turbines? What harm can it cause?	CO3	7 Marks
	b)	What is blowout in gas turbines? When it does it occur?	CO3	7 Marks

(OR)

6.		How stabilization of flame is obtained in a typical gas turbine combustion chamber? Show by a sketch the flow pattern in a typical combustion chamber.	CO3	14 Marks

UNIT-IV

7.	a)	Draw the thermodynamic cycle of the ramjet engine and derive the equation for thrust.	CO4	7 Marks
	b)	What are the advantages and disadvantages of a ramjet engine and what are its applications.	CO4	7 Marks

(OR)

8.		Explain the working principle of pulse jet engine with the help of schematic diagram. Mention it advantages and disadvantages.	CO4	14 Marks

UNIT-V

9.	a)	Compare the various rocket propulsion devices.	CO1	7 Marks
	b)	Explain the concept of ion propulsion.	CO5	7 Marks

(OR)

10.	a)	Explain the concept plasma propulsion.	CO5	7 Marks
	b)	Draw a schematic diagram of a liquid propellant rocket and explain its working. What are the applications of this type of rocket?	CO5	7 Marks

DIGITAL SIGNAL PROCESSING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Using the properties of DTFT, find the frequency domain representation of following signals. i) $\left(\frac{1}{3}\right)^{\lvert n-3\rvert} u(n-3)$; ii) $n3^{-n}u(-n)$	CO5	7 Marks
	b)	Determine the z-transform the signal $x(n) = (-1)^n \cos\left(\frac{n\pi}{3}\right)u(n)$.	CO2	7 Marks

(OR)

2.	a)	Check whether following system is linear, causal and time invariant. $y(n) = x(n)x(n-2)$.	CO2	7 Marks
	b)	Derive the relation between the input and output of LTI system.	CO3	7 Marks

UNIT-II

3.	a)	Develop the DIT FFT algorithm with neat sketch for N = 8.	CO3	8 Marks
	b)	Synthesize the time domain sequence using IDFT of the sequence $x(k)=\{1, 1-2j, -1, 1+2j\}$.	CO5	6 Marks

(OR)

4.	a)	Find the 8-Point DFT of the sequence $x(n)=\{1, -1, -1, -1, 1, 1, 1, -1\}$ using DIT FFT algorithm.	CO5	7 Marks
	b)	Derive the relation between DFT and Z-transform.	CO3	7 Marks

UNIT-III

5.	a)	Apply the bilinear transformation to $H_a(s) = \frac{4}{(s+3)(s+4)}$ with $T = 0.5$s and find $H(z)$.	CO4	7 Marks
	b)	Derive the frequency mapping expression for bilinear transformation.	CO2	7 Marks

(OR)

6.	a)	Synthesize the characteristics of Butterworth prototype filter and give its pole zero locations in Z plane.	CO4	7 Marks
	b)	Obtain the Direct form I and Direct form II realizations of the difference equation $y(n)=b0x(n) + b1x(n-1) + b2x(n-2) - a1y(n-1) - a2y(n-2)$.	CO2	7 Marks

UNIT-IV

7.	a)	Synthesize the Direct form realizations of linear phase FIR filter when N is even and odd.	CO4	7 Marks
	b)	Design Low pass FIR filter for the desired frequency response $H_d(w) = \begin{cases} e^{-j2w} & -\frac{\pi}{4} \le \omega \le \frac{\pi}{4} \\ 0 & \frac{\pi}{4} \le \omega \le \pi \end{cases}$ using Rectangular window when N = 5.	CO3	7 Marks

(OR)

8.	a)	Design a linear phase FIR Lowpass filter using rectangular window with cut off frequency Wc=0.2π rad/sample and N=7.	CO3	7 Marks
	b)	Distinguish advantages and disadvantages of FIR and IIR filters.	CO2	7 Marks

UNIT-V

9.	a)	Write a short note on i) pipelining; ii) Onchip peripherals.	CO1	7 Marks
	b)	Distinguish synchronous and asynchronous mode of operation of serial ports.	CO1	7 Marks

(OR)

10.	a)	Explain Von Neumann and Harvard architecture with a neat sketch	CO1	7 Marks
	b)	Explain the internal architecture of TMS320C6X DSP processor.	CO1	7 Marks

CODE No.: 16BT60406 SVEC-16

TELECOMMUNICATION SWITCHING SYSTEMS
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Memorize the Evolution of telecommunications.	CO1	7 Marks
	b)	Assess the advantages and disadvantages of space division and time division switching systems.	CO2	7 Marks

(OR)

2.	a)	Identify the importance of Cross bar switching and its switch configurations.	CO1	7 Marks
	b)	Distinguish Centralized SPC and distributed SPC and Explain.	CO2	7 Marks

UNIT-II

3.	a)	Categorize the Subscriber loop systems and Interpret in detail. Also identify the importance of transmission plan.	CO1	7 Marks
	b)	Estimate the need of Switching hierarchy and routing and also discuss the environmental issues pertaining to routing.	CO5	7 Marks

(OR)

4.	a)	Explain i) Transmission plan, ii) Numbering plan.	CO1	7 Marks
	b)	Assess the charging plan for telecommunication services.	CO5	7 Marks

UNIT-III

5.	a)	The traffic statistics of a company using a PABX indicates that 180 out-going calls are initiated every hour during working hours. Equal number of calls comes in. Each call lasts for 200 seconds on the average. If the GOS required is 0.05, determine the number of lines required between the PABX and the main exchange.	CO3	7 Marks
	b)	Compare the following Signalling techniques. i) In channel and common channel signalling. ii) In band and out band signalling. iii) Channel associated and channel non associated signalling.	CO4	7 Marks

(OR)

6.	a)	A group of 20 servers carry a traffic control of 10 erlangs. If the average duration of a call is three minutes, calculate the number of calls put through by a single server and the group as a whole in a one hour period.	CO3	7 Marks
	b)	Describe various categories of signalling techniques for a tele-communication system.	CO4	7 Marks

UNIT-IV

7.	a)	List out the various features of ISDN B and D channels.	CO1	6 Marks
	b)	Explain signalling mechanism used in IDSN.	CO5	8 Marks
		(OR)		
8.	a)	List out the features of ATM networks. Explain the principle of operation of ATM switch.	CO1	7 Marks
	b)	Formulate the design goals and basic principles of frame relay.	CO6	7 Marks

UNIT-V

9.	a)	Assess the relationship between STS levels and OC levels.	CO6	7 Marks
	b)	What is the relation between STS and STM and explain.	CO2	7 Marks
		(OR)		
10.	a)	How is STS-I frame organized?	CO6	7 Marks
	b)	How is an STS Multiplexer is different from an add / drop multiplier since both can add signals together?	CO3	7 Marks

DIGITAL CMOS IC DESIGN
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Summarize the charge re-distribution in a clocked gate.	CO1	10 Marks
	b)	Why reverse body biasing important to extend the battery life in the present day context.	CO6	4 Marks
		(OR)		
2.	a)	Explain the clock skew problem in dynamic circuits.	CO1	6 Marks
	b)	Why low power become an important issue in the present day VLSI circuit realization.	CO6	8 Marks

UNIT-II

3.	a)	Identify and design different contact cuts used in NMOS circuits.	CO3	7 Marks
	b)	Evaluate the functionality of Event driven simulator in view of an XOR gate verification.	CO4	7 Marks
		(OR)		
4.	a)	Build the layout of two input NAND gate.	CO3	7 Marks
	b)	Recommend the CMOS design rule for wire and Transistor.	CO4	7 Marks

UNIT-III

5.	a)	Explain Leakage current in DRAM with suitable diagram.	CO1	7 Marks
	b)	Construct NOR Flash memory structure.	CO3	7 Marks
		(OR)		
6.	a)	Explain basic memory architecture with neat sketch.	CO1	7 Marks
	b)	Design 1 bit basic RAM binary cell and explain its read and write operation.	CO3	7 Marks

UNIT-IV

7.	a)	Suggest methods to overcome RC delay.	CO5	6 Marks
	b)	Outline the design techniques to address L(di/dt) Problem.	CO6	8 Marks
		(OR)		
8.	a)	Suggest a design technique for circuit fabrics with predictable wire delay.	CO5	7 Marks
	b)	Assess the challenges for designing reliable output and input pads.	CO6	7 Marks

UNIT-V

9.	a)	Write short notes on Documentation of design process.	CO1	6 Marks
	b)	List the domains in IC development and classify the levels of abstraction.	CO2	8 Marks
		(OR)		
10.	a)	Outline gate array design with neat sketches.	CO1	7 Marks
	b)	Categorize design methods and describe in detail about them.	CO2	7 Marks

INFORMATION THEORY AND CODING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		Write a short note on: i) Kraft's inequality ii) Markov sources and iii) Optimal codes.	CO1	14 Marks
		(OR)		
2.	a)	Explain and derive the expression for differential and conditional differential entropy.	CO2	7 Marks
	b)	Prove that: i) $H(x, y) = H(x) + H(Y)$ ii) $I(x, y) = H(x) + H(y) - H(x, y)$	CO2	7 Marks

UNIT-II

3.		Derive Shannon's second theorem.	CO2	14 Marks
		(OR)		
4.	a)	Evaluate the relation between mutual information and joint entropy.	CO2	7 Marks
	b)	Derive the channel capacity of parallel Gaussian channel.	CO2	7 Marks

UNIT-III

5.	a)	Discuss the generator matrix for linear block codes.	CO5	7 Marks
	b)	Generator matrix of a (7,4) block code is $G = \begin{bmatrix} 1 & 0 & 0 & 0 & 1 & 0 & 1 \\ 0 & 1 & 0 & 0 & 1 & 1 & 1 \\ 0 & 0 & 1 & 0 & 1 & 1 & 0 \\ 0 & 0 & 0 & 1 & 0 & 0 & 1 \end{bmatrix}$ i) Determine the Parity - Check matrix. ii) Determine the maximum weight of the code.	CO4	7 Marks
		(OR)		
6.		The parity check bits of a (8, 4) block code are generated by $c5 = d1+d2+d4$, $c6 = d1+d2+d3$, $c7 = d1+d3+d4$, $c8 = d2+d3+d4$, where $d1$, $d2$, $d3$, $d4$ are message bits. Develop the generator matrix and parity check matrix for this code; i) Identify the minimum weight of this code ii) Compute the error detecting capabilities of this code.	CO4	14 Marks

UNIT-IV

7.	a)	Explain the Viterbi algorithm with an example.	CO6	8 Marks
	b)	Describe clearly the characteristics of BCH code.	CO1	6 Marks

(OR)

8.	a)	Discuss some of Practical applications of Convolution codes.	CO6	6 Marks
	b)	Derive an encoder and decoder for the (15, 11) cyclic Hamming code generated by $g(x) = 1 + x + x4$. Also explain the properties of syndrome polynomial.	CO2	8 Marks

UNIT-V

9.		Design a (7, 3) RS decoder for a receiving vector is R=10000110111110101101111.	CO3	14 Marks

(OR)

10.		With an example discuss about feedback decoder.	CO1	14 Marks

LIGHT WAVE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks

UNIT-I

1.	a)	Appraise the requirements to be satisfied while selecting the Fiber Materials. Also suggest the materials.	CO6	7 Marks
	b)	Identify and illustrate the appropriate optical fibers for long and short distance communication.	CO5	7 Marks
		(OR)		
2.	a)	Justify how the Optical Fiber Communications are advantageous over conventional communication.	CO6	7 Marks
	b)	Assess the different modes in cylindrical fibers.	CO5	7 Marks

UNIT-II

3.	a)	List and Explain various mechanisms that cause absorption losses in optical fibers.	CO1	8 Marks
	b)	Distinguish between macro bending and micro bending losses in optical fibers.	CO2	6 Marks
		(OR)		
4.	a)	Discuss in detail about the Waveguide and Material Dispersions.	CO1	7 Marks
	b)	Assess the Core & Cladding losses of Optical Fibers.	CO2	7 Marks

UNIT-III

5.	a)	Develop an expression for the density of photons resulting from stimulated and spontaneous emissions in Laser diode.	CO3	7 Marks
	b)	The Radiative and Nonradiative recombination lifetimes of the minority carriers in the active region of a double hetero junction LED are 60ns and 100ns respectively. Determine the total carrier recombination life time and the power internally generated within the device when the peak emission wavelength is 0.87 μm at a drive current of 4mA.	CO4	7 Marks
		(OR)		
6.	a)	Develop the diagram and explain the operation of an edge-emitting double-hetero-junction LED.	CO3	7 Marks
	b)	Derive the expressions for internal quantum efficiency and optical power generated internally in LED.	CO2	7 Marks

UNIT-IV

7.	a)	List and describe different types of mechanical misalignment between two joined fibers.	CO1	7 Marks
	b)	Distinguish Splices and Connectors.	CO2	7 Marks
		(OR)		
8.	a)	Discuss about Lensing Schemes for Coupling Improvement.	CO1	6 Marks
	b)	Consider an LED having a circular emitting area of radius 35μm and a lambertian emission pattern with 150W/(cm^2.sr) axial radiance at a given drive current. Compare the optical powers coupled into two step index fibers, one of which has a core radius of 25μm with NA = 0.20 and the other which has a core radius of 50μm with numerical aperture = 0.2.	CO6	8 Marks

UNIT-V

9.	a)	A 1550nm single mode digital fiber optic link needs to operate at 565 Mb/s over 50km without repeaters. A single mode InGaAsP laser launches an average optical power of -13dBm into the fiber. The fiber has a loss of 0.35dB/km, and there is a splice with a loss of 0.1dB every kilometer. The coupling loss at the receiver is o.5dB, and the receiver uses an InGaAs APD with a sensitivity of -30dbm. Excess noise penalties are predicted to be 1.5dB. Set up an optical power budget for this link and find the system margin.	CO6	7 Marks
	b)	For a multimode fiber link the following parameters are recorded i) LED with drive circuit has rise time of 15ns ii) LED Spectral width =40nm iii) Material Dispersion related rise time degradation =21ns over 6km link. iv) Receiver Bandwidth = 25MHz. v) Modal Dispersion Rise Time = 3.9nSec. Calculate the system Rise Time.	CO4	7 Marks

(OR)

10.	a)	Model Ethernet in Optical Networks.	CO5	7 Marks
	b)	Sketch the optical power loss model for a point-to-point link and mention the various losses that occur at connectors and splices.	CO4	7 Marks

SOFTWARE TESTING
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss software testing Myths and Facts.	CO1	7 Marks
	b)	Define psychology for software Testing and Explain?	CO1	7 Marks
		(OR)		
2.	a)	Draw the life cycle of Bugs.	CO2	8 Marks
	b)	Explain bug classification based on SDLC?	CO1	6 Marks

UNIT-II

3.	a)	Explain basic path testing.	CO1	7 Marks
	b)	How do you calculate the number of decision nodes foe switch-case?	CO1	7 Marks
		(OR)		
4.	a)	Explain different data-flow anomalies.	CO1	6 Marks
	b)	Explain Dynamic data flow testing.	CO1	8 Marks

UNIT-III

5.	a)	What is boundary value analysis? Discuss the need for boundary value analysis.	CO1	7 Marks
	b)	Design test cases using Boundary value analysis for the given problem. "A program reads an integer number within the range [1,100] and determines whether it is prime or not"	CO3	7 Marks
		(OR)		
6.	a)	Discuss the steps involved in equivalence class partitioning.	CO1	7 Marks
	b)	Apply equivalence class testing technique and design suitable test cases for the following requirement. "A program reads three numbers A, B and C, with a range [1, 50] and prints the largest number."	CO4	7 Marks

UNIT-IV

7.	a)	Discuss the role of software measurement	CO1	7 Marks
	b)	List and explain the types of software metrics.	CO1	7 Marks
		(OR)		
8.		What type of test planning will you plan for real time critical software? Design a test plan using test plan components.	CO6	14 Marks

UNIT-V

9.		Explain the following regression test selection techniques: i) Minimization ii) Dataflow iii) Safe iv) Ad hoc.	CO1	14 Marks
		(OR)		
10.		Demonstrate data driven testing on Bus Ticket Reservation application using regression testing tool.	CO5	14 Marks

WIRELESS NETWORKS

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Differentiate between connectionless and connection oriented packet data network protocols.	CO2	6 Marks
	b)	Write short notes on portability, nomadicity, mobility and coverage.	CO1	8 Marks
		(OR)		
2.		We provide a wireless public phone with six lines to a ferry crossing between Helsinki and Stockholm carrying 100 passengers where, on the average, each passenger makes a 3-min telephone call every 2 hours. Find the following, i) What is the probability of a passenger approaching the telephone and more of the four lines are available? ii) What would be the average delay if the ferry had 200 passengers?	CO5	14 Marks

UNIT-II

3.	a)	Compare Public-key and secret key algorithms.	CO2	10 Marks
	b)	List the issues in Mobile IP.	CO1	4 Marks
		(OR)		
4.	a)	Write short notes on privacy and authentication requirements of wireless networks.	CO1	10 Marks
	b)	Brief about Challenge response scheme.	CO1	4 Marks

UNIT-III

5.	a)	How to handle MAC Management sub layer?	CO2	10 Marks
	b)	Differentiate between Probe and beacon.	CO2	4 Marks
		(OR)		
6.	a)	How do HPNA, DSL, and POTS share the telephone wirings?	CO2	8 Marks
	b)	Create a Home Access Networks using IEEE 802.11.	CO6	6 Marks

UNIT-IV

7.	a)	Explain the Overview of SMS operation.	CO1	10 Marks
	b)	Discuss about Service description option in SMS.	CO4	4 Marks
		(OR)		
8.	a)	Build the WAP programming architecture and Protocol layers.	CO6	10 Marks
	b)	Write the uses of i-Mode service in WAP.	CO1	4 Marks

UNIT-V

9.	a)	Create File Transfer Application using Bluetooth.	CO6	7 Marks
	b)	Build the Functional overview of the Bluetooth specification.	CO6	7 Marks
		(OR)		
10.		Considering that the encoded voice in Bluetooth is at 64Kbps in each direction. Find the following, i) Use packet format for the HV1 channels to show that these packets are sent every six slots. ii) Use packet format for the HV2 channel to find how often these packets are sent.	CO5	14 Marks

CYBER SECURITY AND LAWS

[Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	In classifications of cyber crimes explain about cyber crime against property, organization, society and crimes emanating from **usenet** newsgroup.	CO3	10 Marks
	b)	Define the terms Techno-crime, Techno-vandalism	CO2	4 Marks
		(OR)		
2.		Outline the Indian Perspective on Cyber Crime and Indian ITA 2000.	CO6	14 Marks

UNIT-II

3.	a)	Illustrate the categories of Password cracking attacks? Interpret in what way this is different from the password cracking and password recovery?	CO3	7 Marks
	b)	Categorize DDoS attacks.	CO2	7 Marks
		(OR)		
4.		Define Spyware and keyloggers. Specify how Spyware and keyloggers are related. List and describe different types of keyloggers.	CO1	14 Marks

UNIT-III

5.		Analyze the consequences of not addressing the weakness in Information Technology Act. Illustrate it's Impact on State Government Powers & Information Technology Organizations.	CO6	14 Marks
		(OR)		
6.		Illustrate about the Digital Signatures in the ITA 2000.Impact of Oversights in ITA 2000 Regarding Digital Signatures. Current Scenario regarding Digital Signatures under the Indian IT Act.	CO2	14 Marks

UNIT-IV

7.		Discuss the Organizational Guidelines for Internet Usage and how Privacy is protected in an Organization. Discuss about Safe Computing and Usage Policy.	CO5	14 Marks
		(OR)		
8.		Summarize about Media and Asset Protection in case of Incident Handling and what kind of best practices can be followed.	CO5	14 Marks

UNIT-V

9.		Discuss about the Ethical Dimension of Cyber Crimes.	CO4	14 Marks
		(OR)		
10.		Illustrate the following i) Intellectual Property ii) Copyright iii) Patent iv) Trademarks v) Trade Secret vi) Trade Name vii) Domain Name.	CO1, CO5, CO6	14 Marks

CRYPTOGRAPHY AND NETWORK SECURITY

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Write a short note on security attacks.	CO1	7 Marks
	b)	Differentiate Poly and Mono Alphabetic cipher techniques with example.	CO2	7 Marks
		(OR)		
2.	a)	Explain about various security services.	CO1	7 Marks
	b)	Explain the model for Internet security.	CO1	7 Marks

UNIT-II

3.	a)	With the help of a neat sketch, Analyze a single round of DES algorithm.	CO2	7 Marks
	b)	Identify the security issues of DES algorithm.	CO4	7 Marks
		(OR)		
4.	a)	Explain different cipher block modes of operation.	CO1	7 Marks
	b)	What is the important Feistel cipher in Cryptography?	CO1	7 Marks

UNIT-III

5.	a)	Identify the digital evidences and its respective admissibility in courts in cyber crimes.	CO6	7 Marks
	b)	List the public key cryptosystems requirements that must be fulfill to design a secure algorithm.	CO2	7 Marks
		(OR)		
6.	a)	Discuss the role of a compression function in a hash function.	CO1	7 Marks
	b)	Compare and contrast the principal differences between version 4 and version 5 of Kerberos.	CO2	7 Marks

UNIT-IV

7.	a)	Define web security threats. Identify the consequences and counter measures of such security threats?	CO3	7 Marks
	b)	With a neat diagram explain the steps performed by sending PGP entity to transmit a message that is both signed and encrypted.	CO5	7 Marks
		(OR)		
8.	a)	State the roles of different participants in SET system?	CO1	7 Marks
	b)	Explain how the E-mail authentication and confidentiality is achieved using PGP.	CO5	7 Marks

UNIT-V

9.	a)	Explain about Statistical Anomaly Detection.	CO1	7 Marks
	b)	Identify the preventive measures for DoS / DDoS attacks.	CO2	7 Marks
		(OR)		
10.	a)	Discuss the main actions of a packet filter.	CO1	7 Marks
	b)	Explain different types of malwares.	CO1	7 Marks

PRINCIPLES OF BUSINESS ECONOMICS AND ACCOUNTANCY

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

	UNIT-I				
1.	Examine utility and significance of Business Economics.	12 Marks	L2	CO1	PO1
	(OR)				
2.	What is demand forecasting? Demand forecasting is a key for success of an enterprise. Explain	12 Marks	L2	CO1	PO1
	UNIT-II				
3.	Interpret the concepts of Isoquants and Isocosts.	12 Marks	L3	CO2	PO2
	(OR)				
4.	Solve the following from the given data – i) BEP ii) Margin of Safety for 30,000 units of sales iii) Sales required to earn a profit of Rs.15,000/- Selling Price /unit – Rs.20.00/- Variable Cost/unit – Rs.8.00/- Fixed Cost – Rs.24, 000/-	12 Marks	L3	CO2	PO2
	UNIT-III				
5.	Describe with a neat graph, price and output determination under monopolistic competition.	12 Marks	L2	CO3	PO2
	(OR)				
6.	Sketch the characterization of Perfect Competition.	12 Marks	L3	CO3	PO2
	UNIT-IV				
7.	Define "Trial Balance". Explain its' significance, objectives and limitations.	12 Marks	L2	CO4	PO2
	(OR)				
8.	Pass the necessary journal entries for the following transactions in the books of Raghava: 2019 Jan. 1 Raghava commenced a business with Rs.15,00,000/- Jan. 6 Bought goods from Harika for cash Rs. 1,04,500/- Jan. 17 Bought goods by Suri Rs. 1,48,000/- Jan. 21 Commission paid Rs. 3,600/- Jan 28 Cash deposited in Bank Rs.10,000/- Jan. 31 Salaries paid through cheque Rs.20,000/-	12 Marks	L4	CO4	PO12
	UNIT-V				
9.	Discuss relative merits and demerits of computerized accounting.	12 Marks	L2	CO5	PO2

(OR)

10. From the following trail balance as on September 30, 2018 prepare trading, profit and loss account for the year ended December 31, 2018 and a balance sheet as on that date: 12 Marks L3 CO5 PO12

Particulars	Amount	Particulars	Amount
Sundry debtors	64,000	Sales	2,65,000
Opening Stock	44,000	Sundry Creditors	25,300
Cash in hand	70	Bills payable	15,000
Cash at bank	3,090	Capital	1,59,000
Plant and Machinery	35,000		
Trade Expenses	2,150		
Salaries	4,450		
Carriage outwards	800		
Rent	1,800		
Purchases	2,37,740		
Discounts	2,200		
Land and Building	69,000		
	464,300		**464,300**

Also adjust the following:

i) Stock as on December 31, 2018 amounted to Rs.24,900/-
ii) Rent outstanding Rs.170/-
iii) Trade expenses yet to be paid Rs.300/-
iv) Write off bad debts Rs 800/-
v) Depreciate Plant and Machinery @ 10% p.a.

SOFTWARE TESTING

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Differentiate error, bug, defect, fault, failure, test ware and incident giving examples of each.	6 Marks	L4	CO1	PO2
	b)	With a neat diagram explain Software Testing model.	6 Marks	L4	CO1	PO1
		(OR)				
2.	a)	Compare and contrast Positive testing and Negative testing.	6 Marks	L4	CO1	PO2
	b)	Explain the model for software testing.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	Discuss about Boundary value Analysis technique in software testing.	6 Marks	L2	CO2	PO1
	b)	Illustrate with an example how decision table is used to generate the test cases.	6 Marks	L4	CO2	PO3
		(OR)				
4.	a)	Discuss the role of primary mutants and secondary mutants in the mutation testing with an example.	6 Marks	L2	CO2	PO2
	b)	Explain the guidelines for developing the test plan.	6 Marks	L2	CO3	PO1
		UNIT-III				
5.	a)	Define test script and explain the steps in developing test script.	6 Marks	L2	CO3	PO1
	b)	Illustrate how test script is developed and implemented for testing software.	6 Marks	L4	CO4	PO2
		(OR)				
6.	a)	Discuss the characteristics of good test scenario.	6 Marks	L4	CO3	PO2
	b)	List the advantages and disadvantages of Equivalence Partitioning technique.	6 Marks	L4	CO3	PO2
		UNIT-IV				
7.	a)	Justify the role of classifying software metrics on monitoring the progress of the software project.	6 Marks	L2	CO5	PO2
	b)	With a neat diagram, explain the selective retest technique functionalities for producing quality software.	6 Marks	L2	CO5	PO2
		(OR)				
8.	a)	What are the types of regression testing and write the steps involved in defining regression testing problem.	6 Marks	L2	CO5	PO2
	b)	Design test cases by using regression testing to produce quality software.	6 Marks	L2	CO6	PO1
		UNIT-V				
9.	a)	Summarize the key elements involved in Selection of Testing Tools**.**	6 Marks	L2	CO6	PO1
	b)	What type of test planning will you plan for real time critical software? Design a test plan using test plan components.	6 Marks	L3	CO6	PO3
		(OR)				
10	a)	With a neat diagram explain Test Organization**.**	6 Marks	L2	CO6	PO2

. b) Explain the need for automated testing tools. 6 Marks L2 CO6 PO1

STEEL STRUCTURES

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	Design a bracket connection to transfer an end reaction of 225 kN as shown in fig.1. The end-reaction from the girder acts at an eccentricity of 300 mm from the face of the column flange. Design bolted joint connecting the tee-flange with the column flange. Steel is of grade E250 and bolts of grade 4.6.	12 Marks	L6	CO1	PO1 PO2 PO3 PO4 PO5 PO6 PO8 PO10

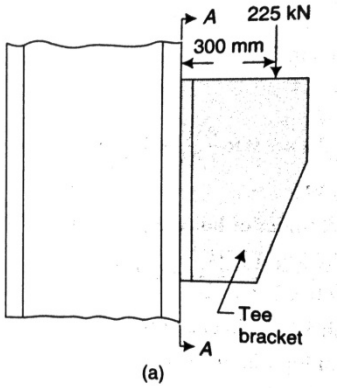

Fig.1

(OR)

2.	Determine the design strength of the welded joints, if two plates of 16 mm and 14 mm thickness are to be joined in the workshop by. i) a single V-groove weld ii) a double V-groove weld The effective length of the weld is 175 mm.	12 Marks	L4	CO1	PO1 PO2 PO5 PO6 PO8

UNIT-II

3.	Design a simply supported beam of span 4m to carry a factored udl of 30 kN/m.	12 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO5 PO6 PO8

(OR)

4.	A beam is simply supported over a span of 6m. It supports one iron beam at mid span exerting 90 kN. Design the beam with ISWB section with flange plates. Assume the beam is not supported laterally.	12 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO5 PO6 PO8

UNIT-III

5.		A diagonal member of a roof truss carries a maximum pull of 300 kN. Design the section and its connection with a 16 mm thick gusset plate. The length of the connection is limited to 340 mm. Design the lug angles also if required. The steel of grade E 250 and bolts of grade 4.6 are to be used.	12 Marks	L6	CO3	PO1 PO2 PO3 PO4 PO5 PO6 PO8 PO10
		(OR)				
6.		Calculate the design compressive load for a stanchion 350 @ 710.2 N/m, 3.5 m high. The column is restrained in direction and position at both the ends. It is to be used as an uncased column in a single-storey building. Use steel of grade E 250.	12 Marks	L4	CO3	PO1 PO2 PO6 PO8

UNIT-IV

7.		Design a laced column 8 m long with two channels placed toe-to-toe to carry factored axial load of 1300 kN. The column may be assumed to have restrained in position but not in direction at both ends. Assume steel of grade E 250 and bolts of grade 4.6.	12 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO8 PO10
		(OR)				
8.		A column ISHB 350 @ 661.2 N/m carries an axial compressive factored load of 1700 kN. Design a suitable gusset base. The base rests on M20 grade concrete pedestal.	12 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO5 PO6 PO8 PO10

UNIT-V

9.		Determine the basic wind pressure to be considered for a shed in the outskirts of Bangalore. Given Structure : General purpose with probable life of 50 years Terrain category: 1, Building class B. Eye board height : 11 m, Topography : Plain area	12 Marks	L4	CO5	PO1 PO2 PO4 PO6 PO8
		(OR)				
10.	a)	Distinguish between determinate and indeterminate trusses.	4 Marks	L4	CO5	PO1 PO2
	b)	What are the functions of an eave strut?	4 Marks	L2	CO5	PO1
	c)	Why it is necessary to design truss member for both compression and tension forces?	4 Marks	L2	CO5	PO1

AIR AND NOISE POLLUTION AND CONTROL

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Distinguish between primary and secondary air pollutants with examples.	6 Marks	L2	CO1	PO1 PO2 PO6 PO7 PO10
	b)	Enumerate briefly about various meteorological factors that influence the air pollution.	6 Marks	L4	CO1	PO1 PO2 PO4 PO5
		(OR)				
2.	a)	Differentiate between the various types of plume behavior with a neat sketch: i) Looping plume and Coning plume ii) Neutral plume and Fanning Plume	6 Marks	L4	CO1	PO1 PO2 PO4 PO6 PO7 PO10
	b)	Define wet and dry adiabatic lapse rate. Write the importance of stack height in relation with air pollution.	6 Marks	L4	CO1	PO1 PO6 PO7 PO10

UNIT-II

3.		Explain in brief about the effects of art treasures in India and other countries.	12 Marks	L4	CO2	PO1 PO2 PO6 PO7
		(OR)				
4.		Compare the effects of air and noise pollution on human health.	12 Marks	L4	CO2	PO1 PO2 PO10

UNIT-III

5.		Classify the sampling methods and explain in detail about them.	12 Marks	L4	CO3	PO1 PO2 PO5 PO6 PO7 PO8 PO10

(OR)

6.	a)	List the various stack sampling techniques. Explain briefly with a neat sketch.	6 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO6 PO10
	b)	Discuss in brief about the recent trends in sampling of stack emissions.	6 Marks	L4	CO3	PO1 PO2 PO7
		UNIT-IV				
7.		Discuss about the design and operation of wet scrubbers and electrostatic precipitators to remove particulate matter present in air with a neat sketch.	12 Marks	L4	CO4	PO1 PO2 PO4 PO5 PO7 PO10
		(OR)				
8.	a)	Explain the methods available to control of gaseous pollutants.	6 Marks	L4	CO4	PO1 PO2 PO4 PO5 PO7
	b)	Explain the working principle of bio filters to control air pollution with neat sketch.	6 Marks	L4	CO4	PO1 PO2 PO4 PO5 PO7
		UNIT-V				
9.		Compare the air pollutants that are emitted from petroleum refineries and cement industry.	12 Marks	L4	CO5	PO1 PO2 PO4 PO6 PO7
		(OR)				
10.	a)	Explain the emission standards of air pollution in industrial areas.	6 Marks	L2	CO5	PO1 PO2 PO6 PO7 PO8
	b)	Mention the noise standards in industrial areas and how to control the noise from industrial operations.	6 Marks	L4	CO5	PO1 PO4 PO6 PO7 PO8

SOLID AND HAZARDOUS WASTE MANAGEMENT
[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Examine the functional elements of an effective solid waste management system.	6 Marks	L4	C01	PO1 PO2 PO6 PO7
	b)	Describe the effects of improper disposal of solid waste on human health and environment.	6 Marks	L2	CO1	PO1 PO6 PO7
		(OR)				
2.	a)	Compare and contrast the characteristics of solid wastes in Indian cities and that of developed countries.	6 Marks	L4	CO1	PO1 PO2 PO6 PO7
	b)	Discuss the role of NGO's in municipal solid waste management.	6 Marks	L2	CO1	PO1 PO6 PO7

UNIT-II

3.		Assume you were the engineer responsible for handling the solid waste generated in the Tirupati city. Discuss how your team of experts quantify the waste generated in the city. What are the onsite processing techniques that you would adopt for managing the waste generation?	12 Marks	L4	CO2	PO1 PO2 PO4 PO5 PO6 PO7 PO11 PO12
		(OR)				
4.	a)	Compare the long term and short term planning methods for quantification of wastes generated in your city.	6 Marks	L4	CO2	PO1 PO6 PO7
	b)	Explain the necessity of onsite segregation of solid waste.	6 Marks	L2	CO2	PO1 PO6 PO7

UNIT-III

5.	a)	Discuss the operation and maintenance of transfer stations under Indian conditions.	6 Marks	L4	CO3	PO1 PO2 PO6 PO7
	b)	"Does transfer stations play vital role in the process of municipal solid waste management" justify.	6 Marks	L4	CO3	PO1 PO2 PO6 PO7

(OR)

6.	a)	Analyze the most economical method of collection of municipal solid waste in your city.	6 Marks	L4	C03	PO1 PO2 PO4 PO6 PO7 PO11
	b)	Discuss briefly about layout of collection routes.	6 Marks	L2	CO3	PO1 PO6 PO7

UNIT-IV

7.	a)	Differentiate between composting and pyrolysis processing techniques of municipal solid waste.	6 Marks	L4	C04	PO1 PO2 PO5 PO6 PO7
	b)	Contrast the various adverse effects of a landfill leach ate caused due to improper dumping of municipal solid waste.	6 Marks	L4	C04	PO1 PO2 PO6 PO7

(OR)

8.		Assume you were engineer responsible for disposal of municipal solid waste generated in your city, which generates 120tons of solid waste every day. How your team of experts will develop a solution considering environmental safety and sustainability. Also Draw a neat sketch of a sanitary landfill and mention its components.	12 Marks	L6	C04	PO1 PO2 PO3 PO4 PO5 PO6 PO7 PO10

UNIT-V

9.	a)	Contrast the various adverse effects of improper handling of hazardous waste on human health and environment.	6 Marks	L4	C05	PO1 PO2 PO6 PO7
	b)	Summarize in detail the sources and generation of Bio-medical waste.	6 Marks	L4	C05	PO1 PO2 PO6 PO7

(OR)

10.	a)	Assume you were engineer responsible for resource recovery from solid waste generated in your city. Analyze most economical method of resource recovery from waste considering environmental sustainability.	6 Marks	L4	C05	PO1 PO2 PO5 PO6 PO7
	b)	Discuss methods adopted for Bio-medical waste treatment and explain any one method of treatment.	6 Marks	L2	C05	PO1 PO5 PO6 PO7

HIGHWAY CONSTRUCTION AND MAINTENANCE

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Discuss about WBM road construction as per IRC.	6 Marks	L2	CO1	PO1 PO5 PO8
	b)	List and discuss different methods of bituminous pavement construction.	6 Marks	L4	CO1	PO1 PO2 PO5
		(OR)				
2.	a)	Classify the different types of joints in cc pavements? Discuss briefly.	6 Marks	L4	CO1	PO1 PO2 PO10
	b)	Write in detail about Interlocking concrete paver block with neat sketch.	6 Marks	L2	CO1	PO1 PO10

UNIT-II

3.		Compare and contrast different types of soil stabilization techniques suitable for road construction.	12 Marks	L4	CO2	PO1 PO2 PO5 PO8
		(OR)				
4.	a)	Write a short note on latest developments in stabilization methods.	6 Marks	L2	CO2	PO1 PO12
	b)	Classify the different methods of mix design in Mechanical Stabilization. Explain any one.	6 Marks	L4	CO2	PO1 PO2 PO5

UNIT-III

5.	a)	Which type of road construction method is suitable for water logged areas? Explain why.	6 Marks	L2	CO3	PO1 PO5
	b)	The maximum quantity of water to be discharged by the two side drains on a highway section is 1.8 m^3/sec. Design the side drains for the following conditions: Silty loam soil with maximum permissible velocity of flow = 0.77 m/sec. Roughness coefficient = 0.028.	6 Marks	L6	CO3	PO1 PO2 PO3 PO4 PO10
		(OR)				
6.		The maximum quantity of water expected in one of the open longitudinal drains on clayey soil is 1.3 m^3/sec. Design the cross section and longitudinal slope of trapezoidal drain assuming the bottom width of the trapezoidal section to be 0.75 m and cross slope to be 1.0 vertical to 1.5 horizontal. The allowable velocity of flow in the drain is 0.88 m/sec and Manning's roughness coefficient is 0.02.	12 Marks	L6	CO4	PO1 PO2 PO3 PO4

UNIT-IV

7.	a)	Write in detail about compacting equipment for bituminous mixes.	6 Marks	L2	CO4	PO1 PO5
	b)	Distinguish between scrapers and dozers in highway construction.	6 Marks	L4	CO4	PO1 PO2
		(OR)				
8.	a)	Briefly discuss piles and pile driving equipments in detail.	6 Marks	L2	CO4	PO1 PO5
	b)	Categorize the highway construction equipment based on the suitability for different types of soil.	6 Marks	L4	CO4	PO1 PO2 PO5

UNIT-V

9.	a)	Enlist the various flexible pavement failures.	6 Marks	L2	CO5	PO1 PO6
	b)	Discuss why road side development is important in highway construction.	6 Marks	L4	CO5	PO1 PO2 PO6 PO7
		(OR)				
10.	a)	What is pavement evaluation? Contrast the importance of pavement evaluation.	6 Marks	L2	CO5	PO1 PO6
	b)	Suggest any few maintenance and improvement techniqes for the rectification of transeverse cracks in pavements.	6 Marks	L4	CO5	PO1 PO2 PO5

CODE No.: 19BT60118 SVEC-19

INDUSTRIAL WASTEWATER TREATMENT

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Define the term characteristics of wastewater and explain the importance of determination of characteristics of wastewater for the purpose of design of treatment plant.	6 Marks	L4	CO1	PO1 PO2
	b)	Discuss self-purification of a stream and evaluate its usefulness for aquatic ecosystem and in turn to the society.	6 Marks	L5	CO1	PO1 PO2 PO6 PO7
		(OR)				
2.	a)	List out any six the physical and chemical characteristics of treated effluent for disposal into surface water bodies and public sewers as per the IS tolerance limits for disposal of industrial effluents.	6 Marks	L2	CO1	PO1 PO2 PO6 PO7 PO8
	b)	A city discharges 20000 m^3/day of sewage into a river whose rate of flow is 0.7 m^3/sec. Determine D.O. deficit values at 10 km interval, and draw a profile for 100 km and analyse the D.O. variation from the following data: River water: BOD = 10 mg/L, Temperature = 23°C, DO = 8.2 mg/L. Sewage: BOD = 150 mg/L, Temperature = 25°C, DO = 2.0 mg/L. Velocity of mix = 0.25 m/sec, R'= 0.4, K' = 0.23.	6 Marks	L4	CO1	PO1 PO2 PO5

UNIT-II

3.	a)	State the function and describe the working principle of the following treatment units with neat sketch. i) Screen chamber ii) Grit chamber	6 Marks	L3	CO2	PO1 PO2 PO10
	b)	Design a circular primary sedimentation tank for a wastewater quantity 2000 m^3/d with suspended solids concentration 1000 mg/L. Assume the surface overflow rate as 20 m^3/m^2/d, and liquid depth in the tank is 3 m, Free Board as 0.5 m and bottom floor slope as 1:10.	6 Marks	L6	CO2	PO1 PO2 PO3 PO8
		(OR)				
4.		Design an activated sludge completely mixed reactor for an industrial effluent flow of 1000 m^3/day having 5 day BOD @20°C = 500 mg/L. Assume necessary parameters and constants as: Y = 0.5 kg/kg, k_d = 0.04 d^{-1}, MLSS = 3000 mg/l, the underflow concentration = 12000 mg/l and the mean cell residence time = 10 days. Determine i) the volume of the reactor, ii) the mass and the volume of solids that must be wasted each day, and iii) the recycle ratio.	12 Marks	L6	CO2	PO1 PO2 PO3 PO5 PO6 PO8

UNIT-III

5.	a)	Analyze any two different techniques that can be used for removal of color and odor from wastewater with neat sketches.	6 Marks	L4	CO3	PO1 PO2 PO5 PO6 PO12
	b)	Draw the lime treatment process flow diagram for phosphorus removal and explain the treatment process.	6 Marks	L2	CO3	PO1 PO2 PO5
		(OR)				
6.	a)	Explain the Reverse-osmosis process for the removal of colloidal and dissolved solids in wastewater treatment with neat sketch.	6 Marks	L2	CO3	PO1 PO2 PO10
	b)	Analyze the chemical and biological nitrification - denitrification treatment processes for the removal of nitrogen in the wastewater treatment.	6 Marks	L4	CO3	PO1 PO2 PO5
		UNIT-IV				
7.	a)	Write the sources and characteristics of waste water from a typical brewery industry. Suggest and draw a suitable typical treatment flow sheet diagram for treating of brewery wastewater.	6 Marks	L3	CO4	PO1 PO2 PO5 PO10
	b)	Write the sources and characteristics of waste water from a typical dairy industry. Suggest and analyze a suitable treatment and draw a flow sheet diagram for treating the dairy wastewater.	6 Marks	L4	CO4	PO1 PO2 PO5 PO10
		(OR)				
8.	a)	Explain the treatment used in recovery of chemicals from black liquor of pulp and paper mill industry with neat sketch of treatment flow diagram.	6 Marks	L2	CO4	PO1 PO2 PO5 PO10
	b)	Analyze a typical treatment of wastewater from sugar mill with neat flow diagram. Mention at each stage of treatment, the amount of contaminants that are expected to be removed in percentage satisfying the IS tolerance limits for disposal of treated effluents.	6 Marks	L4	CO4	PO1 PO2 PO5 PO6 PO7 PO8 PO10
		UNIT-V				
9.		Analyze the significance of the following in the present context for the clean environment and sustainable development. i) Factors encouraging the waste minimization, and ii) Remediation of aquatic life in a polluted stream.	12 Marks	L4	CO5	PO1 PO2 PO6 PO7 PO8 PO12
		(OR)				
10.	a)	Enlist the characteristics of wastewater generated from the tannery industries and compare with the IS tolerance limits for those contaminants for disposal into inland surface water bodies and public sewers.	6 Marks	L4	CO5	PO1 PO2 PO6 PO7 PO8
	b)	Write short note on treatment of wastewater by i) Volume reduction, and ii) Strength reduction.	6 Marks	L2	CO5	PO1 PO2 PO5

CODE No.: 19BT60123 SVEC-19

FIRE ENGINEERING

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain about the fire triangle.	6 Marks	L2	CO1	PO1 PO7
	b)	Compare the fire properties of solid, liquid and gases.	6 Marks	L4	CO1	PO1 PO2 PO7
		(OR)				
2.		Discuss any case study related to Boiling liquid expanding vapour explosion (BLEVE) in detail.	12 Marks	L4	CO2	PO1 PO2 PO4 PO6 PO7
		UNIT-II				
3.		List the types of fire extinguishers in the fire preventing system. Suggest suitable one for prevention of class A fire with justification.	12 Marks	L4	CO2	PO1 PO2 PO6
		(OR)				
4.		Compare the following types of fire. i) Class C and Class D ii) Class B and Class A	12 Marks	L4	CO2	PO1 PO2
		UNIT-III				
5.		Differentiate active and passive fire protection systems	12 Marks	L4	CO3	PO1 PO2 PO7
		(OR)				
6.		Why hydraulics test is necessary for fire extinguisher? Discuss in detail.	12 Marks	L4	CO3	PO1 PO2 PO5 PO8
		UNIT-IV				
7.		How do you calculate the fire load in building? List few fire resistant materials for a residential building	12 Marks	L4	CO4	PO1 PO2 PO7
		(OR)				
8.		As an engineer how would you describe fire safety as an essential parameter in designing residential building?	12 Marks	L4	CO4	PO1 PO2
		UNIT-V				
9.	a)	Compare the detonation and blast waves with suitable examples.	6 Marks	L4	CO5	PO1 PO2
	b)	Elaborate the details of Explosion relief of large enclosure.	6 Marks	L2	CO5	PO1 PO7 PO8
		(OR)				

10.	As an engineer how would you describe explosion protection systems in industry and residential building?	12 Marks	L4	CO5	PO1 PO2 PO7

POWER ELECTRONICS

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Sketch and explain switching characteristics of SCR.	6 Marks	L2	CO1	PO1
	b)	Identify and enlist the features of a fully controlled power switch suitable for medium voltage and high frequency industrial applications.	6 Marks	L2	CO1	PO6
		(OR)				
2.	a)	Explain the necessity of parallel combination of SCRs in a string and suggest appropriate methods to improve the string efficiency of parallel connected SCRs.	6 Marks	L2	CO1	PO7
	b)	A thyristor string consists of five thyristors in series. The string voltage is 5kV. Maximum permissible blocking voltage of each thyristor is 1200V and maximum blocking current is 15mA. Calculate the value of equalizing resistance to be connected in parallel with each thyristor so as to improve the string efficiency.	6 Marks	L3	CO1	PO7

UNIT-II

3.	a)	Classify and draw the circuit schemes of the converters based on number of output pulses produced and compare their performances.	6 Marks	L2	CO3	PO1
	b)	Three phase fully controlled rectifier is connected to three phase AC supply of 230 V, 50 Hz. load current is continuous and has a negligible ripple. If the average load current Idc is 150 A and the commutating inductance Lc is 0.1 mH. Determine the overlap angle when $\alpha = 10°$.	6 Marks	L3	CO3	PO2
		(OR)				
4.	a)	Identify the gating sequence of a three phase six pulse rectifier with R-load for $\alpha = 75^{O}$ and derive an expression for average output voltage.	8 Marks	L2	CO3	PO1
	b)	Find the magnitude of per phase input supply voltage, if the resistive load of 10 Ohms is connected to a three-phase full converter and the connected load takes 5 kW for a firing angle delay of 70^{O}.	4 Marks	L3	CO3	PO2

UNIT-III

5.		With the help of a neat circuit diagram, relevant waveforms, and expressions, discuss the operation of complementary commutation technique.	12 Marks	L1	CO2	PO5
		(OR)				
6.	a)	Explain the working of step-down chopper with RL-load and derive an expression for average value of output voltage.	6 Marks	L2	CO2	PO1
	b)	A Circuit employing class-B commutation has C=20 μF and L=5 μH. Initial voltage across capacitor is 230 V. For a constant load current of 250 A, calculate the voltage across main thyristor.	6 Marks	L3	CO2	PO4

UNIT-IV

7.	Discuss the operation of a single phase AC voltage controller with RL-load for firing angle α greater than load phase angle, ϕ. Also show that for α less than ϕ, the output voltage of AC voltage controller cannot be regulated.	12 Marks	L3	CO3	PO1

(OR)

8.	Develop a single phase bridge type cycloconverter to produce an output frequency 1/6 times that of source frequency. With the help of a neat circuit diagram and relevant waveforms explain its operation.	12 Marks	L4	CO3	PO3

UNIT-V

9.	Explain the operation of 1-phase full bridge voltage source inverter with R-load. Sketch relevant waveforms and derive the expression for instantaneous output voltage.	12 Marks	L2	CO4	PO1

(OR)

10.	With the help of neat circuit diagram and relevant waveforms, analyze 120^{o} mode of operation of a three phase full bridge inverter with resistive load.	12 Marks	L4	CO4	PO2

POWER SYSTEM ANALYSIS

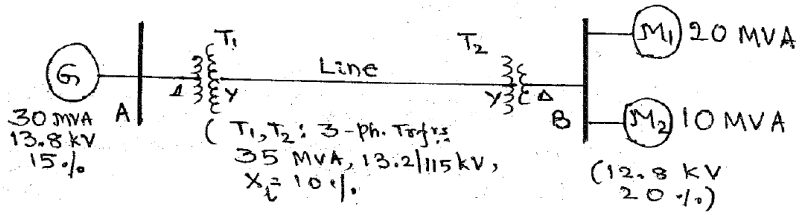
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Draw the per unit reactance diagram for the system shown in figure. Choose a base of 30 MVA, 13.8 kV in the generator circuit. Assume the reactance of the line to be 80 Ohms. — 6 Marks — L3 — CO1 — PO2



b) The parameters of a 4 – bus system are as follows. — 6 Marks — L4 — CO1 — PO5

Bus code	Line impedance (pu)	Half Line Charging admittance (pu)
1- 2	0.2 + j 0.8	j 0.02
2- 3	0.3 + j 0.9	j 0.03
2- 4	0.25 + j 1.0	j 0.04
3- 4	0.2 + j 0.8	j 0.02
1- 3	0.1 + j 0.4	j 0.01

Draw the network and find bus admittance matrix using direct inspection method.

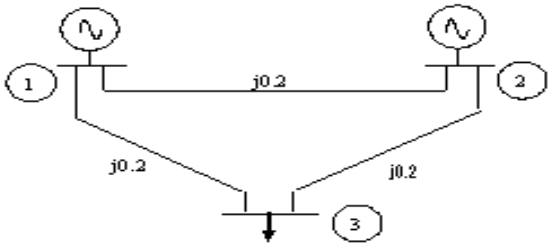
(OR)

2. Develop step-by-step algorithm for Zbus building considering all possible modifications for a network containing no mutual and no phase shifting transformers. — 12 Marks — L3 — CO1 — PO5

UNIT-II

3. Carry out for one iteration of load flow solution for the system shown in Figure by G-S method. Take Q limits of generator 2 as $0 \le Q \le 5$ p.u. — 12 Marks — L4 — CO2 — PO4

Bus 1 slack bus $V_{specified} = 1.05\angle 0°$
Bus 2 PV bus $|V|_{specified} = 1.00$ p.u., $P_G = 3$ p.u.
Bus 3 PQ bus $P_D = 4$ p.u., $Q_D = 2$ p.u.



(OR)

4.	a)	Derive the necessary expressions of Jacobian matrix elements for fast decoupled load flow method.	6 Marks	L3	CO2	PO1
	b)	With flow chart, explain the computational procedure for load flow solution using fast decoupled method and also derive the necessary equations.	6 Marks	L3	CO2	PO2

UNIT-III

5.	a)	Derive the expression for fault current when three phase balanced fault occurs in power system.	6 Marks	L2	CO3	PO2
	b)	The bus impedance matrix of four bus system with values in p.u. is given by, $$Zbus = j\begin{bmatrix} 0.15 & 0.08 & 0.04 & 0.07 \\ 0.08 & 0.15 & 0.06 & 0.09 \\ 0.04 & 0.06 & 0.13 & 0.05 \\ 0.07 & 0.09 & 0.05 & 0.12 \end{bmatrix}$$ In this system generators are connected to buses 1 and 2 and their sub transient reactances were included when finding Z_{bus}. If pre-fault current is neglected, find sub-transient current in p.u. for a 3 phase fault on a bus 4. Assume pre-fault voltage is 1 p.u.	6 Marks	L3	CO3	PO2

(OR)

6.		A synchronous generator and a synchronous motor each rated 20MVA, 12.66KV having 15% reactance are connected through transformers and a line as shown in fig. the transformers are rated 20MVA,12.66/66KV and 66/12.66KV with leakage reactance of 10% each. The line has a reactance of 8% on base of 20MVA, 66 KV. The motor is drawing 10MW at 0.8 leading power factors and a terminal voltage 11KV when symmetrical three phase fault occurs at the motors terminals. Determine the generator and motor currents. Also determine the fault current.	12 Marks	L4	CO3	PO4

UNIT-IV

7.	a)	Draw the positive, negative and *zero sequence* networks for the network shown in the figure: 	6 Marks	L3	CO3	PO4

	b)	In a three phase four wire system, the sequence component of currents and voltages are as follows: $I_{\infty} = (0.1 + 0.2j)\ pu;$ $V_{\infty} = (0.1 + 0.2j)\ pu$ $I_{a1} = (0.8 + 0.2j)\ pu;$ $V_{a1} = (1 + 0j)\ pu$ $I_{a2} = (0.2 + 0.2j)\ pu;$ $V_{a2} = (0.2 + 0.2j)\ pu$ Determine the total three phase complex power in MVA if the base is 100 MVA and show that the symmetrical component transformation is power invariant.	6 Marks	L3	CO3	PO2
		(OR)				
8.	a)	Derive the necessary equation to determine the fault current for a single line to ground fault in an un-loaded alternator and draw the sequence network diagram.	6 Marks	L3	CO3	PO1
	b)	A 3-phase, 11 kV, 25 MVA generator with X_0 = 0·05 p.u., X_1 = 0·2 p.u. and X_2= 0·2 p.u. is grounded through a reactance of 0·3 Ohms. Calculate the fault current for a single line to ground fault.	6 Marks	L3	CO3	PO4
		UNIT-V				
9.	a)	Derive an expression for the maximum power transfer between two nodes. Show that this power is maximum when $X = \sqrt{3R}$, where X is the reactance and R the resistance of the system.	6 Marks	L3	CO4	PO2
	b)	Define the power system stability and enumerate the varoius methods of improving the powr system stability in the event of distrubances.	6 Marks	L1	CO4	PO7
		(OR)				
10.	a)	Explain in detail, the equal area criterion. How can the equal area criterion be applied to find the maximum additional load that can be suddenly added?	6 Marks	L2	CO4	PO1
	b)	A generator supplies 1.0 p.u. power to an infinite bus as shown in Figure. The terminal voltage and infinite bus voltage are 1.0 p.u.. All the reactance are on a common base. Determine steady state stability limit: i) When both lines are in. ii) When one line is switched off. 	6 Marks	L4	CO4	PO4

HIGH VOLTAGE ENGINEERING

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Enumerate the different types of electric field and justify the factors that influence the field strength between the electrodes.	6 Marks	L1	CO1	PO1
	b)	What are the various reasons for over voltages and enumerate the adverse effects of over voltages in power system?	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Define the term degree of uniformity of electric fields and explain its significance in determining the nature of field.	6 Marks	L2	CO1	PO1
	b)	What is a surge absorber? Write a short note on functionality of a surge absorber.	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	State and explain Paschen's law. How do you account for the minimum voltage for breakdown under a given pdcondition?	6 Marks	L2	CO1	PO1
	b)	What will the breakdown strength of air be for small gaps (1 mm) and large gaps (20 cm) under uniform field conditions and standard atmospheric conditions?	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Justify, how the breakdown in non-uniform fields is different from the breakdown in uniform fields?	6 Marks	L2	CO1	PO1
	b)	In an experiment for determining the breakdown strength of transformer oil, the following observations are made. Determine the power law dependence between the gap spacing and the applied voltage of the oil.	6 Marks	L3	CO1	PO2

Gap Spacing(mm)	4	6	10	12
Voltage at Breakdown(kV)	90	140	210	255

UNIT-III

5.	a)	Explain the different schemes for cascade connection of transformers for producing very high AC. voltages.	6 Marks	L3	CO2	PO5
	b)	Determine the ripple voltage and regulation of a 10 stage Cockcroft-Walton type DC voltage multiplier circuit having a stage capacitance = 0.01 μF, supply voltage =100 kV at a frequency of 400 Hz and a load current = 10 mA.	6 Marks	L3	CO2	PO2
		(OR)				
6.	a)	Describe the construction, principle of operation and application of a multistage Marx's Surge Generator.	6 Marks	L2	CO2	PO1
	b)	An impulse generator has eight stages with each condenser rated for 0.12 μ F and 125 kV. The load capacitor available is 1000 pf. Find the series resistance and the damping resistance needed to produce 1.2/50 μ s impulse wave. What is the maximum output voltage of the generator, if the charging voltage is 120 kV?	6 Marks	L3	CO2	PO4

UNIT-IV

7.	a)	Compare the relative advantages and disadvantages of using a series resistance microammeter and a potential divider with an electrostatic voltmeter for measuring high DCvoltages?	6 Marks	L2	CO3	PO1
	b)	A generating voltmeter is required to measure voltage between 15 kV to 250 kV. If the indicating meter reads a minimum current of 2 μA and maximum of 35 μA, determine the capacitance of the generating voltmeter. Assume that the speed of driving synchronous motor is 1500 rpm.	6 Marks	L3	CO3	PO2
		(OR)				
8.	a)	Explain how a sphere gap can be used to measure the peak value of voltages. What are the parameters and factors that influence such voltage measurement?	6 Marks	L2	CO3	PO5
	b)	A peak reading voltmeter is required to measure voltage upto 150 kV. The peak voltmeter uses an RC circuit, a microammeter and a capacitance potential divider. The potential divider has a ratio of 1200 : 1 and the micrometercan read upto 10 μA. Determine the value of R and C if the time constant of RC circuit is 8 secs.	6 Marks	L3	CO3	PO2

UNIT-V

9.	a)	What is meant by non-destructive testing? Explain the construction and working of a transformer ratio arms bridge for the measurement of loss factor and capacitance.	6 Marks	L2	CO4	PO5
	b)	The capacitance and loss angle of the above specimen were measured using the same electrode set-up. The capacitance and tanδ with the specimen are 147 *p*F and 0.0012 respectively. The air capacitance of the electrode system was 35 *p*F. What is the dielectric constant and complex permittivity of bakelite?	6 Marks	L3	CO4	PO2
		(OR)				
10.		Describe the different electrical tests done on isolators and circuit breakers.	12 Marks	L1	CO4	PO5

INDUSTRIAL ENGINEERING AND MANAGEMENT

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	Explain system approach to management.	12 Marks	L2	CO1	PO1
	(OR)				
2.	Describe in detail corporate governance.	12 Marks	L2	CO1	PO1 PO6

UNIT-II

3.	Discuss in detail Herzberg's Two-Factor motivation theory.	12 Marks	L2	CO2	PO1 PO2
	(OR)				
4.	Briefly explain the planning and implementing changes.	12 Marks	L2	CO2	PO1 PO2

UNIT-III

5.	List out the types of allowances and explain them.	12 Marks	L2	CO3	PO1 PO2 PO3
	(OR)				
6.	Find standard time for operations performed by drill man, if the work sampling shows that he was idle for 15% of the total working time of 8 hours, and for the remainder of the duty he worked at 110% performance index. He drilled 200 items of acceptable quality during his total duty. Assume that 10% of the total time is taken as fatigue and other personal allowances.	12 Marks	L3	CO3	PO1 PO2 PO3

UNIT-IV

7.	What are the types of maintenance and explain.	12 Marks	L2	CO4	PO1 PO2
	(OR)				
8.	A system has three units connected in series with MTBF values of 100, 300 and 400 hours respectively. Determine the following: i) The unit reliability of each component. ii) System reliability. iii) System MTBF for an operating period of 10 hours.	12 Marks	L3	CO4	PO1 PO2 PO3

UNIT-V

9.	Briefly explain industry safety rules and Indian factories act.	12 Marks	L2	CO5	PO1 PO2 PO3
	(OR)				
10.	The daily production in a machine shop is 1000 items. These items are inspected by 'GO' and 'NO GO gauge'. A sample of 100 is inspected daily for 10 days. The samples are taken at random. Compute the control limits for the 'p' chart and hence draw the 'p' chart.	12 Marks	L4	CO5	PO1 PO2 PO3

Day	1	2	3	4	5	6	7	8	9	10
Rejection	2	10	6	20	18	14	15	12	8	6

DESIGN OF MACHINE ELEMENTS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

	UNIT-I				
1.	State and explain the applications of different theories of failure.	12 Marks	L2	CO1	PO1 PO2
	(OR)				
2.	A circular bar of 500mm length is supported freely at its two ends. It is acted upon by a central concentrated cyclic load having a minimum value of 20kN and a maximum value of 50kN. Determine the diameter of bar by taking a factor of safety of 1.5, size effect of 0.85, surface finish factor of 0.9. The material properties of bar is given by: ultimate strength of 650MPa, yield strength of 500MPa and endurance strength of 350MPa.	12 Marks	L3	CO1	PO1 PO2 PO3
	UNIT-II				
3.	Design a muff coupling to connect two steel shafts transmitting 25KW of power at 360RPM. The shaft and key are of same material with a yield tensile stress of 400MPa. The muff is made of cast iron with an ultimate tensile stress of 200 MPa. Factor of safety can be taken as 4.0 for all the stresses.	12 Marks	L3	CO2	PO1 PO2 PO3
	(OR)				
4.	Draw a knuckle joint and explain its design procedure.	12 Marks	L2	CO2	PO1 PO2
	UNIT-III				
5.	Design and draw a cast iron flange coupling for a mild steel shaft transmitting 90 kW at 250 r.p.m. The allowable shear stress in the shaft is 40 MPa and the angle of twist is not to exceed 1° in a length of 20 diameters. The allowable shear stress in the coupling bolts is 30 MPa.	12 Marks	L3	CO3	PO1 PO2 PO3
	(OR)				
6.	Design a knuckle joint for a tie rod of a circular section to sustain a maximum pull of 70 kN. The ultimate strength of the material of the rod against tearing is 420 MPa. The ultimate tensile and shearing strength of the pin material are 510 MPa and 396 MPa respectively. Determine the tie rod section and pin section. Take factor of safety = 6.	12 Marks	L3	CO3	PO1 PO2 PO3
	UNIT-IV				
7.	The ball bearings are to be selected for an application in which the radial load is 2000N during 90% of the time and 8000N during the remaining 10%. The shaft is to rotate at 150 r.p.m. Determine the minimum value of the basic dynamic load rating for 5000 hours of operation with not more than 10% failures.	12 Marks	L3	CO4	PO1 PO2 PO3

(OR)

8.	A 70mm long journal bearing supports a load of 2700N on a 40mm diameter shaft. The bearing has a radial clearance of 0.05mm and the viscosity of the oil is 0.021 kg/m-s at the operating temperature. If the bearing is capable of dissipating 80J/s, determine the maximum safe speed.	12 Marks	L3	CO4	PO1 PO2 PO3

UNIT-V

9.	Design a helical spring to support a tensile load of 6 kN and to have a stiffness of 100N/mm. the spring index is 6. The spring is made of steel having allowable stress of 300MPa. Take G=80GPa.	12 Marks	L3	CO5	PO1 PO2 PO3

(OR)

10.	Design a pair of spur gears to transmit 25kW at 1200 r.p.m to a parallel shaft to be rotated at 600 r.p.m. The center distance between shafts is 175mm.	12 Marks	L3	CO5	PO1 PO2 PO3

HEAT TRANSFER

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.		A 0.8 m high and 1.5 m wide double pane window, consisting of two 4 mm thick layers of glass (k= 0.78 W/m.K), is separated by a 10 mm wide stagnant air space (k= 0.026 W/m.K). Determine the steady rate of heat transfer through this window; and the temperature of its inner surface for a day during which the room is maintained at 20 C, while the temperature of the outdoors is -10 C. Take the values of surface heat transfer coefficients for inner and outer surfaces of the window to be 10 W/m2. K and 40 W/m2. K, respectively.	12 Marks	L3	CO1	PO1 PO2 PO3
		(OR)				
2.		Define Critical thickness of insulation. Obtain an expression for critical radius of insulation for a spherical shell.	12 Marks	L3	CO1	PO1 PO2
		UNIT-II				
3.		Derive the expression Temperature distribution through an infinitely long rectangular fin by stating its assumptions.	12 Marks	L3	CO2	PO1 PO2
		(OR)				
4.		Fins, 12 in number, having K=75 W/m K and 0.75 mm thickness protrude 25mm from a cylindrical surface of 50mm diameter and 1m length placed in an atmosphere of 40^0C. If the cylindrical surface is maintained at 150^0C and the heat transfer coefficient is 23 W/m^2K Calculate: i) The rate of heat transfer ii) The percentage increase in heat transfer due to fins iii) The temperature at the centre of fins and iv) The fin efficiency and effectiveness.	12 Marks	L2	CO2	PO1
		UNIT-III				
5.	a)	Briefly explain the concept of heat transfer by free convection	6 Marks	L2	CO3	PO1
	b)	A horizontal plate 1 m X 0.8 m is kept in a water tank with the top surface at 60°C providing heat to warm stagnant water at 20°C. Determine the value of convection coefficient.	6 Marks	L3	CO3	PO1 PO2
		(OR)				
6.	a)	Water at 60^0C enters a tube of 2.54 cm diameter at a mean velocity of 2 cm/s. Calculate the exit water temperature if the tube is 3.0 m long and wall temperature is constant at 80^0C.	6 Marks	L3	CO3	PO1
	b)	Air at 20°C at atmospheric pressure flows over a flat plate at a velocity of 3m/s. if the plate is 1 m wide and 80°C, calculate the following at x = 300 mm. i) Hydrodynamic boundary layer thickness, ii) Thermal boundary layer thickness, iii) Local friction coefficient.	6 Marks	L3	CO3	PO1 PO2

UNIT-IV

7.	a)	A 4cm outer diameter, 1 m long tube is to be used to condense steam at atmospheric pressure. The water flows inside the tube maintaining the wall surface at 60^0C. Estimate the mass of condensate for the tube in horizontal position.	6 Marks	L3	CO4	PO1
	b)	In a counter flow double pipe heat exchanger with Water (Cp=4186) enters at 15°C, flowing at the rate of 1300kg/h. It is heated by oil (Cp=2000J/ kg K) flowing at the rate of 550kg/h from the inlet temperature of 94 °C. For an area of $1m^2$ and an overall heat transfer co-efficient of 1075 w/m^2K, determine the total heat transfer and the out let temperatures of water and oil	6 Marks	L3	CO4	PO1
		(OR)				
8.	a)	Water at atmospheric pressure is to be boiled in polished copper pan. The diameter of the pan is 350 mm and is kept at 115^0C. Calculate: i) power of the burner, ii) rate of evaporation in kg/h and iii) critical heat flux	6 Marks	L3	CO4	PO1
	b)	Oil with a specific heat of 2 KJ/ kg K is cooled from 110^0C to 70^0C by a flow of water flow in a counter flow heat exchanger. Water flows at the rate of 2 kg/sec and is heated from 35^0C to 65^0C. The overall heat transfer coefficient is estimated to be 0.37 KW/ m^2K. Determine the exit temperatures of oil and water, if the water flow rate drops to 1.5 kg / sec at the same oil flow rate.	6 Marks	L3	CO4	PO1 PO2

UNIT-V

9.	a)	A dead black cylinder of emissivity 0.95 is kept at 95°C in a large enclosure at 10°C. Find the radiation heat loss per square meter of its surface. What would be the radiation loss if the cylinder were surrounded by concentric cylinder with its inner surface having a brightly polished metal of emissivity 70.1?	6 Marks	L3	CO5	PO1
	b)	What is the shape factor with respect to itself if the surface is concave, convex or flat?	6 Marks	L3	CO5	PO1 PO2
		(OR)				
10.	a)	Discuss on shape factor algebra with simple sketches.	6 Marks	L3	CO5	PO1
	b)	The net radiation from the surfaces of two parallel plates maintained at temperatures, T1 and T2 is to be reduced by 79 times. Calculate the number screens to be placed between the two surfaces to achieve this reduction in heat exchange, assuming the emissivity of the screens as 0.05 and that of the surfaces as 0.8.	6 Marks	L3	CO5	PO1 PO2

NON TRADITIONAL MACHINING PROCESSES

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	How the modern machining process classified based on source of energy, and shapes to be machined?	6 Marks	L2	CO1	PO1 PO2
	b)	Give specific applications for employing Chemical Machining process.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.	a)	What are the various factors to be considered in the selection of Maskants for a particular application?	6 Marks	L2	CO1	PO1 PO2
	b)	Explain various process characteristics of chemical machining process.	6 Marks	L2	CO1	PO1 PO2
		UNIT-II				
3.	a)	What are the operations performed in ECM?	6 Marks	L2	CO2	PO1 PO2
	b)	Give some of the practical applications of chemical machining process.	6 Marks	L2	CO2	PO1 PO2
		(OR)				
4.	a)	What are the reactions possible in cathode (tool) and anode (work piece) in ECM process? (Assume electrolyte is NaCl)?	6 Marks	L2	CO2	PO1 PO2
	b)	List out the applications of electrochemical deburring process.	6 Marks	L2	CO2	PO1 PO2
		UNIT-III				
5.		With the aid of simple sketch, explain the working principle of WJM process. List the practical applications.	12 Marks	L2	CO3	PO1 PO2
		(OR)				
6.	a)	How is metal removed in abrasive jet machining process? Explain the mechanism with neat diagram.	6 Marks	L2	CO3	PO1 PO2
	b)	Explain the process elements of abrasive flow finishing process.	6 Marks	L2	CO3	PO1 PO2
		UNIT-IV				
7.		Name some of the dielectric fluids commonly used in EDM. Name some of the tool material used in EDM.	12 Marks	L2	CO4	PO1 PO2
		(OR)				
8.		Discuss the advantages of EDM as compared to other non traditional methods with regard to i) Metal removed rate ii) Accuracy and Surface finish.	12 Marks	L2	CO4	PO1 PO2
		UNIT-V				
9.		Distinguish between transferred and Non-transferred Arc type in PAM process based on principle, construction and working. List the advantages, limitations and practical application.	12 Marks	L2	CO5	PO1 PO2
		(OR)				
10.	a)	With the help of neat sketch explain the EBM process.	6 Marks	L2	CO5	PO1 PO2
	b)	Discuss the thermal features of LBM.	6 Marks	L2	CO5	PO1

REFRIGERATION AND AIR CONDITIONING

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	A simple air cooled system is used for an aeroplane to take a load of 10 tons. Atmospheric temperature and pressure is 25°C and 0.9 atm respectively. Due to ramming the pressure of air is increased from 0.9 atm, to 1 atm. The pressure of air leaving the main compressor is 3.5 atm and its 50% heat is removed in the air-cooled heat exchanger and then it is passed through a evaporator for future cooling. The temperature of air is reduced by 10°C in the evaporator. Lastly the air is passed through cooling turbine and is supplied to the cooling cabin where the pressure is 1.03 atm. Assuming isentropic efficiency of the compressor and turbine are 75% and 70%, find : i) Power required to take the load in the cooling cabin. ii) COP of the system. The temperature of air leaving the cabin should not exceed 25°C.	6 Marks	L3	CO1	PO1 PO2 PO3
	b)	Define energy efficiency ratio of refrigeration system. How it is applicable for the refrigeration systems.	6 Marks	L2	CO1	PO1 PO2
		(OR)				
2.	a)	An air refrigerator working on the principle of Bell-Coleman cycle. The air into the compressor is at 1 atm at -10ºC. It is compressed to 10 atm and cooled to 40ºC at the same pressure. It is then expanded to 1 atm and discharged to take cooling load. The air circulation is 1 kg/s. The isentropic efficiency of the compressor = 80% The isentropic efficiency of the expander = 90% Find the following: i) Refrigeration capacity of the system ii) C.O.P of the system Take $\gamma = 1.4$, $C_p = 1.00$ kJ/kg ºC	6 Marks	L3	CO1	PO1 PO2 PO3
	b)	Illustrate the effect of liquid super heating on performance of the Vapor compression Refrigeration system.	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Discuss the working principle of tube in tube evaporator with a brief sketch.	6 Marks	L2	CO2	PO1
	b)	Explain construction and working of water cooled condenser with neat sketch.	6 Marks	L2	CO2	PO1

(OR)

4.	a)	Discuss the impact of refrigerants on environmental aspects.	6 Marks	L2	CO2	PO1 PO2 PO3 PO6 PO7
	b)	Illustrate the hydrocarbon refrigerants with some examples.	6 Marks	L2	CO2	PO1

UNIT-III

5.	a)	Illustrate the working principle of ammonia, water, and hydrogen refrigeration system with a neat sketch.	6 Marks	L2	CO3	PO1
	b)	Explain the principle of operation of four shell Li-Br vapor absorption refrigeration systems with a neat sketch.	6 Marks	L2	CO3	PO1

(OR)

6.	a)	Discuss the applications of steam jet refrigeration system.	6 Marks	L2	CO3	PO1
	b)	Illustrate the merits and demerits of thermoacoustic Refrigeration system.	6 Marks	L2	CO3	PO1

UNIT-IV

7.		An auditorium of 100 seating capacity of conditioned for the given specifications: Outdoor conditions – 35 ^{o} C and 65% RH Required air inlet conditions – 15 ^{o} C and 40 RH. The required condition is achieved first by cooling and dehumidifying and then by heating. Find the following: i) The capacity of the cooling coil in tons of refrigeration. ii) Capacity of the heating coil in kW. iii) By-pass factor of the heating coil if the surface temp of the coil is 22 ^{o} C.	12 Marks	L4	CO4	PO1 PO2 PO3

(OR)

8.	a)	Explain the procedure to draw a grand sensible heat factor line on a psychrometric chart. What do you understand by effective room sensible heat factor?	6 Marks	L2	CO4	PO1
	b)	Give the important characteristic features of adiabatic cooling and humidification process.	6 Marks	L2	CO4	PO1

UNIT-V

9.	a)	Discuss importance of comfort chart to design air conditioning system.	6 Marks	L2	CO5	PO1
	b)	What are the functions of a fan in an air conditioning system?	6 Marks	L2	CO5	PO1

(OR)

10.	a)	Describe the different methods of air conditioning duct design.	6 Marks	L2	CO5	PO1
	b)	Discuss the applications air – water heat pump circuits.	6 Marks	L2	CO5	PO1

HYDRAULICS AND PNEUMATICS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

	UNIT-I				
1.	Explain the working principle of following pumps with neat sketch. i) Lobe pump ii) External gear pump	12 Marks	L2	CO1	PO1
	(OR)				
2.	Explain the working principle following types of cylinders Single acting cylinder, double acting cylinder and double rod cylinder with applications.	12 Marks	L2	CO1	PO1
	UNIT-II				
3.	What are the methods of actuating direction control valve, explain the working of poppet valve with neat sketch.	12 Marks	L2	CO2	PO1
	(OR)				
4.	List and explain the components used in the hydraulic system, mention any six.	12 Marks	L2	CO2	PO1
	UNIT-III				
5.	Draw the ANSI symbols of any three types of flow lines and reservoirs used in hydraulic system.	12 Marks	L3	CO3	PO1
	(OR)				
6.	Explain and Design the hydraulic circuit for double acting cylinder with neat sketch.	12 Marks	L3	CO3	PO1
	UNIT-IV				
7.	Explain the following: i) 4/3- Direction Control Valve (7) ii) 3/2-DirectionControlValve iii) 4/2-DirectionControlValve iv) 2/2-DirectionControlValve	12 Marks	L2	CO3	PO1
	(OR)				
8.	Explain the following: i) Pneumatic circuit control single acting cylinder. ii) Air pilot control of double acting actuator.	12 Marks	L2	CO3	PO1
	UNIT-V				
9.	Explain about any three different position sensors with neat sketch.	12 Marks	L2	CO4	PO1
	(OR)				
10.	Design a pneumatic cylinder sequencing circuit using logics.	12 Marks	L3	CO4	PO1 PO2 PO3

MECHATRONICS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

	UNIT-I				
1.	Taking an example explain sequential controller.	12 Marks	L2	CO1	PO1 PO2 PO3
	(OR)				
2.	With a block diagram explain the automatic camera operation.	12 Marks	L3	CO1	PO1 PO2 PO3
	UNIT-II				
3.	Explain: i) Poppet valve ii) Check valve	12 Marks	L2	CO2	PO1 PO2
	(OR)				
4.	Explain the types of cylinders used in linear actuators.	12 Marks	L3	CO2	PO1 PO2
	UNIT-III				
5.	Write note on belt drives.	12 Marks	L3	CO3	PO1 PO2 PO3
	(OR)				
6.	Write note on single phase and three phase induction motor.	12 Marks	L3	CO3	PO1 PO2 PO3
	UNIT-IV				
7.	Write note on Optical encoders.	12 Marks	L3	CO4	PO1 PO2 PO3
	(OR)				
8.	Explain any two types of pressure sensors.	12 Marks	L3	CO4	PO1 PO2 PO3
	UNIT-V				
9.	Explain DAC and ADC Systems.	12 Marks	L1	CO5	PO1 PO2
	(OR)				
10.	Explain PID controllers.	12 Marks	L2	CO5	PO1 PO2

MICROCONTROLLERS

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Contrast Microprocessors to microcontrollers.	6 Marks	L1	CO1	PO2
	b)	Illustrate 8051 Timer/counter control logic.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Bring out how addressing modes gives flexibility to program an 8051 microcontroller.	6 Marks	L2	CO1	PO2
	b)	Develop an ALP for 8051to move block of 'n' bytes from one Internal memory location to another internal memory location.	6 Marks	L4	CO1	PO2
		UNIT-II				
3.	a)	Present PIC18F452 Memory organization in detail.	6 Marks	L1	CO2	PO1
	b)	Analyze PIC18F452 Instruction set classes with relevant examples.	6 Marks	L2	CO2	PO2
		(OR)				
4.	a)	Compose an ALP to convert packed BCD bytes to ASCII for PIC18F452.	6 Marks	L4	CO2	PO2
	b)	Reproduce and paraphrase PIC18F internal hardware structure.	6 Marks	L1	CO2	PO1
		UNIT-III				
5.	a)	Present PIC18F452 pin details.	6 Marks	L1	CO3	PO1
	b)	Evaluate PIC18F452 I/O PORT programming concepts.	6 Marks	L3	CO3	PO2
		(OR)				
6.	a)	Illustrate PIC18F452 Timer0 Structure.	6 Marks	L3	CO3	PO2
	b)	Characterize how Timer in PIC18F can be deployed for counting applications with suitable support.	6 Marks	L3	CO3	PO2
		UNIT-IV				
7.	a)	Specify how Serial Port in PIC18F452 can be programmed for transmitting a byte.	6 Marks	L2	CO4	PO3
	b)	Detail out support for RS232 connections for PIC18F452.	6 Marks	L1	CO4	PO6
		(OR)				
8.	a)	Program how Serial interrupt can be enabled and used in PIC18F452.	6 Marks	L3	CO4	PO6
	b)	Discuss various sources of interrupts for PIC18F.	6 Marks	L1	CO4	PO2
		UNIT-V				
9.	a)	Describe how the Seven segment LED display can be interfaced with PIC18.	6 Marks	L1	CO4	PO3
	b)	Detail out how DC motor speed can be controlled using PWM module on PIC18.	6 Marks	L3	CO4	PO8
		(OR)				
10.	a)	Illustrate the need and method to interface ADC to PIC18.	6 Marks	L2	CO4	PO4
	b)	Plan how Keyboard can be interfaced with PIC18.	6 Marks	L1	CO4	PO6

DIGITAL IC DESIGN

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Identify the difference between static and dynamic logic.	5 Marks	L2	CO1	PO1
	b)	Analyze the characteristics of Propagation delay in complementary CMOS gates.	7 Marks	L4	CO1	PO2
		(OR)				
2.	a)	Explain in detail about NORA Logic and Domino logic.	5 Marks	L3	CO1	PO1
	b)	Construct Four input CMOS NAND gate and its RC model.	7 Marks	L4	CO1	PO3
		UNIT-II				
3.	a)	Describe about Clock skew and clock generation in sequential circuits.	6 Marks	L3	CO2	PO5
	b)	Analyze the operation of sense Amplifier based registers.	6 Marks	L1	CO1	PO1
		(OR)				
4.	a)	Design NORA CMOS logic style using C^2 MOS pipelined structure.	6 Marks	L2	CO1	PO2
	b)	Explain in detail True single –Phase clocked register using a single clock technique.	6 Marks	L3	CO2	PO3
		UNIT-III				
5.	a)	Classify methods of logical effort for transistor sizing.	5 Marks	L3	CO3	PO2
	b)	Construct and explain read write operation of Three transistor Dynamic RAM technique.	7 Marks	L1	CO3	PO3
		(OR)				
6.	a)	Write short notes about power consumption in CMOS gates.	5 Marks	L2	CO3	PO2
	b)	Demonstrate the logic circuit of a basic RAM cell.	7 Marks	L3	CO3	PO3
		UNIT-IV				
7.	a)	Analyze the ALU functions in Adders and Multipliers.	5 Marks	L4	CO3	PO3
	b)	Explain general arrangement of 4 bit Arithmetic processor.	7 Marks	L2	CO3	PO1
		(OR)				
8.	a)	Design 4 bit shifter with suitable considerations.	6 Marks	L2	CO3	PO2
	b)	Implement ALU functions with modified booths algorithm.	6 Marks	L3	CO3	PO4
		UNIT-V				
9.	a)	Summarize standard cell design methodology.	5 Marks	L1	CO4	PO1
	b)	Develop flow chart for Physical design flow and explain the significance of each block.	7 Marks	L3	CO4	PO7
		(OR)				
10.	a)	Develop flow chart for ASIC Design Flow.	6 Marks	L1	CO4	PO7
	b)	Sketch the block diagram of a typical standard cell floor plan.	6 Marks	L2	CO4	PO1

SATELLITE COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Discuss the frequency allocations and few applications of satellites.	6 Marks	L1	CO1	PO1
	b)	Draw the geometry of a geostationary link showing elevation, azimuth and Range and explain how range can be calculated.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	List the various launch vehicles and techniques used for launching a satellite and explain them briefly.	6 Marks	L1	CO1	PO2
	b)	A geostationary satellite moving in an equatorial orbit is at a height of 35,786Km from the earth's surface. If the earth radius is taken as 6,378 Km, determine the theoretically feasible maximum coverage angle and maximum slant range.	6 Marks	L3	CO1	PO4
		UNIT-II				
3.	a)	Derive an equation for Free space path loss for a satellite system and explain the significance of it during satellite up-link and down-link design.	6 Marks	L2	CO2	PO2
	b)	Show the uplink and down link model for designing a satellite system for a specified C/N ratio and explain the procedure.	6 Marks	L2	CO2	PO8
		(OR)				
4.	a)	Discuss the Telemetry, Tracking, Command and Monitoring subsystem in detail for a satellite system.	6 Marks	L1	CO2	PO1
	b)	Design a satellite system for an EIRP of 100 dBW, a carrier frequency of 10 GHz and the distance between earth station and satellite of 36000Km. Calculate the CNR in 10MHz bandwidth if the ground station G/T is 20 dB/K.	6 Marks	L3	CO2	PO3
		UNIT-III				
5.	a)	Describe TDMA frame structure with a neat block diagram.	6 Marks	L1	CO3	PO1
	b)	Compare FDMA and TDMA systems performance with relevant examples.	6 Marks	L2	CO3	PO2
		(OR)				
6.	a)	List the various types of antennas used in satellite Earth Station design.	6 Marks	L1	CO3	PO1
	b)	Illustrate how unique word correlator is designed and used as a time marker for earth station transmission in TDMA technique.	6 Marks	L2	CO3	PO5
		UNIT-IV				
7.		List and analyze the various operational NGSO Constellation designs used in satellite communications and explain any two in detail.	12 Marks	L4	CO4	PO6

(OR)

8.	a)	Discuss Delay and Throughput considerations in a satellite system.	6 Marks	L2	CO4	PO2
	b)	Discuss about the radiation effects in satellite systems and its components. What are the standards that have to be followed?	6 Marks	L2	CO4	PO6

UNIT-V

9.	a)	List few applications of Global Positioning System.	6 Marks	L1	CO5	PO1
	b)	Explain the principle and operation and techniques used for GPS system and tracking.	6 Marks	L2	CO5	PO2

(OR)

10.	a)	List the advantages and applications of GPS Aided Geo Augmented Navigation.	6 Marks	L2	CO5	PO2
	b)	Explain briefly about IRNSS system, its necessity and sustainability in India.	6 Marks	L1	CO5	PO7

IMAGE PROCESSING

[Electrical and Electronics Engineering, Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Derive the Walsh transform kernel for N=4.	6 Marks	L3	CO1	PO5
	b)	If an image A= [5 3 4 ;6 8 7; 4 7 9] & B= [1 4 5; 8 3 6; 2 4 0] Perform Arithmetic operations on the two images A & B.	6 Marks	L4	CO1	PO4
		(OR)				
2.	a)	Develop the steps involved in sampling and quantization of an image.	6 Marks	L2	CO1	PO1
	b)	If an image A=[1 0 1 ;1 1 0; 0 1 1] & B= [0 1 1; 0 0 1; 1 1 0] Perform any four Logical operations on the two images A & B.	6 Marks	L4	CO1	PO4

UNIT-II

3.	a)	Give the expression for 2-D Butterworth Low pass filter transfer function and sketch it.	7 Marks	L2	CO2	PO3
	b)	Differentiate between spatial and frequency domain methods.	5 Marks	L2	CO2	PO2
		(OR)				
4.	a)	What is meant by image enhancement? Explain about the i) Gray level slicing ii) Bit plane slicing	6 Marks	L2	CO2	PO1
	b)	Write the different masks used for calculating first and second order derivatives for sharpening an image.	6 Marks	L3	CO2	PO5

UNIT-III

5.	a)	With neat diagram explain the image degradation model.	4 Marks	L2	CO3	PO1
	b)	List the algebraic approaches of restoration and explain anyone.	8 Marks	L2	CO3	PO1
		(OR)				
6.	a)	What type of Algorithm used in filters to estimate the Degradation function?	6 Marks	L2	CO3	PO2
	b)	Derive the constrained least squares filtering to remove noise and blurring in an image?	6 Marks	L2	CO3	PO2

UNIT-IV

7.	a)	What is the need of Fidelity Criteria in Modern image Compression?	6 Marks	L2	CO4	PO2
	b)	Analyze the various steps involved in functioning of source encoder and decoder in image compression.	6 Marks	L3	CO4	PO3
		(OR)				

8.	a)	Write the need for image compression? List and explain different redundancies in an image.	6 Marks	L2	CO4	PO2
	b)	Discuss about bit plane coding in Image Processing.	6 Marks	L2	CO4	PO1

UNIT-V

9.	a)	Write a short note on region-based Segmentation	5 Marks	L2	CO5	PO1
	b)	Explain how to convert given image from RGB to HSV with an example.	7 Marks	L2	CO6	PO2
		(OR)				
10.	a)	Define thresholding and explain about global thresholding.	7 Marks	L2	CO5	PO1
	b)	Convert the given RGB image into CMYK.	5 Marks	L3	CO6	PO2

$$X = \begin{bmatrix} \{22 & 32 & 42\} & \{36 & 49 & 58\} \\ \{45 & 56 & 78\} & \{67 & 76 & 89\} \end{bmatrix}.$$

NANOSTRUCTURES AND NANOTECHNOLOGY

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Recall Gleiter's definition of size effects.	5 Marks	L1	CO1	PO1
	b)	Outline intrinsic and extrinsic size effects. Give an example.	7 Marks	L2	CO1	PO1
		(OR)				
2.		Outline the Instability of 3D0 NSM due to grain growth.	12 Marks	L2	CO1	PO1
		UNIT-II				
3.		Examine the principal working and application of Transmission electron microscopy (TEM) for the characterization of nano materials.	12 Marks	L4	CO1	PO1
		(OR)				
4.	a)	Identify the role of nano scale dimension on the structural and mechanical properties of materials.	6 Marks	L3	CO1	PO1
	b)	Solve the challenges in detecting an extremely low concentration in solid using Secondary Ion Mass Spectrometry (SIMS) methods.	6 Marks	L3	CO1	PO1
		UNIT-III				
5.		Recall how a variety of tip sample interactions may be measured by an AFM, depending on the separation.	12 Marks	L1	CO2	PO5
		(OR)				
6.	a)	Summarize the basic working principle of Focused ion beam (FIB) lithographic technique.	6 Marks	L2	CO2	PO5
	b)	Analyze the two possible mechanisms proposed to explain the enhanced strength of nano wires or nano rods.	6 Marks	L4	CO2	PO2
		UNIT-IV				
7.	a)	Express the different Growth Mechanisms and their self-termination growth mechanisms of CNT.	6 Marks	L2	CO3	PO1
	b)	Summarize the two operation modes that are commonly used in scanning tunneling microscope.	6 Marks	L2	CO3	PO1
		(OR)				
8.		Characterize the Electrical, Thermal, and Mechanical Properties of carbon nano tube.	12 Marks	L4	CO3	PO1
		UNIT-V				
9.	a)	Design and develop nano bots and its applications nano device for biomedical application.	6 Marks	L3	CO4	PO3
	b)	Analyze the concept of Quantum dots and their use in lasers and detectors.	6 Marks	L4	CO4	PO6
		(OR)				
10.	a)	Recall the sustainability of gold nano particles for its excellent catalytic properties.	6 Marks	L2	CO4	PO7
	b)	Explain the challenges in lower threshold current and lower spectra width with Quantum well lasers.	6 Marks	L2	CO4	PO4

MACHINE LEARNING

[Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Investigate the different perspectives and issues in Machine Learning.	6 Marks	L4	CO2	PO2
	b)	Illustrate the General-to-Specific Ordering of Hypotheses using example hypotheses.	6 Marks	L2	CO1	PO2
		(OR)				
2.	a)	Write the algorithm for the Finding A Maximally Specific Hypothesis.	6 Marks	L3	CO3	PO1
	b)	Explain the simple learning algorithm to represent the version space.	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Information gain measures the expected reduction in entropy. Justify.	6 Marks	L4	CO2	PO2
	b)	Illustrate the operations of ID3 algorithm with an example.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Explain the hypothesis space search in Decision tree learning.	6 Marks	L2	CO1	PO2
	b)	Analyze the use of kernels in SVM and which kernel can be used in the case of non-linear data.	6 Marks	L4	CO2	PO2

UNIT-III

5.	a)	Investigate the advantage of gradient descent rule over the perception training rule.	6 Marks	L4	CO4	PO3
	b)	Find the stochastic approximation to gradient descent rule and explain.	6 Marks	L3	CO4	PO2
		(OR)				
6.	a)	Derive the gradient descent training rule and explain the steps with necessary equations.	6 Marks	L3	CO4	PO3
	b)	Explain the architecture of a typical multilayer neural network and illustrate its decision surface.	6 Marks	L2	CO4	PO2

UNIT-IV

7.	a)	Discuss in detail about maximum likelihood hypotheses for predicting probabilities.	6 Marks	L2	CO2	PO2
	b)	Apply the MDL principle to the problem of learning decision trees. Explain in detail.	6 Marks	L3	CO2	PO2
		(OR)				
8.	a)	Explain the Bayes optimal classification process in detail.	6 Marks	L2	CO2	PO2
	b)	Analyze the drawback of Bayes Optimal Classifier and advantage of Gibbs algorithm.	6 Marks	L4	CO3	PO3

UNIT-V

9.	a)	Discuss in detail about the locally weighted linear regression algorithm.	6 Marks	L2	CO2	PO2
	b)	Write a short note on the Radial Basis Functions.	6 Marks	L2	CO2	PO2
		(OR)				
10.	a)	Analyze the various remarks on the k-nearest neighbor algorithm.	6 Marks	L4	CO2	PO2
	b)	Describe the learning task in reinforcement learning process.	6 Marks	L2	CO2	PO2

CRYPTOGRAPHY AND NETWORK SECURITY

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Apply network security model in business organizations.	6 Marks	L3	CO1	PO8
	b)	Explain the following substitution techniques with example. i) Monoalphabetic Cipher ii) Caesar Cipher	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Convert "attack postponed until two am" using transposition technique with the key "4317256".	6 Marks	L3	CO1	PO2
	b)	Mention Responsibilities of security mechanisms.	6 Marks	L4	CO1	PO8
		UNIT-II				
3.	a)	State the purpose of the S-boxes in DES.	6 Marks	L3	CO1	PO4
	b)	Write short notes about the following block cipher modes of operations. i) Cipher Block chaining method ii) Counter mode	6 Marks	L2	CO1	PO2
		(OR)				
4.	a)	Distinguish between a block cipher and a stream cipher.	6 Marks	L2	CO1	PO1
	b)	Describe in detail the key generation in AES algorithm and its expansion format.	6 Marks	L4	CO1	PO2
		UNIT-III				
5.	a)	Explain the Schnorr Digital Signature Scheme in detail.	6 Marks	L2	CO2	PO1
	b)	List and explain the approaches to attack the RSA algorithm.	6 Marks	L4	CO2	PO4
		(OR)				
6.	a)	Differentiate a message authentication code and a one-way hash function.	6 Marks	L2	CO2	PO2
	b)	Explain in detail El Gamal Public key cryptosystem.	6 Marks	L2	CO2	PO2
		UNIT-IV				
7.	a)	Explain the format of the X.509 certificate.	6 Marks	L2	CO3	PO1
	b)	What is Kerberos? Explain how it provides authenticated service.	6 Marks	L4	CO3	PO2
		(OR)				
8.	a)	Explain public-key Authority in distribution of public keys.	6 Marks	L3	CO3	PO2
	b)	Discuss PIV System Model in Personal Identity Verification.	6 Marks	L3	CO3	PO2
		UNIT-V				
9.	a)	Write down the functions provided by S/MIME.	6 Marks	L2	CO4	PO2
	b)	Explain the architecture of IP Security.	6 Marks	L3	C04	PO1
		(OR)				
10.	a)	Differentiate between transport modes vs. tunnel mode encryption in IPsec.	6 Marks	L2	C04	PO2
	b)	Discuss the various web security requirements.	6 Marks	L4	C04	PO2

PROCESS CONTROL INSTRUMENTATION

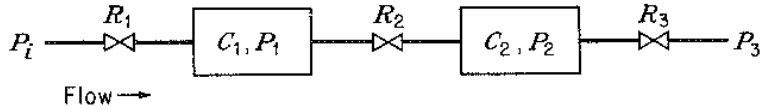
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Evaluate the transfer function of two single capacity systems are connected in none interacting.	6 Marks	L1	CO1	PO4
	b)	List the elements of process dynamics.	6 Marks	L3	CO1	PO1
		(OR)				
2.	a)	Define degrees of freedom. Illustrate with an example.	6 Marks	L2	CO1	PO2
	b)	Determine the effective time constants for an interacting flow system shown in figure, which has two equal capacities and three equal resistances.	6 Marks	L2	CO1	PO3



UNIT-II

3.	a)	Illustrate how a two position control will work.	6 Marks	L2	CO1	PO2
	b)	A liquid-level control system linearly converts a displacement of 2 to 3m into a 4 to 20mA control signal. A relay serves as the two-position controller to open or close an inlet valve. The relay closes at 12mA and opens at 10mA. Find i) The relation between displacement level and current. ii) The neutral zone or displacement gap in meters.	6 Marks	L2	CO1	PO4
		(OR)				
4.	a)	Illustrate how a multi position control will work. Also sketch the controller output for an input error signal.	6 Marks	L2	CO1	PO2
	b)	What is an offset error? How to minimize the offset error in proportional controller?	6 Marks	L3	CO1	PO1

UNIT-III

5.	a)	In an application of the closed loop Ziegler-Nichols method, a process begins oscillation with a 30% proportional band in an 11.5 min period. Find the nominal three-mode controller settings.	6 Marks	L2	CO2	PO4
	b)	Explain the Cohen-Coon method to determine the controller parameters.	6 Marks	L2	CO2	PO1
		(OR)				
6.	a)	Explain the Ziegler Nichols open loop method.	6 Marks	L3	CO2	PO2
	b)	Explain the procedure to determine the controller parameters using Ziegler Nichols closed loop method.	6 Marks	L2	CO2	PO1

UNIT-IV

7.	a)	Whether the solenoid is an actuator or not? Justify with an operation.	6 Marks	L3	CO3	PO2
	b)	Sketch the flow-lift characteristics of control valves.	6 Marks	L2	CO3	PO1

(OR)

8.	a)	Identify the forces acting on the spring actuator? Explain briefly.	6 Marks	L3	CO3	PO5
	b)	Flow through a linear valve is given by $\frac{m}{M} = \frac{1}{R}\left[1 + (R - 1)\frac{x}{X}\right]$. Compute the valve sensitivity if the valve passes 20gpm at a maximum lift of 25cm and the rangeability is 30.	6 Marks	L1	CO3	PO4

UNIT-V

9.	a)	Explain how the closed loop performance of the system can be improved by applying the cascade control concept.	6 Marks	L2	CO4	PO1
	b)	Compare and contrast the feedback and feed forward control systems with applications.	6 Marks	L3	CO4	PO2

(OR)

10.	a)	Explain the practical aspects of designing a feed forward controllers.	6 Marks	L2	CO4	PO1
	b)	What is distillation column? Explain with a neat diagram.	6 Marks	L2	CO4	PO2

ANALYTICAL INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Specify the purpose of pH measurement. Discuss the working of direct-reading type pH meter with temperature compensation arrangement	6 Marks	L1	CO1	PO2
	b)	List the gas analyzers used in industries and with a neat sketch explain the working of silica analyzer in detail.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Analyze the hydrogen concentration by using hydrogen analyzer.	6 Marks	L3	CO1	PO2
	b)	Define ion selective electrode. Identify and analyze a suitable electrode to determine the ammonia concentration present in a sample.	6 Marks	L3	CO1	PO2
		UNIT-II				
3.	a)	List the characteristics of detection systems used in gas chromatography. Explain flame ionization detector that is used in gas chromatography.	6 Marks	L2	CO2	PO1
	b)	Draw chromatogram and interpret how the chromatography separates the compounds from the sample mixture.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Classify liquid chromatography and explain columns used in liquid chromatography in detail.	6 Marks	L2	CO2	PO1
	b)	Specify the purpose of detection system and discuss any one detection system that is used with liquid chromatography.	6 Marks	L2	CO2	PO1
		UNIT-III				
5.	a)	Differentiate single beam and double beam spectrometers.	6 Marks	L2	CO2	PO1
	b)	Explain how beer Lambert's law is implemented in the analysis of chemical solution by using spectrometers.	6 Marks	L2	CO2	PO1
		(OR)				
6.	a)	Elaborate an appropriate spectroscopic technique to analyze the given chemical solution by using colorimeter.	6 Marks	L3	CO2	PO1
	b)	Draw the block diagram of FTIR spectrophotometer and illustrate the analysis of biological fluids with an example.	6 Marks	L2	CO2	PO6
		UNIT-IV				
7.	a)	Compare continuous-wave NMR spectrometer and pulsed Fourier Transform NMR spectrometer with respect to working principle.	6 Marks	L2	CO2	PO1
	b)	Select an appropriate spectroscopic technique to analyze given chemical sample by using magnetic resonance phenomenon.	6 Marks	L2	CO2	PO1

(OR)

8.	a)	Identify and analyze a suitable instrument that uses flame as light source to determine the concentration of Na present in Nacl solution.	6 Marks	L2	CO2	PO6
	b)	Explain the necessity of X- ray detectors in day today life. Discuss the instrumentation for x-ray spectrometers in detail with the help of block diagram.	6 Marks	L2	CO2	PO1

UNIT-V

9.	a)	Compare GM counter and proportional counter with respect to working principle.	6 Marks	L2	CO3	PO1
	b)	Discuss the safety measures in industrial power plants. Analyze ionizing radiations that are emitted from the nuclear power plants by using an ionization chamber.	6 Marks	L3	CO3	PO7

(OR)

10.	a)	Explain how environmental pollution monitoring devices that provides environmental safety.	6 Marks	L2	CO4	PO5
	b)	Analyze NO_X concentration present in a sample by identifying the suitable techniques that meet industrial safety.	6 Marks	L2	CO4	PO2

POWER PLANT INSTRUMENTATION

[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Define co-generation. Explain the topping cycle and bottom cycle operation of co-generation cycle.	6 Marks	L1	CO1	PO1
	b)	With a schematic diagram, explain various operations involved in hydro power plants.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Justify the role of instrumentation in thermal power plants.	6 Marks	L2	CO1	PO2
	b)	With the aid of block diagram, describe the operation of solar power plant.	6 Marks	L2	CO1	PO1
		UNIT-II				
3.	a)	Design a measuring system to measured drum water level in power plant.	6 Marks	L3	CO2	PO4
	b)	Analyze the methods of measuring steam flow in power plants.	6 Marks	L2	CO2	PO2
		(OR)				
4.	a)	With neat sketch, illustrate the working of flue gas analyzer.	6 Marks	L2	CO2	PO1
	b)	Analyze the various methods of water flow measurement in power plants.	6 Marks	L3	CO2	PO2
		UNIT-III				
5.	a)	Recall the difference between feed forward and feedback steam temperature control.	6 Marks	L2	CO3	PO1
	b)	Provide an engineering solution to control cascade steam temperature in water circuit.	6 Marks	L3	CO3	PO3
		(OR)				
6.	a)	Name different Principle parts of steam turbine and explain each in detail.	6 Marks	L2	CO3	PO1
	b)	Compare fireside with waterside control mechanisms for control of steam temperature in boiler.	6 Marks	L2	CO3	PO1
		UNIT-IV				
7.	a)	Classify steam turbines. Explain any two methods in detail.	6 Marks	L2	CO4	PO1
	b)	Select an appropriate technique for controlling automatic load frequency control.	6 Marks	L3	CO4	PO4
		(OR)				
8.	a)	Compare impulse turbine with reaction turbine.	6 Marks	L2	CO4	PO1
	b)	Explain about free governor mode operation in detail.	6 Marks	L1	CO4	PO1
		UNIT-V				
9.	a)	Discuss in detail about interlocks for boiler operation.	6 Marks	L2	CO5	PO1
	b)	Specify the importance of electrical safety and maintenance of measuring instruments in power plants.	6 Marks	L3	CO5	PO6
		(OR)				
10.	a)	List the types of maintenance in power plants and explain each in detail.	6 Marks	L2	CO5	PO1
	b)	Discuss about explosion hazards and intrinsic safety.	6 Marks	L2	CO5	PO5

INFORMATION SECURITY
[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain the security mechanisms of X.800 and security standards.	6 Marks	L2	CO1	PO1
	b)	Explain the different types of flodding_based DDoS attacks.	6 Marks	L2	CO2	PO1
		(OR)				
2.	a)	Explain the significance of the Handshake protocol of the SSL.	6 Marks	L2	CO1	PO1
	b)	Discuss the role of compression in the operation of a virus?	6 Marks	L2	CO2	PO1
		UNIT-II				
3.	a)	Explain about the SSL Handshake protocol message types and its parameters.	6 Marks	L2	CO3	PO1
	b)	Explain the IEEE 802.11 Protocol Stack and the services provided by it.	6 Marks	L2	CO3	PO1
		(OR)				
4.	a)	Explain the channel mechanism procedure in User Authentication Protocol.	6 Marks	L4	CO3	PO2
	b)	Explain the IEEE protocol architecture with a neat sketch.	6 Marks	L2	CO3	PO3
		UNIT-III				
5.	a)	Discuss with an example the message format of MIME.	6 Marks	L4	CO4	PO2
	b)	What are the advantages of the Oakley key determination protocol and ISAKMP in IPsec?	6 Marks	L4	CO4	PO2
		(OR)				
6.	a)	Briefly explain the five principal services provided by PGP.	6 Marks	L2	CO4	PO5
	b)	Explain the processing model for Outbound Packets of IPSec processing.	6 Marks	L2	CO4	PO5
		UNIT-IV				
7.	a)	Classify different types of intruders and their patterns of behaviour with examples.	6 Marks	L4	CO5	PO2
	b)	Write short notes on the following: i) application-level gateway ii) circuit-level gateway?	6 Marks	L2	CO5	PO1
		(OR)				
8.	a)	Write a short note on the Statistical Anomaly Detection of intrusion detection techniques.	6 Marks	L2	CO5	PO5
	b)	What are the common characteristics of a bastion host?	6 Marks	L2	CO5	PO2
		UNIT-V				
9.	a)	How Tor is used for anonymize SSH connections.	6 Marks	L4	CO6	PO2
	b)	Explain the installation procedure of SpoofGuard.	6 Marks	L4	CO6	PO2
		(OR)				
10.	a)	Discuss the tools used to protect the data privacy with fewer passwords.	6 Marks	L2	CO6	PO5
	b)	How to set up GPG with Apple's Mail.app included with Mac OS X.	6 Marks	L4	CO6	PO2

BIG DATA TECHNOLOGIES

[Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Illustrate the structure and Characteristics of Big Data.	6 Marks	L3	CO1	PO1
	b)	List out the applications and Tools of Big Data.	6 Marks	L1	CO1	PO2
		(OR)				
2.	a)	Differentiate between Hadoop and RDBMS.	6 Marks	L4	CO1	PO2
	b)	Explain about Hadoop latest Five Releases.	6 Marks	L4	CO1	PO2 PO5
		UNIT-II				
3.	a)	Explain data Flow and Hadoop Archives in HDFS.	6 Marks	L2	CO1	PO1
	b)	Explain Serialization, File-Based Data Structures in Hadoop I/O.	6 Marks	L4	CO1	PO2
		(OR)				
4.	a)	Explain Building Blocks of HDFS.	6 Marks	L2	CO1	PO2
	b)	List out the Concept in Hadoop I/O and HDFS.	6 Marks	L1	CO1	PO1
		UNIT-III				
5.	a)	Explain counters and joins in Map Reduce features.	6 Marks	L4	CO2	PO1
	b)	List out different types Input and output formats of Map Reduce.	6 Marks	L1	CO2	PO2
		(OR)				
6.	a)	Discuss Scaling out and Hadoop pipes in Map Reduce.	6 Marks	L3	CO2	PO2
	b)	Explain Map Reduce Architecture and Demonstrate Map Reduce word count Process with an example.	6 Marks	L3	CO3	PO3 PO4
		UNIT-IV				
7.	a)	Distinguish between HBase vs. RDBMS.	6 Marks	L4	CO3	PO2
	b)	Explain User-defined functions in Hive with Examples.	6 Marks	L4	CO3	PO1
		(OR)				
8.	a)	Demonstrate the basic concepts of Praxis.	6 Marks	L2	CO3	PO2
	b)	Explain Data processing Operators of PIG with an Example.	6 Marks	L4	CO3	PO3 PO4
		UNIT-V				
9.	a)	Describe Sqoop working with Database Imports, working with Imported Data, Importing Large Objects.	6 Marks	L1	CO4	PO5
	b)	Explain Building applications with Zookeeper.	6 Marks	L4	CO4	PO8
		(OR)				
10.	a)	Write Hive steps for creating a WhatsApp Database.	6 Marks	L4	CO3	PO8
	b)	Elaborate procedure of Facebook data processing in PIG environment.	6 Marks	L4	CO3	PO8

NANO MATERIALS AND NANOTECHNOLOGY

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Recall Gleiter's definition of size effects.	5 Marks	L1	CO1	PO1
	b)	Classify the intrinsic and extrinsic size effects with an example.	7 Marks	L2	CO1	PO1
		(OR)				
2.		Extrapolate a formula for classification of nanostructures by dimensionality.	12 Marks	L3	CO1	PO1
		UNIT-II				
3.		Explain the working principle and application of scanning electron microscopy for the characterization of nano materials.	12 Marks	L2	CO1	PO1
		(OR)				
4.	a)	Identify the influence of nano scale dimension on the structural and optical properties of materials.	6 Marks	L3	CO1	PO1
	b)	A ZnO crystallite is having a shape factor of 0.9. Apply an appropriate formula to estimate the mean size of ZnOnanocrystallites (nm). (Given, 1.54060 Å is the X-ray wavelength, 0.5 angle (θ) is the full width at half the maximum (FWHM) of the X-ray diffraction peak and the Braggs' angle is 10 deg.)	6 Marks	L3	CO1	PO1
		UNIT-III				
5.		Explain the working principle, application and advantages of Microsystems.	12 Marks	L2	CO2	PO1
		(OR)				
6.	a)	Illustrate different micromachining techniques used in MEMS.	6 Marks	L2	CO2	PO3
	b)	Analyze the concept MEMS & NEMS and compare with respect to their design and applications.	6 Marks	L4	CO2	PO2
		UNIT-IV				
7.	a)	Interpret different properties of CNT based on chiral indices (n, m).	6 Marks	L2	CO3	PO1
	b)	Develop the flowchart of Chemical Vapor Deposition of Carbon Nanotubes.	6 Marks	L3	CO3	PO1
		(OR)				
8.		Analyze the present reflection on the development of multidisciplinary research on Carbon Nanotubes (CNTs).	12 Marks	L4	CO3	PO1
		UNIT-V				
9.		Develop a Nanodevice for advanced technological application.	12 Marks	L3	CO4	PO2
		(OR)				
10.	a)	Illustrate Applications of Nanoparticles in Biological field.	6 Marks	L2	CO4	PO1
	b)	Explain synthetic tailoring of band gaps in quantum devices.	6 Marks	L2	CO4	PO1

PHYSICAL DESIGN AUTOMATION

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain in detail about computational complexity and its classes.	8 Marks	L2	CO1	PO1
	b)	List out the three ways of verification methods before fabrication process and explain in brief.	4 Marks	L1	CO1	PO1
		(OR)				
2.		Develop the Pseudo code description of Prim's minimum spanning tree algorithm and explain in detail.	12 Marks	L3	CO1	PO2
		UNIT-II				
3.	a)	List out the minimum distance design rules and explain the rules with help of lambda grid.	6 Marks	L1	CO1	PO1
	b)	Develop the symbolic layout of a CMOS Inverter by using layout design rules and explain in brief about its geometric layers.	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Develop the pseudo code for constructive placement algorithm using **while** , **if** and **cost** as attributes	4 Marks	L3	CO1	PO2
	b)	Apply constructive placement algorithm on any cluster of cells and analyze its computations.	8 Marks	L3	CO1	PO3
		UNIT-III				
5.	a)	Discuss the following : i) Signal modeling. ii) Gate modeling. iii) Delay modeling.	8 Marks	L2	CO2	PO1
	b)	Compare compiler-driven and event-driven simulation.	4 Marks	L2	CO2	PO1
		(OR)				
6.		Explain in detail about ROBDD Manipulation with an example.	12 Marks	L2	CO2	PO1
		UNIT-IV				
7.	a)	Name the special conditional nodes and explain in detail with neat sketch.	6 Marks	L1	CO2	PO1

	b)	Construct two different DFGs for below given if else statements using conditional nodes and explain in detail.
		if (a > b)
		c ——a – b ;
		else
		c ——b – a ;
			6 Marks	L3	CO2	PO2

		(OR)				
8.		Summarize the Force-directed scheduling algorithm with suitable example.	12 Marks	L2	CO2	PO1
		UNIT-V				
9.		Describe the FPGA routing algorithm for non-segmented model with necessary illustrations.	12 Marks	L2	CO3	PO1
		(OR)				
10		Explain in detail about MCM technologies with neat sketch.	12 Marks	L2	CO3	PO1

.

SYSTEM-ON CHIP DESIGN

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Recognize issues of Design for Timing Closure.	6 Marks	L2	CO1	PO1
	b)	Summarize Manufacturing Test strategies SoC.	6 Marks	L1	CO1	PO1
		(OR)				
2.		Analyze different specification problems in SoC Design.	12 Marks	L4	CO1	PO1
		UNIT-II				
3.	a)	Appraise the macro design process.	6 Marks	L4	CO2	PO1
	b)	Discuss about model development for Hard Macros.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Distinguish between Hard and Soft Macros Design Process.	6 Marks	L4	CO2	PO1
	b)	Evaluate the method of Soft Macro Productization.	6 Marks	L3	CO2	PO1
		UNIT-III				
5.	a)	Categorize and compare verification technology options.	6 Marks	L4	CO3	PO1
	b)	Develop an arbiter block RTL code for lint checking.	6 Marks	L3	CO3	PO1
		(OR)				
6.		List different verification approaches. Outline Verification Plans for all of the verification activities to be performed and explain them in detail.	12 Marks	L2	CO3	PO1
		UNIT-IV				
7.	a)	Devise a methodology for creating a Soft Prototype. Also List the limitations of Soft Prototype.	6 Marks	L3	CO3	PO1
	b)	Asses Static Timing Verification to verify whether the design has met timing requirements or not.	6 Marks	L4	CO3	PO1
		(OR)				
8.		What are the several co verification methodologies in the market and discuss the basic methodology flow of the same.	12 Marks	L2	CO3	PO1
		UNIT-V				
9.	a)	Identify and explain Topologies, Protocols and Interfaces for On-chip Communication Architecture.	7 Marks	L2	CO4	PO3
	b)	Relate a method to minimize the energy consumed by Communication architecture and to improve its energy efficiency.	5 Marks	L3	CO4	PO1
		(OR)				
10.		List and assess the performance of various Adaptive Communication Architectures.	12 Marks	L4	CO4	PO3

NETWORK-ON-CHIP DESIGN

[V L S I]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Illustrate Interconnection network of modern multiprocessor system-on-chip (MPSoC) architectures.	6 Marks	L2	CO1	PO1
	b)	Model 4 x 4 2D torus with single core connected to each router.	6 Marks	L4	CO1	PO1
		(OR)				
2.	a)	Categorize Switching techniques in NoC.	6 Marks	L2	CO1	PO1
	b)	Show MoT(Mess of Tree) topology and its simplified graph.	6 Marks	L1	CO1	PO1
		UNIT-II				
3.	a)	Model dynamic adaptive–deterministic odd–even (DyAD–OE) router architecture.	6 Marks	L4	CO1	PO1
	b)	Examine the communication strategy of GALS style using dual-clock FIFO in NoC router.	6 Marks	L3	CO1	PO1
		(OR)				
4.	a)	Explain in detail about Round-robin arbiter with Grant Signal Generation Logic.	6 Marks	L2	CO1	PO1
	b)	Summarize the architecture design of wormhole and Virtual channel for NoC.	6 Marks	L1	CO1	PO1
		UNIT-III				
5.	a)	Classify Routing algorithms in NoC.	6 Marks	L2	CO2	PO2
	b)	Distinguish Resource dependency graph with: i) hold and wait-for relations and ii) wait-for relations for Deadlock Avoidance	6 Marks	L2	CO2	PO1
		(OR)				
6.	a)	List typical approaches of QoS in NoC architectures.	6 Marks	L1	CO2	PO2
	b)	Examine Buffer less Routing Algorithms inNoC.	6 Marks	L3	CO2	PO1
		UNIT-IV				
7.	a)	Simplify notations an output arguments of function Scheduling policy in verification of NoC.	6 Marks	L1	CO3	PO1
	b)	Show the basic elements of NoC architecture.	6 Marks	L2	CO3	PO1
		(OR)				
8.	a)	Demonstrate the application of Formal Methods in NoCs Verification.	6 Marks	L2	CO3	PO1
	b)	Evaluate Protection of IP Cores from Side-Channel Attacks.	6 Marks	L3	CO3	PO3
		UNIT-V				
9.	a)	Inspect an overview of the exploration methodology of alternative topologies for 3D Networks-on-Chip.	6 Marks	L3	CO4	PO2
	b)	Analyze Deadlocks in routing protocols.	6 Marks	L4	CO4	PO2
		(OR)				
10.	a)	Interview Duplication of switch resources scheme of NoC.	6 Marks	L2	CO4	PO1
	b)	Assess taxonomy of routing algorithms in NoC protocols.	6 Marks	L2	CO4	PO3

COMPUTER ORIENTED STATISTICAL TECHNIQUES

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Illustrate the central tendency measures using suitable examples	6 Marks	L2	CO1	PO2
	b)	Calculate the IQR and determine if any salaries are outliers. The salaries are in dollars. $33,000 $64,500 $28,000 $54,000 $72,000 $68,500 $69,000 $42,000 $54,000 $120,000 $40,500.	6 Marks	L3	CO1	PO2
		(OR)				
2.	a)	Discuss measures of skewness on univariate data with example.	6 Marks	L1	CO1	PO1
	b)	Define Kurtosis and explain normal distribution with example.	6 Marks	L2	CO1	PO2
		UNIT-II				
3.	a)	Describe Data types and structures using R.	6 Marks	L1	CO2	PO1
	b)	Illustrate Array operations in R programming.	6 Marks	L1	CO2	PO1
		(OR)				
4.	a)	Discuss Graphical Data Analysis using R	6 Marks	L2	CO2	PO1
	b)	Discuss the Time series Analysis using R.	6 Marks	L2	CO2	PO2
		UNIT-III				
5.	a)	Compare and contrast Binomial distribution and Poisson distribution with examples.	6 Marks	L1	CO3	PO1
	b)	Explain Binomial Distribution and find the probability of getting exactly 7 heads when Toss a coin for 12 times.	6 Marks	L1	CO3	PO5
		(OR)				
6.	a)	Explain probability distribution on random variables.	6 Marks	L1	CO3	PO1
	b)	Compare and contrast Normal probability distribution and Binomial probability distribution with suitable examples.	6 Marks	L1	CO3	PO5
		UNIT-IV				
7.		Apply Karl Pearson Coefficient of Correlation Direct Method on given data.	12 Marks	L2	CO4	PO1

Price of Apple (Rs.)	15	25	35	40	50	65	75
Supply of Apples (Units)	2	5	6	8	9	10	14

		(OR)				
8.	a)	Explain simple linear Regression analysis and Multi Linear Regression analysis with suitable examples.	6 Marks	L2	CO4	PO2
	b)	Discuss 7 steps to Run a linear Regression Analysis using R.	6 Marks	L1	CO4	PO1
		UNIT-V				
9.	a)	Describe Hypothesis testing and prove null hypothesis, Alternate hypothesis on given statement “A researcher thinks that if knee surgery patients go to physical therapy twice a week (instead of 3 times), their recovery period will be longer. Average recovery times for knee surgery patients is 8.2 weeks.	6 Marks	L1	CO5	PO1
	b)	Explain Chi square test and F-test and t-test with suitable examples.	6 Marks	L3	CO5	PO4

(OR)

10.	a)	Explain Statistical significance and Type I error and Type2 error rate.	6 Marks	L2	CO5	PO2
	b)	Discuss Two Sample t test for Comparing Two Means with suitable examples.	6 Marks	L3	CO5	PO4

M.C.A. I Semester (SVEC-20) Supplementary Examinations October– 2022

COMPUTER NETWORKS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	What do you mean by computer network? Classify computer networks and explain them in brief.	6 Marks	L2	CO1	PO1
	b)	Differentiate between Connection-Oriented *Vs* Connectionless Services.	6 Marks	L4	CO1	PO1
		(OR)				
2.	a)	Why twisted pair cables are preferable over coaxial cables? Explain.	6 Marks	L2	CO1	PO2
	b)	Compare OSI and TCP/IP reference models.	6 Marks	L4	CO1	PO1
		UNIT-II				
3.	a)	What are the design issues of Data Link Layer? Explain.	6 Marks	L2	CO3	PO2
	b)	Explain any two error correction mechanisms in detail.	6 Marks	L2	CO2	PO2
		(OR)				
4.	a)	Explain in detail about the Simplex Stop and Wait protocol.	6 Marks	L2	CO2	PO2
	b)	Explain briefly about the Persistent and Non-persistent CSMA protocols.	6 Marks	L2	CO2	PO3
		UNIT-III				
5.	a)	Explain the link state Routing Algorithm with an example.	6 Marks	L2	CO3	PO3
	b)	Describe the General principles of Congestion Control.	6 Marks	L3	CO3	PO2
		(OR)				
6.	a)	Differentiate between Virtual circuit *Vs* Datagram Subnets.	6 Marks	L4	CO3	PO3
	b)	Write briefly about congestion control for multicasting.	6 Marks	L2	CO3	PO2
		UNIT-IV				
7.	a)	Define UDP. Discuss the operations of UDP.	6 Marks	L2	CO3	PO3
	b)	Draw and explain each field in the TCP Segment header.	6 Marks	L2	CO3	PO3
		(OR)				
8.	a)	Identify and explain the states involved in TCP.	6 Marks	L2	CO3	PO3
	b)	Explain in detail the various TCP congestion control mechanisms.	6 Marks	L2	CO3	PO3
		UNIT-V				
9.	a)	Explain in brief about the formats of HTTP request and Response messages.	6 Marks	L2	CO4	PO4
	b)	Describe importance of DNS in application layer.	6 Marks	L2	CO4	PO4
		(OR)				
10.	a)	What is a name server? List and explain the features of various name servers.	6 Marks	L2	CO4	PO4
	b)	What is electronic E-mail? Describe in brief about the two architectures of E-Mail.	6 Marks	L2	CO4	PO4

DATABASE MANAGEMENT SYSTEMS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Briefly explain about physical view and logical view.	6 Marks	L1	CO1	PO1
	b)	What is meant by data independence? Explain the difference between physical data independence and logical data independence.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Write short notes on data models, schemas and instances.	6 Marks	L2	CO2	PO2
	b)	Analyze the concepts of class hierarchy and aggregation features of Entity Relationship model with an example.	6 Marks	L4	CO3	PO3
		UNIT-II				
3.	a)	Discuss the Characteristics of Relations.	6 Marks	L2	CO3	PO3
	b)	Differentiate between entity and referential integrity constraints.	6 Marks	L2	CO4	PO4
		(OR)				
4.		Construct an Entity Relationship diagram for a university database. Assume your own entities (Minimum of 5 entities), attributes and relations. Explain in detail.	12 Marks	L3	CO3	PO3
		UNIT-III				
5.	a)	Explain with suitable example that, if a relation is in 3NF then necessarily it should be in 2NF.	6 Marks	L3	CO2	PO2
	b)	Describe Dependency preservation with an example.	6 Marks	L3	CO2	PO2
		(OR)				
6.		Make use of Structured Query Language in solving the following with proper example: i) Nested Queries. ii) Joins.	12 Marks	L3	CO4	PO4
		UNIT-IV				
7.		What is the two-phase locking protocol? What are the variations of it? How does it guarantee serializability?	12 Marks	L2	CO5	PO5
		(OR)				
8.	a)	Discuss why concurrency control is needed. Give informal example.	8 Marks	L2	CO5	PO5
	b)	What is transaction rollback?	4 Marks	L2	CO5	PO5
		UNIT-V				
9.	a)	Write differences between fixed length records and variable length records.	6 Marks	L3	CO2	PO2
	b)	Briefly explain different types of single level ordered Indexes.	6 Marks	L3	CO2	PO2
		(OR)				
10.		What are different Hashing Techniques that allow dynamic file expansion?	12 Marks	L2	CO2	PO2

DATA STRUCTURES AND ALGORITHMS

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Compare bubble and selection sorting methods.	6 Marks	L2	CO2	PO2
	b)	Write binary search algorithm and find its time complexity.	6 Marks	L2	CO2	PO2
		(OR)				
2.	a)	What is data structure and give examples? List out applications of each data structure.	6 Marks	L2	CO1	PO2
	b)	Sort the following numbers using insertion sort. 39, 48, 62, 18, 23, 34, 58.	6 Marks	L3	CO2	PO2

UNIT-II

3.	a)	What is the difference between singly linked list, doubly linked list and circular linked list?	6 Marks	L2	CO3	PO3
	b)	Write an algorithm to delete a node from the beginning of the linked list.	6 Marks	L3	CO3	PO3
		(OR)				
4.		Write insertion and deletion algorithm for the doubly linked lists.	12 Marks	L3	CO3	PO3

UNIT-III

5.	a)	What is stack? Specify any four applications where stacks are extensively used.	6 Marks	L2	CO4	PO1
	b)	Write a routine to convert the following infix expression in to postfix expression: **a+b*c/(e+f*g).**	6 Marks	L3	CO4	PO1
		(OR)				
6.	a)	What is Queue? Specify any four applications where queues are extensively used.	6 Marks	L2	CO4	PO1
	b)	Write a routine to implement double ended queue (Deque).	6 Marks	L3	CO4	PO1

UNIT-IV

7.	a)	Explain Array representation of Binary tree.	6 Marks	L2	CO5	PO1
	b)	Construct a Binary tree T by using the following in order and post order traversals of T. In order: D K I B A E G H J F C. Post Order: K D I E A G B F C J H.	6 Marks	L3	CO5	PO1
		(OR)				
8.		What is Binary Search Tree (BST)? Explain insertion and deletion operations on BST.	12 Marks	L2	CO5	PO1

UNIT-V

9.	a)	Differentiate Breadth First Search and Depth First Search methods.	6 Marks	L2	CO5	PO1
	b)	Write a program to implement Depth First Search algorithm.	6 Marks	L3	CO5	PO1
		(OR)				
10.	a)	Differentiate between B Tree and B+ Tree.	6 Marks	L2	CO5	PO1
	b)	Explain Open addressing collision resolution in hashing.	6 Marks	L2	C06	PO2

FINANCIAL AND MANAGEMENT ACCOUNTING

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry marks

UNIT-I

1. Discuss the objectives and functions of Accounting. 12 Marks L2 CO1 PO2

(OR)

2. Explain the Accounting conventions in detail. 12 Marks L2 CO1 PO2

UNIT-II

3. From the following particulars prepare Balance Sheet of Madhu for the year ended 2020. 12 Marks L3 CO2 PO3

Liabilties	Amount	Assets	Amount
Capital	2,00,000	Creditors	40,000
Drawings	40,000	Bills Payable	20,000
Cash in hand	15,000	Goodwill	60,000
Loan from bank	40,000	Debtors	80,000
Bank overdraft	20,000	Land	50,000
Investments	20,000	Vehicles	80,000
Bills receivable	10,000	Cash At Bnk	25,000

The following adjustments are to be made.
i) Outstanding salaries : Rs 10,000,
ii) Wages Rs 20,000
iii) Interest on bank OD Rs 3,000 and interest on bank loan Rs 6,000.

(OR)

4. Differentiate Manual and Computerized Accounting. 12 Marks L3 CO2 PO3

UNIT-III

5. Discuss briefly different Leverage ratios. 12 Marks L2 CO1 PO2

(OR)

6. The assets and liabilities of a limited company are given below. You are required to calculate 12 Marks L3 CO2 PO3
i) Current Ratio ii) Liquidity Ratio and
iii) Proprietary Ratio.

Liabilities	Rs.	Assets	Rs.
5,000 Equity Shares of Rs. 100 each	5,00,000	Land & Buildings	6,00,000
2,000, 8% preference shares at Rs. 100 each	2,00,000	Plant, Machinery	5,00,000
9% Debentures	4,00,000	Stock	2,40,000
Reserves	3,00,000	Debtors	2,00,000
Creditors	1,50,000	Cash at Bank	55,000
Bank Overdraft	50,000	Prepaid Expense	5,000
	16,00,000		16,00,000

UNIT-IV

7.	Assuming that the cost structure and selling prices for remain the same in periods I and II, find out: i) Profit Volume ratio ii) Break Even Point for Sales iii) Profit when sales are of Rs. 100,000 iv) Sales required to earn a profit of Rs. 20,000 and v) Variable Cost in Period II	12 Marks	L3	CO2	PO3

Period	Sales	Cost	Profit
I	1,20,000	1,11,000	9,000
II	1,40,000	1,27,000	13,000

A company prepares a budget to produce 3,00,000 units with fixed cost Rs. 15,00,000/-,Variable cost is Rs.10/- per unit Profit is 20% on Total Cost. Calculate BEP in units and Sales as well as P/V ratio, Margin of Safety and Contribution.

(OR)

8.	Explain the advantages and disadvantages of break even analysis.	12 Marks	L2	CO1	PO2

UNIT-V

9.	Explain modern techniques of project evaluation.	12 Marks	L2	CO1	PO2

(OR)

10.	A project costs Rs.5,00,000 and is expected to generate net cash inflow of Rs.3,00,000,Rs.2,50,000 and Rs.2,00,000 over its life of three years. Cost of capital is 10%. Calculate Payback period and Net Present value of the Project.	12 Marks	L3	CO2	PO3

DATA WAREHOUSING AND DATA MINING

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Describe spread sheets to data cubes.	6 Marks	L1	CO1	PO1
	b)	Define data ware housing and explain benefits of data ware housing.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Describe data warehouse architecture.	6 Marks	L1	CO1	PO2
	b)	Write about Start, snowflake schemas.	6 Marks	L1	CO1	PO3
		UNIT-II				
3.	a)	Explain need of processing the data.	6 Marks	L2	CO2	PO2
	b)	Describe classification of data mining functionalities.	6 Marks	L2	CO2	PO1
		(OR)				
4.		Describe Data Integration, Data Transformation and Data Reduction, Data Cleaning.	12 Marks	L4	CO2	PO2
		UNIT-III				
5.	a)	Explain Bayesian Classification.	6 Marks	L3	CO3	PO3
	b)	Describe classification by decision Tree Induction.	6 Marks	L3	CO2	PO1
		(OR)				
6.		Evaluate the accuracy of a classifier or predictor, bagging and boosting.	12 Marks	L4	CO2	PO3
		UNIT-IV				
7.	a)	Explain Grid-Based Method-STING.	6 Marks	L1	CO4	PO4
	b)	Describe types of data in cluster analysis.	6 Marks	L2	CO3	PO1
		(OR)				
8.		Explain partitioning methods (k-means, k-medians).	12 Marks	L2	CO3	PO3
		UNIT-V				
9.	a)	Explain Multi-Media Data mining.	6 Marks	L4	CO3	PO4
	b)	Explain Text Mining Approaches.	6 Marks	L4	CO4	PO2
		(OR)				
10.		Explain Data Mining Applications.	12 Marks	L2	CO4	PO3

OBJECT ORIENTED PROGRAMMING THROUGH JAVA

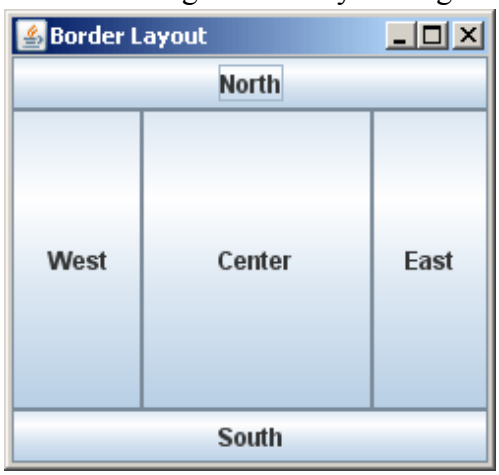
Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain different operators available in JAVA.	9 Marks	L3	CO1	PO1
	b)	Describe about garbage collection in Java.	3 Marks	L3	CO1	PO2
		(OR)				
2.		Explain different control statements available in JAVA with code fragment.	12 Marks	L3	CO1	PO3 PO4
		UNIT-II				
3.	a)	Explain Multilevel Inheritance with an example program.	6 Marks	L2	CO2	PO1
	b)	What is an Abstract Class? Give a suitable example program.	6 Marks	L2	CO2	PO3
		(OR)				
4.	a)	How do you define a subclass for a class? Explain the concept with an example.	6 Marks	L3	CO2	PO4
	b)	Describe the concept of Dynamic method dispatch.	6 Marks	L3	CO1	PO3
		UNIT-III				
5.	a)	Explain about Collection frame work for the following: i) Hash Set. ii) Array List.	6 Marks	L1	CO3	PO2
	b)	Elaborate the concept of Console Class and illustrate with an example.	6 Marks	L2	CO2	PO4
		(OR)				
6.		Describe the following Byte streams. i) File Input Stream. ii) File Ouput Stream. iii) Print Stream.	12 Marks	L1	CO3	PO1 PO2
		UNIT-IV				
7.		Define a Thread. Explain about Thread Life Cycle with suitable example.	12 Marks	L1	CO3	PO2 PO3
		(OR)				
8.	a)	How do you throw your own exception? Explain with an example program.	6 Marks	L2	CO3	PO4
	b)	Explain Multiple Catch blocks and Nested Try blocks.	6 Marks	L1	CO3	PO5
		UNIT-V				
9.	a)	Explain about the following Swing Components. i) Check Boxes. ii) Radio Buttons.	6 Marks	L4	CO4	PO1 PO2
	b)	Illustrate about Event Delegation Model.	6 Marks	L3	CO4	PO4

(OR)

10. a) Design an applet that arranges 5 buttons with labels North, South, East, West, and Center using Border Layout as given below. 6 Marks L3 CO4 PO5



b) Explain the following: 6 Marks L4 CO4 PO4

i) JFrame ii) JButton iii) JText Field

CRYPTOGRAPHY AND NETWORK SECURITY

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Classify various security attacks defined in X.800.	6 Marks	L3	CO1	PO2
	b)	Explain any two substitution techniques in detail with an example.	6 Marks	L4	CO1	PO3
		(OR)				
2.	a)	Summarize symmetric cipher model with a neat diagram and what are the main requirements for the secure use of symmetric encryption?	6 Marks	L2	CO1	PO2
	b)	List and explain security mechanisms defined in X.800.	6 Marks	L4	CO1	PO1
		UNIT-II				
3.	a)	State the principles of public-key cryptosystem and explain.	5 Marks	L2	CO1	PO1
	b)	What is the purpose of Diffie-Hellman key exchange algorithm and explain the algorithm?	7 Marks	L5	CO3	PO5
		(OR)				
4.	a)	Analyze the Encryption process in Data Encryption Standard (DES).	7 Marks	L4	CO3	PO3
	b)	Summarize RSA algorithm and perform encryption and decryption using RSA algorithm for p=3, q=11, e=7 and m=5.	5 Marks	L6	CO3	PO5
		UNIT-III				
5.	a)	Explain Message Authentication Code based on DES with neat sketch.	6 Marks	L4	CO3	PO3
	b)	Discuss the techniques of distributing public keys in public-key cryptography.	6 Marks	L3	CO3	PO2
		(OR)				
6.	a)	Define Digital Signature and explain Digital Signature algorithm.	7 Marks	L5	CO3	PO5
	b)	Draw and analyze X.509 Certificate Format.	5 Marks	L4	CO3	PO1
		UNIT-IV				
7.		Explain in detail the packet formats of Authentication Header and Encapsulating Security Payload in both Transport mode and Tunnel mode with neat diagrams.	12 Marks	L4	CO2	PO3
		(OR)				
8.	a)	What are the services that PGP provide and explain the general format of a PGP message?	7 Marks	L4	CO2	PO2
	b)	Summarize the cryptographic algorithms used in the functions provided by S/MIME.	5 Marks	L2	CO2	PO5
		UNIT-V				
9.	a)	Explain in brief the SSL Handshake protocol and Record protocol.	6 Marks	L4	CO4	PO4
	b)	Discuss the approaches to intrusion detection in brief.	6 Marks	L3	CO4	PO1
		(OR)				
10.		What are the characteristics of a Firewall? Discuss the types of firewall with diagrams in detail.	12 Marks	L4	CO4	PO2

MACHINE LEARNING

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	List the steps that are involved in designing a learning system and explain about choosing the training experience with an example.	6 Marks	L2	CO1	PO1
	b)	Explain the concept learning task for the following example.	6 Marks	L3	CO1	PO1

Day	Sky	Airtemp	Humidity	Wind	Water	Forecast	WaterSport
1.	Sunny	Warm	Normal	Strong	Warm	Same	Yes
2.	Sunny	Warm	High	Strong	Warm	Same	Yes
3.	Rainy	Cold	High	Strong	Warm	Change	No
4.	Sunny	Warm	High	Strong	Cool	Change	Yes

(OR)

2.	a)	Explain the different issues in machine learning.	6 Marks	L2	CO1	PO1
	b)	Explain version space and representation of version space with an example.	6 Marks	L2	CO1	PO1

UNIT-II

3.	a)	Discuss about the basic decision tree algorithm.	6 Marks	L2	CO2	PO1
	b)	Differentiate Restriction Biases and Preference Biases in decision tree learning.	6 Marks	L2	CO2	PO1

(OR)

4.	a)	Explain the back propagation algorithm.	6 Marks	L2	CO2	PO3
	b)	Discuss the appropriate problems for neural network learning.	6 Marks	L2	CO2	PO3

UNIT-III

5.	a)	Explain naïve bayes classifier.	6 Marks	L1	CO1	PO2
	b)	Write about minimum description length principle.	6 Marks	L2	CO1	PO3

(OR)

6.	a)	Discuss about EM algorithm.	6 Marks	L2	CO1	PO1
	b)	Explain about probably approximately correct learning model.	6 Marks	L1	CO1	PO1

UNIT-IV

7.		Explain in detail probably approximately correct learning model of computational learning.	12 Marks	L2	CO3	PO1

(OR)

8.	a)	Write the possible alternative methods for learning set of rules and explain.	6 Marks	L2	CO3	PO1
	b)	Discuss about the explanation-based learning algorithm. PROLOG EBG.	6 Marks	L2	CO3	PO2

UNIT-V

9.	a)	Explain KBANN algorithm.	6 Marks	L2	CO4	PO1
	b)	Write about TANGENTPROP algorithm.	6 Marks	L2	CO4	PO2

(OR)

10.		Discuss in detail about the learning tasks and Q learning in the context of reinforcement learning.	12 Marks	L3	CO4	PO1

ENGINEERING MATHEMATICS

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Solve: $\frac{dy}{dx} + x\sin 2y = x^3\cos^2 y.$ 7 Marks

b) Solve: $y'' - 2y' + y = e^x \log x$ by the method of variation of parameters. 7 Marks

(OR)

2 a) Solve: $(D^2 - 2D + 1)y = xe^x \sin x.$ 7 Marks

b) The temperature of the body drops from 100^0C to 75^0C in ten minutes when the surrounding air is at 20^0C temperature. What will be its temperature after half an hour. When will the temperature be 25^0C. 7 Marks

UNIT-II

3 a) Express equation $\frac{\partial^2 y}{\partial x^2} + \frac{\partial^2 y}{\partial y^2} = 0$ in polar form (r, θ). 7 Marks

b) Show that the rectangular solid of maximum volume that can be inscribed in a sphere is cube. 7 Marks

(OR)

4 a) Trace the curve $a^2y^2 = x^2(a^2 - x^2)$. 7 Marks

b) Find the radius of curvature at any point of the cardioid $r = a(1 - \cos\theta)$. 7 Marks

UNIT-III

5 a) Find the length of an arc of the cycloid $x = a(\theta + \sin\theta), y = a(1 + \cos\theta)$. 7 Marks

b) Evaluate $\iint_R ydxdy$ where R is the region bounded by the parabolas $y^2=4ax$ and $x^2=4ay$. 7 Marks

(OR)

6 a) Evaluate $\int_0^1 \int_0^{2-x} xy\ dxdy$ by changing the order of integration. 7 Marks

b) Evaluate $\iiint_V \frac{dxdydz}{(x + y + z + 1)^3}$ taken over the volume bounded by the planes $x = 0$, $y = 0$, $z = 0$ and the plane $x + y + z = 1$. 7 Marks

UNIT-IV

7 a) Find the Laplace transform of $f(t) = \begin{cases} \sin(wt) & when \quad 0 < t < \pi / w \\ 0 & when \quad \pi / w < t < 2\pi / w \end{cases}$. 7 Marks

b) Find the inverse Laplace transform of $(i)\log\left(\frac{s^2+1}{(s-1)^2}\right)$ $(ii)\frac{s+2}{(s^2+4s+5)^2}$. 7 Marks

(OR)

8 a) Solve $y'' + 2y' - 3y = \sin t$ such that $y'(0) = 0$ *and* $y(0) = 0$. 7 Marks

b) Find the Laplace transform of *(i)* $\boldsymbol{\cos^3 2t}$ *(ii)* $\boldsymbol{e^{-2t}\cosh 3t}$ 7 Marks

UNIT-V

9 a) Find the work done in moving a particle in the force field 7 Marks
$\overline{F} = 3x^2\bar{i} + (2xz - y)\bar{j} + z\bar{k}$, along the straight line from (0, 0, 0) to (2, 1, 3).

b) Find the directional derivative of the function $f(x, y, z) = x^2 - y^2 + 2z^2$ at the point $P(1, 2, 3)$ in the direction of the line PQ where $Q(5, 0, 4)$. 7 Marks

(OR)

10 a) Verify divergence theorem for $\boldsymbol{F = x^2 i + y^2 j + z^2 k}$ taken over the rectangular parallelepiped $\boldsymbol{0 \le x \le a, 0 \le y \le b, 0 \le z \le c}$. 7 Marks

b) Evaluate $\iiint_V xyz\, dx\, dy\, dz$ take over the volume V of the tetrahedron given by 7 Marks
$\boldsymbol{x \ge 0,\ y \ge 0,\ z \ge 0}$ and $\boldsymbol{x + y + z \le 1}$.

ENGINEERING CHEMISTY

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Three samples of water are collected from Bandara palli (**BP**), Naravari Palli (**NP**) and Sree Sainath Nagar (**SSN**). 100 mL of the water sample collected at **BP** requires 34 mL of 0.01 M EDTA solution on titration. 100 mL of the water sample collected at **NP** required 48 mL of 0.01 M EDTA solution on titration. 100 mL of the water sample collected at **SSN** requires 15 mL of 0.01 M EDTA solution on titration. Discuss the result and suggest the sample which can be directly used for drinking with respect to only Hardness (WHO standard: Hardness < 200 ppm of $\mathbf{CaCO_3}$).	10 Marks
	b)	Why hard water consumes lot of soap? Explain your answer with chemical reactions.	4 Marks
		(OR)	
2	a)	Give the specifications of Water for "steam generation". Explain Boiler corrosion, scale and sludge formation	7 Marks
	b)	Discuss ion exchange process of water softening with neat diagram. Give the chemical reactions where ever is necessary	7 Marks

UNIT-II

3	a)	Explain the role of chemistry in Engineering materials with suitable examples.	7 Marks
	b)	Explain engineering applications of Composites.	7 Marks
		(OR)	
4	a)	Discuss: i) Intrinsically conducting polymer. ii) Extrinsically conducting polymer.	7 Marks
	b)	Discuss the Properties and classification of Bio-degradable polymers.	7 Marks

UNIT-III

5	a)	Write notes on: i) Use of alternative feedstocks. ii) Use of safe reagents.	8 Marks
	b)	Write informative notes on recent trends in Nano Technology.	6 Marks
		(OR)	
6	a)	Classify the nanomaterials.	10 Marks
	b)	Green solutions - explain their role in green synthesis.	4 Marks

UNIT-IV

7	a)	Based on the chemistry that takes place; explain Ni-Cd battery is called "secondary storage battery."	8 Marks
	b)	Summaries the role of fuel cells in the modern world.	6 Marks
		(OR)	

8	a)	Construct a lithium ion battery and explain the chemistry involved in it	10 Marks
	b)	Fuel cells were invented in 1839, but never developed into practical devices for producing electrical energy until the U.S. space program in the 1960s. What advantages did fuel cells have over previous power sources?	4 Marks

UNIT-V

9	a)	i) When a coating is plated onto a metal, two different metals are in contact with each other. Why doesn't galvanic corrosion occur at this interface? ii) Aluminium is used extensively as a construction metal. What are two important properties of Aluminium that make it particularly desirable for construction purposes? iii) Explain how corrosion can be considered as extractive metallurgy in reverse.	10 Marks
	b)	Discuss any two factors influencing rate of corrosion with suitable example.	4 Marks

(OR)

10	a)	Explain the chemistry involved in concentration cell corrosion.	4 Marks
	b)	Discuss in detail the classification and properties of Lubricants.	10 Marks

I B.Tech I Semester (SVEC-16) Supplementary Examinations November – 2022

ENGINEERING PHYSICS

[Electrical and Electronics Engineering, Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define acceptance angle, acceptance cone and numerical aperture. Derive the expression for numerical aperture in terms of refractive index of the core and the cladding of an optical fiber.	12 Marks
	b)	List any four applications of laser.	2 Marks
		(OR)	
2	a)	What is meant by population inversion? How is it achieved?	5 Marks
	b)	Derive the relation between the probabilities of spontaneous emission and stimulated emission in terms of Einstein's coefficient.	9 Marks

UNIT-II

3		Discuss with suitable mathematical expressions, the Kronig – Penney model for the energies of an electron in a crystal.	14 Marks
		(OR)	
4	a)	Show that the energies of a particle in a one dimensional potential box are quantized.	10 Marks
	b)	Write the conclusions of Kronig – Penney model of periodic potentials.	4 Marks

UNIT-III

5	a)	Develop an expression for local filed of an atom in a dielectric material using Lorentz method.	9 Marks
	b)	What is ferroelectricity?	2 Marks
	c)	The dielectric constant of a medium is 4. The electric field applied to the dielectric material is 10^6**V/m**. Calculate electric displacement and polarization. Give that the relative permittivity of free space is 8.85×10^{-12} **F/m.**	3 Marks
		(OR)	
6	a)	How do you apply frequency dependence of polarization to analyse variation of dielectric constant of material as frequency of alternating electric field changes from radio wave to optical frequency range?	5 Marks
	b)	With usual notations show that $\alpha_e = \varepsilon_o(\varepsilon_r - 1)/N$.	9 Marks

UNIT-IV

7	a)	Explain Josephson Effect in superconductor.	8 Marks
	b)	What is meant by flux quantization ?	3 Marks
	c)	Calculate the critical temperature and critical current for a wire of lead having a diameter 1 mm at 4.2 K. The critical temperature for the lead is 7.18 **K** and H_o = 6.5 x 10^{-4}**A/m**.	3 Marks
		(OR)	

8	a)	Distinguish between type-I and type-II superconductors.	8 Marks
	b)	Explain how penetration depth for a superconductor varies with magnetic field strength and temperature.	4 Marks
	c)	A lead superconductor with T_c = 7.22 K has a critical magnetic field of 6.5 x $\mathbf{10^3}$ $\mathbf{Am^{-1}}$ at absolute zero, then find the value of critical field at 5**K**.	2 Marks

UNIT-V

9	a)	Sketch the following planes in a cubic crystal (100), (110) and (111).	6 Marks
	b)	What are nano materials and what are their importances? List any six applications of nano materials.	8 Marks

(OR)

10	a)	What are nano materials? List any four applications of nano materials.	6 Marks
	b)	Suggest and describe a method which can give us an understanding of the possible crystal structure by using a mono chromatic X- ray diffraction.	8 Marks

MATRICES AND NUMERICAL METHODS

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Determine the characteristic values and characteristic vectors of the matrix A= 10 Marks

$$\begin{bmatrix} -2 & 2 & -3 \\ 2 & 1 & -6 \\ -1 & -2 & 0 \end{bmatrix}$$

b) 4 Marks

Two Eigen values of the matrix A= $\begin{bmatrix} 2 & 2 & 1 \\ 1 & 3 & 1 \\ 1 & 2 & 2 \end{bmatrix}$ are 1 each. Find the Eigen values of A^{-1}.

(OR)

2 Reduce the quadratic form $3x^2 + 5y^2 + 3z^2 - 2xy - 2xz + 2yz$ into canonical form by orthogonal transformation. Also identify its nature, rank, signature and index. 14 Marks

UNIT-II

3 a) Using the bisection method, find a real root of the equation x log x=3.375 lying between 2 and 3. 7 Marks

b) If P is the pull required to lift a load W by means of a pulley block, evaluate a linear equation of the form **P=mW** + c connecting **P** and **W**, using the following data: 7 Marks

P	12	15	21	25
W	50	70	100	120

Where **P** and **W** are taken in **kg-wt**. Compute P when **W=150 kg.wt.**

(OR)

4 a) Applying Newton- Raphson method, find the root of the equation **$x+\log_{10} x=3.375$** correct to four significant figures. 7 Marks

b) In some determinations of the volume v of carbon dioxide dissolved in a given volume of water at different temperatures θ , the following pair of values were obtained: 7 Marks

θ	0	5	10	15
v	1.80	1.45	1.18	1.00

Obtain by the method of least squares, a relation of the form $v= a+b\theta$ which best fits to these observations.

UNIT-III

5 a) The following are data from a steam table: 7 Marks

Temperature (°C):	140	150	160	170	180
Pressure **kg/cm^2**:	3.685	4.854	6.302	8.076	10.225

Using Newton's formula, find the pressure of steam for a temperature 142°C.

b) If y (1) = -3, y(3) = 9, y(4) = 30 , y(6) = 132, find the Lagrange's interpolation polynomial that takes the same values as y at the given points. 7 Marks

(OR)

6 a) Find the number of men getting wages below Rs 15/- from the following data by using suitable interpolation technique: 7 Marks

Wages(Rs):	0-10	10-20	20-30	30-40
Frequency:	9	30	35	42

b) Construct the Newton's forward interpolation polynomial for the following data 7 Marks

x	0	1	2	3
f(x)	1	5	11	19

hence evaluate **f(5).**

UNIT-IV

7 A Curve is drawn to pass through the points given by the following table 14 Marks

x:	1	1.5	2	2.5	3	3.5	4
y:	2	2.4	2.7	2.8	3	2.6	2.1

Estimate the area bounded by the curve, x-axis and the lines x=1, x=4. Also find the volume of solid of revolution generated by revolving this area about x-axis.

(OR)

8 a) Find the first and second derivatives of the function tabulated below, at the point x = 1.2 7 Marks

x:	1.0	1.2	1.4	1.6	1.8	2.0
f(x):	0	0.128	0.544	1.296	2.432	4.00

b) Find, from the following table, the area bounded by the curve and the x-axis from x=7.47 to x=7.52. 7 Marks

x	7.47	7.48	7.49	7.50	7.51	7.52
f(x)	1.93	1.95	1.98	2.01	2.03	2.06

UNIT-V

9 Use Runge-Kutta method of order four to compute the value of **'y'** when 'x=0.4' in steps of 0.2 given that $\frac{dy}{dx} = y^2 + 1$ and y(0)=0. 14 Marks

(OR)

10 Apply Milne's method, to find a solution of the differential equation $\frac{dy}{dx} = x - y^2$ in the range $0 \le x \le 1$ for the initial condition y(0)=0. 14 Marks

MULTIVARIABLE CALCULUS AND DIFFERENTIAL EQUATIONS

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Obtain the solution of the differential equation $\frac{dy}{dx}\left(x^2y^3 + xy\right) = 1$. 7 Marks

b) Determine the orthogonal trajectories of the family of curves $x^{2/3} + y^{2/3} = a^{2/3}$, where 'a' is the parameter. 7 Marks

(OR)

2 a) Identify the order and degree and Determine the solution of the differential equation $\frac{dy}{dx} + \frac{y}{x} = y^2 x \sin x$ 7 Marks

b) Determine the orthogonal trajectories of the family of cardioids $r = a(1 - \cos\theta)$, where 'a' is the parameter. 7 Marks

UNIT-II

3 a) Determine the solution of initial value problem $y'' - y' - 2y = 3e^{2x}, y(0) = 0, y'(0) = -2$. 7 Marks

b) The charge $q(t)$ on the capacitor is given by the differential equation $\frac{d^2q}{dt^2} + 12\frac{dq}{dt} + 100q = 24\sin 10t$. If the charge q=0 and current i=0 at t=0, then determine the charge at time t > 0. 7 Marks

(OR)

4 a) Determine the solution of $\left(D^2 - 3D + 2\right)y = \cosh x$. 7 Marks

b) Apply variation of parameter method and obtain the solution of $\left(D^2 + a^2\right)y = \sec ax$. 7 Marks

UNIT-III

5 a) If $u = f(2x - 3y, 3y - 4z, 4z - 2x)$ then prove that $\frac{1}{2}\frac{\partial u}{\partial x} + \frac{1}{3}\frac{\partial u}{\partial y} + \frac{1}{4}\frac{\partial u}{\partial z} = 0$. 7 Marks

b) If $u = \frac{yz}{x}, v = \frac{zx}{y}, w = \frac{xy}{z}$ show that $\frac{\partial(u,v,w)}{\partial(x,y,z)} = 4$. 7 Marks

(OR)

6 a) Estimate the extreme values of the function $f(x,y) = x^3 + 3xy^2 - 3x^2 - 3y^2 + 4$. 7 Marks

b) If $u = x + y + z, y + z = uv, z = uvw$ show that $\frac{\partial(x,y,z)}{\partial(u,v,w)} = u^2v$. 7 Marks

UNIT-IV

7 a) Find the entire length of cardioid $r = a(1+\cos\theta)$. 7 Marks

b) Evaluate the double integral $\int_0^1 \int_0^{\sqrt{1+x^2}} \frac{dydx}{1+x^2+y^2}$. 7 Marks

(OR)

8 a) Evaluate $\iint r^3 drd\theta$ over the area included between the circles $r = 2\sin\theta$ and $r = 4\sin\theta$. 7 Marks

b) Apply change of order of integration method, and evaluate $\int_0^1 \int_x^{\sqrt{x}} xydydx$. 7 Marks

UNIT-V

9 a) Obtain the directional derivative of $f = x^2 - y^2 + 2z^2$ at the point P(1,2,3) in the direction of the line PQ where Q is the point (5,0,4). 7 Marks

b) Verify the Green's theorem for $\oint_C [(xy+y^2)dx + x^2dy]$, where c is bounded by $y = x$ and $y = x^2$. 7 Marks

(OR)

10 a) Identify the value of a for which the given vector function $(ax^2y + yz)i + (xy^2 - xz^2)j + (2xyz - 2x^2y^2)k$ is solenoidal. 7 Marks

b) Apply Green's and evaluate $\oint_C [(y-\sin x)dx + \cos x dy]$ where C is the plane triangle enclosed by the lines $y = 0, x = \frac{\pi}{2}$ and $y = \frac{2}{\pi}x$. 7 Marks

PROGRAMMING IN C

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) What are unsigned integer constants? What are long integer constants? How do these constants differ from ordinary integer constants? How can they be written and identified? 7 Marks

b) What is the largest permissible magnitude of an integer constant? State your answer in decimal, octal and hexadecimal. 7 Marks

(OR)

2 a) How are initial values assigned to variables within a type declaration? How are strings assigned to one dimensional, character-type arrays? 7 Marks

b) What is a subscript? What range of values is permitted for the subscript of a one-dimensional, n-element array? 7 Marks

UNIT-II

3 a) Write a program to accept a list of strings and display the largest string. 7 Marks

b) Summarize the syntactic rules associated with the **if - else** statement. 7 Marks

(OR)

4 a) What is the purpose of the while statement? When is the logical expression evaluated? What is the minimum number of times that a while loop can be executed? 9 Marks

b) A C program contains the following statements: 5 Marks

```
#include <stdio.h>
int i, j , k;
```

Write an appropriate scanf() function to enter numerical values for i, j and k, assuming

i) The values for i,j and k will be decimal integers.
ii) The value for i will be a decimal integer, j an octal integer and k a hexadecimal integer.
iii) The values for i and j will be hexadecimal integers and k will be an octal integer.

UNIT-III

5 a) Using recursive functions implement a program to print all prime numbers between given two positive numbers N,M where N<M. What is a recursion? Write a recursive function to find n! 7 Marks

b) Write a program calculate the sum of the elements in two tables of integers. 7 Marks

(OR)

6 a) How arrays are usually processed in C? Can entire arrays be processed with single instructions, without repetition? 7 Marks

b) Illustrate the concept of Pointer to an Array and Array of Pointers with an example Program. 7 Marks

UNIT-IV

7	a)	Write a program to compare two strings by using pointers.	7 Marks
	b)	Develop a program to read a line of text and a string **str1** to count how many number of times **str1** exist in the given line of text.	7 Marks

(OR)

8	a)	Distinguish the concept of Call-by-Value and Call-by-Reference.	7 Marks
	b)	Develop a program to read N strings from the user and then arrange them in dictionary order.	7 Marks

UNIT-V

9	a)	How a member of a union variable is assigned an initial value? In what way does the initialization of a union variable differ from the initialization of a structure variable?	7 Marks
	b)	Define a structure CRICKET whose fields are name of the player, number of innings played, total runs scored and batting average. Using CRICKET declare an array ***x*** with 50 elements and write a program to read the name, number of innings and total runs scored by each of the 50 players, and find the batting average. Display all the 50 players details sorted by batting average in tabular from.	7 Marks

(OR)

10	a)	Describe the Significance of Files and explain the String oriented functions in Files. Write a Program to read a File consisting of Strings.	7 Marks
	b)	Explain the **fopen**() function in files and illustrate the different modes of Opening a file.	7 Marks

DIFFERENTIAL EQUATIONS AND MULTIVARAIBLE CALCULUS

[Civil Engineering, Electrical and Electronics Engineering, Mechanical Engineering, Electronics and Communication Engineering, Computer Science and Engineering, Electronics and Instrumentation Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Solve the differential equation $(D^3 - 6D^2 + 11D - 6)y = 2^x + \cos 2x$	6 Marks	L3	CO1	PO1 PO2
	b)	Solve the differential equation $\frac{d^2y}{dx^2} - 2\frac{dy}{dx} + y = xe^x \sin x$	6 Marks	L3	CO1	PO1 PO2
		(OR)				
2.	a)	Using the method of variation of parameters solve $\frac{d^2y}{dx^2} - 4y = x\sin x$	6 Marks	L3	CO1	PO1 PO2
	b)	Reduce the differential equation $x^2\frac{d^2y}{dx^2} - 4x\frac{dy}{dx} + 6y = x^2$ into linear equation with constant coefficients and find its general solution .	6 Marks	L2	CO1	PO1 PO2
		UNIT-II				
3.	a)	Construct the partial differential equation by eliminating arbitrary functions f and g from the relation $z = y f(x) + x g(y)$.	6 Marks	L3	CO1	PO1
	b)	Solve $(x^2 - y^2 - z^2)p + 2xyq = 2xz$.	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Solve the partial differential equation $\frac{\partial^2 z}{\partial x^2} + \frac{\partial^2 z}{\partial x \partial y} - 6\frac{\partial^2 z}{\partial y^2} = \cos(2x + y)$.	6 Marks	L3	CO1	PO1 PO2
	b)	Solve $\frac{\partial u}{\partial x} = 4\frac{\partial u}{\partial y}$ given, $u(0, y) = 8e^{-3y}$ by method of separation of variables.	6 Marks	L3	CO1	PO1 PO2
		UNIT-III				
5.	a)	Given $u = \sin(x/y)$, $x = e^t$ and $y = t^2$, find $\frac{du}{dt}$ as a function of t. Compare the result by direct substitution.	6 Marks	L1	CO2	PO1
	b)	Define Jacobian for two variables and find the Jacobian of the variables $u = \frac{x+y}{1-xy}$ and $v = \tan^{-1}x + an^{-1}y$.	6 Marks	L1	CO2	PO1
		(OR)				
6.	a)	Find the maximum and minimum values of $x^3 + 3xy^2 - 15x^2 - 15y^2 + 72x$.	6 Marks	L3	CO2	PO1 PO2
	b)	A rectangular box is open at the top is to have volume of 32 cubic ft., find the dimensions of the box requiring least material	6 Marks	L4	CO2	PO1 PO2

for its construction.

UNIT-IV

7.	a)	Change the order of integration in $I = \int_0^1 \int_{x^2}^{2-x} xy\, dxdy$ and hence evaluate the same.	6 Marks	L3	CO2	PO1 PO2
	b)	Evaluate $\int_0^\infty \int_0^\infty e^{-(x^2+y^2)} dxdy$ by changing to polar coordinates.	6 Marks	L3	CO2	PO1 PO2

(OR)

8.	a)	Evaluate $\int_{-1}^{1} \int_{0}^{z} \int_{x-z}^{x+z} (x+y+z)\, dxdydz$.	6 Marks	L5	CO2	PO1
	b)	Find the area inside the circle $x^2 + y^2 = 4$ and outside the circle $x^2 + y^2 = 2x$ in the first quadrant.	6 Marks	L3	CO2	PO1 PO2

UNIT-V

9.	a)	Show that $\nabla^2(r^n) = n(n+1)\, r^{n-2}$	6 Marks	L5	CO3	PO1
	b)	Determine directional derivative of $f = x^2 - y^2 + 2z^2$ at the point $P(1,2,3)$ in the direction of the line PQ where Q is the point $(5,0,4)$.	6 Marks	L3	CO3	PO1

(OR)

10.		Verify Green's theorem for $\int_C (xy + y^2)dx + x^2 dy$, where C is bounded by $y = x$ and $y = x^2$.	12 Marks	L5	CO3	PO1 PO2

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	In a Newton's ring experiment the diameter of the eighth ring has been found to be 0.42 cm and that of the 25th ring 0.84 cm. The radius of curvature of the plano convex lens is 95 cm. Determine the wavelength of light used.	4 Marks	L3	CO1	PO2
	b)	Explain the formation of Newton's rings. Determine the wavelength of sodium light using Newton's rings experiment.	8 Marks	L3	CO1	PO1 PO2
		(OR)				
2.	a)	Derive the condition for obtaining minima for the diffraction pattern due to a single slit.	8 Marks	L1	CO1	PO1
	b)	List the differences between half wave plate and quarter wave plate.	4 Marks	L1	CO1	PO2
		UNIT-II				
3.	a)	For a scalar field V, Show that $\nabla \times \nabla V = 0$.	8 Marks	L2	CO2	PO2
	b)	Write Maxwell's equations in differential form.	4 Marks	L3	CO2	PO1
		(OR)				
4.	a)	Define acceptance angle and numerical aperture of an optical fiber. Derive the expression for numerical aperture of an optical fiber.	7 Marks	L2	CO2	PO2
	b)	Explain how optical fibers are used in communication with a block diagram.	5 Marks	L2	CO2	PO2
		UNIT-III				
5.	a)	Distinguish between conductors, semiconductors and insulators.	6 Marks	L2	CO3	PO1
	b)	Derive an expression for density of holes in the valence band of an intrinsic semiconductor.	6 Marks	L3	CO3	PO1
		(OR)				
6.	a)	Discuss the dependence of Fermi energy on carrier concentration and temperature.	6 Marks	L3	CO3	PO1 PO2
	b)	What is drift current? Derive the expression for drift current density.	6 Marks	L3	CO3	PO1
		UNIT-IV				
7.	a)	What is electronic polarization? Derive the expression for electronic polarizability.	7 Marks	L1	CO4	PO1
	b)	What are piezoelectric materials? Write the applications of dielectrics.	5 Marks	L2	CO4	PO1 PO2
		(OR)				
8.	a)	A magnetic material has a magnetization of 2300 A/m and produces a flux density of 0.00314Wb/m². Calculate relative permeability of the material.	4 Marks	L1	CO4	PO1
	b)	What is Hysteresis? Explain hysteresis loop with a neat diagram.	8 Marks	L3	CO4	PO1

UNIT-V

9.	a)	Briefly explain the BCS theory of superconductivity.	8 Marks	L1	CO5	PO1
	b)	What are the critical parameters of a superconductor?	4 Marks	L1	CO5	PO1
		(OR)				
10.	a)	What are nano materials? Write its properties.	8 Marks	L1	CO5	PO1
	b)	Explain, why the properties of nano materials are different from that of bulk.	4 Marks	L1	CO5	PO1

		UNIT-I				
1.	a)	Explain the stability of benzene with π-molecular orbitals.	6 Marks	L2	CO1	PO1
	b)	Identify the magnetic behavior of nitric oxide molecule based on its energy level diagram.	6 Marks	L3	CO1	PO1 PO2
		(OR)				
2.		Discuss the postulates of molecular orbital theory.	12 Marks	L2	CO1	PO1
		UNIT-II				
3.		Define sterilization of water. Explain the sterilization of water by using chlorine and ozone.	12 Marks	L2	CO2	PO1 PO2 PO6
		(OR)				
4.		List the adverse effect of fluorides on human health. Explain the Nalgonda defluoridation method.	12 Marks	L2	CO2	PO1 PO6
		UNIT-III				
5.	a)	Describe the construction and working of lithium ion battery and identify its advantages over lead acid battery.	8 Marks	L2	CO3	PO1
	b)	Write a short note on methanol-oxygen fuel cell and its net reaction.	4 Marks	L1	CO3	PO1
		(OR)				
6.	a)	Explain the protection of underground pipelines and cables from corrosion.	7 Marks	L2	CO3	PO1 PO2
	b)	Write the differences between dry corrosion and wet corrosion.	5 Marks	L2	CO3	PO1
		UNIT-IV				
7.	a)	Explain different types of fundamental modes of vibrations.	6 Marks	L2	CO4	PO1
	b)	Write the principle and applications of Scanning Electron Microscope.	6 Marks	L1	CO4	PO1
		(OR)				
8.		Discuss the principle and working of a UV- Visible spectrometer with the help of a block diagram.	12 Marks	L2	CO4	PO1 PO5
		UNIT-V				
9.	a)	Write an explanatory note on solid and semi-solid lubricants.	8 Marks	L2	CO5	PO1
	b)	List the difference between fluid film lubrication and boundary lubrication.	4 Marks	L1	CO5	PO1
		(OR)				
10.	a)	Discuss various advantages of liquid fuels over solid fuels.	4 Marks	L2	CO5	PO1
	b)	A coal has following composition by weight C = 90**%**, O = 3**%**, S =0.5**%**, N = 0.5**%** and ash = 2.5**%**. Net calorific value of the coal was found to be 8490 kcal/kg. Calculate the high calorific value of coal.	8 Marks	L3	CO5	PO2

PROGRAMMING FOR PROBLEM SOLVING

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Describe the efficiency of algorithms with suitable examples.	6 Marks	L2	CO1	PO1
	b)	List and explain about the data types in Python.	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Write a short notes on the following concepts: i) Implicit line joining ii) Explicit line joining	6 Marks	L1	CO1	PO1
	b)	Define variable. Explain identifier rules.	6 Marks	L1	CO1	PO1
		UNIT-II				
3.	a)	Write a Python script to print factorial of a given number.	6 Marks	L3	CO1	PO2
	b)	Display the following pattern using Python script. 2345 1345 1245 1235 1224	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Write a Python script to print list of prime numbers within a range.	6 Marks	L3	CO1	PO2
	b)	Specify the usage of **pass**, **break**, **continue** statements.	6 Marks	L2	CO1	PO1
		UNIT-III				
5.	a)	Compose a Python script to perform matrix multiplication.	6 Marks	L3	CO1	PO2
	b)	Design a Python script to check balanced parenthesis of a given expression.	6 Marks	L3	CO1	PO3
		(OR)				
6.	a)	Write a Python script to search a key element in the given list of elements.	6 Marks	L3	CO1	PO2
	b)	Illustrate any four set operation functions with an example program.	6 Marks	L2	CO1	PO1
		UNIT-IV				
7.	a)	Explain different types of arguments in functions.	6 Marks	L2	CO2	PO1
	b)	Develop a Python script to copy data from one file to another file.	6 Marks	L3	CO2	PO2
		(OR)				
8.	a)	Define scope and explain usage of global keyword.	6 Marks	L2	CO2	PO1
	b)	List and explain any four built-in functions in **numpy**.	6 Marks	L1	CO2	PO1

UNIT-V

9.	a)	Draw a scatter plots for knowing the relationship between two numerical variables.	6 Marks	L3	CO2	PO3
	b)	Write a Python script to drop the missing data from data frame.	6 Marks	L3	CO2	PO2

(OR)

10.	a)	Consider data frame contains student marks information. Write a Python script to display student details whose marks <60.	6 Marks	L3	CO2	PO3
	b)	Write a Python script to print information and frequency counts of a data set.	6 Marks	L3	CO2	PO2

II B.Tech I Semester (SVEC14) Supplementary Examinations November - 2022

FLUID MECHANICS-I

[CIVIL ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 Define the terms Specific weight, Capillarity, Viscosity and Specific volume and the specific gravity of a liquid is 3.0. What are its specific weight, specific mass and specific volume? 14 Marks

(OR)

2 Derive expressions for total pressure and centre of pressure for vertically immersed plane surface. A circular plate 2.5 m diameter is immersed in water, its greatest and least depths below the free surface being 3m and 1 m respectively, Find; 14 Marks

i) Total pressure on one face of the plate
ii) The position of centre of pressure.

UNIT-II

3 a) Define Steady flow and unsteady flow. 6 Marks

b) Show that $=x^2 - y^2$ represents on two dimensional irrotational flow. Find the potential function. 8 Marks

(OR)

4 a) What type of acceleration is to be expected if: 8 Marks

i) Stream lines are parallel and equidistant
ii) Stream lines are straight and converging
iii) Stream lines are curved but equispaced
iv) Stream lines are curved and converging

b) Derive the equation for a stream line. 6 Marks

UNIT-III

5 Derive an expression for loss of head due to sudden enlargement and find the head lost due to friction in a pipe of diameter 360 mm and length 60 m through which water is flowing at a velocity of 2.5 m/s using Darcy formula and Chezy's formula for which C=60. Assume kinematic viscosity as 0.01 stoke. 14 Marks

(OR)

6 Differentiate between notch and weir and A discharge of 0.06 cumec was measured over right angled notch. While measuring the head over the notch, an error of 1.5 mm was made. Determine the percentage error in the discharge, if coefficient of discharge of notch is 0.6. 14 Marks

UNIT-IV

7	Find the pressure gradient along flow, the average velocity and the discharge for an oil of viscosity 0.02 Ns/m^2 flowing between two stationary parallel plates 1m wide maintained 10mm apart. The velocity mid way between the plates is 2m/s.	14 Marks

(OR)

8	Explain Reynolds's experiment and describe the relation between flow through parallel plates.	14 Marks

UNIT-V

9	The pressure difference in a pipe of diameter and length due to turbulent flow depends on the velocity, viscosity, density and roughness. Using Buckingham's pi theorem, obtain an expression for pressure difference.	14 Marks

(OR)

10	Define similitude and types of similarities and In the model test of a spillway the discharge and velocity of flow over the model were 2.5 cumec and 1.5 m/s respectively. Calculate the velocity and discharge over the prototype which is 36 times the model size.	14 Marks

PROBABILITY DISTRIBUTIONS AND STATISTICAL METHODS

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science Systems Engineering]

Max. Marks: 70

Time: 3 hours

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Define discrete random variable and probability mass function. CO1 4 Marks

b) The following probability function is given by CO4 10 Marks

X	-3	-2	-1	0	1	2	3
P(x)	0.05	0.10	2k	0	0.3	k	0.10

Compute

i) K; ii) Find mean of X; iii) E(2x + 3);
iv) Variance of X.

(OR)

2 a) A continuous random variable X has a probability density function $f(x) = 3x^2$, $0 \le x \le 1$. Find a and b such that : CO5 7 Marks
i) $P(X \le a) = P(X > ab)$ and ii) $P(X > b) = 0.05$.

b) If the probability density function of a random variable is $f(x) = kx^3$, $0 \le x \le 1$. Find the value of k and the probability that this random variable will take on a value; CO4 7 Marks

i) Between ¼ and ¾
ii) Greater than 0.66
iii) Less than 0.8.

UNIT-II

3 a) The sum and product of the mean and variance of a Binomial distribution are 15 and 50 respectively; find $P(X \ge 1)$. CO4, CO5 7 Marks

b) If X is a random variable which follows normal distribution with mean 30 and standard deviation 5, Find the probabilities that CO4 7 Marks

i) $26 \le X \le 40$ ii) $X \ge 45$ iii) $|X - 30| > 5$

(OR)

4 a) If a random variable has a Poisson distribution such that $P(X = 1) = P(X = 2)$, then find; CO4 7 Marks
i) Mean ii) $P(X = 4)$ iii) $P(X \ge 1)$.

b) A marksman has a probability of 0.9 of hitting a target on a single shot. If the marksman has 40 shots, what is the probability that he hits the target CO4 7 Marks

i) At least 35 times
ii) Between 34 and 36 times
iii) At most 37 times.

UNIT-III

5 Construct the Mean and Range charts from the following data and comment on the process. CO2, CO3 14 Marks

Sample No.	1	2	3	4	5	6	7	8	9	10
Sample Mean	15	17	15	18	17	14	18	15	17	16
Sample Range	7	7	4	9	8	7	12	4	11	5

(OR)

6 The expenditure (x) and annual profits(y) of a company are given for the last 8 years. Find both the regression lines and estimate Y if $X = 6$. CO1, CO2 14 Marks

Year	2008	2009	2010	2011	2012	2013	2014	2015
X	9	7	5	10	4	5	3	2
Y	45	42	41	60	30	34	25	20

UNIT-IV

7 a) A sample of 400 individuals is found to have a mean height of 67.47 inches. Is it reasonable to regard the sample drawn from the large population with mean height 67.39 inches and standard deviation of 1.3 inches. Justify your answer. CO1, CO4 7 Marks

b) In a sample of 1000 people in a state, 470 were found to be rice consumers and the rest wheat consumers. Can we conclude that the food items are equally popular? Justify your answer. CO2 7 Marks

(OR)

8 a) A company claims that its light bulbs are superior to those of its main competitor. If a study showed that n_1=40 of its bulbs has a mean life time of 647 hours with a standard deviation of 27 hours, while a sample of n_2=40 from its main competitor has a mean lifetime of 638 hours with a standard deviation 31 hours, does this data substantiate the claim? Justify your answer. CO1, CO4 7 Marks

b) In a sample of 600 men from a certain city, 450 men are found to be smokers. In a sample of 900 from another city 450 are found to be smokers. Do the data indicate that the two cities are significantly different with respect to prevalence of smoking habit among men? Justify your answer. CO2 7 Marks

UNIT-V

9 a) A random sample of 8 envelopes is taken from a letter box of a post office and their weights in grams are found to be 12.1, 11.9, 12.4, 12.3, 11.9, 15.4, 13.9, and 12.8. and 99% confidence interval for the population mean weight of the envelopes received at that post office. CO4 7 Marks

b) Two independent random samples of 8 and 7 items respectively have the following values CO4 7 Marks

Sample 1	9	11	13	11	15	9	12	14
Sample 2	10	12	10	14	9	8	10	---

Test whether the difference between the variances is significant at 1% level of significance?

(OR)

10 To determine whether there is really a relationship between employee's performance in the company's training program and his success in the job, a sample of 400 cases were taken and the following results were obtained. Test at 1% level of significance whether the performance in the training program and success in the job are independent. CO4 14 Marks

Success in Job	Performance in training program		
	Below Average	Average	Above Average
Poor	23	60	29
Average	28	79	60
Very Good	9	49	63

❀ ❀ ❀

MANAGERIAL ECONOMICS AND PRINCIPLES OF ACCOUNTANCY
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Explain the nature and scope of Managerial Economics.	CO1	14 Marks
		(OR)		
2		What is Demand? Discuss the determinants of demand.	CO3	14 Marks

UNIT-II

3		Explain about input – output relationship in production.	CO1	14 Marks
		(OR)		
4	a)	Write the merits and demerits of Break Even Analysis.	CO2, CO3	7 Marks
	b)	From the following particulars calculate the Break-even point in terms of both quantity and value: Production in units 20,000 Sales price Rs.5.00 per unit Variable costs Rs.40,000 Fixed costs Rs.15,000	CO2, CO3	7 Marks

UNIT-III

5		Define market structure. Describe the features of perfect competition.	CO3	14 Marks
		(OR)		
6		Explain the following: i) Marginal cost pricing ii) Penetration pricing iii) Skimming pricing	CO3	14 Marks

UNIT-IV

7		Distinguish between Journal and Ledger with an example.	CO1, CO4	14 Marks
		(OR)		
8		Define capital and explain its significance.	CO1, CO5	14 Marks

UNIT-V

9		Write and explain the steps in the preparation of final accounts.	CO1, CO4	14 Marks
		(OR)		

10 From the following balances of Ravi, prepare Trading A/c, Profit and Loss A/c for the year ending 31st March, 2019 and Balance Sheet as on that date. CO4, CO5, CO6 14 Marks

	Rs.		Rs.
Purchases	14,000	Commission Received	1,000
Sales	28,800	Debtors	5,000
Opening Stock	3,000	Salaries	4,800
Machinery	8,000	Insurance	1,200
Cash	2,000	Buildings	15,000
Creditors	1,500	Bills Payable	2,000
Wages	3,000	Furniture	500
Printing & Stationery	1,700	Interest Received	800
Capital	25,000	Patents	4,000
Factory Rent	300	Bank overdraft	3,400

Adjustments:

1. Closing stock Rs.5,500
2. Outstanding Printing charges Rs.300
3. Insurance paid in advance Rs.200
4. Unpaid wages Rs.500

FLUID MECHANICS AND HYDRAULIC MACHINERY

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the properties of fluids? 3 liter petrol weighs 21N. Calculate i) specific weight ii) density iii) specific volume and iv) specific gravity.	CO1	7 Marks
	b)	A U-tube differential manometer connects two pressure pipes A and B. Pipe A contains carbon tetrachloride having a specific gravity 1.594 under a pressure of 11.772 N/ cm^2 and Pipe B contains oil of specific gravity 0.9 under a pressure of 12 N/cm^2. The pipe a lies 2.5m above pipe B. Find the difference of pressure measured by mercury as fluid filling U-tube.	CO2	7 Marks

(OR)

2	a)	Will you state pascal's law in your own words? What is the pressure, in meters of oil (Sp.gr. 0.8), equivalent to 80 m of water?	CO1	7 Marks
	b)	A blower delivers 8 m^3 air per sec at 27^0 C and one atmospheric pressure (1 bar). Find mass of the air delivered if molecular weight of the air is 30. Also find (i) density (ii) specific volume and (iii) specific weight of the air being supplied.	CO2	7 Marks

UNIT-II

3	a)	Define steady, non-steady, uniform, non-uniform flows? The stream function for a two-dimensional flow is given by $\psi = 3xy$, calculate the velocity at the point P (2, 3). Find the velocity potential function Φ.	CO2	7 Marks
	b)	In a fluid, the velocity field is given by, $V = (3x + 2y)\,i + (2z + 3x^2)\,j + (2t - 3z)k$. Determine: i) The velocity components u, v, w at any point in the flow field. ii) The speed at point (1, 1, 1). iii) The speed at time t = 2 sec at point (0, 0, 2).	CO2	7 Marks

(OR)

4	a)	Develop the Euler's equation of motion and then derive Bernoulli's equation. List all some practical applications	CO2	7 Marks
	b)	Water flows in a circular pipe. At one section, the diameter is 0.3 m, the static pressure is 260 Kpa gauge, the velocity is 3m/s and the elevation is 10 m above ground level. The elevation at a section downstream is 0 m, and the pipe diameter is 0.15 m. Find the gauge pressure at the downstream section. Frictional effects may be neglected. Assume density of water to be 999 kg/m^3	CO2	7 Marks

UNIT-III

5	a)	Derive Darcy-Weisbach formula for calculating loss of head due to friction in a pipe. Water flows through a pipe of diameter 300mm with a velocity of 5m/s. If the co-efficient of friction is given by $f = 0.015 + \frac{0.08}{Re^{0.3}}$ where Re is the Reynolds number, estimate the head lost due to friction for a length of 10m. Take kinematic viscosity of water as 0.01 stoke.	CO3	7 Marks

	b)	Derive an expression for the head loss due to sudden enlargement in pipe flow Water flows through a pipe line whose diameter various from 25 cm to 15 cm in a length of 10 m. If the Darcy-Weisbach friction factor is assumed constant at 0.018 for the whole pipe, estimate the head loss in friction when the pipe is flowing full with a discharge of $0.06m^3$/sec.	CO3	7 Marks
		(OR)		
6	a)	Describe Buckingham's theorem? Why this theorem is considered superior to Rayleigh's method for dimensional analysis.	CO4	7 Marks
	b)	The drag force F on a partially submerged body depends on the relative velocity V between the body and the fluid, characteristics linear dimension *l*, height of surface roughness k, fluid density ρ , the viscosity μ and acceleration due to gravity g. Obtain an expression for the drag force using the method of dimensional analysis.	CO4	7 Marks
		UNIT-IV		
7	a)	In a tabular form write the types of channel slopes and corresponding possible channel profiles. Also indicate conditions under which they occur.	CO5	7 Marks
	b)	At a certain section M in a rectangular channel of bed width 2 m, the depth of flow is 1.20 m. When the flow rate is 6.0 m3/sec, estimate the distance from M to another section N where the depth is 1.40m. The bed slope is 0.002 and Manning's n = 0.015. Take two steps.	CO5	7 Marks
		(OR)		
8	a)	Derive the dynamic equation of gradually varied flow. What are the assumptions in the analysis of gradually varied flow?	CO5	7 Marks
	b)	Determine the slope of the free water surface in a rectangular channel of width 20 m, having depth of flow 5 m. The discharge through the channel is 52 cumecs. The bed slope of the channel is 1 in 4000. Assume Chezy,s constant C as 60.	CO5	7 Marks
		UNIT-V		
9	a)	Show that the efficiency of a free jet striking normally as series of flat plates mounted on the periphery of a wheel never exceeds 50%	CO3	7 Marks
	b)	A jet of water of diameter 60 mm moving with a velocity of 40 m/s, strikes a curved fixed plate tangentially at one end at an angle of 30^0 to horizontal. The jet leaves the plate at an angle of 20^0 to the horizontal. Find the force exerted by the jet on the plate in the horizontal and vertical directions.	CO3	7 Marks
		(OR)		
10	a)	Derive an expression for the work done by the impeller of a centrifugal pump on liquid per second per unit weight of lquid. Explain briefly manometric and volumetric efficiencies of a centrifugal pump	CO1	7 Marks
	b)	An inward flow reaction turbine operating under 30 m head, develops 4000 KW while running at 300 rpm. The overall efficiency of the turbine is 0.85; the hydraulic efficiency is 0.9; and the radial velocity of flow at inlet is 7 m/s; the inlet guide vane angle at full gate opening is 30^0. Calculate the diameter and width of the runner at inlet. Blade thickness coefficient is 5 %.	CO2	7 Marks

MECHANICS OF SOLIDS
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	A bar of 25mm diameter is tested in tension. It is observed that when a load of 60 KN is applied, the extension measured over a gauge length of 200 mm is 0.12 mm and contraction in diameter is 0.0045 mm. Determine the i) Poisson's ratio ii) Young' Modulus iii) Shear Modulus iv) Bulk Modulus.	CO1	7 Marks
	b)	A mild steel rod of 25mm diameter and 400 mm long is encased centrally inside a hollow copper tube of external diameter 35 mm and inside diameter 30 mm. The ends of the rod and tube are rigidly attached, and the composite bar is subjected to an axial pull of 40KN.If Young's modulus for steel and copper is 200 GN/m^2 and 100 GN/m^2 respectively. Find the i) Stresses developed in the rod and the tube and ii) Extension of the rod	CO2	7 Marks

(OR)

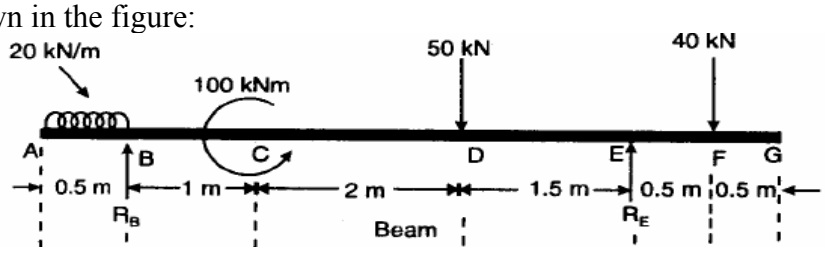
2	a)	A load of 100 N falls through a height of 20mm on to a collar rigidly attached to the lower end of a vertical bar 1.5m long and of 15000 mm^2 cross sectional area. The upper end of the vertical bar is fixed. Take E=200 GPa. Determine the: i) Maximum instantaneous stress induced in the vertical bar. ii) Maximum instantaneous elongation and. iii) Strain energy stored in the vertical rod.	CO2	10 Marks
	b)	Two tapering bars of the same material are subjected to a tensile load P. The lengths of both the bars are the same. The larger diameter of each of the bars is D. The diameter of the bar A at its smaller end is D/2 and that of the bar B is D/3. What is the ratio of elongation of the bar A to that of the bar B?	CO1	4 Marks

UNIT-II

3		A cantilever beam 5m long carries concentrated loads of 30kN, 40kN and 50 KN at distances of 1.5m, 3 m and 4.5m from the fixed end. In addition to this the beam carries a uniformly distributed load of 10 kN/m over the entire length of the beam. Draw the SFD and BMD.	CO2	14 Marks

(OR)

4		Construct the Shear force and Bending moment diagrams for the beam as shown in the figure:	CO2	14 Marks



UNIT-III

5		A T-section has a flange width of 200 mm and overall depth of 150 mm and thickness 20mm. If it is subjected to a shear force of 120kN at a section, Find the maximum intensity of stress and also draw the shear stress distribution diagram.	CO1	14 Marks

(OR)

6		A masonry chimney 24 meters high, of uniform circular section,3.5 meters external diameter and 2m internal diameter is subjected to a horizontal wind pressure of 1 KN/m^2 of projected area. Find the maximum and minimum stress intensities at the base, if the specific weight of masonry is $22KN/m^3$.	CO5	14 Marks

UNIT-IV

7		In a torsion test, the specimen is a hollow shaft with 50 mm external and 30 mm internal diameter. An applied torque of 1.6 kN-m is found to produce an angular twist of 0.4^0 measured on a length of 0.2 m of the shaft. The Young's modulus of elasticity obtained from a tensile test has been found to be 200 GPa.Find the values of (i) Modulus of rigidity (ii) Poisson's ratio	CO1	14 Marks

(OR)

8	a)	A closed coil helical spring is subjected to an axial load of 300 N having 12 coils of wire diameter of 16 mm and made with coil diameter of 250m. Determine the i) Axial Deflection. ii) Strain energy stored. iii) Maximum torsional shear stress in the wire.	CO4	10 Marks
	b)	A closed coil helical spring is to carry a load of 500 N. Its mean coil diameter is to be 10 times that of the wire diameter. Calculate the wire diameter and mean diameter of the spring if the maximum shear stress In the material of the spring is to be 80 MN/mm^2.	CO3	4 Marks

UNIT-V

9	a)	A thin cylindrical shell 3 m long which is closed as the ends has an internal diameter of 1 m and a wall thickness of 15 mm. Calculate the circumferential and longitudinal stresses induced and also changes in the dimensions of the shell, if it is subjected to an internal pressure of 1.5 N/mm^2. Take $E=2x10^5$ N/mm^2 and $\mu=0.25$.	CO3	10 Marks
	b)	A thin walled water pipe carries water under a pressure of 2 N/mm^2 and discharges water into a tank. Diameter of the pipe is 25 mm and thickness is 2·5 mm. What is the longitudinal stress induced in the pipe?	CO1	4 Marks

(OR)

10		Differentiate between thin cylinders and thick cylinders. Derive an expression for the radial pressure and hoop stress at any point in case of thick cylinders.	CO6	14 Marks

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Three equal point charges of 2 μC are in free space at (0, 0, 0), (2, 0, 0) and (0, 2, 0). Determine the net vector force on 5 μC at (2, 2, 0).	CO1	7 Marks
	b)	Evaluate the electric field $\vec{E}$ at the general point P due to charge distributed uniformly along an infinite straight line with charge density ρ_l.	CO3	7 Marks
		(OR)		
2	a)	A point charge of 6μC is located at the origin, a uniform line charge density of 180nC/m lies along the x-axis, and a uniform sheet of charge equal to 25nC/m^2 lies in the z=0 plane. Determine D at A (0,0,4).	CO1	9 Marks
	b)	Derive Laplace's and Poisson's equation from Maxwell's first equation.	CO4	5 Marks

UNIT-II

3	a)	Illustrate Conduction, convection and displacement currents and current densities.	CO2	6 Marks
	b)	A large parallel plate capacitor has its plates normal to the x-axis. Plate 1 with potential v = 0 is at x = 0. Plate 2 with a potential v = v_1 at x = x_1. Use Laplace's equation for the capacitor to show that the potential distribution is given by V = (v_1/x_1) x volts.	CO3	8 Marks
		(OR)		
4	a)	Derive continuity equation and explain the terms in the equation.	CO1	6 Marks
	b)	Conducting spherical shells with radii a = 10cm and b = 30cm are maintained at a potential difference of 100V such that V(r=b) = 0 and V(r=a) = 100V. Determine V and E in the region between the shells. If ε_r=2.5 in the region, determine the total charge induced on the shells and the capacitance of the capacitor.	CO3	8 Marks

UNIT-III

5	a)	State Biot-Savart's law and deduce an expression for $\vec{H}$ at a point located at a distance of ***r*** metres from an infinitely long straight conductor carrying ***I*** amperes	CO5	9 Marks
	b)	State and explain Amperes circular law with applications.	CO4	5 Marks
		(OR)		
6	a)	For a coaxial cable, apply Amperes law to derive expressions for **H** and plot **H** with respect to distance.	CO5	8 Marks
	b)	Explain scalar and vector magnetic potentials.	CO2	6 Marks

UNIT-IV

7	a)	Derive the expression for inductance of a coil and energy density in the magnetic field.	CO2	8 Marks
	b)	A coil of 300 turns is wound on a non-magnetic core having a mean circumference of 300 mm and a cross-sectional area of 300 mm^2. Determine the inductance of the coil corresponding to a magnetizing current of 3A.	CO3	6 Marks

(OR)

8	a)	In free space, E= 20cos(wt-50x) a_y V/m. calculate (i) Displacement current density (J_d); (ii) H	CO3	7 Marks
	b)	Discuss the force excreted on a current element due to a magnetic field B in another current element	CO2	7 Marks

UNIT-V

9	a)	Write Maxwell's equations for time varying EM fields in both differential and integral form.	CO4	8 Marks
	b)	An a c. voltage source V = V_o sinωt is connected across a parallel plate capacitor C. Verify that displacement current in the capacitor is same as the conduction current in the wires.	CO3	6 Marks

(OR)

10	a)	Derive an expression Displacement current density J_d, and also give the physical interpretation of Maxwell's Equations.	CO2	7 Marks
	b)	Derive boundary conditions between two perfect dielectrics in a magnetic field.	CO5	7 Marks

SIGNALS, SYSTEMS AND NETWORKS

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 70**

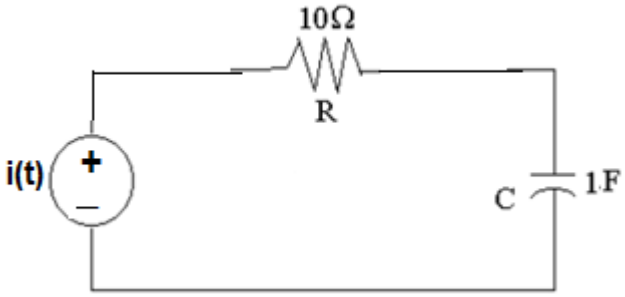
Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define terms linearity, causality and time invariance.	CO1	6 Marks
	b)	Discriminate periodic and non-periodic signal and check the signal given is periodic or not $y(t)=5\cos(17\pi t+\pi/4) + 7\sin(21\pi t - \pi/4)$.	CO2	8 Marks
		(OR)		
2	a)	Determine the unit response of the following system whose impulse response is $h(t) = e^{-2t}u(t-3)$.	CO2	8 Marks
	b)	Determine the complete response of the system defined by the differential equation $\frac{d^2x(t)}{dt} + 6\frac{dx(t)}{dt} + 5x(t) = \frac{du(t)}{dt}$ with $x(0) = 2$ and $\frac{dx(0)}{dt} = 1.5$ for the input $u(t)=e^{-3t}$.	CO4	6 Marks

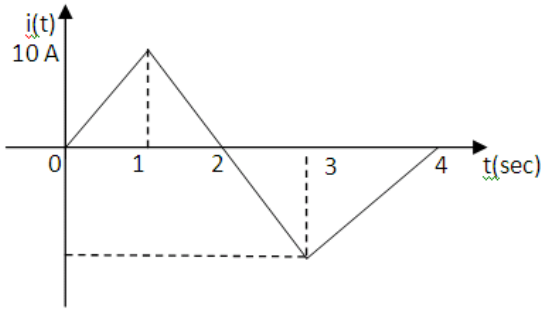
UNIT-II

3	a)	State the need of Fourier series and Fourier Transform in circuit analysis.	CO2	6 Marks
	b)	Determine the voltage output across capacitor v(t), if the source of current applied to circuit is $i(t) = 2 + 5(\cos t + \cos 2t + \cos 3t + \cos 4t + \cos 5t)$ as shown in figure using Fourier Transform.	CO4	8 Marks



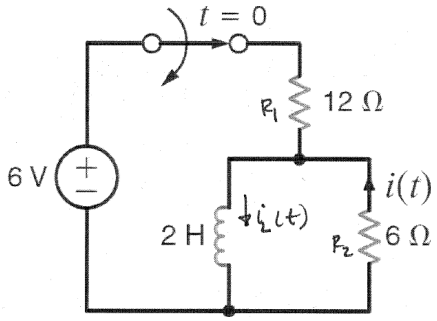
(OR)

4	a)	State and explain the convolution theorem in Laplace Transform.	CO1	6 Marks
	b)	The periodic current waveform shown in figure is applied across a 5 kΩ resistor. Find the average power dissipated and also compare with DC power of magnitude same as peak value.	CO4	8 Marks



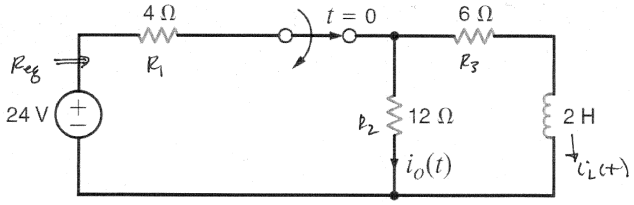
UNIT-III

5	a)	What are final value conditions? Explain the procedure to evaluate final value conditions.	CO1	6 Marks
	b)	Compute the response $i_L(t)$ for $t > 0$. Plot the response including the time interval just prior to switch action.	CO4	8 Marks

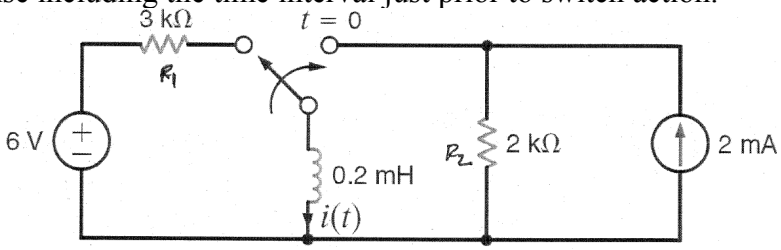


(OR)

6 a) Compute the response of the circuit shown below $i_0(t)$ for t > 0. CO4 7 Marks

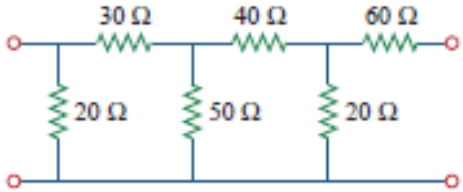


b) Compute the response of i(t) for t > 0 in circuit shown below. Plot the response including the time interval just prior to switch action. CO4 7 Marks

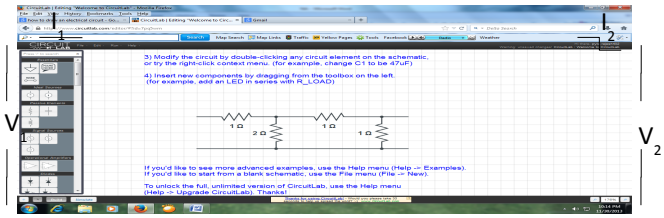


UNIT-IV

7 a) Compute the open circuit parameters of two port network shown in figure. CO4 7 Marks

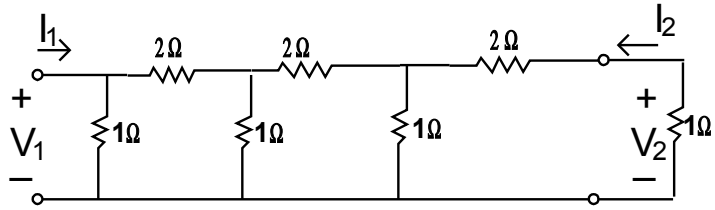


b) Find the ABCD and H parameters for the circuit below. CO4 7 Marks

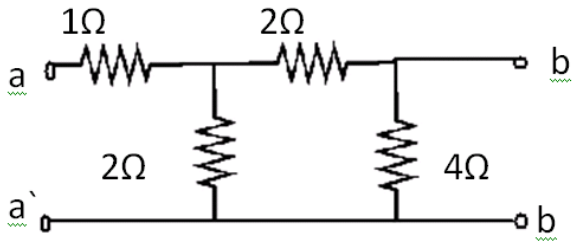


(OR)

8 a) For the resistive two port network shown in Figure, Find the Voltage and current ratio transfer function $G_{12} = \frac{V_2}{V_1}$ *and* $\alpha_{12} = \frac{I_2}{I_1}$ respectively. CO3 7 Marks

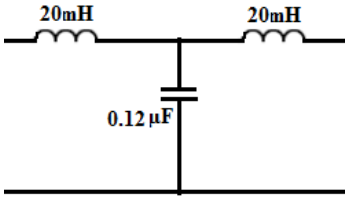


b) Compute the Y and T parameters of the two port network shown in figure. CO3 7 Marks



UNIT-V

9	a)	Compute the Characteristic impedance of T and π prototypes at 2.5 kHz and 5 kHz of high pass filter with cutoff frequency 2 kHz and nominal characteristic impedance is 500 Ω.	CO3	6 Marks
	b)	A T-section filter is shown in fig. Calculate the value of cutoff frequency and determine the iterative impedance and the phase shift of the network at 1.5 kHz.	CO3	8 Marks



(OR)

10	a)	Why the preference given for reactive elements in passive filter design, rather than resistive elements.	CO2	4 Marks
	b)	A π-section filter is shown in fig. Calculate the value of cutoff frequency and determine the iterative impedance and the phase shift of the network at 1.25 kHz.	CO6	10 Marks

ENGINEERING METALLURGY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1	a)	Describe in detail basic open hearth process.	CO3	7 Marks
	b)	Discuss in detail the working of puddling furnace.	CO5	7 Marks
		(OR)		
2		Explain the following: i) Vacuum induction melting. ii) Electric furnace melting.	CO3	14 Marks
		UNIT-II		
3		Explain eutectic and peritectic reactions with neat phase diagrams.	CO2	14 Marks
		(OR)		
4		What is phase diagram? Explain the importance of Gibbs phase rule.	CO6	14 Marks
		UNIT-III		
5	a)	Describe how TTT Curves are useful in the heat treatment process of steel.	CO3	7 Marks
	b)	Write a short notes on i) Process Annealing; ii) Hardening.	CO3	7 Marks
		(OR)		
6		Explain the following i) Tempering. ii) Austempering. iii) Martempering. iv) Age hardening.	CO3	14 Marks
		UNIT-IV		
7		Explain the following i) Carburizing; ii) Carbonitriding; iii) Cyaniding.	CO3	14 Marks
		(OR)		
8	a)	Explain about Optical Microscope.	CO5	7 Marks
	b)	Write differences between TEM and SEM.	CO5	7 Marks
		UNIT-V		
9	a)	Write the advantages and limitations of powder metallurgy.	CO6	7 Marks
	b)	Write about atomization process.	CO4	7 Marks
		(OR)		
10		Discuss the following terms i) Sintering; ii) Electrolysis process; iii) Mixing.	CO4	14 Marks

KINEMATICS OF MACHINERY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

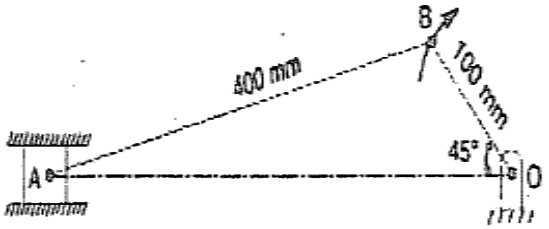
Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define the following terms i) Element or link; ii) Kinematic chain; iii) Lower pair; iv) Higher pair.	CO1	4 Marks
	b)	Sketch and explain double slider crank mechanism	CO1	10 Marks
		(OR)		
2	a)	What is a machine? Differentiate between machine and structure?	CO1	4 Marks
	b)	Sketch and explain single slider crank chain.	CO1	10 Marks

UNIT-II

3		A four bar mechanism ABCD is made of four links. AD is fixed link which is 180 mm long. The links AB, BC and CD are 90 mm, 120 mm and 120 mm respectively. At a certain instant, the link AB makes 69^0 with link AD. If link AB rotates at uniform speed of 120 rpm, find: i) Angular velocities of links BC and CD. ii) Velocity of B and C.	CO2	14 Marks
		(OR)		
4		Locate all the instantaneous centres of the slider crank mechanism shown in following figure. The lengths of crank OB and connecting rod AB are 100 mm and 400 mm respectively. If the crank rotates clockwise with an angular velocity of 10 rad/s, find: i) Velocity of the slider A. ii) Angular velocity of the connecting rod AB.	CO2	14 Marks



UNIT-III

5		Sketch and explain Peaucellier straight-line mechanism. Prove that it generates exact straight line.	CO1	14 Marks
		(OR)		
6		Draw the neat sketch of Davis steering gear and show that exactly satisfies the condition for correct steering.	CO1	14 Marks

UNIT-IV

7		The following data refers to two mating 20^0 involute gears. Number of teeth on pinion is 20. Gear ratio = 2. Speed of pinion is 250 rpm. Module = 12mm. If the addendum of each wheel is such that the path of approach and path of recess on each side are half of the maximum permissible length, find : i) The addendum of pinion and gear. ii) The length of arc of contact.	CO3	14 Marks
		(OR)		

8	Two shafts A and B are coaxial. A gear C (50 teeth) is rigidly mounted on shaft A. A compound gear D-E gear with C and an internal gear G. D has 20 teeth and gears with C and E has 35 teeth and gear with an internal gear G which is fixed and is concentric with the shaft axis. The compound gear D-E is mounted on a pin which projects from an arm keyed to the shaft B. i) Sketch the arrangement. ii) Find the number of teeth on internal gear G assuming that all gears have the same module. iii) If shaft A rotates at 110 rpm find the speed of shaft B.	CO4	14 Marks

UNIT-V

9	A cam with minimum radius of 25 mm, rotating clockwise at uniform speed is to be designed to give a roller follower, at the end of a valve rod, motion described below: To raise the valve through 50 mm during 120^0 rotation of the cam, to keep the valve fully raised through next 30^0, to lower the valve during next 60^0 and to keep the valve closed during rest of the revolution i.e. 150^0. The diameter of the roller is 20 mm and the diameter of the cam shaft is 25 mm. Draw the profile of the cam when the line of stroke of the valve rod passes through the axis of the cam shaft. The displacement of the valve, while being raised and lowered, is to take place with simple harmonic motion. Determine the maximum acceleration of the valve rod when the cam shaft rotates at 100 rpm.	CO5	14 Marks

(OR)

10	Draw the profile of a cam operating a knife edge follower from the following data: i) Follower to move outward through 40 mm during 60^0 of a cam rotation, ii) Follower to dwell for the next 45^0 iii) Follower to return its original position during next 90^0 iv) Follower to dwell for the rest of the cam rotation. The displacement of the follower is to take place with SHM during both outward and return strokes. The least radius of the cam is 50 mm. If the rotates at 300 rpm, determine the maximum velocity and acceleration of the follower during the outward stroke and return stroke.	CO6	14 Marks

MANUFACTURING TECHNOLOGY

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1	a)	Enumerate the procedure for sand mold making with neat sketch.	CO1	7 Marks
	b)	Explain any four types of patterns with neat sketches.	CO2	7 Marks
		(OR)		
2	a)	What are the essential properties of molding sand? Explain.	CO2	7 Marks
	b)	Explain the testing methods of mold sand.	CO4	7 Marks
		UNIT-II		
3	a)	Briefly explain the steps in sequence for shell molding process with an illustration.	CO5	7 Marks
	b)	What are the steps followed in the precision investment casting process? Explain.	CO5	7 Marks
		(OR)		
4	a)	Describe the continuous casting process with a neat sketch.	CO5	7 Marks
	b)	What are the various testing methods used for casting inspection? State their advantages and disadvantages.	CO4	7 Marks
		UNIT-III		
5	a)	Explain the process of hot working and cold working.	CO5	7 Marks
	b)	Elucidate the wire drawing process with a neat diagram.	CO1	7 Marks
		(OR)		
6	a)	State the types of dies used in sheet metal forming. Explain them with a neat sketch.	CO4	7 Marks
	b)	What is meant by HERF process? Explain the explosive forming process.	CO5	7 Marks
		UNIT-IV		
7	a)	Enumerate with neat sketches three types of flames used in gas welding.	CO4	7 Marks
	b)	Explain in detail about the TIG and MIG welding processes.	CO1	7 Marks
		(OR)		
8	a)	Describe the process of laser beam welding process and its merits.	CO4	7 Marks
	b)	Name some of the common welding defects and methods to overcome it.	CO4	7 Marks
		UNIT-V		
9	a)	What are the additives used in plastics materials? Describe them briefly.	CO5	7 Marks
	b)	Write short notes on thermoplastics and thermosetting materials.	CO5	7 Marks
		(OR)		
10	a)	Describe the process of blow molding in detail.	CO1	7 Marks
	b)	Explain the process of transfer molding with an illustration.	CO1	7 Marks

STRENGTH OF MATERIALS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the importance of stress strain diagram.	CO1	4 Marks
	b)	A 2 m long steel bar has a uniform diameter of 40 mm for a length of 1m from one end. For the next 0.5 m length the diameter decreases uniformly to d. For remaining 0.5 m length it has a uniform diameter of d mm. When a load of 150 KN is applied the observed extension is 2.4 mm. Determine the diameter d and stresses in each section. E = 200 KN/mm^2.	CO2	10 Marks
		(OR)		
2		A steel rod 20 mm in diameter passes centrally through a steel tube of 25 mm internal diameter and 30 mm external diameter. The tube is 800 mm long and is closed by rigid washers of negligible thickness which are fastened by nuts threaded on the rod. The nuts are tightened until the compressive load on the tube is 20 KN. Calculate the stresses in the tube and the rod. Find the increase in these stresses when one nut is tightened by one quarter of turn relative to other. There are 4 threads per 10 mm. E=200 GPa.	CO5	14 Marks

UNIT-II

3		A beam **6 m** long rests on two supports with equal overhangs on either side and carries a uniformly distributed load of **30 KN/m** over its entire length. Calculate the overhang if the maximum bending moment is to be as small as possible. Also draw shear force and bending moment diagrams.	CO6	14 Marks
		(OR)		
4		A horizontal beam AB 10 m long supported at two ends A and B carries a UDL of 180 N/ m from end A upto 3 m long in addition a concentrated load of 200 N at the left end, UDL of 200 N/m upto 4 m long from end B. Sketch the shear force and bending moment diagrams. Also, find the magnitude and position of maximum bending moment.	CO6	14 Marks

UNIT-III

5	a)	Find the width and depth of the strongest beam that can be cut of a cylindrical log of wood whose diameter is 600mm.	CO3	5 Marks
	b)	A water main of 1200 mm internal diameter and 12 mm thick is running full. If the stress is not to exceed 56 N/mm^2, find the greatest span which the pipe may be freely supported. Steel and water weigh 76800 N/m^3 and 10000 N/m^3 respectively.	CO3	9 Marks
		(OR)		
6	a)	Show that the maximum shear stress of solid circular section of a beam is equal to 1.333 times its mean shear stress.	CO3	5 Marks
	b)	The cross sectional area of a solid shaft of 160 mm diameter is the same as of a hollow shaft of the same material and of 120 mm inside diameter. Determine i) The ratio of power transmitted for the same angular velocity, ii) The ratio of angles of twist for the equal lengths when stressed to same intensity.	CO3	9 Marks

UNIT-IV

7		A horizontal beam, simply supported at its ends, carries a load which varies uniformly from 15 KN/m at one end to 60 KN/m at the other. Estimate the central deflection if the span is7m. E= 210 GPa and I=200x10^{-6} m.	CO4	14 Marks

(OR)

8		The direct stresses in two mutually perpendicular directions are 350 MPa and 250 MPa**,** both tensile and accompanied by the complimentary shear stress of intensity 200 MPa. Determine the magnitude of principal stresses and find the orientation of principal plane. Also find the stresses on the plane making an angle 60^0 with 350 MPa plane. Use Mohr's circle method.	CO4	14 Marks

UNIT-V

9	a)	Derive an expression for volumetric strain for a thin cylinder subjected to an internal pressure p	CO4	4 Marks
	b)	A closed end copper tube of 72 mm internal diameter, 800 mm long and 2 mm thick is filled with water under pressure. Find the change in pressure if additional volume of 4000 mm^3 of water is pumped into the tube. E= 102 GPa, K = 2200 MPa and Poissons ratio is 0.3.	CO5	10 Marks

(OR)

10		A thick Cylinder has inner and outer diameters as 120 mm and 180 mm respectively. It is subjected to an external pressure of 9 MPa. Find the value of the internal pressure which can be applied if the maximum stress is not to exceed 30 MPa. Draw the curves showing the variation of the hoop and radial stresses through the material of the cylinder.	CO5	14 Marks

ELECTRONIC CIRCUIT ANALYSIS AND DESIGN

[Electronics and Communication Engineering]

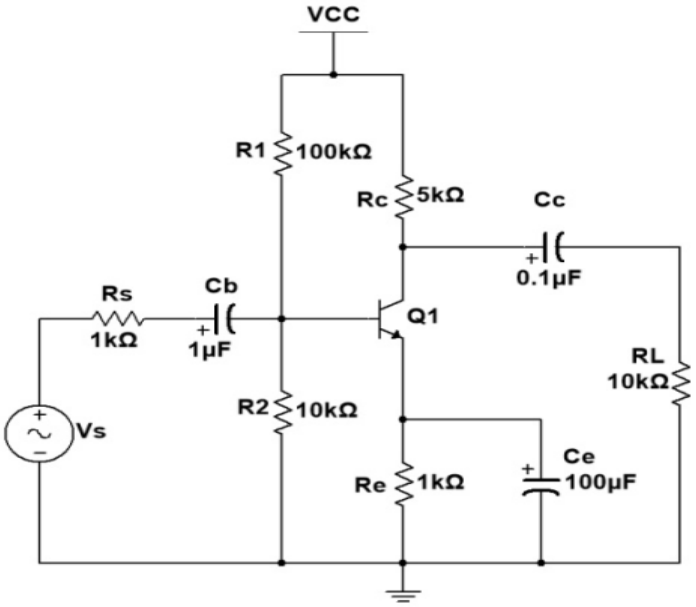
Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 For the transistor shown below, Compute A_i, A_v, A_{vs}, Z_i and Z_o. CO4 14 Marks

Assume h_{ie}=1KΩ, h_{fe}=100, h_{re}=2.5×10^{-4} and h_{oe}=24μʊ.



(OR)

2 Draw the circuit of a RC coupled amplifier Explain its behavior at low, mid and high frequencies by drawing separate equivalent circuit for each frequency region. CO4 14 Marks

UNIT-II

3 a) Explain CE current gain with and without resistive load. CO1 8 Marks

b) Define f_α, f_β and f_T. CO1 6 Marks

(OR)

4 Derive the expressions for voltage gain, current gain, input and output resistances of a Common Source amplifier at high frequencies. CO2 14 Marks

UNIT-III

5 a) With a neat sketch explain a negative feedback amplifier and obtain expression for its closed loop gain. CO1 8 Marks

b) An amplifier requires an input signal of 60mV to produce a certain output. With a negative feedback to get the same output the required signal is 0.5V.The voltage gain with feedback is 90.Find the open loop gain and feedback factor. CO2 6 Marks

(OR)

6	a)	Draw the circuit of Hartley oscillator and explain its working. Derive the expressions for frequency of oscillation and condition for starting of oscillation.	CO2	10 Marks
	b)	In an Hartley oscillator, if L_1=0.2mH,L_2=0.3mH and C=3nF, calculate the frequency of its oscillation.	CO2	4 Marks

UNIT-IV

7	a)	A signal $i_b=I_m$ Cosωt is applied to a power amplifier with second order nonlinearity between i_b and i_c. Derive the expression for i_C and also derive distortion factor.	CO2	8 Marks
	b)	Explain the operation of a class A power amplifier with necessary diagram.	CO3	6 Marks
		(OR)		
8	a)	Draw the circuit diagram of a Class B amplifier, and derive an expression for its conversion efficiency.	CO2	8 Marks
	b)	In an Ideal Class B push pull amplifier, V_{CC}=20V, N_2:N_1=2:1 and R_L=20Ω.Find the output signal power, $P_{0max}$and collector dissipation in each Transistor, P_C under full power condition, Find P_{Cmax} also.	CO3	6 Marks

UNIT-V

9	a)	Define Q-factor, derive the expressions for Q factors of RL and RC circuits.	CO1	8 Marks
	b)	Explain about the stability of Tuned amplifiers.	CO1	6 Marks
		(OR)		
10		Derive the expressions for 3dB bandwidth of i) Capacitance coupled single tuned amplifiers, ii) Double tuned amplifiers.	CO2	14 Marks

SIGNALS AND SYSTEMS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Find the convolution sum of two sequences $x[n] = \{1, 4, 3, 2\}$, $[n] = \{1, 3, 2, 1\}$ by graphical representation.	CO1	7 Marks
	b)	Discuss the importance of impulse signal as test signal for testing of various electronic equipments to ensure the safety and security of environment.	CO1	7 Marks

(OR)

2		Compute convolution integral of x(t) and h(t) waveform shown in fig.1.	CO1	14 Marks

fig.1

UNIT-II

3	a)	Find the Exponential Fourier series representation of the following signals i) $x(t) = 3\sin(4\omega_0 t)$ ii) $x(t) = \cos 2t$	CO1	7 Marks
	b)	State and prove the following properties of Fourier Transforms i) Time shifting , ii) Differentiation in frequency domain, iii) Parseval's Theorem.	CO4	7 Marks

(OR)

4		Obtain the Fourier transform of the following functions: i) Impulse train ii) dc signal iii) $\cos \omega_0 t$ iv) Gaussian pulse	CO4	14 Marks

UNIT-III

5	a)	The impulse response of a system is $h(t) = e^{-2t}\,u(t)$ when excited by the input given by $x(t) = e^{-4t}[u(t) - u(t-2)]$. Determine the output of the system using Graphical model.	CO1	7 Marks
	b)	A signal $x(t) = e^{-2t}\,u(t)$ is passed through an ideal low pass filter with cut off frequency of 1 rad/sec. Determine the output energy spectral density and the output energy.	CO1	7 Marks

(OR)

6	a)	Consider a linear system with impulse response $h(t)$, defined and derive the relation between the input and output power spectral densities**.**	CO2	7 Marks
	b)	State and prove any three properties of auto correlation function.	CO1	7 Marks

UNIT-IV

7	a)	Find the signal whose bilateral transform is $X(s) = \frac{1}{(s+5)(s+1)}$ - $5 < \mathrm{Re}(s) < 1$.	CO4	7 Marks
	b)	Find the transfer function of an ideal differentiator.	CO5	7 Marks

(OR)

8		Determine Laplace transform of the following continuous time signals and their ROC. i) $x(t) = A\,u(t)$ ii) $x(t) = t\,u(t)$ iii) $x(t) = e^{-3t}\,u(t)$ iv) $x(t) = e^{-3t}\,u(-t)$ v) $x(t) = e^{-3\lvert t\rvert}$	CO4	14 Marks

UNIT-V

9	a)	Determine the Z – Transform of the following sequences and sketch their ROC's i) $x(n) = n\,u(n)$ ii) $x(n) = (0.4)^n\,[u(n) - u(n-8)]$	CO3	7 Marks
	b)	State and prove the Sampling theorem.	CO1	7 Marks

(OR)

10	a)	i) Determine the Inverse Z-Transform Using Residue Method $X(z) = 3z^{-1}/(1 - z^{-1})(1 - 4z^{-1})$ ROC: $1 < \lvert z \rvert < 4$. ii) Find the inverse Z-Transform of $X(z) = 1 + 3z^{-1}/1 + 3z^{-1} + 2z^{-2}$ for $\lvert z \rvert > 2$.	CO3	7 Marks
	b)	Using appropriate method find y(n) of Z transformed signal $Y(z) = z/(z-1)^3$.	CO3	7 Marks

SWITCHING THEORY AND LOGIC DESIGN

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Determine the binary code for each of the ten decimal digits using a weighted code with weights 7, 4, 2 and 1.	CO1	6 Marks
	b)	The solutions to the quadratic equation $x^2 - 11x + 22 = 0$ are $x = 3$ and $x=6$. What is the base of the numbers?	CO4	4 Marks
	c)	Simplify the following Boolean expressions to a minimum number of literals using basic Boolean laws. i) $X' + XY + XZ' + XY'Z'$. ii) $XY' + Y'Z' + X'Z'$.	CO5	4 Marks

(OR)

2	a)	List and explain the axiomatic definition of Boolean algebra.	CO1	6 Marks
	b)	Simplify the following Boolean expressions to a minimum number of literals: i) $xyz + x'y + xyz'$ ii) $(A + B)'(A' + B')'$ iii) $(a + b + c')(a'b' + c)$ iv) $(BC' + A'D)(AB' + CD')$	CO5	8 Marks

UNIT-II

3	a)	Simplify the following Boolean function using four variable maps i) $F(w, x, y, z) = \sum(2, 3, 12, 13, 14, 15)$. ii) $F(A, B, C, D) = \sum(3, 7, 11, 13, 14, 15)$.	CO5	6 Marks
	b)	Implement the following functions with NOR and NAND gates. Assume that both the normal and complement inputs are available. i) $AB' + C'D' + A'CD' + DC'(AB + A'B') + DB(AC' + A'C)$. ii) $AB'CD' + A'BCD' + AB'C'D + A'BC'D$.	CO3	8 Marks

(OR)

4	a)	Find all the prime implicants for the following Boolean functions, and determine which are essential: i) $F(w,x,y,z) = \sum(0, 2, 4, 5, 6, 7, 8, 10, 13, 15)$. ii) $F(A,B,C,D) = \sum(0, 1, 2, 5, 7, 8, 9, 10, 13, 15)$.	CO4	6 Marks
	b)	Simplify the following Boolean functions by means of the tabulation method $F(A, B, C, D, E, F) = \sum(6, 9, 13, 18, 19, 25, 27, 29, 41, 45, 57, 61)$.	CO5	8 Marks

UNIT-III

5	a)	Define multiplexer and implement full adder using 4X1 multiplexer.	CO6	8 Marks
	b)	Design a combinational circuit that generates the 9's complement of a BCD digit.	CO3	6 Marks

(OR)

6	a)	Design a code converter that converts a decimal digit from BCD to 8 4 -2 -1 code.	CO3	7 Marks
	b)	Design a circuit of a 3 bit parity generator and the circuit of a 4 bit parity checker using an odd parity bit.	CO2	7 Marks

UNIT-IV

7	a)	Explain the edge triggering and how do you achieve the edge triggering in Flip Flops.	CO1	6 Marks
	b)	The circuit is described by the following flip-flop input equations: $J_A = x$ $K_A = B$ $J_B = x$ $K_B = A'$ i) Derive the state equations $A(t+1)$ and $B(t+1)$ by substituting the input equations for the J and K variables. ii) Draw the state diagram of the circuit.	CO2	8 Marks

(OR)

8	a)	Explain the operation of four bit universal shift register with neat block diagram.	CO1	7 Marks
	b)	Design a four-bit binary synchronous counter with D flip - flops.	CO3	7 Marks

UNIT-V

9	a)	Explain the differences between asynchronous and synchronous sequential circuits.	CO1	5 Marks
	b)	Draw a PLA circuit to implement the functions. $F = A'BC + AC + A'BC'$ $G = (AC + ABC + BC)'$	CO2	9 Marks

(OR)

10	a)	Define ROM and explain different types of ROMs.	CO1	4 Marks
	b)	Tabulate the PLA programming table for the four Boolean functions listed below. Minimize the numbers of product terms. $A(x, y, z) = \sum(1, 3, 5, 6)$ $B(x, y, z) = \sum(0, 1, 6, 7)$ $C(x, y, z) = \sum(3, 5)$ $D(x, y, z) = \sum(1, 2, 4, 5, 7)$.	CO6	10 Marks

PYTHON PROGRAMMING

[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the essence of computational problem solving with suitable example.	CO1	8 Marks
	b)	Write about control characters.	CO1	6 Marks
		(OR)		
2	a)	Define the terms variable, identifier and keyword in Python with suitable example for each.	CO1	9 Marks
	b)	Differentiate between coercion and type conversion.	CO1	5 Marks

UNIT-II

3	a)	Write in detail about selection control statement in Python with examples.	CO2	9 Marks
	b)	Write a Python program to check whether the given number is prime or not.	CO5	5 Marks
		(OR)		
4	a)	Discuss in detail about Boolean operators.	CO1	7 Marks
	b)	Differentiate between lists, tuples and dictionary in python.	CO2	7 Marks

UNIT-III

5	a)	Write a Python program to find the minimum and maximum value from the given numbers using function.	CO5	8 Marks
	b)	Explain why binary files do not contain newline characters.	CO3	6 Marks
		(OR)		
6	a)	Illustrate the use of string processing in Python.	CO2	7 Marks
	b)	Differentiate between a text file and a binary file in Python.	CO3	7 Marks

UNIT-IV

7	a)	Write in detail about fundamental concept of object oriented programming.	CO1	6 Marks
	b)	With suitable examples explain about absolute positioning and relative positioning.	CO3	8 Marks
		(OR)		
8	a)	How do you create and control any number of turtle objects? Explain	CO2	6 Marks
	b)	Develop a simple program for bouncing ball that exactly three balls are created, each with different colors.	CO4	8 Marks

UNIT-V

9	a)	Explain briefly about TKinter pragmatics.	CO1	7 Marks
	b)	Write in detail about binding events with a suitable example.	CO2	7 Marks
		(OR)		
10	a)	What is meant by Event-driven program? Explain with a suitable example.	CO1	7 Marks
	b)	Write about scales widget type.	CO2	7 Marks

DISCRETE MATHEMATICAL STRUCTURES

[Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Show that: $P \vee (P \wedge Q) \Leftrightarrow P$.	CO1	7 Marks
	b)	Obtain the p.d.n.f of the formula given by $(\sim P \wedge R) \vee (Q \wedge R)$.	CO1	7 Marks
		(OR)		
2	a)	Prove (or) Disprove the validity of the following argument. Every living thing is a Plant or animal. Davids dog is alive and it is not a plant. All animals have hearts. Hence, David's dog has a heart.	CO1	7 Marks
	b)	Prove that $(\exists x)(P(x) \wedge Q(x)) \Rightarrow (\exists x)\, P(x) \wedge (\exists x)\, Q(x)$.	CO2	7 Marks

UNIT-II

3	a)	Show that if R,S are equivalence relations on set A the $R \cap S$ is also equivalance relation.	CO1	7 Marks
	b)	Let $X=\{2, 3, 6, 12, 24, 36\}$ and the relation $\leq$ be such that $x \leq y$ if x divides y. Draw the Hasse diagram of $(X, \leq)$.	CO1	7 Marks
		(OR)		
4	a)	Show that the function $f(x) = x^3 - 1$ is bijective function. Find its inverse function.	CO1	7 Marks
	b)	Define Distributive Lattice. Check whether $(D_{20}, \mid)$,where D_{20} is divisors of 20 and $\mid$ represents the relation divides.	CO1	7 Marks

UNIT-III

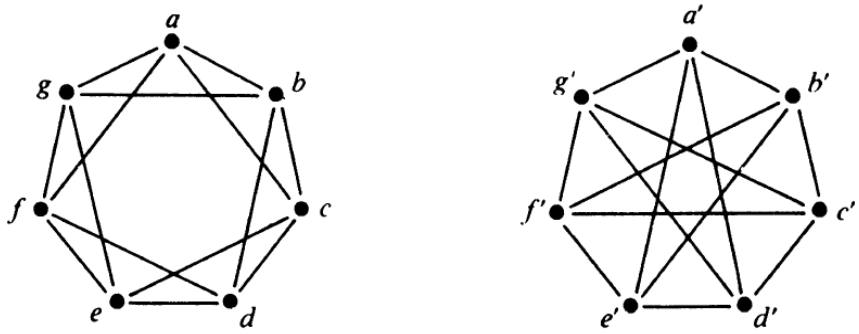
5	a)	Show that the set Q+(=set of all positive rational numbers) form an abelian group with respect to the composition * defined by, a*b=ab/3, $\forall\, a, b \in Q+$.	CO5	7 Marks
	b)	Define semigroup and Monoid. Give an example of semigroup which is not a Monoid.	CO5	7 Marks
		(OR)		
6	a)	Define Algebriac structure? List its properties?	CO5	7 Marks
	b)	State and Prove Lagranges theorem.	CO5	7 Marks

UNIT-IV

7	a)	Prove by mathematical Induction that $6^{n+2} + 7^{2n+1}$ is divisible by 43 for all +ve integers.	CO1	7 Marks
	b)	There are 30 females and 35 males in the junior class while there are 25 females and 20 males in the senior class. In how many ways can a committee of 10 be chosen so that there are exactly 5 females 3 juniors on the committee?	CO5	7 Marks
		(OR)		
8	a)	Solve the Reccurence Relation $a_n - 7a_{n-1} + 16a_{n-2} - 12a_{n-3} = 0$,where $a_0=1$, $a_1=4$,$a_2=8$.	CO1	7 Marks
	b)	Solve the Reccurence Relation $a_n - 6a_{n-1} + 8a_{n-2} = n.4^n$.	CO1	7 Marks

UNIT-V

9 a) What is meant by Isomorphism? Determine whether the following graphs G_1 and G_2 Isomorphic or not? CO5 7 Marks



b) Define the Hamiltonian Path and Hamiltonian Cycle. Determine whether the graph (G_3) is Hamiltonian or not? CO4 7 Marks

(OR)

10 a) Write the algorithm for Depth First Search. Explain with a example. CO4 7 Marks

b) State Krushkal's Algorithm. Illustrate it by using an example. CO3 7 Marks

OPERATING SYSTEMS

[Computer Science & Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	What is a System Call? Write about the purpose of a system call.	CO1	7 Marks
	b)	Explain about special purpose systems.	CO1	7 Marks
		(OR)		
2	a)	Differentiate between preemptive and non preemptive scheduling.	CO1	6 Marks
	b)	Write in detail about the thread libraries.	CO1	8 Marks

UNIT-II

3	a)	Show how to prevent critical section problem by using locks.	CO2	7 Marks
	b)	State and explain the readers-writers problem. Suggest a solution to it by using semaphores.	CO2	7 Marks
		(OR)		
4	a)	Explain how to recover the system from a deadlock.	CO2	7 Marks
	b)	With the aid of a suitable example, show how to use Banker's algorithm for deadlock avoidance.	CO2	7 Marks

UNIT-III

5	a)	Discuss in detail about various page table structures.	CO2	7 Marks
	b)	Describe second chance page replacement algorithm.	CO2	7 Marks
		(OR)		
6	a)	Explain the difference between internal and external fragmentation.	CO2	6 Marks
	b)	Describe the concept of virtual memory. Explain its techniques.	CO2	8 Marks

UNIT-IV

7	a)	Explain in detail about free space management.	CO4	7 Marks
	b)	Describe the methods for implementing a directory structure by mentioning the tradeoffs of each.	CO4	7 Marks
		(OR)		
8		Explain in detail about different disk scheduling algorithms.	CO1	14 Marks

UNIT-V

9		Explain the following. i) Application I/O Interface; ii) Kernel I/O subsystem.	CO5	14 Marks
		(OR)		
10		Write short notes on i) Domain of protection; ii) Revocation of access rights.	CO5	14 Marks

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Demonstrate time function using appropriate environment variables.	CO5	10 Marks
	b)	List out the members of tm structure.	CO1	4 Marks
		(OR)		
2	a)	Display the current date and time using tm-structure.	CO1	7 Marks
	b)	Describe the following environment variables. i) strptime. ii) strftime.	CO3	7 Marks

UNIT-II

3	a)	Write a shell script to find factorial of a given number.	CO3	10 Marks
	b)	Discuss the usage of AND List and OR List with example.	CO1	4 Marks
		(OR)		
4	a)	Design a C Program to display Environment variables.	CO4	6 Marks
	b)	Discuss the following commands. i) set. ii) unset. iii) shift. iv) trap.	CO1	8 Marks

UNIT-III

5	a)	Explain the following system calls for managing files. i) lseek. ii) fstat,stat and lstat. iii) dup and dup2	CO1	10 Marks
	b)	Design a shell script to list all of the directory files in a directory.	CO4	4 Marks
		(OR)		
6	a)	Differentiate the following : i) getc() ***vs*** fgetc() ii) stat() ***vs*** fstat() iii) printf() ***vs*** fprintf() iv) scanf() ***vs*** fscanf()	CO2	10 Marks
	b)	Differentiate system calls and Library Functions and give the syntax for the open system call and fopen library function in detail.	CO2	4 Marks

UNIT-IV

7	a)	Define process. Describe the structure of process.	CO1	7 Marks
	b)	Discuss the need for process table.	CO1	7 Marks
		(OR)		
8	a)	Explain briefly about system processes and process scheduling.	CO1	7 Marks
	b)	Illustrate the method of process creation with example.	CO5	7 Marks

UNIT-V

9	a)	Discuss the process of file descriptor manipulation by close and dup system calls.	CO1	7 Marks
	b)	Write a program to create a process using fork() and display Child and Parent Process Id's.	CO3	7 Marks
		(OR)		
10	a)	Describe the process of creating named pipes and FIFO.	CO1	7 Marks
	b)	Discuss the method of accessing FIFO, opening FIFO files, reading and writing FIFOs.	CO1	7 Marks

NUMERICAL METHODS, PROBABILITY AND STATISTICS

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. a) Find an approximate root for the equation $xe^x = 2$ by using method of false position. — 6 Marks L1 CO1 PO1

   b) Apply Newton-Raphson method, find the real root of the equation $3x = \cos x + 1$. — 6 Marks L3 CO1 PO2

(OR)

2. a) Using Newton's Forward interpolation formula compute the value of sin 52° given sin45° = 0.7071, sin 50° = 0.7660, sin55° = 0.8192 and sin 60° = 0.8660. — 6 Marks L3 CO1 PO1

   b) Apply Lagrange's interpolation formula, compute the value of $f(9)$ from the following data: — 6 Marks L3 CO1 PO1

x	5	7	11	13	17
$f(x)$	150	392	1492	2366	5202

UNIT-II

3. a) The population of a certain town (as obtained from census data) is shown in the following table. — 6 Marks L3 CO1 PO2

Year	1951	1961	1971	1981	1991
Population (in thousands)	19.96	39.65	58.81	77.21	94.61

   calculate the rate of growth of the population in the year 1981.

   b) Using Simpson's $\frac{1}{3}$ rule to find $\int_0^6 \frac{dx}{1+x^2}$ by taking seven ordinates. — 6 Marks L3 CO1 PO1

(OR)

4. a) Find the values of $y(0.1)$ and $y(0.2)$ given that $y' = 2y + 3e^x$, $y(0) = 0$ by using Taylor's series method. — 6 Marks L1 CO1 PO2

   b) Apply Runge–Kutta fourth order method to find an approximate value of y when x = 0.2 given that $\frac{dy}{dx} = x + y$, y(0) = 1. — 6 Marks L3 CO1 PO1

UNIT-III

5. a) A sample of 4 items is selected at random from a box containing 12 items of which 5 are defective. Let X denote the number of defective items in the sample. Find the probability distribution of X and also obtain the mean of X. — 6 Marks L1 CO2 PO2

   b) For the continuous random variable X whose Probability density function is given by $f(x) = \begin{cases} cx(2-x), & if\ 0 \le x \le 2 \\ 0, & otherwise \end{cases}$ where $\boldsymbol{c}$ is a constant. Find the value of $\boldsymbol{c}$ and also obtain the mean and variance of X. — 6 Marks L1 CO2 PO1

(OR)

6.	a)	For the following probability distribution $X = x$ | -3 | 6 | 9 $P(X = x)$ | 1/6 | 1/2 | 1/3 Find i) $E(X)$ ii) $E(X^2)$ iii) $E[(2X+1)^2]$	6 Marks	L1	CO2	PO1
	b)	For the continuous probability function $f(x) = kx^2e^{-x}$ *when* $x \geq 0$. Calculate the value of k and also obtain the mean and variance of X.	6 Marks	L3	CO2	PO1

UNIT-IV

7.	a)	Assume that 50% of all engineering students are good in Mathematics, find the probabilities that among 18 engineering students - i) exactly 10, ii) at least 10 iii) at least 2 and at most 9 are good in mathematics.	6 Marks	L1	CO2	PO2
	b)	In a test on 2000 electric bulbs, it was found that the life of a particular make was normally distributed with an average life of 2040 hrs and standard deviation of 60 hours. Find the number of bulbs likely to burn for ; i) more than 2150*hrs* ii) less than 1950 *hrs* and iii) more than 1920 *hrs* and but less than 2160 *hrs*.	6 Marks	L1	CO2	PO2

(OR)

8.	a)	If a random variable X has a Poisson distribution such that $P(1) = P(2)$, Calculate: i) Mean ii) $P(1 < X < 4)$.	6 Marks	L3	CO2	PO1
	b)	For a Normally distributed variate with mean 1 and standard deviation 3, find the probabilities that i) $3.43 \leq x \leq 6.19$ ii) $-1/43 \leq x \leq 6.19$	6 Marks	L1	CO2	PO1

UNIT-V

9.	a)	In a sample of 500 from a village in Andhra Pradesh, 280 are found to be rice eaters and the rest are wheat eaters. Examine that both the articles are equally popular or not.	6 Marks	L4	CO2	PO4
	b)	The means of two large samples of sizes 1000 and 2000 members are 67.5 *cm* and 68.0 *cm* respectively. Test whether the sample has come from the same population standard deviation 2.5 *cm*.	6 Marks	L4	CO2	PO4

(OR)

10.	a)	The measurements of the output of two units have given the following results. Assuming that both samples have been obtained from the normal population at 10% significance level, test whether the two populations have the same variance. Unit-A | 14.1 | 10.1 | 14.7 | 13.7 | 14.0 Unit-B | 14.0 | 14.5 | 13.7 | 12.7 | 14.1	6 Marks	L4	CO2	PO4
	b)	In an investigation on the machine performance, the following results were obtained: Machine 1 | No. of units inspecteds: 375 | No. of defectives: 17 Machine 2 | 450 | 22 Test whether there is any significant performance of two machines at $\alpha = 0.05$.	6 Marks	L4	CO2	PO4

CODE No.: 19BT30102 SVEC-19

II B.Tech I Semester (SVEC-19) Supplementary Examinations, November – 2022

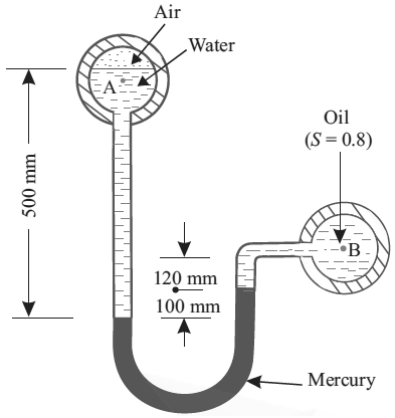
FLUID MECHANICS
[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Differentiate between cohesion and adhesion? Explain the various types of fluids vary with temperature.	6 Marks	4	CO1	PO1 PO2
	b)	Figure shows a differential manometer connected at two points A and B. If at A air pressure is 78.5 kN/m^2, find the absolute pressure at B.	6 Marks	4	CO1	PO1 PO2 PO10



(OR)

2.	a)	What is the principle associated with buoyancy? Explain buoyancy, center of buoyancy, metacenter and metacentric height.	6 Marks	2	CO2	PO1 PO10
	b)	A circular door of 0.5 m diameter closes on an opening in the vertical side of a bulk head, which retains water. The center of the opening is at a depth of 2m from the water level. Determine the total pressure on the door. Take specific gravity of sea water as 1.03.	6 Marks	4	CO2	PO1 PO2

UNIT-II

3.	a)	i) Define and explain briefly the following: Velocity potential and Stream function. ii) For the following stream functions calculate velocity at a point (1, 2):$\psi = 3xy$ and $y = 3x^2y - y^3$	6 Marks	4	CO2	PO1 PO2
	b)	What is the irrotational velocity field associated with the potential $\varphi = 3x^2 - 3x + 3y^2 + 16t^2 + 12zt$. Does the flow field satisfy the incompressible continuity equation?	6 Marks	4	CO2	PO1 PO2 PO4

(OR)

4.	a)	Explain about impulse-momentum equation? Also write its applications.	6 Marks	2	CO2	PO1 PO5
	b)	A 45° reducing bend is connected in pipeline, the diameters at the inlet and outlet of the bend being 400 mm and 200 mm respectively. Find the force exerted by water on the bend if the intensity of pressure at inlet of the bend is 215 kN/m^2. The rate of	6 Marks	4	CO2	PO1 PO2 PO4 PO10

flow of water is 0.5 m^3/s.

UNIT-III

5.	a)	A convergent-divergent mouthpiece having throat diameter 40 mm is discharging water under a constant head of 4 meters. Determine the maximum outlet diameter to avoid separation of the flow, if the maximum vacuum pressure is 8·5 meters of water. Find the discharge also.	6 Marks	4	CO3	PO1 PO2 PO4
	b)	The following data relate to venturimeter fitted to an inclined pipe in which water is flowing. Diameter of the pipe = 300 mm, Throat diameter = 150 mm, Sp. gravity of liquid used in U-tube manometer= 0.8, Reading of manometer = 400 mm, Loss of head between the inlet and throat = 0.3 × kinetic head of the pipe. Find the discharge using the given data.	6 Marks	4	CO3	PO1 PO2 PO4 PO5 PO10
		(OR)				
6.	a)	A rectangular notch 0·5 m long is used for measuring a discharge of 0·04 m^3/s. An error of 2 mm was made in measuring the head over the notch. Calculate the percentage error in the discharge. Take C_d = 0·6.	6 Marks	4	CO3	PO1 PO2 PO10
	b)	For sudden expansion in a pipe flow, work out the optimum ratio between the diameter of the pipe before expansion and the diameter of pipe after expansion so that pressure rise is maximum? Also find the maximum pressure rise.	6 Marks	6	CO4	PO1 PO2 PO3 PO5 PO10

UNIT-IV

7.	a)	Differentiate laminar and turbulent flow.	6 Marks	2	CO5	PO1 PO2 PO10
	b)	An oil of viscosity 0.9 poise and specific gravity 0.8 is flowing through a horizontal pipe of 80 mm and length 15 m. Calculate the difference of pressure at the two ends, if 50 kg of the oil is enclosed in a tank in 15 seconds.	6 Marks	4	CO5	PO1 PO2 PO4 PO10
		(OR)				
8.	a)	Obtain an expression for the coefficient of friction in terms of shear stress.	6 Marks	4	CO5	PO1 PO2
	b)	Determine the average height of the roughness for a rough pipe of diamter 10 cm when the velocity at a point 4 cm from wall is 40% more than the velocity at a point 1 cm from a pipe wall.	6 Marks	4	CO5	PO1 PO2 PO4

UNIT-V

9.	a)	Explain the step by step procedure to develop the relationship between variables using Rayleigh method.	6 Marks	2	CO6	PO1 PO5
	b)	Discharge Q through a turbine is a function of the turbine speed n, head H, diameter D of the runner, density ρ, and viscosity μ of the fluid and acceleration due to gravity g. Find the expression for Q using Buckingham method.	6 Marks	4	CO6	PO1 PO2 PO5
		(OR)				
10.		A 7.2 m height NS 15 m long spillway discharges 94 cumecs discharge under a head of 2 m. If a 1:9 scale model of this spillway is to be constructed, determine model dimensions, head over spillway model and model discharge. If model experiences a force of 7500 N determine force on the prototype.	12 Marks	4	CO6	PO1 PO2 PO4 PO5

CODE No.: 19BT30103 SVEC-19

MECHANICS OF SOLIDS

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Derive the maximum shear force and bending moment for a cantilever beam subjected to point load at the free end.	6 Marks	L4	CO1	PO1 PO2 PO4 PO10
	b)	A cantilever beam of span 4 m is subjected to a uniformly distributed load of 3 kN/m for the entire span. Determine the shear force and bending moment at the salient point. Draw SFD and BMD	6 Marks	L4	CO1	PO1 PO2 PO4 PO10
		(OR)				
2.		Determine the maximum shear force and bending moment of a Simply Supported beam shown in the Fig.1 and draw SFD and BMD. 	12 Marks	L4	CO1	PO1 PO2 PO4 PO10

UNIT-II

3.	a)	A beam consists of a symmetrical rolled steel joist. The beam is simply supported at its ends and carries a point load at the centre of the spa. If the maximum stress due to bending is140 MPa, find the ratio of the depth of the beam section to span in order that the central deflection may not exceed 1/480 of the span. Take E = 200 GPa.	6 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO6 PO10
	b)	A beam of channel section 120 mm x 60 mm has uniform thickness of 15 mm. Draw the diagram showing the distribution of shear stress for the vertical section where the shearing force is 50 kN. Also find the ratio between maximum and mean shear stress.	6 Marks	L4	CO2	PO1 PO2 PO4 PO10
		(OR)				
4.		A masonry chimney having a shape of the frustum of a cone is 25 m high. The external diameter at the top and the internal diameter at the bottom is 2 m. The chimney is 0.5 m thick at the base. If the weight of the chimney is 1800 kN, find the uniform horizontal wind pressure that may act per unit projected area of the chimney in order tension at the base may be just avoided.	12 Marks	L4	CO3	PO1 PO2 PO6 PO10

UNIT-III

5.	a)	A steel shaft transmits 100 kW at 160 rpm. The shaft is 100 mm in diameter, find the torque of the shaft and the maximum shearing stress induced. Find also the twist of the shaft in a length of 6 m. Take $C=8x10^4$ N/mm^2.	6 Marks	L4	CO4	PO1 PO2 PO4 PO6

	b)	A solid circular shaft transmits 75 kW at 200 rpm. Calculate the shaft diameter if the twist in the shaft is not to exceed 1° in 2 m of shaft and the shearing stress in limited to 50 N/mm^2. Take $C=1x10^5$ N/mm^2.	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO6
		(OR)				
6.	a)	Mention some of the functions of the springs. Derive the shear stress and deflection of a close coiled helical spring with axial load for a circular section.	6 Marks	L4	CO4	PO1 PO2
	b)	A close coiled helical spring is to have a stiffness of 900 N/m in compression, with a maximum load of 45 N and a maximum shear stress of 120 N/mm^2. The solid length of the spring is 45 mm. Find the wire diameter and mean coil radius. Take $C=0.4x10^5$ N/mm^2.	6 Marks	L6	CO4	PO1 PO2 PO3 PO4 PO6
		UNIT-IV				
7.	a)	Derive the expression for the stresses acting in an inclined plane due to two perpendicular stresses.	6 Marks	L4	CO5	PO1 PO2 PO10
	b)	A tie bar is 10 m long and 60 mm by 40 mm in section. It is subjected to an axial pull of 400 kN and increase in length is found to be 7 mm. Determine the intensity of stress on a right cross section, normal and tangential and shear stresses on a plane inclined at 60° to the longitudinal axis, and also the modulus of elasticity of the material.	6 Marks	L4	CO5	PO1 PO2 PO6 PO10
		(OR)				
8.		In a steel member at a point the major principal stress is 180 MN/m^2 and the minor principal stress is compressive. If the tensile yield point of the steel is 225 MN/m^2, find the value of the minor principal stress at which yielding will commence, according to each of the following criteria of failure i) Maximum Shearing Stress. ii) Maximum Total Strain Energy. iii) Maximum Shear Strain Energy. Take Poisson's ratio=0.26	12 Marks	L6	CO2	PO1 PO2 PO6 PO10
		UNIT-V				
9.	a)	Define slenderness ratio. Derive the Euler's formula when both ends of the column are fixed.	8 Marks	L4	CO6	PO1 PO2
	b)	Calculate the critical load of a strut which is made of a bar circular in section and 5 m long and which is pin-jointed at both ends. The same bar when freely supported gives mid-span deflection of 10 mm with a load of 80 N at the centre.	4 Marks	L4	CO6	PO1 PO2 PO5 PO6
		(OR)				
10.		Compare the crippling loads given by Rankine's and Euler's formulae for tubular strut 2.25 m long having outer and inner diameters of 37.5 mm and 32.5 mm loaded through pin-joint at both ends. Take yield stress as 315 MN/m^2; a = 1/7500; and E = 200 GN/m^2. If elastic limit for the materia.l is taken as 200 MN/m^2, then for what length of the strut does the Euler formula cease to apply?	12 Marks	L4	CO6	PO1 PO2 PO5 PO6

ELECTROMAGNETIC FIELDS
[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	State and compare Coulomb's Law and Gauss's Law.	6 Marks	L2	CO1	PO1
	b)	A charge lies in y=-5m plane in the form of an infinite square sheet with a uniform charge density of $20nC/m^2$. Determine the electric field intensity at all the points.	6 Marks	L3	CO1	PO2
		(OR)				
2.	a)	Derive an expression for electric flux density due to a differential volume element.	6 Marks	L3	CO1	PO1
	b)	Q1 and Q2 are the point charges located at (0,-4,3) and (0,1,1). If Q1 is 2 nC, find Q2 such that the force on a test charge at (0,-3, 4) has no Z-components.	6 Marks	L3	CO1	PO2

UNIT-II

3.	a)	State and explain Ohms law in point form.	6 Marks	L2	CO1	PO1
	b)	Find the total current in outward direction from a cube of 1m, with one corner at the origin, and the edges parallel to the coordinate axes, if $\bar{J} = 2x^2\bar{a}_x + 2xy^3\bar{a}_y + 2xy\bar{a}_z \ A/m^2$.	6 Marks	L3	CO1	PO2
		(OR)				
4.	a)	Derive an expression for current continuity equation.	6 Marks	L3	CO1	PO1
	b)	In a dielectric material, E_x = 5 V/m and $P = \frac{1}{10\pi}\left(3\bar{a}_x - \bar{a}_y + 4\bar{a}_z\right)nC/m^2$. Calculate: i) susceptibility of the material. ii) electric field intensity. iii) electric flux density.	6 Marks	L3	CO1	PO2

UNIT-III

5.	a)	Using Ampere's circuital Law, obtain an expression for magnetic field intensity due to a toroid.	6Marks	L3	CO2	PO5
	b)	A steady current of 1000 A is established in a long straight, hollow aluminium conductor of inner radius 1 cm and outer radius 2 cm. Assuming uniform resistivity, calculate magnetic flux density as a function of radius 'r' from the axis of the conductor.	6 Marks	L3	CO2	PO2
		(OR)				
6.	a)	State and explain Biot-Savart's Law.	6Marks	L2	CO2	PO1
	b)	Derive an expression for magnetic flux density due to a finite current carrying element using Biot-Savart's Law.	6Marks	L3	CO2	PO1

UNIT-IV

7.	a)	Obtain an expression for force between two differential current elements carrying currents I_1 and I_2.	6 Marks	L3	CO2	PO1
	b)	A rectangular coil carrying a current of 5A is placed in the magnetic field $\vec{B} = 0.3(\vec{a}_x + \vec{a}_y)T$. The coil is lying in the y-z plane and has dimensions 0.8m x 0.4m. Find the torque on the coil.	6 Marks	L3	CO2	PO2
		(OR)				
8.	a)	Plot the variation of magnetic field due to two conductors each of radius *R* meters and spaced d meters. One of the conductor carries a current of +I amperes and the other -I amperes.	6 Marks	L2	CO2	PO1
	b)	What is the maximum torque on a square loop of 1000 turns in a field of uniform flux density in 10 Tesla? The loop has 10cm sides and carries a current of 3A.	6 Marks	L3	CO2	PO2

UNIT-V

9.		Write Maxwell's equations for static fields. Explain how they are modified for time varying electric and magnetic fields.	12 Marks	L3	CO3	PO1
		(OR)				
10.	a)	Differentiate between statically induced EMF and dynamically induced EMF and discuss their applications in electrical machines.	6 Marks	L2	CO3	PO1
	b)	A capacitor has a capacitance of 1.5pF. Find the displacement current at t=0, if a voltage 5sin100 (π*t) is applied to it.	6 Marks	L3	CO3	PO2

CODE No.: 19BT30301 SVEC-19

ENGINEERING THERMODYNAMICS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Classify systems and Explain with neat sketch quasi static process.	6 Marks	L2	CO1	PO1
	b)	A mass of 1.5 kg of air is compressed in a quasi-static process from 0.1 MPa to 0.7 MPa for which *pv* = constant. The initial density of air is 1.16 kg/m3. Find the work done by the piston to compress the air.	6 Marks	L3	CO1	PO1 PO2
		(OR)				
2.		Derive the steady flow energy equation with all the assumptions made and give the equations when it is applied to 1.Boiler 2.Nozzle 3.Turbine and 4.Compressor.	12 Marks	L2	CO1	PO1 PO2 PO3

UNIT-II

3.		Two Carnot engines A and B are connected in series between two thermal reservoirs maintained at 1000 K and 100 K respectively. Engine A receives 1680 kJ of heat from the high-temperature reservoir and rejects heat to the Carnot engine B. Engine B takes in heat rejected by engine A and rejects heat to the low-temperature reservoir. If engines A and B have equal thermal efficiencies, determine: i) The heat rejected by engine B. ii) The temperature at which heat is rejected by engine, A. iii) The work done during the process by engines, A and B respectively. If engines A and B deliver equal work, determine iv) The amount of heat taken in by engine B. v) The efficiencies of engines A and B.	12 Marks	L1	CO1	PO1 PO2
		(OR)				
4.	a)	Explain the concepts of availability and irreversibility.	6 Marks	L2	CO1	PO1
	b)	In a turbine the air expands from 7 bar, 600^{0}C to 1 bar, 250^{0}C. During expansion 9 kJ/kg of heat is lost to surroundings which is at 1 bar, 15^{0}C. neglecting kinetic and potential energy changes , determine per kg of air: i) The decrease in availability; ii) The maximum work; iii) The irreversibility. For air, take Cp = 1.005 kJ/kgK, h= CpT where Cp is constant.	6 Marks	L3	CO1	PO1 PO2

UNIT-III

5.	a)	Define dryness fraction (or) what is the quality of steam?	4 Marks	L2	CO2	PO1
	b)	A sample of steam from a boiler drum at 3 MPa is put through a throttling calorimeter in which the pressure and temperature are found to be 0.1 MPa, 120°C. Find the quality of the sample taken from the boiler.	8 Marks	L3	CO2	PO1 PO2

(OR)

6.		Derive the other three Maxwell relations Using the cycle relation and first Maxwell relation.	12 Marks	L3	CO1	PO1 PO2

UNIT-IV

7.		Draw a neat schematic of a compressibility chart and indicate its salient features.	12 Marks	L1	CO3	PO1 PO2

(OR)

8.	a)	Explain the Dalton's law of partial pressures for mixture of gases.	6 Marks	L2	CO3	PO1
	b)	Following is the gravimetric analysis of air: Oxygen-23.14%, Nitogen-75.53%, Argon-1.28%, Carbon dioxide-0.05% Calculate analysis by volume and the partial pressure of each constituent when total pressure is 1bar.	6 Marks	L3	CO3	PO1 PO2

UNIT-V

9.		With the help of P-V and T-S diagrams. Show that for the maximum pressure and Temperature of the cycle and the same heat rejection rate $\eta_{diesel} > \eta_{dual} > \eta_{Otto}$	12 Marks	L3	CO4	PO1 PO2

(OR)

10.	a)	Discuss the effect of compression ratio and specific heat ratio on the efficiency of Otto cycle.	6 Marks	L3	CO4	PO1
	b)	An engine of 250 mm bore and 375 mm stroke works on Otto cycle. The clearance volume is 0.00263 m^3. The initial pressure and temperature are 1 bar and 50°C. If the maximum pressure is limited to 25 bar, find the following : i) The air standard efficiency of the cycle. ii) The mean effective pressure for the cycle. Assume the ideal conditions.	6 Marks	L3	CO4	PO1 PO2

KINEMATICS OF MACHINERY
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

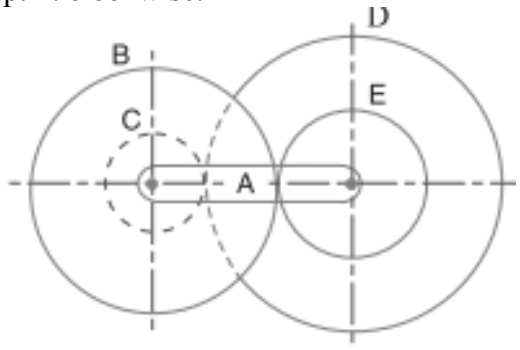
1.	Explain any two inversion single slider crank chain mechanism	12 Marks	L2	CO1	PO1
	(OR)				
2.	Explain Grubler's criterion for determining degree of freedom for mechanisms. Using Grubler's criterion for plane mechanism, prove that the minimum number of binary links in a constrained mechanism with simple hinges is four.	12 Marks	L2	CO1	PO1

UNIT-II

3.	What are straight line mechanisms? Describe one type of exact straight line motion mechanism with the help of a sketch.	12 Marks	L3	CO2	PO1 PO2
	(OR)				
4.	Derive an expression for the ratio of shafts velocities for Hooke's joint and draw the polar diagram depicting the salient features of driven shaft speed.	12 Marks	L3	CO3	PO1 PO2

UNIT-III

5.	Derive an expression for the minimum number of teeth required on the pinion in order to avoid interference in in volute gear teeth when it meshes with wheel.	12 Marks	L4	CO4	PO1 PO2 PO3
	(OR)				
6.	In a reverted epicyclic gear train, the arm A carries two gears B and C and a compound gear D - E. The gear B meshes with gear E and the gear C meshes with gear D. The number of teeth on gears B, C and D are 75, 30 and 90 respectively. Find the speed and direction of gear C when gear B is fixed and the arm A makes 100 r.p.m. clockwise.	12 Marks	L4	CO4	PO1 PO2 PO3



UNIT-IV

7.	A cam is to be designed for knife edge follower with the following data: i) Cam lift =40 mm during 90^0 of cam rotation with SHM ii) Dwell for next 30^0 iii) During the next 60^0 of cam rotation, the follower returns to its	12 Marks	L3	CO5	PO1 PO2 PO3

	original position with uniform acceleration iv) Dwell during the remaining 180^0. Draw the profile of the cam when the line of stroke is offset by 20 mm from the axis of the cam shaft. The radius of the base circle of the cam is 40 mm. Determine the maximum velocity and acceleration of the follower during its ascent and descent, if the cam rotates at 240 rpm.				
	(OR)				
8.	It is required to set out the profile of a cam to give the following motion to the reciprocating follower with a flat mushroom contact face : i) Follower to have a stroke of 20 mm during 120° of cam rotation ; ii) Follower to dwell for 30° of cam rotation ; iii) Follower to return to its initial position during 120° of cam rotation ; and iv) Follower to dwell for remaining 90° of cam rotation. The minimum radius of the cam is 25 mm. The out stroke of the follower is performed with simple harmonic motion and the return stroke with equal uniform acceleration and retardation.	12 Marks	L3	CO5	PO1 PO2 PO3
	UNIT-V				
9.	In a pin jointed four bar mechanism, as shown in Fig. 6.9, AB = 300 mm, BC = CD = 360mm, and AD = 600 mm. The angle BAD = 60°. The crank AB rotates uniformly at 100 r.p.m. Locate all the instantaneous centres and find the angular velocity of the link BC.	12 Marks	L4	CO6	PO1 PO2 PO3
	(OR)				
10.	The crank of a slider crank mechanism rotates clockwise at a constant speed of 300 r.p.m. The crank is 150 mm and the connecting rod is 600 mm long. Determine : i) linear velocity and acceleration of the midpoint of the connecting rod, and ii) angular velocity and angular acceleration of the connecting rod, at a crank angle of 45° from inner dead centre position.	12 Marks	L4	CO6	PO1 PO2 PO3

MANUFACTURING TECHNOLOGY
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Define pattern and list the various types of patterns with a neat diagram.	6 Marks	L2	CO1	PO1
	b)	Outline the design considerations followed during the design of gating system.	6 Marks	L2	CO1	PO1 PO2 PO3
		(OR)				
2.	a)	Recite the properties of molding sand.	6 Marks	L2	CO1	PO1
	b)	Illustrate the working principle of blast furnace with a neat sketch.	6 Marks	L2	CO1	PO1 PO7
		UNIT-II				
3.	a)	Write short note on full mold casting process.	6 Marks	L2	CO2	PO1 PO7
	b)	List the various casting defects with neat sketch.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	Describe centrifugal casting process in detail.	6 Marks	L2	CO2	PO1 PO7
	b)	Write short notes on cleaning and finishing of castings.	6 Marks	L2	CO2	PO1
		UNIT-III				
5.	a)	Discuss the principle of drawing process. List various types of drawing process with beat diagram.	6 Marks	L2	CO3	PO1 PO2
	b)	Elaborate forging operation with a neat sketch.	6 Marks	L2	CO3	PO1 PO7
		(OR)				
6.	a)	Briefly explain progressive die used in sheet metal operations.	6 Marks	L2	CO3	PO1 PO7
	b)	Summarize the magnetic pulse forming process with a neat sketch.	6 Marks	L2	CO3	PO1 PO7
		UNIT-IV				
7.	a)	Explain the working of submerged arc welding with its advantages and limitations.	6 Marks	L2	CO4	PO1 PO7
	b)	List the destructive tests used in welding with neat diagram.	6 Marks	L2	CO4	PO1
		(OR)				
8.	a)	List various welding defects and explain any two welding defects with neat sketches.	6 Marks	L2	CO4	PO1
	b)	Describe thermit welding process with neat sketch.	6 Marks	L2	CO4	PO1 PO7

UNIT-V

9.	a)	Describe the working principle of injection molding process.	6 Marks	L2	CO5	PO1 PO3 PO7
	b)	Discuss the various additives used in plastics with examples.	6 Marks	L2	CO5	PO1 PO2 PO7
		(OR)				
10.	a)	Explain the working principle of compression molding process.	6 Marks	L2	CO5	PO1 PO3
	b)	Recall the properties of plastics.	6 Marks	L2	CO5	PO1

STRENGTH OF MATERIALS
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.		A composite bar is made up of a brass rod of 25 mm diameter enclosed in a steel tube of 40 mm external diameter and 30 mm internal diameter as shown in Fig.1. The rod and tube, being coaxial and equal in length, are securely fixed at each end. If the stresses in brass and steel are not to exceed 70 MPa and 120 MPa respectively, find the load (P) the composite bar can safely carry.	12 Marks	L3	CO1	PO1 PO2

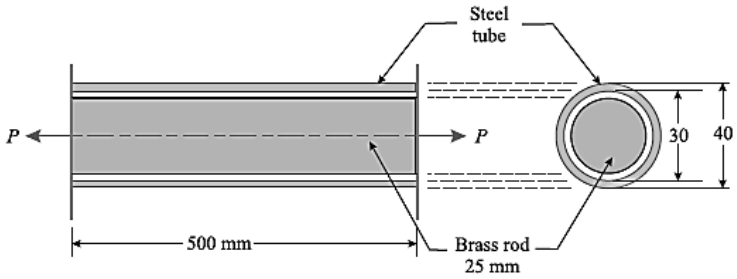

Fig. 1

(OR)

2.		Derive the relation between Modulus of Elasticity (E), Modulus of Rigidity (G) and Bulk modulus (K).	12 Marks	L3	CO1	PO1 PO2

UNIT-II

3.		Draw the shear force and bending moment diagram for the overhanging beam carrying uniformly distributed load of 2kN/m over the entire length and a point load of 2kN as shown in Fig.2. Locate the point of Contra flexure, if any.	12 Marks	L4	CO2	PO1 PO2 PO3

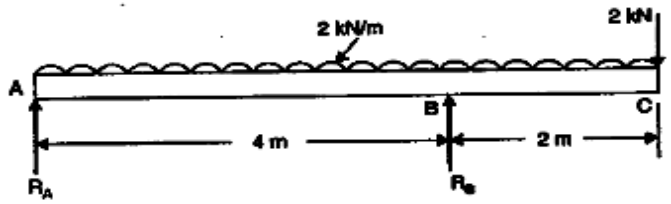

Fig.2

(OR)

4.	a)	What are sagging and hogging bending moments? Explain.	4 Marks	L2	CO2	PO1
	b)	A beam AB 10 m long is simply supported at its ends A and B. It carries a uniformly distributed load of 20 kN/m for a distance of 5 m from the left end A and a concentrated load of 40 kN at a distance of 2 m from the right end B. Draw S.F. and B.M. diagram for the beam. Also find the position and magnitude of maximum bending moment.	8 Marks	L4	CO2	PO1 PO2 PO3

UNIT-III

5.		State the assumptions in the theory of simple bending. Also derive the bending equation from first principles.	12 Marks	L3	CO2	PO1 PO2
		(OR)				
6.		An 'I' section beam consists of two flanges 150 x 20 mm and a web of 310 x 10 mm. Find the magnitude of maximum shear stress when it is subjected to a shear force of 40 kN and draw the shear stress distribution diagram over the depth of the section.	12 Marks	L3	CO2	PO1 PO2 PO3

UNIT-IV

7.	a)	State the assumptions involved in deriving the torsion equation.	4 Marks	L1	CO3	PO1
	b)	A hollow steel shaft of 300 mm external diameter and 200 mm internal diameter has to be replaced by a solid alloy shaft. Assuming the same values of polar modulus for both, calculate the diameter of the latter and work out the ratio of their torsional rigidities. Take C for steel as 2.4 C for alloy.	8 Marks	L3	CO3	PO1 PO2 PO3
		(OR)				
8.	a)	Derive an expression for the stresses on an oblique section of a rectangular body, when it is subjected to a direct stress in only one plane.	4 Marks	L3	CO3	PO1 PO2
	b)	An element in a strained body is subjected to a compressive stress of 200 MPa and a clockwise shear stress of 50 MPa on the same plane. Calculate the values of normal and shear stresses on a plane inclined at 35° with the compressive stress. Also calculate the value of maximum shear stress in the element.	8 Marks	L3	CO3	PO1 PO2 PO3

UNIT-V

9.		A beam AB of 5 m span is simply supported at ends A and B. C is a point on the beam at a distance of 4m from A. The beam has a moment of inertia of 80 x 106 mm4 for the length AC and 20 x 106 mm4 for the length CB. The beam is loaded with a point load of 6 kN at C. Determine the slope at A, deflection at the mid span and maximum deflection. E = 205 GPa.	12 Marks	L4	CO4	PO1 PO2 PO3 PO4
		(OR)				
10.		Derive the relation between slope, deflection and radius of curvature of a deflected beam.	12 Marks	L3	CO4	PO1 PO2 PO3

CODE No.: 19BT30404 SVEC-19

SWITCHING THEORY AND LOGIC DESIGN

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Convert: i) octal (26153.7406) to binary. ii) Hexadecimal (2AC5.D) to binary and then to octal. iii) Decimal (1032.2) to binary.	6 Marks	L2	CO1	PO1
	b)	i) Convert gray code 101011 into its binary equivalent. ii) Use 2's complement to perform M - N with the given number M=1010100 N=1000100.	6 Marks	L2	CO1	PO1
		(OR)				
2.	a)	Implement the following logical expression using AND-OR-INVERTER gates and also using only NOR gates. F= A + BC'(D' + BE')	7 Marks	L2	CO1	PO2
	b)	Prove the following using Boolean algebra: i) y'z' + w'x'z' + w'xyz' + wyz' = z' ii) ABC + A'B'C + A'BC +ABC' + A'B'C' = A'B' + B(A+C).	5 Marks	L2	CO1	PO2

UNIT-II

3.	a)	Simplify the following expressions using K-Map i) F = A'B'C'D + AB'C'D + A'B'CD + ABCD' + AB'CD' +A'B'C'D. ii) F (A,B,C,D) = Σm (5,6,7,12,13) + Σd (4,9,14,15).	8 Marks	L4	CO1	PO2
	b)	What are the advantages and disadvantages of Tabulation method over Karnaugh - Map method.	4 Marks	L1	CO1	PO1
		(OR)				
4.		Simplify the given Boolean function using Quine - McCluskey method. F (A,B,C,D) = Σm (5,6,7,12,13) + Σd(4,9,14,15).	12 Marks	L4	CO1	PO2

UNIT-III

5.	a)	Construct a 4×16 decoder using 3×8 decoders.	6 Marks	L3	CO2	PO3
	b)	Construct a 16 × 1 multiplexer with two 8 × 1 and one 2 × 1 multiplexers. Use block diagrams.	6 Marks	L3	CO2	PO3
		(OR)				
6.	a)	Construct an Encoder circuit to convert Octal to Binary.	6 Marks	L3	CO2	PO3
	b)	Design and construct a Four-bit by Three- bit binary multiplier circuit.	6 Marks	L3	CO2	PO4

UNIT-IV

7.	a)	Convert D- Flip-Flop into T- Flip-Flop.	6 Marks	L2	CO2	PO2
	b)	Design a MOD8 synchronous counter using T Flip-Flops.	6 Marks	L3	CO2	PO6
		(OR)				
8.	a)	Describe the operation of the SR Latch using NAND gate with the help of truth table, transition table and the circuit.	6 Marks	L2	CO2	PO2

	b)	Design a 4-bit ripple counter using flip-flops that trigger on the negative edge of the clock.	6 Marks	L2	CO2	PO6

UNIT-V

9.		Design PLA by implementing the following Boolean function with AND-OR structure F1 (A,B,C,D) = Σm (2,12,13). F2 (A,B,C,D) = Σm (7,8,9,10,11,12,13,14,15). F_3 (A,B,C,D) = Σm (0,2,3,4,5,6,7,8,10,11,15) . F4 (A,B,C,D) = Σm (1,2,8,12,13).	12 Marks	L3	CO4	PO3

(OR)

10.	a)	Distinguish the following i) PROM ii) PAL iii) PLA.	6 Marks	L1	CO4	PO2
	b)	Realize a Logic function using F (A, B, C) = Σ_m (2,4,5,6) using Hazard Free logic gate network.	6 Marks	L2	CO3	PO7

DYNAMICS OF MACHINERY

[MECHANICAL ENGINEERING]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 The following data relate to a connecting rod of a reciprocating engine 14 Marks
Mass = 55 kg
Distance between bearings = 850 mm
Diameter of small end bearing = 75 mm
Diameter of big end bearing = 100 mm, Time of oscillation when connecting rod is suspended from small end = 1.83 sec, Time of oscillation when connecting rod is suspended from big end = 1.68 sec

Determine
a) The radius of gyration of the rod about an axis passing through the C.G perpendicular to the plane of oscillation.
b) The dynamically equivalent system for the connecting rod constituted of two masses, one of which is situated at small end centre.

(OR)

2 A petrol engine with a speed of 3000rpm has a stroke of 8.75cm. The weight of the connecting rod is 1.75kgf. The length of connecting rod from centre to centre is 17.5cm. The centre of gravity from big end centre is 5.75cm. The radius of gyration about an axis through the center of gravity and perpendicular to the connecting rod is 7.5cm. Find the inertia force of the connecting rod and its direction with the centre line of the connecting rod when the crank makes an angle of 40^0 with I.D.C. Also find inertia torque on the crank shaft. 14 Marks

UNIT-II

3 a) Write expression for gyroscopic couple. 7 Marks
b) Each paddle wheel of a steamer has a mass of 1600kg and a radius of gyration of 1.2m. The steamer turns to port in a circle of 160m radius at 24Km/hr. The speed of the paddle is 90 rpm. Find the magnitude and effect of the gyroscopic couple acting on the steamer. 7 Marks

(OR)

4 a) List out the few machines in which flywheel are used. 7 Marks
b) The crank of a three-cylinder single-acting engine is set equally at 1200 the engine speed is 540 rpm. The turning-moment diagram for each cylinder is a triangle for the power stroke with a maximum torque of 100 N-m at 60^0 after dead- centre of the corresponding crank. On the return stroke, the torque is sensibly zero. Determine (i) The power developed (ii) The coefficient of fluctuation of speed if the flywheel has a mass of 7.5 kg with a radius of gyration of 65 mm. 7 Marks

UNIT-III

5 1. A cone clutch with one cone angle 20˚is to transmit 7.5kw at 750rpm. The normal intensity of pressure between the contact faces is not to exceed 0.12 N/mm2. The coefficient of friction is 0.2. if face width is 1/5th of mean diameter, find; 14 Marks

i) The main dimensions of the clutch.
ii) Axial force required while running.

(OR)

6 Summarize with the help of a neat sketch the principles of operation of an internal expanding shoe. Derive the expression for the braking torque. 14 Marks

UNIT-IV

7 a) A mass is attached to a shaft which is rotating at an angular speed of w rad/s. Describe the procedure of balancing this mass by (i). A single mass only (ii). Two masses in different planes. 7 Marks

b) Three masses of 8 kg, 12 kg and 15 kg attached at radial distances of 80 mm, 100 mm and 60 mm respectively to a disc on a shaft are in complete balance. Determine the angular positions of the masses 12 kg and 15 kg relative to 8 kg mass. 7 Marks

(OR)

8 a) Describe the function of a simple watt governor. What is its limitation? 7 Marks

b) Each ball of a Porter governor has a mass of 6 kg and the mass of the sleeve is 40 kg. The upper arms are 300 mm long and are pivoted on the axis of rotation whereas the lower arms are 250 mm long and are attached to the sleeve at a distance of 40 mm from the axis. Determine the equilibrium speed of the governor for a radius of rotation of 150 mm for 1% change in speed. Also find the effort and the power for the same speed change. 7 Marks

UNIT-V

9 A vibrating system consists of a mass 50 kg, a spring of stiffness 30 KN/m and a damper. The damping provided is only 20% of the critical value. Determine: 14 Marks

a) The damping factor.
b) The critical damping coefficient.
c) The natural frequency of damped vibrations.
d) The logarithmic decrement.
e) The ratio of two consecutive amplitudes.

(OR)

10 A disc having a mass of 6 kg, is mounted half way on a 2 cm dia shaft supported at ends by two bearings. The length between the bearing support is 50 cm. Due to manufacturing defects the CG of the disc is 0.01 mm away from the geometric center of the disc. If the system rotates at 2000 rpm. Find the amplitude of steady state vibration and the dynamic force transmitted to the bearings. Take $E = 1.96 \times 10^{11}$ N/ sq m. 14 Marks

LINEAR AND DIGITAL IC APPLICATIONS

[Electrical and Electronics Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1 a) Distinguish between practical and ideal op-amp. Draw its equivalent circuit. 7 Marks

b) With the help of suitable examples, explain how the slew rate affects the frequency response of an op-amp. 7 Marks

(OR)

2 a) Define the following terms: 4 Marks
i) Input bias current. ii) Input offset voltage.

b) Explain the frequency compensation technique in an op-amp. 10 Marks

UNIT-II

3 a) What is a comparator? Discuss the applications of comparators. 7 Marks

b) Design an op-amp differentiator that will differentiate an input signal with $f_{max} = 100$. 7 Marks

(OR)

4 a) Draw the circuit of Current to Voltage converter and explain its operation. 7 Marks

b) Design a first order low pass filter for a high cut-off frequency of 2KHz and pass band gain of 2. 7 Marks

UNIT-III

5 a) Draw and explain the block diagram of IC566 VCO. 7 Marks

b) With a neat sketch, explain the functional diagram of 555 timer in monostable mode. 7 Marks

(OR)

6 a) LSB of a 9-bit DAC is represented by 19.6mV. If an input of 9 zero bits is represented by 0 volts. 6 Marks
i) Find the output of the DAC for an input 101101101 and 011011011.
ii) What is the Full Scale Reading (FSR) of this DAC?

b) Explain any two applications of PLL. 8 Marks

UNIT-IV

7 a) Draw the CMOS inverter circuit and explain in detail. 7 Marks

b) Realize the Boolean function **f = (a' + b) (b + c')** using CMOS transistor circuit. 7 Marks

(OR)

8 a) Which one is the fastest non-saturated logic gate? Explain its operation with circuit diagram. 7 Marks

b) Draw the circuits for **TTL OR** logic gate and **CMOS OR** logic gate and explain their working. 7 Marks

UNIT-V

9 a) Write a Verilog code for SR flip-flop with NAND gates. 7 Marks

b) In Verilog HDL, explain port declaration with example. 7 Marks

(OR)

10 a) Using gate level modeling, design full adder with the help of half adder. 7 Marks

b) Using two 74 x 138 decoders design a 4 to 16 decoder. 7 Marks

COSTING AND FINANCE MANAGEMENT FOR CIVIL ENGINEERS

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	Define and explain the approximate estimation of costs.	CO1	14 Marks
	(OR)		
2	Distinguish between relevant and irrelevant costs.	CO2, CO4	14 Marks

UNIT-II

3	An expenditure of Rs.1,92,000 has been incurred on a contract upto the end of 31st March, 2015. The value of work done and certified is Rs.2,10,000. The cost of work done but not yet certified is Rs.12,000. It is estimated that the contract will be completed by 30th June, 2015 and an additional expenditure of Rs.18,000 will have to be incurred to complete the contract. The total estimated expenditure on the contract is to include a provision of 12 ½ per cent for contingencies. The contract price is Rs.2,80,000 and Rs.1,68,000 has been realized in cash up to 31st March, 2015. Calculate the proportion of profit to be taken to Profit and Loss account as on 31st March, 2015 under different methods.	CO1, CO4	14 Marks
	(OR)		
4	Discuss the procedure followed in accounting for costs under contract costing.	CO1	14 Marks

UNIT-III

5	"Flexibility in a budget is an aid to co-ordination, while the budgetary control is an instrument of co-ordination." Elucidate	CO1, CO2	14 Marks
	(OR)		
6	Explain the relationship between budget and budgetary control.	CO1, CO3	14 Marks

UNIT-IV

7	Elucidate the importance of cash flows in business.	CO1	14 Marks
	(OR)		
8	A choice is to be made between two competing proposals which require an equal investment of Rs.50,000 and are expected to generate net cash flows as under. Suggest which proposal should be chosen under Net Present value method.	CO3, CO4	14 Marks

Year	Project I (Rs.)	Project II (Rs.)
1	25,000	10,000
2	15,000	12,000
3	10,000	18,000
4	NIL	25,000
5	12,000	8,000
6	6,000	4,000

The cost of capital of the company is 10%.

UNIT-V

9	Sketch and explain the operating cycle.	CO1	14 Marks
	(OR)		
10	Evaluate the following equation - "Current Assets – Current liabilities = Working Capital"	CO1, CO2	14 Marks

CODE No.: 16BT41204 SVEC-16

Roll No.

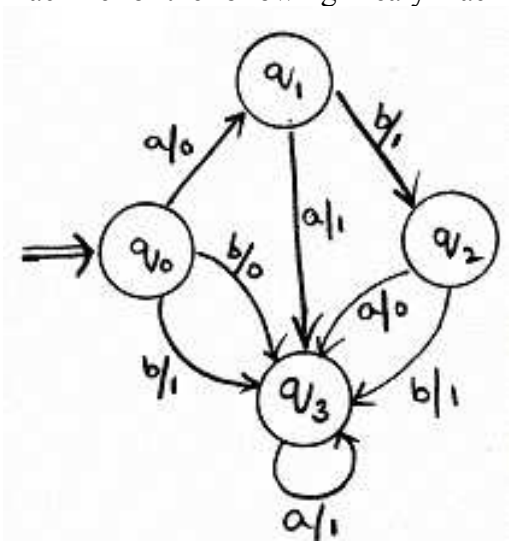
THEORY OF COMPUTATION
[Computer Science and Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define the following terms, with an example for each: i) String; ii) Alphabet; iii) Problem; iv) Language	CO1	8 Marks
	b)	Construct Moore machine for the following Mealy machine	CO3	6 Marks



(OR)

2	a)	Construct DFA equivalent to the following Finite automation	CO3	8 Marks

	b)	Draw the NFA accepting the set of all strings whose second symbol from last is 1	CO3	6 Marks

UNIT-II

3	a)	Construct a Finite Automata equivalence to the regular expression (0+1)*(00+11)(0+1)*	CO3	8 Marks
	b)	Write a regular expression to denote a language L which accepts all the strings of 0's and 1's whose number of 0's is divisible by five and whose number of 1's is even.	CO3	6 Marks

(OR)

4	a)	Write a regular expression for the language over the set $\Sigma=\{a, b\}$ in which total number of a's are divisible by. 3.	CO3	6 Marks
	b)	Consider the FA given, construct a regular expression that. is accepted by it.	CO3	8 Marks

	0	1
$\rightarrow q_1$	q_2	q_3
q_2	q_1	q_3
$*q_3$	q_2	q_1

UNIT-III

5	a)	Construct equivalent grammar in Chomsky Normal Form for the grammar $G=(\{S,A,B\},\{a,b\}, \{S\rightarrow aAbB, A\rightarrow aA\|a, B\rightarrow bB\|b\},S)$.	CO2	10 Marks
	b)	Define the following i) Derivation; ii) Parse tree	CO1	4 Marks

(OR)

6	a)	Find the language generated by the grammar : $S\rightarrow 0S1 \mid 0A \mid 0 \mid 1B \mid 1$ $A\rightarrow 0A \mid 0$ $B\rightarrow 1B \mid 1$	CO1	6 Marks
	b)	Discuss in detail about ambiguous grammar and removing ambiguity from grammar.	CO1	8 Marks

UNIT-IV

7	a)	Design PDA for the language $L=\{ww^R \mid w\in\{0,1\}^*\}$..	CO3	10 Marks
	b)	If L is a context free language then prove that there exists a PDA M such that $L = N(M)$.	CO5	4 Marks

(OR)

8	a)	Obtain a PDA to accept the language $\{L = a^n b^n \mid n \geq 1\}$	CO3	12 Marks
	b)	Prove that acceptance by empty stack and by final state is equivalent.	CO2	2 Marks

UNIT-V

9		Design a Turing machine which recognizes palindrome over alphabet {0, 1}.	CO4	14 Marks

(OR)

10		Design a Turing machine M to implement the function "multiplication" using subroutine 'copy'.	CO4	14 Marks

IRRIGATION ENGINEERING
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define duty, delta and base period. Derive a relationship between the two for a given base period.	CO5	7 Marks
	b)	Find the delta for crop period if the duty for a base period of 150 days is 1600 hectares/cumec.	CO2	7 Marks
		(OR)		
2	a)	What is consumptive use of water? Discuss briefly the factors affecting the consumptive use of water.	CO1	7 Marks
	b)	What do you understand by crop rotation and discuss its advantages?	CO1	7 Marks

UNIT-II

3	a)	What is meant by an intake weir and how does it differ from a surplus weir?	CO1	7 Marks
	b)	Enlist the various functions of a canal head regulator.	CO1	7 Marks
		(OR)		
4	a)	Discuss the Bligh's creep theory for the design of weir constructed over pervious foundation.	CO2	7 Marks
	b)	Compare the Bligh's and Khosla's theories for the design of impervious floor.	CO2	7 Marks

UNIT-III

5	a)	Derive an expression for the limiting height of a low gravity dam, and what are the major differences between low and high gravity dam.	CO5	7 Marks
	b)	Design the practical profile of a gravity dam made of stone masonry given the following data. R.L. of base of the dam = 198m, R.L. of HFL of reservoir =228m, Specific gravity of masonry =2.4m, safe compressive stress in masonry=1200kN/m^3.	CO3	7 Marks
		(OR)		
6	a)	Explain the elementary and practical profile of a gravity dam.	CO1	7 Marks
	b)	What are the criteria to be considered for safe design of earth dams?	CO1	7 Marks

UNIT-IV

7	a)	How will you justify economically the necessity of lining existing canal?	CO1	7 Marks
	b)	Define non-erodible canals. How under-drainage of non-erodible canals are provided?	CO2	7 Marks

(OR)

8	a)	Design the procedure for designing a irrigation channel using Lacey's theory.	CO3	7 Marks
	b)	Explain Kennedy's theory for the design of irrigation channel in alluvial soils.	CO3	7 Marks

UNIT-V

9	a)	Explain the various factors affecting the suitability of aqueduct and siphon aqueduct.	CO1	7 Marks
	b)	How would you estimate the afflux and the uplift pressure on the floor of a siphon aqueduct?	CO7	7 Marks

(OR)

10	a)	Explain the procedure for the design of a level crossing and an inlet-outlet structure.	CO1	7 Marks
	b)	How do you classify Indian rivers and discuss the various stages of a river with salient features of each stage?	CO2	7 Marks

REINFORCED CEMENT CONCRETE STRUCTURES

[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Show a reinforcement concrete beam section of size 300x700 mm effective depth is reinforced with 3 bars of 20 mm diameter in tension. Determine the moment of resistance and the maximum stresses induced in the materials using working stress method.	CO2	14 Marks
		(OR)		
2		Calculate the area of reinforcement required for a T-beam with the following data. Span = 8 m, ends simply supported, Spacing of beams = 3m, Super imposed load on slab = 3 kN/m^2 Thickness of slab = 130 mm, Weight of wall on beam = 15 kN/m Assume width of web 230 mm, total depth 680 mm, concrete- M20 and steel – Fe250.	CO2	14 Marks

UNIT-II

3	a)	What are the types of reinforcement used to resist shear force?	CO1	4 Marks
	b)	List out the types of reinforcements used to resist shear.	CO1	4 Marks
	c)	Explain briefly the procedure for the design of shear reinforcement.	CO1	6 Marks
		(OR)		
4		Design a cantilever beam of uniform depth for a span of 2.5m, if the superimposed load is 20 kN/m and it is monolithic with R.C column of 300 mm width and 400 mm deep. Use M20 grade concrete and Fe415 steel.	CO3	14 Marks

UNIT-III

5	a)	A Simply supported RCC slab has to be provided for the roof of a room of clear dimensions 3 x 8 m. Width of supporting wall is 300 mm. The weight of weathering course over the slab is 1 kN/m^2. Take the live load on the slab using M 20 grade concrete and HYSD bars. Check the design for stiffness.	CO1	7 Marks
	b)	A Simply supported RCC slab has to be provided for the roof of a room of clear dimensions 3 x 8 m. Width of supporting wall is 300 mm. The weight of weathering course over the slab is 1 kN/m^2. Take the live load on the slab using M 20 grade concrete and HYSD bars. Check the design for stiffness.	CO2	7 Marks
		(OR)		
6		A Simply supported RCC slab has to be provided for the roof of a room of clear dimensions 3 x 8 m. Width of supporting wall is 300 mm. The weight of weathering course over the slab is 1 kN/m^2. Take the live load on the slab using M 20 grade concrete and HYSD bars. Check the design for stiffness.	CO2	14 Marks

UNIT-IV

7	a)	How the compression failures occur in columns.	CO1	7 Marks
	b)	Determine the ultimate load carrying capacity of rectangular column section 400x600mm reinforced with 10nos. of 25mm dia. Use M25 concrete and Fe415 steel.	CO2	7 Marks

(OR)

8		A circular column, 4.6m high is effectively held in position at both ends to carry an axial load of 1200kN, if its dia is restricted to 450mm. Use M20 and Fe425 grade bars.	CO2	14 Marks

UNIT-V

9		Design a suitable footing for a 500 mm x 500 mm square column transferring 100kN axial load and a moment of 35KN-m.The safe bearing capacity of soil is 190 kN/ m^2.Use M20 concrete and Fe415 steel. Adopt limit state design method.	CO3	14 Marks

(OR)

10		A straight stair in residential building is supported on wall on one side and stringer beam on the other side. The risers are 150 mm and treads are 250mm, and the horizontal span of the stair as 1.2m. Design the steps use M20 grade concrete.	CO3	14 Marks

SOIL MECHANICS
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	If Uniformity coefficient, C_u= 9, and coefficient of curvature, C_c=1 for a soil, what will the ratio of D_{30}/D_{10}?	CO4	6 Marks
	b)	A soil sample collected from the field and observed that the moist soil mass is 1.98 kgs and volume of the mould is 980cc, specific gravity of soil particles is 2.7 and water content is 11% from the laboratory testing. Evaluate the void ratio, dry density and degree of saturation of the soil.	CO2	8 Marks
		(OR)		
2	a)	If a soil sample is having porosity 40% and degree of saturation 80%, what will be its percentage air voids?	CO4	5 Marks
	b)	A soil sample of 3.81cm diameter and 7.62cm height is collected from the field and observed the wet weight of 1.668N and oven dry weight of 1.4N from the laboratory. Also observed the specific gravity as 2.7 in the laboratory. Evaluate the bulk unit weight, dry unit weight, void ratio and degree of saturation.	CO2	9 Marks

UNIT-II

3	a)	In a three layered soil, water flows parallel to that of top and bottom layers. The thickness and permeability of middle layer is twice that of top and bottom layer. What is the average coefficient of permeability for this flow?	CO4	6 Marks
	b)	At a depth of 3m in a sand deposit, when the borehole is made in the month of June, there is no water table observed and the dry unit weight of sand is 16 kN/m^3. How much effective stress decreases, when borehole is made in the month of December, if 1 m height of water is logged above the ground level, i.e., above sand deposit, and the saturated unit weight of sand is 20 kN/m^3.	CO6	8 Marks
		(OR)		
4	a)	The ground water table is lowered from ground level to 5m from the ground surface. If the foundation is made at a depth of 3m, what will be effect on effective stress at the depth of foundation, if the saturated unit weight of soil is 20 kN/m^3?	CO4	5 Marks
	b)	A non-homogeneous soil deposit consists of a silt layer sandwiched between a fine sand layer at top and clay layer below. Permeability of silt layer is 10 times the permeability of the clay layer and 1/10th permeability of sand layer. Thickness of silt layer is 2 times the thickness of sand layer and 2/3rd thickness of clay layer. What is the ratio of equivalent horizontal and equivalent vertical permeability of the deposit?	CO8	9 Marks

UNIT-III

5	a)	What are the assumptions and limitations made in Boussinesq's theory?	CO1	6 Marks
	b)	A rectangular footing with dimensions of 2m x 3m has to carry a uniformly distributed load of 100 kN/m^2. Plot the distribution of vertical stress intensity due to this load on a horizontal plane at a depth of 2 m below the base of the footing by Boussinesq's method.	CO2	8 Marks

(OR)

6	a)	What are the field methods for compacting soils and explain them?	CO1	6 Marks
	b)	The mass of a moist soil sample collected from the field is 465 grams, and its oven dry mass is 405.76 grams. The specific gravity of the soil solids was determined in the laboratory to be 2.68. If the void ratio of the soil in the natural state is 0.83, find the following: i) The moist density of the soil in the field (kg/m^3). ii) The dry density of the soil in the field (kg/m^3) . iii) The mass of water, in kilograms, to be added per cubic meter of soil in the field for saturation.	CO6	8 Marks

UNIT-IV

7	a)	What are the difference between compaction and consolidation?	CO1	6 Marks
	b)	An Oedometer test is performed on a 2 cm thick clay sample. After 5 minutes, 50% consolidation is reached. After how long a time (Days) would the same degree of consolidation be achieved in the field when the clay layer is 4.0m thick? Assume the sample and the clay layer have the same drainage conditions. (Double drainage).	CO7	8 Marks

(OR)

8	a)	Define pre-consolidation pressure. How can you determine it from an oedometer test?	CO1	6 Marks
	b)	The time required for 50% consolidation of a 25mm thick clay layer (drained at both top and bottom) in the laboratory is 2 min 20secs. How long (in days) will take for 3m thick clay layer of the same clay in the field under the same pressure increment to reach 50% consolidation? In the field, there is a rock layer at the bottom of the clay.	CO2	8 Marks

UNIT-V

9	a)	Describe the Mohr-Coulomb failure theory and draw the failure envelopes for various types of soils.	CO3	6 Marks
	b)	Two drained triaxial tests are performed on the material. In the first test the all-round pressure is 200 kN/m^2 and failure occurs at an added axial stress of 600 kN/m^2. In the second test all-round pressure is 350 kN/m^2 and failure occurs at an added axial stress of 1050 kN/m^2. What values of c' and ø' correspond to these results?	CO2	8 Marks

(OR)

10		A thin layer of silt exists at a depth of 18 m below the surface of the ground. The soil above this level has an average dry density of 1.53 Mg/m^3 and an average water content of 36%. The water table is almost at the surface. Tests on undisturbed samples of the silt indicate the following values: C_u= 45 kN/m^2; $ø_u$= 18°; c'= 35 kN/m^2; ø'= 27° Estimate the shearing resistance of the silt on a horizontal plane, (a) when the shear stress builds up rapidly and (b) when the shear stress builds up very slowly.	CO2	14 Marks

STRUCTURAL ANALYSIS-II
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	A uniformly distributed load of 20 kN/m and 4 m long rolls over a girder of span 16 m. Find the equivalent uniformly distributed load.	CO2	4 Marks
	b)	A girder having a span of 18 m is simply supported at the ends. It is traversed by train loads of 150 kN, 150 kN, 250 kN and 100 kN with 100 kN load leading. The spacing between the loads is 3 m for all loads. Determine the maximum shear force and bending moment at the mid-span of the beam.	CO2	10 Marks

(OR)

2	a)	A single point load of 80 kN crosses a girder of 12 m span. Using influence lines, find the maximum positive and negative shear forces at a point 4 m from the left end.	CO2	7 Marks
	b)	A uniformly distributed load of 500 kN/m longer than the span, rolls over a beam of span 25 m. Using influence lines determine the maximum bending moment at a section 10 m from the left end.	CO2	7 Marks

UNIT-II

3		Analyse the continuous beam ABCD shown in Fig.1, if support C sinks by 10 mm. Take E = 2 x 10^5 N/mm^2 and I = 4 x 10^7 mm^4.	CO2	14 Marks

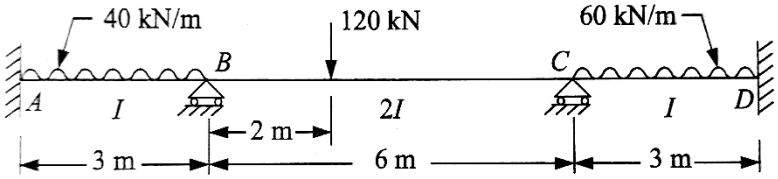

Fig. 1

(OR)

4		Analyse the continuous beam shown in Fig.2 by moment distribution method and draw the bending moment and shear force diagram.	CO6	14 Marks

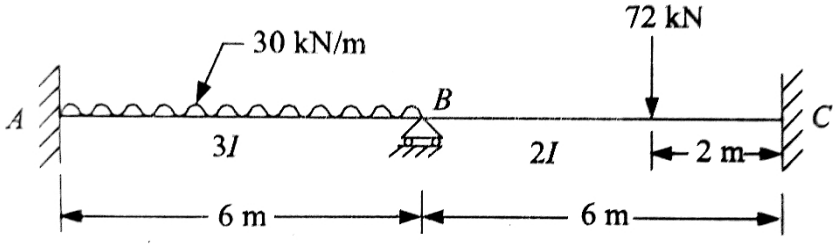

Fig. 2

UNIT-III

5 Analyse the frame shown in Fig. 3 by Kani's method. CO4 14 Marks

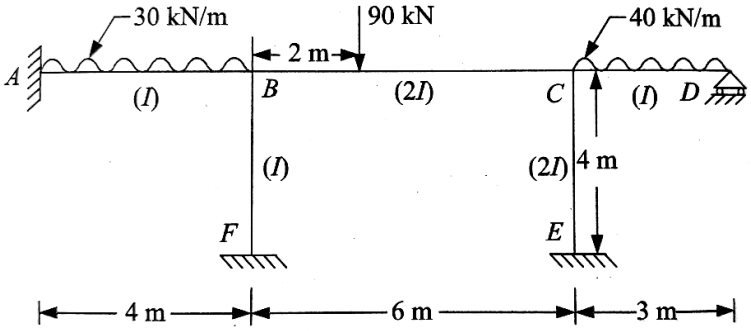

Fig. 3

(OR)

6 a) Derive the expression for strain energy due to bending moment. CO1 7 Marks

b) Determine the deflection under 60 kN load in the beam shown in Fig.4. CO2 7 Marks

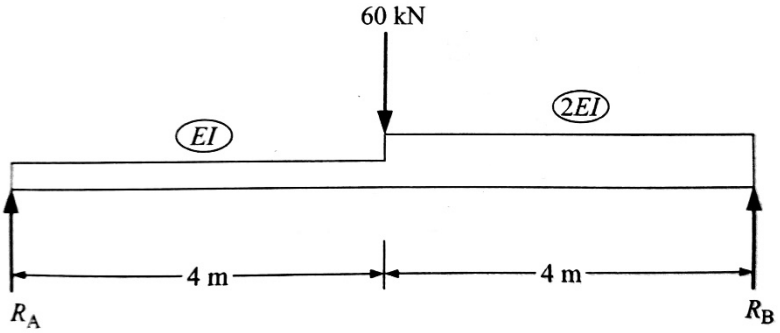

Fig. 4

UNIT-IV

7 Analyze the truss shown in Fig. 5 by Castigliano's theorem. Area of cross section of members in mm^2 is shown in brackets. E is constant throughout. CO4 14 Marks

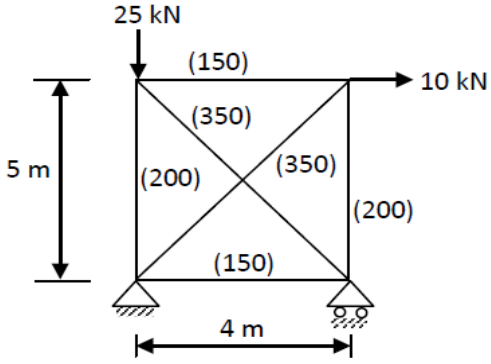

Fig. 5

(OR)

8 Find the forces in all the members of the pin-jointed frame work as shown Fig. 6. All the members have the same area of cross section and Young's modulus. CO2 14 Marks

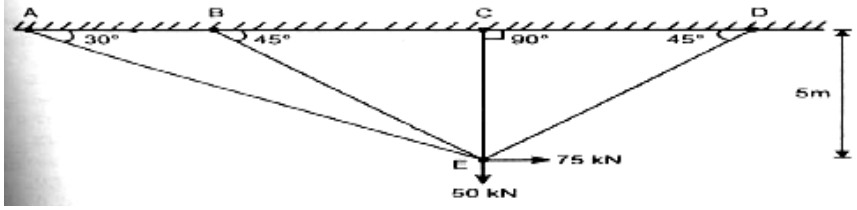

Fig. 6

UNIT-V

9	a)	Derive the moment curvature relationship in plastic analysis.	CO1	7 Marks
	b)	A T-section consists of a flange 150x10mm and a web of 140x10mm. The section modulus of the T-section is 54600mm^3. This section is used as a simply supported beam of 4m span and carries a UDL of 25kN/m on the whole span. Determine the shape factor of the beam and also calculate the collapse load for the beam. Assume yield stress as 250 Mpa.	CO3	7 Marks

(OR)

10		Calculate the plastic moment capacity required for the continuous beam with working loads shown in Fig. 7.	CO3	14 Marks

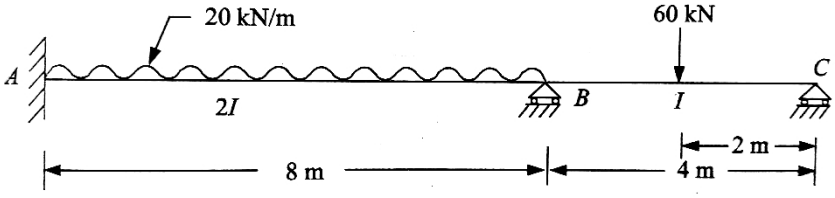

Fig. 7

III B.Tech I Semester (SVEC-16) Supplementary Examinations, November - 2022

WASTE WATER TECHNOLOGY
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	A city with a population of 100,000 has an area of 50km^2. Rate of water supply is 110 litres per capita per day of which 80% turns into sewer. The average run-off coefficient is 0.5 and intensity of rainfall is 14.5mm/hr. Estimate the quantity of combined sewage. Take peak factor as 2.5.	CO3	7 Marks
	b)	Describe conservancy and water carriage system and explain their relative advantages and disadvantages to recommend suitable solutions in collection, treatment and disposal of sewage.	CO4	7 Marks
		(OR)		
2	a)	Explain the principle of working of oil and grease trap. Mention the reasons for excluding grease and oil from sewage.	CO1	7 Marks
	b)	Calculate the diameter of a separate sewer section running half full at maximum discharge for a town with a population of 1,00,000. Water is supplied at a rate of 200 LPCD. Assume 80% of water supply turns as sewage. Take peak factor = 2.25 and n = 0.013 at all depth. Permissible slope is 1 in 600.	CO3	7 Marks

UNIT-II

3	a)	Explain the various Physico-chemical characteristics of sewage and state their environmental significance.	CO2	7 Marks
	b)	The BOD of sewage incubated for one day at 30°C has been found to be 400 mg/l. Calculate the 5 day BOD@20°C. Assume kd= 0.12/day at 20°C.	CO2	7 Marks
		(OR)		
4	a)	Explain the terms BOD and COD. How these parameters are useful in treatment of sewage and disposal standards.	CO6	7 Marks
	b)	Design a rectangular sedimentation tank for treating 12MLD adopting L:B ratio as 2.5 and overflow rate 40m^3/m^2/day. Assume Detention Time as 2 hours.	CO3	7 Marks

UNIT-III

5	a)	Explain different aeration practices in Activated Sludge Process viz i) Tapered Aeration ii) Step aeration and iii) Extended aeration.	CO1	7 Marks
	b)	Examine the size of standard rate trickling filter to treat 6 million litres of sewage per day having BOD of 160 mg/l. Take hydraulic loading of 6m^3/m^2/d and organic loading of 0.35kg/m^3/d.	CO3	7 Marks
		(OR)		
6	a)	Discuss in detail with neat sketches about the effective use of trickling filters and communicate the various advantages and disadvantages of trickling filters	CO9	7 Marks
	b)	Calculate and design an oxidation ditch for a design sewage flow of 50MLD. Assume suitable data wherever necessary. Show the neat sketch of the designed unit.	CO3	7 Marks

UNIT-IV

7	a)	Discuss the need for sludge dewatering and explain the various sludge dewatering methods.	CO5	7 Marks
	b)	Describe briefly the heat treatment method of sludge conditioning.	CO5	7 Marks
		(OR)		
8	a)	Explain briefly about the characteristics of sludge.	CO2	5 Marks
	b)	What is land treatment? Discuss the conditions under which it is suitable.	CO1	9 Marks

UNIT-V

9	a)	Summarize the principle of the self-purification process of river and the various stages of oxygen sag curve.	CO1	7 Marks
	b)	What is sewage farming? List the methods and state its advantages over the method of disposal of sewage by dilution.	CO1	7 Marks
		(OR)		
10	a)	Give the various effluent standards for waste water disposal into inland water bodies and ocean.	CO8	7 Marks
	b)	Design a septic tank with dispersion pit for a hostel with a population of 150 and peak discharge of 205 Lit Per Min. Take desludging period as one year. Assume suitable design criteria and draw a neat sketch of the designed septic tank.	CO3	7 Marks

CONTROL SYSTEMS

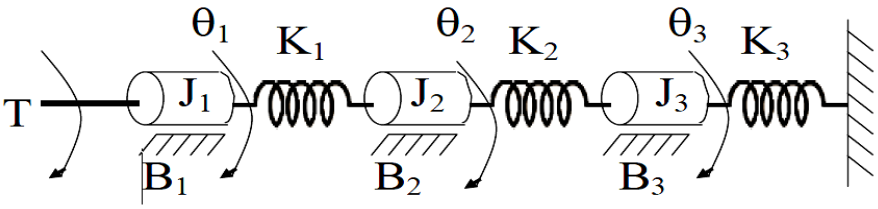
[Electrical and Electronics Engineering, Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit.
All questions carry equal marks

UNIT-I

1	a)	Explain in detail with a neat block diagram, how closed loop system is more effective by taking traffic control system as an example.	CO1	6 Marks
	b)	Write the differential equations and determine the transfer function $\frac{\theta_1(s)}{T(s)}$ of the given mechanical system.	CO4	8 Marks



(OR)

2	a)	Determine the overall gain of the system using Masson's gain formulae.	CO4	7 Marks

	b)	Derive the transfer function of field controlled DC motor and draw the block diagram.	CO4	7 Marks

UNIT-II

3	a)	Derive the expression for the rise time, peak time, peak overshoot and settling time in time domain analysis.	CO2	7 Marks
	b)	The open loop transfer function of a unity feedback system is $G(s) = \frac{20}{s(s+2)(s+5)}$. Find the steady state error when it is subjected to input $r(t) = 5 + 3t + 4t^2$.	CO4	7 Marks

(OR)

4		Sketch the complete root locus for a system with an open loop transfer function $G(s)H(s) = \frac{K}{S(S+2)S^2+2s+2}$. Also find the marginal value of K for system stability.	CO4	14 Marks

UNIT-III

5	a)	Explain the procedure to construct polar plot and to find gain margin and phase margin.	CO1	6 Marks
	b)	The open loop transfer function of a system is given by $G(s) = \frac{K}{S(1+0.1S)(1+S)}$. Determine the value of K for: i) gain margin = 6 db; ii)phase margin = 40^0.	CO5	8 Marks

(OR)

6		Sketch the Bode plot for the given system and determine the system gain K for the gain cross over frequency to be 10 rad/sec. Comment on the stability of the system for K=1. $G(s) = \frac{Ks^2}{(1+S)(1+0.01S)(1+0.1S)}$.	CO5	14 Marks

UNIT-IV

7	a)	Explain how series RLC circuit acts as a lag compensator, also draw the pole zero plot.	CO6	7 Marks
	b)	Explain the effect of PI controller on various performance specifications of a second order system.	CO1	7 Marks

(OR)

8		The open loop transfer function of a unity feedback system is $G(s) = \frac{K}{S(S+1)(1+0.1s)}$. Design a phase lag compensator to meet the following specifications. i) velocity error constant $K_v = 10$; ii) phase margin = 35^0. Also compare the cross over frequencies of the un compensated and compensated systems.	CO3	14 Marks

UNIT-V

9	a)	Obtain the state model for the given transfer function: $T(s) = \frac{2}{(S^3+2S^2+4S+8)}$	CO2	7 Marks
	b)	Obtain the state model of a given electrical system by taking voltage across capacitor as output. 	CO2	7 Marks

(OR)

10	a)	Explain the concept of controllability and observability.	CO1	7 Marks
	b)	Obtain the time response of the following system with: $\begin{bmatrix}\dot{X}_1\\ \dot{X}_2\end{bmatrix} = \begin{bmatrix}1 & 0\\ 1 & 1\end{bmatrix}\begin{bmatrix}X_1\\ X_2\end{bmatrix} + \begin{bmatrix}1\\ 1\end{bmatrix}u, \quad X_0 = \begin{bmatrix}1\\ 0\end{bmatrix}$	CO4	7 Marks

RENEWABLE ENERGY
[Civil Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Define the following terms used in solar radiation i) Solar Constant ii) Incident Angle iii) Zenith angle iv) Solar azimuth angle v) Altitude angle vi) Hour angle vii) Declination angle	CO1	14 Marks
		(OR)		
2		Describe in detail about the environmental impacts by the usage of renewable as well as non-renewable energy sources for energy conversion.	CO1	14 Marks

UNIT-II

3		Write short notes on i) Heat extraction from a solar pond. ii) Chemical energy storage method iii) Maintenance of stable density gradient in a solar pond. iv) Electromagnetic energy storage.	CO1	14 Marks
		(OR)		
4		Write short notes on i) Solar distillation ii) Solar pumping iii) Solar cooking iv) Solar cell	CO1	14 Marks

UNIT-III

5		Describe in detail about the performance of wind machines with neat sketch.	CO1	14 Marks
		(OR)		
6	a)	Explain in detail about the Geothermal potential in India.	CO1	7 Marks
	b)	Write short notes on the environment aspects of wind energy.	CO1	7 Marks

UNIT-IV

7	a)	Explain the comparison between open cycle and closed cycle OTEC systems.	CO1	7 Marks
	b)	Describe in detail about the settings of OTEC plants	CO1	7 Marks
		(OR)		
8		Discuss in detail about mini and micro hydel power plants and their economics.	CO1	14 Marks

UNIT-V

9		Describe in detail the utilization of biogas for the operation of CI and SI engines with neat sketches.	CO1	14 Marks
		(OR)		
10	a)	Explain briefly about the methods of energy extraction from the Biomass.	CO1	7 Marks
	b)	How the biogas plants are classified and explain them briefly.	CO1	7 Marks

DESIGN OF MACHINE ELEMENTS-II
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		The load on the journal bearing is 150 kN due to turbine shaft of 300 mm diameter running at 1800 r.p.m. Determine the following : i) Length of the bearing if the allowable bearing pressure is 1.6 N/mm^2, and ii) Amount of heat to be removed by the lubricant per minute if the bearing temperature is 60°C and viscosity of the oil at 60°C is 0.02 kg/m-s and the bearing clearance is 0.25 mm.	CO2	14 Marks

(OR)

2		Write the design procedure for journal bearing.	CO1	14 Marks

UNIT-II

3		Select a single row deep groove ball bearing for a radial load of 4000 N and an axial load of 5000 N, operating at a speed of 1600 r.p.m. for an average life of 5 years at 10 hours per day. Assume uniform and steady load.	CO4	14 Marks

(OR)

4		A single row deep groove ball bearing operating at 2000 r.p.m. is acted by a 10 kN radial load and 8 kN thrust load. The bearing is subjected to a light shock load and the outer ring is rotating. Determine the rating life of the bearing.	CO6	14 Marks

UNIT-III

5		A cast steel spur gear pinion having 24 teeth and rotating at 1800 rpm is required to transmit 9kW to a high grade to run at 600rpm. The teeth are 14.5^o Involute form. Design the gears completely.	CO3	14 Marks

(OR)

6		Design a pair of helical gears to transmit 20kW at 1200 rpm of pinion. The velocity ratio is 3:1 pinion has 24 teeth and is made of 0.3% carbon steel untreated. The gear is made of cast steel. The teeth are 14.5^o Involute form in normal plane. Helix angle is 25^o.	CO3	14 Marks

UNIT-IV

7	a)	Write the design a procedure of helical spring	CO1	8 Marks
	b)	A cantilever beam of rectangular cross-section is 1200mm long. The allowable bending stress for the material used is 420MPa. It is fixed at one end and carries a load of 900N at its free end. Take E= 210GPa. Find its width and thickness. The deflection is not to exceed 120 mm.	CO2	6 Marks

(OR)

8 Table below gives the particulars of concentric helical springs. If the spring is subjected to an axial load of 400N. Determine for each spring. CO2 14 Marks

Determine for each spring:

i) The load shared,

ii) The change in length and

iii) The torsional shear stress induced. Take G=84GPa.

Sl No.	Particulars	Outer Spring	Inner Spring
1	Wire diameter	4.875 mm	4 mm
2	Mean coil diameter	40 mm	30 mm
3	No. of active coils	10	8
4	Free Length	90 mm	75 mm

UNIT-V

9 a) Derive the relation for the ratio of driving tensions of a V-belt. CO5 7 Marks

b) Determine the dimensions of cross section of the connecting rod for a diesel engine with the following data. CO2 7 Marks

Cylinder bore = 100 mm
Length of connecting rod = 350 mm
Maximum gas pressure = 4 MPa
Factor of safety = 6.

(OR)

10 Write a note on: CO1 14 Marks

i) The materials suitable for engine cylinders.

ii) Construction of V-Belts

iii) Factor of safety in wire ropes

INDUSTRIAL ENGINEERING AND MANAGEMENT
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Briefly describe the evolution of management thought.	CO1	6 Marks
	b)	Discuss the different types of managerial skills in conjunction with various levels of management.	CO5	8 Marks
		(OR)		
2		What is the need for systems approach to management? Explain.	CO4	14 Marks

UNIT-II

3		Enumerate various maintenance practices and discuss their relative advantages and disadvantages.	CO1	14 Marks
		(OR)		
4	a)	Discuss the following terms with examples i) Failure density, ii) Failure rate, iii) MTTF, v) MTBF	CO1	5 Marks
	b)	A four wheel car uses four identical tyres and has an identical tyre as a standby. If the failure rate of each tyre is 6.5 for 10^6 km, what is the probability that the car will not fail due to tyre failure in 10000 km of running? What is the increase in reliability, if you add one more tyre as stand by?	CO4	9 Marks

UNIT-III

5		Define work sampling. List and explain the procedural steps involved in work sampling.	CO3	14 Marks
		(OR)		
6		Define performance rating. List and explain different types of performance rating and also state its importance for improving productivity.	CO2	14 Marks

UNIT-IV

7	a)	Define value analysis. Also give its importance to minimize the burden of inventory in the organization.	CO4	7 Marks
	b)	Give the procedure of purchasing and also state how it correlates to stores management.	CO2	7 Marks
		(OR)		
8		Define materials management. Explain the procedure involved in stores management using VED analysis.	CO1	14 Marks

UNIT-V

9		List the general safety rules in industry for industrial safety and also explain the duties of plant safety inspector.	CO6	14 Marks
		(OR)		
10		Explain single and double sampling plans in controlling the quality using the block diagram.	CO1	14 Marks

METROLOGY AND MEASUREMENTS

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Define the following terms: i) Accuracy; ii) Precision; iii) Range.	CO1	6 Marks
	b)	List out the various instruments used for linear measurement. With the help of neat sketch explain the working of vernier Calipers and Micrometer gauge.	CO2	8 Marks

(OR)

2	a)	Draw the conventional diagram of limits and fits and explain the terms: i) Basic Size; ii) Upper Deviation; iii) Lower Deviation.	CO1	6 Marks
	b)	Determine the tolerances on the hole and the shaft for a precision running fit designated by 20 H7e8. Also determine the allowance and maximum clearance.	CO3	8 Marks

UNIT-II

3	a)	Explain Taylors Principle of gauges.	CO1	6 Marks
	b)	Describe the method of magnification involved in pneumatic Comparator. Also explain its working principle.	CO5	8 Marks

(OR)

4	a)	List out the possible sources of errors in Sine bars.	CO2	4 Marks
	b)	Find the minimum no of angle gauges required to measure following angles using standard gauge in degrees 1,3,9,27 and 41 minutes 1, 3, 9, and 27 ; seconds 3, 6, 18 and 30. i) 24º 3’; ii) 32º 50’ 54”.	CO3	10 Marks

UNIT-III

5	a)	Describe with the help of neat sketch the principle and construction of NPL flatness Interferometer.	CO3	8 Marks
	b)	Explicate the working of Optical flat with a neat sketch.	CO2	6 Marks

(OR)

6	a)	Define the following terms. i) Roughness; ii) Waviness; iii) Lay. iv) Sampling length.	CO1	6 Marks
	b)	Describe the construction and working of Talysurf surface roughness measuring instrument with neat sketch.	CO3	8 Marks

UNIT-IV

7	a)	Illustrate the basic nomenclature of external screw thread and mention various elements.	CO1	4 Marks
	b)	Describe the methods of computing the effective diameter, angle of thread and thread pitch by three wire methods.	CO5	10 Marks

(OR)

8	a)	Enumerate various types of errors in gear measurement.	CO1	4 Marks
	b)	Derive the expression of gear setting parameters by using chordal thickness method.	CO2	6 Marks
	c)	Calculate the setting of the gear tooth vernier to inspect a gear having 40 teeth and module 5 mm.	CO3	4 Marks

UNIT-V

9	a)	Define the term gauge factor and derive the expression.	CO1	6 Marks
	b)	Describe the method of measuring a strain in half bridge circuit.	CO5	8 Marks

(OR)

10	a)	Define the term pressure and classify the various types of pressure Measuring instruments.	CO1	6 Marks
	b)	Compare the working principle of RTD, thermocouple and thermistor.	CO3	8 Marks

REFRIGERATION AND AIR CONDITIONING
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	What is the need of air conditioning of air-crafts at high altitudes where ambient temperatures are very low?	CO1	6 Marks
	b)	A refrigerator working on Bell-Coleman cycle (Reverse Brayton cycle) operates between 1 bar and 10 bar. Air is drawn from cold chamber at -10ºC. Air coming out of compressor is cooled to 50ºC before entering the expansion cylinder. Polytropic law $PV^{1.3}$ = constant is followed during expansion and compression. Find theoretical C.O.P of the origin. Take 1.4γ= and C_P= 1.00 kJ/kg ºC for air.	CO2	8 Marks

(OR)

2	a)	Explain refrigeration system using Brayton cycle and show the state points on Temperature-Entropy diagram considering the irreversibilities.	CO1	6 Marks
	b)	A dense air refrigeration machine operating on Bell-Coleman cycle operates between 3.4 bar and 17 bar. The temperature of air after the cooler is 15ºC and after the refrigerator is 6ºC. For a refrigeration capacity of 6 tonnes, find: i) Temperature after compression and expansion, ii) Air circulation required in the cycle per minute, iii) Work of compressor and expander, iv) Theoretical C.O.P and v) Rate of water circulation required in the cooler in kg/min, if the rise in temperature is limited to 30ºC.	CO3	8 Marks

UNIT-II

3	a)	Discuss the effect of sub-cooling on COP. Would you desire large sub-cooling and why?	CO1	6 Marks
	b)	A vapour compression refrigerator uses R-12 as refrigerant and the liquid evaporates in the evaporator at -15ºC. The temperature of this refrigerant at the delivery from the compressor is 15ºC when the vapour is condensed at 10ºC. Find the coefficient of performance if the liquid is cooled by 5ºC before expansion by throttling. Take specific heat at constant pressure for the superheated vapour as 0.64kJ/kg K and that for liquid as 0.94 kJ/kg K. the other properties of refrigerant are as follows:	CO4	8 Marks

Temperature ^{0}C	Liquid heat (kJ/kg)	Latent heat (kJ/kg)	Entropy of liquid (kJ/kg K)	Entropy of Vapour (kJ/kg K)
-15	22.3	180.88	0.0904	0.7051
10	45.4	191.76	0.1750	0.6921

(OR)

4	a)	Draw the vapour compression refrigeration cycle on T-s diagram when the refrigerant is dry and saturated at the end of compression and find an expression for the C.O.P in terms of i) Temperature and entropies; ii) Enthalpy	CO1	7 Marks
	b)	A refrigerator using Ammonia works between the temperatures -10 deg. C and 25 deg. C. The gas is dry at the end of compression and there is no under cooling of liquid. Using the tables, Calculate the theoretical COP of the cycle	CO2	7 Marks

UNIT-III

5	a)	What is the effect of inert gas in three fluid refrigeration systems?	CO1	7 Marks
	b)	Draw a neat diagram of lithium bromide water absorption system and explain its working.	CO1	7 Marks

(OR)

6	a)	What are the characteristics of ideal absorbent and refrigerant mixture in vapour absorption refrigeration?	CO1	7 Marks
	b)	Draw a neat sketch of a practical vapour absorption refrigeration cycle. Indicate there on the phases of various fields and the name of the equipments. Also indicate the direction of the external energy flow to or from the equipments.	CO4	7 Marks

UNIT-IV

7		An auditorium of 100 seating capacity of conditioned for the given specifications: Out door conditions - 35 and 65% RH Required air inlet conditions – 15ºC and 40 RH. The required condition is achieved first by cooling and dehumidifying and then by heating. Find the following i) The capacity of the cooling coil in tons of refrigeration ii) Capacity of the heating coil in kW iii) By-pass factor of the heating coil if the surface temp of the coil is 22 ºC.	CO5	14 Marks

(OR)

8	a)	Define the term `bypass` factor used for cooling or heating coil and find the expression for that.	CO1	6 Marks
	b)	The amount of air supplied to an air conditioned hall is 300 m^3/min. The atmospheric conditions are 35ºC DBT and 55% RH. The required conditions are 20ºC DBT and 60% RH. Find the Sensible Heat and Latent Heat removed from air per minute.	CO6	8 Marks

UNIT-V

9	a)	Compare the viscous impingement filter with dry filter.	CO1	7 Marks
	b)	Write short notes on air-washer type humidifier.	CO1	7 Marks

(OR)

10	a)	Discuss the common considerations for humidification of air in air conditioning.	CO1	7 Marks
	b)	With a simple sketch explain the principle of centrifugal dust collector.	CO1	7 Marks

THERMAL ENGINEERING-II
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Comment the efficiency of the Modified Rankine cycle with respect to Rankine cycle. Also obtain the expression for efficiency of Modified Rankine cycle.	CO1	7 Marks
	b)	A basic steam power plant works on ideal Rankine cycle between 30 bar and 0.04 bar. The initial condition of steam being 0.8 dry and flow rate 10 kg/s determine i) Work required for pumping ii) Work done by the turbine iii) Cycle efficiency.	CO2	7 Marks

(OR)

2	a)	State functions of various mountings and accessories of a boiler.	CO1	7 Marks
	b)	Discuss the working of Benson boiler with a neat sketch.	CO1	7 Marks

UNIT-II

3	a)	Mention steps involved in preparing the heat balance sheet for a boiler.	CO1	7 Marks
	b)	A boiler working at a pressure of 20 bar evaporates 10 kg of water per kg of coal fired from feed water entering at 40^0C. The steam at the inlet of the stop valve is 0.9 dry. Determine the equivalent evaporation from and at 100^0C.	CO2	7 Marks

(OR)

4	a)	Derive the expression for the draught produced in terms of water column.	CO2	7 Marks
	b)	Calculate the height of chimney required to produce a draught equivalent to 1.7cm of water if the flue gas temperature is 270^0C and ambient temperature is 22^0C and minimum amount of air per kg of fuel 17kg.	CO4	7 Marks

UNIT-III

5	a)	Explain the supersaturated flow of steam through a nozzle and the significance of Wilson's line.	CO1	7 Marks
	b)	Steam enters a group of nozzles of a steam turbine at 12 bar and 220^0C and leaves at 1.2 bar. The steam turbine develops 220KW with a specific steam consumption of 13.5 kg/KWh. If the diameter of nozzles at throat is 7mm, calculate the number of nozzles.	CO5	7 Marks

(OR)

6	a)	Show by graphical representation of pressure and velocity of a steam in impulse turbine.	CO1	7 Marks
	b)	In a De-Lavel turbine, the steam enters the wheel through a nozzle with a velocity of 500 m/s and at an angle of 20° to the direction of motion of the blade. The blade speed is 200 m/s and the exit angle of the moving blade is 25°. Find the inlet angle of moving blade, exit velocity of steam and its direction and work done per kg of steam.	CO3	7 Marks

UNIT-IV

7		At a stage of Reaction Turbine, the Rotor diameter is 1.4 m and speed ratio 0.7.If the blade outlet angle is 20° and the rotor speed 3000 rpm. Find the blade inlet angle and diagram efficiency. Also find the %increase in diagram efficiency and rotor speed, if the Turbine is designed to run at best theoretical speed.	CO3	14 Marks

(OR)

8	a)	Compare the merits and demerits of surface condensers over jet condensers	CO1	7 Marks
	b)	The following were obtained from the test of a surface condenser. Condenser vacuum=711 mm of Hg, hot well temperature=32°C, Inlet temperature of circulated water =12°C, outlet temperature of circulated water=28°C, Barometric reading=760 mm of Hg. Compute the vacuum efficiency and efficiency of condenser.	CO5	7 Marks

UNIT-V

9	a)	Differentiate between closed cycle and open cycle gas turbine.	CO1	7 Marks
	b)	The pressure ratio of an open cycle gas turbine power plant is 5.6. Air is taken at 30^0C and 1 bar. The compression is carried out in 2 stage with perfect intercooling in between the maximum temperature of the cycle is limited to 700^0C. Assuming the isentropic efficiency of each compressor stage as 85% and that of a turbine as 90%. Determine power output if mass flow rate of air is 1.2kg/s and efficiency cycle if C_P=1.02kJ/kg-K and γ =1.41.	CO2	7 Marks

(OR)

10	a)	Discuss the principle of operation of ram jet engine with a neat sketch.	CO1	7 Marks
	b)	A gas-turbine unit has a pressure ratio of 10/1 and a maximum cycle temperature of 700°C. The isentropic efficiencies of the compressor and turbine are 0.82 and 0.85 respectively. Calculate the power output of an electric generator geared to the turbine when the air enters the compressor at 15°C at the rate of 15 kg/s. Take Cp=1.005 kJ/kg-K and γ=1.4 for compression process, and take Cp=1.11 kJ/kg-K and γ=1.333 for the expansion process.	CO2	7 Marks

MICROPROCESSORS AND MICROCONTROLLERS
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Suggest the criterion for choosing level of programming for developing system software centered around Intel 8086.	CO6	7 Marks
	b)	Develop an ALP to evaluate the product of two 16-bit Hexadecimal Numbers.	CO4	7 Marks
		(OR)		
2	a)	Mention the role of Direction flag while performing string operations with example?	CO1	7 Marks
	b)	Compose an Assembly Language Program to Explore usage of 8086 String related Instructions with a suitable examples.	CO4	7 Marks

UNIT-II

3	a)	Design the timing diagram of memory Read and write cycle in minimum mode configuration.	CO3	7 Marks
	b)	Illustrate control flags? Describe maskable and non-maskable interrupts available in 8086?	CO1	7 Marks
		(OR)		
4	a)	Formulate the sequence of initializing and operating steps necessary to program 8259A.	CO3	7 Marks
	b)	Illustrate types of Intel 8086 interrupts and Outline their default priorities.	CO1	7 Marks

UNIT-III

5	a)	Summarize different modes in which the ports of 8255A can be operated and explain 8255A control word formats.	CO2	7 Marks
	b)	Apply the Mode set control word needed to initialize an 8255A for following requirements: Port A - handshake input, Port B - handshake output, Port C - bits PC6, PC7 as outputs.	CO3	7 Marks
		(OR)		
6	a)	Apply interfacing concept to explain about interfacing ADC with Intel 8086 using 8255.	CO5	10 Marks
	b)	Give the expression to count the rotating shaft of the stepper motor through a specified angle? Design flowchart to Initialize 8251A to send and receive characters on polled basis.	CO2	4 Marks

UNIT-IV

7	a)	Define addressing mode? List addressing modes supportable for 8051 with suitable examples.	CO1	7 Marks
	b)	Explain the following 8051 instructions i) XCHD; ii) SWAP; iii) DJNZ.	CO2	7 Marks
		(OR)		
8	a)	Interpret 8051 SMOD and SCON Special Function Register formats.	CO2	7 Marks
	b)	List the hardware features of 8051 Microcontroller.	CO1	7 Marks

UNIT-V

9	a)	Apply 8051Microcontroller interfacing concept to interface 4 digits of 7 segment LED display to Intel 8051	CO6	10 Marks
	b)	Draw and explain the format of SCON and SMOD.	CO1	4 Marks
		(OR)		
10	a)	Draw and discuss the formats and bit definitions of the following SFR's in 8051. i) PSW; ii) TMOD.	CO1	7 Marks
	b)	Model the setup and develop an ALP to operate different modes of operating Timers/Counters in 8051.	CO6	7 Marks

VLSI DESIGN

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain how a bipolar NPN transistor is included in N well CMOS processing.	CO5	7 Marks
	b)	For a CMOS inverter, calculate the shift in the transfer characteristic curve when βn/βp ratio is varied from 1/1 to 10/1.	CO3	7 Marks
		(OR)		
2	a)	Suggest a step-by-step procedure for a typical n-well process with neat diagrams.	CO5	7 Marks
	b)	For the inverter circuit shown in Fig.1 give the expression for the energy drawn from supply VDD to charge capacitor C_L.	CO3	7 Marks

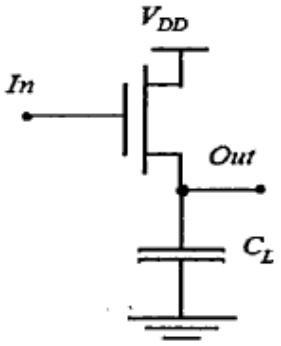

Fig.1

UNIT-II

3	a)	Describe three sources of wiring capacitances. Explain the effect of wiring capacitance on the performance of a VLSI circuit.	CO6	7 Marks
	b)	Design a stick diagram and layout diagram for the CMOS logic shown below Y=((A+B)(C+D))'.	CO4	7 Marks
		(OR)		
4	a)	Develop the layout diagram for three input-NAND and NOR gates using CMOS logic.	CO4	7 Marks
	b)	Explain the concept of sheet resistance and apply it to compute the ON resistance (VDD to GND) of an NMOS inverter having pull up to pull down ratio of 4:1, if n channel resistance is Rsn = 104 per square.	CO6	7 Marks

UNIT-III

5	a)	Enumerate all the 16 possible functions of a two input ALU.	CO2	7 Marks
	b)	Compare the different types of CMOS subsystem Multipliers.	CO2	7 Marks
		(OR)		
6	a)	Compare the different types of Adders.	CO2	7 Marks
	b)	Appraise the use of carry generation and propagation in carry look-ahead adder.	CO5	7 Marks

UNIT-IV

7	a)	Implement an adder cell and register cell using transmission gates and explain.	CO4	7 Marks
	b)	Sketch and compare the schematics of CPLD and FPGA.	CO2	7 Marks
		(OR)		
8	a)	Summarize the purpose of using Programmable Interconnect structures and explain in detail.	CO5	7 Marks
	b)	Design a 4-bit synchronous up/down counters using adders and registers.	CO3	7 Marks

UNIT-V

9	a)	Write short notes on "need for CMOS testing".	CO1	7 Marks
	b)	Explain the basic sources of errors in CMOS Circuit and how they are tested in synthesis process.	CO4	7 Marks
		(OR)		
10	a)	Discuss different low power techniques for SRAM memory cells.	CO1	7 Marks
	b)	Suggest design methodologies for power reduction.	CO4	7 Marks

OBJECT ORIENTED ANALYSIS AND DESIGN

[Computer Science and Engineering, Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1		Explain about conceptual model of UML.	CO1	14 Marks
		(OR)		
2		Design a class diagram for School information system using structural relationships.	CO4	14 Marks
		UNIT-II		
3	a)	Define a classifier.	CO1	2 Marks
	b)	List and explain standard stereotypes that apply to classes.	CO1	6 Marks
	c)	List and explain different kinds of classifier.	CO1	6 Marks
		(OR)		
4	a)	Differentiate between sample, anonymous, orphan and multi object instances.	CO2	7 Marks
	b)	How can we model object structures? Explain with an example.	CO1	7 Marks
		UNIT-III		
5	a)	Design sequence diagram for Online Shopping.	CO5	8 Marks
	b)	Distinguish sequence diagram from collaboration diagram.	CO2	6 Marks
		(OR)		
6	a)	Design usecase diagram for Hospital Management System Problem statement: Patients request for appointment for any doctor. The details of the existing patients are retrieved by the system. New patients update their details in the system before they request for appointment with the help of assistant. The assistant confirms the appointment based on the availability of free slots for the respective doctors and the patient is informed. Assistant may cancel the appointment at any time.	CO4	9 Marks
	b)	Illustrate the steps involved in modeling the requirements of a system.	CO1	5 Marks
		UNIT-IV		
7	a)	Design state chart diagram for ATM system with sub states.	CO4	8 Marks
	b)	Distinguish sequential states and concurrent states.	CO2	6 Marks
		(OR)		
8	a)	Define an Event.	CO1	3 Marks
	b)	List and explain different kinds of events with an example.	CO1	11 Marks
		UNIT-V		
9	a)	Differentiate between components and classes.	CO2	5 Marks
	b)	List and explain the different kinds of components with an example.	CO1	9 Marks
		(OR)		
10	a)	Explain the relationship between components and interfaces with a suitable example	CO1	7 Marks
	b)	Apply modeling processes and devices techniques to design a client/server system.	CO3	7 Marks

WEB TECHNOLOGIES
[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1		Design a web page which provides the following details: i) Train Name; ii) Starting Place; iii) Destination; iv) Arrival and Departure time v) Fare Place a border for the table and use cell padding to present the cell data with clarity. Align the table in the center of the screen. Use a caption saying 'Time and Fare List'.	CO6	14 Marks
		(OR)		
2	a)	Design a web page with fields user id, password and a submit button. Consider the following while writing a HTML code. i) Table to include fields. ii) Background image with repeatable option iii) Font Styles and Sizes.	CO5	7 Marks
	b)	Classify different types of CSS. List the advantages of external CSS.	CO2	7 Marks

UNIT-II

3	a)	Design a web page to load a list box dynamically using XMLHttpRequest Object.	CO4	7 Marks
	b)	Develop a web page to perform hiding and showing of HTML elements using JQuery.	CO4	7 Marks
		(OR)		
4	a)	Compare and Contrast AJAX Web Application Model and Classical Web Application Model.	CO2	7 Marks
	b)	Design a webpage with animation effects using JQuery methods.	CO5	7 Marks

UNIT-III

5		Create contact us page using bootstrap responsive classes	CO2	14 Marks
		(OR)		
6		Create a grid system for mobile, tablet and desktop with bootstrap.	CO5	14 Marks

UNIT-IV

7	a)	Define Associative array. Write a code to implement associative array.	CO1	7 Marks
	b)	Explain the following concepts of PHP arrays: i) Merging; ii) Slicing; iii) Splicing	CO1	7 Marks
		(OR)		
8	a)	Classify data types of PHP.	CO2	7 Marks
	b)	Define Type casting. List cast operators of PHP with syntax.	CO1	7 Marks

UNIT-V

9	Develop a PHP code to perform the following with MySQL database: i) Connection Establishment. ii) Query generation for table creation. iii) Retrieving the data from the select query.	CO3	14 Marks
	(OR)		
10	Develop a PHP code for the following: i) Fetching database results into an object. ii) Retrieving database results using indexed and associative arrays.	CO3	14 Marks

OBJECT ORIENTED PROGRAMMING
[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	Explain the steps involved in creating and executing a java program.	CO1	7 Marks
	b)	Design a program to implement Money class. This class should have fields for initializing a rupee and paisa value. The paisa value will be in the range from 0 – 99 with the paisa being the same sign as that of rupees. The class should have all reasonable constructors, addition and subtraction methods, and a main() method that provides a thorough test of all the methods in the class.	CO6	7 Marks
		(OR)		
2	a)	Java compiled and interpreted. Justify.	CO4	5 Marks
	b)	Create a class Rectangle. The class has two attributes, length and width, each of which defaults to 0. It has methods that calculate the perimeter and area of the rectangle. It has set and get methods for both length and width. The set methods should verify that length and width are floating – point numbers larger than 0.0 and less than 20.0.	CO3	9 Marks

UNIT-II

3	a)	Explain **final** keyword with all its usages. Support explanation with a program.	CO1	7 Marks
	b)	Explain the various forms of implementing **interface**s.	CO1	7 Marks
		(OR)		
4	a)	What are Nested Interfaces? Explain with a suitable example.	CO1	7 Marks
	b)	Create a class within the package "`AmountInWords`" to convert the amount into words. (Consider the amount to be not more than 100000.)	CO3	7 Marks

UNIT-III

5	a)	Explain the steps in creating a thread using **Runnable** interface.	CO1	6 Marks
	b)	Design a java program that demonstrates how a high-priority thread using sleep makes way for the lower-priority threads to execute.	CO3	8 Marks
		(OR)		
6	a)	What is a try-with-resources block and how it is used?	CO1	4 Marks
	b)	Consider a Student examination database system that prints the marksheet of students. Input the following from the command line: i) Student's name ii) Marks in six subjects These marks should be between 0 to 100. If the marks are not in the specified range, raise a RangeException, else find the total marks and print the percentage of the student.	CO6	10 Marks

UNIT-IV

7	a)	Design a program that shows a screen sot with an applet running inside the applet viewer. The applet should display your name.	CO5	6 Marks
	b)	Explain the difference between with a suitable example: i) Vector and ArrayList ii) Enumeration and Iterator	CO1	8 Marks

(OR)

8	a)	Explain the use of overriding the following methods for an applet. init() start() stop() destroy() paint()	CO1	6 Marks
	b)	Create a collection class named Queue to implement the FIFO order of queues.	CO3	8 Marks

UNIT-V

9	a)	How is the concept of inner classes used for event handling?	CO2	7 Marks
	b)	What is the difference between doGet () and doPost () or GET and POST?	CO1	7 Marks

(OR)

10	a)	What do you mean by HTTP servlet request and response? What is the procedure for initializing a servlet ?	CO1	7 Marks
	b)	What is the advantage of having anonymous classes while handling events in Java?	CO1	7 Marks

DIGITAL SIGNAL PROCESSING
[Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1	a)	The impulse response of LTI system is $h(n)=\{1,2,1,-1\}$. Find the response of the system to the input $x(n)=\{2,1,0,2\}$.	CO5	7 Marks
	b)	Check whether following system is linear, causal and time invariant. $Y(n)=x(n)x(n-2)$.	CO2	7 Marks
		(OR)		
2	a)	Classify discrete time systems with examples.	CO2	7 Marks
	b)	Derive the relation between the input and output of LTI system.	CO3	7 Marks

UNIT-II

3	a)	Derive and sketch the structure of decimation in time FFT algorithm for N=8.	CO3	8 Marks
	b)	Synthesize the time domain sequence using IDFT of the sequence $X(k)=\{1,\ 1\text{-}2j,\ -1,\ 1+2j\}$.	CO5	6 Marks
		(OR)		
4	a)	Find the 8-Point DFT of the sequence $x(n)=\{1,\ -1,\ -1,\ -1,\ 1,\ 1,\ 1,\ -1\}$ using DIT FFT algorithm.	CO5	7 Marks
	b)	Derive and sketch the structure of Decimation in Frequency FFT algorithm for N=8.	CO3	7 Marks

UNIT-III

5	a)	Apply the bilinear transformation to $H_a(s) = \frac{4}{(s+3)(s+4)}$ with T=0.5s and find $H(z)$.	CO4	7 Marks
	b)	Derive an expression for order of the butterworth analog prototype filter.	CO2	7 Marks
		(OR)		
6	a)	Convert the following analog filter transfer function Bilinear Transformation method. $H(s)=1/(s+0.2)$ Consider T= 1 Sec.	CO4	7 Marks
	b)	Compare the characteristics of butter worth and chebyshev approximations.	CO2	7 Marks

UNIT-IV

7	a)	Synthesize the Direct form realizations of linear phase FIR filter when N is even and odd.	CO4	7 Marks
	b)	Design a linear phase FIR bandstop filter to reject frequencies in the range 0.35π to 0.48π rad/sample by taking 75samples of rectangular window.	CO3	7 Marks
		(OR)		
8	a)	What is gibbs phenomenon? How its effect can be reduced in the design of FIR filters.	CO3	7 Marks
	b)	Derive the frequency response of Linear phase FIR filter when impulse response is symmetric when N even no. samples.	CO2	7 Marks

UNIT-V

9	a)	Explain the internal architecture of TMS320C6X DSP processor.	CO1	7 Marks
	b)	Discuss the modified bus structures and memory access schemes with supporting block diagrams.	CO1	7 Marks

(OR)

10	a)	Explain VLIW architecture with neat block diagram and explain how higher throughput is obtained using VLIW architecture with an Example.	CO1	7 Marks
	b)	Write a short note on i) pipelining; ii) Onchip peripherals.	CO1	7 Marks

[Information Technology]

Time: 3 hours **Max. Marks: 70**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I		
1	a)	Draw the Block diagram of Image Processing System and explain each block in detail.	CO1	8 Marks
	b)	Analyze the Performance of Haar Transform with kernel.	CO2	6 Marks
		(OR)		
2	a)	Write the Properties of: i) Slant Transform. ii) KL Transform.	CO1	4 Marks
	b)	Derive the kernel for N = 4 using Discrete Cosine Transform.	CO3	10 Marks
		UNIT-II		
3	a)	How Histogram Equalization is used in Modern Digital image Processing?	CO6	7 Marks
	b)	Apply various techniques in image Sharpening and explain in brief.	CO5	7 Marks
		(OR)		
4	a)	What are the techniques used in image processing to remove blurring in an image?	CO5	7 Marks
	b)	What are the applications of image enhancement in the society?	CO6	7 Marks
		UNIT-III		
5	a)	Write a brief notes on Weiner Filtering.	CO1	7 Marks
	b)	Differentiate between enhancement and restoration processes. Present the restoration technique employing inverse filter.	CO2	7 Marks
		(OR)		
6	a)	Design additive and multiplicative noise models.	CO1	7 Marks
	b)	Briefly explain the approach of inverse filtering method used for image restoration.	CO2	7 Marks
		UNIT-IV		
7	a)	Write notes on image compression standards.	CO1	7 Marks
	b)	Develop an algorithm for 'Huffman coding' to compress an image.	CO3	7 Marks
		(OR)		
8	a)	What is meant by Error-free compression? Discuss about variable-length coding and Token based coding.	CO1	7 Marks
	b)	What is the algorithm used in Arithmetic coding? Explain with an example.	CO3	7 Marks
		UNIT-V		
9	a)	Explain RGB color model using Cartesian coordinate system with supporting diagram.	CO1	7 Marks
	b)	Identify various color models used in the digital representation of a color image.	CO4	7 Marks
		(OR)		
10	a)	Write a short notes on: i) Color models. ii) Color image segmentation.	CO1	8 Marks
	b)	Suggest an operator to perform edge detection in 2-D and explain its significance.	CO4	6 Marks

INDIAN HISTORY

[Civil Engineering, Mechanical Engineering, Computer Science and Engineering, Information Technology, Computer Science and Systems Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

	UNIT-I				
1.	Define the term institution and describe major functions of institution that includes different types of marriages.	12 Marks	L1	CO1	PO1
	(OR)				
2.	What are major Varna's in the Indian history (vedic period) and explain roles and responsibilities of the family system?	12 Marks	L2	CO1	PO1
	UNIT-II				
3.	Describe about the Mohenjodaro civilization and period of occurrence.	12 Marks	L1	CO1	PO1
	(OR)				
4.	Analyze the farming and construction of houses of Harappan's with the present constructional features.	12 Marks	L2	CO2	PO2
	UNIT-III				
5.	Explain briefly about the Satavahana dynasty and Sunga dynasty.	12 Marks	L2	CO2	PO1
	(OR)				
6.	Examine the ruling of Vijayanagar kings and the efforts they made to improve the social culture.	12 Marks	L2	CO2	PO6
	UNIT-IV				
7.	Analyze the political situation in India when East India Company entered in 18th Century.	12 Marks	L2	CO2	PO2
	(OR)				
8.	How British east India company stabilized their place in India during 18th century?	12 Marks	L1	CO1	PO1
	UNIT-V				
9.	"Modernization and globalization changed the face of the India". Interpret.	12 Marks	L2	CO2	PO2
	(OR)				
10.	Mention the existing trends of job market and change in technology.	12 Marks	L1	CO1	PO6

LINEAR AND DIGITAL IC APPLICATIONS

[Electrical and Electronics Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	Sketch the functional schematic of 555-timer for Astable multivibrator and describe in detail.	6 Marks	L1	CO1	PO1
	b)	Explain the principle of operation of 565 PLL with the help of block diagram.	6 Marks	L1	CO1	PO2
		(OR)				
2.	a)	Analyze the basic principle of operation of RC Phase shift oscillator using op-amp. Derive the condition for frequency of oscillations.	6 Marks	L2	CO1	PO8
	b)	Design a First order Butter worth LPF and plot the Frequency response.	6 Marks	L4	CO2	PO3

UNIT-II

3.	a)	Explain the principle of operation of Flash type ADC.	6 Marks	L1	CO3	PO1
	b)	Compare the operation of a Dual-slope ADC with flash type ADC.	6 Marks	L1	CO3	PO2
		(OR)				
4.	a)	Design a Butterworth high pass filter of order two with cut off frequency of 3 KHz.	6 Marks	L4	CO2	PO8
	b)	Develop a successive approximation ADC and explain its operation in detail.	6 Marks	L2	CO3	PO2

UNIT-III

5.	a)	Write Verilog code for 16-to-1 multiplexer using case statement in dataflow modeling.	6 Marks	L4	CO4	PO1
	b)	Compare the data types in Verilog HDL.	6 Marks	L1	CO4	PO2
		(OR)				
6.	a)	Analyze the performance of case and if statements in Verilog HDL program.	6 Marks	L2	CO4	PO2
	b)	Develop behavioral style Verilog code for the following functions. $F(S) = A \oplus B \oplus C1$ $F(CO) = AB + AC1 + BC1$	6 Marks	L2	CO4	PO1

UNIT-IV

7.	a)	Sketch the IC diagram of the 74 x 999 subtractor and explain its operation.	6 Marks	L1	CO5	PO1
	b)	Write Verilog code in any modeling style and analyze the concept of a simple floating-point encoder.	6 Marks	L2	CO5	PO2
		(OR)				
8.	a)	Explain the concept of 74 x 280 9-Bit Parity Generator with an example.	6 Marks	L2	CO5	PO1
	b)	Design a Barrel Shifter using 74 x 151 multiplexer and write its Verilog HDL code.	6 Marks	L2	CO5	PO2

UNIT-V

9.	a)	Design a 3-bit LFSR counter using 74x194. List out the sequence assuming that the initial state 111.	6 Marks	L3	CO5	PO4
	b)	Explain the operation of standard IC 74x194 and Write Verilog HDL code for 74x194.	6 Marks	L2	CO5	PO6
		(OR)				
10.	a)	Sketch the symbol, functional table and write Verilog HDL source code of 74x194 IC.	6 Marks	L2	CO5	PO6
	b)	Design a modulo-8 binary counter and decoder with glitch-free outputs. Explain the operation.	6 Marks	L4	CO5	PO3

REINFORCED CEMENT CONCRETE STRUCTURES

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Explain about working stress method and its importance.	2 Marks	L2	CO1	PO1
	b)	Design the reinforcement required for a doubly reinforced beam having a width of 250mm and effective depth of 500mm and cover to the center of compression reinforcement is 50mm. Maximum bending moment under working load conditions is 160 kNm. Use M20 concrete and Fe 250 steel.	10 Marks	L4	CO1	PO1 PO2 PO4 PO5 PO6 PO10
		(OR)				
2.	a)	What are the provisions to calculate the effective length for a T – Beam and L – Beam?	2 Marks	L2	CO1	PO1
	b)	Design a singly reinforced concrete beam having a clear span of 3m to support a live load of 6 kN/m and width of the beam as 250mm and support width as 230mm. Consider M20 and Fe415 grades. Sketch the reinforcement detailing.	10 Marks	L4	CO1	PO1 PO2 PO4 PO5 PO6 PO8 PO10
		UNIT-II				
3.	a)	Explain the stress strain curve of concrete.	2 Marks	L2	CO2	PO1
	b)	Design a singly reinforced simply supported reinforced concrete beam over a clear span of 4 m with a super imposed load of 20 kN/m having a width of 300mm and support width of 300mm. Consider M 20 and Fe 415 steel with a cover of 50 mm. sketch the details of reinforcement. Check for shear.	10 Marks	L4	CO2	PO1 PO2 PO4 PO5 PO6 PO8 PO10
		(OR)				
4.	a)	Explain the need to check for shear in beams.	2 Marks	L2	CO2	PO1
	b)	Explain about the types of the section with neat sketches.	10 Marks	L4	CO2	PO1 PO2 PO4
		UNIT-III				
5.	a)	Explain about bending moment variations in one way slab and two way slab.	2 Marks	L2	CO3	PO1
	b)	Determine the moment of resistance of a slab for office room of size 4m x 6m subjected to factored load of 8 kN/m² and floor finish load of 1 kN/m². The corners of the slab is prevented from lifting and two adjacent edges are discontinuous. Use M20 and Fe415 grades of concrete and steel.	10 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO6 PO8 PO10
		(OR)				

6.	a)	Calculate the effective depth required for a one-way slab of span 4 m for 0.4% steel of Fe415 grade and M20 Concrete.	2 Marks	L2	CO3	PO1
	b)	Design a simply supported slab supported on masonry walls having a clear span of 3m to bear a live load of 4 kN/m² on a side bearing walls of 120 mm thick. Use M20 and Fe415 grades of concrete and steel and sketch the reinforcement detailing.	10 Marks	L4	CO3	PO1 PO2 PO4 PO5 PO6 PO10
		UNIT-IV				
7.	a)	Explain about clear cover and effective span. Mention the minimum clear cover for beams and columns.	2 Marks	L2	CO4	PO1
	b)	Design a reinforced square column, with following dimensions 400 mm x 400 mm subjected to factored load 2000 KN, factored moment 150Kn/m and with grade of concrete M_{20}, grade of steel Fe-415N/mm². Column surrounded by concrete clear cover 20mm.	10 Marks	L4	CO4	PO1 PO2 PO4 PO6 PO8 PO10
		(OR)				
8.	a)	Explain in detail about the classification of columns based on type of reinforcement and sketch them neatly.	2 Marks	L2	CO4	PO1
	b)	Design a reinforced circular column, with following dimensions i.e, diameter of column 450 mm subjected to factored load 1500KN, factored moment 110 Kn/m and with grade of concrete M 20, grade of steel Fe - 250N/mm². Column surrounded by concrete cover 40 mm (clear cover) and also evaluate hoop and helical reinforcement.	10 Marks	L4	CO4	PO1 PO2 PO4 PO5 PO6 PO8 PO10
		UNIT-V				
9.	a)	Explain in detail about one-way shear in design of footings.	2 Marks	L2	CO5	PO1
	b)	Design an isolated footing for a rectangular column. 230mm x 450mm with 16-20mm diameter longitudinal bars carrying a service load of 2000 kN. Assume safe bearing capacity of soil as 300 kN/m² at a depth of 1 m below ground level. Use M25 concrete and Fe415 steel. Sketch the reinforcement details and check for shear.	10 Marks	L4	CO5	PO1 PO2 PO4 PO5 PO6 PO8 PO10
		(OR)				
10.	a)	Explain about Dog Legged staircase with neat sketch.	2 Marks	L2	CO5	PO1
	b)	Design one of the flights of a dog legged stair case spanning between landing beams using following data. Number of steps in flight = 10, Tread = 300mm, Rise = 150mm Width of landing beams = 300mm, Live load = 5 kN/m² , Floor finish = 1 kN/m², Grade of concrete = M20, Grade of steel = Fe415.	10 Marks	L4	CO5	PO1 PO2 PO4 PO5 PO6 PO8 PO10

TRANSPORTATION ENGINEERING

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	As a highway engineer suggest and write the ideal alignment requirements for a highway.	6 Marks	L4	CO1	PO1 PO2 PO4 PO5 PO6 PO7
	b)	Design the length of the transition curve and shift using the following data; Design speed= 70 kmph Radius of circular curve= 220 m Allowable rate of super elevation= 1 in 150 Pavement rotated about inner edge of the pavement Pavement width including extra widening= 7.5 m	6 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO8
		(OR)				
2.	a)	Explain in detail about the different road pattern with neat sketches.	6 Marks	L2	CO1	PO1 PO10
	b)	Design the extra widening required for a pavement of width 7m on a horizontal curve of radius 250 m if the longest wheel base of vehicle expected on the road is 7.0 m. Design speed is 70 kmph.	6 Marks	L6	CO2	PO1 PO2 PO3 PO4 PO8

UNIT-II

3.	a)	A two lane road at present carrying traffic of 1200 CVPD. It is to be strengthen for growing traffic needs, VDF=2.75, rate of growth of traffic 7.5% annum, period of construction is 5 years. The pavement is to be designed for a life of 15 years after completion. Calculate the cumulative standard axles used for design.	6 Marks	L6	CO3	PO1 PO2 PO3 PO5 PO8
	b)	Write a short note on Aggregate Crushing test and its significance.	6 Marks	L2	CO1	PO1 PO5 PO8
		(OR)				
4.	a)	Write a short note on Softening Point test on bitumen and its significance.	6 Marks	L2	CO1	PO1 PO5 PO8
	b)	Calculate the stress at interior, edge and corner regions of a cement concrete pavement using Westergaard's equation. Use the following data. Wheel load, P=5000kg; Modulus of elasticity of concrete, $E=3.0x10^5$ kg/cm^2; Pavement thickness, h=20 cm, Poisson's ratio=0.15; Modulus of subgrade reaction=6.0 kg/cm^3; Radius of contact area=15 cm.	6 Marks	L4	CO3	PO1 PO2 PO8

UNIT-III

5.	a)	What is the need of Origin and Destinations studies discuss briefly.	6 Marks	L4	CO4	PO1 PO2
	b)	Discuss the relationship between speed, density and flow with neat sketches.	6 Marks	L4	CO4	PO1 PO2 PO10
		(OR)				
6.	a)	For designing a two phase fixed signal at an intersection having N-S and E-W roads where only a straight ahead traffic is permitted. The lost time per cycle is 11 sec. The average normal flow of traffic on N-S and E-W during design period are 1100 PCU per hour and 800 PCU per hour respectively. The saturation flow values are 2400 PCU per hour and 2900 PCU per hour for N-S and E-W roads respectively. Calculate the optimum cycle length (sec) as per Webster's approach.	6 Marks	L4	CO4	PO1 PO2 PO4 PO5 PO6
	b)	Briefly discuss the traffic volume data collection methods and list out latest trends in traffic volume data collection.	6 Marks	L4	CO4	PO1 PO2 PO12

UNIT-IV

7.	a)	Discuss briefly about Points and Crossings.	6 Marks	L4	CO5	PO1 PO2
	b)	A turnout takes off as a 5º curve with contrary flexure from a BG main line on a 3º curve. The speed on the branch line is restricted to 50 km/hr. Determine the maximum permissible speed on the main line.	6 Marks	L4	CO5	PO1 PO2 PO4
		(OR)				
8.	a)	Discuss railway development in Indian Scenario.	6 Marks	L2	CO5	PO1
	b)	Determine the equilibrium speed for which super elevation is to be maintained for the following split-up of the trains and their speeds in the section: 14 trains at 55 km/h 5 trains at 62 km/h 5 trains at 85 km/h 2 trains at 92 km/h The track is on BG and the main line curve is a 2º curve. Determine the super elevation to be provided allowing cant deficiency of 75 mm, and the speed for this section.	6 Marks	L4	CO5	PO1 PO2 PO4

UNIT-V

9.	a)	Write a short note on Aircraft characteristics.	6 Marks	L2	CO6	PO1 PO6 PO7 PO8
	b)	The monthly average of the maximum daily temperature at the proposed site of an airport is 47º C during the hottest month of the year. During the same month, the average daily temperature is 36º C. Calculate the airport reference temperature. If the site is at MSL and is having an effective gradient of 0.6%. Calculate the actual length to be provided, if basic runway length is 2245 m.	6 Marks	L4	CO6	PO1 PO2 PO4 PO8
		(OR)				
10.	a)	Compare and contrast VASI and PAPI system with neat sketches.	6 Marks	L4	CO6	PO1 PO2 PO8 PO10
	b)	Write down the steps involved in drawing Type-II Wind rose diagram along with explaining wind coverage, cross wind and calm period briefly.	6 Marks	L2	CO6	PO1 PO8

CONSTRUCTION EQUIPMENT AND AUTOMATION

[Civil Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	What is equipment maintenance? List the objectives of maintenance.	6 Marks	L2	CO1	PO1 PO3
	b)	A excavator is purchased in the year 12 may, 2000 with a cost of Rs. 32,00,000/- which the company assured its service period as 20years.the scrap value of the equipment is Rs. 25000/- find the depreciation value for each and year using diminishing method. Also, find the rate of depreciation.	6 Marks	L4	CO1	PO1 PO2 PO5 PO10
		(OR)				
2.	a)	List the steps to improve equipment's productivity.	4 Marks	L2	CO1	PO1 PO5
	b)	A lathe machine is purchased for Rs. 84,000/- and the assumed life is 10years and scrap value is Rs. 20,000/-. If the depreciation is charged by diminishing balance method, calculate the percentage by which, value of the lathe is reduced every year and depreciation fund after 2years and also find out the cost of the lathe machine for each year.	8 Marks	L3	C01	PO1 PO2 PO5 PO10

UNIT-II

3.	a)	What are basic earthwork operations? Suggest a multipurpose equipment to perform different earthwork operations.	6 Marks	L4	CO2	PO1 PO2 PO5 PO6
	b)	Explain densification of soil with neat sketch.	6 Marks	L2	CO2	PO1 PO5 PO10
		(OR)				
4.	a)	Enlist different soil compaction principles.	6 Marks	L2	CO2	PO1 PO5
	b)	What is dump truck? How will you calculate the number of dump trucks required for a project?	6 Marks	L4	CO2	PO1 PO2 PO5 PO6

UNIT-III

5.	a)	How will you enhance the production capacity of: i) Jaw crushers. ii) Hammer mills. iii) Screening plants. iv) Crushing plants	6 Marks	L4	CO3	PO1 PO2 PO4 PO5
	b)	Explain the method of tunneling by "drill and blast".	6 Marks	L2	CO3	PO1 PO5 PO6

(OR)

6.	a)	Write the uses of Ready Mix Concrete (RMC).	6 Marks	L2	CO3	PO1 PO5
	b)	Compare and contrast the following : i) Multi-stage pump ii) Submersible pump iii) Deep well pump	6 Marks	L4	CO3	PO1 PO2 PO5

UNIT-IV

7.	a)	Explain the stages of project planning.	6 Marks	L2	CO4	PO1 PO11
	b)	In which aspects the BIM is useful? Explain in detail.	6 Marks	L4	CO4	PO1 PO2 PO5 PO10 PO11

(OR)

8.	a)	How do building automation system work? Explain with neat sketch.	6 Marks	L2	CO4	PO1 PO5 PO10 PO11
	b)	What sort of barriers would a engineer face while implementing BIM?	6 Marks	L4	CO4	PO1 PO2 PO5 PO10 PO11 PO12

UNIT-V

9.	a)	Define a robot. Illustrate different types of robots.	6 Marks	L2	CO5	PO1 PO5 PO11
	b)	Write the advancement in surveying using autonomous machines and explain how drone survey helps in surveying the areas with ease.	6 Marks	L4	CO5	PO1 PO2 PO5 PO11

(OR)

10.	a)	What steps would you like to take for starting the use of your own drone in construction project?	6 Marks	L4	CO5	PO1 PO2 PO5 PO11 PO12
	b)	Discuss the use of robots in pre-fabrication works for housing projects.	6 Marks	L4	CO5	PO1 PO2 PO5 PO11

OPERATIONS RESEARCH
[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1. Solve following Linear Programming problem using Simplex method. — 12 Marks | L3 | CO1 | PO1 PO2

$Maximize\, Z = X_1 + X_2 + X_3$

$Subject\, to\ 4X_1 = 5X_2 + 3X_3 \leq 15$

$10X_1 + 7X_2 + X_3 \leq 12$

$and\ X_1, X_2, X_3 \geq 0$

(OR)

2. Use two-phase method to solve the following Linear Programming Problem. — 12 Marks | L3 | CO1 | PO1 PO2

$Maximize\ Z = 3X_1 - X_2$

$Subject\, to\ 2X_1 = X_2 \geq 2$

$X_1 + 3X_2 \leq 2$

$X_2 \leq 4$

$and\ X_1, X_2 \geq 0$

UNIT-II

3. Goods have to be transported from sources S_1, S_2 and S_3 to destination D_1, D_2 and D_3. The transportation cost per unit, capacities of the sources, and the requirements of the destinations are given in the following table. — 12 Marks | L3 | CO1 | PO1 PO2

	D_1	D_2	D_3	Supply
S_1	8	5	6	120
S_2	15	10	12	80
S_3	3	9	10	80
Demand	150	80	50	

Determine a transportation schedule so that cost is minimized. Use North-west corner rule to find Basic Feasible Solution.

(OR)

4. A travelling salesman has to visit 5 cities. He wishes to start from a particular city, visit each city once and then return to his starting point. The travelling cost (in '000 Rs) of each city from a particular city is given below: — 12 Marks | L3 | CO1 | PO1 PO2

		To city				
		A	B	C	D	E
From city	A	-	2	5	7	1
	B	6	-	3	8	2
	C	8	7	-	4	7
	D	12	4	6	-	5
	E	1	3	2	8	-

What should be the sequence of visit of the salesman so that the cost is minimum?

UNIT-III

5. a) Explain i) Pure strategy in a game ii) Row dominance in game problem iii) Column dominance in game problem. — 4 Marks | L1 | CO2 | PO1

b) Solve the game whose payoff matrix is given below: — 8 Marks | L3 | CO2 | PO1 PO2

Player B

Player A	B_1	B_2	B_3	B_4
A_1	3	2	4	0
A_2	3	4	2	4
A_3	4	2	4	0
A_4	0	4	0	8

(OR)

6. Find the optimal order quantity of a product for which the price breaks are as follows: — 12 Marks | L3 | CO3 | PO1 PO2

Quantity (Units)	Price per Unit (Rs)
$0 < Q_1 < 100$	20
$100 \leq Q_2 < 200$	18
$200 \leq Q_3$	16

The monthly demand of the product is 400 units. The storage cost is 20 % of the unit cost and the cost of ordering is Rs 25.

UNIT-IV

7. The following table gives the activities of construction project and duration: — 12 Marks | L3 | CO4 | PO1 PO2 PO3

Activity	1-2	2-3	2-4	3-5	3-6	4-6	4-7	5-8	6-8	7-8
Duration (days)	2	3	5	4	1	6	2	8	7	4

Draw the network for the project .Find the critical path and project duration.

(OR)

8. A small project involves 7 activities and their estimates are listed in the following table. — 12 Marks | L3 | CO4 | PO1 PO2 PO3

Activity	Duration (Weeks)		
	Optimistic	Most likely	Pessimistic
1-2	1	1	7
1-3	1	4	7
1-4	2	2	8
2-5	1	1	1
3-5	2	5	14
4-6	2	5	8
5-6	3	6	15

i) Draw the network of the activities

ii) Find expected duration, variance for each activity and expected Project Length.

iii) What is the probability that the project will be completed at least 4 weeks earlier than expected. time.

UNIT-V

9. Trucks arrive at a loading dock at an average rate of 4 trucks per hour. The loading of a truck takes 10 minutes on the average by a crew of three men. The operating cost of a truck is Rs 20 per — 12 Marks | L3 | CO5 | PO1 PO2 PO3

hour and the men are paid at Rs 6 each per hour. Is it advisable to add another crew of three men?

(OR)

10. A company trading in motor vehicle spare parts wishes to determine the levels of stock it should carry for the items in the range. The demand is not certain and there is a lead time for stock replenishment. For an item A, the following information is obtained: 12 Marks L4 CO5 PO1 PO2 PO3

Demand (units/day)	3	4	5	6	7
Probability	0.10	0.20	0.30	0.30	0.10

Carrying cost (per unit/day) =Rs 2, Ordering cost (per order) = Rs 50, lead time for replenishment = 3 days. Stock on hand at the beginning of the simulation exercise was 20 units. Carry out a simulation run over a period of 10 days with the objective of evaluating the inventory rule: Order 15 units when present inventory falls below 15 units. Use random numbers in the sequence: 0, 9, 1, 1, 5, 1, 8, 6, 3, 5. Also calculate total inventory cost.

THERMAL ENGINEERING-II

[Mechanical Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Differentiate Benson boiler and locomotive boiler.	6 Marks	L2	CO1	PO1
	b)	Calculate the equivalent evaporation from and at 1000C for a boiler, which receives water at 600C and produces steam at 1.5MPa and 3000C. The steam generation rate is 16000kg/h. Coal is burnt at the rate of 1800 kg/h. The calorific value of coal is 34750 kJ/kg. Also evaluate the thermal efficiency of the boiler. If the efficiency of the boiler is increased by 5% due to use of economiser, find the saving in coal consumption per hour	6 Marks	L3	CO1	PO1
		(OR)				
2.	a)	Differentiate between water tube and fire tube boilers.	6 Marks	L2	CO1	PO1
	b)	Discuss the working principle of Babcock and Wilcox boiler with a neat sketch.	6 Marks	L3	CO1	PO1
		UNIT-II				
3.	a)	What are the effects of super saturated flow on the performance of nozzle?	6 Marks	L2	CO2	PO1 PO2 PO3
	b)	Derive the expressions for maximum velocity and discharge through a convergent-divergent nozzle in terms of initial pressure, specific volume and polytropic index.	6 Marks	L3	CO2	PO1
		(OR)				
4.	a)	Draw the schematic diagram of counter flow jet condenser and explain its working.	6 Marks	L2	CO2	PO1 PO2 PO3
	b)	The surface condenser is designed to handle 16000kg of steam per hour. The steam enters the condenser at 0.09 bar abs. and 0.88 dryness fraction and condensate leaves the condenser at the corresponding saturation temperature. Determine the rise in cooling water temperature if the cooling water flow rate is 8.96 x 105 kg/hour. Assume that the pressure is constant throughout the condenser.	6 Marks	L3	CO2	PO1
		UNIT-III				
5.	a)	Derive an expression for maximum blade efficiency.	6 Marks	L2	CO3	PO1 PO2 PO3
	b)	The following data refer to a particular stage of a Parson's reaction turbine Speed of the turbine = 1500 r.p.m, Mean diameter of the rotor = 1 metre, Stage efficiency = 80%, Speed ratio = 0.7, Blade outlet angle = 200. Determine the available isentropic enthalpy drop in the stage.	6 Marks	L3	CO3	PO1
		(OR)				

6.	a)	What is 50%Reaction turbine. What are the characteristics of 50% reaction turbine.	6 Marks	L2	CO3	PO1 PO2 PO3
	b)	Draw and analyze velocity diagram for De-laval turbine.	6 Marks	L3	CO3	PO1 PO2 PO3

UNIT-IV

7.	a)	An ammonia VCR refrigerator operates between -15ºC to 40ºC. The vapor is dry and saturated at the entry to the compressor and compression is isentropic. Assuming there is 5ºC of under cooling, calculate: i) Mass flow rate and power input per kW of refrigeration. ii) COP of the system.	6 Marks	L2	CO4	PO1
	b)	Discuss the working principle of air refrigeration system with a neat diagram.	6 Marks	L3	CO4	PO1 PO2 PO3
		(OR)				
8.	a)	Explain how the COP of vapor compression refrigeration system varies with the following parameters i) Suction pressure. ii) Deliver pressure. iii) Sub-cooling of the refrigerant. iv) Superheating of the refrigerant.	6 Marks	L2	CO4	PO1
	b)	Discuss the difference between heat pump, refrigerator and heat engine with a neat sketch.	6 Marks	L3	CO4	PO1

UNIT-V

9.	a)	Can you explain how the following Psychometric processes can be achieved? Show them on Psychometric chart also. i) Cooling and dehumidification. ii) Heating and humidification.	6 Marks	L2	CO5	PO1
	b)	20 m^3 of air per minute at 30^{0}C and 60% RH are cooled to 22^{0}C DBT maintaining specific humidity constant. Find the following: i) Heat removed from air. ii) RH of cooled air. iii) WBT of the cooled air. Take air pressure = 1 bar.	6 Marks	L3	CO5	PO1 PO2 PO3
		(OR)				
10.	a)	Discuss the constructional details of psychometric chart.	6 Marks	L2	CO5	PO1
	b)	Calculate the properties of moist air whose DBT is 25^{0}C and WBT 15^{0}C.	6 Marks	L3	CO5	PO1

DIGITAL COMMUNICATIONS

[Electronics and Communication Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

		UNIT-I				
1.	a)	Derive an expression for Signal to Quantization noise in a DM System.	6 Marks	L3	CO1	PO2
	b)	What is Companding and explain different types of Companding techniques?	6 Marks	L1	CO1	PO1
		(OR)				
2.	a)	Find the optimum step size required to avoid slope overload distortion when an analog signal $x(t)=10\sin(2\varpi x10^3t)$is sampled at thrice of Nyquist rate in a Delta Modulator.	6 Marks	L2	CO1	PO1
	b)	Explain the operation of Differential Pulse code modulator and demodulator.	6 Marks	L1	CO1	PO1
		UNIT-II				
3.	a)	Explain Nyquist's criterion for distortion less transmission of base band signals.	6 Marks	L2	CO2	PO1
	b)	Explain in detail about Inter symbol Interference and Eye Pattern.	6 Marks	L2	CO2	PO1
		(OR)				
4.	a)	What is a Baseband binary PAM system? Explain.	6 Marks	L2	CO2	PO1
	b)	Explain in detail about Duo binary coding and decoding.	6 Marks	L2	CO2	PO1
		UNIT-III				
5.	a)	Derive the expression for the probability of error in Coherent PSK.	6 Marks	L3	CO2	PO2
	b)	Illustrate the merits of DPSK over BPSK.	6 Marks	L3	CO2	PO2
		(OR)				
6.	a)	Implement a Digital System for generation and reception of DPSK signals with a neat block diagram.	6 Marks	L2	CO2	PO3
	b)	Distinguish between ASK, FSK and PSK systems.	6 Marks	L3	CO2	PO2
		UNIT-IV				
7.	a)	A discrete message source is generating the message sequence [X] = [A B C D E F G H] with probabilities [P] = [0.50, 0.15, 0.15, 0.08, 0.08, 0.02, 0.01, 0.01]. Find the Code words using Huffman coding.	6 Marks	L2	CO3	PO4
	b)	Define mutual information and explain the properties of mutual information.	6 Marks	L2	CO3	PO2

(OR)

8.	a)	Apply the Shanon-Fano coding procedure for the following message ensemble to find the code word:	6 Marks	L2	CO3	PO4
			Signal	X1	X2	X3	X4	X5
			Probability	0.30	0.25	0.20	0.15	0.1
	b)	Define the following: i) Channel Capacity of Continuous Channel. ii) Hartley Shannon's theorem.	6 Marks	L1	CO3	PO1

UNIT-V

9.	a)	Briefly describe about the Code tree, Trellis and State Diagram for a Convolution Encoder.	6 Marks	L3	CO4	PO1
	b)	Discuss about the matrix description of linear block codes.	6 Marks	L3	CO4	PO2

(OR)

10.	a)	Explain Convolution Decoding using Viterbi algorithm.	6 Marks	L2	CO4	PO2
	b)	Find (7,4) cyclic codeword generated in Systematic and Non-systematic form when message data D(1011), D(0101) is applied to Cyclic Encoder with generator polynomial of **a** is $g(x) = 1 + X + X^3$.	6 Marks	L3	CO4	PO3

(An Autonomous Institution, Affiliated to JNTUA, Ananthapuramu)

III B.Tech I Semester (SVEC-19) Supplementary Examinations, November - 2022

DIGITAL SIGNAL PROCESSING

[Electronics and Communication Engineering, Electronics and Instrumentation Engineering]

Time: 3 hours **Max. Marks: 60**

Answer One Question from each Unit
All questions carry equal marks

UNIT-I

1.	a)	The system is represented by the difference equation y(n) = x(n+1) + 3x(n) + 5x(n-1) .Is the system causal, stable, and time invariant? Justify your answer.	8 Marks	L3	CO1	PO2
	b)	Determine the z-transform the signal $x(n) = (-1)^n \cos\left(\frac{n\pi}{3}\right)u(n)$.	4 Marks	L3	CO1	PO4
		(OR)				
2.		Determine the solution of the difference equation $y(n) = x(n) + \frac{5}{6}y(n-1) - \frac{1}{6}y(n-2)$ *for* $x(n) = 2^n u(n)$.	12 Marks	L3	CO1	PO4

UNIT-II

3.	a)	State and prove circular time reversal and convolution properties of Discrete Fourier Transform.	6 Marks	L2	CO2	PO2
	b)	Explain the process of evaluating DFT through DITFFT algorithm.	6 Marks	L3	CO2	PO2
		(OR)				
4.		Compute 8-point DFT for the sequence. $x(n) = \begin{Bmatrix} 2, 0 \le n \le 7 \\ 0, otherwise \end{Bmatrix}$ radix-2 DITFFT algorithm.	12 Marks	L3	CO2	PO5

UNIT-III

5.	a)	Compare the characteristics of Butterworth and Chebyshev approximations.	4 Marks	L2	CO3	PO2
	b)	Design a Digital Chebyshev Type-I Low pass filter using bilinear transformation with the specifications. α_p=1 dB ripple in the pass band $0 \le \omega \le 0.2\pi$. α_s=15 dB ripple in the stop band $0.3\pi \le \omega \le \pi$.	8 Marks	L4	CO3	PO3
		(OR)				
6.	a)	Construct the Cascade form structure of the LTI system having $H(z) = \frac{\left(1+\frac{3}{2}z^{-1}+\frac{1}{2}z^{-2}\right)\left(1+\frac{3}{2}z^{-1}+z^{-2}\right)}{\left(1+z^{-1}+\frac{1}{4}z^{-2}\right)\left(1+\frac{1}{4}z^{-1}+\frac{1}{2}z^{-2}\right)}$.	7 Marks	L3	CO3	PO5
	b)	Derive an expression for order of the butter worth analog prototype filter.	5 Marks	L3	CO3	PO2

UNIT-IV

7.	a)	Design FIR high pass filter with a frequency response using hamming window for N = 7. $H_d(e^{j\omega}) = 1$; $\pi/4 \leq \lvert \omega \rvert \leq \pi$ $= 0$; otherwise	7 Marks	L4	CO3	PO3
	b)	Distinguish the window functions used in the design of FIR filters.	5 Marks	L2	CO3	PO2
		(OR)				
8.	a)	Determine the direct form realization of FIR filter having transfer function. $H(z) = 1 + 2z^{-1} - 2z^{-2} + 3z^{-3} + 3z^{-4} - z^{-5} + 2z^{-6} + z^{-7}$	7 Marks	L4	CO3	PO5
	b)	Discuss the advantages and disadvantages of FIR and IIR filters.	5 Marks	L2	CO3	PO1
		UNIT-V				
9.	a)	Explain the internal architecture of TMS320C6X DSP processor.	7 Marks	L2	CO4	PO1
	b)	List the relative merits and demerits of RISC and CISC processors.	5 Marks	L2	CO4	PO1
		(OR)				
10.	a)	Explain Serial port and TDM serial port on-chip peripherals of P-DSPs.	6 Marks	L2	CO4	PO1
	b)	Write a short note on Memory Access schemes in P-DSPs	6 Marks	L2	CO4	PO1
